Channel depths: The least depth in the approaches to the terminal in March 1988 was 15.1 m. below C.D. and occurred in the buoyed fairway approximately 0.5 nautical miles within the port limits. Loaded tankers may sail with a draft up to 17.5 m. dependent on the tide. Advice should be sought from Cromarty Firth Port Authority prior to vessel's arrival.

Tidal range: M.L.W.S. 0.8 m., M.H.W.S. 4.3 m.

Tidal restrictions: Subject to draft, vessels will be able to berth and sail at any state of the tide, possibly excepting Spring ebbs. Berthing head Eastwards is to be preferred.

MAX. SIZE: *Length restrictions at berth:* Max. 290 m. LOA. Minimum 190 m. LOA.

Max. displacement: 157,500 tonnes.

VHF:

Communications:	Port Authority	Channel 11 & 16
	Port Emergency	Channel 11
	Invergordon Pilot	Channel 13
	Tugs	Channel 13
	Pollution Control	Channel 10
	Nigg Oil Terminal	Channels 49, 50

Portable VHF/UHF sets: These must not be used within the Terminal Area unless they are classed as "intrinsically safe". The Terminal will lend approved VHF equipment if necessary.

TUGS: Berthing and unberthing operations will be assisted by a minimum of 2 tugs of 50 tons and 38 tons bollard pull respectively. A relief tug of 40 tons bollard pull may be substituted for either of these tugs. A third tug of 34 tons bollard pull will also be available if required. The vessel's agent will arrange for tugs as required by the Master. A firefighting tug will remain on standby at all times when a tanker is at the Nigg Oil Terminal Jetty. Whilst underway within Port limits a 1 tug escort is required.

BERTHING: *Berthing velocity:* Vessels must not exceed a berthing velocity of 20 ft./min., regardless of displacement, and should aim to achieve a berthing velocity of less than 10 ft./min.

Mooring arrangements: The Plan (See "Plan") depicts a mooring arrangement for a typical 80,000 d.w.t. vessel. Similar configurations will be employed for all vessels in the range 40,000/160,000 d.w.t.

Seebeck quick release mooring hooks are fitted on all dolphins.

Each mooring dolphin is fitted with a 3-hook assembly; each hook of 100 tonnes capacity.

Each berthing dolphin is fitted with a 2-hook assembly; each hook of 100 tonnes capacity.

The 50 tonnes bollards at the corners of the jetty head are for use by small craft only.

LOADING: *Loading arms:* 3×16 in. Emco Wheaton loading arms, each designed to ANSI 150 lb. pressure rating, are installed on the jetty head. Each arm may be used either for deballasting or for loading and these operations can take place concurrently provided that the terminal approves the system of onboard separation. These loading arms are also used for discharging crude oil.

The minimum acceptable ship's figure size is 12 in. Nominal Bore. The M.I.B. couplings can be adjusted to 12 in., 14 in. or 16 in. flange sizes. Vessels must present manifold flanges with a minimum clearance of 8 in. behind the flange and 3 ft. axial clearance around the centre of the flange face in order to provide adequate clearance for the coupling jaws. If necessary spool pieces must be fitted. Flanges of steel or nodular iron must be presented. Cast iron manifold materials are not acceptable. The vessel's manifold connections must remain within an envelope between 2.85 m. and 6.1 m. off the berthing face and between 4.6 m. and 25.6 m. above chart datum.

If ranging or drift-off exceeding 2.7 m. occurs the coupling ball valves will close and the couplings will automatically disconnect.

If sustained wind speeds exceed 35 knots loading operations will stop and arms will be drained. Arms will be disconnected if wind speeds exceed 40 knots.

Loading rates and pressures: Loading rates of 50,000 bbls.p.h. are attainable utilising 2 loading arms. the maximum pressure permitted at the ship's rail is 128 p.s.i.
Ballast reception: Ballast water reception facilities are available at the Terminal. Ballast must not be discharged overboard within the port. Vessels not having segregated ballast tanks must deballast ashore. Vessels with segregated ballast must retain their ballast onboard for inspection and analysis after berthing, and disposal of this ballast is subject to the results of this inspection and analysis. Permission will not be granted for the overboard discharge of segregated ballast with an oil content in excess of 5 parts per million.
FRESH WATER: Fresh water is available on request from the Terminal from a connection on the jetty head. Approximate maximum delivery rate is 30 t.p.h.
FUEL: Bunkers are not available at Nigg Oil Terminal but may be available at Invergordon (See Section "A").
REPAIRS: Repairs may only be commenced upon receipt of a work permit signed by the Terminal Superintendent. Immobilisation of a vessel alongside the jetty is only permitted with the written permission of the Terminal Superintendent and of the Port Authority.
Readiness to vacate berth: Engines and all other essential equipment of vessels alongside the jetty must be maintained in a state of readiness for vacating the berth at short notice.
STORING: Loading of stores onto a vessel alongside the jetty may be carried out only with the specific permission of the Terminal Superintendent and in a manner and at a time approved by him.
SHORE LEAVE: A pass system will operate. Shore leave will normally be by launch from the jetty launch landing pontoon. Shore leave arrangements are the responsibility of the vessel's Master and will normally be made by the ship's Agent. Details of the arrangements are to be provided to the Terminal Superintendent.
GARBAGE/WASTE OIL DISPOSAL: See Part (A).
GENERAL: *Loading Master:* A B.P. Loading Master remains on board the vessel at all times during the vessel's stay at Nigg Oil Terminal.
Permanent watch: During operations a responsible member of the ship's crew must be stationed in the vicinity of the manifold.
Smoking: No smoking is permitted in the Terminal Area or on the weather deck of any vessel in the Terminal Area. Smoking may be permitted at the Master's discretion in two onboard locations, to be approved by the Terminal Superintendent.
Emergency: In the event of an emergency any assistance required must be summoned via the Terminal Control Room.
Craft alongside: Craft may not lie alongside a vessel at the jetty without the written permission of both the Master of the vessel and the Terminal Superintendent.
Refuse: No refuse or waste may be disposed of overboard from a vessel within the Port.
I.S.G.O.T.T.: Vessels must be provided with a copy and be familiar with the contents of the International Safety Guide for Oil Tankers and Terminals. Reference copies are available on temporary loan from the Terminal.
Important telephone numbers:
Nigg Oil Terminal: Nigg (086 285) 631.
Cromarty Firth Port Authority: Invergordon (0349) 852308.
AUTHORITY: Cromarty Firth Port Authority, Port Office, Shore Road, Invergordon, Ross-shire IV18 0HD. *Tel:* Invergordon (0349) 852308. *Telex:* 75263. *FAX:* (0349) 854172. *Contact:* Captain D.R.F. Miller, Harbour Master. Captain P.J. Taylor, Port Manager. Captain I. Dunderdale, Deputy Harbour Master. Captain W. Thomas, Pilot/Marine Officer. Captain N. Robertson, Pilot/Marine Officer.

DARTMOUTH (Including Totnes): 50.21 N. 03.34 W. (See Plan)

PORT LIMITS: A line from Inner Froward Point to Combe Point.
DOCUMENTS: Normal documents for U.K. ports.
PILOTAGE: No direct radio contact with Pilots. Contact local Agent, Harbour Authority or Berry Head Coastguard Station who will telephone Pilot.
Pilot station 5 cables S.S.E. Castle Ledge Conical Buoy.
ANCHORAGE: Anchor at pilot station.
MAX. SIZE: Max. length 500 ft., max. draft 28 ft.
HEALTH: Contact Port Health (Tel: 0803-868000).
Also see "Health – All Ports" before first U.K. port.
RADIO: Route cables, etc., through Niton or Lands End Radio Stations.
VHF: Watch maintained on Channels 11 and 16, 0900 hrs. – 1700 hrs. during weekdays and 0900 hrs. – 1200 hrs. on Saturday. Call sign "Dartnav".
TUGS: Tugs can be arranged.
BERTHING: All berthing on midstream buoys.
Totnes: Max. Size: At Spring Tides coasters of about 1,000 tons up to 240 ft. LOA and drawing 12.5 ft. proceed up river to the Baltic Wharf which lies half a mile below Totnes Bridge.
Berthing: 750 ft. quay. Dries out all tides.
MEDICAL: All medical services are available; if possible give notice of requirement.
DENSITY: Normally salt. 1025.
FRESH WATER: Available at the South Embankment.
FUEL: Diesel available by barge.
FIRE PRECAUTIONS: Normal.
GANGWAY/DECK WATCHMEN: It is advisable to have watchmen.
OPENING/CLOSING HATCHES: Crew open.
CARGO GEAR: Ship's gear.
REPAIRS: All repairs unless of a major or underwater type can
carried out.
SURVEYORS: West Marine Surveyors & Consultants Limite
Consulting Marine Surveyors, Engineers & Naval Architects, 59 Fo
Street, Totnes, TQ9 5NJ. Tel: 0803-865810. Fax: 0803-86534
Telex: 42962 – Survey G.
REPATRIATION: Facilities exist.
AIRPORT: 35 miles from Exeter airport. Internal and short ran
Continental flights.
TELEPHONES: Not normally available, except for H.M. ships.
HOLIDAYS: Not applicable.
POLICE/AMBULANCE/FIRE: Dial 999 for emergencies. Local hosp
adjacent to Harbour Office.
SHORE LEAVE: Permitted. Seaman's Book adequate.
GENERAL: Dartmouth does not now operate as a commercial po
except for small vessels up to about 800 d.w.t. en route to Totne
although the harbour is suitable for ships of 18,000 d.w.t. and crui
liners, and mooring buoys are available for such vessels.
Lay-up facilities available for vessels up to 22,000 tons displaceme
AUTHORITY: Dart Harbour and Navigation Authority, Dart Hous
Oxford Street, Dartmouth, Devon TQ6 9AL. *Tel:* 0803-832337/8337

Contact: Captain C.J. Moore, Harbour Master.

DOUGLAS, Isle of Man: 54.09 N. 04.28 W. (See Pla

PORT LIMITS: That part of the coast including all creeks, bays an
headlands from HW mark Ordinary Spring Tides which extends fro
Port Soderick Landing Jetty (Lat. 54° 07′ 24″ N., Long. 04° 31′ 48″ W
in a Northerly direction to the most Easterly point of Clay Head (Lat. 5
11′ 42″ N., Long. 04° 23′ 05″ W.) thence in a straight line drawn in
135° True (S.E.) direction for 3 nautical miles, thence in a straight li
drawn to a position 3.5 nautical miles 135° True (S.E.) from Port Soderi
Landing Jetty, thence in a straight line drawn to Port Soderick Landin
Jetty.
All shipping entering the above defined area should contact Dougla
Radio on Channel 16 VHF.
DOCUMENTS: Same as for all U.K. Ports.
PILOTAGE: Not compulsory. Arrangements usually made at least 2
hours before vessels' arrival, through Ships' Agent, or to Harbour Maste
Douglas – Tel: 686628. Call Douglas Radio on Channel 16 and the
transfer to Channel 12 for instructions 1 to 2 hours before ETA Dougla
Bay.
RESTRICTIONS: Enter only on Harbour Master's instructions.
Traffic Signals: International Port Traffic Signals (See Admiralty Noti
to Mariners 568/83) are exhibited when required, by day and night, fro
a mast at the head of Victoria Pier, visible from seaward and from insi
the harbour, as follows:

Signal	*Meaning*
3 fixed red lights, disposed vertically	Vessels may not proceed
Fixed green, white, green lights, disposed vertically	A vessel having received speci permission by RT may procee
3 fixed green lights disposed vertically	All vessels may proceed

ANCHORAGES: In Douglas Bay:
Douglas Head bearing 196° (T) 7 cables in 6 fathoms.
" " " 199° (T) 9.3 cables in 7 fathoms.
" " " 200° (T) 8 cables in 6.5 fathoms
" " " 212° (T) 7.9 cables in 10 fathoms
MAX. SIZE: Max. size of cross channel vessels 115 m. LOA, draft 5.0
Max. size of cargo vessels 62 m. LOA, draft 4.0 m. Spring tid
2.75 m. Neaps to Inner Harbour, dries out at LW.
Max. size of tankers 90 m. LOA, draft 5.5 m. at LWOST.
HEALTH: See "Health – All ports" before first U.K. port.
RADIO: Port Patrick for vessels coming from North. Anglesey for vesse
coming from South.
VHF: Douglas Harbour Radio manned at all times. Channel 16 and
only.
RADAR: Port Radar available for use in fog or when required. Us
with Channel 12 VHF.
TUGS: None available.
BERTHING: Passenger vessels – 6 berths for vessels of 350 ft.
length, 13 ft. draft LWST at Victoria Pier and King Edward Pier.
Office Berth – vessels 68 m. LOA, draft 5.0 m. spring tides. 3.5
neap tides, dries out at LW.
Coffee Palace Berth will accommodate vessels of 62 m. LOA, dr
4.0 m. Springs, 2.75 m. Neaps, dries out at LW.
Market Berth same as Coffee Palace Berth.
Battery Pier – Tankers up to 90 m. LOA, draft 5.5 m. at LWOS
Discharging of cargo vessels and container vessels can be done
shore crane.
All berths at Douglas are salt water.
CRANES: *Mobile Cranes:* 2×25 tonnes, 1×72 tonnes, 1×5 tonnes a
1 mobile grab crane.
BULK CARGO FACILITIES: Bulk cargoes of coal and scrap metal
handled at Coffee Palace and Market Berths described above, a
timber at King Edward Pier.
Rate of discharge for coal about 60 t.p.h. – 70 t.p.h. by grab cra
SPECIALISED CARGO HANDLING FACILITIES: Ro/Ro ser
operated to Victoria Pier by I.O.M. Steam Packet Co.
Ro/Ro cargo service operated by Isle of Man Steam Packet Co
King Edward VIII Pier.
LPG cargoes are handled at Battery Pier as described above.
BRIDGES: Swing Bridge only to Inner Harbour.

STEVEDORES: Advice required to Ship's Agent. Rate of discharge – cement 60 t.p.h.; coal 60 – 70 t.p.h.
MEDICAL: Advise Agent when possible, alternatively contact Harbour Master with advance warning. Hospital available.
TANKERS: Tankers pipelines 6 in. Tanker berth at Battery Pier – Max. draft. 5.5 m. at LW Spring tides. Discharging rate 180 t.p.h. – 200 t.p.h.
DENSITY: Density of water salt (1025).
FRESH WATER: Fresh water available on request to Agent or Harbour Master.
FUEL: Fuel delivered by road tanker only. Contact Manx Petroleum or Esso.
FIRE PRECAUTIONS: Fire precautions as normal.
CONSULS: None.
REPAIRS: Limited facilities only.
DRY DOCKS: None.
SURVEYORS: Four I.O.M. Marine Department Surveyors.
GANGWAY/DECK WATCHMEN: Could be arranged by Agent.
OPENING/CLOSING HATCHES: Handled by crew.
CUSTOMS ALLOWANCES: Same as U.K.
CARGO GEAR: Cargo can be discharged by ship's own gear or mobile cranes.
REPATRIATION: Repatriation only done through arrangement with Agents.
AIRPORT: Ronaldsway Airport 8 miles from Douglas and served by regular airlines.
TIME: Same as U.K.
HOLIDAYS: Good Friday, Easter Monday, Spring Holiday, T.T. Friday (1st week in June), Tynwald Day (5th July), August Holiday, Christmas Day, Boxing Day, New Year's Day.
TELEPHONES: Connections to ships can be arranged at passenger piers.
POLICE/AMBULANCE/FIRE: Police Tel: 631212; Ambulance Tel: 663322; Fire Brigade Tel: 673333.
EMERGENCY CO-ORDINATION CENTRE: H.M. Coastguard, Liverpool. Tel: 051 9313341.
STORING: See "Prelims".

1. By truck.
2. Not applicable.
3. Trucks can go alongside vessels except tankers when working cargo or ballasting.
4. Fork lift trucks could be permitted.
5. U.K. Customs regulations.
6. Storing usually done by crew.

SERVICES: None.
SHIP SUPPLY SERVICE: General Marine Services Limited (Tel: (0624) 628904 or 629710), who operate the pilot launch and ship to shore transfers of personnel, stores, etc. This launch is kept afloat and a 24 hour-service is available.
There is no helicopter service on the Island.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Identification Cards not required for British Ships. Same as U.K.
REGULATIONS: No unusual regulations.
DELAYS: Delays can be expected due to tidal conditions, or awaiting a berth; also delays caused by N.E. gales, which make Douglas Outer Harbour untenable.
GARBAGE DISPOSAL: 4 skips are available on harbour property. Contact Island Skip-Hire (Tel: 0624-629525) or Merit Skip-Hire (Tel: 0624-824569). Charges are £58.75 for 2/3 days hire.
WASTE OIL DISPOSAL: Not available.
SEAMEN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: Isle of Man Department of Highways, Ports and Properties, Harbours Division, Sea Terminal Building, Douglas, Isle of Man IM1 2RF. *Tel:* 0624-686628. *Telex:* 629335 Iomhar G. *FAX:* 0624-626403. *Contact:* Harbour Master.

DOVER: 51.07 N. 01.18 E. (See Plan)

PORT LIMITS: The seaward boundary of the Port extends 1 mile off both the Eastern and Western entrances.
DOCUMENTS: Required on arrival:
Crew List H.O. Form I.S.6. or IMO FAL Form 5 (in duplicate).
Crew Declaration Form C.142 (in duplicate).
Ship's General Declaration (in duplicate) C13.
Ship's Surplus Stores Declaration (in triplicate) C14.
Derat Certificate available for inspection.

It is required to report and clear a vessel at Customs House if remaining in port more than 24 hours for loading and discharging cargo or embarking and disembarking passengers, with following:
Passenger List.
Cargo Manifests (2 copies).
Ship's documents.

PILOTAGE: Requests for pilotage are normally made by local agents. Pilotage is compulsory for all ships navigating within the Dover Pilotage Area (defined as port limits above) subject to the following exceptions:
(a) Ships of less than 20 m. overall, fishing boats of less than 47.5 m., H.M. Ships and foreign war ships.
(b) Ships (other than those referred to in (a) above) of less than 80 m. overall length, provided that any such ship is either not carrying dangerous substances in bulk or not substandard or in any way hampered.

All ships subject to compulsory pilotage shall board or land pilots at or close to the seaward limit of the Dover Pilotage area.

DEEP SEA AND COASTAL PILOTS: For Channel, North Sea and British Coast.
Contact agency 48 hours before arrival by radio, giving ETA Dover and destination port(s).
Agencies are: "Deep Sea and Coastal Pilots" (Telex: 911847 Pilots G) and "Hammond Dover" (See "Agent").
On approaching Dover contact Port Control by VHF for instructions.
Pilots will also board at any U.K. or continental port as required.
ANCHORAGE: Limited space available in Outer Harbour. Contact Port Control in advance for instructions.

The Outer Harbour comprises an area of approximately 600 acres. The Northern extremity indicated by two buoys 'East' and 'West' and 4 intermediate marker buoys, the Southern extremity denoted by a line through the Southern most tip of the Prince of Wales Pier and the Southern most tip of the Eastern Arm. The Eastern boundary is formed by a S.E.'ly line drawn through East Buoy and the Western boundary is formed by a S.E.'ly line drawn through West Buoy.

The maximum depth at MLWS is 7.3 m.
RESTRICTIONS: Attention is drawn to the strict requirement of obtaining permission from Port Control to enter or leave the harbour.

It will be noted that although the traffic control signal may be exhibited for entry/departure, every vessel manoeuvring to enter or leave the port is required to obtain specific permission to enter or leave, as the case may be.

Vessels awaiting permission to proceed should keep at a safe distance of at least 1.5 miles clear of the entrance until so authorised. Responsibility for entering or leaving with caution and the safe navigation of each vessel subsequent to the receipt of permission to proceed continues to remain the responsibility of the Master.
Explosives – Dangerous Cargo: Declaration is to be made and permission obtained prior to entering the harbour. Dover Harbour Board is not compellable to receive within the harbour any articles which in their opinion would endanger safety of harbour or vessels or goods.
HEALTH: Pratique, obtained by radio via Coastguard Station giving name of ship, ports of call during voyage, nature of cargo, number of crew and passengers, port of destination and Agent, condition and health of all on board with details of any sickness. Coastwise vessels from U.K. ports have automatic Pratique.

Also see "Health – All Ports" before first U.K. port.
RADIO: Vessels from East use North Foreland Radio call sign GNF and vessels from Westward use Niton Radio call sign GNI.
RADAR/VHF: Port Control and Admiralty Pier Signal Station are fitted with radar and VHF, vessels can make initial contact with "Dover Port Control" on VHF Channels 74, 16 and 12. Operational frequency is Channel 74. See "Pilotage".
TUGS: Two tugs of 2,900 h.p. each. Tug names 'Deft' and 'Dextrous'. Twin engined Voith Schneider. Tugs will normally join vessels inside harbour entrance, but may meet vessels outside by arrangement. Tug's rope used. Tug charges on application from Dover Harbour Board.
BERTHING: All berths in the Outer Harbour can be reached at all times. There are 3 berths available on the Eastern Arm fitted with Yokohama fenders, depth at MLWS is 8.5 m. Berths are used for lay-by, general cargo and vessels taking water, stores and crew changes. There is one berth on the South Jetty of Eastern Docks having 200 m. of quay available with a depth of 8.5 m. at MLWS. There is 5,500 sq.m. of cargo shed and open storage space and additional temperature controlled storage of 7,500 sq.m.

Those berths in the Wellington and Granville Docks can normally be reached from 1 hour before each high water. All berthing requirements are allocated by Port Control.
Western Docks: This comprises the International Hoverport, Jetfoil Terminal, the Admiralty Pier, and Train Ferry Berth, the Inner Harbour, Tidal Basin incorporating the tug haven, Granville and Wellington Docks.
Granville Dock: This dock is non-tidal and comprises an area of 4.5 acres with depths of water of 21 ft. (6.4 m.) at MHWS, 17 ft. (5.2 m.) at MHWN. The entrance is 65 ft. (19.8 m.) wide and depth on the sill at MHWS is 21 ft. (6.4 m.). Transit sheds and open storage space are available at the Dockside.

Berth No.	*Length* (m.)		
1/2	146	Fruit/Veg/General	Portal cranes
3	76	Fruit/Veg/General	Portal cranes
4	40	Lay-by/Ro/Ro	
5	73	For lay-by only (no hot work)	
6	137	Grain	No cranes
7	96	Coal/Limestone/Coke/Pumice (leased to Cory Bros.)	

Wellington Dock: This dock is non-tidal and comprises an area of 8 acres with depth of water 15 ft. (4.6 m.) at MHWS, 11 ft. (3.4 m.) at MHWN. The entrance is 70 ft. (21.3 m.) wide and depth on the sill at MHWS is 15 ft. (4.6 m.). Transit sheds and open storage space are available. A slipway 567 ft. (173 m.) in length is capable of taking private and commercial vessels on its cradle, up to 53.3 m. in length.

This dock is now principally used by pleasure craft.
Prince of Wales Pier: This separates the inner and outer harbours. Please note that berthing alongside the Prince of Wales Pier is only permitted by special arrangement with the Harbour Superintendent.
Hoverport: All hovercraft services operate from the Hoverport adjacent to and West of the Prince of Wales Pier. "Hoverspeed" operate daily services for passengers and accompanied cars to Boulogne and Calais.
Admiralty Pier: Length 4,140 ft. (1,260 m.), with depths alongside ranging from 6.0 m. to 9.1 m.

There is one single width, single deck, multi-purpose Ro-Ro berth, other berths are used for passenger only services and for lay-bys.
Train Ferry Berth: Situated on the Admiralty Pier and is operated by Sealink UK for British Rail and SNCF. Trains run direct into the ferries which operate daily services of freight to Dunkirk throughout the year.
Tidal Basin: This forms the entrance to the Wellington and Granville Docks and is entered between the Admiralty and Prince of Wales Piers. It comprises an area of approximately 12 acres.

The entrance is 140 ft. (42.7 m.) wide, with a depth of 10.8 m. at MHWS. There are 2 berths in the Tidal Basin, Nos. 16 and 17. No. 16 has a length of 300 ft. (91 m.). No. 17, length 360 ft. (110 m.) used for berthing small boats.

A tug haven has been constructed in the Tidal Basin adjacent to Clarence Quay. The jetty 45 m. in length is positioned perpendicular and to the Southern end of Clarence Quay. To the North of the new breakwater is positioned a pontoon 90 m. long parallel to Clarence Quay, providing berths for all harbour craft including the 2 tugs, dredger, patrol launch, work boats and RNLI Lifeboat. Private berth users will not be allowed to use the berth without express permission from the Harbour Superintendent or Duty Marine Officer.

Eastern Docks:

The docks comprise the Eastern Arm and Car Ferry Berths.

Car Ferry and Freight Terminal: Operated by Dover Harbour Board. Berth No. 1, situated at the North end of the Eastern Arm, is a general purpose Ro-Ro berth for all classes of Ro-Ro vessels.

Berths No. 2 and 3, situated either side of Pier A are for large Ro-Ro ferries of length 168 m. and beam 28 m. with double deck and double width loading bridges. Berth No. 4 being situated to the Westward on Pier 'B', Berths No. 5 and 6 situated at Pier 'C', with double lane loading bridges of 23 m. plus covered passenger bridges. The Seacat berth is situated on the East side of Pier D, whilst Berth No. 7 on the West side of Pier D is now operational and similar to Berth No. 3. The car ferry/freight berths provide berthing for vessels up to 180 m. in length with depths of water of 7.0 m. at MLWS. Berths are connected with loading bridges to enable cars, coaches and freight to drive on direct on board the vessels, operating to Calais, Boulogne, Ostend and Zeebrugge. Shore facilities provide modern reception buildings, a new passenger handling complex, Customs clearance halls, 2 restaurants/shop complexes, banking facilities, shipping operators' offices, spacious assembly car parks.

BULK HANDLING FACILITIES: 2×550 t.p.h. shiploaders for grain operated by Dover Stevedoring Co. Ltd. Two shiploaders for grain operated by P.D. Wharfage.

CRANES: *Enclosed Docks:* There are 2 electrical portal cranes of SWL 3 tonnes installed at Berths 1, 2 and 3 in the Granville Dock also 3 mobile cranes with SWL of 10, 20 and 70 tonnes available for cargo handling. The 2 mobile cranes may be employed for other duties. Hire charges on application to Dover Harbour Board.

Eastern Docks: 2×20 tonnes SWL and 1×36 tonnes SWL container cranes are available for hire. There are 2×40 tonnes mobile cranes available. Hire charges are available from Dover Harbour Board.

CARGO HANDLING FACILITIES: Seven berths equipped for handling scheduled Ro/Ro traffic.

STEVEDORES: No particular ETA required as ship's Agent makes all necessary arrangements.

MEDICAL: Medical assistance can be arranged by Agent to vessels passing Dover Harbour. Doctor will board a vessel in English Channel or on arrival at anchorage in Outer Harbour. Hospital facilities are available.

DENSITY: 1020.

FRESH WATER: Available to all vessels by pipeline 25 t.p.h.

FUEL: All grades of fuel oil and gas oil available by barge from Shell UK Ltd. (Tel: 071-257-3018).

CONSULS:

France	Dover 204080
Italy	Folkestone 53692
Denmark	
Finland	
Germany	
Iceland	Dover 201201 (office)
Netherlands	Dover 203333 (night)
Norway

Sweden	

REPAIRS: Facilities available for minor engine repairs. Radio and Radar repairs also possible.

GANGWAY/DECK WATCHMEN: Supplied on request.

OPENING/CLOSING HATCHES: By crew.

CERTIFICATES: Certificates to be obtained for foreign clearance: Register, Load Line, Safety Construction, Passenger and Safety Equipment.

REPATRIATION: All facilities exist.

AIRPORT: Most repatriations by air through London/Gatwick and London/Heathrow.

TIME: Local time: BST (British Summer Time) 1 hour in advance of GMT. Reverting to GMT in Winter months (late March to late October).

HOLIDAYS: Official holidays: 1st January; Good Friday; Easter Monday; May Day Holiday; Spring Holiday (end May); August Bank Holiday; Christmas Day; Boxing Day.

The port is open every day for cargo and passengers, except Christmas Day.

POLICE/AMBULANCE/FIRE: Dial 999.

TELEPHONES: Not available.

BANKS:

Barclays Bank Ltd., Tel: Dover 214516.
Lloyd's Bank Ltd., Tel: Dover 240808.
Midland Bank Ltd., Tel: Dover 201131.
National Westminster Bank Ltd., Tel: Dover 201308.
National Westminster Bank Ltd., (Car Ferry Terminal, Eastern Docks), Tel: Dover 201474 or 202744.
Trustee Savings Bank, Tel: Dover 202037.

SHIP SUPPLY SERVICE: Dover Harbour Board offer a 24 hour launch service (Tel: 0304-240400).

The Dover Motorboat Co. Limited, a Hammond subsidiary, operates a 24 hours a day launch service to provide vessels off the port with Pilots and stores, etc., telephone (0304) 206809 or alternatively call the Dover Harbour Board Port Control on VHF Channel 74 to contact the Dover Motorboat Co. and allocate a working channel.

SERVICES: Repairs to radar equipment, compass adjusting, supp charts and crew changes can be arranged outside Dover Harb through local Agents at all times.

SHORE LEAVE: Allowed, subject to Port Passes (See "Identifica Cards").

IDENTIFICATION CARDS: Are necessary, plus passes for sh personnel at Eastern Arm berths having to pass through Eastern Do Terminal. Passes obtainable from Mooring Party foreman.

GARBAGE DISPOSAL: Facilities are not provided alongside, howe upon request, the ship's agent can make arrangements for a skip to provided and collected as necessary.

WASTE OIL DISPOSAL: No shore tanks. Disposal would be facilita using road tankers.

PORT LIMITS: A vessel is considered to be an "arrived ship" whe

(a) For berthing turn-arrival at Fairway Buoy.

(b) For Laytime – usually "off or at the berth" and subject to Cha Party terms.

DOCUMENTS:

3 Crew Lists.
3 Passenger Lists.
1 Tobacco Manifest.
1 Health Declaration.
Cargo Manifests.
Bills of Lading.
Derat Certificate.
Lights Certificate.

PILOTAGE: The port is approached by a well-defined main channel with up-to-date navigational aids and radar surveillance. To provide information on navigation and safety the Authority operates a Port Control Service which maintains a 24 hour listening watch on VHF Channels 16 and 12.

Pilotage is compulsory in Dundee Pilotage District. Pilots board incoming vessels at either inner pilot station (Lady Buoys) or outer pilot station (Fairway Buoy), depending on weather conditions and/or type of vessel. The pilot boat is only on sea station when shipping is expected and accurate ETAs are essential.

ETA should be given 6 hours before arrival either by radiotelephone link call to Dundee Port Control 24121 or by radiotelegram to "Dockyard Dundee" Dundee. Amendments should be made up to 2 hours before the original ETA. When within VHF range (approx. 25 miles from Tay Fairway Buoy) ETAs may be confirmed by contacting "Dundee Harbour Radio" on Channel 16 and transferring to Channel 12 to pass messages.

Pilot boats, when on station, keep a listening watch on Channel 12 and transfer to Channel 6 (156.3 MHz) to pass messages.

ANCHORAGES: Pilots are instructed where to anchor vessels. There are 3 deep-water anchorages to accommodate vessels up to 8.5 m. draft. Two anchorages for vessels up to 6.7 m. draft, and other minor anchorages.

RESTRICTIONS: Tide and draft 29.5 ft. at MHWS. Vessels enter 2 hours before HW. 26 ft. at MHWN. Vessels enter 2 hours before HW.

MAX. SIZE: Length 600 ft./700 ft., beam 90 ft., draft 28.5 ft.

HEALTH: Health Declaration on arrival – if clean, automatic Pratique. Suspect disease as per international requirements. Pratique automatic if already called at another port.

Also see "Health – All ports" before first U.K. port.

RADIO: Any UK coast station. Nearest stations – Stonehaven and Forth.

VHF: See "Pilotage" and "Tugs".

TUGS: Towage is operated by the Authority's tug – 'Abertay' (1,280 h.p. Bollard pull 17 tons). Tug joins vessel in the vicinity of West Ferry. Tug operates on Channels 16, 12 and 6 (Channel 6 when attending vessels). Tug lines optional, charge made if tugs lines used. Additional towage by arrangement.

BERTHING: (Dundee).

Deep-drafted vessels must arrive at the Fairway Buoy at least 2 hours before HW to berth on same tide.

CARGO HANDLING FACILITIES: All types of general cargo are handled, including packaged timber and side-loading of forest products. Grab facilities for bulk material. 4 conveyors are arranged for grain and suitable bulk materials.

Cold Storage: Private cold storage in the vicinity of the port is accessible on application.

Containers: Container handling with ship's gear or mobile cranes and stevedores' transporters.

Cranage: Wide range of cranage, both mobile and portal, with grabbing facilities. Heavy lifts up to 100 tonnes can be arranged.

Grain Handling: Grab facilities. 5 conveyors are available.

Grain Storage: Temporary shed accommodation leased by Grainfax and Port Authority.

Minerals Handling: Lander hydraulic grabs.

Sheds: All riverside berths are equipped with transit sheds not less than 30.5 m. wide, fronted by broad concrete aprons. Total shed area is 69,672 sq.m. Within the harbour area there is extensive storage area and warehouse facilities.

Ro/Ro Berth: At Eastern Wharf. Accepts vessels up to 25 m. beam with stern ramps up to 12.5 m. wide. Linkspan single-lane carriageway 4 m. wide. Road vehicles up to 50 tonnes. Trailer park adjacent. Also 2 Secure Trailer Parks.

STEVEDORES: One ETA to Agent or port suffices for all services.

Full stevedoring facilities are arranged by Dundee Port Authority.

MEDICAL: Advance notice required for ordinary medication for arrivals week-ends. Hospitals and casualty stations available.

TANKERS: Diameter of hoses – 10 in. Slop discharge facilities not available. One tanker berth with depth 9.5 m. at L.A.T. One coastal tanker berth with depth 7.0 m.

DENSITY: 1010 at MLWS. 1015 at MHWS.

FRESH WATER: Available, 24 hour service. Delivery, hose from quays. Rate, 30 t.p.h.

FUEL: Bunkering is available to any vessel by direct pipeline or by road tanker. Large quantities of any fuel type by coastal tanker, subject to 3 or 4 days' notice.

FIRE PRECAUTIONS: Regulations are handed to Master on arrival.

CONSULS:

Denmark	23044	Netherlands	23111
Finland	23111	Norway	23044
France	21252	Sweden	21061
Italy	65222		

REPAIRS: Dundee can offer fitting-out wharves and heavy lift capacity. Various local firms undertake engine and electrical repairs to vessels. Construction, repair and maintenance services for the offshore oil industry are now well developed.

DRY DOCKS: One dry dock available.

SURVEYORS: Lloyd's and D.O.T.

GANGWAY/DECK WATCHMEN: Recommended for large vessels.

OPENING/CLOSING HATCHES: By crew.

CERTIFICATES: As required by Department of Transport (Lifesaving, Radio, Registry, Drugs, Crew Agreement, Load Line) also Derat.

CUSTOMS ALLOWANCES: Foreign-going: 25 cigarettes or 1 oz tobacco per day. 8 days allowance granted. Home trade: same as for foreign-going but only 4 days allowance granted. Spirits: quarter pint per day for 4 days, further issue granted after 4 days for foreign-going only.

REPATRIATIONS: Facilities exist.

AIRPORT: Dundee Airport: Only U.K. flights and charter flights available.

TIME: British Standard Time (GMT plus 1 hour). GMT in Winter months.

HOLIDAYS: 1st, 2nd and 3rd January; 1st Monday in April; 1st Monday in May; Last Monday July; 1st Monday October; Christmas Day and 26th December.

POLICE/AMBULANCE/FIRE: Tel: 999.

TELEPHONES: Quay telephones installed.

SHORE LEAVE: At the discretion of the Master.

IDENTIFICATION CARDS: Not required.

GARBAGE DISPOSAL: Garbage skips for normal domestic waste from vessels sited within port. Additional skips can be arranged if required. Charges depend on requirements.

WASTE OIL DISPOSAL: Service available by contacting local agents.

SEAMAN'S CLUBS: None.

REGULATIONS: Absolutely no smoking, penalty £50.

GENERAL:
Electric Power: Electric power to vessels available at repair berths.
Fire Fighting: Tayside Fire Brigade Services.
Mooring: The Authority provide boatmen's services for the mooring and unmooring of ships.
Motor Vehicle Compounds: An area of 1 acre which can be extended.
Navigation Lights: The main estuarial approach light is the Abertay Racon Buoy supported by port and starboard buoys marking the main channel as detailed in Admiralty Chart 1481.
Passenger Cruise Liners: Dundee is a port of call for passenger cruise liners at riverside berths. The city has quick access to some of Scotland's finest scenery and places of historic interest.
Policing: Effective security is provided by Tayside Police.
Ships Stores: Ship supplies are offered by a number of private firms with premises adjacent to the harbour. These include the special requirements of the offshore oil industry.
Steelyards: The port has 4 road transport weighbridges and portable weighbridges in sheds for sampling, etc.
Tidal Reference: Tide heights are related to Lowest Astronomical Tide (Admiralty Chart Datum).
Range of tides at HWN – 2.4 m.
Range of tides at HWS – 4.7 m.

AUTHORITY: Dundee Port Authority, Harbour Chambers, Dock Street, Dundee DD1 3HW, United Kingdom. *Tel:* (0382) 24121. *FAX:* (0382) 200834. *Cables:* Dockyard, Dundee. *Contact:* John J. Watson, Chief Executive. Captain G.T. Dobbie, General Manager/Harbour Master.

DUNOON: 55.57 N. 04.55 W. (See Plan)

Priority is given to the ferry services using this pier, although other shipping may use the facility.

The wharf has two access arms to shore and an adjustable Ro/Ro link span for side loading vessels. The main berth is 150 m. long with a depth of 4.3 m. below Chart Datum. Fresh water is available. VHF Channels 16, 12 and 31 are available, call sign "Dunoon Pier".

GARBAGE DISPOSAL: No facilities.
WASTE OIL DISPOSAL: No facilities.
SEAMAN'S CLUBS: None.

Manifests.
Bills of Lading.
Ship's papers, including Register, Load Line Certificate, Safety Equipment Certificate, Radio Certificate, U.K. Light Dues, if any.

Radio Officer's Report:
2 copies Master's Declaration.
2 copies Crew List.
1 copy Crew Declaration (No "Magazines" permitted).

APPROACHES: Traffic Regulatory Systems in effect. Details of current harbour Bye-laws and General Directions for navigation available. See "Radar/VHF" – "Harbour Operations Service".

PILOTAGE: PROCEDURE AND INFORMATION ON ETAs/ETDs FOR SHIPS REQUIRING THE SERVICES OF AN AUTHORISED PILOT:

Arrival Notification: Ships bound for the Haven Ports of Harwich, Felixstowe, Ipswich and Mistley and requiring a Pilot, shall notify Harwich Operations Control, 8 hours in advance, giving the ETA at the Harwich Approach Buoy (Lat. 51° 56.4′ N., Long. 01° 31.2′ E.), gross tonnage, maximum draft, departure port and destination port.

Confirmation of ETA should be given at least 3 hours before arrival at Harwich Approach Buoy.

Failure to provide the ETA and subsequent confirmation could result in delay to the ship.

In the case of a ship engaged in the short sea trade, the initial ETA may be passed at the time of leaving the last port of call, if passage time is less than 8 hours.

A ship having complied with the above conditions and then having anchored before embarking a Pilot must give Harwich Operations Control adequate notice of requiring the services of a Pilot. Failure to give such notice could result in delay to the ship.

Requests from inward-bound ships for the services of a Pilot for the Rivers Blackwater, Colne, Crouch or Roach may also be passed though Harwich Operations Control.

Departure Notification: Outward-bound ships, or ships moving within the compulsory Area, which require the services of a Pilot, shall give at least 2 hours' notice of their Estimated Time of Departure and update as required by giving 30 minutes confirmation.

Boarding and Landing Arrangements: The pilot boarding point for inward bound ships will be within the voluntary pilotage area, (see below), such that the Pilot is boarded in good time before entering the Compulsory Area.

The boarding position will be agreed with Harwich Operations Control, having due regard to the size and draft of the ship and the prevailing circumstances.

The normal boarding point will be "The Cork Station" in the vicinity of the Harwich Approach Buoy, but deep-draft ships may, by arrangement, board their pilots near the Sunk Light Vessel or the Mid-Bawdsey Buoy, depending on their point of entry into the Compulsory Area.

Boarding and landing will take place from pilot launches operating from Harwich Harbour. The launches will have the word "HAVEN PILOTS" on the side of the wheelhouse, fly the pilot flag by day and, at night, exhibit lights and signals in accordance with Rule 29 of the International Regulations for Preventing Collisions at Sea.

If the pilot launch is unable to operate in the normal locations due to stress of weather, or other unforeseen circumstances, alternative arrangements will be advised by Harwich Operations Control.

GEOGRAPHICAL LIMITS OF THE HAVEN PORTS PILOTAGE AREA (THE COMPULSORY AREA):

The area bounded by the following limits:
- (a) As much of the River Orwell as lies below Ipswich Dock.
- (b) As far up the River Stour as the tide flows.
- (c) To seaward of Landguard Point, the area bounded as follows:
  - (i) In an Easterly direction as far as 01° 24′ E.
  - (ii) In a Southerly direction as far as 51° 54.5′ N.
  - (iii) In a Northerly direction as far as 51° 57.4′ N.

Voluntary Pilotage: The Board will provide pilotage upon request in the area to seaward of the compulsory Area as far as a line drawn between the following points:
- (a) Bawdsey Cliff – Lat. 52° 00′ N., Long. 01° 26′ E.
- (b) Lat. 52° 00′ N., Long. 01° 41′ E.
- (c) Lat. 51° 49′ N., Long. 01° 41′ E.
- (d) Lat. 51° 49′ N., Long. 01° 15′ E.

ANCHORAGES: For vessels needing to anchor at the Sunk to await Pilot or berthing:
- (i) Recommended Deep Water Anchorage approximately 2.5 miles East of Sunk Light Vessel.
- (ii) King's Channel Anchorage approximately 3 miles S.W. of Light Vessel.

For vessels proceeding via Cork:
- (i) Recommended Deep Water Anchorage at the Bawdsey Anchorage.
- (ii) The Cork Anchorage North of the Harwich Channel Approaches.

Inside Harwich Harbour are the:
- (i) Platters Anchorage, South of the Pitching Ground Buoy.
- (ii) For small vessels, the Shelf and River Stour Anchorages.

Information on all these anchorages is available from Harwich Harbour Radio VHF Channel 71. See "Radar/VHF" – "Harbour Operations Service".

RESTRICTIONS: Approach Channel dredged to 12.5 m. (below Chart Datum). Deepest water alongside is 13.4 m. (C.D.) at Trinity Container Terminal. At least 0.3 m. keel clearance (except Landguard which is 0.5 m.) required at all times between channel bed and keel of vessel.

MAX. SIZE: General cargo vessels: Dock Basin 39.0 m. wide entrance. Depth 6.7 m. (C.D.). No lock gates. Suitable vessels able to leave on any state of tide.

North Quay: 146 m. + 45 m. = 191 m. in length.
South Quay: 186 m. in length.
East Quay: 132 m. in length.

Container Vessels: Landguard Container Terminal, depth 11.9 m. (C.D.) for 280 m. of quay, 9.75 m. (C.D.) for remainder. Max. draft 9.3 m. – 11.4 m.

Trinity Terminal – Berth No. 1: Depth 11.6 m. (C.D.). Max. draft 11.3 m.
Trinity Terminal – Berth No. 2: Depth 11.9 m. (C.D.). Max. draft 11.6 m.
Trinity Terminal – Berth No. 3, 4 and 5: Depth 13.4 m. (C.D.). Max. draft 13.1 m.

Ro/Ro vessels Ferry Terminal: Ro/Ro Bridge No. 1: Vessels up to 184.6 m. overall, depth 7.3 m. (C.D.). Ro/Ro Bridge No. 2: Vessels up to 151.0 m. length, depth 7.3 m. (C.D.) Ro/Ro Bridge No. 3: Vessels up to 137.2 m. length, depth 7.3 m. (C.D.). Ro/Ro Bridge No. 4: Depth 9.75 m. (C.D.). Vessels up to 213 m. overall.

Tanker Jetty: Vessels 180 m. overall, depth 9.75 m. (C.D.).

All berths subject to siltation between maintenance dredging periods.

HEALTH: Pratique flag in daylight and lighted signals in darkness to be displayed by vessel on arrival. Health Declaration to be given in writing or verbally by Master on arrival. If disease suspected, then report to pilot station who will advise Health Authorities.

Also see "Health – All ports" before first U.K. port.

RADIO: North Foreland, Humber, Niton (or any other radio station convenient to vessel's position).

RADAR/VHF: *Harbour Operations Service:* An Operations Service is operated by the Harwich Haven Authority, and is provided from the Harbour Master's Office, Navigation House, Harwich on a 24-hour basis to provide all vessels using the harbour with navigational information and advice. The following facilities are available:

VHF Radio:	Channel 16	Safety.
	Channel 9	Pilotage and ETAs.
	Channel 71	VTS and Reporting.
	Channel 6	Pilot Launches.
	Channel 69	Tugs.
	Channel 20	Harwich Radar Assistance.
	Channel 11	Harbour Craft.
Telephone:	0255 243000	Harbour Operations.
	0255 243111	Pilot Orders.
Telex:	98472 HAROPS G.	
Fax:	0255 241325	

Dangerous substances in Harbour Areas notifications should be sent by telex or fax 24 hours prior to arrival or at time of leaving last port.

The centre is equipped with comprehensive radio and telecommunications, advanced radar surveillance displays, VHF and direction finding equipment, electronic tide gauges, and wind instruments, to provide full and up to date navigational information to seafarers.

All vessels over 50 gross tons must carry suitable VHF R/T equipment, capable of communicating with the Harwich Harbour Operations Service (Call sign "Harwich Harbour Radio") and must maintain a listening watch on Channel 71 (156.575 MHz) while navigating within the harbour and approaches. Vessels entering or leaving the harbour must contact the Operations Service for permission to navigate through the area, in accordance with the procedures laid down in current Harwich Harbour General Directions for Navigation.

Traffic regulatory procedures exist with respect to the Harwich Deep Water Channel and within other areas of the harbour, depending on circumstances. The Harbour Operations Service will keep vessels suitably advised.

TUGS: Up to 5 tugs (Up to 40 tons bollard pull) join vessels in Harwich Approaches, or where ordered by Pilot. Tugs listen on Channel 16 and Channel 71 (24 hours). Main tug working Channel when engaged in towing is Channel 69.

In addition 3 dock tugs up to 13 tons bollard pull are available. Contact on Channel 71 or via Harbour Operations.

BERTHING: All berthing information available through Harbour Operations via Harwich Harbour Radio, who have direct links to Berthing Master's Office at the Port of Felixstowe.

CONTAINER TERMINALS:

Terminal	*Berth* No.	*Length* (m.)	*Depth* (m.)
Landguard	–	440	9.75 – 11.90
Trinity	1	1,704	11.6
Trinity	2		11.9
Trinity	3, 4, 5		13.4

All berths are dredged annually.

Container Handling Equipment:

Landguard:

Container Cranes:	3 Paceco portainers (1×50 ton and 2×40 tons capacity). 2 Morris ship-shore container cranes (2×50 tons capacity).
Park Gantry Cranes:	13×35 ton Paceco rubber tyred gantry cranes.
Container Park:	26 ha. (ground slots – 3,893 TEU's; capacity – 9,733 TEU's).
Reefer Points:	120 (20 ft.).

Trinity:

Container Cranes:	7 Davy Morris ship-shore container cranes (Post-Panamax) 50 tons capacity. 2 I.H.I./M.G.M. container cranes (Post-Panamax) 50 tons capacity. 2 I.H.I./M.G.M. container cranes 50 tons capacity. 2 Conrad Stork container cranes 50 tons capacity.
Park Gantry Cranes:	(All 35 tons capacity – rubber tyred gantry cranes) 26×Davy Morris, 5×M.G.M., 9×Paceco and 4×Morristac.
Container Park:	76 ha. (ground slots – 14,200 TEU's; capacity – 46,600 TEU's).
Reefer Points:	532.

Rail Facilities: All berths are served by rail including 2 Freightliner Terminals, one situated at the Landguard Container Terminal and the other situated at Trinity Container Terminals.

CARGO HANDLING FACILITIES: *General Cargo Division:* 9 mobile cranes up to 33 tonnes capacity and 2 Scotch derrick cranes, capacity 32 tons at 90 ft. radius.

Roll-on/Roll-off Division: No. 1 Berth: P & O European Ferries Terminal. Upper and Lower deck loading ramps. Electric travelling crane, capacity 32 tons at 110 ft., depth 6.7 m. – 7.3 m.

No. 2 Berth: P & O European Ferries Terminal: One hydraulic loading ramp designed to carry loads up to 140 tons. Upper loading ramp designed to carry loads up to 32 tons. Least depth 7.3 m.

No. 3 Berth: Hydraulic loading ramp designed to carry two lanes of traffic with loads up to 140 tons. Electric travelling crane with capacity of 35 tons at 95 ft. radius, least depth 7.3 m.

No. 4 Berth: Allows a combination of Roll-on/Roll-off and container vessels to be accommodated. The hydraulic loading ramp is designed to carry two lanes of traffic with loads of up to 140 tons. Depth 9.75 m.

STEVEDORES: 24 hours notice required by Agent to advise stevedores of vessel's ETA, in order to arrange berthing and allocation of labour. All stevedoring arranged between Dock Company and vessel's Agent.

MEDICAL: Prior notice desirable through Agent to arrange attention. All services available.

TANKERS: 4 in. and 6 in. connections. No slop facilities, except as required by MARPOL Regulations. No facilities for gas freeing alongside or in harbour.

One tanker berth available. Vessels up to 180 m. overall, 25,000 tons displacement and max. draft 9.1 m. at C.D.

DENSITY: 1025 salt water.

FRESH WATER: Pipeline connections to all quays. Delivery approx. 40 t.p.h. Tug service available for supplies to vessels at anchor.

FUEL: Marine diesel and gas oil available, pipeline and barge delivery. 24 hours notice required.

FIRE PRECAUTIONS: Standard precautions at all berths.

CONSULS: Royal Swedish Vice-Consul, Harwich 241063; Icelandic Vice-Consul, Felixstowe 285651/4; Netherlands and Germany, Harwich 506666; Finnish Honorary Consul, Felixstowe 604500.

REPAIRS: Facilities exist for small repairs only.

DRY DOCKS: None available.

OPENING/CLOSING HATCHES: Work undertaken by crew.

CERTIFICATES: Valid Derrick and Rigging Certificates, Ship's Register, Load Line, (Light Dues Receipts), Safety Equipment, Radio, Derat. Construction.

CUSTOMS ALLOWANCES: 100 cigarettes or equivalent in tobacco or cigars per man. 1 bottle spirits.

REPATRIATION: All facilities available.

AIRPORTS: Ipswich – 10 miles; Stanstead – 65 miles; Southend – 70 miles; Heathrow – 90 miles. International flights.

Air UK flights from Norwich to Aberdeen, Amsterdam, Bergen, Edinburgh, Humberside, Leeds/Bradford and Teesside.

TIME: GMT. In Summer months, April to October, time advanced 1 hour.

HOLIDAYS: Shipwork every day except Christmas Day. Parks and warehouses closed at Easter and Christmas/New Year. Exact dates and times advised in advance.

POLICE/FIRE/AMBULANCE: Emergency points on all quays. Tel. 4300 or, outside dock area, 999.

TELEPHONES: Shore connections available by prior arrangement for vessels on regular trades.

SERVICES: Most services available for dry cargo vessels, but no special tank cleaning or tank washing facilities for tankers.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Not necessary if in possession of Seaman's Book or Passport.

GARBAGE DISPOSAL: Skips are placed at strategic points on quayside, and are emptied as and when required by Hales Waste Control, Papermill Lane, Bramford, Ipswich, IP8 4DE (Tel: 0473 831725) who can also arrange to dispose of excessive amounts of waste.

WASTE OIL DISPOSAL: Can be supplied by Hunting Secon Ltd., Cecil House, 27 High Street, Hoddesdon, Herts EN11 8UZ. Tel: 0992-451848. Fax: 0992-446596. They will collect sludge and waste oil by 20 ton tanker lorry. Any reasonable quantity can be accepted. 24 hour/7 days a week service. Cost on application, depending on water content, no special berth necessary.

SEAMEN'S CLUBS: Felixstowe Seafarers Centre, The Dock, Felixstowe (Tel: 0394-673599). Facilities include games room, pool table, TV, darts, table tennis, food available, shop, international telephone, church services, minibus collection, postage facilities. Open 7 days a week.

CURRENCY: U.K.Pound (U.K.£).

GENERAL: ETA to Agent required 72 hours, 48 hours, and 24 hours prior arrival.

DEVELOPMENTS: Trinity Terminal Quay is to be extended Northwards by a further 630 m. Three new Post-Panamax gantry cranes will be added to the 13 gantry cranes already on Trinity Terminal. The development which will increase capacity by 300,000 containers per annum is due for completion by 1996.

AUTHORITY: Felixstowe Dock & Railway Co., Tomline House, The Dock, Felixstowe, Suffolk IP11 8TB. *Tel:* Felixstowe (0394) 604500, 604789. *Cables:* Dock, Felixstowe. *Telex:* 98277 or 98535 (Operations). *FAX:* 0394 604653. *Contact:* D. Harrington, Managing Director. P. Bennett, Executive Director and General Manager. D. Barr, Director of Operations. Captain J.M. Bubb, Port Operations Manager.

FISHGUARD: 52.01 N. 04.58 W. (See Plan)

DOCUMENTS: See "Cardiff".
PILOTAGE: Local Pilot available on request. Pilotage compulsory.
ANCHORAGES: Eastward of a line joining Northern and Eastern breakwaters.
MAX. SIZE: Max. draft 18 ft.
HEALTH: See "Health – All ports" before first U.K. port.
RADIO/VHF: Fishguard Radio, VHF Channel 16 and 14.
TUGS: None.
FACILITIES: Stern loading, car and Roll-on/Roll-off Ferry Port. Also Lift-on/Lift-off crane of 22 tons.
CRANES: 1×6 tons and 1×22 tons.
STEVEDORES: No stevedores – vessels worked by Stena Sealink staff.
MEDICAL: Doctors available. Hospital facilities 16 miles away.
DENSITY: 1025.
FRESH WATER: Available alongside quay.
FUEL: Available with prior warning.
GANGWAY/DECK WATCHMEN: Ship's crew.
OPENING/CLOSING HATCHES: Crew.
REPAIRS: Minor repairs by Stena Sealink workshops and contractors.
SURVEYORS:
1. Cargo Surveyor: Captain D. Hughes, tel: Fishguard 873880.
2. Lloyd's Surveyor: Tel: Milford Haven (06462) 4811.

CUSTOMS ALLOWANCES: (Crew allowance) 40 cigarettes. No wine or spirits unless proceeding on leave.
AIRPORT: Cardiff, Swansea and Haverfordwest.
POLICE/FIRE/AMBULANCE: Dial 999. British Rail police and Stena Sealink Port Supervisor on duty 24 hours.
EMERGENCY CO-ORDINATION CENTRE: Coastguard – Tel: Dale 218.
BANKS: Barclays Bank, The Square, Fishguard, Dyfed. Tel: Fishguard 873226. No telex.
Midland Bank, West Street, Fishguard, Dyfed. Tel: Fishguard 872232. No telex.
Lloyds Bank, West Street, Fishguard, Dyfed. Tel: Fishguard 872309. No telex.
STORING: See "Prelims".
1. Vessel can be stored by barge or truck, limited space of approximately 15 ft. width available for trucks.
2. Loading of stores can be carried out from barge with ships equipment.
3. Trucks of limited size can proceed alongside berth.
4. Fork lifts can be used to handle stores.
5. Prior notification to local customs,.
6. Stena Sealink can assist with stores if given prior notification.

SHORE LEAVE: Allowed.
AUTHORITY: Stena Sealink Ports Ltd., Fishguard Harbour, Goodwick, Dyfed, SA64 0BU. *Tel:* Fishguard (0348) 872881. *FAX:* (0348) 874699. *Contact:* N. Saul, Ship and Port Manager.

FLEETWOOD: 53.55 N. 03.00 W. (See Plan)

LOCATION: The Port of Fleetwood is situated on the Lancashire coast approximately 38 km. (24 miles) North West of Preston and 42 km. (26 miles) South West of Lancaster.
DOCUMENTS:
Manifests.
Bills of Lading.
Ship's papers.
Crew Lists.
Customs Documents.
Health Documents.
PILOTAGE: Pilot to be picked up off No. 1 Fairway Buoy. Ordered through ship's Agent giving 24 hours notice of ETA.
ANCHORAGES: Good anchorage 1.0 miles North of Fairway in outer limits of harbour in Lune Deeps in 14 fathoms.
RESTRICTIONS: Vessels under power must not navigate any portion of this harbour above Beacon No. 11 at a greater rate of speed than is necessary to navigate safely, also on passing other vessels, either steam or sail, hopper barges, pontoons in tow, etc., in the channels outside the above mentioned Beacon No. 11 and within harbour limits due care must be taken to pass them at a rate of speed that will not cause risk from displacement or what is commonly called "backwash", and that all vessels must be navigated in this harbour strictly in conformity with Rule 9 (Narrow channels) contained in the Collision Regulations for Preventing Collisions at Sea, 1972.

Vessels bound into Fleetwood must not enter the river without being sure they have sufficient depth of water to ensure their getting to the quays or piers to which they are bound.

In the event of any vessel grounding on the "Tiger's Tail" or in any other part of the Fleetwood Harbour, the Master shall not attempt to refloat the vessel by reversing the engines, or by any other means whatsoever, until all incoming vessels following have passed the stranded vessel and the channel is clear of shipping.

Locks are normally open from 2 hours before HW to 1 hour after HW.
MAX. SIZE: (Within enclosed docks): 107 m. LOA: 14.1 m. beam.

So far as draft is concerned, allowances have to be made for clearing the lock invert. These allowances vary according to the beam of the ship and the following scale may be taken as a guide:

Beam of Vessel (m.)	*Clearance Required* (m.)
11.28	0.69
13.41	1.22
14.02	2.21
14.17 maximum	3.12

HEALTH: See "Health – All ports" before first U.K. port.
RADIO: VHF Port Operations and Information Service. Call sign: Fleetwood Harbour Radio Channel 16 (156.80 MHz): Calling and Safety. Channels 11 and 12: Port Operations.

All movements of vessels arriving for and sailing from the Harbour and Docks are controlled by the Harbour Master using the VHF Port Operations and Information Service located in the Harbour Master's Office on the West side of Fleetwood Harbour. (Lat. 53° 55′ 30″ N., Long. 3° 00′ 12″ W.). This service is operated for the 24 hour period, and vessels must maintain a listening watch when approaching or leaving the Port. Messages must be restricted to matters appertaining to general navigation, berthing instructions and the safety of ships or persons within the Port Area. Messages of any other nature will not be accepted.
TUGS: Tug service available.
BERTHING: Under normal conditions the lock gates operate for 2 hours before and after HW.

There is a Roll-on/Roll-off berth in the harbour. This is a twice daily service to Larne for wheeled vehicles and trailer loads and a daily service to Warrenpoint.

Dock	*Quay Length (Total)* (m.)	*Depth of Water (Absolute Min.)* (m.)	*Max. Size of Vessel* *Length* (m.)	*Beam* (m.)	*Draft* (m.)	*Approx. d.w.t.*
Fish Dock	800	5.5	107	14.1	5.5	3,500
Harbour/	To suit vessel					
Ro-Ro Berth	150	4.5	152	20.3	4.2	5,000
Isle of Man Berth	91	As required	107	—	4.2	—

Fish Dock: Modern facilities for fish handling, marketing and processing are available operated by Fish Handling (Fleetwood) Ltd. and a large number of wholesale fish merchants.

Ro-Ro Berths: Separate berths handling Irish Sea and Isle of Man freight and passenger ferry services are located within the port. Ample land is available for development of Ro-Ro business.
MEDICAL: Ship's Agent will organise medical attention if required.
DENSITY: 1015 at half tide; 1025 at high water.
FRESH WATER: Fresh water available through stand pipes. Charge according to consumption (sliding scale).
FUEL: All grades of fuel available.
FIRE PRECAUTIONS: No specific requirement outside usual "No smoking" precautions.
GANGWAY/DECK WATCHMEN: Ship's watchmen required.
OPENING/CLOSING HATCHES: Normally carried out by crew.
REPAIRS: One slipway located in Fish Dock with lifting capacity of 1,050 tons.
REPATRIATION: Arranged through ship's Agent.
AIRPORT: Squires Gate, Blackpool, 10 miles away.
TIME: GMT in Winter. GMT plus 1 hour in Summer months.
HOLIDAYS: Christmas Day and Boxing Day; New Years Day; Good Friday and Easter Monday; Spring Bank Holiday; May 1st; Autumn Bank Holiday.
POLICE/AMBULANCE/FIRE: Police 999; Ambulance 999; Fire 999.
TELEPHONES: Can be arranged through Post Office.
SERVICES: Compass adjusting.
SHORE LEAVE: Crew members are allowed ashore.
GARBAGE DISPOSAL: Service available through Wyre Mini Skips (Tel: 872171, mobile: 0860-771530) every working day.
WASTE OIL DISPOSAL: Service available through B & M Salvage Fuels, Fleetwood (Tel: 779650).
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: Associated British Ports – Fleetwood, Dock Office, Wyne Dock, Fleetwood, Lancs. FY7 6PP. *Tel:* (0253) 872323. *Telex:* 777296. *FAX:* (0253) 777549. *Contact:* Captain J. Green, Port Manager. Captain P.L. Sherry, Pilot/Harbour Master. C. Couper, Port Superintendent.

FOSDYKE BRIDGE: 52.52 N. 00.02 W.

APPROACHES: Common approach channel shared with Port of Boston.
PILOTAGE: Compulsory. A joint service for the two ports is provided in conjunction with the Port of Boston Authority. Tel: 0205-362114. VHF Channels 16and 12.
MAX. SIZE: Spring tides: Draft up to 5.0 m.; LOA 58 m. (exceptionally *with prior approval* 59 m. – 90 m.).
Lowest Neap tides: Draft 2.8 m.; LOA 50 m. – 52 m.
VHF: Fosdyke Port Radio operates on Channel 12. A listening watch is maintained during shipping movements on the River Welland.
TUGS: Service operated by wharfingers.
BERTHING: Private wharf 69.50 m. long, giving 1/2 berths alongside or vessel up to 90 m. LOA, subject to hold length not exceeding 70 m. The wharf is situated on the North bank of the river, operated by Port of Fosdyke Ltd.
FRESH WATER: Available.
GARBAGE DISPOSAL: A skip is provided for disposal of domestic refuse, etc.
WASTE OIL DISPOSAL: Not available.
SEAMEN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: Port of Fosdyke Ltd., Fosdyke Bridge, Boston, Lincs. PE20 2DB. *Tel:* Fosdyke 0205-85240. *FAX:* 0205-85400. *Contact:* A. Blay or Mrs. P. Fish.
AGENT: Welland Ships' Agents, Fosdyke Bridge, Fosdyke, Boston, Lincs. PE20 2DB. Tel: 0205-85240. Fax: 0205-85400. Contact: A. Blay or (After hours – K. Peak, Tel: 0406-425092).

FOWEY: 50.20 N. 04.39 W. (See Plan)

PORT LIMITS: The whole of the Fowey River to a line across the entrance to the harbour. A vessel is considered to have arrived on entering the harbour unless she is anchored just outside by the Pilot to await suitable conditions for entering, in which case she is considered to have arrived on being so anchored.

DOCUMENTS:

Crew and Passenger Lists are essential, using IMO forms.
Aliens List is essential.
List of Bonded Stores, including beer.
List of Personal Dutiable Articles owned by Crew.
Bill of Health, if available.
Derat Certificate.
Manifest of all cargo on board.
Copies of Bills of Lading.
Stowage plan, if available.
Normal Ship's Papers.

PILOTAGE: Compulsory within the harbour limits. Vessel requiring Pilot gives ETA as far in advance as possible to Agent. Vessel displays normal signals off port. VHF calling Channel 16, working Channel 9. Pilot cutter (LOA 55 ft.) has a black hull and orange upperworks. The Pilot boards off entrance. Vessels can anchor South of entrance if necessary.

Pilots VHF station open for messages from arriving ships up to 2 hours before time of ETA received by Agent. Pilots telephone No. 0726-870291 (calls are automatically diverted to duty pilot).

RESTRICTIONS: Vessels can enter at any time, if their draft is less than 18 ft. Otherwise according to tide. Depth of ship channel at LWOST – 22 ft.

MAX. SIZE: LOA 540 ft., beam 60 ft. Loaded draft of 28 ft. Vessels of this draft have to be handled at or near high water.

Vessels up to 540 ft. in length are handled, but subject to prior consultation with the Harbour Master and owners of the loading berths.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Land's End Radio, Niton, Pendennis or Portishead.

VHF: For arriving vessels see "Pilotage".

Fowey Harbour Commissioners "Fowey Harbour Radio" calling Channel 16, working Channel 12, ECC Ports Ltd., loading berths operators, "Fowey Port Radio", calling Channel 16, working Channel 12. Note: A listening watch is kept on Channel 12. Vessels are requested to call on this channel in preference.

TUGS: Three diesel tugs are available and normally join vessels on entering entrance. Ship's lines usually used. No tug required for vessels under 90 m. in length under normal conditions. Only 1 tug required for vessels under 100 m. length. Two tugs required for vessels over 100 m. length. Harbour Master may require particular vessels to enter with tug assistance.

BERTHING: Vessels waiting for berths are normally moored, using their own anchor with their stern to a buoy. On the berth, vessels require long ropes.

Berth	*Max. LOA (approx.)* (m.)	*Depth of Water at LWOST* (m.)
Jetty No. 3	110	7.0
Jetty No. 4	120	7.3
Jetty No. 5/6	170	6.7
Jetty No. 8	164	8.5

CARGO FACILITIES: The port is specially equipped to handle china clay and ball clay in bulk and to a limited extent in bags. Occasional cargoes of timber are handled. Discharge is by mobile crane. There are 5 berths. Berth No. 4 has a bulk conveyor capable of handling up to about 330 t.p.h., Berth No. 6 up to 500 t.p.h. and Berth No. 8 up to 1,000 t.p.h. Berth No. 3 for liquid slurry coal only. 6 tonne and 3 tonne mobile cranes are available.

STEVEDORES: Earliest ETA possible is required, especially when a vessel arrives over week-end.

MEDICAL: If Medical Officer is required on arrival, advise Agent earliest opportunity. Hospital facilities are available.

DENSITY: River fully salt at all states of the tide.

FRESH WATER: Available at all jetties, delivered by hose and rate very variable.

FUEL: Gas oil only available by bunker barge in port (deliveries by Seatow for quantities over 50 tons from Falmouth or Plymouth) or by road. As much notice as possible is advisable.

CONSULS:

Finland	J. A. Samuel, c/o S.C.U.K. Ltd., Fowey. Tel. 072683–3161
France	J. A. Samuel, c/o S.C.U.K. Ltd., Fowey. Tel. 072683–3161
Denmark	J. A. Samuel, c/o S.C.U.K. Ltd., Fowey. Tel. 072683–3161
Netherland	J. A. Samuel, c/o S.C.U.K. Ltd., Fowey. Tel. 072683–3161

REPAIRS: Fowey Harbour Commissioners have repair facilities for minor repairs and welding.

SURVEYORS: West Marine Surveyors & Consultants Ltd., Consulting Marine Surveyors, Engineers & Naval Architects, The Old Custom House, Brixham, South Devon. Tel: Brixham (080 45) 2604. After normal office hours: Tel: 0803 842925. Cables: Surveyor, Brixham. Telex: 42962 Survey G.

GANGWAY/DECK WATCHMEN: Not normally employed.

OPENING/CLOSING HATCHES: Carried out by crew.

CUSTOMS ALLOWANCES: 200 cigarettes *or* 100 cigarillos *or* 50 cigars *or* 250 grams tobacco. Drink over 22% alcohol 0.5 litre *or* under 22% alcohol 1 litre *or* 1 litre fortified sparkling wine. 2 litres still wine. 50 grams perfume. 0.25 litre toilet water. Half this allowance for vessels arriving from home trade ports which for this purpose is from Elbe/Brest range of ports.

REPATRIATION: Facilities exist.

HOLIDAYS: Saturdays, Sundays, and all Public Holidays.

POLICE/AMBULANCE/FIRE: Telephone 999 or VHF Channel 16.

Emergencies in harbour handled by Fowey Harbour Emergency and Pollution Plan under Harbour Master's direction.

TELEPHONES: No arrangements made for connection on board.

SERVICES: Compass adjusting can be arranged.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Not needed.

DELAYS: There is a possibility of delay in heavy rain and wind.

GARBAGE DISPOSAL: Skips are provided on quays adjacent loading berths. Special arrangements made by agents and ECC Por for Haul Waste to provide specific services. In Summer months a s is afloat in the harbour for leisure craft.

WASTE OIL DISPOSAL: Can be arranged by Agent with contractor

SEAMEN'S CLUBS: Flying Angel Mission to Seaman is in the do area adjacent to agent's office. Tel: 0726 833102/833505.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: Fowey Harbour Commissioners, Albert Quay, Fowe Cornwall PL23 1AJ. *Tel:* 0726-832471. *FAX:* 0726-83373 *Contact:* Captain M.J. Sutherland, Chief Executive and Harbour Maste Captain D.I. Gammons, Deputy Harbour Master.

GARSTON: 53.21 N. 02.54 W. (See Pla

LOCATION: On the North bank of the River Mersey, 10 km. fro Liverpool city centre.

DOCUMENTS, HEALTH: and all general information, refer "Liverpool".

RESTRICTIONS: Locking into/out of Garston commences 3 hou before HW and ceases 3 hours after for vessels up to 76.2 m. lengt Larger vessels enter or leave the dock in the period approximately 1 ho before to 30 minutes after HW, when the dock is open to the river.

MAX. SIZE: Length 152.4 m. and beam 19.2 m.

VHF: Docking and berthing instructions can be supplied through (ca sign) "Garston Docks" on Hague Channel 20, or through Liverpool Po Radar (call sign) "Mersey Radio" on Hague Channels 12, 18 or 22.

BERTHING:

Dock	*Quay Length (Total)* (m.)	*Maximum Size of Vessel* *Length* (m.)	*Beam* (m.)	*Approx Draft* (m.)	*d.w.t.*
Stalbridge Dock	975	152	19.2	8.3	10,000
Old & North Docks	1,405	Old 152	19.2	7.0	6,500
		North 122	19.2	5.5	5,000

Storage and Warehousing: Garston in association with its custome provides covered storage facilities in excess of 16,000 sq.m.

Port Facilities:

	No.	*Capacity*
Cranes – Stalbridge	1 (Scotch Derrick)	32 tonnes
	2	10 tonnes
	2	7 tonnes
	1	6 tonnes
Old	1 (Scotch Derrick)	32 tonnes
	2	7 tonnes
North	2	6 tonnes

Frank Armitt & Son operate, at Stalbridge Dock, a specialised ste handling terminal, offering 1,022 sq.m. of covered storage served b 2×25 tonnes overhead gantry cranes.

A specialised bulk export facility of 2,880 sq.m. at the East side, Nor Dock has recently been developed between Associated British Por and Frank Armitt & Son Ltd.

A bulk loading coal shipping terminal is situated in Stalbridge Doc with a loading capacity of 300 tonnes per hour.

STEVEDORES: *Port Working Hours:* By arrangement.

(a) Garston Port Stevedores Ltd.,
Dock Road, Garston, Liverpool.
Telephone: 051 427 3835
Fax: 051 427 8110

(b) Mersey Stevedores Ltd.,
Johnsons Lane, Widnes, Cheshire.
Telephone: 051 494 1040
Fax: 051 494 1044

(c) North West Stevedores Ltd.,
26-30 South Road, Weston Point, Runcorn, Cheshire.
Telephone: 09285 75926
Fax: 09285 81971

DENSITY: 1025.

FRESH WATER: Available Monday to Friday 0800 to 1600 hrs. A watering required outside of these hours is by arrangement.

OPENING/CLOSING HATCHES: Hatches to be opened and closed b the crew except on request.

AIRPORT: Liverpool Airport, 3 km. distant.

POLICE/FIRE/AMBULANCE: Dial 999 and ask for service required

TELEPHONES: Shore based facilities available.

AUTHORITY: Associated British Ports – Garston, Port Office, Do Road, Garston, Liverpool L19 2JW. *Tel:* 051-427-5971. *FAX:* 051-49 3232. *Contact:* S.F. Pearse, Port Manager.

GIRVAN: 55.15 N. 04.51 W. (See Plan)

DOCUMENTS: Normal U.K. documentation. H.M. Customs attendance obtained by contacting Harbour Master.
PILOTAGE: By local fishermen only – contact Harbour Master.
ANCHORAGES: To seaward clear of channel approaches. This area is hazardous in gales, particularly from the N.W.
RESTRICTIONS: Draft occasionally restricted at MLWS due to siltation. Harbour Master will advise on water depths available.
MAX. SIZE: LOA 50 m., beam 9 m., draft 3.5 m. Vessels with max. draft will only be moved at or near HW.
HEALTH: Under H.M. Customs control.
RADIO: ETA messages, etc. via Portpatrick Radio Station, Call on 2182 kHz – VHF Channel 16 (British ships may call on 2381 kHz but listen on 1792 kHz).
VHF: Harbour VHF ship to shore available 0900 – 1700 hrs. daily, Monday to Friday inclusive. Calling: Channel 16; Working: Channel 12.
TUGS: None.
BERTHING: South Pier Quay: 107 m. long, depth 2.1 m. MLWS.
Ailsa Berth: 49 m. long, depth 2.2 m. MLWS.
Fish Wharf: 42 m. long, depth 2.1 m. MLWS.
Fish Quay: 62 m. long, depth 2.2 m. MLWS.
Note: Fish Wharf and Fish Quay used only for fishing vessels.
CRANES: No port cranes available. Mobile cranes can be hired from local companies.
MEDICAL: Small local hospital, contact Harbour Master for assistance.
DENSITY: Water brackish, being sea water with fresh water river discharge.
FRESH WATER: Available.
FUEL: Diesel fuel only.
FIRE PRECAUTIONS: Normal safety procedures.
CONSULS: None, nearest at Glasgow.
REPAIRS: Small engine and deck gear repairs may be carried out alongside.
DRY DOCKS: None. 2 slipways, max. length of vessel which can be slipped, 21 m. – 33 m. overall.
SURVEYORS: Not available.
GANGWAY/DECK WATCHMEN: None. If desired would have to come from ship's crew.
HATCHES: Worked by crews.
CUSTOMS ALLOWANCES: Apply to H.M. Customs Officers.
CARGO GEAR: Hire-in mobile cranes or ship's own gear.
REPATRIATION: No arrangements.
AIRPORT: Prestwick, distance 38.4 km. Glasgow, distance 91 km. Internal U.K./Europe/Scandinavian and North Atlantic services.
TIME: Winter – GMT. Summer – March to October, British Summer Time i.e. 1 hour ahead of GMT (dates as announced).
HOLIDAYS: Cargo working unlikely on Christmas Day and New Year's Day.
POLICE/FIRE/AMBULANCE: In emergency dial 999 otherwise telephone numbers are: Police: Girvan (0465) 3587. Fire: Ayr (0292) 267471. Ambulance: Girvan (0465) 2571.
EMERGENCY CO-ORDINATION CENTRE: Marine Rescue Co-ordination Centre, (H.M. Coastguard), Greenock. Tel: Greenock (0475) 29014 or 29988. Telex: 777006.
TELEPHONES: No ship links.
SERVICES: No special services available locally. Compass adjuster available from Glasgow.
BANKS: Local banks only.
STORING: See "Prelims".
3. Yes.
4. Yes.
There is no accommodation for storage.
SHORE LEAVE: Unrestricted after Customs clearance.
IDENTIFICATION CARDS: Clear requirements with Customs.
GARBAGE DISPOSAL: Refuse bin available adjacent to Harbour Master's Office.
WASTE OIL DISPOSAL: No facilities available.
SEAMAN'S CLUBS: None.
REGULATIONS: No unusual regulations.
DELAYS: Normal breakdown/weather delays.
GENERAL: The harbour is formed at the mouth of the river known as "Water of Girvan". The water in the channel and basin is, therefore, a mixture of sea and fresh water.

A breakwater protects the inner part of the channel on the North side. A timber and steel sheet pile jetty protects the basin from river scour. Access is hazardous in N.W. gales.

In 1988 the harbour channel was deepened to give a minimum depth of water of 3 m. at MLWS. Siltation is a continuing problem and the depth available has been reduced as noted in previous sections.

The harbour is primarily a fishing port. However, it is used regularly by small tankers and cargo vessels of the coasting type, bringing in raw materials for local industry. As may be noted, berthing accommodation is very restricted.

AUTHORITY: Strathclyde Regional Council, Department of Roads, 15 Links Road, Prestwick KA9 1QG. *Tel:* Prestwick (0292) 76716. FAX: (0292) 671455. *Contact:* Neil McProvan.
R. Lietch, Harbour Master, Girvan. *Tel:* Girvan (0465) 3648.

GLENSANDA: 56.34 N. 05.32 W. (See Plan)

LOCATION: Glensanda is on the Western shore of Loch Linnhe some 9 miles North of Oban in approximate position 56° 34′ N., 05° 32′ W. Glensanda is over 6 miles along a track from the nearest road and that road is only a narrow highland lane, thus it is necessary to appreciate that Glensanda is remote and that its services are severely restricted. The only commodity that can be supplied at Glensanda is crushed granite.
PORT LIMITS: The limits of the Company's jurisdiction are from position 56° 35.862′ N., 05° 29.982′ W. on the shore, S.E. to position 56° 34.826′ N., 05° 27.922′ W., then S.W. to position 56° 31.165′ N., 05° 33.975′ W., then N.W. to the shore at position 56° 31.839′ N., 05° 35.312′ W.
DOCUMENTS: Usual U.K. requirements. Customs attend from Oban.
APPROACHES: The approaches to Glensanda Harbour and to the berth are deep and clear. The port is well served by a Pilot, mooring launches, lighthouses and beacons. Generally ships will enter Glensanda Harbour in Loch Linnhe through the Firth of Lorne between the islands of Mull and Lismore. Smaller ships can safely enter Loch Linnhe through the Sound of Mull.
PILOTAGE: The pilot boarding station is one mile off Port Donain on the Isle of Mull (in about 56° 24′ N., 05° 37′ W.). If Masters are willing, they may enter Loch Linnhe and take the Pilot at Glensanda's Southern harbour limit (in about 56° 31′ N., 05° 35′ W.). Pilot boards vessels under 10,000 tonnes d.w.t. at the Inner Pilot Station in Loch Linnhe. Thus the position for boarding the Pilot reflects the Master's wishes and judgement. Masters are required to inform Glensanda of their decisions in this respect. Certain ships are not to berth or unberth without the Pilot being on board. Vessels should not enter Glensanda's harbour limits without the Harbour Master's express permission.

Vessels to call Pilot on VHF Channel 14 when they are one hour from the pilot station.

ANCHORAGE: If the berth cannot take the ship for any reason there are many sheltered and safe anchorages in the vicinity. The Harbour Master recommends anchorages:
South of Lismore at 56° 27′ N., 05° 33′ W. (depth 35 m.)
West of Lismore at 56° 32.5′ N., 05° 31′ W. (depth 60 m.)
RESTRICTIONS: Berthing is generally restricted to the hours of daylight, unless the Harbour Master considers conditions for manoeuvring off the berth in the dark are acceptable. Unberthing is performed without regard to light.
MAX. SIZE: Panamax or 100,000 d.w.t. – 120,000 d.w.t. part load.
VHF: The Quarry Office and Pilot maintain watch on Channel 14.
TUGS: 1 tug (25 ton bollard pull). The tug is available at 14 hours notice for berthing large vessels without bow thrusters.
RADIO: Masters should keep Glensanda well informed of their approach with notices to the Glensanda Harbour Master (cable address "Glensanda Oban") 5 days, 3 days, 2 days and 1 day prior to arrival. Over the last 3 days these ETA's should be timed to reach Glensanda for their opening (0700 hrs.) to permit their day's work to be planned and to be ready for the ship.

Ships are asked to guard Portishead Radio Station whilst on passage to Glensanda as the Agent and Harbour Master will use that station by preference should they have a message for the ship.

Masters are especially asked to telex Yeoman (Morvern) Ltd. (See "Authority") with the following details from their previous port:

1. Ship's particulars.
   (a) Ship's name.
   (b) Master's name.
   (c) Flag.
   (d) Radio call sign.
   (e) Satcom number.
   (f) Marine telex number.
   (g) Summer deadweight.
   (h) Gross registered tonnage.
   (i) Number of hatches.
2. Proposed Stowage.
   (a) Tonnage to be loaded in each hold.
   (b) Grade to be loaded in each hold.
   (c) Sequence and Tonnages in which each hold is to be loaded.
3. Pilot Station.
   Advise if the Pilot is to board off Port Donain (3 miles South of Lismore) or at Glensanda's Southern harbour limits. This decision can be revised as the ship approaches Glensanda to reflect current conditions.

BERTHING: The depth of water at the berth is at least 12.3 m. at chart datum. To this depth may be added the rise of tide in the range of 0.2 m. at low water to a maximum of 4.4 m. at high water (spring tides).
LOADING: *Conditions:* The matter of ballast is of particular interest as manoeuvrability must be maintained. The vessel's propeller and thruster must be fully submerged for berthing.

The air draft of the ship loading arm can be raised to 21 m. above the highest high tide, so high that there is no need to ballast deeply to get a ship below it.

The shiploader is intended to load at 6,000 tonnes per hour and has almost to achieve this speed if demurrage is to be avoided on some contracts of affreightment.

It is Glensanda's experience that large bulk carriers (i.e. Panamax class) can berth and rapidly deballast if they approach with their peak tanks, ballast hold and top wing tanks full and their double bottom ballast tanks empty. If the ballast hold is needed for cargo, it is of no concern if its tank top is damp or even has puddles when it is loaded.

CARGO: The aggregate is manufactured in 4 basic grades, by diameter:
(a) 40 mm. – 20 mm. – for rail ballast.
(b) 20 mm. – 10 mm. – for concrete.
(c) 10 mm. – 5 mm. – for road surfacing.
(d) 5 mm.– dust – for various uses.

These basic grades are frequently mixed to form special categories for specific requirements. The final grades must not be co-mingled. For each final grade, hold separation is required.

Base Grades Diameter (mm.)	Stowage Factors (Tonnes per cu.m.)	Angles of Repose
(a) 40 – 20	1.37	36°
(b) 20 – 10	1.45	38°
(c) 10 – 5	1.46	39°
(d) 5 – dust	1.56	43°

(i.e. every grade stows at about 24 cu.ft. to 28 cu.ft. per long ton).

For loading aggregate, holds may be damp, as the material is immune to fresh water. On completion of loading, hatches are to be covered to reduce the weight of rain water in the cargo. However, salt water is an unacceptable contaminant and must be avoided. Hatches must be watertight.

The cargo is loaded by automated shiploader. This machine can span the full length and width of all the hatches of a 60,000 ton – 70,000 ton bulk carrier without having to shift the ship. The loader operates at up to 6,000 tonnes an hour and can distribute the cargo without peaks forming. It is operated from the deck of the ship by radio control allowing direct contact between the ship's staff and the loading supervisor.

Loading is performed around the clock on every day of the year except for Christmas Day and New Year's Day. Rain will not interrupt loading but the shiploader will cease work if the wind speed exceeds 48 knots.

Holds are inspected for cleanliness by Glensanda's staff and must be approved before the Notice of Readiness is accepted and permission to start loading is given. Glensanda's Inspectors will be checking to determine that there are no traces of any previous cargoes or loose scale. Some cargoes, such as coal, petcoke, bauxite, alumina, sulphur and salt, can seriously devalue aggregate and any traces of these materials is unacceptable. Although hold washing is not always necessary, for some grades of aggregate and for some trades it is unavoidable. A covering Letter of Instruction will be issued when hold washing is considered necessary. Holds may be washed with salt water and need not necessarily be dry for loading to start. Thus the ballast hold can be loaded as soon as it has been pumped out.

MEDICAL: Emergency medical services are available. Glensanda has a small airstrip. The Yeoman staff includes first aid men and a doctor is available from Oban's small hospital and Port Appin.

DENSITY: 1023 – 1025.

FRESH WATER: Not available.

FUEL: Not available.

SURVEYORS: If required, surveyors attend from Glasgow.

Belt weight figures used for Bill of Lading.

REPAIRS: Repairs are not to be contemplated, partly because the weather can rapidly deteriorate and partly because there is no service for repairs in the vicinity.

REPATRIATION: Not recommended.

HOLIDAYS: Christmas Day and New Year.

GARBAGE DISPOSAL: No facilities.

WASTE OIL DISPOSAL: No facilities.

SEAMAN'S CLUBS: None.

GENERAL: *Visitors:* To visit Glensanda, other than by ship, needs Yeoman's co-operation. Visitors can take a train to Oban or fly to Glasgow and take a car to Yeoman's Rhugh Garbh depot which is some 10 miles North of Oban on the A828 main road towards Fort William. Yeoman's passenger launches ply on a regular schedule between Rhugh Garbh and the Glensanda Quarry. This journey takes about 30 minutes to cover the 8 miles down Loch Creran and across Loch Linnhe to the quarry.

Harbour Conditions: Loch Linnhe is free of swell as its approaches are well protected by the islands of Mull and Lismore.

The waters of Glensanda Harbour are virtually free of tidal streams at any depth. A sluggish stream of up to 1 knot has been irregularly observed during the fall ebb of spring tides.

Glensanda's times of high and low water are observed to follow closely those of Oban. Glensanda has a tide pole clearly visible from the berth. It is noticeable that the level of high water stands for about 90 minutes after each high tide before falling rapidly.

Wind observations have been made from a meteorological station set on a knoll some half a mile from the berth. At the berth the Harbour Master believes winds are less strong and more inclined to blow from the N.E. or S.W. It is difficult to draw any conclusions, but Glensanda is a windy place. Winds tend to vary in strength and direction in an unpredictable manner though S.W. and N.E. winds do predominate. The berth lies along this S.W./N.E. axis.

Services: Glensanda ought not to be depended upon for any services except those to cover the immediate work in hand of loading aggregate.

Cash: By prior arrangement and transfer, the Agent can supply the Master with cash, in Sterling, on arrival.

Notary: A local Oban Notary can accept Notices of Protest, though the time taken to reach his office and to return to the ship may delay vessel's sailing.

AGENCY: *The Glensanda Harbour Agent:* Morvern Shipping Agency Limited, Rhugh Garbh Depot, Barcaldine, Oban, Argyll, PA37 1SE. Tel: (063 173) 441. Telex: 777792. Fax: (063 173) 460. Cables: "Glensanda Oban".

The Quarry Office maintains radio watch on VHF Channel 14 during office hours and around the clock when a ship is approaching or is in the port.

The Glensanda Harbour Master shares these communication facilities with the Agent. The Harbour Master's Office and home telephone number is (063 173) 537. He may be reached on VHF radio by calling "Glensanda Harbour Master".

The Agent can provide Masters with details of any other services that are required. H.M. Customs attend ships in the normal manner. Masters can always contact emergency services if the Agent is not available through the Oban Coastguard on VHF Channel 16.

AUTHORITY: Yeoman (Morvern) Limited, Rhugh Garbh Depot, Barcaldine, Oban, Argyll, PA37 1SE. *Tel:* Office (063 173) 441. *Telex:* 777792. *FAX:* (063 173) 460. *Contact:* Captain J.A. Jackson, Harbour Master. Tel: (063 173) 537.

GOOLE: 53.42 N. 00.50 W. (See Pla

PORT LIMITS: Goole is a river port with Conservancy jurisdiction to t junction of rivers Humber, Ouse, Trent. However, laytime commenc from commencement of next normal working shift after ship is on be and ship's Agent has issued "Notice of Readiness". This may 0800 hrs. or 1300 hrs. dependent on time of issue of notice.

Precedence of order of arrival of vessels is determined by arrival ti at Ocean Lock Entrance – Goole Docks.

DOCUMENTS:

Bills of Lading/Manifests (prepared by Agents at port of origin).
"Imperfect" Customs Entry.
Request (to work vessel).
*Request for Immigration Officer to be in attendance – if carryi passengers.
*Crew List to Immigration Officer (for foreign personnel).
Ship's Register.

*Ship's Agent will normally notify Immigration Officer.

PILOTAGE: Compulsory from Spurn to Goole, except for vesse claiming exemption by reason of length or by possession of a Pilota Exemption Certificate.

ANCHORAGES: Bull Anchorage on chart of Humber Estuary, or in H Roads, otherwise only on advice of Pilot.

RESTRICTIONS: State of tide, Springs or Neaps. Port entered dur tidal hours, 3 hours 30 minutes before HW to 1 hour (approx.) after H according to draft. Pilots will advise.

Locks: 3 entrance locks, largest being 104 m. long and 24.4 m. wi Depth on sill 8.0 m. (MHWS) and 6.0 m. (MHWN).

MAX. SIZE: Subject to suitable tides, vessels of approximately 100 overall length, 5.5 m. draft, 24 m. beam and 4,500 d.w.t. (approx.) ca be accepted. It should be noted that vessels with a beam in excess 13.4 m. will find certain berths in the port inaccessible due to bridgew restrictions.

HEALTH: Pratique issued by H.M. Customs Waterguard (in absence Port Health Official). Pratique accepted when entering after calling another port in the U.K.

Also see "Health – All Ports" before first U.K. port.

TUGS: Tugs available but not normally used. If required, to be arrang through Ship's Agent.

BERTHING: Berthing instructions given to vessel on arrival at entran locks. No specific requirements.

RADIO: Via Humber Radio, call sign GKZ – call on Channel 16. G ship's name and call sign and pass message.

VHF:

Station	*Call Sign*	*Channel No.*	*Operational Times*	*Remarks*
Vessel Traffic Services Humber, Queen Elizabeth Dock, Hedon Road, Hull	"Vee Tee Ess Humber"	16 12	Continuous watch maintained	Calling and safety Navigation and safe information etc. for Rivers Humber, Ou and Trent.
Blacktoft Jetty	"Blacktoft Jetty Radio"	14	3 hours before HW Goole until 1 hour after HW Goole	Port Operations and berthing instructions for Blacktoft.
Goole Docks	"Goole Docks Radio"	14	Continuous watch maintained	Port operations and docking instructions for Goole.

Also see "Hull".

SPECIALISED CARGO HANDLING FACILITIES: Boothferry Termi for specialised container handling, 26,000 sq.m. hard standing a sheds, equipped with 4 heavy duty fork lift trucks, Liebherr gantry cra and a 70 tonne capacity crawler crane.

Aldam Terminal served by mobile container crane and Scotch Der crane on Jubilee Quay.

1 mobile shiploading conveyor for grain, rate 100 t.p.h.

10×7.5 tonne and 5×6 tonne quay cranes, equipped with suitab grabs for sand, ores, fertilisers, coal, grain, sulphur, scrap, etc.

5 mobile cranes up to 40 tonne capacity and fleet of forklift trucks w capacities up to 35 tonnes and capable of lifting 20 ft., 30 ft. and 40 containers.

3×32 tonne Scotch derrick cranes for container handling, one Stanhope Dock, one at Jubilee Quay East and one at Jubilee Qu West.

50 tonne electric travelling crane for heavy lifts.

2 Ro/Ro ramps for abnormal loads of up to 450 tonnes – otherw no special facilities needed as water is maintained at a constant le

Some bulk liquids (creosote, tar), direct to or from road tanker vehic

Timmgrain Ltd. operate 2 separate silo facilities which g 13,000 tonnes of storage capacity for grain, maize, maize products.

Damac Bulk Handling Ltd. operate 2×3,000 tonne silos for cem cargoes. Discharge rate 180 tonnes per hour.

STEVEDORES: Arrangements made by ship's Agent who shoul given ample notice of time of arrival of vessel.

Port Working Hours:

Monday to Thursday	0800 – 1200	1300 – 1700
Friday	0800 – 1200	1300 – 1600

Overtime available 24 hours a day, 7 days a week.

MEDICAL: Ship's Agent will arrange for attendance of doctor notification. Doctor's, dentists and hospital services available. Sh Agent can arrange service required.

DENSITY: Water in Goole Docks is fresh water and is maintain constant level. Entry is by locks. Density 1000.

FRESH WATER: Delivery by waterboat through hose p Rate 30 t.p.h.

FUEL: All grades available on reasonable notice being given to Sh Agent.

FIRE PRECAUTIONS: No specific precautions unless there exceptional circumstances, when special arrangements can be m with local Fire Service.

CONSULS: France, Netherlands and Denmark.
REPAIRS: All types of deck and engine repairs possible by local ship repairers.
DRY DOCKS: Dry Dock No. 2: 91 m. length, 15.2 m. width at entrance, 4.75 m. depth on sill. One other dry dock. The water in the wet docks at Goole is maintained at a constant level and all dry docks are entered direct from the wet docks.
GANGWAY/DECK WATCHMEN: Necessary. Usually provided from crew. Otherwise by negotiation locally.
OPENING/CLOSING HATCHES: Responsibility of crew.
SHIP CERTIFICATES:

Ship's Register (including load-line)
Ship's Gear Certificates (when gear is used in port)
Radio Safety
Life-Saving
Light Dues
Change of Articles
Derat Certificate

CARGO GEAR: Normally not required, as ample port facilities available.
REPATRIATION: Arranged by Ship's Agent.
AIRPORT: Humberside Airport. Daily services to Amsterdam, Aberdeen, Bergen, Edinburgh, Newcastle, Norwich, Stavanger and Teeside.
TIME: GMT in Winter; GMT plus 1 hour in Summer months.
HOLIDAYS: Facilities available on all Bank Holidays, except Christmas Day, Boxing Day and New Year's Day.
POLICE/AMBULANCE/FIRE: Dial 999 and ask for service required.
EMERGENCY CO-ORDINATION CENTRE: Contact Port Manager's office.
BANKS: Midland Bank, Tel: 762401. Barclays Bank, Tel: 762431. National Westminster Bank, Tel: 764541.
TELEPHONES: No arrangements for ship connection.
GARBAGE DISPOSAL: Waste disposal skips placed at a number of locations on quays. Skips emptied on a weekly basis.
WASTE OIL DISPOSAL: Disposal by road tanker available through ship's agent.
SEAMEN'S CLUBS: Goole Mariners Club, Bridge Street, Goole. Tel: 0405-764730/762058.
CURRENCY: U.K.Pound (U.K.£).
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: May be required to be produced to Immigration Officer or H.M. Customs Offical, especially in the case of foreign flags.
REGULATIONS: Visitors to vessels require permits from Port Authority and Master or ship's Agent. Smoking not permitted ashore in dock area.
AUTHORITY: Associated British Ports – Goole, East Parade, Goole, North Humberside, DN14 5RB. *Tel:* (0405) 762691 (6 lines). Telex: 57626. *FAX:* (0405) 767419. *Contact:* C. Silvester, Port Manager.

GRANGEMOUTH: 56.01 N. 03.43 W. (See Plan)

PORT LIMITS: At Grangemouth a vessel is not considered to be an "arrived vessel" until she is tied up at the allocated berth.
DOCUMENTS:

1 Crew List.
1 Passenger List.
1 List of all high duty goods in crew's possession.
1 Cargo Manifest.
All Valid Certificates.

PILOTAGE: Compulsory in river. Pilot boards at Inchkeith. Pilot boat on VHF, also see "Radio".
ANCHORAGES: North of Grangemouth West Buoy, 2 fathoms. Charleston Roads 5 fathoms. East of Inchkeith, up to 8 fathoms.
RESTRICTIONS: 24 hour locking system in operation depending on draft. The height of the tide must always be taken into account when dealing with larger vessels.
MAX. SIZE: Dry cargo vessels: Length 600 ft., beam 90 ft.

Tankers: Length 575 ft., beam 90 ft. Draft according to state of tide. Vessels other than tankers max. draft 25 ft. 6 in. Tankers, up to 34 ft. max. draft.

HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Wick, Stonehaven and Cullercoats coastal stations and Forth Radio.

Port VHF (FM) Communications: Station: Lock Control Office, Lock Entrance, Grangemouth. This centre will maintain a continuous watch. Call sign: Grangemouth Docks.

Channel 16 (156.8) calling and safety. All vessels should maintain a listening watch on this Channel and use it to establish contact with Grangemouth Docks. Once contact is established the Duty Operator will request vessels to shift to the Port Operations Channel.

Channel 14 (156.7 MHz), Port Operations. A working Channel restricted to messages relating to the movement and safety of ships, and in emergency, to the safety of persons.

Channel 10 (156.6 MHz), Inter-ship. A working Channel for tug-to-tug and tug-to-bridge communications.

Channel 6 (156.3 MHz), Inter-ship. A working Channel for communication with other vessels.

Channel 9 (156.5 MHz). A working Channel for tug to tug and tow to tow communications.

No message of a personal character or messages of any other nature than those pertaining to the general navigation and safety of ships and persons within the Port Area can be accepted.

TUGS: Tugs can join vessel at Hen and Chicken Buoy or Lock Gates and should be pre-booked. Tugs' lines used. 2×25 ton bollard pull tugs available.
BERTHING: The water in Grangemouth Docks is maintained at the same level by impounding pumps. On passing through the lock entrance berthing is allocated according to the nature of the cargo and draft of vessel.

The depth of water available at the berths varies in each dock, the max. depths being approx.: Grange Dock 26 ft.; Carron Dock 23 ft.; Old Dock 17 ft.

CARGO HANDLING FACILITIES: Bulk cargoes can be handled at most berths within the port. The East Wall berth has 4×10 ton grabbing cranes, 2×7.5 tonne mobile cranes are available. Other berths have 10 and 6 ton cranes. 1×35 tonne Scotch derrick. Container berth is 1,000 ft. long and has 2×32 ton transporter cranes.

A Ro-Ro berth in operation. Liquid chemicals and LPG Carriers are handled at the LPG berth and BP jetties. No. 1 North Jetty, which is a common user jetty handles chemicals.

STEVEDORES: No particular advice necessary to stevedores. Essential, however, advise Agent 24 hours prior arrival, who will advise stevedores.
MEDICAL: No advance notice necessary. Hospital facilities available in immediate district.
TANKERS: B.P. Refinery (Grangemouth) Limited. Private jetties in Eastern Channel. South Side Jetties "J2" and "J3" 34 ft. "J4" and "J5" 19 ft. 6 in. North Side Jetties "E1" and "E2" 34 ft. No. 1 North Side Jetty, pipelines connected to Ross Chemical and Storage Co. are 1.5 in. nitrogen line, 6 in. chemical line, 10 in. heavy fuel line, 2 in. fresh water supply, 8 in. motor spirit line, 8 in. gas oil line. Draft at No. 1 North 32 ft. 6 in.
DENSITY: 1019 average.
FRESH WATER: Available in most berths. Watermen supervise delivery on request. Delivery rate varies depending on berth.
FUEL: All grades available from oil installations.
GANGWAY/DECK WATCHMEN: Not necessary but can be done by ship's personnel.
OPENING/CLOSING HATCHES: Custom of port is crew open and close hatches but stevedores will do so if required.
CUSTOMS ALLOWANCES: At the discretion of Local Customs Inspector. Normal allowances are equivalent of 5 ounces tobacco per man and equivalent of 1 bottle of wine per man. Allowances may be halved for home trade vessels. Vessels in port more than 3 or 4 days may receive extra allowances.
CERTIFICATES: For Customs Clearance valid Certificates in respect of Radio, Load-Line, Construction, Safety Equipment, Deratisation, necessary.
CONSULS: Norwegian, Danish and Swedish Consuls available locally.
REPAIRS: All types of repairs can be carried out afloat.
DRY DOCKS: Carron Dry Dock: Length 350 ft., breadth 50 ft., depth 22 ft.
SURVEYORS:

(1) Macleod & McAllister Ltd., Old Granary Office, Meadowside Quay, Glasgow G11.
(2) Thomas Nicol and Son, 11 Bothwell Street, Glasgow G2.
(3) S. A. Greer & Co., 15 North Claremont Street, Glasgow G3.
(4) E. K. Wallace & Son Ltd., 11 Bothwell Street, Glasgow G2.
(5) Lloyd's Register of Shipping, 27 Thistle Street, Edinburgh.

REPATRIATION: All facilities exist.
AIRPORT: 1 hour from Glasgow and Edinburgh airports where numerous connections for London thence world wide travel.
TIME: British Standard Time (1 hour ahead of GMT). GMT during Winter months.
HOLIDAYS: First 3 weekdays in January; Easter Monday; 1st Monday May; 3rd Monday July; 2nd Monday September; Christmas Day and 26th December.
POLICE/AMBULANCE/FIRE: In public telephone dial 999 and ask for appropriate service. With dock circuit telephone dial 222 and ask for Police/Fire/Ambulance.
EMERGENCY CO-ORDINATION: Coastguard Fifeness Tel: 033 35 666. Major Port Emergencies are controlled by the Police dial 999 or contact through Harbourmaster Grangemouth Tel: 486839.
SERVICES: Compass adjusting, calibrating, etc., can be done in river. No equipment for tank cleaning but can accept tank washings ashore.
BANKS: Royal Bank of Scotland, La Porte Precinct, Grangemouth.

Bank of Scotland, La Porte Precinct, Grangemouth.

STORING: See "Prelims".

Vessels may be stored by trucks alongside dry cargo berths. There are no facilities for storing, by trucks, vessels berthed at jetties in Eastern Channel.

Trucks may, by prior arrangement, proceed alongside dry cargo berths to store vessels.

Stevedores fork lifts may be employed to handle ship's stores.

Customs regulations are in force for stores remaining on board. Details of stores, including bonded goods such as spirits, etc., must be supplied to Customs on arrival, and a constant check is kept whilst the ship is in Port. Regarding stores loaded aboard, any bonded goods must be presented to Customs for inspection and approval. Restricted amounts only are permitted.

Local riggers may be employed for storing.

SHORE LEAVE: Allowed.
GARBAGE DISPOSAL: Skips are provided on quayside and are collected as required.
WASTE OIL DISPOSAL: Collection by road tanker by Kelvin Waste.
SEAMEN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: Forth Ports Authority, Dock Office, Grangemouth, Stirlingshire FK3 8UE. *Tel:* (0324) 482591. *Telex:* 777432. *FAX:* (0324) 665106. *Contact:* A. McEwen, Port Manager.

GRANTON: 55.59 N. 03.13 W. (See Plan)

DOCUMENTS: See "Leith".
PILOTAGE: Pilot station Firth of Forth located at Granton, boarding station West of Fairway Buoy at Longitude 3° West. Contact with pilot cutters can be made on VHF Channel 16 and R/T 2182 kHz. Pilotage not compulsory for vessels passing South of Inchkeith Island.
ANCHORAGES: Good holding ground at Leith roadstead 8 m. – 19 m. at C.D. Request should be made to Forth Navigation Service for suitable anchorage position.
RESTRICTIONS: The entrance between the breakwaters is 103 m. in width. The rise of tide, 5.182 m. at Springs and 3.658 m. at Neaps, permits the entry or exit of vessels up to 7.07 m. draft at HW.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Forth, Stonehaven and Cullercoats radio stations.
RADAR/VHF: Port and estuary radar service. Contact should be made with "Leith Harbour Radio" for berthing instructions on VHF Channel 12. Forth Navigation Service should be contacted on VHF Channel 71 by all vessels passing Forth Ports Authority seaward limit (line joining North and South Carr Beacons), working on Channels 20 and 12.
TUGS: Sound signal for vessels requiring tug services is four long blasts. Tugs, if required, join the vessel in the roads. Tugs towing gear available, and compulsory.
BERTHING: Middle Pier: Quayage 210 m. max. depth 5.1 m. LWOST. In addition, there is a 122 m. crosspiece at the end of the pier where depth of water is 5.1 m. LWOST. Ro-Ro ramp available.
West Pier: Closed to all traffic.
MEDICAL: No advance notice of medical attention required. All hospital facilities available.
TANKERS: Jetty closed.
FRESH WATER: Available alongside at all berths.
FUEL: All grades available subject 24 hours notice in advance.
CONSULS: See "Leith".
REPAIRS: Facilities available for all minor repairs.
AIRPORT: Edinburgh Airport, served by regular airlines, situated about 6 miles away.
HOLIDAYS: Public holidays observed annually: Third Monday in April; third Monday in September; Christmas Day (25th December); 26th December; 1st, 2nd and 3rd January.
AUTHORITY: Forth Ports Authority, Leith Port Office, 1 Prince of Wales Dock, Edinburgh EH6 7DX. *Tel:* (031) 554-4343. *Telex:* 72192. *FAX:* (031) 555-1212. *Contact:* Captain H. MacLennan, Harbour Master – Leith and Granton. A.Burns, Port Manager.

GREAT YARMOUTH: 52.34 N. 01.44 E. (See Plan)

DOCUMENTS: Usual U.K. requirements.
PILOTAGE: A 24-hour service is provided, subject to 8 hours notice and confirmation 2 hours before arrival. Pilots can be contacted on VHF Channel 12.
RESTRICTIONS: When large or awkward vessels are navigating within the port, it may be necessary to hold or slow down other vessels.
TRAFFIC CONTROL SIGNALS:
By Night:

(a) When entrance to the Haven is *prohibited* 3 fixed red lights vertically disposed (3 F.R (vert)) 2.0 m. apart, will be exhibited on the South Pier brick building, the lower being at a height of 11.0 m. above MHWS, arc of visibility 235° (T) through 270° (T) to 295° (T) from seaward.

In the event of it not being possible to exhibit these lights, the night signal for prohibiting entrance to the Haven will be the extinguishing of: The Brush Light, the Leading Lights, the Main Light and the South Pier Lights and/or as advised by Yarmouth Port Radio on VHF Channel 12.

(b) Control of vessels proceeding South down the Haven: 3 fixed red lights vertically disposed (3 F.R. (vert)) 2.0 m. apart are exhibited on the North side of the White Port Control Office Gorleston at the root of the South Pier, to indicate that NO vessel when proceeding down the Haven is to come South of the lifeboat shed on the Gorleston side of the river.

In the event of failure of these lights vessels will be advised by Yarmouth Port Radio on VHF Channel 12.

By Day:

(c) The lights as described in (a) when entrance to the Haven is prohibited also the lights as described in (b) for controlling vessels proceeding South down the Haven will also be exhibited during the day. In the event of failure, vessels will be advised by Yarmouth Port Radio on VHF Channel 12.

TIDAL SIGNAL: When the tide is flooding between the piers, a quick flash amber (Q.Am) is exhibited on the South Pier brick building, arc of visibility from 235° (T) through 270° (T) to 295° (T) from seaward.
Also see "Bridges".
MAX. SIZE: Max. length 138 m., max. draft 5.7 m. HWOST.
With a tidal range of only 1.9 m. and a minimum entrance depth of 4.3 m., Great Yarmouth can be used by vessels up to 4,000 d.w.t. and with a length of up to 120 m.
HEALTH: Usual U.K. procedure. Contact Port Health Officer for Derat, Fumigation, Quarantine or Livestock Quarantine.
VHF: Masters of vessels intending to enter the harbour must notify Harbour Master at least 1 hour before arriving off South Pier, giv ETA, max. draft, gross tonnage, any dangerous cargo and last por call (Also see "Pilotage"). Masters must also obtain clearance bef starting to navigate through the entrance between the piers.
Where possible, VHF Channel 12 must be used for giving informa and obtaining clearance to navigate from the Harbour Master.
Yarmouth Radio keeps a continuous watch on Channels 12 and The Haven Bridge operates on Channel 12.
Reporting: All vessels over 50 g.r.t. and any others fitted with VHF m report to Yarmouth Radio when passing Ocean Terminal, Atlas Be and Turntide Jetty (Breydon Water), giving direction of travel.
TUGS: The port's 550 h.p. tug *Hector Read* has a bollard pull of nea 7 tonnes and can be used for all harbour work. It is fully equipped w salvage and fire fighting pumps. Contact should be made through Harbour Master.
BERTHING:
East Side:
Bowling Green Wharf: Length 65 m. Bulk cargoes.
South Quay: Length 475 m. General cargo and Lay-By.
Mayer Newman: Length 98 m. Scrap cargoes.
ABC Wharf: Length 123 m. Repairs afloat.
Atlas Berth: Length 125 m. Ro/Ro berth.
Wood Group Berth: Length 349 m. Offshore vessels and bunker
Milpark Berth: Length 59 m. Offshore vessels.
Phillips Berth: Length 85 m. Offshore vessels.
GY Warehousing: Length 154 m. General cargo and offshore vess
Ocean Terminal: Length 70 m. Common user Ro/Ro terminal.
Amoco Berth: Length 131 m. Offshore vessels.
East Quay: Length 160 m. General and bulk cargoes.
Lay-By Berth: Length 100 m. Offshore and general cargoes.
North Discharge Berth: Length 158 m. Lay-by, offshore and gene cargoes.
South Discharge Berth: Length 82 m.
Discharge Bunker Terminal: Length 172 m., offshore and gene cargoes.
Ventureforth Marine Base: Length 320 m. Offshore vessels.
West Side:
Clarkes Quay: Orfeur & Bellin. Length 78 m. Wheat and tim imports.
Bunns Quay: Length 125 m. Fertiliser imports.
Southtown Wharf: Length 73 m. General and bulk cargoes.
British Gas berth: Length 76 m. Offshore vessels.
Turmerics Berth: Length 170 m. Fabrication Yard.
Portland Wharf: Length 120 m. Offshore vessels.
Richards Shipbuilders: Length 152 m. Ship construction repair ya
Palgrave Browns: Length 225 m. General and bulk cargoes.
Yeoman Berth: Length 179 m. General and bulk cargoes.
Bollard Quay: Length 394 m. General cargoes and lay-by.
Gas House/EAE Quay: Length 370 m. Offshore vessels and gene cargoes.
CRANES: The Port Authority have 5 mobile cranes, including 3 that lift up to 24 tonnes and one that can lift up to 32 tonnes. All are equip with grabs and hooks. Truck mobile cranes up to 80 tonnes S.W.L higher are available from the Port Authority.
BRIDGES:
Haven Bridge Lights:
1. Western Buttress: At both the North and South ends, 2 fixed red li vertically disposed (2 F.R. (vert)).
2. Eastern Buttress: At both the North and South ends, 2 fixed gr lights vertically disposed (2 F.G. (vert)).
3. At Centre Span: On both the North and South sides, a fixed red (F.R.).
4. Traffic Control Signals: By Day and Night.
When *passage* through the bridge is *prohibited* from the South g upriver, 3 fixed red lights vertically disposed (3 F.R. (vert)) wi exhibited above the Eastern Buttress.
When *passage* through the bridge is *prohibited* from the North g downriver, 3 fixed red lights vertically disposed (3 F.R. (vert)) wi exhibited above the Western Buttress.
In the event of failure of these lights, vessels will be advised by Haven Bridge Master on VHF Channel 12.
Breydon Bridge Lights:
1. Southern Buttress: On both the upriver and downriver ends, 2 f red lights vertically disposed every 5 seconds (2 Fl.R. 5s (vert)).
2. Southern Dolphins: On both the upriver and downriver, 2 fixed lights vertically disposed (2 F.R. (vert)).
3. North Buttress: On both the upriver and downriver ends, 2 flash g lights vertically disposed every 5 seconds (2 Fl.G.5s (vert)).
4. Northern Dolphins: On both the upriver and downriver dolphins, 2 green lights vertically disposed (2 F.G. (vert)).
5. At Centre Span: On both the upriver and downriver sides, a f amber light (F.Am.).
6. When the bridge is lifted above a 45° angle, on each side nea end of the lifting span, a fixed red light is exhibited (F.R.) (Aircraft wa light).
7. Traffic Control Signals: By day and night.
When *passage* through the bridge is *prohibited* going West up on to Breydon Water, 3 fixed red lights vertically disposed (3 F.R. will be exhibited on the main structure of the bridge on the Sou Buttress.
When *passage* through the bridge is *prohibited* going East dow towards Haven Bridge, 3 fixed red lights vertically disposed (3 F.R. will be exhibited above the Control Building.
In the event of failure of these lights, vessels will be advised b Breydon Bridge Operator on VHF Channel 12.
8. Restricted Visibility – Fog Signal: This is a horn which gives 2 every 30 seconds (2 Bl.ev 30s).
STEVEDORES: There are various stevedoring companies offeri range of services for offshore and cargo vessels.

MEDICAL: Doctors and dentists can be arranged through Agents. Hospital facilities available.

FRESH WATER: Water is available on most operational quays.

FUEL: Wood Group operate two bunkering facilities with a gas oil delivery rate of up to 100 t.p.h. Storage capacity about 3,000 tons and 1,200 tons, depending on berth.

CONSULS: Belgium: Consul, Harwich. Tel: (0255) 252101.
Denmark: Vice-Consul, Great Yarmouth. Tel: 856831.
Finland: London Embassy. Tel: (071) 235-9531.
France: Consul, London. Tel: (071) 581-5292.
Italy: London Embassy. Tel: (071) 235-8643.
Netherlands: Vice-Consul, Great Yarmouth. Tel: 856831.
Norway: Vice-Consul, Great Yarmouth. Tel: 850431.
Spain: London Embassy. Tel: (071) 235-5555.
Sweden: Consul, Felixstowe. Tel: (0394) 673884.

REPAIRS: Several ship repair companies are located in Great Yarmouth and most types of repairs can be undertaken.

DRY DOCKS: Richards (Shipbuilders) repairs ships up to 85 m. long and 12.5 m. beam. Sill depth 4.4 m. at MST. Also a shipbuilding berth.

SURVEYORS: Both Marine and Cargo Surveyors can be arranged through the Agent.

AIRPORT: Flights are available by helicopter and light aircraft from North Denes Airfield, 5 km. from the North of the town.

Air U.K. operate scheduled daily flights from Norwich to British and Continental destinations.

TIME: GMT. Summertime (GMT plus 1 hour) kept from March to October.

POLICE/AMBULANCE/FIRE: Dial 999 in an emergency.

SEARCH AND RESCUE CO-ORDINATION CENTRE: H.M. Coastguard, Tel: 851338.

SERVICES: Compass adjusting can be carried out.

As this port services the oil industry, many types of oil-related services are available from several companies.

BANKS: Barclays Bank plc. Tel: Gt. Yarmouth 856266.
Lloyd's Bank plc. Tel: Gt. Yarmouth 855177.
Midland Bank plc. Tel: Gt. Yarmouth 843631.
National Westminster Bank plc. Tel: Gt. Yarmouth 857521.

GARBAGE DISPOSAL: Regular collection service from alongside by waste disposal company. Domestic refuse must be double wrapped prior to disposal.

WASTE OIL DISPOSAL: Waste oil disposal by various companies arranged direct or via local ship's agents.

SEAMEN'S CLUBS: British Sailors Society, South Denes Road, Great Yarmouth, Norfolk, Tel: 0493 331222.

CURRENCY: U.K.Pound (U.K.£).

DEVELOPMENTS: There are plans for the development of an outer harbour.

AUTHORITY: Great Yarmouth Port Authority, 20/21 South Quay, Great Yarmouth, Norfolk NR30 2RE. *Tel:* (0493) 855151. *FAX:* (0493) 852480. *Telex:* 975102 (Gyportg). *Contact:* M.C.M. Boon, Chief Executive. M.L. Goodall, Commercial and Marketing Manager.

Operations and Dangerous Goods: Captain A. Goodlad, Harbour Master. *Tel:* (0493) 855153. *Telex:* 975367 Gyuts. *FAX:* (0493) 653464.

GRIMSBY: 53.34 N. 00.04 W. (See Plan)

VESSEL TRAFFIC SERVICES HUMBER: See "Hull".

NOTICES: See "Hull".

DOCUMENTS: See "Immingham".

PILOTAGE: See "Immingham".

ANCHORAGES: Hawke and Sunk Roads, Haile, Spurn and Bull Anchorages. See "Hull". The Pilots will advise where to proceed to anchor and also provide Pilot.

RESTRICTIONS: See "Berthing" – entrance locks.

MAX. SIZE: Maximum breadth 20.6 m., maximum length of vessel that can be locked 81.7 m. but vessels of greater length can enter docks on HW when all lock gates are open. 0.91 m. clearance under the keel is required. Vessels having a draft of 5.8 m. can normally enter the docks on any tide when the height of water is sufficient to allow 0.91 m. clearance. Vessels with 6.4 m. draft can be taken on spring tides. Vessels can enter usually approx. 3 hours before and 2.5 hours after high water.

Commercial Docks: Max. LOA 145 m., draft 5.8 m., beam 20.6 m.
Fish Docks: Max. LOA 73 m., draft 5.5 m., beam 12.8 m.

HEALTH: Master has to report any "Reportable" illness as detailed in Form "Port 38" to "Porthealth Grimsby". Also see "Health – All Ports" before first U.K. port.

RADIO: Humber Radio, 2182 kHz, or VHF Channel 16. Also see "Hull".

VHF: See "Hull" – Vessel Traffic Services Humber.

TUGS: Normally join in Grimsby roads. Optional whether use ship's or tug's lines. Tugs operate from Immingham so plenty of notice required.

BERTHING: *Grimsby Docks:*

	Commercial Docks	Fish Docks
Entrance Locks:		
Length	90.0 m.	21.4 m.
Width	21.4 m.	13.0 m.
Sill level MHWN	6.8 m.	6.8 m.
Quay cranes	11 electric – capacity 3 to 7.5 tonnes	1 mobile – capacity 15 tonnes

There are 2 Ro/Ro berths in the Royal Dock, one to/from Esbjerg and a second to/from Norway. There are also 2 Ro/Ro berths in the Alexandra Dock for motor vehicles.

There is a Lo/Lo Terminal operated by Humber Terminals Ltd. on the West side of the Royal Dock. It is equipped with a 35 ton gantry crane. Present users are Floatline with two sailings a week to Sweden and one sailing a week to Norway for Scott Line.

STEVEDORES: Vessels are allocated labour in order of arrival so it is only necessary to give the Agent the ETA preferably before noon on the previous day. Normal working hours 0800 – 1700 hrs., Friday 0800 – 1600 hrs. Overtime can be worked 1700 – 1900 hrs. Monday to Thursday. On Saturdays and Sundays as required.

MEDICAL: Hospitals and all other medical facilities are readily available. If immediate attention is required on arrival please advise Agent by radio or telegram.

FRESH WATER: Available at all quays. Rate approx. 20 t.p.h.

FUEL: Normal gas and diesel oils available by both road and barge with at least 24 hours notice. This is also quayside tankage in fish docks.

CONSULS:

Belgium, Vice-Consul	Hull	227255
Denmark, Vice-Consul	Grimsby	357521
Finland, Consul	Immingham	571387
France, Consular Agent	Grimsby	47221
Germany	Hull	25781
Greece, Vice-Consul	Hull	224151
Iceland	Grimsby	357543
Netherlands, Vice-Consul	Immingham	76246
Norway, Vice-Consul	Hull	224151
Sweden, Vice-Consul	Immingham	571387

REPAIRS: Facilities are available for all deck and engine repairs.

DRY DOCKS: None.

SURVEYORS: See "Immingham".

GANGWAY/DECK WATCHMEN: Not necessary, but the service is available if Master requires it.

OPENING/CLOSING HATCHES: Responsibility of the crew. The hatch beams can be removed and replaced by the shore cranes but there is an extra charge for this operation.

CUSTOMS ALLOWANCES: 200 cigarettes per 8 days. 1 bottle wine and 1 bottle spirits per 4 days. All seals to be broken.

CARGO GEAR: In accordance with the regulations laid down by H.M. Factories Inspector.

REPATRIATION: Can be arranged if required.

AIRPORT: Humberside, 15 miles from Grimsby, daily service to Amsterdam (3 flights daily), Bergen, Stavanger, Norwich and Aberdeen. Easy access to all major airports via rail, etc.

Leeds Bradford Airport, 3 flights daily to Amsterdam, Aberdeen, Belfast, Norwich, Paris and Edinburgh. One flight to Dublin.

HOLIDAYS: New Year's Day; Christmas Day; Boxing Day; Good Friday; Easter Sunday and Monday; May Day; Spring Bank Holiday (end May); Late Summer Bank Holiday (end August). All except Christmas Day, New Year's Day, Good Friday and May Day can be worked as overtime if sufficient staff are willing.

POLICE/AMBULANCE/FIRE: Port Security 352713; Grimsby Police – Grimsby 359171. Emergency – Police/Fire/Ambulance 999.

EMERGENCY CO-ORDINATION CENTRE: See "Immingham".

TELEPHONES: Not available for connection on board.

SERVICES: Compass adjusting, tank cleaning, etc., are available.

BANKS: See "Immingham".

STORING: See "Immingham".

SHORE LEAVE: Crew are allowed ashore.

IDENTIFICATION CARDS: Some sort of identification whilst crew are ashore is advisable. (Seaman's Book or Passport).

GENERAL: The Grimsby Dock Master can be contacted on VHF Channel 16 and then change to Channel 18 or 9 for speaking.

GARBAGE DISPOSAL: In dock, collection service available alongside vessels using private hire skips for kitchen/galley waste. Contact BIFFA. Tel: 0472 351185. Some port authority skips available on the quayside for dunnage waste disposal only.

On the jetties, garbage skips are available.

WASTE OIL DISPOSAL: In dock, collection service is made available by tanker trucks alongside vessel. Contact Waste Oil Services (Tel: 0472 827112) and BIFFA (Tel: 0472 351185).

SEAMEN'S CLUBS: Danish Mission, 2 Cleethorpe Road, Grimsby, Tel: 0472 342257.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: Associated British Ports, Port Office, Cleethorpe Road, Grimsby, South Humberside DN31 3LL. *Tel:* (0472) 359181. *Telex:* 52250. *FAX:* (0472) 348275. *Contact:* D. Dunn, Port Manager.

HARTLEPOOL: 54.42 N. 01.12 W. (See Plan)

PORT LIMITS: The Port facilities extend from Hartlepool Fairway Buoy to all berths.

Arrival Time is accepted as time of passing Hartlepool Dock Head or time of anchoring in Hartlepool Bay.

DOCUMENTS: *Ship's Official Papers including:*
Ship's Register.
Ship's Construction Certificate.
Load Line Certificate.
Derat Certificate.
Safety Equipment Certificate.
Radio Equipment Certificate.
U.K. Light Dues Certificate.
Crew List.
Bills of Lading, Manifest and Stowage Plan (Usually sent in advance).
Ship's Stores List.

RESTRICTIONS: Small vessels can berth in outer harbour at any state of tide. Deep draft vessels enter in accordance with tide.

Vessels for the enclosed docks enter or depart from 3 hours before High Water to 1 hour after High Water.

Entrance Channel 1.1 km. long., 65 m. wide. Nominal dredged depth 5.7 m. below LAT.

PILOTAGE: Call by VHF when 2 hours from port and again 30 minutes before arrival. 2 hours required for sailing. VHF Channels 9, 14 and 16. Tel. No. 0642 - 485648.

Pilotage compulsory for:

(a) Vessels of 95 m. LOA and over navigating in Victoria Harbour.
(b) Vessels of 85 m. LOA and over navigating in Impounded Docks.
(c) Vessels requiring services of a tug.

Pilot usually boards in vicinity of Longscar Buoy from a cutter showing the usual international signals.

ANCHORAGE: Vessels are prohibited from anchoring:

(i) Inside the dredged channel.
(ii) Within a radius of 1,113 m. of the charted position of the Fairway Buoy.
(iii) Within the limits of divergent lines starting and extending from the dredged channel limits 244 m. apart at the South Gare Light Station, to 550 m. apart between their respective points of intersection with the circumference of the circle defined in (ii)

Vessels should not anchor within 2.5 cables of the Ekofisk Oil Pipeline or Everest Gas Pipelines.

Caution should be exercised by the Mariners wishing to anchor in Tees or Hartlepool Bays, especially during periods of onshore winds. Local weather forecasts may be obtained from the Coast Guard or Coast Radio Station. Continuous anchor watches must be maintained and frequent confirmation of the vessel's position obtained to ensure the vessel is not dragging. Engines should be maintained in a state of readiness so that the vessel may heave up if required.

MAX. SIZE: Overall length 190 m. Beam 30.5 m., draft of 8.00 m. Vessels approaching any of the max. sizes must consult the Tees Harbour Master in advance. Keel clearance of 1.2 m. required.

HEALTH: The Public Health (Ships) Regulations in force.

Also see "Health – All Ports" before first U.K. port.

RADIO: Cullercoats Radio.

VHF: VHF watch kept on Channels 16 and 12, working Channel 12.

V.H.F. Station	*Call Sign*	*Channel*
Tees Harbour Master	"Tees Port Control"	14, 16
Dock Master's Office	"Hartlepool Harbour Radio"	16,12,11,8.
Tugs "Hart" and "Stranton"	Tug Name	All frequencies
Tees Bay Pilot Cutter	"Tees Bay Pilot"	67,16,14,12,9,6.

TUGS: Two twin screw diesel (1,200 h.p.) tugs available during tidal periods. Tugs ropes available at extra charge.

BERTHING: Victoria Harbour, Deep Water Berth. Length 295 m. Depth 9.5 LAT. Equipped with 5 × 10 tonne cranes. Ro/Ro pontoon available.

Victoria Quay: Length 150 m., depth 9.5 m. 2 × 10 ton cranes and 1 × 7.5 tonne crane.

Irvines Quay: Length 380 m., depth 9.5 m. 3×10 tonne cranes and 1×25 tonne crane.

North Basin (Non-Tidal): Length of Dock 182.87 m. Depth on sill is 3.1 m. below LAT. No Cranes.

Mobile bulk conveyor available in deep water harbour.

STEVEDORES: All stevedoring undertaken by Port Authority on day work basis with voluntary overtime available (including week-ends). Shift working can also be provided.

MEDICAL: Full hospital and emergency services available at all times. Shore Telephone No. 999 or call on VHF 16.

DENSITY: 1025.

FRESH WATER: Available from shore hydrants at 20 t.p.h. Quantities up to 50 tons available by tug.

FUEL: Available by road and bunkering vessels.

CONSULS: Belgium, Denmark, Finland, French Consular Agency, Germany, Netherlands, Norway, Portugal, Sweden.

REPAIRS: Deck and engine repairs available.

SURVEYORS: Hull and cargo surveyors available through Shipping Agent.

GANGWAY/DECK WATCHMEN: Available by private arrangement through Agents.

HATCHES: To be opened and closed by ship's crew.

AIRPORT: Teesside Airport nearby with regular U.K. and Continental Services.

TIME: GMT and BST (GMT plus 1 hour) during Summer months.

HOLIDAYS: Normal Bank Holidays.

EMERGENCY CO-ORDINATION CENTRE: Tees Harbour Office.

STORING: See "Prelims".

1. Yes. 2. Yes – no regulations concerning storing.
3. Yes. 4. Yes.
6. Yes. 5. Normal standing regulations.

IDENTIFICATION CARDS: Seaman's Book or Passport advisable.

GARBAGE DISPOSAL: A skip is provided at the end of the finger pontoon.

WASTE OIL DISPOSAL: No shore facilities.

SEAMAN'S CLUBS: None.

GENERAL: *Charts:* B.A. Charts No. 2566 and 2567.

Depths: All depths given are subject to siltation and updated information may be obtained from the Tees Harbour Master Tel: (0642) 452541.

Tidal and Weather Information: Strong winds from the N.W. through N. to N.E. increases tides. The flood tide sets S.S.E. on the coast, therefore strong S.E. winds depress the heights of the tides.

Tidal Variations:

M.H.W.S.	5.05 m.	M.H.W.N.	4.01 m.
M.L.W.S.	0.75 m.	M.L.W.N.	1.75 m.

AUTHORITY: Tees and Hartlepool Port Authority – Hartlepool Docks, Middleton Road, Hartlepool, Cleveland TS24 0SE. *Tel:* Hartlepool (0429) 276771. *Telex:* 58669. *FAX:* (0429) 222291. *Contact:* N. Britton, Director.

HARWICH (Including Harwich International (Previously Parkeston Quay) and Navyard Wharf): 51.56 N. 01.15 E. **(See Pla**

The Harbour Authority is the Harwich Haven Authority wh jurisdiction extends from the Shipwash Bank to the mouth of the R Orwell on one hand and as far up the River Stour as the tide flows the other.

The Harbour Master's Office is at Navigation House, Angel Ga Harwich (Tel: (0255) 243030. Telex: 987304), at which is based Harwich Harbour Operations Service maintained on a 24 hour basis

The Harbour Operations Service (Call sign "Harwich Harbour Rad maintains a listening watch on Channel 16, and operates on Channel

The service is equipped with surveillance radar, radar informatio available on request.

Harwich International Port Ltd. keep a 24 hour listening watch Channel 16 and work on Channel 18.

DOCUMENTS:

1 Home Officer Form 1.B.6 may be obtained from H.M. Custo Boarding Officer.
1 C.142 Crew Declaration List.
1 Maritime Declaration of Health ("Q" Flag procedure).
2 Ship's Report by Master.
1 Stores List.
1 Certificate of Deck Cargo Tonnage (if carried).
1 Grain Certificate (if carried).
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List required by vessels other than packet vessels.
1 Landing Card for each passenger.
1 Ship's Certificate of Registry.
1 Mercantile Marine Office Certificate – for British vessels only.
1 Load Line Certificate.
1 Safety Equipment Certificate.
1 Lloyd's Certificate.
1 Derat Exemption Certificate.
1 Ship's Register.
1 Lights Bill.
1 Radio Safety Certificate.

In addition Manifests and Bills of Lading are usually sent to Ag direct from loading port.

Dangerous Goods: Notification is required to Harwich Harbour V 24 hours in advance of the vessel's arrival at the port. Notification m be made by the following means:

(1) By facsimile – Fax No. (0255) 241325.
(2) By telex – Telex No. 98472.
(3) By telephone – (0255) 243000 (24 hour number) in exceptio circumstances only.

PILOTAGE: PROCEDURE AND INFORMATION ON ETAs/ETDs F SHIPS REQUIRING THE SERVICES OF AN AUTHORISED PILOT

Arrival Notification: Ships bound for the Haven Ports of Harw Felixstowe, Ipswich and Mistley and requiring a Pilot, shall notify Harw Operations Control, 8 hours in advance, giving the ETA at the Harw Approach Buoy (Lat. 51° 56.4′ N., Long. 01° 31.2′ E.), gross tonna maximum draft, departure port and destination port.

Confirmation of ETA should be given at least 3 hours before ar at Harwich Approach Buoy.

Failure to provide the ETA and subsequent confirmation could res in delay to the ship.

In the case of a ship engaged in the short sea trade, the initial E may be passed at the time of leaving the last port of call, if pass time is less than 8 hours.

A ship having complied with the above conditions and then hav anchored before embarking a Pilot must give Harwich Operat Control adequate notice of requiring the services of a Pilot. Failur give such notice could result in delay to the ship.

Requests from inward-bound ships for the services of a Pilot for t Rivers Blackwater, Colne, Crouch or Roach may also be passed thro Harwich Operations Control.

Departure Notification: Outward-bound ships, or ships moving within compulsory Area, which require the services of a Pilot, shall give at le 2 hours' notice of their Estimated Time of Departure.

Boarding and Landing Arrangements: The pilot boarding poin inward bound ships will be within the voluntary pilotage area, such t the Pilot is boarded in good time before entering the Compulsory Ar

The boarding position will be agreed with Harwich Operations Con having due regard to the size and draft of the ship and the preval circumstances.

The normal boarding point will be in the vicinity of the Harw Approach Buoy, but deep-draft ships may, by arrangement, board th pilots near the Sunk Light Vessel or the Mid-Bawdsey Buoy, depen on their point of entry into the Compulsory Area.

Boarding and landing will take place from pilot launches opera from Harwich Harbour. The launches will have the word "HA PILOTS" on the side of the wheelhouse, fly the pilot flag by day an night, exhibit lights and signals in accordance with Rule 29 of International Regulations for Preventing Collisions at Sea.

If the pilot launch is unable to operate in the normal locations du stress of weather, or other unforeseen circumstances, altern arrangements will be advised by Harwich Operations Control.

GEOGRAPHICAL LIMITS OF THE HAVEN PORTS PILOTAGE AR (THE COMPULSORY AREA):

The area bounded by the following limits:

(a) As much of the River Orwell as lies below Ipswich Dock
(b) As far up the River Stour as the tide flows.
(c) To seaward of Landguard Point, the area bounded as follo
    (i) In an Easterly direction as far as 01° 24′ E.
    (ii) In a Southerly direction as far as 51° 54.5′ N.
    (iii) In a Northerly direction as far as 51° 57.4′ N.

Voluntary Pilotage: The Board will provide pilotage upon request in the area to seaward of the Compulsory Area as far as a line drawn between the following points:

(a) Bawdsey Cliff – Lat. 52° 00′ N., Long. 01° 26′ E.
(b) Lat. 52° 00′ N., Long. 01° 41′ E.
(c) Lat. 51° 49′ N., Long. 01° 41′ E.
(d) Lat. 51° 49′ N., Long. 01° 15′ E.

APPROACHES: Traffic Regulatory System in effect.

ANCHORAGES:

Erwarton: Situated to the North and West of Harwich International Port with an average depth of 5.5 m. at LW.

Parkeston: Situated to the North of Harwich International Port with an average depth of 5.5 m. at LW.

Shelf: Situated on the Western side of the main Channel between the North and South Shelf Buoys. Average depth of 3.7 m. at LW.

Platters: Situated at the Pitching Ground. Average depth 8.0 m. at LW.

Cork: Situated to the North of the Harwich Channel. Area approx. 2 miles×1 mile. Average depth 6.5 m.

RESTRICTIONS: Normal max. draft allowed alongside the berths at Harwich International Port is 7.5 m.

Normal cargo working at Harwich International Port throughout 24 hours.

MAX. SIZE: Normal max. permissible length 190 m. Arrangements for larger vessels can be made. Normal max. permissible breadth for Roll-on/Roll-off is 24 m. Normal max. permissible draft – 8.0 m. The height of the tide does not restrict a vessel berthing alongside the quay if her draft is within 8.0 m.

HEALTH: Maritime Declaration of Health required ("Q" Flag procedure). Obtain Pratique through H.M. Customs Boarding Officer if no sickness on board.

If there is sickness on board the Customs Official will notify the Duty Port Medical Officer.

If the vessel is from another port in the U.K. Pratique is automatic.

Also see "Health – All Ports" before first U.K. port.

RADIO: North Foreland Radio (call sign GNF) or Humber Radio (call sign GKZ) are the most convenient stations to pass ETA cables, etc., to Agents or receivers

VHF: *Port Operations:*

	Channel 16	Safety.
	Channel 9	Pilotage and ETAs.
	Channel 71	VTS and Reporting.
	Channel 6	Pilot Launches.
	Channel 69	Tugs.
	Channel 20	Harwich Radar Assistance.
	Channel 11	Harbour Craft.
Telephone:	0255 243000	Harbour Operations.
	0255 243111	Pilot Orders.
Telex:	98472 HAROPS G.	
Fax:	0255 241325	

Dangerous substances in Harbour Areas notifications should be sent by telex or fax 24 hours prior to arrival or at time of leaving last port.

TUGS: 5 tugs are available in Harwich Harbour for use in the area. M.T. "Sun London", M.T. "Trimley", M.T. "Deben", M.T. "Ganges" and M.T. "Victoria" 40 tons bollard pull. Tugs' lines usually used.

24 hour service, 7 days per week. Constant watch on Channel 16 VHF. Additional tugs up to 2,250 h.p. can be obtained from London at 24 hours' notice.

BERTHING: There are 8 berths at Parkeston Quay, of which 2 are Portal Ro-Ro berths and 3 Pontoon Ro-Ro berths. Normally max. draft permissible alongside is 8.0 m.

Berthing, etc., by arrangement. Applications for berths must be made through the Ship and Port Manager, Harwich International Port, giving as much advance notice as possible. Also see "Navyard, Harwich" before "Authority".

STEVEDORES: Arrangements for their use must be made through the Ship and Port Manager, Harwich International Port.

MEDICAL: Prior notice through Harwich International Port, desirable to arrange attention. All services are available.

TANKERS: A berth is available for tankers for the purpose of discharging and loading to the local oil refinery.

DENSITY: 1025 (sea water).

FRESH WATER: Fresh water can be supplied from quayside hydrants.

FUEL: Can be arranged by either barge or road tanker.

CONSULS: Dutch, German, Danish, Belgian.

REPAIRS: Minor repairs can be carried out by port workshops. As much advance notice as possible required.

GANGWAY/DECK WATCHMEN: Watchmen are not provided or required by the port, but ships may use their own watchmen.

OPENING/CLOSING HATCHES: To be carried out by ship's crew.

CARGO GEAR: There are 2 transporter cranes, 30 tons SWL and 4×30 ton Goliath rubber tyred gantries. A 45 ton mobile crane is available at Parkeston Quay.

REPATRIATION: All facilities available.

AIRPORT: Nearest is Stanstead, 50 miles; Southend, 70 miles.

HOLIDAYS: The port is open 24 hours a day all year round, except Saturday nights, Christmas Day and Boxing Day.

POLICE/FIRE/AMBULANCE: Dial 999 and ask for service required.

TELEPHONES: Arrangements can be made, with advance notice given.

SHIP SUPPLY SERVICE:

The Alexandra Towing Co. (Felixstowe) Ltd., The Dock Office, Felixstowe Dock, Felixstowe, Suffolk.
Felixarc Marine, Felixstowe Dock, Felixstowe, Suffolk.
Orwell & Harwich Navigation Co., The Quay, Harwich, Essex.

IDENTIFICATION CARDS: Seaman's Identity Cards sufficient.

GARBAGE DISPOSAL: Leigh Environmental (Tel: 0206-871111). 0700 hrs. – 1700 hrs. Skips provided alongside. One day's notice required.

WASTE OIL DISPOSAL: Southern Economy Fuels, tanker trucks (20 tons) (Tel: 0394-272236. Fax: 0394-271540). 24 hours service, 48 hours notice required.

CURRENCY: Thomas Cook Foreign Exchange Bureau in Passenger Terminal. Tel: 0255-503088. Open daily 0630 hrs. – 2115 hrs.

DEVELOPMENTS: Eastern end of Parkeston Quay to be lengthened in due course to provide more container berths.

NAVYARD, HARWICH:

Operators: Harwich Dock Co. Ltd. Naval House, Kings Quay Street, Harwich, Essex CO12 3JJ. Telephone: Harwich 241341. Telex: 98229. Fax: (0255) 241441. Contact: F.A. Hatchard, Managing Director. D.M. Lucey, Commerical Manager. Listens on VHF Channel 16, working Channel 22.

Berths:

Berth No. 1:	Length 42 m.	
Berth No. 3:	Length 160 m.,	depth 8.6 m.
Berth No. 4:	Length 90 m.,	depth 4.5 m.
Berth No. 5:	Length 160 m.,	depth 6.5 m.

(Berths 3, 4 and 5 equipped with Ro/Ro ramps).

Stevedores:

All labour at Navyard is employed by Harwich Dock Co. Ltd. Berths and labour must be booked through Operations Manager (24 hour service available).

Cargo Equipment:

1 Ransome Rapier NCK 60 mobile crane – capacity 35 tonnes.

Other equipment includes 14 tugmasters, 10 forklifts to 45 tonnes.

Other Services:

Telephones, fresh water, bunkers, medical services can all be arranged. Harwich Dock Company Ltd., provides ships and goods agency services at this and other ports.

Garbage Disposal: Collection service available on request.

Waste Oil Disposal: Collection available by road tanker.

AUTHORITY: Harwich Haven Authority, Navigation House, Angel Gate, Harwich CO12 3EJ. *Tel:* (0255) Harwich 243030. *Telex:* 987304. *FAX:* (0255) 240933. *Contact:* Captain I. Whale, Marine Manager and Harbour Master.

HEYSHAM: 54.02 N. 02.55 W. (See Plan)

DOCUMENTS: As for other British ports plus Walney Light Dues.

PILOTAGE: Heysham Pilots. Compulsory for all vessels over 50 m. LOA.

ANCHORAGES: Heysham Lake. 0.5 mile W.N.W. of No. 1 Buoy. Position: Lat. 53° 59.6′ N., Long. 3° 00.0′ W. Depth: 40 ft. at LW.

RESTRICTIONS: Entry possible at all states of tide. Harbour maintained at 4.1 m. below Admiralty chart datum of chart No. 2010.

MAX. SIZE: 525 ft. (160 m.) length, draft 17 ft.

HEALTH: See "Health – All Ports" before first UK port.

RADIO: Heysham Harbour Radio, VHF Channels 16, 14 and 74.

TUGS: None available locally. Tugs on call from Liverpool.

BERTHING: Vessels may be berthed at any time. 2 Ro/Ro ramps, 1 berth exclusively for gas base, 1 general cargo berth North Quay, 2 general cargo berths South Quay and 1 berth West Quay.

CRANES: 1×30 ton portal crane on North Quay; 1×23 tonne portal crane, 4×7.5 ton portal cranes and 1×10 tonnes on South Quay.

DENSITY: Salt water.

FRESH WATER: Available at all quays, except West Quay.

FUEL: Gas oil by road vehicle.

REPAIRS: Small repairs possible, no docking facilities.

GANGWAY/DECK WATCHMEN: Ship's watchmen required.

AIRPORT: Nearest, Liverpool and Manchester; 60 miles.

PROVISIONS: Available locally.

POLICE/AMBULANCE/FIRE: Telephone 999 in emergency.

SHORE LEAVE: No restrictions on landing.

GARBAGE DISPOSAL: Skips and road vehicles available. Charges are variable by arrangement with local contractor. Contact Heysham Port Limited (Tel: 0524 852373).

WASTE OIL DISPOSAL: A waste oil collection service can be arranged with a local contractor (prior notice required). Contact Heysham Port Ltd. (Tel: 0524 852373).

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£). U.S.$ 1.00 = U.K.£ 0.67 (31.1.94).

AUTHORITY: Heysham Port Ltd., Heysham, Lancs. LA3 2XF. *Tel:* (0524) 852373, 852284. *Telex:* 65260. *FAX:* (0524) 853301. *Contact:* Captain P.A. Read, Port Manager. P.L. Fenton, General Manager.

HOLYHEAD: 53.19 N. 04.41 W. (See Plan)

DOCUMENTS:

1 Crew List and where applicable a Passenger List.
1 Pratique issued by Customs.
1 Crew Declaration (C.142 for H.M. Customs).
1 List of Consumable Stores (tobacco, alcohol).
1 Declaration of Health.
1 Cargo Manifest.
1 Ship's Report.

PILOTAGE: Pilotage compulsory under Sealink Harbours Holyhead Authority. Local Pilot available on request.

ANCHORAGES – PROHIBITED ANCHORAGE: The breakwater affords partial shelter to the outer anchorage and complete protection to New Harbour; there are depths of up to 12.0 m. in the former and of up to 12.0 m. in the latter.

The accommodation for vessels of deep draft in New Harbour is limited. Small vessels should always proceed into New Harbour and anchor in the S.W. part, leaving the outer part and the roadstead for large vessels. The bottom is hard, overlaid with mud but the holding ground is sufficiently good if an adequate amount of cable is veered. During Easterly winds an uncomfortable sea is raised; vessels may then obtain shelter in the Eastern part of outer anchorage. Anchorage is prohibited within 1.5 cables on either side of the track followed by Passenger Ferries from the head of the breakwater to the entrance to Old Harbour; the limits of this area are shown on charts.

MAX. SIZE:

Inner Harbour: Restricted to vessels of 4.5 m. draft and vessels exceeding this draft will only be accepted after consultation with the Port Manager or Harbour Master.

New Harbour: Vessels of approximately 60,000 tons can be accepted alongside the Anglesey Aluminium Jetty where the berth is dredged to 13.5 m. at L.A.T.

Ro-Ro vessels up to 150 m. length and 7.0 m. draft accepted.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Holyhead Radio, VHF Channel 16, No Port Radar.

TUGS: Available through Agents. Tugs up to 1,375 h.p.

BERTHING: By prior arrangement with the Port Manager.

Ferry Ramps and Services: There are 2 berths available in the port which are used by Sealink Multi-purpose (Car and Ro/Ro traffic) ferries. The main one is termed the 'Station Berth' and as its name implies is an integral part of the rail station complex offering quick and easy rail/ship interchange with all the necessary H.M. Customs, passenger waiting and ticket checking facilities. Two mechanical gangways are available. A similar berth is available at Salt Island (Admiralty Pier) with again passenger waiting and H.M. Customs clearance facilities available on the spot. Transfer for rail passengers can be made by connecting coaches.

	Station Berth	*Salt Island Berth*
Maximum length of ship accepted	130 m.	140 m.
Datum depth of water available	4.6 m.	4.6 m.
Ramp width	3.4 m.	3.0 m.
Maximum weight of vehicles over ramp	40 tonnes	38 tonnes
Maximum width of vehicles at ramp	3.7 m.	3.5 m.

General Cargo Handling: General Cargo berth is used for exports of Aluminium ingots, steel, powdered chemicals and various other commodities. Imports include fertiliser, timber and steel. Vessels using this berth make arrangements with Agent. Storage space available with this berth by prior arrangement. Cranes/forklifts are available for hire.

Length of berth	170 m.	(total quayage)
Depth of water available	4.4 m.	datum

CONTAINER HANDLING FACILITIES: Closed.

Length of berth	135 m.
Datum depth of water available	4.8 m.

STEVEDORES: No stevedores. Vessels loaded and discharged by making prior arrangements with Agent.

MEDICAL: Medical Officer available. Stanley Sailors Hospital situated in close proximity to Harbour.

DENSITY: Salt water (1025).

FRESH WATER: Available at all berths within the Inner Harbour and alongside Anglesey Aluminium Jetty.

FUEL: Fuel oil and diesel oil available provided that adequate warning is given to Agent. Only 1 berth available for bunkering of large vessels of deep draft alongside Anglesey Aluminium Jetty.

Prior arrangements must be made with Sealink Harbours Ltd. in conjunction with Anglesey Aluminium Metals Ltd., telephone Holyhead 763333.

No oiling barge available for bunkering vessels at anchor.

GANGWAY/DECK WATCHMEN: Required at all times when vessels are in port.

REPAIRS: No facilities.

SURVEYORS: Cargo Inspectors can be contacted, if required.

Surveyors representing Lloyd's Register, Bureau Veritas, etc., can be contacted on request.

AIRPORT: RAF Station Valley, Anglesey (6 miles away).

HOLIDAYS: Saturdays, Sundays and all Public holidays.

POLICE/AMBULANCE/FIRE: Tel. 999.

EMERGENCY CO-ORDINATION CENTRE: Maritime Rescue Sub-Centre, Coastguard. Tel: 0407-762051.

TELEPHONES: No telephone connection for outside vessels. Public telephone within port limits.

SERVICES: Compass adjusting can be arranged. Agency can be arranged through Port Authority.

BANKS: British banks only available in the Holyhead area, exchange facilities are provided.

STORING: See "Prelims".

1. Vessels can be stored by barge or truck, usually by truck.
2. Vessels can be stored during loading or discharging.
3. Trucks can proceed alongside at the berth.
4. Forklift trucks can be used to handle stores.
5. Customs Regulations, where applicable, in force.
6. Local riggers can be employed, if necessary.

SHORE LEAVE: Allowed.

GARBAGE DISPOSAL: Garbage disposal can be provided on requ

WASTE OIL DISPOSAL: Waste oil disposal can be provided on requ 48 hours notice required.

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: Sealink UK Ltd., Sealink House, Holyhead, Gwyne LL65 2DQ. *Tel:* (0407) 762304. *FAX:* (0407) 765118. *Telex:* 612

Contact: Port Manager/Harbour Master.

HOUND POINT: 56.00 N. 03.22 W. (See Pla

LOCATION: The Terminal consists of 2 steel and concrete isla structures, situated to the East of the Forth Railway Bridge. Berth No in position Lat. 56° 00.3′ N., Long. 3° 21.7′ W., and Berth No. 2 position Lat. 56° 00.3′ N., Long. 3° 21.0′ W.

DOCUMENTS:

1 Crew List.
1 Passenger List.
1 Crew's Effects List.
1 Stores List.
All valid Certificates.

PILOTAGE: Pilotage in Firth of Forth is compulsory. Contact "Fo Pilot" VHF Channel 16. Pilot boards large vessels in vicinity of Fair Buoy (56° 03.5′ N., 03° 00′ W.) as there is limited depth a manoeuvring space at normal Pilot boarding ground East of Inchke For large vessels in ballast, Pilots require gangway/pilot lad combination rig.

Shipmaster's Report: January 1993: The Terminal has its own Che List and the Pilots require Pilot Card on boarding.

ANCHORAGE: When vessel has to wait for Pilot, berth or tide, "Fo Navigation Service" will assign anchorage. These anchorages are i line E.S.E. to S.W. of Fairway Buoy. Good holding ground anchorages.

RESTRICTIONS: Vessels will be berthed at any state of the tide, exc where tidal range is more than 4.9 m.

MAX. SIZE: Berth No. 1 is designed to accommodate vessels in t range of 50,000 – 300,000 tonnes deadweight, where the maxim permissible berthing displacement is 150,000 tonnes. The minim parallel mid-body length acceptable is 47.5 m. on either side of t vessel's manifold centreline.

Berth No. 2 is designed to accommodate vessels in the range 50,000 – 150,000 tonnes deadweight, where the maximum permiss berthing displacement is 174,000 tonnes. The minimum parallel m body length acceptable is 32.0 m. on either side of the vessel's mani centreline.

Max. Draft: Maximum Departure Draft: Following discussions at t Pilotage Management Committee and the Sub-Group of the Hound Po Liaison Committee, the following system has been established to ob the maximum draft of a vessel sailing from the Hound Point Termi

The minimum depths in the approaches to the Hound Point Term are two patches of 19.0 m. and 19.2 m. respecitively which approximately 200 m. to the North and East of the berthing face of N Jetty (see Admiralty Chart No. 736).

The maximum draft of a vessel sailing from the Terminal shoul established as follows:

Minimum Charted Depth	19.0 m.
Plus Predicted Height of Tide (Leith Gauge) at departure time	+
Less	– 2.5 m.
Maximum Draft	

Vessels of maximum draft should have a departure time no later t 2 hours before predicted High Water (Leith) in order to be at Buoy N by High Water.

To establish the Height of Tide (Leith) required before a vessel safely depart from the Terminal on a rising tide, the following rule app

Height of Tide required = Draft – 16.5 m.

N.B. The above maximum draft calculations must be used for all ves having loaded draft of 16.5 m. or greater.

This maximum draft calculation supersedes any previous informa issued on this subject.

Berth No. 1: Minimum Depth 24.50 m.
Max. Draft (Springs) 21.30 m.
Max. Draft (Neaps) 20.24 m.
Berth No. 2: Minimum Depth 22.40 m.
Max. Draft (Springs) 21.30 m.
Max. Draft (Neaps) 20.24 m.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: *Pre-Arrival Telex Format:* Prior to arrival at the Terminal Master shall advise the Company of the following:

AA ETA – Last Cargo – Last Port – Destination.
BB Quantity of ballast to pump ashore.
CC Estimated Deballasting time.
DD Can vessel load/deballast simultaneously.
EE Quantity and type of any slops to be discharged.
FF Confirm vessel carries onboard valid Oil Pollution Certifica
GG Confirm vessel carries onboard all appropriate charts and these are up to date.
HH Confirm aft leading accommodation ladder available.
II Confirm I.G. System fully operational and all cargo tanks in to 8% or less oxygen content.
JJ Confirm cargo tanks do not contain high concentrations of which may result in emissions during loading being in exc the Threshold Limit Value.

KK Was the Last Cargo carrying a High Sulphur Crude.
LL Required Loading Rate.
MM Confirm vessel can perform Closed Loading Operations.

RADAR/VHF: Estuary radar service. VHF contact can be made with Forth Navigation Service on Channels 16 and 71, working Channels 20 and 12. B.P. Grangemouth VHF Channel 16 (calling) and Channel 19. Berth Supervisor on Channel 19. Forth tugs, Fire tug and Anti-Pollution tug on Channels 16 and 9.

Hound Point Terminal operates on VHF Channel 9 for berthing and unberthing operations.

If simultaneous operations are being carried out at both berths, Berth No. 1 will operate on Channel 9 and Berth No. 2 on Channel 17.

TUGS: Two tugs of 60 tonnes bollard pull and 4 tugs of 35 tonnes bollard pull available. Tugs wires are used.

Berth No. 1: Vessels up to 265 m. LOA normally use 3 tugs for berthing and 2 tugs for unberthing. Vessels over 265 m. LOA normally use 4 tugs for berthing and 3 tugs for unberthing.

Berth No. 2: Vessels berthing and unberthing use 2×60 tonnes bollard pull tugs in the push/pull mode.

BERTHING: Hound Point Terminal (leased and operated by British Petroleum) is in the Firth of Forth about 13 miles from Fairway Buoy. The datum depth in the approach channel is 19.9 m. and least depths of 24.5 m. (Berth No. 1), and 22.0 m. (Berth No. 2), are available. Both berths are aligned in a 064° – 244° direction on the North Western faces of the structures. Mean tidal range is 4.8 m. (Springs), and while stream rates of 3.5 knots are normal, rates of 5 knots can be experienced.

Vessels are berthed either side to with the assistance of tugs. Rate of approach equipment is fitted on both berths. A combination of vessel and shore moorings is used, and vessels must have available a minimum of 6 suitable lines at each end.

Vessels above 1,600 g.r.t. shall comply with the requirements of Statutory Instrument 1077 The Merchant (Tankers) (EEC Requirements) Regulations 1981, and Statutory Instrument 1637 The Merchant (Tankers) (EEC Requirements) (Amendment) Regulations 1982.

A vessel will only be accepted at a berth providing it is compatible with all aspects of the berth design.

Special attention is made to a vessel's manifold arrangements, which must be of a fixed and permanent design (including pipelines, valves, supports, etc.), and form part of the vessel's structure. Cast iron manifolds are not acceptable.

All vessels should have manifold arrangements which comply with the standards recommended by the Oil Companies International Marine Forum – Standards for Tanker Manifolds and Associated Equipment.

Operators of vessels which are unable to comply with the above recommendations must confirm with the Company the suitability of a vessel for a cargo operation.

Shore gangways are normally provided.

Marine band VHF radio operating on Channels 9, 10, 12, 16, 19 and 46 are used on Berth No. 1, and full multi-channel VHF is used on Berth No. 2.

Crude Oil (approximate density 0.8250 (API 40.0), temperature 15° – 33°C), is loaded at rates up to 14,000 tonnes/hr. (Berth No. 1), and 12,000 tonnes/hr. (Berth No. 2).

Ballast water contained in cargo tanks must, where necessary, be discharged to the shore facility which can normally receive up to 50,000 tonnes without prior approval (Max. shore capacity from any one vessel is 100,000 tonnes). The Terminal is capable of simultaneous handling of crude oil and ballast.

Masters should note that it is necessary to overcome a system back pressure of 4.5 bar when discharging ballast and should estimate deballasting time accordingly.

Ballast water containing chemicals or waste incompatible with shore facilities must not be discharged ashore.

Clean ballast from a Segregated Ballast System may be discharged overboard, subject to the approval by the Port Authority and the Company.

Contents of a vessel's slop tanks may be dicharged to the shore reception facility after analysis and with the prior approval of the Company. If material for discharge is incompatible, arrangements for disposal of the material must be made with the vessel's Agent, who keeps a list of contractors licensed to handle hazardous material.

Vessels normally receive full documentation at time of departure, but it may, on occasions, be necessary to utilise an Early Departure Procedure.

On completion of operations, vessels may be required to vacate the berth and proceed to an anchorage to carry out cargo measurements (this includes operations carried out by Independent Cargo Surveyors).

Four loading arms are normally available for use on each berth presenting 16 in. ASA 150 conection flanges. The loading arms are designed to operate within an envelope 4.5 m. – 31.0 m. on Berth No. 1 and 4.5 m. – 25.1 m. on Berth No. 2. Vessels should arrive with appropriate reducing pieces fitted to the manifold.

Loading arms on Berth No. 2 are fitted with an Emergency Release System (ERS), which activates in the event of a vessel movement outside the arms operating envelope.

Mooring hooks on Berth No. 2 are fitted with a Mooring Load Monitoring System, with remote readout visually displayed in the control room.

Remote Release of moorings can be activated from the control room.

Berthing and Unberthing: The number of tugs employed will vary according to the size of the vessel and the prevailing weather conditions.

Berthing is undertaken during daylight or darkness.

Minimum acceptable visibility for berthing and unberthing is 1 mile.

Berthing will not be attempted if the wind is in excess of 20 knots (Force 5) blowing onto or off the berth from a direction up to 45° either side of a line at right angles to the longitudinal axis of the berth, or if in excess of 30 knots (Force 7) from any other direction.

The unberthing of vessels in excess of 54 ft. draft will also be restricted by the tidal rise, otherwise, any other limit conditions will be assessed at the time of unberthing.

At Berth No. 1, speed of approach equipment is provided to assist in ensuring a safe speed during the final breasting in manoeuvre. The equipment operates a display panel which indicates the distance each end of the vessel is off the berthing fenders by means of 2 white bar lights which diminish in length as the vessel approaches. Speed of approach for each end of the vessel is indicated by 2 "traffic light" systems which show:

Flashing Red – dangerous speed, 8 cm./sec. and above.
Flashing Amber – marginally safe speed, 5 – 8 cm./sec.
Steady Green – safe speed, 5 cm./sec. and below.

At Berth No. 2, the equipment operates a display panel giving digital readings of distance off, speed of approach and angle of approach.

A stand-by fire tug on 15 minutes notice will remain in attendance at the specially provided buoy mooring while the berth is occupied. A stand-by pollution tug is also on 15 minutes notice.

Mooring Arrangement: The Master shall ensure that:

1. Ropes and Wires: The vessel is secured alongside with suitable ropes or wires which are to the satisfaction of the Manager. A minimum of 6 mooring lines must be used at each end of the vessel. The use of mooring lines of dissimilar materials in the same direction shall be avoided. The use of wire springs (with or without synthetic fibre rope tails which should not exceed 11.0 m. in length overall, and should have a breaking strain at least 25% greater than the breaking load of the wire to which they are attached), is required. Alternatively, low stretch synthetic ropes may be substituted for wire if the elongation of the rope at 55% breaking load does not exceed 3% of the rope length.
2. Winches: Mooring ropes or wires shall only be fastened to the proper fixtures provided for this purpose. Self-tensioning winches must not be used in automatic mode, and winch brakes must be kept hardened up, except when moorings are being tended.
3. Wire Reeling: Mooring wires and lines shall be reeved on their drums in the direction which enhances brake holding power.
4. Deck Watch: A strict watch is kept on moorings, and they are tended to prevent undue movement of the vessel.
5. Emergency Towing Wires: Towing wires of a minimum 50 tonnes breaking strength (approximately 32 mm. diameter), are provided, rigged and secured to the offshore bow and quarter with the towing eyes maintained just above water level, and with sufficient slack maintained on deck.

SAFETY:

Health Hazard: *Partly Laden Vessels:* The Master will inform the Terminal of the name and nature of the part cargo on board. If the part cargo has characteristics which indicate a health hazard may exist, e.g. Hydrogen Sulphide (H_2S):

1. Will be required to isolate the venting system of the tanks containing cargo from that of the tanks to be loaded.
2. Ensure that the tanks to be loaded are not contaminated with gases from the cargo on board.
3. Release gases from the part cargo only in an emergency.
4. Gauge the tanks containing the part cargo using fixed systems or sonic tapes with approved vapour locks.
5. Sample the cargo onboad using closed sampling devices with approved vapour locks.

Note: If no such system is fitted and samples are required, arrangements should be made to carry out such operations either before the vessel berths or after the vessel sails.

Vessels in Ballast: The Master of a vessel whose previous cargo had characteristics indicating a health hazard may exist:

1. Will take all precautions to prevent high concentration of H_2S gases being vented to atmosphere during loading. Precautions should include Crude Oil Washing and the purging of all tanks prior to arrival, so that venting does not result in emissions which are above the Threshold Limit Value (TLV). Under United Kingdom Control of Substances Harmful to Health (COSHH), this is referred to as Occupational Exposure Standards (OES).
2. If any doubt exists whether an acceptable tank atmosphere has been attained, then before the vessel berths arrange for an independent chemist to issue a certificate which records the level of H_2S in each tank.
3. Will incur a delay in berthing when cargo tank atmospheres contain levels of H_2S.

Note: *If on arrival tank atmospheres are found to contain high levels of H_2S, the vessel will be required to vacate the berth.*

DENSITY: 1020 – 1025.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: See "Leith".

TIME: GMT in Winter. GMT plus 1 hour in Summer.

GARBAGE DISPOSAL: Heavy duty bags supplied to vessel. Garbage is then transported to the terminal by ship's staff and handed into a terminal vessel by B.P. staff for carriage ashore.

A minimum of £120 is charged for this service, but if a sizeable quantity of garbage is transported then additional charge will be levied. Arrangments made via B.P. Berth Supervisor.

WASTE OIL DISPOSAL: Slops can be discharged to shore reception via ballast facilities, but this may be restricted dependent upon the nature of the slops.

No alongside barge facilities available for waste oil.

SEAMAN'S CLUBS: None.

GENERAL: Outside the Firth of Forth, clear of the land on the South side, streams are weak, spring rate up to 1 knot, but at spring tide the velocity at the terminal is up to 3.5 knots (Refer to Tidal Stream Atlas).

Storing: The exposed location of the Terminal does not normally permit the safe handling of bulk stores. Subject to prior authorisation, it is permitted to transfer small packages which can be hand carried across the Terminal.

HULL: 53.44 N. 00.14 W. (See Plan)

VESSEL TRAFFIC SERVICES HUMBER:

The Humber Ports Operation and Information Service operates radar surveillance between Spurn and Humber Bridge, and VHF (FM) radio telephone service available to all vessels navigating the Rivers Humber, Ouse, and Trent from the Queen Elizabeth Dock.

A continuous watch is maintained on Channels 10, 12, 14, 16 and 52. The call sign is "VEE TEE ESS" Humber. The telephone number is Hull 0482 – 701787. Telegraphic address "Humberops". Telex: 597656. Fax: 0482-795221.

The Service provides information regarding the arrival, berthing, anchoring and departure of vessels and also information on navigational aids, navigation generally, visibility, and the safety of vessels and persons. Tidal information, including the height of tide at Spurn Pilot Jetty, Immingham, Hull, Humber Bridge, Blacktoft and Keadby, is also available on request. Messages of any other nature and messages of a personal character cannot and will not be accepted. Messages of this kind should be passed through the British Telecom Ships Telephone Service via "Grimsby Radio" on Channel 27.

Other VHF (FM) Stations situated on the River Humber and the Channels used are shown in the Appendix to this Notice. These Stations provide direct communication between a vessel and the Dock or Pier Master at the place of destination. In general, vessels should obtain their navigation and safety information from the Vessel Traffic Services Humber and their berthing, docking and other pre-arrival information from the Station serving their destination.)

A general broadcast giving weather reports, tidal information and navigational warnings is made by the Vessel Traffic Services Humber on Channel 12 every 2 hours commencing at 0103 hrs., prior notification being given on Channel 16.

Procedure:

(i) Vessels fitted with appropriate VHF R/T equipment approaching the Humber should set watch on Channel 16.

(ii) Vessels wishing to communicate with the pilot station should c "Spurn Pilot" on Channel 16 and shift to Channel 14 for exchan of traffic.

(iii) On entering and before sailing or moving in the Humber, vesse should call "VEE TEE ESS" Humber on Channel 16. Wh contact is established they will be requested to transfer Channel 12 for exchange of arrival or departure informatio Watch should then be resumed on Channel 16 and 12.

(iv) Vessels wishing to communicate with the Station serving th destination should do so at the appropriate time on the Channe shown in the Appendix, reporting their departure from Cham 12 to "VEE TEE ESS" Humber. Vessels are advised that, wh communicating with these Stations, contact with the Vess Traffic Services Humber can only be re-established throu Channels 16 and 12 and it is particularly advisable to maintai listening watch on Channel 16 whenever practicable in the eve of unforeseen circumstances developing in the River.

All times in messages should be given in local time using the 24 ho notation.

To achieve the full advantage of efficient communication, st telephone discipline and attention to procedure, particularly on t Calling Channel, is imperative. The operating procedure should be accordance with that laid down in Chapters VI and VII of the G.P. Handbook for Radio Operators (1975 Edition, with Supplements).

These services will be offered and will be rendered on the conditi that neither the Associated British Ports, nor any of its servants Agents, shall be liable to any person for loss or damage of any ki howsoever caused or arising whether as a result of negligence otherwise or as a result of the non-availability of the services.

NOTICES:

GENERAL DIRECTIONS FOR NAVIGATION IN THE HUMBER: PROCEDURE AND INSTRUCTIONS FOR SHIPS USING THE RIVER HUMBER

1. *Time of arrival. ETA:*

1.1 Ship Owners, Masters and Agents are required to inform the Associated British Ports (A.B.P.) of the Estimated Time of Arrival of their vessels as per the General Directions together with relevant information regarding draft, air draft if proceeding under the Humber Bridge, EEC Check Lists, hazardous cargo, last port of call, nationality of vessel. In this context the A.B.P. means the Dock Master at the particular port to which the vessel is bound, the Vessel Traffic Services Humber and the Pilot Office at Spurn. Reference British Transport Docks Board Notice to Mariners Nos. 2 and 3 of 1974.

1.2 Ship Owners or Agents are requested to inform the Masters of their vessels of the importance of amending ETA's as necessary due to changing circumstances. Such amendments can be passed to the A.B.P. by radio through Grimsby Radio either in the form of a link call or telegram.

1.3 Within the A.B.P. organisation Vessel Traffic Services Humber will disseminate relevant information received to all interested parties.

1.4 Within the river any message related to the movement and safety of vessels will be passed by Vessel Traffic Services Humber to the vessel concerned and Ship Owners and Agents may avail themselves of this service at any time.

2. *Time of Departure. ETD:*

2.1 In order to maintain a complete and up to the minute picture of traffic movement Dock Masters are requested to notify the Vessel Traffic Services Humber of the intended time and actual time of departure of vessels from their docks. This information should be passed by land line. Exchange of information thus engendered should ensure that all Officers of the A.B.P. are fully informed of traffic movements. In the case of berths not under the jurisdiction of a Dock Master (e.g. wharves on the River Trent), requests for services of Pilots on Telex No. 527393 Spilot g duplicated to Telex No. 597656 Vtshumg.

3. *Navigation of the river:*

3.1 Vessels entering the river should communicate with the Vessel Traffic Services Humber (VHF Channels 16 and 12). A two way exchange of information is essential to ensure the smooth flow of traffic on the Humber necessary for the safety of vessels using the ports. In addition the Vessel Traffic Services Humber can fully advise Owners, Agents and Dock Masters, etc., as to the movement on the river of the vessels in which they are interested. Vessels approaching their destinations desirous of communication with the station serving their destination should do so as per the instructions in Notice to Mariners No. 3 of 1974.

4. *Completion of passage or departure from river:*

4.1 Inward bound vessels should on completion of their passage report to Vessel Traffic Services Humber indicating the closing down of their station. R/T should not be used whilst laid alongside in dock.

4.2 On departure from the river vessels are requested to report the disembarking of their Pilots and their intention of proceeding to sea.

4.3 All reported departures from normal traffic movement (e.g. engine failures, vessels weather bound at Spurn etc.), will be disseminated by the Vessel Traffic Services Humber to the appropriate authorities.

DOCUMENTS:

1 Maritime Declaration of Health.
1 Crew's Effects List.
2 Ship's Report by Master.
1 Home Office Form 1B6.
1 Stores List.
1 Certificate of Deck Cargo Tonnage.
1 Grain Certificate.
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List.
1 Landing Card for each passenger.
Ship's Certificate of Registry.
Mercantile Marine Office Certificate – for British Ships only.
Load Line Certificate.
Safety Equipment Certificate.
Lloyd's Certificate.
Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.
EEC Check List.

In addition Manifests and Bills of Lading are usually sent to Agents direct from the loading port.

PILOTAGE: Compulsory. *Humber Pilotage District – Spurn Pilot Station:* Mariners are advised that the Pilotage Control Station (Tel: 0964-650392; Telex: 527393 Spilot G) is established on the Spurn Peninsula in a position Lat. 53° 34′ 29″ N., Long. 00° 06′ 48″ E.

The station is manned at all times with a Pilot Master in attendance and vessels bound to the Humber requiring the services of Humber Pilots must give advance notice by signal through a G.P.O. Coast Station or by telex to the Spurn Pilot Station giving ETA at the seaward limits of the Humber Pilotage District, draft, and destination at least 12 hours in advance. Any adjustment to the time should be given at least 2 hours before arrival.

Vessels wishing to communicate direct with the Spurn Pilot Station by VHF radiotelephony may if within VHF range (approximately 20 miles) call "Spurn Pilot" on VHF Channel 16 and after contact transfer to Channel 14 for passing messages.

(Note: Attempts to establish communication on VHF at extreme range can cause unnecessary interference).

All requests for Pilots for ports or berths on the Humber, Ouse or Trent will be processed from Pilotage Control Station at Spurn (Telex: 527393 Spilot G. Tel: 0964-650392).

Compliance with this procedure will ensure, as far as possible, the shipping of Pilots without delay.

ANCHORAGES: The undermentioned anchorages have been designated for the use of sea-going vessels. Masters are asked to co-operate by using these anchorages and to avoid anchoring in the Fairway or elsewhere.

Spurn Anchorage for vessels awaiting Pilot, Bull Anchorage for vessels awaiting berth and vessels outward (awaiting orders, etc.), Hawk Anchorage for small vessels and vessels sheltering and Haile Anchorage for vessels carrying explosives.

Spurn Anchorage. From position "A" 121° distant 3.65 miles from Spurn Lighthouse, in a 125° direction 1.60 miles; thence in a 020° direction 0.60 mile; thence in a 077° direction 1.00 mile; thence in a 347° direction 0.70 mile; and thence in a 257° direction 2.40 miles to position "A".

Haile Anchorage: (Explosives): From position A, 216° distant 2.18 miles from Spurn High Lighthouse in a 284° direction 0.77 mile; thence in a 139° direction 0.80 mile; and thence in a 027° direction 0.46 mile to position A.

Bull Anchorage: From Position "A", 193° distance 2.1 miles from Spurn High Lighthouse, in a 090° direction 1.96 miles thence in a 294° direction 1.76 miles, thence in a 274° direction 0.93 miles, thence in a 206° direction 1.0 miles, thence in a 116° direction 0.88 miles, thence in a 026° direction 0.55 miles to Position "A".

Hawk Anchorage:

(1) Lat. 53° 35′ 00″ N., Long. 00° 04′ 14″ E.
(2) Lat. 53° 36′ 16″ N., Long. 00° 01′ 33″ E.
(3) Lat. 53° 36′ 09″ N., Long. 00° 00′ 52″ W.
(4) Lat. 53° 34′ 51″ N., Long. 00° 04′ 02″ E.

RESTRICTIONS: Vessels may be accepted through the day and night, the only restrictions on the larger vessels being influence of tides together with the undermentioned physical limitations. The larger deep drafted vessels are usually docked from 3 hours before HW until HW, with similar restrictions on vessels sailing. Ships drawing up to 19 ft. can have access to the docks over the full 24 hours on Neap tides and can be docked/undocked over an 18 hour period on Spring tides.

Locks	*Entrance lock*		*Depth of water on sill*	
	Length	*Width*	*at MHWS*	*at MHWN*
	321m.	m.	m.	m.
King George Dock	228	25.7	12.75	11.25
Albert and William Wright Docks	97	24.3	8.52	7.02
			at MLWS	
Salt End Jetty Number 1	tidal		10.64	
Salt End Jetty Number 3	tidal		10.64	
Alexandra Dock	167	25.7	10.20	8.70

MAX. SIZE: The maximum permissible dimensions for a general cargo/bulk carrier vessel (excluding tankers) requiring a berth in the enclosed docks are as follows: King George & Queen Elizabeth Docks, length 196 m., beam 25.5 m., draft 9.5 m. at Neaps, up to 10.4 m. at Springs.

A vessel of LOA 222 m. recently entered King George Dock by special arrangement.

HEALTH: Pratique is normally automatic. In case of suspected illness, death on board or the presence of captive birds or animals on board, Master must radio the Hull and Goole Port Health Authority through the Post Office or Coastal Radio Stations not more than 12 hours or less than 4 hours before arrival using the following telegraphic address "Portealth Hull" or through the Vessel Traffic Services Humber using call sign "Vee Tee Ess" Humber on VHF Radio Channel 12. The usual flag or light signals should be shown except where only animals are present and Free Pratique should be obtained from the Hull and Goole Port Health Authority.

RADIO: Portishead Radio – call sign GKL but when within 200 miles of the Humber can go through Grimsby Radio – call sign GKZ.

VHF: See "Vessel Traffic Services Humber".

TUGS: Head boat normally joins vessel in vicinity of Salt End, about 2 miles from dock, and the other tug or tugs connect with vessel when approaching the dock. Where vessel supplies own ropes for towage these to be good stout hawsers. Wire ropes will not be accepted. There is a charge for use of tug's hawsers.

BERTHING:

Dock or Jetty	*Length of Operational Quays* (m.)	*Normal Depth* (m.)	
Alexander Dock	4,082	6.5	Tidal
King George	3,423	11.5	Impounded
Queen Elizabeth	1,646	11.5	
Albert and William Wright	3,453	HW	
Salt End Jetty No. 1	79	9.8	At C.D. which is at L.A.T.
Salt End Jetty No. 2	121	9.8	
Riverside Quay	325	4.8	

CONTAINER FACILITIES: Container terminal at Queen Elizabeth Dock equipped with 3 container gantry cranes of 35 tonnes, 40 tonnes and 45 tonnes capacity, 5 rubber-tyred gantries and a fleet of tractors and trailers.

Ro/Ro container services operated from King George and Queen Elizabeth Docks.

BULK HANDLING FACILITIES: Cargill UK operate a grain storage and export facility for vessels up to 34,000 d.w.t. Loading rate 1,200 tonnes/h. Storage capacity 60,000 tonnes. The facility can handle vessels with length 650 ft., beam 83 ft. and draft 32 ft.

Edible oil storage available.

CRANES: 41×3-10 tonnes, 2×32 tonnes and 1×35 tonnes capacity.

STEVEDORES: Enable Agent order gangs important receive accurate ETA. See "Holidays". *Working hours:* 24 hours a day.

MEDICAL: Necessary for Agents to be advised of any urgent cases of illness in order that they can arrange for a doctor or if necessary an ambulance to be available immediately on berthing. Hospital facilities available.

If vessel required to remain in river awaiting berth, arrangements can be made for any serious case to be taken from vessel by lifeboat and conveyed to Grimsby for immediate treatment.

TANKERS: The Oil terminal at Salt End handles refined or semi-refined chemical, liquefied ammonia and petroleum products which are transferred from the vessel along the oil jetties through a series of chemical and service pipes which range from 4 in. for chemicals, 8 in. and 12 in. for spirit, 16 in. for fuel oils and molasses and 8 in. (300 ASA) for ammonia.

There are 2 tanker berths at Salt End and maximum dimensions of vessels are length 214 m., draft 10.4 m. Max. size 40,000 d.w.t.

Berthing Operations: Vessels normally berth on a rising tide from 2.5 hours before HW, swinging off berth and mooring port side to jetty. Late arrivals may be taken on up to 1 hour after HW, berthing starboard side to jetty but this is subject to tidal and weather conditions prevailing at time.

Moorings are to dolphins and buoys and normally consist of a minimum 2 head lines (to buoys), 2 stern lines (to dolphins), 2 breast lines forward (to buoys), 2 breast lines aft (to dolphins), 2 springs forward (to jetty), 2 springs aft (to jetty).

Cargo Handling and Requirements: Ship's derricks are needed to assist in hose connection. Shore hoses have 6 in., 8 in. and 10 in. 150 ASA flanges.

Discharge rates are governed by a maximum back pressure of 7 kg. (100 p.s.i.).

Facilities and Services:
Fresh water available.
Ship's gangway required.
Public telephone situated at jetty head.
No deballast or slop facilities are available.

Unberthing: Normally up to one hour either side of HW or LW slack.

DENSITY: 1013/1015.

FRESH WATER: King George and Queen Elizabeth Docks. Rate of delivery – 15 t.p.h. Also available at Salt End if berth vacant, at 50 t.p.h.

At Albert Dock water is delivered by water boat.

If water required urgently after 1700 hrs. weekdays or on Saturdays or Sundays Agents must be notified in good time to enable them order men out.

FUEL: Fuel oil available, viscosity up to 3,500 secs. Redwood. Gas oil and diesel also available. At least 24 hours notice required. Delivered by barge or road tanker.

FIRE PRECAUTIONS: Masters receive an emergency services dock plan with an explanatory leaflet.

CONSULS:

	Tel.		*Tel.*
Denmark	0482 655875	Netherlands	0482 224911
Finland	0482 25781	Norway	0482 224151

Germany	0482 842511	Sweden	0469 72387
Iceland	0482 24024	Thailand	0482 29925
Italy	0482 447118		

REPAIRS: Facilities available for all types of deck and engine repairs.

DRY DOCKS: Wm. Wright Dock.

Net length	137.0 m.
Width at cope level	25.9 m.
Width at entrance.	15.2 m.
Depth of water on sill MHWS	6.6 m.
Depth of water on sill MHWN	5.1 m.

GANGWAY/DECK WATCHMEN: Watchmen available if required by Master.

OPENING/CLOSING HATCHES: Can be carried out by stevedores when ordered. Ship charged with actual cost, but ship's crew may do so if required.

CUSTOMS ALLOWANCES: Foreign trade – max. allowance 0.5 lb. cigarettes or cigars or tobacco. Home Trade – (Elbe/Brest limits) half the above. Wine and/or Spirits. Foreign Trade – 1 pint – opened. Home Trade – (Elbe/Brest limits) half the above allowance.

CARGO GEAR: When working with ship's gear a Register of Machinery, Chains and Wire Ropes, etc., with all Test Certificates and record of inspections to be produced to the stevedores before work commences.

REPATRIATION: Crew changes can be effected and repatriation arranged by sea or air.

AIRPORT: Humberside Airport. Air UK operate flights to Aberdeen, Amsterdam, Bergen, Norwich, Stavanger and Teesside.

TIME: BST (British Standard Time) GMT plus 1 hour, GMT during Winter months.

HOLIDAYS: New Year's Day; Good Friday (movable Holiday); Easter Monday (movable Holiday); May Day (1st Monday after May 1st.); Spring Holiday (last Monday in May); Bank Holiday (last Monday in August); Christmas Day (25th December); Boxing Day (26th December).

POLICE/AMBULANCE/FIRE: Emergency Calls – Police – Fire – Ambulance – Coastguard – Dial 999 and ask the operator for the service required, or by VHF Channels 16 or 12 to VTS Humber.

TELEPHONES: Can be placed on board at the majority of berths in King George and Queen Elizabeth Docks.

SERVICES: Tank cleaning, facilities for discharge of tank washings slop (residue), compass adjusting, etc., available.

SHORE LEAVE: Crew members allowed ashore.

DEVELOPMENTS: The Alexandra Dock, which closed in 1982, is to re-open to cater for increased trade using the port.

Parliamentary powers have also been granted allowing A.B.P. to construct 3 riverside Ro/Ro berths adjacent to King George and Queen Elizabeth Docks.

AUTHORITY: Associated British Ports, P.O.Box No. 1, Port House, Corporation Road, Hull, North Humberside, HU9 5PQ. *Tel:* (0482) 27171. *Telex:* 592251. *FAX:* (0482) 26283. *Contact:* M.G. Fell, Port Manager.

IMMINGHAM: 53.37 N. 00.12 W. (See Plan

VESSEL TRAFFIC SERVICES HUMBER: See "Hull".

NOTICES: See "Hull".

DOCUMENTS:
2 copies Immigration, Crew and Passenger List, H.O. Form I.S.6 Supplied by Agents.
Form C.13 General Declaration (In duplicate).
Form C.14 Ship's Stores (In triplicate).
Form C.142 Crew Declaration (In duplicate).
Form C.143 Small Parcels List. (1 Copy) if appropriate.
Form D.C.1 Self Declaration Deck Cargo (In duplicate).
1 copy Cargo Manifest.
1 copy Dangerous Cargo List.

PILOTAGE: Compulsory.

Humber Pilotage District – Spurn Pilot Station: A Pilotage Con Station (Tel. No. 096-46-392; Telex No. 527393) is established on th Spurn Peninsula in a position Lat. 53° 34′ 29″ N., Long. 00° 06′ 48′

The station is manned at all times with a Pilot Master in attendan and vessels bound to the Humber requiring the services of Humber Pilo must give advance notice by signal through a Coast Station to the Spu Pilot Station giving ETA at the seaward limits of the Humber Pilotag District, draft, and destination at least 12 hours in advance. A adjustment to the time should be given at least 2 hours before arriva

Vessels wishing to communicate direct with the Spurn Pilot Statio by VHF radio telephony may if within VHF range (approximate 20 miles) call "Spurn Pilot" on VHF Channel 16 and after contact trans to Channel 14 for passing messages.

(Note: Attempts to establish communication on VHF at extreme rang can cause unnecessary interference).

Inward vessels bound for ports up river of Hull desiring to pick up Goole or Trent Pilot in Hull Roads should give at least two hours advan notice of their ETA in Hull Roads to the Vessel Traffic Services Humb on VHF Channels 16 or 12 or through a Coast Station (telegraph address "Humberops") or by telex No. 527656.

Compliance with this procedure will ensure, as far as possible, th shipping of Pilots without delay.

ANCHORAGES: "Hawk", "Bull" and "Haile Explosives Anchorage".

The Pilot station will advise where to proceed to anchor and a provide Pilot. See "Hull".

RESTRICTIONS: No restrictions, vessels may enter the harbour day night. Max. draft for entering harbour 10.36 m. HW. Compulsory Pilo boarding Spurn Light-vessel, decide whether vessel shall proceed river or anchor and await suitable state of tide.

MAX. SIZE: Also see "Tetney Terminal" and Immingham Oil Termi under "Tankers".

Immingham Dock: Max. length 198 m., breadth 26.2 m., draft 10.36 on density 1010.

HEALTH: Master to report any "Reportable" illness as detailed in fo "Port 38" to "Porthealth Immingham".

See "Health – All Ports" before first U.K. port.

RADIO: Humber Radio – 2182 kHz or VHF Channel 16. Dock Mast VHF Channel 16. Tankers use Channel 19.

VHF: See "Hull" – Vessel Traffic Services Humber.

TUGS: Will join vessel off dock entrance, optional use of tow lines using tug's tow lines, charge for this service, depending on vessel's leng

BERTHING: Unless Master or Agent indicates preference, the P Authorities will decide which side alongside. River Pilot deciding conjunction with Dock Master most suitable berthing time for harbo and river installations.

Ro/Ro Terminals: The enclosed dock system incorporates 2 Ro freight terminals: 1×4 berth facility is operated by Exxtor while a seco single berth terminal is available on a common user basis.

BULK HANDLING FACILITIES: Immingham Bulk Terminal – Ore

Immingham Bulk Terminal is an off-shore jetty, some 525 m. lo sited approximately 0.5 miles upstream from Immingham Dock.

It is serviced from the shore by a single lane roadway, which h height and weight restrictions, which must be conformed with.

Ore Berth: All depths are to L.A.T. Datum.

Sea Channel	A deep Buoyed Channel to Humber Light Vessel.
Sunk Channel designed depth **	9.2 m.
Berth designed depth **	14.8 m.
Average Tidal Range – Springs	6.4 m.
Average Tidal Range – Neaps	3.2 m.
Max. Berth length	303.0 m. Stern lines to mooring dolphin.

Ship's Dimensions:

Max. length overall	303.0 m.
Beam	47.0 m.
Draft **	14.5 m.
Max. height of hatch coaming or side covers above High Water	15.80 m.
Max. working length of vessel	260.42 m.

** Subject to alteration due to local tidal conditions.

Additional Berth Data:

Designed stockpile capacity imported coal	150,000 tonnes
Seasonal restrictions	None
Designed stockpile capacity	600,000 tonnes
Discharge system	2 unloaders
Maximum designed hourly discharge	4,000 tonnes (ore) 2,000 tonnes (coal)
Average hourly discharge	2,300 tonnes (ore) 1,200 tonnes (coal)
Outreach of grab beyond fender line	37.4 m.
Clearance of unloader boom from High Water	29.84 m.

Clearance of unloader boom from Low Water	35.94 m.
Travelling length of unloader along jetty	287.72 m.

All oil/ore carriers must be in possession of a valid Gas Free Certificate, and be fitted with an Inert Gas System. If any slops remain on board, these must be inerted as per Charter Party B.S.C. CORE 7 CL48.

Discharge is continuous, including Bank Holidays.

Small quantities of stores can be supplied by road. However, chandlers must consult with the Jetty Officer before delivery (Tel: Immingham 571-300, Ext. 127). Larger quantities and heavy loads are by barge only.

All oil bunkers are supplied by barge only.

Parking facilities on the Jetty are very limited.

Public telephone boxes are sited on the Jetty.

A ship-shore access gangway is available.

Garbage disposal by arrangement with Agents and Terminal management.

Maximum vehicle dimensions are:
Height – 3.20 m. (10 ft. 6 in.).
Width – 3.05 m. (10 ft. 0 in.).
Length – 9.70 m. (32 ft. 0 in.).
Axle weight – not to exceed 9 tonnes.

Contact: Immingham Bulk Terminal, Humber Road, South Killingholme, South Humberside DN40 3LZ. Tel: (0469) 571300. Fax: (0469) 571750.

Grain: 2×500 t.p.h. shiploaders available.

CRANES: 16 electric cranes 3 – 20 tonnes capacity.

1×40 ton crane at Exxtor berths.

STEVEDORES: Firm ETA to Agent required if possible before noon on previous day before arrival.

Working Hours: Monday – Thursday, 0800 – 1700 hrs.; Friday, 0800 – 1600 hrs.; overtime by arrangement.

MEDICAL: No advance notice necessary for medical treatment as all hospital facilities available.

TANKERS: Also see "Tetney Terminal".

Immingham Oil Terminal: Berths No. 1 & 2: Up to 284,480 d.w.tonnes. with max. load displacement of 172,720 tonnes. Length up to 1,100 ft., breadth no restriction and max. draft 42 ft. Four 12 in. lines for crude oil. Two 12 in. lines for fuel oil and three 10 in. lines for white oils. One 8 in. line for fuel oil bunkers.

Berth No. 3: Max. 80,000 d.w.tonnes with max. load displacement 110,000 tonnes. Length up to 1,100 ft. and max. draft 42 ft. 3 loading arms (2×16 in. for fuel oil and ballast and 1×12 in. for distillate, spirit and ballast).

Finger Pier: 8 in. loading arms for fuel and white oils

Mooring Operations: Large vessels normally berth at HW port side to jetty. Ideally, vessels of maximum size should stop off jetty and approach beam on at rates of no more than 55 ft. per minute. Number of tugs depends on vessel size.

Mixed moorings in the same service (i.e. headlines, stern lines, breasts and springs) are not permitted unless previous authorisation has been given and then only when stand-by tugs and Pilot remain onstand-by throughout vessel's stay alongside.

Vessels are not allowed to berth or unberth without the attendance of the Associated Petroleum Terminal's Berthing Master.

There is no fixed doppler or berth approach rate indicators installed on jetty.

Normal mooring pattern is indicated in the "Plan Section".

Various wind speed restrictions in force for berthing and sailing operations.

Unberthing: Due to the strong tidal currents which develop in the vicinity, vessels normally sail on or around HW or LW slack.

Maximum size vessels, having made fast their tugs, come off the berth bodily, and swing in a position just to the S.E. of the terminal.

Eastern Jetty: Max. Length approx. 650 ft. breadth, no restriction, draft depends on LW, range 27 ft. to 36 ft. Lines 10 in., 8 in., 6 in. depends on Receivers. Bunker line available.

Western Jetty: Max. Length approx. 800 ft. breadth, no restriction, draft depends on LW, range 27 ft. to 36 ft.

Berthing Operations: (Eastern and Western Jetties): Normal berthing time for vessels is not more than 1 hour either side of HW or LW slack.

Vessels berth either port or starboard side to jetty depending on weather and tidal conditions prevailing at time.

Jetties are of wooden piling and fender construction and consequently care should be taken to ensure vessel does not land too heavily when berthing.

Draft restrictions can be calculated by taking the ABP predictions on the outer sill at Immingham for LW and adding 0.5 m. (1.6 ft.).

Normal mooring pattern is 3 headlines, 3 sternlines, 2 breastlines forward, 2 breastlines aft, 2 springs forward and 2 springs aft.

Unberthing; Normal sailing time, in view of strong tidal conditions which develop, is at HW or LW slack or up to one hour either side of these times.

Killingholme North: Max. length 580 ft., beam, no restriction. Draft 30 ft. 6 in. One 8 in. line. One 4 in. bunker line.

Berthing Operations: Normal berthing time for vessels is at HW or LW slack and not more than 1 hour either side of these times. Vessels berth either port or starboard side to jetty depending on weather or tidal conditions prevailing. The mooring pattern is similar to that used at Immingham East and West Jetties (see above).

Unberthing: Normally up to one hour either side of HW or LW slack.

Killingholme South: Max. length 800 ft.; beam, no restriction. Max. draft will be advised. 10 in. loading arms. Bunkers by barge.

Berthing Operation: Vessels berth at H.W. or L.W. (if draft acceptable).

Unberthing: One hour before H.W. or at L.W. (if draft acceptable).

Small vessels normally berth and unberth at anytime.

Head and stern lines must be a minimum of 100 m. length.

LPG FACILITIES: Humber Gas Terminal located at South Killingholme.

Max. Vessel Size: LOA – 280 m. (Min. 65 m.). Beam – No restriction. Capacity – 80,000 cu.m. (L.P.G) or 55,000 d.w.t. (white oil)

Max. Draft: Berth dredged to 12 m. Draft dependent on low water level. Mud bottom on berth. Capable of future dredging to 14.8 m below LAT.

Tidal Range: Springs – 6.4 m. (21 ft.) (approx.) Neaps – 3.2 m. (10.5 ft.) (approx.)

Max. Tidal Ebb Speed: Springs – 4.5 – 5 knots. Neaps – 2.54 – 3 knots.

Approach to Berth: Sunk Dredged Channel and Main Channel. Two Channels are marked by light buoys and light floats. Pilotage compulsory.

Jetty Berth: 6 facing fenders. 6 mooring dolphins (3 Fore/3 Aft). Minimum flat side vessel – 32 m. with manifolds midships.

Presentation Arm: 1 × 10 in. L.P.G and 1×10 in. white oil.

Jetty Pipe-lines: 1×14 in. L.P.G., 2×10 in. and 2×12 in. white oil lines.

Cargo Handling Rates: L.P.G. exports – 2×300 cu.m.p.h. pumps. L.P.G. imports – up to 1,000 cu.m.p.h. White oil exports – up to 1,200 cu.m.p.h.

Fresh Water: Available from berth.

Bunkers: Available only by barge.

Stores: Limited access to Jetty. Rigid vehicles only but no parking facility at Jetty Head. (Always refer to Agent).

DENSITY: In harbour 1010.

FRESH WATER: Available all berths by hose. Rate of delivery 20 t.p.h.

FUEL: 24 hours notice required. All grades available.

FIRE PRECAUTIONS: Copy of these regulations handed to the Master on arrival.

CONSULS:

Finland	Immingham 573187	Netherlands	Immingham 76246
Denmark	Grimsby 357521	Norway	Hull 224151
Greece	Hull 224151	Sweden	Immingham 571387

REPAIRS: No facilities.

DRY DOCKS: None.

SURVEYORS: Classification/P&I and cargo surveyors available.

GANGWAY/DECK WATCHMEN: Watchmen not usually employed, but left to the discretion of the Master.

OPENING/CLOSING HATCHES: See "Grimsby".

CERTIFICATES:
Ship's Register.
Load Line.
Safety Radio.
Safety Equipment.
Safety Construction and any British Light Dues Receipts.
Derat Certificate.
Oil Pollution Certificate (Tankers).

CUSTOMS ALLOWANCES: 8 days – 200 cigarettes per person approx. Wine/spirits, 4 days – 0.25 pt. per day; this depends on the Customs Officer's discretion.

CARGO GEAR: This must comply with the Department of Employment and Productivity regulations. Normally discharge carried out by shore cranes, although overside berths available.

REPATRIATION: All facilities exist for dealing with crews and passengers.

AIRPORTS: Leeds Bradford Airport and Humberside Airport for Amsterdam (3 flights from each daily), Aberdeen and London for International destinations.

TIME: GMT. Summertime, GMT plus 1 hour.

HOLIDAYS: See "Grimsby".

POLICE/AMBULANCE/FIRE: Port Security – 72067, 72068. County Police – Immingham 76444. Ambulance; County – Cleethorpes 692912. Fire; 999 ask for Fire.

EMERGENCY CO-ORDINATION CENTRE: Humber Estuary, Humber Ports Operations and Information Service. Tel: Hull 35599 – Hull Radio on VHF Channels 16 and 12.

TELEPHONES: Public telephones available.

BANKS: All major U.K. Banks have branches in the area.

STORING: See "Prelims".

1, 2, 3. It is normal practice for such stores to be delivered to ships side at in-dock berths by road vehicles. At the Eastern and Western River Jetties at Immingham, however, vehicles are not permitted and the approximate distances fom the root of the Jetties to ships side is from 400 m. to 500 m. South Kilingholme Jetty – access by foot only.

4. Fork lift trucks could be used at in-dock berths, if necessary.

If proceeding to NCB/BSC or Immingham Oil Terminals – check with Terminal Authorities.

IDENTIFICATION CARDS: Seaman's Book or Passport sufficient for crew members going ashore.

GARBAGE DISPOSAL: In dock, collection service available alongside vessels using private hire skips for kitchen/galley waste. Contact BIFFA (Tel: 0472 351185). Some Port Authority skips available on the quayside for dunnage waste disposal only.

At the jetties, garbage skips are also available.

Immingham Oil Terminal: Garbage disposal available at each berth. Skips permanently in position and are emptied 3 times per week. Service administered by jetty contractor, Delta Catalytic Port Services (Tel: 0469-574044). Ships up to 6,000 d.w.t. included in mooring tariff at finger pier. Other vessels at other berths, £39.00 per vessel. Same facilities at South Killingholme Jetty and Immingham Gas Terminal.

WASTE OIL DISPOSAL: In dock, collection service available using tanker trucks alongside vessel. Contact Waste Oil Services (Tel: 0472-827112) or BIFFA (Tel: 0472-351185).

Killingholme Jetty has no access for vehicles to come alongside vessels, but other jetties can be facilitated similarly to vessels in dock.

SEAMAN'S CLUBS: Immingham Seaman's Club, Immingham Dock. Tel: 0469-574195. Danish Mission, 2 Cleethorpe Road, Grimsby. Tel: 0472-342257.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: Associated British Ports, Port Office, Grimsby, South Humberside DN31 3LL. *Tel:* (0472) 359181. *FAX:* (0472) 48275. *Contact:* D. Dunn, Port Manager.

INVERNESS: 57.29 N. 04.14 W. (See Plan)

DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
Customs and Excise and Health Documents.
Manifest.
Bills of Lading, etc.

PILOTAGE: Compulsory for all vessels over 50 m. Apply direct to Agent or to Pilot, telephone Inverness 715715. ETA 24 hours. Pilot equipped with VHF. Pilot cutter is a blue launch. Pilot station Meikle Mee Buoy. Location of anchorage while awaiting Pilot – Munlochy Buoy.

ANCHORAGES: Munlochy Buoy in 5 – 8 fathoms. Beauly Basin in 15 fathoms.

RESTRICTIONS: Vessels may enter and leave from 2 hours before HW until 2 hours after HW.

MAX. SIZE: Ship max. 125 m. length, 6.25 m. draft, high water springs. 5.5 m. draft, high water neaps

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Wick Radio.

VHF: Harbour Office on VHF Channels 16, 14 and 12 during office hours.

TUGS: Available from Invergordon.

BERTHING: *Longman Quay:* Length 180 m. Depth 5.0 m L.A.T.
Thornbush Quay: Length 156 m. Depth 3.0 m L.A.T.
New Citadel Quay, Old Citadel Quay and *Central Quay:* Each about 100 m. in length, and *Shore Street Quay,* about 150 m. in length, form a continuous length of quayside on the East side of the harbour at its upper end; there are depths of 3 m. alongside. L.A.T.

BRIDGES: Kessock Road Bridge, max. clearance 29 m. at MHWST.

STEVEDORES: Arrange through Agent. 24 hours notice required.

MEDICAL: Doctor available.

DENSITY: 1002.

FRESH WATER: Available on demand, 5 t.p.h., ex-hose on quay.

FUEL: Marine diesel and petroleum on request.

CONSULS: Sweden (Mr. John Fraser), Tel: Inverness 238366.

REPAIRS: Thornbush Slipway Tel: 711048.

GANGWAY/DECK WATCHMEN: Supplied by ship.

OPENING/CLOSING HATCHES: Done by crew.

CUSTOMS ALLOWANCES: Tobacco/Wines/Spirits. Usual amount allowed by Customs and Excise.

REPATRIATION: Facilities available.

AIRPORT: Dalcross, 7 miles from Inverness.

HOLIDAYS: 1st and 2nd January; Easter Monday; July Bank holiday; First Monday in October; and Christmas Day. All official holidays, cargo work can be arranged on these days.

POLICE/AMBULANCE/FIRE: Police Inverness 715555; Fire Brigade Inverness 222722; Ambulance Inverness 231511.

TELEPHONES: Adjacent to quays.

SHORE LEAVE: Unrestricted.

IDENTIFICATION CARDS: None.

GARBAGE DISPOSAL: Rubbish bins available on quay, free of charge, emptied as required.

WASTE OIL DISPOSAL: Full service into tanker trucks available. Charges according to quantity and commodity. Contact Agent for details.

SEAMAN'S CLUBS: None.

AUTHORITY: Inverness Harbour Trust, Harbour Office, Longman Drive, Inverness IV1 1SU, Scotland. *Tel:* (0463) 715715. *FAX:* 0463-715705.
Contact: Captain J.B. Fairgrieve, Harbour Master.

IPSWICH: 52.03 N. 01.10 E. (See Plan)

DOCUMENTS: Masters can conclude all documentation in port. Ship's Agent will give the necessary advice.

PILOTAGE: On behalf of the Ipswich Port Authority. Pilotage Authority – Harwich Haven Authority.
Compulsory Area: River Orwell and Harwich Harbour as far seaward as the following outer boundaries:
Eastwards to Longitude 01° 24′ E.
Southwards to Latitude 51° 54.5′ S.
Northwards to Latitude 51° 57.4′ N.

Pilotage is compulsory for all vessels over 50 m. LOA navigating within this area except H.M. Ships and vessels of less than 100 m. LOA operating exclusively within the port area.

Boarding Point: Boarding and landing of pilots is carried out by fast launches operating from Harwich. The boarding position will be outside the compulsory area, and must be agreed with Harwich Harbour Operations, having regard to the size and draft of the ship, and other prevailing circumstances.

ETA's/ETD's: Inward vessels to give 8 hours Notice of Arrival at Harwich Approach Buoy, (Latitude 51° 56.4′ N., Longitude 01° 31.2′ E.), together with details of Gross Tonnage/Gross Register Tonnage, Draft (Maximum), Departure Port and Destination.

Confirmation of ETA required 3 hours before arrival.

Outward vessels must give a minimum of 2 hours' notice before sailing from or moving within the compulsory area.

Communications: Call sign "Harwich Harbour Radio", VHF Channel 9.

VHF Radio:	Channel 16	Safety
	Channel 9	Pilotage and ETAs
	Channel 71	VTS and Reporting
	Channel 6	Pilot Launches
	Channel 69	Tugs
	Channel 20	Harwich Radar Assistance
	Channel 11	Harbour Craft

Telephone:	(0255) 243000 Harbour Operations, or (0255) 243111 Pilot Orders.
Telex:	98472 HAROPS - G.
Fax:	(0255) 241325.
Pilot Launches:	VHF Channels 6 and 71.
Director of Pilotage:	Captain I.T.Whale, Tel: (0255) 243030.
Ipswich Harbour Master:	Captain D.H.Winter, Tel: (0473) 211771 (mann 24 hours).

ANCHORAGES: No anchorages within port. All vessels will proce direct to berth, otherwise anchorage provided in Harwich Harbour or a indicated by Harwich Harbour Radio (VHF Channel 71).

RESTRICTIONS: Up to 80 m. in length the lowest permissible U.K. is 0.75 m. Over 80 m. and up to 110 m. in length the lowest permissi U.K.C. is 1.0 m. Over 110 m. in length by special arrangeme (U.K.C.=Under Keel Clearance).

See "Notices" – "Guidelines – Vessels Navigating the River Orw and the Port of Ipswich" and "Dangerous Substances in Harbour Are Regulations".

MAX.SIZE: LOA 140 m., draft 7.7 m. (inward) and draft 7.4 m. (outwar both on a 3.6 m. tide.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Masters to contact ship's Agent through North Forelan Humber, Niton or Portishead depending on position of vessel. All the radio stations hold cable addresses and staff telephone numbers Agents.

VHF: A 24 hour VHF radio facility is in operation. Vessels arriving shou contact "Ipswich Port Radio" on VHF Channel 16 on entering the Riv Orwell and report and/or maintain a listening watch as instruct Channels 14 and 12 will be used for the passing of messages wh should be restricted to the safety of navigation or persons.

TUGS: Vessels of 110 m. in length and up to 130 m. will use 1 tu Vessels of 130 m. in length and over will use 2 tugs.

Special consideration may be given to vessels fitted with bow thr facilities trading regularly to the port.

BERTHING: Vessels bound for berths in the Wet Dock should arrive the lock 2 hours before HW.
Power Station Quay: Length 143 m.
Depth of water alongside: 7.5 m., subject to silting.
Approach channel: 5.6 m. below chart datum.
Cliff Quay: Length: 3,250 ft (990 m.).
Depth of water alongside: 7.5 m. below Chart Datum. Subject to silt
Approach Channel: 5.6 m. below Chart Datum.
Cranes: 5 portal jib cranes from 10 tonnes to 35 tonnes lifting capac A Karrilift container gantry is also available.

Largest vessel which can be accommodated: 460 ft. (140.2 m.) ove in length, 25 ft. 6 in. (7.7 m.) draft inwards, 24 ft. 6 in. (7.4 m.) outwar

The Quay handles containers and heavy lifts up to 35 tonnes and particularly well equipped to handle cargoes direct to and from both ro and rail transport. The South end has been developed as a mode terminal for handling all types of general cargo, including containe flats, palletised units and bulk cargoes. Spacious modern transit she and a container park are sited on part of this Quay. Vessels up 25 ft. 6 in. (7.7 m.) draft can be handled at the terminal.

Grain Terminal: Located at Cliff Quay. Capable of handling vessels to 10,000 tonnes capacity at a loading rate of 550 t.p.h. (malt) a 700 t.p.h. (other grain products). Grain silo capacity 11,000 tonnes

Container Terminal: The terminal has a 40 tonne ship to shore lift crane and 2 shoreside gantries with 1-9-1 configuration.

West Bank Terminals: These terminals provide 3 berths with a total q frontage of 310 m. and are dredged to 5.8 m. below Chart Dat 2 container berths are backed up by 5.5 hectares of hardstandi including a transit shed of 2,750 sq.m. floor area. The berths are serv by portal cranes of 40 tonnes, 37.5 tonnes and 10 tonnes capacity a are adjacent to a Freightliner Terminal offering daily services a incorporated into the Railfreight Speedlink network.

A Ro-Ro berth is backed up by 7 hectares of hardstanding. The bri ramp is designed to carry a load of 180 tonnes with maximum axle loa of 45 tonnes. The ramp has a carriageway of 36.9 m. long×7 m. w and can handle traffic at all states of the tide.

The Dock: The dock is situated within the town of Ipswich. It is s 26.25 acres (10.63 hectares) in extent and is approached by an entra lock.

NAVIGATION - THE ENCLOSED DOCK, ISPWICH

VHF Radio: The Lock Master is equipped with VHF Marine Radio a may be contacted through the Orwell Navigation Service (Ipswich R Radio) on Channel 14.

Maximum Size Vessels that can:

(a) Lock In or Out:	80.76 m. LOA and 14.50 m. beam.
(b) Enter the Dock:	114 m. LOA and 14.50 m. beam. (Vessels over 80.76 m. LOA can only ente the Dock when the Outer and Inner Lock-gates are open, that is for approximately on hour prior to HW on most tides but this is n guaranteed).
(c) Maximum Draft:	Owing to the shape of the Lock Pit, moder vessels require a minimum Under Keel Clearance depending upon their beam. To ascertain the maximum permissible draft a the following to the height of the Tide abo Chart Datum at time of entry.

Vessel's Beam (m.)	(m.)
12.00	+2.09
12.50	+1.81
13.00	+1.59
13.50	+1.43
14.00	+1.28
14.50	+1.17

Notwithstanding the above, the maximum draft for any vess the enclosed dock is 5.50 m.

Locking Times:

(i) Commercial Vessels:
May Lock In or Out from 2 hours before HW to 40 minutes after HW.
Special arrangements may be made for vessels to enter or leave one hour either side of these times, subject to the Lock Master being advised during the preceeding tide, there being sufficient water and at additional cost to the User.

(ii) Non-Commercial Vessels:
Should enter or leave the Dock from one hour to quarter hour prior to HW, if possible.

Entry Signals:

Lights fixed above the Orwell Navigation Service Building on the East-side of the Lock indicate to vessels whether the Lock is open or closed for entry from the River or the Dock as appropriate.

ONE RED LIGHT *Lock closed* to vessels entry.
ONE GREEN LIGHT *Lock open* for vessels entry.

Flood Protection Gates:

These gates are closed when the tide level is 4.6 m. or more above Chart Datum. During this period the Dock Entrance is closed to navigation.

Inside, in addition to some 2,700 ft. (823 m.) of private quays owned by merchants having warehouses or mills adjoining, where small vessels can berth, there are the following quays owned by the Authority:

(i) *South West Quay:* This quay is 800 ft. (244 m.) in length with a depth of 19 ft. (5.79 m.) of water alongside at mean dock level. The quay is served by 3 modern 7.5 tonne portal electric travelling cranes and mobiles as required.

(ii) *Timber, Public Warehouse,* and *End Quays* total 940 ft. (286 m.) in length and have a depth of water alongside varying from 12 ft. (3.65 m.) to 20 ft. (6.09 m.). Public warehouse is served by mobile cranes capable of lifting up to 5 tonnes.

(iii) *Tovell's Wharf* is a 600 ft. (183 m.) reinforced concrete quay with 22 ft. (6.70 m.) of water alongside. It is served by mobile cranes up to 5 tonnes lifting capacity.

(iv) *Orwell Quay* is 775 ft. (236 m.) in length, with 18 ft. (5.48 m.) of water alongside and includes a Ro/Ro berth. One transit shed, with a floor area of 10,100 sq.m. is situated immediately behind the quay apron together with further extensive covered and open areas.

BRIDGES: The River Orwell Bridge has a clearance of 38.8 m. above MHWOST (43.07 m. above Chart Datum).

Masters of larger vessels are advised to check their air drafts and if in any doubt contact their Agent or the Ipswich Port Authority before proceeding up the River Orwell.

STEVEDORES: Ship's Master normally advises his Agent of his ETA, distribution of cargo on board, and all relevant details. The Agent passes this information to Stevedores.

MEDICAL: All medical facilities available in port. Vessels requiring medical assistance on arrival should advise all details by radio telephone or in their ETA cables.

TANKERS: It is desirable that when Master of a tanker gives an ETA he also indicates the size of pipeline, size of connection and discharging point in order that necessary arrangements can be made at discharging point of receiving oil terminal. There are no slop facilities at Port of Ipswich, however arrangements can be made, through the Port Authority (Tel: (0473) 231010) for firms using road tank vehicles to remove sludge or oily-waste. All cleaning and gas-free operations must be carried out outside precincts of the Harwich Harbour Board. Only one tanker berth at Ipswich but there are 6 intake points on quay and it is usual for 3 coastal tankers to be accommodated, depending on the overall length and berth availability. A maximum draft on the berth of 23 ft. (7 m.) subject to silting.

Also see "Notice".

DENSITY: Approximately 1020, depending on the amount of fresh water in river due to heavy rain.

FRESH WATER: Available at all quays. Delivery by hose through meter at 10 t.p.h.

FUEL:

Gas oil 35 secs. Redwood.
Light fuel oil 200 secs. Redwood.
Medium fuel oil heated 950 secs. Redwood.
Heavy fuel oil heated 3,500 secs. Redwood.
At least 24 hours' notice required.

CONSULS: Vice-Consul for Sweden and Vice-Consul for Norway.Tel: (0473) 59281.

REPAIRS: Only small repairs on board.

SURVEYORS: Lloyd's Register, Tel: (0502) 81117.

GANGWAY/DECK WATCHMEN: No watchmen required by Port Authority, but sufficient men available at all times to move vessels, if necessary.

OPENING/CLOSING HATCHES: Hatches opened and closed by ship's crew.

CERTIFICATES: Following certificates are required by Agents in order to arrange Customs Clearance: Ship's Register, Radio Certificate, Load Line Certificate, Safety Equipment Certificate, Derat Certificate, British Tonnage Certificate, if required.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes, or equivalent in tobacco, per man. Wine and/or Spirits, 1 bottle per man.

CARGO GEAR: Cargo working gear is supplied by stevedores. Normally, quayside cranes are used for discharging and loading. In event of cargo gear being used in port, Ship's Gear Certificate, duly certifying that all gear has been examined and is in every way workable and suitable for discharge and/or loading of cargo, is to be produced.

REPATRIATION: Facilities exist at port for effecting crew changing and arranging repatriation.

AIRPORT: Ipswich Airport is 2 miles from the port. Charter flights available for ship's crew. Tel: (0473) 70111.

HOLIDAYS: Normal holidays for English ports.

TIME: GMT in Winter months. Summer time, GMT plus 1 hour.

POLICE/AMBULANCE/FIRE: In emergency dial 999. Otherwise Police – Ipswich (0473) 725363.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Not required as long as each crew member has in his possession a Seaman's Book and/or Passport.

GARBAGE DISPOSAL: Garbage disposal is available, skips are placed alongside vessels. Contact Port Authority.

WASTE OIL DISPOSAL: Service available using private contractors. Contact Cleanaway Ltd. (Dry Cargo, Tel: 0953-452374. Wet Cargo, Tel: 0223-423231) or Hales Containers. (Tel: 0473-831725).

SEAMAN'S CLUBS: Ipswich Mission to Seamen, 20 Camberley Road, Ipswich, IP4 5QF. Tel: 0473-727822.

CURRENCY: U.K.Pound (U.K.£).

NOTICES: *Guide Lines – Vessels Navigating the River Orwell and the Port of Ipswich (B.A. Chart No. 2693).*

1. Length and Under Keel Clearance (UKC):

Vessels up to 80 m. LOA – lowest permissible UKC 0.75 m.
Vessels between 80 m. LOA – 140 m. LOA – lowest permissible UKC 1.0 m.
Vessels over 140 m. will only be accepted by special arrangement with the Harbour Master.
Air draft under the Orwell Bridge is 43.07 m. above Chart Datum.

2. Towage:

Up River from Buoy No. 5, vessels between 110 m. LOA and 130 m. LOA – 1 Tug. Vessels 130 m. LOA and above – 2 Tugs.
Special consideration may be given by the Harbour Master to vessels fitted with bow thrust facilities which trade frequently to the Port of Ipswich.

3. Speed:

A Master of a vessel will at all times navigate with caution and at such speed that no damage to the environment, or hazard will be created to other craft which may be navigating or moored in the vicinity.

The speed of vessels must be reduced to the minimum consistent with safe navigation when passing the yacht anchorages at Pin Mill, Woolverstone and other places, or other vessels moored, or dredgers operating; or works of repair, maintenance or construction in progress within the Harbour and from a point abreast of East Fen Buoy to the Lock Gates and while within the Dock.

The maximum speed for vessels under 50 g.r.t. shall be deemed to be 6 knots.

4. Position Reporting:

(a) A Master shall report to the Orwell Navigation Service on VHF Channel 14/12.

(i) On entering the River approaching Buoy No. 1.
Passing Buoy No. 4.
Passing Cathouse.
Passing Buoy No. 9.
When secure on berth.
If any such vessel is in a damaged condition which renders such vessel in any way unseaworthy, or inhibits the vessel's ability to manoeuvre, full particulars of the damage shall be given in such report.**

***Note:* The Harbour Master on receiving a report from a Master of a vessel may give directions to the Master of such vessel under powers in that behalf given by Section 59 (2) of the Ipswich Dock Act 1971.

(ii) On leaving the Port, report to the Orwell Navigation Service at the following positions:
Prior to leaving the berth
On clearing berth and proceeding
Passing Cathouse Buoy
Passing Buoy No. 4
Passing Buoy No. 2
Immediately before leaving the Port.

(iii) While navigating within the Port at all times maintain a listening watch as directed by Orwell Navigation Service.

(b) If such vessel is not fitted with VHF radio-telephone or is fitted with one which is not operational at the time of entry into the Port or departure from a berth therein, on arrival at a berth owned or occupied by the Authority, prior to leaving a berth in the Port and before moving from one berth to another, report to the Orwell Navigation Service in person or by telephone.

5. Restrictions (Navigational):

(a) Inward Bound Vessels:
To satisfy the conditions in 5/1 and 5/2, Masters and/or Pilots of Inward bound vessels *must* contact the Orwell Navigation Service and liaise, if necessary, with any outward bound vessel.

(b) Outward Bound Vessels:
The Master and/or Pilot of outward bound vessels *must* ascertain the position in the Channel from the Orwell Navigation Service, prior to leaving the berth and liaise, if necessary, with any Inward bound vessel.

(1) Vessels over 90 m. LOA:
A vessel of 90 m. LOA or more, *must not pass* or *overtake* another vessel of 90 m. LOA or more in the River Orwell between the Butt Buoy and the Port of Ipswich.

(2) Petroleum Tankers and Chemical Tankers with Hazardous Cargo:
These vessels may navigate at any time (subject to the above and to tidal constraint if appropriate) provided that:

(i) Between one hour after sunset to one hour before sunrise there is no opposing traffic on the River above the Butt Buoy, the size or draft of which would present a potential hazard.

(ii) Weather and visibility conditions are of a standard acceptable to the Master and the Pilot concerned.

6. *Sound Signals:*
In addition to the Sound Signals required to be made by the Regulations for the Prevention of Collisions at Sea, the following signals will be used by vessels navigating in the River Orwell:
4 short blasts followed by 1 short blast = Vessel swinging to starboard.
4 short blasts followed by 2 short blasts = Vessel swinging to port.
1 long blast, given when approaching the Woolverstone and Pin Mill areas between the hours of sunrise and sunset. (Inward bound vessels between Buoys No. 4 and 5, and outward bound vessels when passing Buoy No. 7.).
1 long blast when leaving Cliff Quay or West Bank berths during daylight hours on Saturdays and Sundays.

7. Nothing in these Guide Lines will remove from any Pilot the right to advise Masters against navigating in the River if in the professional opinion of the Pilot a proposed course of action is considered to be imprudent.

8. Notwithstanding anything contained in the generality of these or other arrangements regarding the navigation of the River Orwell, vessels of over 140 m. LOA may, under certain special circumstances and conditions, navigate in the River subject to prior consultation with the Ipswich Harbour Master.

9. Nothing in these Guide Lines shall preclude the Ipswich Port Authority Harbour Master, after consultation, if relevant, with the Haven Pilots, from giving consideration to the exemption of a specific vessel from any of the conditions and requirements herein before mentioned.

Signed: Harbour Master
Date: 1st February 1990.

Dangerous Substances in Harbour Areas Regulations 1987:

1. A Ship Master; Agent; Transport Operator; Contractor or any person who intends to bring a dangerous substance, as defined in Regulation 1(a) of the Merchant Shipping (Dangerous Goods) Regulations 1981, into the Harbour or Harbour Area of the Port of Ipswich, either from Inland or from the Sea, is required under the above regulations to give the Harbour Master and the Berth Operator advance notice of their intention.
The Harbour Master reserves the right to refuse transit through the Harbour Area of certain highly dangerous substances, or to require them to be handled direct to or from transport into a vessel or vice versa.

2. Notification should be made to both the Harbour Master and the Berth Operator from 14 days to 24 hours prior to the goods entering the Harbour Area. However, under certain circumstances the following may apply:
Inward Cargoes: Harbour Master's Information.
In the case of ship reporting Inward from Continental passage, where it is impracticable to comply with the foregoing, then the maximum notice possible should be given but *never less* than *6 hours*.
This to include R O B (Remaining on board) Dangerous Substances in transit through the Port.
This information to be telexed to No. 98642 or Fax to (0473) 230915 at the Orwell Navigation Service (Port Radio) and should also be sent to the Berth Operator.
Export Cargoes: Berth Operator's Information.
In cases where it is not possible to comply with the above regulation, a lesser notification *may* by accepted but *never less* than *12 hours* prior to the arrival of the goods in the Harbour Area.
This information to be transmitted to the Berth involved (Berth Operators – See No. 3).

3. *Berth Operators:*
Ipswich Port Authority: West Bank – Ro-Ro and Container Terminal (excluding Bell Berth).

Fax: (0473) 602266
For internal transmission to Berth
Letter by hand or GPO: Ipswich Port Authority

Telephone: (0473) 690909
Fax: (0473) 686286
Telex: 987855
Letter by hand or GPO: Bell Terminal Ltd
(Dangerous Substances Notification)
Bell Terminal
Wherstead Road
Ipswich IP2 8NB

4. *Notification:*
Notification must include full details of Dangerous Substance to b presented into the Harbour Area, which should be given in th following format.
(a) Name of Agent and/or Operator presenting the notification.
(b) Name of Vessel.
(c) Berth.
(d) Date/Time due.
(e) Dangerous Substance.
(f) UN Number/Flash Point.
(g) Quantity.
(h) Method of Packaging.
(i) Transport Company involved.

5. *Radio Active Substances and Explosives:*
Radio Active Substances and Explosives which are subject to th Port's Licence may only be brought into the Harbour Area after pr booking and by agreement with the Harbour Master and the Ber Operator as to the type, quantities and dates of transit in line w the foregoing.

6. *Other Regulations:*
A Dangerous Substance brought into the Harbour or Harbo Area under the Merchant Shipping (Dangerous Good Regulations 1981, must also conform to the following regulatio
International Maritime Organisation – Dangerous Goods Co Classification, Packaging and Labelling of Dangero Substances Regulations 1984.
Dangerous Substances (Conveyance by Road in Ro Tankers and Tank Containers) Regulations 1981.
The Classification and Labelling of Explosives Regulatio 1983.
Radioactive Substances (Carriage by Road, GB Regulatio 1974). Regulations for the Safe Transport of Radioact Materials. – Ionising Radiation Legislation 1985.
International Carriage of Dangerous Goods by Rail (RID).
International Carriage of Dangerous Goods by Road (AD Geneva 1957.
Road Traffic (Carriage of Explosives) Regulations 1989.

7. *Documentation:*
When Dangerous Substances arrive at the Harbour Area, t Ipswich Port Authority will require, in addition to the Unit Lo Note/Interchange Note, the following:
(1) Dangerous Substance Documentation Showing:
   (a) IMO Class.
   (b) The UN Number.
   (c) The correct Chemical name of substance – Trade Na not acceptable.
   (d) Flash Point (if applicable).
   (e) The number and type of packages and, if explosive, t nett explosive content.
   (f) Emergency contact telephone number.
(2) Labelling:
The Packages/Unit to be labelled in accordance with the IM Code and old label/s to be removed.
(3) Certificates and Licences:
If Radioactive Substances, the appropriate packag certificates and Licences.

Signed: Harbour Master.

KING'S LYNN: 52.45 N. 00.24 E. (See Pl

DOCUMENTS:
Pilot Note to be filled in and signed by the Master on completio pilotage services both inwards and outwards.
Cargo tonnage return to be completed by the ship's Agent.

PILOTAGE: Pilotage is compulsory between an East-to-West through King's Lynn Buoy No. 3 in the Wash and the Freebridg King's Lynn.
Vessels may be boarded from pilot cutter in the Wash from ap 2.5 hours before HW between King's Lynn Buoy No. 1, the Sunk and Roaring Middle Light Float. Unless prevented by weath breakdown a pilot cutter cruises between King's Lynn No. 1 Light and the Sunk Light Buoy approx. 2.5 hours before HW until such as it is too late for a vessel to transit the Approach Channel on th

Requests for a Pilot sent at least 24 hours before the service is required (with amendments if necessary up to 14 hours before) to the Pilot Office, Common Staith, King's Lynn (Tel: King's Lynn 773411, Telex: 817588, Fax: 768185 or telegrams "Conservator" King's Lynn) or through local Agent. The Pilot Office is at the Harbour Office and maintains VHF R/T watch on Channels 16 and 14 from 0900 – 1700 hrs. Monday to Friday and from 4 hours before HW until 1 hour after HW on each tide after 1700 hrs. and before 0900 hrs. The pilot cutter listens on Channel 16 when on station and is fitted with Channels 14, 12, 11 and 6 as working channels.

Pilot launches "United" and "Denver" are 40 ft. fibre glass craft with blue hulls, white superstructure and orange tops to the wheelhouses. In the event of bad weather the pilot launch on duty will fore-run vessels into Cork Hole (Lat. 52° 53′ N., Long. 00° 24′ E.) before boarding Pilots.

Requests for Pilots for ships in port, should be made to the Pilot Office at least 2 hours before the Pilot is required to attend the ship. The signals to be used or displayed where the services of a Pilot are required in accordance with the provisions of the Merchant Shipping (Pilot Signals) Order, 1970.

ANCHORAGE: In the Wash vessels anchor within an area bounded by the Roaring Middle Light Float and the King's Lynn No. 1 Light Buoy and the Sunk Light Buoy. Anchoring close to Buoy No. 1 in sufficient depth of water assists early boarding of Pilots. Depth of water 20 ft. minimum.

RESTRICTIONS: King's Lynn Harbour is situated on the River Great Ouse about 2 miles inland from its mouth, at the S.E. corner of the Wash.

The shipping channel in the approaches to King's Lynn and its approaches in the Wash is subject to changes in depth and direction as published on Admiralty Charts.

Harbour Master will advise in advance upon the suitability of vessels and tides.

All ship movements are at HW, times in accordance with a position list maintained at the Harbour Office on the basis of information supplied in advance from Masters of vessels and their Agents.

At the Docks entrance lock docking signals are exhibited from a signal mast.

MAX. SIZE: The largest vessels can be accommodated at the A.B.P. Riverside Quay and within the enclosed docks (see below).

Max. dimension for vessels entering the Harbour Berths: Length 315 ft. (Berth No. 6, South Quay), beam 45 ft., draft 11 ft., on lowest Neap tides, and 18 ft. on highest Spring tides. Access over high tide only. Harbour Master to be consulted for vessels approaching these limits.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: The King's Lynn Conservancy Board operates in the River Great Ouse and its approaches in the Wash, a VHF (FM) port operations and information radio-telephone service in the International Maritime Band, call signs: "King's Lynn Harbour Radio" (Channels 16, 14, 12 and 11); "King's Lynn Pilots" (Channels 16, 14, 12, 11 and 6).

Associated British Ports operates a docks operations and information service, call sign: "King's Lynn Docks Radio" (Channels 16, 14 and 11).

TUGS: Controlled by King's Lynn Conservancy Board and in attendance at the discretion of the Board's Harbour Master. Vessels joined in the Wash Approaches and/or lower reach of River Great Ouse (Marsh Cut). Vessels should provide own hawsers. If ordered, tug hawser available.

Harbour Master may require any vessel to use and employ a tugboat.

BERTHING: *A.B.P. Riverside Quay:* Total berthing length 220 m. Located between lock entrance and Fisher Fleet. Vessels up to 140 m. length, beam unlimited and draft up to 18 ft. on highest Spring tides. Access over high water only. Vessels take the ground at low water.

Alexandra Dock: Size 780 ft. × 310 ft. Approached from the River Great Ouse and King's Lynn Harbour by a lock. Vessels of length 119 m. and beam 13.80 m. can be accepted. The depth of water on sill is 22 ft. to 26 ft. (Springs) and 18 ft. (Neaps).

Bentinck Dock: Size 1,000 ft. × 400 ft. Connected with the Alexandra Dock by a passage and gates over which pass 2 swing bridges. Also double-sided jetty 235 ft. long.

The quays of the 2 docks have a water frontage of approximately 1 mile and provide a total of 16 berths.

Quay cranes available up to 35 tonnes.

South Quay (King's Lynn Harbour): Grain loading and discharging facilities at South Quay Berth No. 6. Lay-by facilities at South Quay Berth No. 1. Ships berthing at South Quay take the ground at LW.

STEVEDORES: Associated British Ports within enclosed docks. Gangs usually can be provided at minimum notice. Main commodities and handling rates: timber (200 cu.m. pre-pack, pre-slung, per gang-hour), steel coils (250 tons per gang-hour), tinplate (90 tons per gang-hour), grain (200 t.p.h. per elevator), bulk materials 200 – 350 t.p.h. per crane, also Ro/Ro and container handling.

TANKERS: 3 tanker berths in enclosed docks. Discharge from vessels is to 6 in. connecting pipes feeding 8 in. pipes to storage tanks.

MEDICAL: It is advisable to give advance notice of required medical attendance via Agent. In emergency the Harbour Office will pass on requests received over the VHF R/T Port Operations and Information Service. For other medical information, refer to the Port Medical Officer of Health and H.M. Customs.

FRESH WATER: Available on all berths through 4 in. pipes off hydrants from public supply.

FUEL: Available at berths alongside King's Lynn Harbour on 24 hours previous notice. Light-grade fuel oil, gas oil, petrol and paraffin only.

OPENING/CLOSING HATCHES: Done by crew. Cranes available for heavy beams.

GANGWAY/DECK WATCHMEN: Vessels responsible for providing own gangways at King's Lynn Harbour berths, where the Regulations require the Master or other person having the care of any ship or other craft to have a proper number of hands on board to attend moorings and to comply with all the requirements and directions of the Harbour Master or his Deputy or Assistants.

CONSULS: Vice-Consul for the Netherlands and Germany.

REPAIRS: Limited facilities only available locally for hull and engine repairs.

AIRPORT: Charter flights and some regular flights, from Cambridge and Norwich Airports about 45 miles from King's Lynn. Regular flights from London (Heathrow) about 100 miles from King's Lynn.

POLICE/AMBULANCE/FIRE: In emergency dial 999 and ask for the service required. Normal service: Police – King's Lynn 761311; Ambulance – King's Lynn 773503 or 773910; Fire Service – King's Lynn 775163.

HOLIDAYS: Cargo work available at overtime rates on Saturday and Sundays and on all public holidays.

GARBAGE DISPOSAL: Waste skips are provided at specific points on the dockside. This service is currently provided at a charge of £6.50 per vessel.

WASTE OIL DISPOSAL: No specialised facilities, local agents can arrange collection via road tanker.

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: The King's Lynn Conservancy Board, Harbour Office, Common Staith, King's Lynn, Norfolk PE30 1LL. *Tel:* (0553) 773411. *Telex:* 817588. *Cables:* "Conservator" King's Lynn. *FAX:* (0553) 768185. *Contact:* Captain D.W. Garside, Harbour Master, Pilot Master and Chief Executive.

KIRKCALDY: 56.07 N. 03.09 W. **(See Plan)**

DOCUMENTS/PILOTAGE: See "Leith".

RESTRICTIONS: Dock gates open for 2 hours before HW until HW.

MAX. SIZE: Vessels of 1,500 d.w.t. regularly use the port. Width at dock gates 15.2 m. Depth 4.8 m. Max. width to enter 14.6 m.

RADIO: See "Leith".

Vessels are requested to give the Port Authority 24 hours notice prior to arrival at Kirkcaldy.

VHF/RADAR: Forth Navigation Service from Leith or Methil Harbour Radio.

TUGS: Towage available.

BERTHING: 494 m. of berthing space available in dock.

CRANES: Mobile cranes available.

BULK CARGO FACILITIES: Privately owned grain discharge plant.

STEVEDORES: Available from Methil.

GARBAGE DISPOSAL: All garbage collection is arranged via ship's agents who maintain a list of contractors offering this service.

WASTE OIL DISPOSAL: All collection's are arranged via ship's agents who maintain a list of contractors offering this service.

SEAMAN'S CLUBS: None. No clubs for seamen are located in Fife.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: Forth Ports PLC, Dock Office, Methil KY8 3RE. *Tel:* (0333) 426725. *Telex:* 72208. *FAX:* (0333) 424873. *Contact:* Captain T.S. Sutherland, Port Superintendent.

KIRKWALL: 58.59 N. 02.58 W. **(See Plan)**

PORT LIMITS: See "Plan".

DOCUMENTS:

Maritime Declaration of Health.
Vaccination List.
Immigration Form H.O. Form IS6.
Crew List – 2 copies.
Ship's Stores List.
Crew Personal Effects Declaration. Customs Form C142.
Last Port Clearance.
Ship's Register.
Load Line Certificate.
Safety Construction Certificate.
Safety Radio and Safety Equipment Certificates.
Derat Certificate.
Previous British Light Dues Receipt.

Customs and Health: Customs, Immigration, Health and Agent will embark at anchor in Kirkwall Bay or alongside pier.

PILOTAGE: Non-compulsory except for passenger vessels over 65 m. LOA and all other vessels over 80 m. LOA. Pilotage limits same as harbour limits. 10 licensed Pilots available. Arrange through Harbour Authority Office, Scapa. Tel: 0856-873636. VHF Channel 16. Telex: 75475 or by local Agents.

ANCHORAGES: Two areas. See "Plan".

RESTRICTIONS: Kirkwall Pier tidal berthing restrictions on draft. See "Berthing".

MAX. SIZE: See "Berthing".

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Coast station call sign "Orkney Radio" (Wick Radio). Call Channel 16 VHF, working Channel 26 VHF.
VHF: Continuous watch Channel 16 VHF, call sign "Orkney Harbour Radio". Working on Channels 9, 10, 11 and 20 from 0800–1700 hrs. weekdays and when vessel expected. "Kirkwall Harbour Radio" Channel 16 VHF, working Channel 12.
RADAR: No facilities at Kirkwall Harbour.
TUGS: Pilot boat/tug "Kirkwall Bay" of 9 tons bollard pull.
BERTHING: See "Plan" for berths.
Tidal Reference: Range 3.0 m. at Springs and 2.0 m. at Neaps.
Cargoes: Load/discharge ship's gear and mobile crane. Cargoes: Bulk, general, livestock, fuel oils (not petrol), passengers.
CRANES: One Jones 355 mobile crane with grab SWL 11 tons at 12 ft. radius and 2.75 tons at 40 ft. radius. One Jones 971 mobile crane SWL 40 tons at 12 ft. radius and 11.2 tons at 40 ft. radius.
STEVEDORES: Contact local stevedores for detailed information.
MEDICAL: Medical and dental services are available by arrangement. Hospital facilities are available at Balfour Hospital at Kirkwall.
DENSITY: 1025.
FRESH WATER: Available at all berths by 51 mm. mains supply. May be restricted in dry periods. £1.00 per tonne.
FUEL: Available by road tanker only from Esso – Shell/B.P.
FIRE PRECAUTIONS: Standard precautions. Local fire brigade.
CONSULS: Denmark, Netherlands, Norway, Germany.
REPAIRS: Several small engineering firms can carry out minor repairs.
DRY DOCKS: None.
SURVEYORS: Not available.
GANGWAY/DECK WATCHMEN: Not available.
HATCHES: Opening/closing by crew.
CUSTOMS ALLOWANCES: As per British Customs scales.
REPATRIATION/TRAVEL: There are daily air services during the week to Aberdeen, Inverness, Glasgow and Edinburgh from Kirkwall Airport. There is no service on Sunday. There is a daily ferry service from Stromness to Scrabster to connect with British Rail. During the Winter months there is no service on Sunday.
AIRPORT: Approximately 4 miles from Kirkwall. Airlines: British Airways and Logan Air.
TIME: GMT. BST (GMT plus 1 hour) March – October.
HOLIDAYS: Public holidays vary except for Christmas and New Year (25th and 26th December, 1st and 2nd January).
POLICE/AMBULANCE/FIRE: Emergency – 999. Police: 872241. Ambulance: 872763.
EMERGENCY CO-ORDINATION CENTRE: Coast Guard: Tel. 873268. Telex: 75211.
SERVICES: Radio/radar technicians, divers, charts, etc., all available. Contact Agents.

PILOTAGE: Not compulsory. Private Pilots available through Ships' Agents. Pilots board off Fairway Buoy. Contacted through Port Information Service on Channel 14, Call Sign 'Larne Harbour'. ETA 3 hours and 1 hour in advance, giving name, nationality, length, draft and gross tonnage. For Ballylumford Power Station call Belfast Pilots on VHF Channel 12.

Berths arranged by Harbour Master in advance.
ANCHORAGES: Anchorage outside Fairway Buoy in 11 m.
MAX. SIZE: Draft dependent on berth. Minimum depth at Curran Quay is 7.5 m. at C.D. Oil tankers proceed to Ballylumford Power Station which lies across Larne Lough directly opposite Larne Harbour. Approach channel has a minimum depth of 9.1 m. below datum and berth has 10.5 m. below datum.

The port can accommodate vessels up to 175 m. LOA and 30 m. beam.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Portishead/Portpatrick.
VHF: Port Information Service maintains continuous watch on Chann 14 and 16. Call sign 'Larne Harbour'. The service provides informa regarding arrival, berthing, anchoring, departure and movements vessels. Also information including pilots, wind direction and streng visibility, tidal information, etc.
TUGS: 1×18 ton, 1×7 ton and 1×3.5 ton bollard pull tugs are station at Larne. Tugs from Belfast serve oil tankers to Ballylumford.
BERTHING: 1 berth equipped with 2×5 ton cranes for grabbing a general cargo work. One berth is equipped with a crane of 32 t capacity for handling containers. 4 berths (3 twin level ramps for vess up to 175 m.) are equipped with Ro/Ro ramps, capable of taking loa up to 180 tons and ships up to 30 m. beam.
STEVEDORES: Larne Harbour Ltd. carry out all the stevedor 24 hours' notice required for arrangements. Normal hours 0800 – 17 Overtime by arrangement.

Main commodities: Fertiliser in bulk (150 t.p.h.), palletised ferti (200 t.p.h.), pulp (200 t.p.h.), steel plates and general cargo, etc.
MEDICAL: No advance notice required. Ample hospital facili available within near vicinity.
TANKERS: For Ballylumford, see "Max. Size".
DENSITY: 1025.
FRESH WATER: Available at all berths. Order through Agent. R 15 t.p.h.
FUEL: Bunkering carried out by road tanker. Major grades of bun fuel, diesel and marine lubes can be obtained through suppliers.
CONSULS: Consuls in Belfast (20 miles) can be contacted throu ship's Agent.
REPAIRS: Small repairs by local firms. Major repairs by Belfast fir
DRY DOCKS: See "Belfast".
GANGWAY/DECK WATCHMEN: Ship's gangway. Watchmen arrangement with Agents.
OPENING/CLOSING HATCHES: Performed by ship's crew.
CUSTOMS ALLOWANCES: Usual allowances as per H. M. Custo and Excise.
CERTIFICATES:

Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Load Line Certificate.
Ship's Register.
Derat Certificate.

REPATRIATION: Crew changes and repatriation without difficulty sea and air.
AIRPORT: Belfast International Airport and Belfast City Airport, b 20 miles distant. Frequent flights to all parts of U.K.
HOLIDAYS: Christmas Day and New Year's Day. No cargo worked these days, except by special arrangement.
POLICE/FIRE/AMBULANCE: Dial 999 and ask for Emergency serv required. Also through Port Information Service on VHF Channels and 16.
TELEPHONES: Placed on Cross Channel vessels. Public telephon in port area.
SERVICES: Charts and publications available from Class 'A' Admi Chart Agent, Todd Chart Agency Ltd., 4 Seacliff Road, Bangor, Cou Down BT20 5EY. Tel: 0247 466640. Fax: 0247 471070.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required.
SHIP SUPPLY SERVICE: John McLoughlin & Son (Shipping) Lt North End, The Harbour, Larne. Tel: Larne 273785 and 274085.

Ship supply and personnel transfer to ships alongside or at anch
GARBAGE DISPOSAL: Service available using skips on a cos £40/skip. Food waste skip requires a Dept. of Agriculture licence a cost of £120/skip. Contact D. Campbell (0960) 378067.
WASTE OIL DISPOSAL: Service available at all berths. Waste transferred to tanker trucks. Contact Capital Fuels, Ballynahin (Tel: 0238-561574. Fax: 0238-561576).
SEAMAN'S CLUBS: British Sailors Society has a resident R Chaplain.
CURRENCY: U.K.Pound (U.K.£).
GENERAL:
Charts: B.A. 2198, 1237.
Pilot Books: NP40, Irish Coast Pilot.
Lights: Admiralty List of Lights, Volume A (NP74).
AUTHORITY: Larne Harbour Ltd., 9, Olderfleet Road, Larne BT40 1 County Antrim, Northern Ireland. *Tel:* (0574) 279221. *Telex:* 747 *FAX:* (0574) 274601. *Contact:* Captain A.K.W. Gardiner, Harb Master/Operations Manager. D.P. Galway, General Manager.

LEITH: 55.59 N. 03.10 W. (See Plan)

DOCUMENTS: Arrival from Non-E.E.C. port:
2 Report Forms (C. 13). } One Combined
3 Stores Declarations (C. 14). } Form
2 Crew Declarations (C. 142).
2 Crew Lists
2 Passenger Lists
Cargo Manifest
Also additional forms for specific circumstances, e.g. hazardous cargo, livestock, etc.
Arrival from E.E.C. port:
2 Report Forms (C.13), with Manifest.
Master's Information Note (Form TC12), issued by Customs Authorities in the originating member state.
Light Dues: £0.35 per n.r.t. One payment per month or 7 visits in any one year, coastwise or foreign.
(Also see "Clydeport".)

APPROACHES: *Cautionary Advice:* Tidal streams set across the approach channel with rates up to 1.5 knots (in a 080/260° (T) direction). Great care should be exercised in ensuring sufficient set is allowed to maintain the correct approach course when slowed down in the channel immediately prior to entering the locks.

PILOTAGE: Pilot station Firth of Forth located at Granton, boarding station West of Fairway Buoy at Long. 3° West. Contact with pilot cutters can be made on VHF Channel 16 (working Channel 14) and radio-telephone 2182. Pilotage not compulsory for vessels approaching South of Inchkeith Island.

Large vessels are normally docked 1.5 hours before HW. Vessels up to 20 ft. draft, dock at any time.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Forth, Stonehaven and Cullercoats Radio Stations.

ANCHORAGES: Good holding ground at Inchkeith Island and Leith roadstead, depths 8 m. – 19 m. at C.D. Request should be made to Forth Navigation Service (calling on Channel 71, working on Channel 20). Other anchorages as per Admiralty Charts of the area.

RESTRICTIONS: None. Vessels can enter harbour day or night.
Lock: Entrance to the port is from the Firth of Forth through the entrance lock which is 259 m. long and 31.6 m. wide between fenders, depth over the outer sill MHWST 12.293 m. Maximum dimensions: LOA 210 m., beam 30 m.

The lock is operated 24 hours a day, 7 days a week with the exception of December 25th and January 1st, when it is operated in emergencies only.

MAX.SIZE: Governed by draft of vessels. Max. permissible draft alongside in Imperial Dock 9.1 m. and in Western Harbour 9.7 m., in dock water density is 1015.

RADAR/VHF: Port and Estuary radar service. VHF contact can be made with Leith Harbour Radio on Channel 12. Forth Navigation Service must be contacted on VHF Channel 71 by vessels entering Forth Port Authority Seaward Limit (line joining North and South Carr Beacons), working Channels 20 and 12.

TUGS: 5 tugs, 13-30 tonnes bollard pull. Attend inward-bound vessels in Leith roads. Tug's towline available and compulsory. Tugs on VHF Channels 16, 6, 8, 11, 12 and 14.

CRANES: 1×9 tonnes, 1×7.5 tonnes and 1×3 tonnes mobile diesel cranes. Also see "Berthing".

BULK HANDLING FACILITIES: See "Berthing".
Grain Storage: Imperial Basin: 55,880 tonnes. Western Harbour (private) 53,848 tonnes.

STEVEDORES: ETA advices given by Master to ship's Agent and conveyed by them to stevedores.

MEDICAL: No advance notice of medical attention required. All hospital facilities available. Fully equipped Occupational Health Centre in docks.

LIVERPOOL: 53.28 N. 03.02 W. (See Plan)

DOCUMENTS: Required on arrival, Crew List Form I.B.6 to be completed; this list to include all passengers and any British subjects who joined vessel outside of U.K. If any person falling into this category should be on board they must not leave until permission to land is granted by Immigration Officer.

Customs Form C.142, Declaration of goods obtained abroad or during a voyage, must be completed and signed by Master, and each crew member. Health Declaration must be completed. Above forms should be obtained from Pilot.

Manifest and Bills of Lading should be forwarded to vessel's Agent so as to be available before vessels arrival.

Ship's Papers Required:

Ship's Register.
Certificate for British Tonnage (if issued).
Safety Equipment Certificate.
Safety Radio Certificate.
Safety Construction Certificate.
International Load Line Certificate.
Derat Exemption Certificate.

PILOTAGE: Pilotage is compulsory for all vessels navigating within the Port of Liverpool (as defined in the M.D. & H.C. Act 1971). The M.D. & H.C. is also empowered to act on behalf of Garston Docks for Pilotage Directions. The following vessels shall be exempt from Compulsory Pilotage:

1. Any vessels belonging to Her Majesty.
2. Any vessel which is under 82 m. LOA, provided that this exemption shall not apply to any such vessel which is:-
   (a) Carrying hazardous cargoes.
   (b) The navigation of which is, in the opinion of the company, affected by a defect in or damage to the vessel or her equipment, or inadequacy of the Master or crew.
   (c) Navigating solely to adjust her compasses within the Port limits.

Attention is drawn to the General Directions for Navigation in the Port of Liverpool No. 4, the Pilotage Directions 4:1 and the Mersey Channel Collision Rules.

Boarding Position: The normal boarding position will be in the vicinity of the Bar Buoy, but vessels may, by arrangement, board their Pilots at Point Lynas. Both stations are served by launches controlled from "Port Operations Control" in Liverpool. The Control Centre operates on VHF Channel 11 (and 9, 12 or 16) with the call sign 'Liverpool Pilot'. The Pilot launches will show the appropriate Pilot Flag or Lights and will have the words "Liverpool Pilot" painted on the superstructure.

Inward Bound Vessels: Vessels requiring a Pilot must give not less than 24 hours notice before the expected time of arrival of the relevant vessel at the Pilot Station at which the Pilot is to be boarded; via Agents, via G.P.O. Coast Stations to the Liverpool Pilotage Control Centre, or via telex to 626264 P.T.O.P.S. Liverpool and ETA's must be kept up-dated. Penalty charges are made for non-compliance with the ETA Regulations (Reference Pilotage Directions No. 7).

Outward Bound Vessels: Vessels requiring a Pilot must give not less than 3 hours notice before the expected time of departure of the relevant vessel to the Port Operations Control Centre, between the hours of 0800 hrs. to 1630 hrs. on weekdays and 0800 hrs. to 1000 hrs. on Saturdays, Sundays and Bank Holidays.

ANCHORAGE: In the event of berths not being readily available for vessels, normally they must wait at the Mersey Bar Anchorage which is in the open roadstead. There are river anchorages, but these are only usually for vessels about to enter the dock system.

RESTRICTIONS: No restrictions on night entry, except VLCCs, tidal restrictions depend on vessel's draft and to which berth vessel proceeding, larger vessels usually have to wait for HW.

MAX. SIZE: Tranmere: up to 41 ft. (12.5 m.) draft dependent on tide. Birkenhead: Up to 28 ft. 6 in. (8.68 m.) draft.

Liverpool Docks: Up to 42 ft. (12.8 m.) draft.

Royal Seaforth Dock: 42 ft. (12.8 m.) of water depth, up to 75,000 d.w.t.

HEALTH: Maritime Declaration of Health Form must be completed and handed to Customs Officer or Port Health Officer, whoever first boards ship. This form is obtainable from Pilot. In event of any suspected disease or fever on board, or if ship has called during last 4 weeks at any port in Brazil, China, Indo-China, India, Pakistan, Myanmar (Burma), Colombia and the port of Dar-es-Salaam, West African ports between Lat. 20° North and 20° South, the Master should, prior to entering port, make radio contact with Liverpool Port Health Authority, via Portishead Radio or Port Radar Station (Signal "Portelth Liverpool") giving them following information:

1. Name of Ship. 2. Date of departure from and name of last infected port. 3. Number, ages and sex of any cases of infectious diseases or other relevant information. 4. Expected time of arrival at Rock Light.

Before reaching the Rock Light, if medical clearance has not been obtained, the following signal must be displayed: By day – fly the flag signal "Z W". By night – show red light over white light.

When medical clearance is obtained Pratique will be issued at discretion of Customs Officer.

If there is no suspected disease on board and vessel has not called at any of the above ports listed, Master can radio for Free Pratique. Unless otherwise instructed, Customs Officer will again issue Pratique.

Vessels arriving from another U.K. port do not require Pratique or health clearance.

Also see "Health – All Ports" before first U.K. port.

RADIO: Portishead Radio, call sign: GKL; Landsend Radio, call sign: GDL; Wick Radio, call sign: GKR; but on approaching Liverpool, the local radio station is Anglesey Radio, call sign: GLV.

RADAR/VHF: VTS operational. Vessels should establish contact by VHF with the Port Operations Control, call sign "Mersey Radio", before sailing and inward bound when within VHF range and not later than when in the vicinity of the Bar Lighted Buoy.

Harbour Radar: The radar coverage extends seaward over Liverpool Bay for a radius of 20 miles from the station and in the River Mersey as far South as the approaches to the Manchester Ship Canal.

Vessels entering or leaving the Port in conditions of low visibility can, on request, be supplied with continuous information of their position whilst navigating in the river or sea channels.

A general situation and movement statement, giving all intended movements inwards and outwards for the Port of Liverpool, Eastham, Garston and Cammell Lairds and approximate times at the dock entrance or river berth, together with a list of Local Navigation warnings in force, latest weather reports and area forecast, is broadcast on Channel 9 at 3 hours before each HW. This full statement is repeated with any amendments and the disposition of the River Anchorages North and South at 2 hours before each HW.

Any local navigation warning, gale warnings and amendments to gale warnings are broadcast on receipt on Channel 12.

A full list of navigation warnings and gale warnings is broadcast on Channel 9 every 4 hours, commencing at 0001 hrs. No separate broadcast of this list is made during the period from 4 hours before HW to 1 hour before HW as such warnings are included in the General Situation and Movement Statement.

Docking Instructions: The VHF Stations at the Dock Entrances and Stages are provided to facilitate docking and berthing operations and to provide direct communication between the Dock Master or Stage Master and a vessel. The Range of these stations is limited to a distance of 6 miles to 8 miles.

Tug Communications: Channels 8 and 10 are reserved for tug communications and should not be used for any other purpose. Due to the heavy working of these Channels, especially at tide time, and in order to minimise interference, vessels and their tugs when communicating to one another on VHF, should, when possible transmit on reduced power.

Large Vessels Swinging: Vessels of 150 m. or over in length intending to swing in the river should give advance notice of at least 10 minutes to Mersey Radio of their intentions so that Mersey Radio can broadcast on Channel 12 a swinging warning to all ships.

Port VHF Radio Telephone Communications System:

Station	*Call Sign*	*Hague Channel Number*	*Remarks*
Liverpool Port Operations Control	Mersey Radio	16	Calling and safety
		12	Port Operations – Calling and navigation.
		9	Port Operations and routine broadcasts
		18	Port Operations and Radar information
		19	Radar information and general, for tanker traffic for Tranmere only.
			A continuous watch is kept on Channels 16 & 12 at Port Radar Station
Gladstone Dock Master's Office	Gladstone Dock	5	Port Operations and Docking Instructions.
Langton Dock Master's Office	Langton Dock	21	
Alfred Dock Master's Office	Alfred Dock	22	
Tranmere Stage Master's Office	Tranmere Stage	19	
Associated British Ports			
Garston Dock Master's Office	Garston Dock	20	Port Operations and Docking Instructions.
M.D.C.			
Canning	Canning Dock	37	Berthing Instructions
Manchester Ship Canal			
Eastham Locks Office	Eastham Locks	7	Port Operations and Docking Instructions
M.D. & H.C. Pilot Stations			
Point Lynas Shore Station	Lynas Pilot	16	Calling and safety
		9	Ship to shore.
Liverpool Control Centre	Liverpool Pilot	16	Initial calling
		12	Initial calling
		11	Calling & ship to shore

Local Priority Messages: A vessel which has an urgent message to transmit to Mersey Radio concerning urgent navigation matters and which message should receive priority over normal Port Operations R/T Communications, should indicate the urgency of the message by prefixing the call sign of the Port Operations Control with the spoken word "PRIORITY" i.e. "PRIORITY MERSEY RADIO" repeated 3 times followed by normal procedure.

In special circumstances such as the launch of a vessel or in an emergency such as a wreck, it may be necessary temporarily to establish a patrol for the control of traffic. Vessels will be warned of the existence of any such patrol by "Mersey Radio" and any such patrol vessels or launches will maintain a listening watch on Channel 12 and communicate with other vessels on Channel 6.

VHF Procedure

Channels to be used for Calling and for Preparatory Signals: Mersey Radio and ship stations will call on Channel 12. Channel 16 should only be used for distress, urgency or safety communications.

Channels for Reply: Calls received on Channel 12 should be replied to on the same Channel, but if calls are received on Channel 16, replies should be made on this Channel.

Indication of the Channel to be used for VHF Traffic: When communication has been established on Channel 12 between a ship and "Mersey Radio", the shore station will indicate the Channel to be used for passing and receiving information if Channel 12 is busy.

Times: All times in messages should be given in local time, i.e. BST or GMT, using the 24 hour notation.

VHF Discipline: To ensure that the full advantage of efficient communication is achieved, strict VHF discipline and attention to procedure, particularly on the calling Channel is imperative. Channel 16 must only be used for establishing contact between ship and shore or ship and ship, and must not be used for the passing of messages except in cases of distress within Port limits. Channel 12 should be used for establishing contact between ship and shore or ship and ship.

Sequence of VHF Communication for Vessels Entering the River Mersey: (i) Vessels wishing to communicate with the Liverpool Pilotage District Point Lynas Shore Station should call "Lynas Pilot" on Channel 9. Channel 16 shall only be used in case of difficulty in establishing initial contact.

(ii) Vessels wishing to communicate with the Liverpool Pilotage Control Centre should call "Liverpool Pilot" on Channel 11. Channels 16 and 12 should only be used in cases of difficulty in establishing initial contact.

(iii) When within VHF range and not later than when in the vicinity of the Bar Lighted Buoy the vessel should establish contact with Mersey Radio on Channel 12 and pass her arrival information on Channel 12 or other Channel indicated by Mersey Radio, watch should be kept on Channel 12 unless instructed to remain on another working Channel for Port Operational reasons. A vessel at anchor at the Bar anchorage should keep watch on Channels 16 and 12.

(iv) Vessels requiring radar information or assistance will be requested to shift to Channel 18.

(v) Vessels should inform Mersey Radio when they are ceasing to keep a listening watch on Channel 12. If they are shifting to a tug or a dock entrance or Tranmere Oil Stage Channel they should inform Mersey Radio of such intention.

Vessels Sailing from the River Mersey: Vessels, on sailing from any Stage or Dock, should establish contact with Mersey Radio on Channel 12 and then maintain watch on that Channel unless instructed to remain on another working Channel for Port Operational reasons. Ves requiring radar information or assistance will be requested to wor Channel 18.

TUGS: Join vessel after passing Rock Light. Normally use tug's but optional. Charge for tug's hawsers.

BERTHING: 35 general cargo berths.

BULK CARGO FACILITIES: *Grain Berths:* Royal Seaforth G Terminal accommodates ships of up to 75,000 d.w.t. up to 260 m. ov length and 12.8 m. draft. Discharge is by 2 marine towers at up to 2 tonnes p.h. into 133,000 tonnes capacity silo. 2×750 tonnes per h dischargers (Buhler) for animal feedstuffs at Berth S.2, storage capa 30,000 tonnes. 1 × 220 tonnes per hour Vigan pneumatic discha for heavy grains and animal feedstuffs ex-small vessels u 4,000 d.w.t.

Grab Cargoes: (Minerals, ores, coal, meals, etc.).

N.3 Huskisson Branch Dock: 2 berths for vessels up to 9.5 m. d each equipped with 4 grab cranes.

S.E.2 Alexandra Dock: Vessels up to 8.84 m. draft, equipped 3 grabbing cranes for handling animal feeding stuffs; discharge to via hoppers and direct by conveyor to silo storage.

Cavendish Quay: 2 × 20 tonnes level luffing jib cranes with a grab capacity of 15 tonnes. Each designed to handle up to 450 t.p.h. Loa to road or rail with 2 × 100 tonnes capacity mobile weigh hoppers

Duke St. Wharf: Vessels up to 8.7 m. draft discharged 2 × 7.5 tonnes electric level luffing cranes.

S.2 Gladstone Dock: Bulk terminal with length 250 m. and d 12.5 m. The terminal handles Panamax (75,000 tonnes) vessels 4 grab cranes. Daily rate 14,000 tons.

BULK LIQUID FACILITIES: *Tranmere:* Petroleum oils at Tranm South Stage, accommodating tankers up to 115,000 tons displacem max. draft 11.1 m. plus height of tide and Tranmere North S accommodating tankers after lightening up to 210,000 displacement, max. draft 12.0 m. plus height of tide. Facilities opera by Shell U.K. Ltd.

Cautionary Advice: Vessels which are required to pump over the must discharge so as to reach, 30 minutes before LW, a draft not gre than 41 ft. plus height of LW at the North stage, or 38 ft. plus heig LW at the South stage. (These figures may vary slightly from tim time and should be checked with the Berthing Master).

Liverpool: N.2 Gladstone (edible oils berth, total quay length 17 12.8 m. draft).

S.1 Canada (edible oils and molasses, up to 213 m. len 9.75 m. draft).

S.E. Nelson (wines and spirits, for vessels up to 99.1 m. len 6 m. draft).

Birkenhead: N. Alfred (8.6 m. draft, edible oils).

Ilchester Wharf (8.6 m. draft).

E. Lewis (edible oils, bulk chemicals and molasses for vessels u 192 m. in length, 8.7 m. draft).

SPECIALISED CARGO HANDLING FACILITIES: *Containers:* T container terminal at Royal Seaforth Dock has a continuous 1,100 m. in length, served by 6 gantry cranes up to 40 tons capa and a fleet of straddle carriers working to a 22 ha. container supported by a 26 ha. back-up area. Tractor trailer units are use feed the integral Freightliner Rail Terminal.

Containers can also be handled at all general cargo berths.

Timber and Forest Products: At the Royal Seaforth Timber Term 793 m. of continuous quay are served by 4 × 10 tonnes cra discharging packaged timber to a 26 ha. stacking and back-up a 3 sheds provide covered storage of 16,000 sq.m. for plywood, pulp dried timber.

Ro/Ro: There are 10 berths in the port with Ro/Ro ramp faci Royal Seaforth, S.3, S.6 and S.10; Gladstone No. 3. N.W. Alexa E. Langton, N.E. 3 Canada, S.E. Nelson, S.E. Trafalgar and S. Bid (Birkenhead).

Heavy and Indivisible Loads: Good road access and speci facilities include 3 berths strengthened to accept loads of up to 300 and 1,000 tonnes respectively. 250 tonne capacity sea-going flo crane.

STEVEDORES: Earliest possible ETA to be given to arrange gan

MEDICAL: If doctor is required to attend immediately on arrival of ve prior notice will be required, but generally doctor is arranged for convenient time after vessel's arrival.

Hospitalisation is available, but seamen will only be admit immediate treatment is required. It is preferred for foreign sea requiring hospital treatment to be repatriated, if able to travel.

Dentist available by appointment only.

TANKERS: See "Bulk Liquid Facilities".

DENSITY: River Mersey salt water. Docks approximately 1024.

FRESH WATER: Available at all berths, ex-quay. No water ba available. Rate of delivery 15-20 t.p.h.

FUEL: Most major oil companies are represented and can supply of fuels of various viscosities. Notice required depends on the be which vessel is lying as bunkers are supplied ex-lighter at most b Notice required can vary depending on availability of barges generally at least 3 to 4 days notice is required.

FIRE PRECAUTIONS: Tankers may not carry out repairs wh discharging berth unless permission is obtained from Ha Authorities. Fire precautions notice is placed on board by Ha Authorities.

CONSULS: The following countries have representatives in Live

Dominican Republic
Ecuador
El Salvador
Finland
France
Germany
Panama
Thailand

REPAIRS: All types of deck and engine repairs can be carried o

DRY DOCKS: 5 small dry docks (M.D.H.C., Wright and Bey Mannings Marine).

SURVEYORS: (1) Caleb Brett and other companies available.

(2) Lloyds, A.B.S. and B.V. are available.

GANGWAY/DECK WATCHMEN: Watchmen not necessary but available if required.
OPENING/CLOSING HATCHES: Carried out by ship's crew for bulk cargoes and by stevedores for general cargoes.
CERTIFICATES:
Register/Certificate of Measurement.
Certificate of British Tonnage (if issued).
Safety Radio Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Load Line Certificate.
Derat Certificate.
Cargo Gear Test Certificates.
CUSTOMS ALLOWANCES: Crew members who remain on vessel during vessel's stay in port may be allowed, under certain conditions, to keep, for their own use on board, small quantities of any tobacco, spirits and other goods declared on Customs Form C.142. The amount allowed depends on the number of days the vessel is in port.
CARGO GEAR: Cargo Gear Certificates must be produced with the necessary up-to-date endorsement.
REPATRIATION: Can be effected, but must be arranged through Agent, so that Immigration Clearance can be arranged.
AIRPORT: City Centre to Airport approximately 7 miles, regular service to London for international connections.
Regular Services from Liverpool Airport to:

Aberdeen	Air Ecosse
Amsterdam	Genair
Belfast	British Midland
Brussels	Jersey European Airways
Cork	Jersey European Airways
Dublin	Jersey European Airways
Dublin	Aer Lingus
Isle of Man	British Midland
Jersey	British Midland
Gatwick	Genair
Heathrow	British Midland
Stansted	Jersey European Airways
Newquay (Cornwall)	Genair

(The above are all passenger services with the exception of Dublin which is mainly freight).
TIME: British Standard Time, which is 1 hour in advance of Greenwich Mean Time, reverting to GMT in Winter months.
HOLIDAYS: Good Friday; Easter Monday (movable); 1st Monday in May; last Monday in May; last Monday in August or first Monday in September, whichever may be closest to August 31st. December 25th-26th and New Year's Day. Weekly holidays Saturday, Sunday. Cargo can be worked on official holidays, other than 25th-26th December, also arrangements can be made for cargo to be worked on Sundays.
POLICE/AMBULANCE/FIRE: Telephone 999, ask for service required.
EMERGENCY CO-ORDINATION CENTRE: "Liverpool Coast Guard" Tel: Liverpool (051) 931-3341/43.
TELEPHONES: A temporary telephone can be placed on board a vessel, at most berths, whilst in port.
SERVICES: Compass adjusting, D.F. calibration can be arranged.
BANKS: Allied Irish Bank Ltd, 5/9 Renshaw Street, Liverpool 1; Banco Exterior C A, 6 Victoria Street, Liverpool 1; Bank of Ireland, 25 Victoria Street, Liverpool 1; *Citibank Trust Ltd, Tower Buildings, 22 Water Street, Liverpool 2; *American Express International, Travel Agents, Lord Street, Liverpool 2.
*Not Banks as such but possibly undertake closely allied functions.
STORING: See "Prelims".
1. All vessels can be stored by either barge or truck.
2. Barge storing at Tranmere Oil Stages is restricted to "Approved" barges.
3. Trucks do not always have direct access to vessels by driving along quayside. Approach may be via sheds.
4. Forklift trucks can be used in most cases.
5. As per British Customs Regulations.
6. Riggers can be employed.

SHIP SUPPLY SERVICE: Alexandra Towing Co. Ltd., Castle Chambers, 43, Castle Street, Liverpool 2. Tel: 051-227 2151.
Carmet Tug Co. Ltd., Lock Head, Bromborough, Wirral. Tel: 051-645 5579.
Cory Towing Co. Ltd., Odyssey Works, Corporation Road, Birkenhead, Merseyside. Tel: 051-647 6263.
In addition the Port of Liverpool has the Buoyage Tender and Salvage vessel "Vigilant" which has fire fighting capability and is Classed 100 A1 for River Mersey and Liverpool Bay Service.
SHORE LEAVE: All bona fide crew members may be granted temporary shore leave during the vessel's stay in port, on condition that they leave in the same ship. This permission does not apply to any alien member of the crew who is refused leave to land by an Immigration Officer, or to whom an Immigration Officer has given notice prohibiting him from landing without leave.
IDENTIFICATION CARDS: Not required.
GARBAGE DISPOSAL: Skips can be provided alongside. Bootle Barge Ltd: (051) 442-2508. M.D.H.C. (Cleansing and Salvage Section) (051) 200-5124.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: Stella Maris Seamans Club, Washington Parade, Liverpool 20. Tel: (051) 922-6161.
CURRENCY: Pound Sterling.
DEVELOPMENTS: Floating crane "Mersey Mammouth" with capacity 250 tonnes operational.
AUTHORITY: The Mersey Docks and Harbour Company, Maritime Centre, Port of Liverpool, Liverpool L21 1LA. *Tel:* 051-949-6000. Telex: 626264. *FAX:* 051-949-6150. *Contact:* Captain G. McShane, Marine Operations Manager (Tel: 051-949-6112 (Direct). Fax: 051-949-6150 (Direct)).

LOCHMADDY: 57.36 N. 07.11 W. (See Plan)

PORT LIMITS: Westward of a line running Southward from Weavers Point to Leacham Madadh.
PILOTAGE: Pilot can be arranged if required. VHF Channels 16 and 12. Tel: 0876-500337/500282/500226 or 0870-602425 (ext. 859) and at night 0870-610294.
ANCHORAGES: Available in Lochmaddy Bay.
RADIO: Skye Radio.
VHF: Lochmaddy Harbour on Channels 16 and 12.
RADAR: No radar service.
TUGS: None.
BERTHING: Length of berth 370 ft. (South Face). Depths alongside at LWS: East end 6.0 m., West end 4.5 m.
Length of berth 180 ft. (North Face). Depth alongside at LWS is 4.0 m.
CRANES: Available by arrangement. 10 ton lift.
BULK CARGO/SPECIALISED CARGO-HANDLING FACILITIES: Ro–Ro Linkspan at North West end of South Face berth on pier.
BRIDGES: None.
MEDICAL: Doctor and hospital available.
TANKERS: No facilities.
DENSITY: Salt water.
FUEL: Gas oil available. Tel. 0870-610238.
FIRE PRECAUTIONS: None.
CONSULS: None.
REPAIRS/DRY DOCKS/SURVEYORS: None.
GANGWAY/DECK WATCHMEN: Available if required.
HATCHES: Opening/closing carried out by crew.
AIRPORT: 20 miles to Benbecula Airport. Daily service to and from Glasgow, Stornoway and Barra, except Sunday. Onward connecting flights available.
POLICE/AMBULANCE/FIRE: Police Tel: 0876-500328. Ambulance Tel: 0876-500324. Fire Tel: 0463-222722.
SERVICES: None.
BANKS: Bank of Scotland Tel: 0876-500323/500266.
SHIP SUPPLY SERVICE: Crew members, and essential stores can be transported between ship and shore at Lochmaddy by launch. Ships requiring such service should contact Harbour Office. VHF Channel 16 or Telephone 0876-500337/500282, and at night 0876-500226.
SHORE LEAVE: Permitted.
IDENTIFICATION CARDS: Required for cruise ships only, and must conform to the Aviation and Maritime Security Act 1990.
REGULATIONS: None.
GARBAGE DISPOSAL: 1100 ltr. wheeled skips are available free of charge. For bulk refuse contact local authority (Tel: 0870-602425. Fax: 0870-602332). Charges are approximately £15.00 per hour and collection time by arrangement.
WASTE OIL DISPOSAL: By prior arrangement with local authority (Tel: 0870-602425. Fax: 0870-602332) or through Port Manager (Tel: 0876-500337).
SEAMAN'S CLUBS: No club, but local facilities include hotel, 2 shops, sub-post office, bank, church.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: Western Isles Islands Council, Council Offices, Sandwick Road, Stornoway, Isle of Lewis. *Tel:* 0851-703773. *FAX:* 0851-705349. *Contact:* Captain R. Frater, Harbour Master. Home tel: 0851-870268. Captain C. Macleod, Assistant Harbour Master. Tel: 0870-602425. Fax: 0870-602332.
Local Authority: The Port Manager, Harbour Office, Lochmaddy, Isle of North Uist. *Tel:* Office 0876-500337 and 0876-500282. After Hours 0876-500226. *FAX:* 0876-500412. *Contact:* U.I.M. Robertson, Port Manager.

LONDON and Thames District: 51.30 N. 0.05 W. (See Plan)

PORT LIMITS: The seaward limit means lines drawn from Lat. 51° 37′ 00″ N., Long. 00° 57′ 19″ E. (Foulness Point in the County of Essex) to Lat. 51° 46′ 05″ N., Long. 01° 20′ 32″ E. (Gunfleet old lighthouse) and thence to Lat. 51° 26′ 36″ N., Long. 01° 25′ 30″ E. and thence to Lat. 51° 24′ 55″ N., Long. 00° 54′ 21″ E. (Warden Point in the County of Kent).
An arrived ship is considered (subject to Charter Party terms) to have arrived when vessel is instructed to anchor at a designated anchorage, as ordered by the Port Authority, if berth where vessel's operations are to be carried out is not available. Otherwise when vessel is alongside. Usual anchorage for larger vessels is below Southend, which is allocated to vessels by the Port Authority.
DOCUMENTS:
1 copy of H.M. Customs and Excise Form C.142 to be completed showing each crew members declaration as to the amount of cigarettes, tobacco, spirits, wine, radios, lighters, etc., belonging to them on board the ship to enable Customs to ascertain if in conformity or excess of requirements.
1 copy of IMO Crew List.
1 copy of List of Passengers on board, showing names, place of joining vessel, passport details.
Ship's Register to be available for inspection on arrival.
List of space occupied by cargo in unregistered spaces.
Chief Engineer's declaration as to the quantity of fuel carried in double bottom tanks.
Details of any livestock on board.
Ship's Stores Declaration arrival Form C.14 to be completed.
Details of previous ports of call.

PILOTAGE: Compulsory Pilotage:

1. DEFINITIONS:

"Upper Area" means so much of the River Thames as is between Putney Bridge and London Bridge, but does not include a closed dock, lock or other closed work.

"Inner Area" means so much of the Thames as is between London Bridge and the Former Seaward Limit.

"Outer Area" means so much of the Thames as is between the Former Seaward Limit and the Seaward Limit of Pilotage Jurisdiction.

"The Thames" means so much of the River Thames, the Thames Estuary, rivers, streams, creeks, watercourses and the sea as is between London Bridge and the Seaward Limit of Pilotage Jurisdiction, but the area does not include:

(i) A closed dock, lock or other closed work.
(ii) Any part of the Medway Ports.
(iii) The River Lee or Bow Creek above the South boundary stones referred to in Section 3 of the Lee Conservancy Act 1988.

"The Former Seaward Limit" means the former seaward limit of the Port of London Authority which is a line drawn from the pilot mark at the entrance of Havengore Creek in the County of Essex on a bearing 166° reckoned clockwise from the true North point of the compass to mean high water level on the Kent bank of the Thames.

"The Seaward Limit of Pilotage Jurisdiction" means lines drawn from Lat. 51° 37′ N., Long. 00° 57.317′ E. (Foulness Point in the County of Essex) to Lat. 51° 46.083′ N., Long. 01° 20.533′ E. (Gunfleet Old Lighthouse), thence to Lat. 51° 48′ N., Long. 01° 40′ E. (Long Sand Head), thence to Lat. 51° 36′ N., Long. 01° 23.083′ E., thence to Lat. 51° 26.6′ N., Long. 01° 25.5′ E. and thence to Lat. 51° 24.917′ N., Long. 00° 54.35′ E. (Warden Point in the County of Kent).

"Specified Vessel" means any vessel having on board quantities of the following (IMO codings in brackets):

(i) Explosives (Class 1), or
(ii) LNG, LPG in bulk or non-gas free following discharge of these cargoes (Class 2), or
(iii) Low flash petroleum spirit in bulk or non-gas free following discharge of this cargo (Class 3.1 and 3.2), or
(iv) Low flash point and toxic chemicals in bulk or non-gas free following discharge of these cargoes (Class 3.1, 3.2, 6.1 and 8.0).

"Passenger Vessel" means a vessel which is certificated to carry more than 12 passengers.

2. COMPULSORY PILOTAGE:

The Port of London Authority (a competent harbour authority within the meaning of the Pilotage Act 1987), in the exercise of its powers under Section 7 of that Act, directs that on and after 1st June 1991, pilotage shall in all circumstances be compulsory for ships of 50 m. or more in length navigating in the Upper Area.

3. THE INNER AREA:

Pilotage is compulsory for all ships navigating in the Inner Area, except ships of less than 50 m. in length overall.

4. THE OUTER AREA:

Pilotage is compulsory for all ships navigating in the Outer Area, except:

4.1 Specified vessels and passenger vessels of less than 50 m. in length overall.

4.2 All ships of less than 80 m. in length overall other than specified vessels and passenger vessels.

5. A ship which is being navigated in the compulsory area and in circumstances in which pilotage is compulsory for it, must be under the pilotage of:

(a) An authorised Pilot, or
(b) A person who is bona fide, the Master or First Mate of the ship, and possesses a Pilotage Exemption Certificate granted by the Port of London Authority in respect of the area (or a specified part thereof) and ship.

Pilotage Exemption Certificates may be granted by the Authority for the following geographical areas within the compulsory area. Areas ONE and TWO below comprise the Outer Areas, and Areas THREE and FOUR comprise the Inner Area.

Area One: Between the Seaward Limit of Pilotage Jurisdiction in the vicinity of the Outer Tongue Buoy and Sea Reach No. 1 Buoy, via the Edinburgh and the Princes Channels.

Area Two: Between the Seaward Limit of Pilotage Jurisdiction in the vicinity of the Sunk Head Tower Buoy and Sea Reach No. 1 Buoy, via the East Swin Channel/Barrow Deep and the Black Deep.

Area Three: Between Sea Reach No. 1 Buoy and a line drawn due North from Gravesend Pilot Station.

Area Four: Between a line drawn due North from Gravesend Pilot Station and London Bridge; but a certificate will relate only to the part of the area between Gravesend Pilot Station and a point half a mile above a specified berth within the area.

6. TAKING ABOARD AND LANDING PILOTS:

6.1 A ship for which pilotage is compulsory in the Inner Area, but not in the Outer Area, shall take aboard or land a Pilot in the vicinity of the Warp/Oaze Deep, East of Sea Reach No. 1 Buoy.

6.2 A ship for which pilotage is compulsory in the Outer Area shall take aboard or land a Pilot beyond the Seaward Limit of Pilotage Jurisdiction as follows:

6.2.1 All ships with an actual draft of less than 6.0 m. in the vicinity of N.E. Spit Buoy.

6.2.2 All ships with an actual draft of 6.0 m. or more, when entering or leaving from or to the North, in the vicinity of the Sunk Light Vessel.

6.2.3 All ships when entering or leaving from or to the South, in the vicinity of N.E. Spit Buoy.

7. ADVERSE WEATHER CONDITIONS:

In adverse weather conditions, the boarding or landing o
authorised Pilot at the points referred to in Paragraph 6 of
direction may be impracticable. In such circumstances, a
may board or land a Pilot in more sheltered waters in accorda
with advice notified at the time by the Port of London Autho
from the London Port Control Centre at Gravesend. An authori
Pilot will at such times be stationed at the London Port Con
Centre at Gravesend in order to give advice to ships naviga
in the area.

8. PROCEDURE FOR OBTAINING THE SERVICES OF
AUTHORISED PILOT:

It is imperative that good notice is given of the requiremen
the services of a Pilot. To comply with the compulsory procedu
an order for a Pilot must relate to the time that the Pilot is requ
at the boarding point whether inward bound or departing from
port. If the pilot service is unable to supply a Pilot, due to st
of weather or other unforeseen circumstances, due allowance
be made. Ships' Owners or Masters who fail to provide the pr
information in a timely manner may be liable to a surcharge
may cause a delay to the ship.

9.1 *ETA's for Inward Bound Ships:*

Ships requiring the services of an authorised Pilot at the N
Spit, Sunk, Warp/Oaze Deep or Gravesend boarding/land
stations must make a provisional order and notification of a
to the London Port Control Centre at Gravesend, *24 hour*
advance, stating the ETA at the appropriate boarding/land
station, g.r.t./g.t., length overall, draft and destination (nam
berth or anchorage). This notification may be in the form
provisional order and will not incur surcharge penalties.
Confirmation of the above information and a CONFIRMED o
for a Pilot must be given to the London Port Control Centre
later than 8 hours in advance (This constitutes
COMPULSORY NOTICE after which time a surcharge ma
imposed).

Up to 4 hours in advance, any change to an ETA must be no
to the London Port Control Centre. Thereafter, any fu
changes and the final advice of ETA must be given when the
is in VHF radio contact with the appropriate pilot station.

Ships engaged in short sea voyages may give notice o
CONFIRMED order for a Pilot and ETA at the time of leavin
previous port, where this is less than the above compu
notice.

Should the services of an authorised Pilot be cancelled w
4 hours of the confirmed ETA, a cancellation charge will be ma

Note: Ships bound for London (or where applicable the Medw
which anchor in the general vicinity of either the S
Outer Tongue or Margate Roads (i.e. at outer ancho
or are inward from any port adjacent to the limits o
London Pilotage Area, are required to give not less
8 hours notice of the requirement for a Pilot and any
less will incur a surcharge.

9.2 *ETD's for Outward Bound Ships, Ships Proceeding from*
Berth to another or Ships Moving from an Anchorage:

Ships requiring the services of an authorised Pilot to depart
a berth, buoy or tier, in the Port of London, move from one b
to another, or to move from an anchorage, must notify Lon
Port Control Centre *24 hours in advance*, giving their ETD
the berth, buoy, tier or anchoage, g.r.t./g.t., length overall,
destination and landing point. This notification may be in the
of a provisional order and will not incur surcharge penalties
Confirmation of this information and a CONFIRMED order
Pilot must be given to London Port Control Centre *not later*
4 hours in advance (This constitutes the compulsory notice,
which time a surcharge may be imposed). Thereafter, cha
to the ETD must be notified to the London Port Control C
until 2 hours before sailing, when contact should be made
to the Gravesend Pilot Station by VHF radio or telephone.

Should the services of an authorised Pilot be cancelled w
3 hours of the confirmed ETD, a cancellation charge will be m

9.3 *Ships Anchoring in the Port of London:*

Ships required to anchor before proceeding to their berth,
confirm with the Duty Port Controller at London Port Co
Centre by VHF radio, that the Pilot may remain on board
the ship is required to get underway. No arrangement ma
made with any individual Pilots.

Under normal circumstances, when a ship anchors fo
extended period, the Pilot will disembark and be replace
another Pilot when the ship proceeds.

Inward or outward bound ships required to anchor and which
used the services of an authorised Pilot must, as soon
practicable, advise the Gravesend Pilot Station on VHF ra
their ETA at the anchorage in order to land the Pilot. Wh
Pilot is required to move from the anchorage, the ship
comply with the requirements of Paragraph 9.2 above.

9.4 *Ships Requiring Pilots to Join or Disembark at Continental*

Shipowners/Agents wishing a Pilot to board the ship
continental port or to remain on board to a continental port
obtain the approval of the Pilotage Coordinator at the Grav
Pilot Station (Tel: Gravesend (0474) 562333, *not later than*
before the service is required. Charges for this service
published by the P.L.A. No arrangements may be mad
individual Pilots.

Should the services of an authorised Pilot be cancelled
2 days prior to the date required to join the ship at a con
port, a cancellation fee will be made.

Pilots authorised by the P.L.A. may only act as Pilots wi
Port of London compulsory pilotage area. The P.L.A. do
provide deep sea pilotage services.

9.5 *Berthing Pilots:*
Ships of 160 m. or more in length overall or 11,000 g.r.t. or more, whichever is less, are required to employ the services of an authorised Berthing Pilot when berthing or unberthing at the oil wharves or jetties at Shellhaven, Coryton, Canvey Island or the Canvey Methane Terminal.

9.6 *Inner List Pilots:*

9.6.1 Oil Jetties:
Ships of 275 m. or more in length overall or 12.3 m. draft or more, whichever is less, are required to employ the services of an authorised Inner List Pilot when navigating between the Seaward Limit of Pilotage Jurisdiction and the oil wharves or jetties at Shellhaven, Coryton, Canvey Island or the Canvey Methane Terminal.

9.6.2 Ships bound to or from the Medway Ports:
Ships of 12.0 m. draft or more are required to employ the services of an authorised Inner List Pilot, when navigating between the Seaward Limit of Pilotage Jurisdiction and Former Seaward Limit bound to or from the Medway Ports.

10. BOARDING AND LANDING POINTS FOR SHIPS BOUND TO OR FROM THE PORT OF LONDON:

Boarding and landing of Pilots will be carried out by launches operating from Harwich (Sunk Light Vessel), Ramsgate (N.E. Spit Buoy), Sheerness (in the vicinity of the Warp/Oaze Deep to the East of Sea Reach No. 1 Buoy) and Gravesend as appropriate. Pilot boats have a black hull, the word PILOTS on the side of the wheelhouse and fly a pilot flag by day and by night display the signals required by Rule 29 of the International Regulations for Preventing Collisions at Sea 1972 (as amended). Under normal circumstances, these pilot launches operate from their respective bases to ship and land Pilots.

10.1 *N.E. Spit Buoy:*
All ships with an actual draft of LESS than 6.0 m. and all other ships approaching the Port of London from the East and South or departing to ports to the East or South will, subject to weather conditions, ship and land their Pilots (provided by launch from Ramsgate) in the general vicinity of N.E. Spit Buoy and the Elbow Buoy, the charted location being Lat. 51° 25′ N., Long. 01° 30′ E. Ships which are constrained by reasons of their draft from using the North Edinburgh Channel, may embark their Pilot at N.E. Spit or proceed direct to the Sunk boarding and landing station.

10.2 *Sunk Light Vessel:*
Only ships with an actual draft of 6.0 m. or more approaching the Port of London from the North and N.E. directions or departing to the same area will, subject to weather conditions, ship and land their Pilots (provided by launch from Harwich) in the vicinity of the Sunk Light Vessel. The charted location being Lat. 51° 51′ N., Long. 01° 35′ E. Ships with an actual draft of less than 6.0 m. will only be permitted to ship or land their Pilot at the N.E. Spit Buoy Station. Any ship, arriving at the Sunk and taking a Pilot on boad, having advised in advance a draft of 6.0 m. or more, is found to have an actual draft of less than 6.0 m., will be liable to a surcharge.

10.3 *Warp/Oaze Deep:*
Ships which are exempt from compulsory pilotage for Areas 1 and 2, as defined in Paragraph 1.1 of these Regulations, will, subject to weather conditions, ship and land their Pilots (provided by launch from Sheerness) in the vicinity of the Warp/Oaze Deep and to the East of Sea Reach No. 1 Buoy.

10.4 *Gravesend:*
Ships which are exempt from compulsory pilotage for Areas 1 and 3, or 2 and 3, as defined in Paragraph 5 of these Regulations, will normally ship and land their Pilots at Gravesend off the Royal Terrace Pier.

11. SHIPPING OR LANDING A PILOT:

Mariners will appreciate the need to provide a satisfactory lee when shipping or landing a Pilot and may be requested by the pilot launch to change speed and course to enable the operation to be carried out safely.

12. SHIPS CLAIMING EXEMPTION OR EXCEPTION FROM COMPULSORY PILOTAGE:

Ships claiming exemption or exception from compulsory pilotage, as defined in these Regulations, must notify the London Port Control Centre *24 hours in advance* of their intention to claim exemption or exception; giving ETA/ETD as appropriate, ship name, g.r.t./g.t., length overall, maximum draft, name, initials and exemption certificate number of the Master or First Mate who will be piloting the ship on that voyage. Failure to provide this information will necessitate the ship taking the services of an authorised Pilot, and could involve the ship in a delay as well as the imposition of a surcharge on the pilotage dues. Ships, arriving from ports less than 24 hours distant, must provide the information immediately after departure from that port.

13. COMMUNICATIONS:

The London Port Control Centre operates 24 hours a day and is the centre for all initial orders for Pilots. It is equipped with VHF radio, telephones, telex and facsimile equipment.

Long range ETA's from ships at sea may be passed through a United Kingdom Coast Radio Station by M/F or VHF radio telephone, telex or telegraph addressed to "London Port Control". The Gravesend Pilot Station, situated at the London Port Control Centre, operates 24 hours per day and is the administration centre for all pilotage services and is able to provide advice to Shipowners/Agents on all pilotage arrangements. It is equipped with VHF radio, telephones, telex and facsimile equipment.

RESTRICTIONS: Certain restrictions are placed on the navigation of vessels carrying petroleum, chemicals, explosives and other hazardous commodities (See "Notices").

Vessels which are carrying any of the above mentioned cargoes should call Gravesend for details of these restrictions and ascertain whether it is permitted for them to navigate.

Notwithstanding any of the aforementioned restrictions, all vessels should comply with the "General Directions for Navigation in the Port of London 1991". (Copies obtained from the Chief Harbour Master, Port of London Authority, London River House, Royal Pier Road, Gravesend, Kent DA12 2BG.

The tides at London Bridge have a range of 4.6 m. at Mean Neaps and 6.6 m. at Mean Springs.

The sea approach to Shellhaven is dredged to allow the passage of vessels to 13.7 m. at Mean Neap tides. For latest channel depths contact the Harbour Master or Thames Navigation Centre.

THAMES NAVIGATION SERVICE:

London Port Control Centre: (Call sign "Gravesend Radio") is the main operations centre for traffic information within the Port of London Authority area of jurisdiction. All information required by the Authority regarding ETAs and ETDs, etc., should be passed to this Centre. It also deals with matters concerning moorings in the River and enquiries concerning Byelaws, regulations and shipping information.

Communications: VHF radio: Channels 16, 9, 13, 12, 18, 20. Telephone: Gravesend 560311. Telex: 262880 Platns G. Facsimile: Group 3. Gravesend 352996.

Radar coverage and area of responsibility: Crayfordness to the sea.

Tidal Information: Information on tidal heights from gauges at Walton, Margate, Shivering Sands, Southend, Tilbury, Coryton, Denton, Erith, Silvertown, Charlton, Tower Pier, Westminster and Richmond is available on request.

Procedures: All vessels must report to this station on entering the Port Limits inward bound or when leaving a berth within the area of responsibility outward bound or when moving from one berth to another. It is also a requirement to report the vessel's progress at the "reporting points" indicated on the Admiralty Charts of the area. Regular half-hourly broadcasts of navigational information are made on VHF Channel 12 on the hour and 30 minutes past the hour for traffic to the West of Sea Reach No. 4 Buoy and 15, and 45 minutes past the hour for traffic to seaward of Sea Reach No. 4 Buoy.

Thames Barrier Navigation Centre: (Call sign "Woolwich Radio") is a sub-centre to the Thames Navigation Centre with particular responsibility for controlling navigation through the Thames Flood Barrier.

Communications: VHF Radio Channels 16, 14, 22. Tel.: 081-855 0315. Telex: 896157 Plabar G.

Radar coverage and area of responsibility: Radar from Crayfordness to Greenwich. Area of responsibility from Crayfordness to Teddington.

Tidal Information: Tidal information from a gauge at North Woolwich and other stations are available on request.

Regular half hourly broadcasts of Navigational information are made on VHF Channel 14 at 15 minutes and 45 minutes past each hour.

Procedures: All vessels navigating in the area of responsibility must inform this station of their intention to do so and maintain a listening watch on VHF radio. Progress reports should be made at the "reporting points" indicated on the Admiralty Charts. Special regulations are in existence for navigating through the Thames Flood Barrier and the Barrier Control Zone (Margaretness to Blackwall Point). See Port of London – annual summary of Notice to Mariners 1994.

Tilbury Dock: All vessels wishing to enter or leave Tilbury Dock (private facilities) must book a time with the Lock Co-ordinator. Telephone Number Tilbury (0375) 852456. Telex 995176. The Lock Co-ordinator also deals with enquiries for dock tugs, dummy pontoons and other services for vessels in the Dock. Tilbury is operated by Port of Tilbury (London) Ltd.

Patrol Service: A 24-hour patrol service is maintained by the Authority whose launches can be contacted on VHF radio (Call sign "Thames Patrol") on VHF Channels 16, 12, 14 and 6. They can also be contacted through Gravesend Radio or Woolwich Radio.

General: The London Port Centre maintains close liaison with Owners, Agents, Pilots, Watermen, Port Health, Customs and Excise and all the Emergency Services. It is available to give help and advice on any matters affecting ships and shipping.

ANCHORAGES: Great Nore and Little Nore Anchorages allocated by Medway Port Operations, all other anchorages allocated by the London Port Control Centre dependent upon the size and draft of vessel, the length of stay required at the anchorage and the specific details of the vessel, i.e. explosives, petroleum, etc.

Explosives anchorage at Chapman Anchorage for discharging/loading to/ex barge to/from appointed river wharves.

MAX. SIZE: Tankers:

Berth	*Depth at Chart Datum*	*Length*
Coryton	14.0 m. maximum	1,100 ft.
Shellhaven	14.6 m. maximum	1,200 ft.
Holehaven	11.2 m. maximum	720 ft.
Purfleet	8.6 m. – 11.2 m. maximum	700 ft.
Grays	11.2 m. maximum	620 ft. - 750 ft.

Other river and tanker berths restrictions apply according to tides and berth.

Passage for deep-draft tankers for berthing at Shellhaven and Coryton is sometimes over a period of 2 tides. Passage on the first tide to deep water anchorage, vessel to leave anchorage on make of second tide and arrive off the installation half an hour before HW of this tide.

RADIO: Outside U.K. waters from the South, call long range station "Portishead Radio"; approaching London, "Niton Radio" or "Northforeland Radio", giving Agent vessel's draft and ETA. "Gravesend Radio" when in the Thames and its estuary.

TUGS: Tugs usually pick up vessels for Shellhaven and Holehaven in reaches approaching berth, or Gravesend for berths/docks up river. Tugs and lines can be hired from Alexandra Towing Co. (London) Ltd., Alexandra House, Royal Pier Road, Gravesend, Kent. Tel: (0474) 359361.

BERTHING:

Cargo Berths: The Port of Tilbury (London) Ltd. operates the enclosed dock system at Tilbury Docks.

Depths of water shown for berths in the enclosed docks and on the river are the authorised depths to which the berths may be dredged. Ac depths may be less than the authorised depth and the advice of the Port Authority or tenants Operating Manager should be sought if neces

TILBURY DOCKS:

Entrance lock dimensions: Length 1,000 ft. (305 m.). Width 110 ft. (33.5 m.). Depth 7.3 m. below C.D. Max. size: LOA 262 m., beam 32. and max. draft 11.4 m.

Access to berths (except the Grain Terminal, Northfleet Hope Container Terminal, cargo and repair jetties, riverside Ro/Ro terminal and passen landing stage) is gained through an entrance lock.

Berth No. 2 (outer) max. deadweight 10,000 tons. if vessel over 3,000 deadweight tons on Berth G2 then restricted size only on Be G1. 6×8 in. lines at outer berths and 5×6 in. lines at inner bert
London and Coastal Oil Ltd.	1	Max. LOA 580 ft.	Depth (subject to dredging) 40 ft. Max. draft 32 ft.	Products handled: Gasoline, gas oil, diesel, kerosine, jet fue Pumping rates into barges, 200 – 250 t.p.h. with max. press 100 p.s.i. Discharge rate 400 – 1,500 t.p.h.

Other Wharves: In addition to the above some manufacturing and service industries have their own riverside premises with ship berths. Lon Port Control Centre will assist with information. Otherwise contact Waterside Manufacturers and Associated Industries. Tel: 071-481 3681.

*Bunkers available at all berths. Fresh water not available.

**Unless otherwise stated.

†All berths subject to siltation, and Marine Superintendents should be consulted for current depths.

‡Tank cleaning is permitted when back loading operations are to take place. Tank cleaning for other purposes may take place only after agreem from the Terminal.

Dirty ballast separator system allows a cumulative rate of 1,500 cu.m./hr. from all jetties. No waxy material, chemicals or chemical additiv accepted.

Vessels should arrive with minimum possible ballast commensurate with safe handling of vessel.

Shell – Shellhaven: *Cautionary Advice:* Shellhaven Terminal is situated on the concave side of a bend in the river and, as a consequence, the tide does not run parallel to the berths. There is a strong outflow of tide from behind Berth "A" and "B" (the VLCC berth) during the ebb.

When swinging off the terminal before berthing or (for smaller ships) on sailing, due allowance must be made for the run of the tide and a close watch kept on passing traffic. Before a VLCC is berthed on Berth B the adjacent Berths A and C should be vacant or occupied by small craft.

Berthing Pilots: All vessels of 160 m. or more in length or of 11,000 g.r.t. or more, whichever is less, bound for oil jetties in the Shellhaven area are required to employ the services of a Berthing Pilot. (Drawn from senior P.L.A. Pilots). The Berthing Pilot will normally board the vessel from one of the berthing tugs.

Berthing Procedures: Deep draft ships (over 12 m.) are swung before berthing and should, therefore, arrive off the berths on a flood tide. Other ships berth heading up or down river according to the tidal direction at the time of arrival (always head to tide).

Tugs are made fast off No. 7 Sea Reach Buoy. Ships are swung off the berth with due allowance for the set of the tide being made. Extreme care should be exercised in selecting the precise swinging position as the flood tide sets strongly onto "Mucking Flats".

During the swing all tugs are on the hook. For VLCCs there are 3 tugs from the forecastle head and 1 from the poop. When swinging, 2 forward tugs will let go and come alongside to push the ship onto the berth. The vessel should always land on the fenders parallel to the berth. 2 "boatmen" will board the ship in the vicinity of the berth to assist and liaise between ship's crew, the mooring boats and the jetty during mooring operations. Moorings are taken ashore by motor boats (one at each end of the vessel). Spring lines are normally taken first, followed by breast lines, then head and stern lines. Liaison between the Pilot/Berthing Master and the terminal in positioning the ship is not always good, and it is recommended that a ship's officer with portable VHF be stationed near the manifold to assist in positioning.

Moorings – Cautionary Advice. During Spring tides a surface current of up to 2 knots setting out from behind the berth can be experienced on the ebb tide. Large deep ships should be securely moored prior to the start of operations. Upstream moorings in particular, must be of good material and well positioned. Mixed moorings of wire and fibre are not recommended and the terminal recommends that fibre tails be removed from wire moorings. There are no shore moorings.

Mobil – Coryton: *Berthing Pilots:* All vessels of 11,500 g.r.t. and over, bound for jetties in the Coryton area are required to employ the services of a Berthing Pilot. (Drawn from senior P.L.A. Pilots). The Berthing Pilot will normally board the vessel from one of the berthing tugs.

Berthing Procedures: Regardless of draft, VLCCs must not enter the berth dredged box until 1 hour prior to HW.

Deep draft ships (over 12 m.) are swung before berthing and should, therefore, arrive off the berth on a flood tide. Other ships berth heading up or down river according to the tidal direction at time of arrival (always head to tide).

Tugs are made fast at No. 6 Sea Reach Buoy. Ships are swung off the berth with due allowance for set and tide being made.

During the swing all tugs are on the hook. For VLCCs there are 3 tugs from the forecastle head and 1 from the poop. When swung 2 forward tugs will let go and come alongside to push the ship onto the berth. Berth 4 (VLCC) is fitted with a Marconi Semi Mark II approach speed measuring device. Information from this equipment is supplied to ship by means of VHF radio telephone. (The service will be offere the vessel when radio contact is first made, and radios will be pla aboard the vessel prior to its arrival off the berth).

Maximum impact velocity is 25 ft. per minute for a maxim displacement of 230,000 tons at a maximum angle of 12°.

Mooring arrangements for Berth 4 are as follows:

4 mooring dolphins are provided to take the breast ropes and he ropes from vessels. The 4 mooring dolphins are of equal strength are capable of taking a load of 150 tons. Each mooring dolphin is f with triple hook assemblies capable of taking a load of 50 tons single hook.

Mooring hook assemblies are also fitted to each of the 2 bert dolphins and at either end of the jetty head. Each assembly compr two hooks which are capable of taking a load of 50 tons on a si hook. These mooring arrangements are intended to take the spring of vessels and have been designed to be capable of taking a loa 100 tons acting either parallel to berth face or up to an angle of 20° this line. Any significant load applied at an angle greater than 20° the berthing line may cause severe damage to the jetty head.

Mooring diagrams will be available to each vessel from tug boatmen.

2 shore breasting wires are provided, and it is recommended vessels should make use of these.

2 "boatmen" will board the ship in the vicinity of the berth to as and liaise between the ship's crew, the mooring boats and the jetty du mooring operations. Moorings are taken ashore by motor boats (on each end of the vessel).

Moorings: Cautionary Advice. Strong tidal flows, especially du Spring ebb tides which can generate tidal flows up to 4 knots, dem a diligent tendering of vessel's moorings at all times.

Esso – Purfleet: *Berthing:* A vessel should come up river on the tide so as to arrive off the berth about 2 hours before HW. Then tu starboard and berth port side to the jetty head.

Moorings: At Berth No. 1 the first lines run are a head rope to the and a spring to the jetty. When the vessel is secured, she should 2 head/stern ropes to the buoys, 2 breast lines to shore, 2 backsprings to the jetty head. For large vessels the eye of a 5 in. s wire is taken aboard and put over a set of bitts located aft. This w tensioned from ashore.

For large vessels or in bad weather, additional heavy combination backsprings may be available from shore.

The vessel must provide "emergency towing wires" on her offs bow and quarter, with eyes maintained at water level.

Van Ommeran – West Thurrock: *Cautionary Advice:* Both main b are of similar construction. Berth No. 2 (down-river) is subject to silting.

Berthing: Depending on the size of the ship and the weather, 2 tugs usually accompany the vessel from Gravesend. They secur the tug's towline on the hook when about 1 mile from the terminal. sailing, 1 or 2 tugs are used depending on the flash point of the pr

Vessels berth head to tide and may secure either side to jetty. with drafts not exceeding 25 ft. can berth at any stage of the tide. draft vessels (34 ft.) usually berth about 1 hour before HW, duri last of the flood tide, and turn off the terminal and secure port s the jetty.

Moorings: No particular pattern of mooring is specified. Vessels usually secure with 2 or 3 head and stern ropes, 1 or 2 breast ropes, and a spring at each end. 2 mooring launches are in attendance while berthing. The vessel must provide emergency towing on her offshore bow and quarter, with eyes placed at water level.

No shore moorings are available.

HEALTH: Port of London Health Authority:
Public Health (Ships) Regulations, 1979.
Notes for the guidance of Masters/ships Agents:

(1) It is the responsibility of the Master of a vessel due to arrive in the Port of London to report to the Port Health Authority the presence of sickness, animals or captive birds on board, or of the occurrence, during the voyage, of the death, other than by accident, of a crew member or passenger.

(2) This information should be transmitted to North Foreland Radio Station for forwarding to "Portelth London", not more than 12 hours or less than 4 hours before vessel's arrival in the Port.

(3) Vessels already in the Port can contact the Port Health Authority directly by telephoning Tilbury (03752) 2663.
At Public Holidays (and all times other than 0900 – 1700 hrs. Monday to Friday) an answering machine is connected to this number giving the telephone number of the Duty Officer who will give any advice or assistance required.

(4) The Port of London Health Authority District includes that part of the River Medway comprising Sheerness, Isle of Grain, Ridham Dock and Queenborough.

Also see "Health – All Ports" before first U.K. port.

CRANES: See "Berthing".

BULK CARGO FACILITIES: See "Berthing".

SPECIALISED CARGO HANDLING FACILITIES: See "Berthing".

BRIDGES: No bridges below Tower Bridge which opens for shipping on request.

Queen Elizabeth II Bridge now open. Guaranteed headroom of 54 m. above M.H.W.S. is available between the white isophase lights on the main span. Vessels with an air draft in excess of 45 m. should contact the Harbour Master at the London Port Control Centre to arrange a controlled passage.

STEVEDORES: Ordered by the Agents; no ETA to stevedores from vessel necessary; labour to be ordered by 1200 hrs. day before required.

At PLA General Purpose Berths order by 1100 hrs. day before except for weekends/public holidays when 1600 hrs. 2 days before. PLA/TCS Container Terminals work 24 hours a day, including weekends.

MEDICAL: Not necessary to contact Agents once port health requirements satisfied unless urgent medical treatment required on board on arrival. All medical treatment, vaccinations available.

DENSITY: Varies according to position and tides.

FRESH WATER: Available at all berths either from shore or barge.

FUEL: All types, grades available by barge, or from terminals.

FIRE PRECAUTIONS: Tankers – no smoking on open decks, only cabins. Deck fire hoses to be connected. Fire monitors to be trained on manifold area. Explosive workings at Chapman Anchorage, same precautions. Red flag to be flown by these vessels. Fire tug to be in attendance when explosives being worked. Smoking not permitted in the docks or berths.

CONSULS: All British Commonwealth countries are represented in London by a High Commissioner's Office.

Most foreign countries maintain embassies or a consular representative in London.

REPAIRS: All repairs, gas freeing possible; pre-advice recommended.

DRY DOCKS: Tilbury Dry Dock is closed. Nearest small dry docks are in the Medway.

SURVEYORS: *Classification Societies:*

American Bureau of Shipping, 1 Frying Pan Alley, London E1 7HR, Tel: 071-247 3255.

Det Norske Veritas, European Head Office, Veritas House, 112 Station Road, Sidcup DA15 7BU, Tel: 081-309 7477.

Germanischer Lloyd, Riverdale House, 68 Molesworth Street, Lewisham SE13 7EY, Tel: 081-318 1319.

Korean Register of Shipping, Room 319, Premier House, 10 Greycourt Place, London SW1P 1SB, Tel: 071-222 2840.

Lloyd's Register of Shipping, 71 Fenchurch Street, London EC3M 4BS, Tel: 071-709 9166.

Registro Italiano Navale, UK Office, 52 Aberdour Road, Goodmayes, Ilford IG3 9PG, Tel: 081-590 6543.

Inspection Services:

Cargo Superintendents (London) Ltd., 29 Cambridge Park, Wanstead, London E11 2PU, Tel: 081-989 5191. (Bulk grain, vegetable oils, minerals, chemicals).

Moore Barrett & Redwood Ltd., Old Station Approach, London Road, Purfleet, Tel: 0708-865601. (Petroleum, petrochemicals, calibration of tanks and meters)

SGS Inspection Services Ltd., Testing Division, Gaw House, Alperton Lane, Alperton, Wembley HA0 1WU, Tel: 081-998 2171. (Laboratory testing quality of raw wool, textiles, toys, electrical and consumer goods)

GANGWAY/DECK WATCHMEN: Available but not compulsory, Master's discretion.

OPENING/CLOSING HATCHES: Liner vessels by crew, with stevedore assistance. Tramp vessels according to charter party.

CERTIFICATES: These certificates to be on board.

Ship's Register.
Load Line.
Safety Radio.
Safety Equipment.
Safety Construction.
Oil Record Book.
Derat Exemption.
Previous U.K. Light Due Bills.
Cargo Gear and Chain Register complying to U.K. Factory Acts.
British Tonnage Certificate if available.

CUSTOMS ALLOWANCES: Customs usually permit 200 cigarettes or 0.25 lb. tobacco per person on board for 4 days. They can refuse to issue duty free or amount allowed at their discretion. Usually permit 1.3 pints or 1 bottle spirits per person for 4 days. They can issue less or refuse to allow as duty free at their discretion.

CARGO GEAR: To comply with U.K. Factory Acts, valid chain and Cargo Gear Register to be on board. Stevedores usually supply cargo slings, etc.

BANKS: All British and most foreign banks represented in London. British banks have branches in Thameside towns.

REPATRIATION: All facilities exist for changing crews, repatriations.

AIRPORTS: London Heathrow, London City Airport, Luton, Stansted and Gatwick Airports. Southend Airport serves domestic and Continental services.

TIME: British Summer Time which is 1 hour in advance of GMT. GMT during Winter months.

HOLIDAYS: *Public Holidays:* Work is available on official holidays if practical. New Year's Day, Good Friday; Easter Monday; May Day Monday; Spring Bank Holiday Monday; August Bank Holiday Monday; Christmas Day; Boxing Day.

POLICE/AMBULANCE/FIRE: Contact by public telephone; dial 999 and ask for service needed.

EMERGENCY CO-ORDINATION CENTRE: See "London Port Control Centre" and "Notices".

TELEPHONES: Ship to shore connections available at most berths.

SERVICES: All types of service for navigational aids, radar, compass adjusting, nautical instruments repaired, slop discharge barges available. Tank-cleaning, gas-freeing services available.

GARBAGE DISPOSAL: Garbage collection services are provided by private contractors at most berths. Contact should be made through ship's Agent.

WASTE OIL DISPOSAL: Service available through private contractors, and at certain private berths. Contact should be made through ship's Agent.

SEAMAN'S CLUBS:
Queen Victoria Seaman's Rest. Tel: 071-987-5466.
Anchor House, Canning Town. Tel: 071-476-6062.
Stella Maris, Tilbury. Tel: 03752-5641.
Merchant Navy Hotel, Lancaster Gate. Tel: 071-723-8831.
All of the above offer accommodation.
Flying Angel, Tilbury. Tel: 03752-2080.
Flying Angel, Gravesend. Tel: 0474-363383.
Norwegian Seamen's Mission. Tel: 071-237-5587.
Swedish Seamen's Mission. Tel: 071-237-1644.
Finnish Seamen's Mission. Tel: 071-237-4668.

SHORE LEAVE: Crew members allowed ashore.

IDENTIFICATION CARDS: Seamen's Identity Book required to be retained on board in port.

REGULATIONS: No livestock allowed ashore without permission Customs and Port Health Authorities. Rabies regulations enforced.

NOTICES: *Emergency Procedures for Vessels on The River Thames:* Report immediately by the quickest means available to either London Port Control Centre on VHF radio, Gravesend Radio, VHF Channels 12 or 13; Woolwich Radio, VHF Channel 14, or public telephone Tel: 999.
Message: Vessel's name and present position together with details of emergency and assistance required.
Collision, Fire or Other Accident: If involved in or sighting a collision or accident report as above.
Human Injury or Man Overboard: In event of serious personal injury or recovery of a person from the river when vessel's crew require additional assistance report as above.
Machinery or Steering Failure: In event of machinery or steering failure report as above.

If necessary to anchor then endeavour to anchor clear of the fairway if size and draft permit.

Details of Port of London Authority Combined Accident Procedure Applicable to Vessels (POLACAP): In event of a major accident, the London Port Control Centre will broadcast on appropriate VHF Channels an outline of the accident, including in the message:

Word	*Meaning*
"POLACAP"	Serious accident as specified has occurred – Combined Accident Procedure is in force.

Action by Vessels on Receipt of POLACAP Message: Maintain current communications watch, keeping requests for information to MINIMUM. If in vicinity of accident be prepared for traffic regulation, which, if required, will be operated by PLA Harbour Master's Launches.

If directly involved in or assisting with the accident, switch to VHF Channel 16 for inter-ship/craft communications, and report to London Port Control Centre.

On scene control will be exercised from the forward control craft using call sign POLACHIEF. This craft will identify itself by a blue rotating light and in addition by day will hoist a red ball at the masthead.

When Combined Accident Procedure is no longer in force, London Port Control Centre will pass:

Words	*Meaning*
"CANCEL POLACAP"	Combative measures to deal with the major accident are completed and no further action required.

Merchant Shipping (Tanker) Regulations 1981 and (Amendment) Regulations 1982 (EEC Requirements):

In compliance with the above regulations: (Statutory Instruments 1981, No. 1077 and 1982 No. 1637). The Master of any tanker of 1,600 g.r.t. or over which is:
(a) Carrying a cargo of chemicals, gas or oil in bulk; or
(b) Non gas free from any of these cargoes shall:
Section I: Make a report to the Harbour Master by telex (Telex No. 262880) or via G.P.O. Coast Station before entering or navigating within the limits of the Port of London which shall provide the following

information in the order listed:

(a) Tanker's name and call sign.
(b) Country where registered.
(c) Length, beam and arrival draft.
(d) Destination and ETA.
(e) Tankers bound for the Medway, ETA at Medway Buoy.
(f) Nature and type of cargo (together with Flash Point if known).
(g) Is an inert gas system fitted?
(h) If an inert gas system is fitted, is it fully operational?
(i) Do any of the cargo tanks have an atmosphere which has been rendered non-flammable?
(j) If the tanker has a cargo of chemicals or gas has it been issued with a certificate stating that it complies with:
  (i) IMO Code for Ships carrying dangerous chemicals.
  (ii) IMO Code for Existing Ships carrying Liquefied Gas.
  (iii) IMO Code for Ships carrying Liquefied Gas.
(k) Does the tanker have any hull, machinery or equipment defects which may materially affect:
  (i) Its safe manoeuvrability.
  (ii) The safety of other vessels.
or constitute a hazard to:
  (iii) The marine environment.
  (iv) Persons or property.

If the answer is 'Yes' to any of the 4 questions contained in (k), then details of the problem must also be provided.

If the Master fails to make a report or knowingly provides false information to the Port Authority or to a Pilot when boarding his ship he shall be guilty of an offence and liable on summary conviction to a fine not exceeding £1,000 or on conviction on indictment a fine.

If any Pilot boarding a ship to pilot it in or out of the port believes there are defects as described in sub-section (k) which have not been reported to the Port Authority he shall inform the Master of those defects and if the Master then fails to inform the Port Authority the Pilot shall forthwith give such information to the Authority himself.

Section II: Make a Check List available to the Pilot when he boards the vessel and make a copy of the same Check List available to the Harbour Master (if necessary through the vessel's agents).

If the Master fails to make a Check List available the Pilot shall forthwith notify the Harbour Master.

If the Master knowingly makes a Check List available which is materially false he shall be guilty of an offence and liable on summary conviction to a fine not exceeding £1,000 or on conviction on indictment a fine.

Inert Gas Systems and Crude Oil Washing (COW): (Reference Statutory Instruments No. 541, 544 and 687 of 1980).

The attention of tanker Masters are drawn to the following conditions, which must be observed whenever crude oil washing of tanks is to be undertaken in the Port of London.

1. *Notification*

(a) At least 24 hours prior notification of the intention to COW is to be given to the Harbour Master (through the London Port Control Centre) together with written assurance that all systems have been checked and found satisfactory in accordance with the ship's COW Manual and IMO requirements.
(b) One hour before the actual commencement of COW, a further advice must be given to the Harbour Master (through the London Port Control Centre) that COW is about to commence and that all systems are fully operational.

2. *Terminal Approval*

No vessel is to undertake COW without the approval of the Terminal Management and having complied with IMO COW requirements applicable to that ship.

3. *Failure of Systems*

Following the failure of the inert gas system to supply either the correct quality or quantity of inert gas, or a failure of any other part of a COW system, all cargo discharge, de-ballasting and tank cleaning must cease forthwith, and the Authority is to be immediately advised. Operations are NOT to be resumed until after consultation has taken place and agreement reached between the Authority, the Terminal Management and the ship's Master.

4. *Tanker Drafts*

No tanker crude oil washing is to be accepted at any berth where the vessel cannot safely be afloat at any state of the tide.

Notice:

Dangerous Substances in Harbour Areas Regulations 1987

1. INTRODUCTION

The Dangerous Substances in Harbour Areas Regulations 1987 ("DSHA Regulations") came into force on 1st June 1987. They apply in every harbour and harbour area in Great Britain, including therefore the Port of London. (Attention is also drawn to the Port of London Dangerous Substances in Bulk Byelaws 1991.).

2. MEANING OF "DANGEROUS SUBSTANCE"

The term "dangerous substance" is defined in Regulation 3 of DHSA Regulations. For a full understanding of the term, reference should be made to that definition. Essentially, however, it means any substance which by reason of its characteristic properties creates a risk to the health or safety of any person when the substance is in a harbour or harbour area. It includes any substance or article which is within the definition of "dangerous goods" in Regulation 1 (2) of the Merchant Shipping (Dangerous Goods) Regulations 1981.

3. NOTICE OF ENTRY

Regulation 6 requires that a dangerous substance shall not be brought into a harbour or harbour area, unless *notice* containing the required particulars has first been given. The notice must be of *not less than 24 hours* unless –

  (a) the Harbour Master requires a *longer* time (up to 14 days) for operational reasons; or
  (b) a *shorter* time is agreed, if it is not reasonably practicable to give 24 hours' notice.

A. *Entry by Vessel – Notice by Master or Agent*

A.1 *Persons to be notified*

If a dangerous substance is intended to be brought in by a ves the notice must be given by the Master or Agent to –

(a) the PLA's Harbour Master at the address mentio below (*Note* – the requirement applies even if vessel is in transit to or from the Medway); *and*
(b) the berth operator (*Note* – if the berth is at the P Tilbury Docks, notice must be given to the B Superintendent as well as to the Harbour Master)

A.2 *Form*

The PLA's Harbour Master and the berth operator must be *in rec* of the notice *before* the specified time. Notices should there preferably be sent by *telex* or *facsimile*.

The notice to the Harbour Master should be sent to –

The Harbour Master, Thames Navigation Centre, Royal P
Road, Gravesend, Kent DA12 2BG
Telex: 262880. Fax: Group 3 – 0474 352996.

A.3 *Contents*

The notice must contain such information as is *adequate to evalu the risk* created by the substance and –

(a) Name of vessel, and PLA voyage reference numbe allocated).
(b) Berth to be used.
(c) Whether substance is to be discharged or remai board in transit.
(d) Product name
IMO class
UN number
IMDG Code page number
Weight in tonnes or kilos.
(e) Mode of carriage: i.e. bulk, containers, Ro/Ro traile general.
(f) If in bulk –
  (i) whether petroleum or chemical, and
  (ii) Flash Point (FP) closed cup (if only an open FP can be given, this fact should be stated
(g) Whether vessel has current certificate of fitness recommended by IMO).
(h) If an oil tanker, whether vessel has valid cargo- Safety Construction and Safety Equipment Certifica (if required under a SOLAS convention).

B. *Entry by Road or Rail – Notice by Transport Operator Ship's Agent.*

B.1 *Transport Operator*

If a dangerous substance is intended to be brought in by road or the notice must be given by the transport operator.

The notice must be given to the Harbour Master and Berth Oper and must contain such information as is *adequate to evaluate risk* created by the substance and –

(a) Name of the transport operator.
(b) Berth to which substance is to be sent.
(c) Name of vessel for which intended (if known), with and estimated time of departure.
(d) Product name
IMO class
UN number
IMDG Code page number
Weight in tonnes or kilos.
(e) Method of packaging.

B.2 *Ship's Agent*

Information about the loading and estimated time of departure o vessel (as required at (c) above) is important but may not be rea available to the transport operator. Also, the PLA's Harbour Ma needs to have the information in a *form* which related mainly to vessels on which the substances are to be carried. The informa given by transport operators under the DSHA Regulations wi normally be in this form, but information in this form has hitherto b given by ship's agents in accordance with Merchant Ship (Tankers) Regulations 1981 and Amendment Regulation 1 (E.E.C. Requirements).

Ship's agents should therefore *continue* to give notice to the P Harbour Master at least *24 hours before* a dangerous substan *loaded* on to a vessel *anywhere* in the Port of London. The no should be given in the manner stated at A.2 above and should con the information stated at A.3 above (except for item (c)).

4. TILBURY DOCKS

Dangerous goods intended for loading or discharge in the Tilbury d continue to be subject to the PLA's published Schedule of Dange Goods. Attention is particularly drawn to the terms and conditions explosives (class 1) and radio-active substances (class 7).

In addition to notification under the DSHA Regulations, s descriptions of dangerous substances (designated in the Schedul Group 3, require the *prior approval* of the PLA before entering the d Application for approval should be made to the Dangerous Substa Section, Accident Prevention, Port of Tilbury, Tilbury Docks, E RM18 7EH. Telephone: Tilbury 0375 – 852374. Telex: 995441 0375 – 857667. (Note: Now operated by Port of Tilbury (London)

5. FURTHER REQUIREMENTS OF DSHA REGULATIONS

It is impracticable to set out all the provisions of the DSHA Regul in this notice, but particular attention is drawn to the following:

5.1 *Movement of Vessels*

(a) Regulation 7 confers on the Harbour Master powers of prohi removal and regulation relating to dangerous substances.
(b) Regulation 10 requires that a vessel shall not be placed alon another vessel carrying Schedule 3 dangerous substance wi the permission of the Master of the other vessel and of –
  (i) the berth operator, or
  (ii) the Harbour Master (if the vessel is not at berth).

(c) Regulation 14 requires the Master of a vessel carrying a dangerous substance to anchor or moor his vessel only where directed by the Harbour Master.

(d) Regulation 15 requires that the Master of a vessel (other than a dumb barge) carrying a Schedule 3 dangerous substance shall ensure that the vessel is in a state of readiness to be moved at any time (tidal conditions permitting).

5.2 *Permission for Certain Operations*

(a) Regulation 20 requires the Master of a vessel to obtain the Harbour Master's written permission before transferring a dangerous substance by pipeline to another vessel.

(b) Regulation 22 requires the Master of a vessel carrying or which has carried dangerous substance in bulk to obtain the Harbour Master's permission before discharging slops or ballast, pumping bilges, gas-freeing or purging tanks and before crude oil washing a cargo tank.

5.3 *Marking of Vessels*

(a) A vessel carrying a Schedule 3 dangerous substance must carry the lights or flags required by Regulation 8.

(b) A barge carrying one or more dangerous substances in the quantities stated in Regulation 11 (1) must display the hazard warning panels required thereby (or those panels and the labels required by regulations 11 (2)).

6. OTHER PROVISIONS

Attention is drawn to the following:

Port of London River Byelaws 1978

No. 6 – Escape of dangerous substance – vessel not to proceed above No. 1 Sea Reach Buoy except with permission of Harbour Master.

No. 7(f)– Spillage of liquid in bulk to be forthwith notified to Harbour Master.

AUTHORITY: Port of London Authority, London River House, Royal Pier Road, Gravesend, Kent DA12 2BG. *Tel:* 0474-562267, 0474-262880. Telex: 995553. *FAX:* 0474-562277. *Contact:* D.J. Jeffery, Chief Executive. Rear Admiral Bruce Richardson, Chief Harbour Master.

Port of Tilbury (London) Ltd., Leslie Ford House, Tilbury Docks, Tilbury, Essex RM18 7EH. *Tel:* 0375-852427. *Telex:* 995170. *FAX:* 0375-855106. *Contact:* John S. McNab, Chief Executive, Tilbury.

LONDONDERRY (incl. Moville): 55.02 N. 07.16 W.

(See Plan)

The main port of Londonderry is now situated at Lisahally, about 17 miles from the sea, at the confluence of the River Foyle with Lough Foyle.

PORT LIMITS: Extend from Craigavon Bridge to a line drawn from Greencastle Fort in Co. Donegal to the Tower on Magilligan Point in Co. Londonderry.

DOCUMENTS: For Londonderry see "Belfast". For "Moville" see "Dublin".

Since the Port of Londonderry falls within the Republic of Ireland and the United Kingdom, both Governments are concerned in regard to Customs documents. Moville, which is situated down river from Londonderry, is located in the Republic of Ireland and is the anchorage where deep-sea vessels lie prior to proceeding to Londonderry. Should vessels discharge cargo or load cargo at this anchorage, Irish documents are required. The port is under the control of the Londonderry Port and Harbour Commissioners who are recognised by both Governments.

PILOTAGE: The Londonderry Port and Harbour Commissioners are the Pilotage Authority for the Londonderry Pilotage District. For information regarding pilotage application should be made to The Secretary, Harbour Office, Londonderry, Northern Ireland. Tel: (0504) 860555.

Pilotage is compulsory, vessels normally taking the Pilot at Carrickarory Pier, Moville. A Pilot may be taken at the Fairway buoy by special arrangement.

The Pilot station is located at Carrickarory Pier, Moville, 55° 10′ 57″ N. 07° 03′ 27″ W.

Deep-draft vessels usually take Pilot 2 hours before HW time Londonderry, so as to arrive at Londonderry on the top of HW.

Pilotage service may be obtained in response to following signals:

Inward-bound vessels: By day. 1. The International Code Signal G; 2. The International Code Signal P.T.; 3. The Pilot Jack hoisted at the fore. If required after hours telephone Harbour Radio (Londonderry 0504-860313).

By night. Pilot Station unattended at night. Vessels should contact harbour radio on VHF Channel 14 or Londonderry (0504) 363218.

By day or night. 1. By VHF (FM) Channel 14 to the pilot station at Carrickarory Pier. 2. By VHF (FM) Channel 14 to the pilot launch "Foyle Leader." 3. After hours and weekends VHF (FM) Channel 14 to Harbour Radio.

In poor visibility. By sounding the letter G in Morse Code on the steam whistle or siren.

As visibility to seaward from Carrickarory Pier is restricted it is important that Owners, Masters or Agents notify the Berthing Master (Tel: Londonderry 0504-861113) or outside Office hours Harbour Radio (Tel: Londonderry 0504-860313) of the name of vessel; estimated time of arrival at the Pilot Station; draft of water of the vessel. It is also important that VHF (FM) communication be established with pilot station, pilot launch "Foyle Leader", or Harbour Radio as early as possible before arrival in Lough Foyle. Call signs, frequencies and procedure are as follows:

VHF (FM) Communications:

1. Pilot Station at Carrickarory Pier, Moville: Call sign "Foyle Pilots". Equipment VHF (FM) R/T single frequency working. A continuous listening watch is kept during office hours on Channel 14 (156.70 MHz.) except when pilot launch is operating, when watch is transferred to the launch.

2. Harbour Radio: A continuous listening watch is kept on Channel 14 (156.70 MHz) outside of office hours.

3. Pilot launch: Name of vessel "Foyle Leader". Equipment VHF (FM) R/T single frequency working. When launch is operating a listening watch is kept on Channel 14 (156.70 MHz).

4. Harbour Office, Londonderry: Call sign "Harbour Office". Equipment VHF (FM) R/T single frequency working. All vessels fitted with VHF (FM) R/T while navigating in the river or at anchor in Moville Bay should keep a listening watch on Channel 14 (156.70 MHz).

Messages must be restricted to those related to the movement of vessels and safety of vessels and persons. Messages of any other nature and messages of a personal character cannot be accepted.

A continuous listening watch is kept on Channel 16 (156.80 MHz) which is only to be used in circumstances involving distress and safety.

Outward-bound vessels and vessels shifting:

When the services of a Pilot are required for an outward-bound vessel or for shifting a vessel, 3 hours' notification should be given to the Berthing Master (Tel: Londonderry 0504-861113) during office hours, of name of vessel; time of departure; draft of water of vessel; where bound. Early notification should be given to enable Pilot to board in good time.

ANCHORAGES: The only anchorage at Londonderry is located at Moville.

RESTRICTIONS: See "Max. Size".

MAX. SIZE: For vessels using main port of Londonderry, overall length 190 m., beam 26 m. and draft 9.3 m. H.W.O.S.T.

Due to overhead power cables at Culmore Point, height clearance 39 m. H.W.O.S.T.

For vessels using N.I.E.S. Oil Jetty, Coolkeeragh, Londonderry, overall length 190 m., draft (salt water) 7.2 m.

HEALTH: Pratique is automatic except in the case where the Master suspects one of the dangerous diseases on board when he should notify the Agent.

Also see "Health – All Ports" before first U.K. port.

RADIO: Malin Head Radio Station, Republic of Ireland, covers W/T and R/T transmissions and Portpatrick Radio Station, Scotland, covers R/T transmissions.

TUGS: One tug is available which is owned by the Londonderry Port and Harbour Commissioners. Tugs lines normally used.

BERTHING: Vessels of deep draft or large dimensions can only berth at Londonderry to arrive on top of high water. Decisions in this matter are taken by the Pilots in conjunction with the Harbour Master.

A total of 365 m. of ferro-concrete wharf is available. All berths dredged to 10.0 m. LWOST

CRANES: 1×40 tonne mobile grab crane with automatic container spreader, 2×10 ton mobile grab cranes, 1×4 ton mobile grab crane, 1×4 ton mobile hook crane and 1×35 ton derrick.

STEVEDORES: ETA advices should be given before 1600 hrs. on weekdays to arrange work for the next morning and before 1100 hrs. on Saturday to arrange work for Monday morning.

MEDICAL: Doctors and hospital facilities available. Agents should be advised in advance of any medical attention required.

TANKERS: No slop facilities available. Deep-sea tankers discharge heavy fuel oil for electricity power station at N.I.E.S. Jetty, depth 7.4 m., Coolkeeragh, diameter of pipes 8 in. Crew are required to connect and disconnect hoses under port conditions.

Shell Oil: Max. LOA 120 m. Depth 6.0 m.

Du Pont: Depth 7.8 m.

DENSITY: Water at Londonderry is brackish and average density 1005 to 1018.

FRESH WATER: Available at all berths direct from shore lines.

FUEL: Gas-oil and light marine diesel available by road tankers and from Shell Jetty at Pennyburn. Shell Mex and B.P. can supply light, medium and heavy fuel oil by road tanker.

CONSULS: Nearest at Belfast.

REPAIRS: Deck and engine repairs are carried out by a local engineering works. No major repairs available.

GANGWAY/DECK WATCHMEN: Can be covered by crew; shore watchmen available if required.

OPENING/CLOSING HATCHES: This is required to be carried out by ship's crew under local port labour conditions.

CARGO GEAR: Ship's winches and derricks should be in good working order and have DTI Certificates or equivalent. Cluster lighting is required for night work.

REPATRIATION: Can be arranged by ship's Agent on request.

AIRPORT: Eglington Airport 9 miles from city centre. Aldergrove International Airport (Belfast) 60 miles from Londonderry.

HOLIDAYS: Port Holidays at Londonderry are: New Year's Day; St. Patricks Day (17th March); Easter Monday; Easter Tuesday; First Monday in May; Last Monday in May; 12th July; 1st Monday and Tuesday in August; Christmas Day and Boxing Day.

POLICE/AMBULANCE/FIRE: Dial 999 and ask for service required, or Police 265161; Ambulance 45171; Fire 264321.

TELEPHONES: No telephones available for connecting on board.

SERVICES: Compass adjusters available from Glasgow.

Charts and publications available from Class 'A' Admiralty Chart Agent, Todd Chart Agency Ltd., 4 Seacliff Road, Bangor, County Down BT20 5EY. Tel: 0247 466640. Fax: 0247 471070.

IDENTIFICATION CARDS: Not obligatory but should be carried.

GARBAGE DISPOSAL: Collection or skip provided on request at no charge.

WASTE OIL DISPOSAL: Service available using sub-contractor's road tanker. Contact Capitol Oils, Ballynahinch (Tel: 0238-561574). 48 hours notice required.

SEAMAN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
REGULATIONS: Copies of Port Bye-Laws may be obtained through Agent.
GENERAL:
Charts: B.A. 2798, 2499.
Pilot Books: NP40 Irish Coast Pilot.
Lights: Admiralty List of Lights, Volume A (NP74).
AUTHORITY: Londonderry Port and Harbour Commissioners, Harbour Office, Port Road, Lisahally, Londonderry BT47 1FL, Northern Ireland. *Tel:* (0504) 860555. *FAX:* (0504) 861168. *Contact:* S.J. McIlvenny, Chief Executive. G.S. Wilson, Secretary.

LOWESTOFT: 52.29 N. 01.45 E. (See Plan)

DOCUMENTS:
Crew List (at least 2 copies).
Passenger List (at least 2 copies).
Manifest (at least 3 copies).
Customs & Health Documents (normal U.K. regulations).
Ship's Papers (to be presented to Customs and Port Authorities).
PILOTAGE: Pilots on standby at all times. Pilot launch fitted with VHF and maintains listening watch on Channel 14. Pilots can also be ordered by R/T via Humber and Northforeland Radio, hence by phone.

Pilot's telephone No. Lowestoft 560277, or at the Lowestoft Harbour Masters Office, tel. Lowestoft 572286 (this number manned 24 hours). Pilot boat, black hull, orange upper work with "Pilot" painted on each side. Light and sound signals as laid down in the International Code of Signals.

Pilot boards vessel at West Holm Buoy or East Barnard Buoy. Vessel should not approach harbour closer than these limits when awaiting Pilot.
ANCHORAGES: Pilotage anchorage North of a line joining West Holm Buoy and Lowestoft Lighthouse.
RESTRICTIONS: No specific restrictions provided the height of tide is sufficient for draft of vessel. Large vessels normally enter on slack tide due to cross currents at entrance.

There are regulations governing the passage of vessels through the harbour entrance. Masters of vessels shall observe the Harbour Control Light (See Local Notice to Mariners No. 4 of 1992 (below)).

A green occulting light is shown on the North Pier Head and a red occulting light on the South Pier Head, from sunset to sunrise.

Several Inner Pier lights will be clearly visible from a vessel upon entering the harbour and some will also be visible from certain directions before entry.

A "horn" signal is fixed on the South Pier Head for use in foggy weather. 4 blasts of 2 seconds each will be given every minute.

Local Notice to Mariners No. 4/1992:

International Port Traffic Signals – Lowestoft

All Mariners using the Port of Lowestoft are advised that International Port Traffic Signals (No. 2 and No. 5) have been installed on the South Pier as an up-graded replacement for the white flashing traffic signal.

The new signals are sectored in favour of all marine traffic and are designed to convey the following messages:

Three vertical red lights	– Vessels shall not proceed.
Green, white, green vertical lights	– A vessel may proceed only when it has received specific orders to do so.

In the interests of marine safety, all vessels must observe these international port signals and navigate with the understanding that the Port Control, and departing vessels in the Outer Harbour, have extremely limited vision to the North of the entrance piers.

Note: Whilst accurate VHF communication by arriving and departing vessels is essential, small craft without VHF may consider the green, white, green signal in favour of *proceeding with extreme caution and navigational courtesy.*

Signed: Dock and Harbour Master.
14th December 1992.
MAX. SIZE: Max. length approx. 410 ft. Draft up to 20 ft. MHWS. (Check with Port Authority for current situation.)
HEALTH: See "Health – All Ports" before first U.K. port.
TUGS: A number of tugs are available; tug's lines normally used.
BERTHING: *Outer Harbour* (comprising Hamilton and Waveney Docks and Trawl and Yacht Basins). Used largely for fish traffic, liquid bulks and offshore module construction:

Width at entrance	144 ft.
Depth at entrance	23 ft. MHWS
Water area	40 acres
Length of quays	4,500 ft.
Depth of water at quays	18 ft. MHWS 12 ft. MLWS

Inner Harbour. Used for general cargo and grain traffic.

Width of bridge	74 ft.
Water area	70 acres
Length of quay	6,800 ft.
Depth of water at quays up to	23 ft. MHWS 17 ft. MLWS

CARGO HANDLING FACILITIES: *Grain:* Silo with a capacity of 8,500 tonnes. Loading rate up to 300 tonnes/hr. and discharging rate up to 200 tonnes/hr.
Cement: Silos with a capacity of 3,600 tonnes.
Containers: Purpose built container terminal is equipped with a 32 tonne container crane and 2 park-gantry cranes.
Transit Sheds: 4 sheds with total area of 8,500 sq.m.
Open storage also available.
CRANES: 1×35 tonne crane and 1×32 ton container crane. Mo cranes also available.
STEVEDORES: Shipping Agent should be advised of ETA, etc enable gangs to be available. Working hours: As required.
MEDICAL: Advance notice desirable of medical attention required arrival. Hospital facilities available in the district.
FRESH WATER: Can be supplied at various points on quays h hydrants.
FUEL: Marine diesel available from road tankers or fuel barge wi the harbour. 24 hours notice is normally required for supplying ga or boiler fuel; this comes from road tankers.
FIRE PRECAUTIONS: Local fire services available in an emerge Special arrangements can be made for taking fire-fighting equipme sea. Normal harbour fire-prevention regulations apply to all berths.
CONSULS: Netherlands Tel: Lowestoft 572301
Norway " " "
REPAIRS: All types of deck and engine repairs are possible in the p
DRY DOCKS: One dry dock. Length 248 ft. Width at entrance 4 Depth of water on sill 14.5 ft. MHWS.
OPENING/CLOSING HATCHES: Carried out by crew.
AIRPORTS: Nearest international airport served by regular airline London (Heathrow). Smaller airport at Norwich (27 miles) served regular airlines (Frequent flights to Amsterdam).
POLICE/AMBULANCE/FIRE: In an emergency dial 999 and ask service required. For normal enquiries: Police Lowestoft 562 Ambulance Lowestoft 572572; Fire Lowestoft 561700.
GARBAGE DISPOSAL: Skips are available by private arrangemen on request to Port Authority. Normal commercial rates.
WASTE OIL DISPOSAL: Service available by tanker trucks. Con Caird Environmental (Oil) (Tel: 0493-857264, mobile pager: 039911 788088) or Eastern Counties Tank Cleaners (Tel: 0493-602848, mo 0860-729727). Hunting Tank Cleaners Ltd. (Tel: 0493-332288).
Tank cleaning: Contact Hamilton Painter (Tel: Lowestoft 574459).

Bishop, General Manager. C. H Harbour Master, Tel: (0594) 516399 (part-time only – 48 hours n required).

MANCHESTER: 53.29 N. 02.14 W. (See Plan)

GENERAL: The Port of Manchester includes the whole of the Manchester Ship Canal and Queen Elizabeth II Dock. The Canal is approximately 36 miles long from its entrance at Eastham on River Mersey to the Manchester Docks.

DOCUMENTS:
1 Maritime Declaration of Health.
1 Crew Effects List.
2 Ship's Report by Master.
1 Home Office Form 1B6.
1 Stores List.
1 Certificate of Deck Cargo Tonnage.
1 Grain Certificate.
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List.
1 Landing Card for each Passenger.
Ship's Certificate of Registry.
Mercantile Marine Office Certificate – for British ships only.
Load-Line Certificate.
Safety Equipment Certificate.
Lloyd's Certificate.
Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.

In addition, Manifests and Bills of Lading are usually sent to Agent direct from loading port.

PILOTAGE: Compulsory. Orders for Pilots may be lodged with the Harbour Master's Office at Eastham (Tel. 051-327 1242/4). As much notice as possible should be given, particularly in the case of inward-bound vessels due to arrive at Eastham. Helmsmen can be obtained in same manner.

RESTRICTIONS: Eastham Locks. The main entrance to the Canal is at Eastham where there are two locks side by side, one 600 ft. by 80 ft., and the other 350 ft. by 50 ft. The outer or lower sill of each lock is 11.36 ft. below Chart Datum (1975). The levels of upper sills of the 80 ft. and 50 ft. locks are 32 ft. and 29 ft. respectively below statutory water level in Canal.

Both locks are operated for incoming and outgoing vessels of suitable draft during a period of 8 hours on each tide, i.e. from 4 hours before high water to 4 hours after high water.

The size of vessel which can navigate the Canal is governed by the dimensions of locks, the height of fixed bridges and limitations for the draft of vessel.

Maximum length: The greatest length measured between perpendiculars drawn at the foreside of the foremost extremity and at the afterside of the aftermost extremity of the hull or any attachments to the hull shall not exceed 560 ft. The acceptance of ships proceeding above Ince with overall length greater than 530 ft. is subject to approval of the Harbour Master.

The length measured between perpendiculars drawn at the foreside of the stern and at the afterside of the rudder post, or through centre of the rudder stock if there is no rudder post, on the Summer load water-line shall not exceed 535 ft.

The length measured between perpendiculars drawn at the afterside of the rudder plate and at the foreside of the foremost extremity of any part of the hull which is below a horizontal line drawn through the top of the rudder plate shall not exceed 544 ft.

Maximum beam: Vessels not proceeding beyond Ince Oil Berth: 72 ft. overall. Vessels proceeding beyond Ince Oil Berth: 63 ft. 6 in. overall.

Provided the height of masts and/or funnels or other structures is not more than 70 ft. 9 in. from water-line, vessels can pass under all fixed bridges under normal conditions. As, however, the headroom is less during periods of high-water levels, a vessel, in order to avoid possible detention, should reduce masts and funnels or other structures to 70 ft. above the water-line. The restriction as regards height does not apply to vessels proceeding only as far as Runcorn Bridge.

Facilities are available at Eastham for removing and replacing tops of masts and funnels.

MAX. SIZE: When vessels are loading inwards for the Canal, Masters should take these facts into their calculations and have regard to the following limitations, all of which are expressed as maximum draft in fresh water:

Vessels inward bound to a berth	*Arrival draft (in fresh water) at Eastham not to be such as would exceed:*
Between Eastham Locks and Ince Oil Berth	8.78 m.
Between Ince Oil Berth and Runcorn Lay-by (Other than Runcorn Docks)	8.07 m.
Between Runcorn Lay-by and Mode Wheel Locks	7.31 m.
In the Manchester Docks upstream of the Inner Gates of Mode Wheel Locks and downstream of the Railway Swingbridge.	5.48 m.

HEALTH: Foreign arrivals to complete Maritime Declaration of Health. They are cleared immediately on arrival by either a port doctor or an officer of H.M. Customs depending on where ship comes from and whether there is sickness on board.

Vessels arriving from ports within accepted area (N. European ports) and coastal arrivals need not present Declaration in all cases; when there is sickness on board the Port Health Authority must be informed preferably not more than 12 hours and not less than 3 hours before arrival.

Also see "Health – All Ports" before first U.K. port.

RADIO: FM VHF R/T equipment is installed at Eastham, Stanlow, Latchford, Irlam, Barton and Mode Wheel Locks as an aid to navigation on the Canal.

Ships which are equipped with the appropriate R/T channels are requested to establish contact with the nearest shore station before leaving a berth or lock within the harbour and thereafter to maintain a continuous listening watch on Channel 14.

Station	*Call sign*	*Channel*	
Eastham Locks	Eastham Locks	7	Docking instructions: When approaching Eastham Locks from seaward.
Eastham Locks	Eastham	14	Port operations: Vessels moving within the harbour should maintain a listening watch on Channel 14. After contact has been established the shore station will request the ship to switch to the appropriate speech Channel.
Stanlow Oil Docks	Stanlow	14 20	
Latchford Locks	Latchford Locks	14 20	
Irlam Locks Lockmaster's Office	Irlam Locks	14 20	
Barton Locks Lockmaster's Office	Barton Locks	14 20	
Mode Wheel Locks Lockmaster's Office	Mode Wheel Locks	14 20	Irlam, Barton and Mode Wheel Locks are for emergency use only.
Ship/tug communications	Name of ship/tug	8 10	Inward bound Outward bound

TUGS: The Canal Company maintains a fleet of high-powered tugs which may be hired to assist vessels, 12 hours notice required.

Weston Point Docks: Near Runcorn, 11 miles from canal entrance at Eastham. 10-12 berths for vessels up to 2,500 tonnes. Fixed, portal and mobile cranes for handling bulk cargoes.

CARGO HANDLING FACILITIES: Heavy duty floating crane with capacity up to 120 tonnes. Roll-on/Roll-off berth with strengthening to take loads of 300 tonnes.

STEVEDORES: The stevedores require to sight a certificate covering inspection and S.W.L. of slings used in pre-slung cargoes.

MEDICAL: Doctors and hospital facilities available. Agent should be advised in advance of any medical attention required.

TANKERS: *Queen Elizabeth II Dock:* This dock is adjacent to the locks at Eastham which give access to the Canal, and is approached from River Mersey through its own entrance lock. This lock is 807 ft. long by 100 ft. wide. The level of outer sill is 18.36 ft. below Chart Datum (1975). The dock covers an area of 19 acres in the form of a square and has four berths designed to accommodate large tankers, the dimensions of berths being as follows:

Berth No. 1	800 ft.	Berth No. 3	900 ft.
Berth No. 2	725 ft.	Berth No. 4	730 ft.

The dock is directly connected to oil installations by pipelines.

Stanlow Oil Docks: No. 1 & 2 (5 berths) 4.5 miles above Eastham Lock. Length 560 ft., draft 28 ft., beam 72 ft.

Ince Oil Berth: 5.5 miles above Eastham Lock. Length 560 ft., draft 28 ft., beam 72 ft.

Ince Coaster Berth: Max. length 350 ft., beam 53 ft. draft approx 21 ft. dependent on current survey.

Barton: 32 miles above Eastham Lock. Length 508 ft., draft 24 ft., beam 63 ft. 6 in. Max. height above water-line 70 ft.

DENSITY: The water in lower section of the Canal between Eastham Locks and Latchford Locks is brackish. In all sections above Latchford Locks the water is fresh.

FRESH WATER: Available.

FUEL: Oil bunkers may be taken by arrangement with oil companies either from craft alongside or at various oil berths along the Canal.

PILOTAGE: *Pilotage to and from the Medway:*

Pilotage for vessels bound to or from the River Medway is compulsory for vessels 50 m. and over in length, and for vessels 80 m. and over in length seaward of the Medway Buoy. The Medway Pilots are stationed at Medway Navigation Service, Garrison Point, Sheerness, and operate a 24 hour service, 365 days a year. The compulsory area extends to Rochester, and includes The Swale, but 'mud' pilots are available, by arrangement, above Rochester and for creek wharves. The recognised seaward Boarding and Landing Station is in the vicinity of N.E. Spit Buoy, served by launches at Ramsgate.

Pilotage Exemption Certificates are available to certain regular traders, by application on the prescribed form.

VHF/RADAR: Medway Navigation Service (Port of Sheerness Ltd.) is situated at Garrison Point, Sheerness. Tel: Sheerness 663025. Telex: 96435 (Call sign "Medway Radio"). Fax: (0795) 666596. Fitted with VHF, Channels 16, 74, 73, 9, 11 and 22. The station has radar service surveillance of Inner Estuary, Sea Reach, Medway Approach Channel and Lower Reaches of River Medway.

REGULATIONS: All vessels required to proceed in accordance with instructions of Port Authority. Vessels are requested to advise Port of Sheerness Ltd. – Medway Navigation Service (Call sign "Medway Radio") VHF Channels 16 and 74 of ETA, shifting of sailing movements.

Prior notification to Port of Sheerness Ltd. is required, detailing the carriage of all explosives and "dangerous goods".

GENERAL:

Tidal Information:

Tidal streams in the River Medway vary between about 2.5 knots at Springs and 1.5 knots at Neap Tides, although velocities vary considerably from Reach to Reach, the areas of maximum encountered velocities are: off Garrison Point Sheerness and through Rochester Bridge.

Average Tidal Heights are as follows: (metres)

Sheerness	5.7 MHWS	4.8 MHWN
Chatham	6.0 MHWS	4.9 MHWN
Rochester	6.2 MHWS	5.0 MHWN

High Waters occur approximately:

Margate	45 minutes	before Sheerness
Herne Bay	20 minutes	before Sheerness
Whitstable	10 minutes	before Sheerness
Rochester	9 minutes	after Chatham
Wouldham	28 minutes	after Chatham
New Hythe	33 minutes	after Chatham
Allington Lock	41 minutes	after Chatham

Tide Tables may be obtained at the offices of Port of Sheerness Ltd.

AUTHORITY: Port of Sheerness Ltd., Dockyard House, Sheern Docks, Sheerness, Kent ME12 1RX. *Tel:* (0795) 561234. *Telex:* 96 *FAX:* (0795) 660093. *Contact:* P.V. Vincent, Chief Executive. Cap D. Stoyles, Harbour Master.

(C) ISLE OF GRAIN:

(1) Kent Terminal.
(2) Thamesport.

(1) KENT TERMINAL: 51.26 N. 00.43 E. (See Plan)

DOCUMENTS:
2 Crew's Effects Lists.
2 Stores Lists.
Ship's Certificate of Registry.
Load Line Certificate.
Safety Equipment Certificate.
Derat Certificate.
Ship's Register.
Safety Radio Certificate.
Safety Construction Certificate.
2 Cargo Declarations.
1 Oil Pollution Certificate (OPIC).

PILOTAGE: See "Medway".

ANCHORAGES: *Estuary Passage and Anchorages:* Vessels proceeding to Isle of Grain will initially contact the Thames Navigation Service (Gravesend Radio Channels 16-12) and comply with the 'General Directions for Navigation in the Port of London 1975' until entering the Medway Area. Prior contact should be made with the Medway Navigation Service (Medway Radio, Channels 6-74-9-22). Anchorages are allocated according to size and draft of vessel and if outside the Medway area are nominated by the T.N.S.

RESTRICTIONS: Tidal port. 24 hour movements, subject to tidal conditions and under-keel clearance appropriate to size of vessel. The declared depth in the Medway Approach Channel is 11.0 m. at chart datum.

No vessels of 130 m. length and above can pass each other in the Medway Approach Channel between sunset and sunrise.

HEALTH: Under new procedures which apply from April 1st, 1978 a Health Clearance is only required if the vessel is "Suspect". In this case the Port Health Authority should be advised by radio message addressed to "Portelth London" not more than 12 hours and where practicable not less than 4 hours before arrival.

See "Health – All Ports" before first U.K. port.

RADIO:
Notice of 72 hours and over – Portishead Radio.
Notice of 12 – 72 hours – Landsend Radio.
Notice up to 12 hours – from South, Northforeland Radio.
– from North, Humber Radio.

RADAR/VHF: See "Medway".

TUGS: 3 tugs available from 0900 hrs.–1700 hrs. weekdays. If required outside these hours they must be ordered by 1600 hrs. the previous day for night work or by 1600 hrs. on Friday for weekend work. One tug is equipped for fire-fighting. Tugs join and leave vessels at Garrison Point, Sheerness. Normally use tug lines, cost included in tug hire.

BERTHING: There is one jetty (No. 1) of "T" headed design, suitable for coastal and ocean going vessels, which can accommodate vessels of various sizes up to a maximum of 45,000 tonnes displacement and 200 m. LOA. Maximum safe draft for the Medway Approach Channel and on the berths can be advised on request.

Jetty No. 2 is situated 1.5 cables to the East of Jetty No. 1 and is not in general use.

No deballasting facilities are available.

MEDICAL: Advance notice of medical attention and inoculations required is advisable. Hospital facilities available in surrounding areas.

DENSITY: Approx. 1020.

FRESH WATER: Not available.

FUEL: There are no bunkering facilities on site, prior arrangements can be made for the delivery of fuel by barge.

FIRE PRECAUTIONS: *Safety Regulations:* A copy of the BP Oil Kent Distribution Terminal Jetty Safety Regulations is put on board each vessel on arrival. The booklet additionally contains various tear-out Check Lists, forms for confirmation of bunker requirements and requests for immobilisation and permitted repairs. These must be completed by ship and shore representatives before operations commence.

REPAIRS: Local marine repair company can undertake repairs of general nature. No drilling or hot-work permitted alongside jetties.

GANGWAY/DECK WATCHMEN: *Gangways:* Vessels provide their own gangway and are responsible for maintaining it as a safe means of access.

CUSTOMS ALLOWANCES: At the discretion of the local Customs Officer. Normal allowances are 200 cigarettes (F.G.) or 100 cigarettes (H.T.) or equivalent and 1 bottle of spirits per man. Additionally 1.5 litres of wine per man per day. Separate arrangements apply when crew are leaving ship. Vessels in port more than 4 days may receive an additional allowance.

REPATRIATION: All facilities for repatriation by land, sea and air, through London and Dover. Attendance of Foreign Consulate Officials arranged through Agent.

TIME: British Standard Time is GMT plus 1 hour. GMT in Winter months.

TELEPHONES: Public telephone kiosks on the foreshore road.

SHORE LEAVE: The Shift Supervisor will board each vessel on arrival to collect from the Master a copy of the Crew List. This should specify which crew members are leaving the vessel, the names of wives or other visitors expected and, if known, details of crew members joining. It should also note if any crew members are not permitted to go ashore.

The list will be retained by the Shift Supervisor and passes will be issued when crew members pass out and collected from them on their return.

GARBAGE DISPOSAL: A skip is provided free of charge at the rear of Jetty No. 1 for general waste. Arrangements for the disposal of hazardous wastes can be made with prior notice, a charge will be made.

WASTE OIL DISPOSAL: There are no waste oil disposal facilities at the site.

SEAMAN'S CLUBS: None. Phone box available at rear of Jetty No.2.

CURRENCY: U.K.Pound (U.K.£).

GENERAL: Agents have difficulty in providing most services at weekends, therefore, requests for Bond, cash, Consular Officials, etc., should be radioed as soon as possible.

OPERATOR: Strath Services Limited on behalf of BP Oil Aviation/Bitumen Terminal, Isle of Grain, Rochester, Kent ME3 0AG. *Tel:* Medway (0634) 271571. *FAX:* (0634) 270442. *Contact:* M. Bromley, Operations Manager.

(2) THAMESPORT: 51.26 N. 00.42 E. (See Plan)

DOCUMENTS: Same as "Kent Terminal" plus 2 copies Immigration Crew List and 1 copy Port Health Declaration.

PILOTAGE: Same as "Medway", except Pilots require 24 hours, 8 hours and 4 hours notice of ETA Pilotage Station, i.e. "North East Spit" or "Sunk".

ANCHORAGE: See "Medway".

Details via Medway Navigation Service based on vessel's dimensions and nature of cargo.

RESTRICTIONS: Max. draft for access from N.E. Spit through Edinburgh Channel 6.3 m. low tide. As an alternative, vessel can traverse via Long Sand Head, adding approximately one hour passage time to berth. Therefore, 24 hour access to port available.

MAX. SIZE: See "Berthing".

HEALTH: Port Health Declaration to be completed.

Also see "Kent Terminal".

RADIO: See "Kent Terminal" and "Pilotage".

ETA messages should be addressed to Telex No. 965873.

RADAR/VHF: See "Medway".

TUGS: Tugs should be ordered through Agent.

Towage is undertaken by Medway Towage Ltd., Sheerness. Tel: (0795) 664311.

3 tugs stationed for Medway operations: 1×30 tonne bollard pull 2,000 h.p. single screw, 1×30 tonne bollard pull 3,200 h.p. 3,200 h.p. with twin Z propellers, 1×40 tonne bollard pull 2,000 h.p. single screw. 1×55 tonne bollard pull 3,200 h.p. with twin Z propellers (Arriving February 1991).

BERTHING: *Location:* Strategically placed where the River Medway meets the Thames Estuary; just 35 miles from London, connected to the B.R. Rail Network.

Thamesport provides 550 m. length of berth with a depth of 13.5 m., linked to the container park by 2 approach bridges. Phase 3 of the port development will extend the berth to 750 m., providing 300 m. alongside with a dredged depth of up to 16.0 m.

Mooring: Through Thamesport (London) Ltd.

Data Systems: A PC network comprising super-micro computers with fault tolerant disks provides full container control, tasking, inventory, ship-planning, warehousing, railfreight terminal and documentation facilities and is linked by RDT to computer terminals in all mobile equipment. Domestic and EDI facilities to fit specific customer requirements on Edifact standards, for example Bayplans, link to the port to its customers and to all statutory bodies.

CRANES: *Ship to Shore:* Manufactured by Magrini Galileo Meccanica, Padua, Italy.

Weight: 735 tonnes.
Height: 60 m.
Outreach: 47.5 m.
Lift Capacity: 52.8 tonnes.
Cycle Speed: 60 seconds, permitting up to 60 box moves per hour.
Operational in wind speeds up to 45 m.p.h.

Fourth generation, high-tech cranes with remote-read condition monitoring and fault diagnosis systems. Serviced from the landside stacking area by a fleet of 22 tractors (Douglas and Terberg) together with over 70 trailers.

Park Gantry: Manufactured by MGM and Davy Morris.

Weight: 195 tonnes.
Height: 23 m.
Width: 30 m.
Lift Capacity: 35 tonnes under the spreader.

The 14 fully automated storage area gantries serve an area with capacity for almost 20,000 TEU at a time.

BULK CARGO FACILITIES: Covered storage amounting to 18,500 sq.m. is utilised for loose cargo for and from containers, with full frontier status for meat and other food products. Some 500,000 tonnes per year of imported and coastal coal is also processed and distributed from the Terminal.

BRIDGES: None.

STEVEDORES: Labour will be arranged based on vessel's final ETA.

MEDICAL: 24 hours advance notification required by Agents for any medical requirements.

TANKERS: See "Kent Terminal".

DENSITY: Approximately 1020.

FRESH WATER: No pipelines on quay at Thamesport. Fresh water available by barge, 24 hours notice required via Agent.

FUEL: See "Kent Terminal".

FIRE PRECAUTIONS: Shift managers attend each vessel on arrival, and provide full safety requirements and full emergency co-ordination instructions.

CONSULS: See "Rochester".

REPAIRS/SURVEYORS/REPATRIATION: All available through prior notification via Agent.

GANGWAY/DECK WATCHMEN: See "Kent Terminal".

HATCHES: Handled amicably by either party.

CUSTOMS ALLOWANCE: See "Kent Terminal".

TELEPHONES: Available on quay and in nearby offices.
STORING: Many local ship supply services available. Vessels can be stored ex-quay under terminal supervision, and stevedore assistance can be provided as required.
SHORE LEAVE: Possible, bar any immigration restrictions.
DELAYS: None anticipated.
DEVELOPMENTS: See "Berthing".
AUTHORITY: Medway Ports Ltd.
Operator: Thamesport (London) Ltd., Isle of Grain, Kent ME3 0EP. *Tel:* (0634) 271511. *Telex:* 965873. *FAX:* (0634) 270384. *Contact:* A.R.G.Macleod, Managing Director.

(D) CHATHAM DOCKYARD: 51.24 N. 00.33 E.

(See Plan)

Until 1984 the Naval Dockyard and now operated by the Medway (Chatham) Dock Co. Ltd., under the control of Medway Ports Ltd.
DOCUMENTS: See "London".
PILOTAGE: See "Medway".
ANCHORAGES: See "Sheerness".
RESTRICTIONS: Movement of vessels subject to tidal conditions and under keel clearance appropriate to the size of vessel. Entry as directed by Medway (Chatham) Dock Co. Ltd. on VHF Channel 73.
Limiting Depths: Medway Approach Channel 11.0 m. at Chart Datum.
Long Reach 5.8 m. at Chart Datum.
North Lock 4.7 m. at Chart Datum.
South Lock 4.2 m. at Chart Datum.
MAX. SIZE: All berths in Basin No. 3 can accommodate vessels drawing up to 8.0 m. The locks can accept vessels of 143 m. length provided the beam does not exceed 25 m. Canalling can be arranged for vessels in excess of 143 m. subject to turning circle limit. Vessels drawing up to 4.5 m. can be accommodated at any state of the tide.
HEALTH: See "Medway (Rochester)".
RADIO: Portishead. From South: Lands End, Niton, North Foreland.
From North: Cullercoats, Humber, North Foreland.
VHF/RADAR: See "Medway".

Mobile cranes, forklifts and crushing equipment available. Large storage capacity and warehouses also available. Shipbreaking and recycling of metals.

(2) FAVERSHAM: 51° 19′ N., 00° 54′ E.

DOCUMENTS: See "London".
PILOTAGE: Not compulsory. Advisable to engage local person by arrangement with Agent or contact Medway Navigation Service.
ANCHORAGE: The Swale (East) 1 mile (approx.) upstream of the Sand End buoy.
RESTRICTIONS: No night restrictions. Tidal creek – vessels enter from 1.5 hours before High Water according to draft.
MAX. SIZE: 43 m. LOA, 7.6 m. beam, 2.7 m. draft, on Spring tides only. Larger vessels may be accepted under certain conditions on application to the Harbour Master.
RADIO: North Foreland.
VHF/RADAR: See "Medway".
TUGS: None available.
BRIDGES: Maximum size of vessels proceeding to basin above Faversham Swing Bridge – 43 m. length, 7 m. beam. Draft – the minimum clearance for vessels up to 34 m. in length is 0.5 m. over the sill, and for longer vessels 0.6 m. over the sill (Bridge temporarily closed for repairs (March 1994)).
MEDICAL: Notify Agent of any medical treatment required.
FRESH WATER: Available on some berths.
FUEL: No local installation. Bunkers may be obtained by road tanker – contact Agent.
REPAIRS: Minor repairs can be carried out locally. For nearest grid, slipway and dry dock facilities see "Rochester" and "Sheerness".

(3) KINGSNORTH: 51° 25′ N., 00° 36′ E.

DOCUMENTS: See "London".
PILOTAGE: See "Medway."
ANCHORAGES: Vessels proceeding to Kingsnorth must contact Medway Navigation Service (VHF Channels 16 and 74) when a designated anchorage will be allocated appropriate to the size of the vessel.
RESTRICTIONS: Tidal port. 24 hour movements, subject to tidal conditions and under keel clearance appropriate to size of vessel. Minimum depth of 6.0 m. in Long Reach at Chart Datum.
MAX. SIZE: Max. length: 229 m. No breadth restriction. Depth: 8.0 m. min. depth alongside at Chart Datum.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Notice of 72 hours and over, Portishead Radio. Notice of 12-72 hours. Landsend Radio. Notice of up to 12 hours, from South, Northforeland Radio, and from North, Humber Radio.
RADAR/VHF: See "Medway".
TUGS: Although tugs are not normally required for berthing at Kingsnorth 5 tugs are available, 2 of them equipped for fire fighting. Tugs join and leave vessels at Garrison Point, Sheerness. Normally use tug lines, cost included in tug hire.
BERTHING: *Kingsnorth Jetty:*
Lat. 51° 24′ 36″ N.
Long. 0° 36′ 18″ E.

The jetty is owned and operated by Powergen and is situated at the Western end of Long Reach a distance of 6.3 nautical miles from Sheerness and 5.85 nautical miles from Rochester.

The jetty is of concrete construction and is 580 m. long and "L" shaped with a 306.3 m. face, there is a single upstream connected dolphin making an overall face of 330.7 m.

The size of vessels using the jetty are governed by draft.
Minimum depth at MLWS is 6.9 m.
MHWS is 12.8 m.

There is an inner spur situated on the approach arm 396 m. from the jetty face. It is primarily intended for stern Ro/Ro craft, and has 2 starboard berthing dolphins situated at 30.5 m. and 61.0 m. respectively.

Depth at MLWS is 0.6 m. above Chart Datum.
MHWS is 5.3 m.

The jetty is used for the import of coal for Kingsnorth Power Station.

Address: Kingsnorth Power Station
(South Eastern Region)
Hoo, Rochester,
Kent ME3 9NQ
Telephone: STD 0634 – 250088 Telex 965015

MEDICAL: Advance notice of medical attention and inoculations required is advisable. Hospital facilities available in surrounding areas.
TANKERS: Advisable radio Agents connection sizes required. No slop tank available. 1 large tanker berth only.
DENSITY: Approx. 1018.
FRESH WATER: Available by pipeline on jetty.
FUEL: Bunkers not usually available on jetty, but may be delivered by barge. Advance notice essential.
FIRE PRECAUTIONS: No immobilisation or repairs allowed without prior authorisation. No hot-work allowed alongside jetty.
REPAIRS: Local marine repair company can undertake repairs of general nature. No drilling or hot-work permitted alongside jetty.
GANGWAY/DECK WATCHMEN: Services of shore watchmen not necessary. Shore gangway may be used.
REPATRIATION: All facilities for repatriation by land, sea and air, through London and Dover. Attendance of British Ministry and Foreign Consulate officials arranged through Agent.
POLICE/AMBULANCE/FIRE: Dial 999 from public call box. Medway Navigation Service can be alerted on Channel 16 and 74 to call these services.
TELEPHONES: No facilities exist for placing telephones onboard.
GENERAL: Agents have difficulty in providing most services at weekends, therefore, requests for bond, cash, consular officials, etc., should be radioed as soon as possible.

(4) OAKHAM NESS JETTY: 51° 24′ 55″ N., 00° 38′ 45″ E.

The jetty is jointly owned and operated by Powergen and K.C.A. International Ltd. and is situated in Kethole Reach a distance of 4.5 nautical miles from Sheerness (Garrison Point). The jetty is of concrete construction and is 1,960 m. long. The jetty head is 27.5 m. long with upstream and downstream attached dolphins making a 85 m. face. There are 2 further berthing dolphins unattached, both upstream and downstream. The max. size of vessel permitted on the jetty is restricted to 55,000 d.w.t. with a max. length of 229 m.
The depth at MLWS is 10.6 m.
at MHWS is 16.7 m.

Powergen have a separate storage capacity of 300,000 tons for crude oil primarily for Kingsnorth Power Station.

(5) OTTERHAM QUAY – RAINHAM: 51° 22′ 30″ N., 00° 37′ 42″ E.

Situated at the head of Otterham Creek a distance of 2.75 nautical miles from the junction of Long Reach and Kethole Reach and 10.25 nautical miles from Rochester.

There is 192 m. of quay space with a max. length restriction imposed on loaded vessels of 73 m. There is 3.3 m. at HWNT and 4.6 m. at HWST.

The Quay is owned and operated by Crescent Port Services Ltd. Telephone STD 0634 – 815501. Telex: 96312.

(6) QUEENBOROUGH: 51° 26′ N., 00° 44′ E.

Area of harbour extends from Queenborough Spit to Long Point in the West Swale. Queenborough Creek is landlocked and small commercial interests operate within the creek which is buoyed, all berths dry out but are safe berths.
MHWS 5.8 m. Weather – prev. S.W.

The ex-Coal Wharf known as the Washer Wharf, situated at Loden Hope is operated by Queenborough Rolling Mill Ltd. (Tel: Sheerness 668080) and is primarily used for loading scrap metals.

(7) RIDHAM DOCK: 51° 23′ N., 00° 46′ E.

Situated 900 m. (0.5 nautical miles) S.E. of Kingsferry Bridge in the Swale. Restrictions on vessels governed by Pilots in the light of water available in the Swale, Kingsferry Bridge and restricted bends in the navigational channel. Max. LOA 102 m. Beam 15.3 m. and draft 6.7 m.

Beam of vessels transitting Kingsferry Bridge restricted to 15.3 m. maximum.

Vessels of 82 m. and over LOA require a tug in attendance.

Ridham Dock is owned and operated by Ridham Sea Terminals (Tel: STD 0795 – 70881). The terminal has 4 berths, 2 of 244 m. and 2 of 213 m. approximately. These are serviced by 8 electric cranes 2×6 tonnes and 6×5 tonnes. There is a fleet of forklift trucks 8,000 lbs. to 36,000 lbs. plus a 25 ton container handler. 5 hectares of marshalling area for containers including refrigerator points.

Vessels dock only on or near HW and take the ground at LW, the bottom being soft mud. Special facilities for reefer ships going aground.

The terminal covers approximately 26.7 hectares and 13,000 sq.m. of warehousing are available.

Authority: Ridham Sea Terminals Ltd., Ridham Dock, Sittingbourne, Kent. *Tel:* 0759 70881. *Telex:* 96409.

(8) GROVEHURST JETTY: 51° 22′ N., 00° 46′ E.

Situated 1.5 miles S.E. of Kingsferry Bridge in the Swale. Max. length of vessel 88.3 m. Vessels over 82.0 m. LOA handled in daylight only and with tug assistance.

Grovehurst is owned and operated by "Knauf" for import of gypsum. Berth has 2×7 tonne cranes. Depth alongside 2.0 m. at C.D. Swinging circle 1.0 m. at C.D.

METHIL: 56.11 N. 03.01 W. (See Plan)

DOCUMENTS/PILOTAGE: See "Leith".
ANCHORAGES: Deep water anchorages available in Largo Bay.
RESTRICTIONS: Dock gates opened from 3 hours before HW until HW.
MAX. SIZE: Max. beam 14.6 m. to pass dock gates.
RADIO: See "Leith".
VHF: Methil Harbour Radio on Channel 16. Working Channel 14.
TUGS: Available from Leith.
BERTHING: Dock No. 1 has 340 m. of berthing space, max. depth alongside 6.7 m. MHWS. Dock No. 2 has 500 m. of berthing space, max. depth alongside 7.9 m. MHWS. Transit shed with 2,000 sq.m.
CRANES: 4×4 tonne mobile cranes (with grabs) and 2×10 tonne quayside cranes available.
BULK CARGO FACILITIES: 2×1,000 tonnes capacity grain silos and discharge plant at No. 1 Dock (private).

2,000 tonne capacity storage shed and 50 tonne weighbridge (Private).
STEVEDORES: Forth Ports PLC.
GARBAGE DISPOSAL: To be arranged by local agents.
WASTE OIL DISPOSAL: To be arranged by local agents.
SEAMAN'S CLUBS: None.
AUTHORITY: Forth Ports PLC, Dock Office, Methil KY8 3RE. *Tel:* Leven (0333) 426725. *Telex:* 72208. *FAX:* (0333) 424872. *Contact:* Captain T.S. Sutherland, Port Superintendent.

MILFORD HAVEN: 51.42 N. 05.10 W. (See Plan)

PORT LIMITS: The seaward boundary of the port is 3 miles from St. Ann's Head.
DOCUMENTS:

- 5 Crew Lists.
- 2 Crew Stores Declarations (C.142)
- 2 Ship's Stores Declarations (C.13)
- 2 E.E.C. Safety Check Lists.

Agents will prepare other Customs papers.

Ship's Papers:

- Register.
- Load Line Certificate.
- Safety Construction Certificate.
- Safety Equipment Certificate.
- Safety Radio Certificate.
- Oil Pollution Insurance Certificate (tankers).
- British Tonnage Certificate (if applicable).
- U.K. Light Dues for current year (if applicable).

PILOTAGE: Pilots normally board incoming ships from a green-hulled pilot vessel, in a position S.W. of Mid-Channel Rock Light-tower, as close thereto, as weather, size of ship and circumstances permit. When the Western Channel is being used by very large ships other ships may be requested by the Port Signal Station, or by the pilot vessel, to use the Eastern channel, if draft, and length of ship permit, in which case the Pilot will board close to Sheep Buoy. Deep-draft ships should not approach too close whilst awaiting the pilot vessel. They should remain at least 4 miles S.W. of Mid-Channel Rock Light-tower. It is important, when manoeuvring at slow speeds to embark a Pilot to make proper allowance for the set of the tidal stream, which sets across the entrance. *Accurate times of arrival* are requested so that the pilot vessel may be on station at the correct time. ETAs should be given at least 12 hours before arrival and amendments should be made 2 hours before the latest ETA.

ETAs and subsequent amendments should be passed by telex or radio telephone through any United Kingdom Coast Station to Milford Haven Signal Station (Milford Haven 692342 or 692343. Telex: 48575) or to the local Agent of the ship. Alternatively when within 30 miles of St. Ann's Head ETA's may be passed direct to Milford Haven Port Authority Signal Station calling on VHF Channel 16 then transferring to Channel 12 (the Port working frequency). In addition pilot vessels are equipped with MF radio calling on 2,182 kHz and transfer to the working frequencies 2,241, 2,246 or 2,301 kHz. However, VHF contact is preferred.
ANCHORAGES: Anchorage normally available for vessels up to 40 ft. draft in Dale Roads. Anchorage for smaller vessels normally available in Dale Shelf or Stack anchorages. Signal Station will advise mariners on the availability of these anchorages.
RESTRICTIONS: The West Channel with minimum depth of 55 ft. at the entrance and 54 ft. inside is the channel used by the largest tankers. The East Channel with minimum depth of 32 ft. is available to all vessels of suitable size and vessels able to do so are requested to use it when the largest tankers are entering or leaving in the West Channel. The inner channel between Chapel Buoy and Westward of Texaco Jetty has a minimum depth of 53 ft.
MAX. SIZE: Vessels of 65 ft. draft can be handled on virtually all high waters, but draft restriction always dependent on tide, 63 ft. at worst HW Neaps, or up to 68 ft. in favourable conditions.
HEALTH: The Port Health Authority must be notified in advance if any animals on board or of any suspected disease or fever (Milford Port Health Authority. Tel: (0646) 692486. Fax: (0646) 690505).

Also See "Health – All Ports" before first U.K. port.
RADIO: Lands End Radio, Ilfracombe Radio, Celtic Radio and Cardigan Bay Radio (use working channels to call).
VHF: It is important to maintain continuous radio telephone contact with Signal Station when within one hour's steaming of St. Ann's Head, and at all times when in Haven and not safely moored to an alongside berth, including all times spent at anchor or at buoys.

All vessels equipped with VHF radio should adopt follo procedures:

Entering the Harbour: Contact Signal Station on Channel 16 wh within one hour's steaming of St. Ann's Head. After making contact will be requested to maintain watch on Channel 12 until vessel sa moored alongside or at anchor.

Going to anchor or to a buoy mooring: Report to Signal Station wh secured and then maintain a continuous watch on Channel 16.

Berthing alongside: Report to Signal Station when safely moored a may then shut down.

Leaving the Haven: Maintain continuous listening watch on Chan 12 until Pilot has disembarked, when Signal Station should be inform and vessel should maintain a continuous watch on Channel 16 until hour after passing St. Ann's Head.

Navigating within the Haven: Maintain a continuous watch on Chan 12. When radio telephone is used between vessel and tugs du berthing operation, Channel 6 or 8 will be used and Signal Station sho be informed before vessel comes off Channel 12.

Signal Station will answer calls on Channel 16 for any ship in the p which has been instructed to move off international calling frequenc
RADAR: Harbour surveillance radar in operation, range 24 miles.
TUGS: Tugs normally join vessels to Westward of Herbrandston Je but Master will be advised by Pilot. Tug's lines used, cost of li inclusive of towage charge.
BERTHING: VLCCs enter at HW and normally berth heading Ea Vessel will be required to swing after unloading and prior to depart *Milford Docks:* Enclosed dock, minimum depth on sill 26 ft., lock len 550 ft., width 69 ft., 5,033 ft. of quayage includes 420 ft. fish market a two modern cargo handling berths, one of 732 ft. and the other 45 in length. Vessels of up to 34 ft. draft may be handled on Spring tid
Pembroke Dock:

Quay	*Length* (ft.)	*Depth at C.D.* (m.)	*Remarks*
1	600	10.8	Can accept bulk carriers and container vessels up to 700 ft.
2	354	8.0	Can accept bulk carriers and container vessels up to 450 ft.
3	235	6.1	Can accept general cargo vessels up to 340 ft.
4	1,000	—	To be built.

Vessels with Ro/Ro ramps (bow or stern) can berth in the ba between Berths No. 2 and 3.

Mainport Jetty: One cargo berth, depth 20 ft., for vessels up to 350 length. Max. size approximately 6,500 d.w.t.
CRANES: In Milford Docks – 1×25 ton mobile, 2×6 ton electric. Fur mobile cranage available if required.
SPECIALISED CARGO HANDLING FACILITIES:
Containers: Container traffic is handled at Milford Docks although the is no specialised container handling equipment.
Ro/Ro: Pembroke Dock Ferry Terminal has one Ro/Ro berth, dep alongside 21 ft., and can accommodate ferries up to 425 ft. in leng max. size 6,000 g.r.t. (approx.).
LPG: LPG is handled at the Elf, Gulf and Texaco oil terminals.
STEVEDORES: Ordered prior to arrival.
MEDICAL: All oil terminals have well equipped medical centres. Lo hospital facilities available.
TANKER TERMINALS:
Elf:

Berth No. 1: Depth 64 ft., 4×16 in., crude line, 2×12 in. and 1×8 product line, max. size 275,000 d.w.t.

Berth No. 2: Depth 38 ft., 1×12 in., 2×10 in. and 3×8 in. prod lines, 1×8 in. and 1×6 in. LPG lines, max. size 30,000 d.w.t.

Berth No. 3: Depth 22 ft., 3×8 in. and 2×6 in. product lines, 1×8 and 1×6 in. LPG lines, max. size 5,000 d.w.t.

Herbrandston:

Ex-Esso Terminal. New general purpose terminal with 5 berths, a to handle VLCC size ships to coasters (1 large berth only in use).

Gulf Oil:

Berth No. 1: Depth 44 ft., 1×8 in., 4×10 in. and 1×12 in. cargo lin max. size 65,000 d.w.t.

Berth No. 2: Depth 55 ft., 2×10 in. and 4×12 in. cargo lin max. size 870 ft. LOA.

Berth No. 3: Depth 32 ft., 3×8 in. cargo lines and 1×6 in. LPG, m size 12,000 d.w.t.

Texaco:

Berth No. 1: Depth 66.25 ft., 4×16 in. crude, two of which can used for fuel oil, and 4×12 in. clean oil cargo lines. All clean oil and oil arms can take ballast. Max. size 275,000 d.w.t.

Berth No. 2: Depth 47.56 ft., 2×12 in. LPG ship discharge lines 1×8 in. vapour return line, 4×10 in. black oil, 6×10 in. clean oil 2×10 in. ballast/bunker lines, max. size 100,000 d.w.t. (75,000 cu LPG).

Berth No. 3: Depth 39.36 ft., 1×12 in. Refrigerated Butane sh discharge with 1×4 in. vapour return line and LPG ships with a 4 arm. 2×12 in. black oil and 4×10 in. clean oil lines. All clean oil fuel oil arms can take ballast. Max. size 35,000 d.w.t. (30,000 cu LPG).

Berth No. 4: Depth 19.02 ft., 1×8 in. black oil, 1×6 in. and 2×8 clean oil, 1×6 in. LPG and 1×6 in. ballast lines, max. size 2,000 d

Berth No. 5: Depth 20.00 ft., 1×8 in. black oil, 1×6 in. and 2×8 clean oil, 1×6 in. LPG and 1×6 in. ballast lines, max. size 4,500 d

Berth No. 6: Depth 65.92 ft., 4×16 in. cargo lines, max. 275,000 d.w.t.

Berth No. 7: Out of commission.

Berth No. 8: Out of commission.

No ballast facilities at Berth No. 6.
Report: *Cautionary Advice:* In-Port: There are 3 major oil term within the Haven and the previous Esso Terminal, now the Herbrand General Purpose Terminal, which is located less than 2 miles E.N.

the Angle Buoy. Ships bound for this terminal make tugs fast between the Angle Buoy and South Hook Buoy.

VLCCs which require 5 or 6 tugs have little but adequate time to make them fast. It is, therefore, extremely important for a deep tanker bound for a terminal in the Haven to have everything ready and the crew on stations prepared to make tugs fast by the time the Angle Buoy is reached and that after the turn is made the speed over the ground is reduced quickly so that by the time the South Hook Buoy is reached, all tugs are fast and speed reduced to about 2.5 knots.

Ships bound upstream of Herbrandston Terminal must proceed at the slowest speed consistent with safe navigation, as they pass quite close to ships lying alongside other terminals and can cause considerable "passing ship" problems. They usually make tugs fast after passing South Hook Buoy.

Berth Approaches: Ships are strongly advised against steaming into the berths at any terminal.

The only safe manoeuvre being to bring the ship to rest, stopped over the ground, parallel to and about 40 m. – 60 m. off the berth before breasting in.

This particular manoeuvre is of importance to vessels of 70,000 d.w.t. and over.

Most of the incidents during berthing operations have arisen because of a combination of an angled approach to the berth, excessive headway and berth approach speed with a sheer resulting from strong astern engine movements.

Anchorages: Ships of up to 12.00 m. draft for which there is no berth available on arrival can find anchorage within the Haven. (See below). Deeper draft ships which have to wait for tide or berth should remain outside the port well offshore, maintaining a listening watch on VHF Channel 16, and allowing sufficient time to reach the entrance at the proper time for shipping the pilot to enter port.

Anchorages within the Haven: The recognised anchorages within the Haven are shown on the large scale charts, and the Milford Haven Port Authority Signal Station must be consulted before ships use their anchorages.

Dale Roads is the only anchorage for ships over 7.00 m. and under 12.00 m. draft. It is exposed to wind and swell and has an uneven rocky bottom which does not always afford a good holding ground. *Many ships have dragged anchor here and several have lost an anchor, and it is emphasised that a full anchor watch must be maintained on all ships with a listening watch on VHF Channel 12.*

If at anchor in Dale Roads at the onset of a gale, it is usually sound advice to pick up the anchor and proceed to sea. After rounding the Angle Buoy, if Mid-Channel Rock Lighthouse is kept fine on the port bow, this will take a ship clear of dangers. Before departing, the status of the buoys should be checked out with the Signal Station and then proceed with caution.

The 2 entrance buoys should not be relied upon as they sometimes drag out of position during gales.

Stack Anchorage can be used by medium sized ships of up to 7.00 m. draft. It is a little more sheltered and has a better holding ground.

Small ship anchorages are at Dale Shelf, Sandy Haven, and with the exception of LPG ships between Milford Shelf Buoy and Newton Noyes Pier. Some small ships find shelter South of the channel opposite the Herbrandston Terminal.

Herbrandston Terminal – Cautionary Advice: Each berth has a designed maximum speed of approach for the maximum size ship acceptable.

The berths are in an exposed position with prevailing winds blowing on to the berths. Strong winds from the Northerly semi-circle do occur and usually with a sudden shift in wind. Ships with high freeboard can be badly affected by these strong winds and it is, therefore, very important that moorings are kept tight and are properly tended at all times.

Description of Berthing Procedures: All vessels berth head to tide. Ships of less than 265 m. and 14.6 m. draft can be berthed on the flood tide and, therefore, swung before berthing. These ships are usually swung off the berth. Ships of greater draft will always berth at HW or on the ebb tide and will, therefore, always be port side to.

All moorings are taken ashore by boat and lifted on to the dolphins by power winch.

Breast and spring lines are usually put out first.

Good messengers are required at each position for this operation. This system is for VLCCs only.

DENSITY: 1025.

FRESH WATER: Available at all berths.

FUEL: All oil terminals can supply all grades of bunkers. Fuel also available within Milford Docks and from bunkering barge elsewhere in the Haven.

FIRE PRECAUTIONS: Fire wires to be rigged fore and aft on all tankers.

CONSULS: The following countries are represented by Consuls at the port or elsewhere in South Wales: Others may be available.

Belgium
Denmark
Finland
France
Italy
Liberia
Netherlands
Norway
Sweden
Thailand
Turkey

REPAIRS: All types of deck and engine voyage repairs carried out.

DRY DOCKS: One dry dock at Milford Docks, 600 ft. × 63 ft. × 18 ft. with cranage.

SURVEYORS: Lloyd's at Swansea, ABS and NV in South Wales. Cargo inspectors available – Saybolt, Moore, Barrat and Redwood have local offices.

GANGWAY/DECK WATCHMEN: Available if necessary – very rarely required.

CUSTOMS ALLOWANCES: Tobacco, 0.045 kg. per man per day. Spirits, 0.185 litres per man per day.

REPATRIATION: Crew changes frequently carried out and repatriation arranged. Crew arriving by rail to join vessels at Elf, Herbrandston, Gulf and Milford Docks should be directed to Milford Haven station. If joining vessels at Texaco to Pembroke station, and for vessels at Port Operators and Storage or Pembroke Dock Ferry Terminal, to Pembroke Dock station.

AIRPORT: Nearest main airport is Cardiff (Wales) Airport, distance approximately 100 miles. Some international flights and flights to London for onward connections.

TIME: GMT in Winter months, BST (GMT plus 1 hour) March to October.

HOLIDAYS: Oil Terminals operate 24 hours/365 days. Other berths observe standard U.K. holidays but cargo work can be arranged if required.

POLICE/AMBULANCE/FIRE: Police – Milford Haven 692351, Pembroke 682121; Ambulance – Haverfordwest 763355, 236444; Fire – A Division, Carmarthen 231184, B Division, Haverfordwest 762131.

EMERGENCY CO-ORDINATION CENTRE: Emergencies within the port are co-ordinated by the Milford Haven Port Authority Signal Station. Emergencies outside the port and S.A.R. co-ordinated by H.M. Coastguard St. Ann's Head (Tel: Dale 636218).

TELEPHONES: No telephones on board. Public call boxes exist on all oil jetties.

SERVICES: Ministry of Defence compass adjuster available subject to operational commitments.

STORING: Vessels can be stored by barge or truck and local riggers are available to assist. Storing can normally take place during cargo operations but, in the case of oil tankers, trucks cannot proceed alongside the ship and storing from a barge must be carried out near the stern of the ship. Fork lift trucks cannot be used to store oil tankers.

SHIP SUPPLY SERVICE: D.V. Howells and Sons Ltd., P.O. Box 14, Milford Haven, Dyfed SA73 3ER. Tel: Milford Haven (0646) 693091/692418. Telex: 48575.

Marine & Port Services Ltd., The Dockyard, Pembroke Dock, Dyfed SA72 6TF. Tel: Pembroke (0646) 682271/5. Telex: 48303.

Additionally, there is a tug company operating in Milford Haven with a fleet of locally based tugs whose prime duty is the berthing and unberthing of tankers at oil terminals in the Haven and firefighting responsibilities, although occasionally a tug may be called offshore for salvage purposes. The tug company is Cory Towage Ltd., Slip Hill, Milford Haven, Dyfed SA73 3BB. Tel: Milford Haven (0646) 692296/7.

There is a helicopter squadron based at RAF Brawdy, Haverfordwest, which provides a rescue service and, on occasions, airlifts seriously injured or sick personnel from ships in the area, usually on request through the local Coastguard Station.

SHORE LEAVE: Shore leave allowed.

IDENTIFICATION CARDS: Not necessary.

GARBAGE DISPOSAL: Service provided by terminal operators.

WASTE OIL DISPOSAL: Service provided by terminal operators.

SEAMAN'S CLUBS: The Merchant Navy Club, Robert Street, Milford Haven, Dyfed. Tel: 692553. Facilities include telephones, bar, snacks, restaurant, juke box, TV lounge, pool, library.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: Milford Haven Port Authority, P.O.Box 14, Milford Haven, Dyfed, SA73 3ER, U.K. *Tel:* Milford Haven (0646) 693091 office, Milford Haven Signal Station (0646) 692342 or 692343. Signal Station – 24 hours. *Telex:* 48575 – 24 hours. *FAX:* (0646) 690179. *Contact:* Captain J. E. Frost, Harbour Master.

AGENT: G. S. Kelway Ltd., Murray Crescent House, The Rath, Milford Haven SA73 3JR, Dyfed. Tel: Milford Haven 692313/4. After hours: Milford Haven (0850) 692313, (0646) 695587, 693341. Telex: 48213. Fax: (0646) 692706. Cables: "Kelway Milford Haven".

MISTLEY: 51.57 N. 01.05 E. (See Plan)

LOCATION: Private port situated on the River Stour within Harwich Harbour. Seven tidal berths, vessels lay safe aground (Also see "Harwich").

DOCUMENTS: Normal requirements – local Agents will advise.

PILOTAGE: Order via Agents or direct with Harwich Pilots.

Call sign: "Harwich Pilots".
VHF: Channel 16 and 9.
Telephone: Harwich (0255) 243129.
Telex: 98472.

Compulsory ETA 8 hours before arrival and 2 hours confirmation. Details required: Name of vessel, ETA, destination, max. draft., g.r.t.

ANCHORAGES: Safe anchorage in Harwich Harbour or Cork Pilot Station.

RESTRICTIONS: Vessels can enter/depart on HW, according to state of tide and draft. Day and night navigation.

MAX. SIZE: No length or beam restrictions. Draft varies between 3.3 m. Neap tides to 4.3 m. Spring tides except Berth No. 1 with a draft variation of 4.6 m. neap tides to 5.6 m. spring tides (subject to max. LOA 90 m.). Further dredging of the channel is taking place and will result in a further increase in max. draft for Berth No. 1.

HEALTH: As per Port Health Regulations. See "Harwich".

RADIO: Northern Approach: Humber Radio, Tel: (0521) 73447.

Southern Approach: North Foreland Radio, Tel: (0843) 20592.

VHF: Harwich Harbour Radio, Channel 14.

TUGS: Available from Felixstowe and Mistley via ship's Agents.

BERTHING: Instructions given via Pilot or Agents. Loading/discharging via shore cranes/elevators.

CRANES: Mobile cranes up to 12 tons, and Scotch Derrick up to 30 tons.

BULK HANDLING FACILITIES: Bulk cargo facilities available for discharge of grain, ores, fertilisers, etc., by grab. Loading elevators for grain, etc.

STEVEDORES: All cargo handling instructions and enquiries to: Mistley Quay and Forwarding, High Street, Mistley, Manningtree, Essex. Tel: 0206 394431. Fax: 0206-393882.

MEDICAL: All requirements via Agents with advance notice.
DENSITY: 1026.
FRESH WATER: Available with notice. Up to 12 tons-charge £50.00 plus overtime charges if incurred.
FUEL: Bunkers available from major suppliers via Agents.
SURVEYORS: Cargo inspectors, superintendents and surveyors are available locally via Agents.
GANGWAY/DECK WATCHMEN: Ship's gangway, watchmen not necessary.
HATCHES: Opening and closing by crew.
CUSTOMS ALLOWANCES: Normal U.K. Regulations.
CARGO GEAR: All work by shore cranes, heavy lift up to 30 tons.
REPATRIATION: Facilities via Agents.
TIME: GMT. Summertime, GMT plus 1 hour.
HOLIDAYS: No work on public holidays unless overtime working is arranged in advance.
POLICE/AMBULANCE/FIRE: See "Harwich".
TELEPHONES: No onboard facilities available.
SHORE LEAVE: Possible.
IDENTIFICATION CARDS: Not necessary.
DELAYS: None.
GARBAGE DISPOSAL: Not available.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
DEVELOPMENTS: Dredging of the approach channel to Mistley and within the port to increase acceptability of larger vessels is presently in hand but at present it is not possible to indicate when such improvements will be completed. Please enquire to the Port Owners, Mistley Quay & Forwarding.
AUTHORITY: *Port Owners:* Mistley Quay & Forwarding, High Street, Mistley, Manningtree, Essex CO11 1HB. *Tel:* Colchester (0206) 394431. *FAX:* (0206) 393882. *Contact:* I.J. Forbes, Port Director.
Local Port Authority: The Harwich Conservancy Board.

MONTROSE: 56.42 N. 02.27 W. (See Plan)

PORT LIMITS: The port is bounded by a line drawn in a Northwesterly direction from Scurdie Ness Lighthouse to the Annat Bank and thence by both banks of the river to the road bridge which completes the inner boundary.
DOCUMENTS:
1 Crew List.
1 Passenger List.
1 Stores List.
1 Personal Effects List for baggage coming ashore.
1 Manifest or Bill of Lading.
Ship's Register, Load Line Certificate, Radio Certificate, LSA and Safety Certificates to be sighted.
PILOTAGE: Pilotage is compulsory. Pilots are available throughout the 24 hours. International Code Flag "G" to be exhibited.

Vessels should approach the port to a position with Scurdie Ness Lighthouse bearing 250° distance 0.5 mile where Pilot will normally board.

Pilot cutter *"Southesk"* has a black hull with white upper works and "Pilots" painted in black on each side of the wheelhouse. The normal red and white pilot flag is flown during daylight and regulation lights exhibited at night. VHF Channel 16 for calling with a working frequency on Channel 12.

In bad weather it may be necessary for a ship to proceed inwards at the radioed directions of a Pilot to a position on the outer leading marks and inside the lighthouse where the Pilot may board safely. This will only apply during periods of strong Easterly gales and very heavy seas and may be applicable for only a few times in a year. Similarly the port may be closed under severe weather conditions, on average 2.5 days per year.

ETA Messages: Masters should cable Agent with 24 hours' notice of arrival giving overall length and deepest draft and also call "Montrose Port Control" within 2 hours of arrival at the pilot station.
ANCHORAGE: In position mentioned above with Scurdie Ness bearing 250° distance 0.5 mile, in about 13 m.
MAX. SIZE: Since the harbour was reconstructed and deepened ships of 165 m. LOA and 16,700 d.w.t. have been handled on a max. draft of 7.5 m.
HEALTH: "Q" flag to be flown when coming from a foreign country until cleared inwards. In event of disease or fever onboard, advise Agents by radio. Strict attention paid to quarantine regulations regarding dogs which are not allowed ashore.

Also see "Health – all ports" before first UK port.
RADIO: Messages to Agents may be sent through Stonehaven Radio. Harbour service is on Channel 12. Call Montrose Port Control on Channel 16.
RADAR/VHF: No port radar service. Harbour service and pilot vessel work on VHF Channels 16 and 12.
TUGS: Pilot vessel is equipped with towing hook and pusher bow to assist in berthing and unberthing if necessary. Vessel's lines used. Small charge made for such work.

In addition to the pilot vessel, the tug "Glenesk", 425 b.h.p. (4 ton bollard pull) is available.

BERTHING: North Riverside Quays: No. 6 – 113 m., No. 7 – 141 No. 8 – 87.5 m., No. 9 – 69 m. No., 10/11 – 152 m.

Depths vary from 18 ft. at No. 8 (See "Developments") to 16 ft No. 10/11 at Chart Datum.

South Riverside Quays: Berths No. 12, 13, 14, 15, 16, (Berth No. dredged to a depth of 25 ft. (7.6 m.) at MLWS) and 17. These a extensively used by oil related vessels.

Total wharf length available is 1,600 ft. with depth alongside 20 ft MLWS.

Fixed Ro/Ro Ramp available between Berths No. 6 and 7. Vess able to land bow or stern ramp of width 8 m. Depth alongside 18 ft.
CARGO HANDLING FACILITIES: The stevedores are well equipp with mobile cranes, fork lifts, etc., and only rarely is ship's gear us unless it is of rapid, modern type. Grab discharge is used for b cargoes and conveyor belt systems for loading same.

Rates of loading or discharge:— Bagged cargoes 250 tons per ga per day; Bulk 400 tons; Bulk grain loading 3,000 tons; Unitised p 500 tons; Paper 500 ton; Timber 500 tons all per gang per day.

A large motor transport fleet is always available at the port and t Agents also have their own road haulage company.
STEVEDORES: Provided by: J. M. Piggins & Co. Ltd., Tel: Montro 72827. Telex 76251. Ceres (UK) Ltd., Stracathro. Tel: 067484-4 Fax: 067484-608.
MEDICAL: Small hospital in Montrose. Several major units within ea reach by road.
TANKERS: There is no oil berth in the harbour except the facili offered by Rix Petroleum for the receipt into their 3,000 ton stora depot of gas oil.
DENSITY: At high water average 1024 but can be as low as 1005 LW during heavy river outflow.
FRESH WATER: Supplied from quayside hydrants at all berths.
FUEL: Obtainable from road tanker, gas oil and H.S.D. from mo prominent oil companies. Rix Oils can supply gas oil from local stoc Contact J. Piggins.
FIRE PRECAUTIONS: Normal rules to be observed.
CONSULS: None in Montrose.
REPAIRS: Minor deck and engine repairs can be carried out.
DRY DOCKS: None.
SURVEYORS: Cargo ship and engine surveyors Johnston & Smart Pirie & Smith available from Aberdeen at short notice.

Cargo Superintendents regularly working at the port on loading a and discharging various bulk cargoes, include Cargo Superintende (London) Ltd., 50 Wellington Street, Glasgow; James Patterson, T Old Granary Buildings, Meadowside Quay, Partick, Glasgow, a Malcolm Main at same address.
GANGWAY/DECK WATCHMEN: Can be arranged. Owing to range tide on riverside berths mooring watch strongly recommended.
OPENING/CLOSING HATCHES: Normally done by ship's crew.
CERTIFICATES: On arrival Ship's Register may be asked for.
CUSTOMS ALLOWANCES: As arranged between Customs Officer a Master.
CARGO GEAR: The port is equipped with mobile cranes which can used at any berth. These are of various capacities and the maxim lift is 100 tons for which prior notice is required.
REPATRIATION: Facilities available with excellent railway connectio Air connections from Aberdeen.
AIRPORT: Aberdeen 36 miles. Montrose has facilities for light airc and helicopter landing.
TIME: GMT with 1 hour advance for British Summer Time, approxima March to October.
HOLIDAYS: *Port Holidays:* Christmas Day; Boxing Day; 1st and 2 January; One day Spring, mid-Summer and Autumn Trades Holida
POLICE/AMBULANCE/FIRE: Report to Dock Office immediately. D 999 and ask for whichever emergency service required.
EMERGENCY CO-ORDINATION CENTRE: Maritime Rescue S Centre – Forth District Tel: Crail 666.
TELEPHONES: Not possible to place telephones aboard. Kiosk Wharf near Agents office. Comprehensive connections to Continent a Telex services from Agent's office.
SERVICES: Laundry, Ship Chandlers and Lloyd's Agent immediate

Compass Adjuster, Radio/Radar Mechanics can be called in fr Aberdeen at short notice.
BANKS: Usual branches of Scottish banks all in High Str No American or European banks.
STORING: Vessels can be stored by truck. Trucks can proceed alo side vessel. Fork lifts can be used if required. Customs notifica required for all bonded stores.

Stevedores can be employed to assist with storing and also lash and fastening deck cargo.
SHORE LEAVE: No restrictions on crew members after inw clearance.
IDENTIFICATION CARDS: Not required.
GARBAGE DISPOSAL: The Port Authority provides skips for garb disposal, however they are not to be used for disposal of waste foo
WASTE OIL DISPOSAL: Can be arranged through ship's agents.
SEAMAN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
DEVELOPMENTS: Berth No. 8 has been reconstructed to pro 293 m. of continuous quayside with a minimum depth of 18 ft. be C.D.
AUTHORITY: Montrose Port Authority, Harbour Office, South Q Ferryden, Montrose, Tayside DD10 9SL. *Tel:* (0674) 672302, 673 672729. *FAX:* 0674-675530. *Contact:* Captain H.J. Johansen, Har Master/Chief Executive.

NEW HOLLAND: 53.12 N. 00.21 W. (See Plan)

PILOTAGE, DOCUMENTS, ANCHORAGES, ETC.: See "Hull".

RESTRICTIONS: Vessels arrive and depart on high water. Vessel always aground (N.A.A.B.S.A.).

MAX. SIZE: Max. size 5,000 d.w.t. Max. LOA 100 m. No restriction on beam or air draft. Max. draft at Spring tide 7.0 m. – 7.5 m.

TUGS: Not necessary.

BERTHING:

Imports: The Terminal specialises in the import of feeding stuffs, fertilisers, coals, cokes, etc. The import route has been designed to offload cargo, from ship to storage or direct to carrier, efficiently and fast and offers via drop-scale and weighbridge, full documentary control and management.

Terminal: With two berths, an inner berth for vessels of 2,500 d.w.t. and an outer berth with a maximum capacity of 5,000 d.w.t., the Terminal reaches into deep water channels of the River Humber and enjoys the advantage of only requiring one Pilot from Spurn Point. Unloading by grab discharge direct to covered conveyor belts, the import route is rated at a capacity of between 230 – 300 tonnes per hour and incorporates full bypass facilities.

Weighing: Grains and derivatives can be passed through a drop-scale with a capacity of 250 tonnes per hour; coals, cokes and other bulk commodities moving from the site are weighed by means of 2×60 tonne road and/or 100 tonne rail weighbridges.

Storage: Grains and derivatives can be passed by the conveyor systems direct to 4 flatstores with an approximate capacity of 43,000 tonnes, all with movable and fixed partitions. Coals, etc., are directed to open storage for ease of distribution.

Distribution: Direct ship to road haulage is made possible by 2 overhead lorry hoppers. Recovery from the flatstore is by means of Front End Loaders, and if required, import commodities can be loaded via the export system, weighed or unweighed.

Exports: The Terminal has a dual capability for simultaneous import and export and has been designed for the export of grains and other bulk commodities.

The export route has many features unique to Humberside, and with full weight control and documentation offers the ideal export venue for any product.

Terminal: With two export berths, an outer berth of 5,000 d.w.t. capacity and an inner berth with a maximum capacity of about 1,500 d.w.t., loading is rated at 400 tonnes per hour via the covered conveyor belt which feeds 4 loading spouts, direct to the ship's cargo holds. Vessels approaching New Holland from the North Sea need only one pilot in and outward, thereby reducing costs.

Reception: The Terminal is the only specially designed export terminal in Humberside that can receive grain direct from railcars. With extensive private sidings and shunting locomotive, full train loads can be handled in intake pits. Road haulage delivery is either by intake pit or direct to open compound. Reception of grains also includes a grain testing station for quality control.

Direct or Indirect Loading: Grain intake can either be pre-assembled into 5 silos with an approximate overall capacity of 3,500 tonnes and then loaded directly to ship. Coals, coke, etc., are fed directly to the main export belt from their pre-collected storage areas.

Weighing: All commodities entering the site are weighed by fully computerised weighbridges, 2×60 tonne road and 1×100 tonne rail weighbridges. Export of grain related products is also monitored by 2 dropscales weighbridges prior to being loaded onto export vessels.

CRANES: 2×8 ton electric rail mounted cranes.

STEVEDORES: Work around the clock, from Monday 0600 hrs. – Friday 2200 hrs.

Saturday and Sunday work by arrangement.

FRESH WATER: Available at 5 t.p.h. No charge, included in jetty dues.

FUEL: Available by barge from Hull.

REPAIRS: Local shipyard can undertake minor repairs.

HATCHES: Opening and closing by ship's crew.

AIRPORT: Humberside Airport is 15 minutes away by road. Air U.K. have flights to Aberdeen, Amsterdam, Bergen, Norwich, Stavanger and Teesside.

TELEPHONES: No shore connections. Public telephone available on pier.

GENERAL: The New Holland Bulk Terminal is situated on the South bank of the River Humber, about 4 miles East of the Humber Bridge, and about 20 miles inland from Spurn Point. Close proximity to the U.K.'s motorway and dual carriageway network gives the terminal a competitive and strategic position for the import and export of bulk commodities. Close connections to the M1, A1, M18 and A15 Humber Bridge link road ensure optimal North/South connections with the M180, M62 and A6 offering good East/West connections. The terminal has its own railway sidings, connected directly to the British Rail network.

GARBAGE DISPOSAL: Skip provided at Jetty Head for ship's use at no charge to vessel.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: New Holland Bulk Services Ltd., Old Ferry Terminal New Holland, P.O. Box 1, Barrow upon Humber, South Humberside, DN19 7SD. *Tel:* Barrow upon Humber 0469-31102. *Telex:* 527466 NH Bulk G. *FAX:* (0469) 31966. *Contact:* J.G. van Velzen, General Manager. J. Lyne, Operations Manager.

NEWHAVEN: 50.47 N. 00.04 E. (See Plan)

PORT LIMITS: A line drawn from a position 300 ft. South of breakwater in a 075° direction to Seaford Bay.

DOCUMENTS: See "London".

PILOTAGE: Pilotage compulsory for all vessels over 50 m. length. Contact Newhaven Radio, VHF Channels 12 and 16, advising ETA 12 hours in advance.

RESTRICTIONS: 5.5 m. through entrance to port LWOST. Inner harbour then dredged depth of 4.5 m. in accordance with chart datum 3.5 m. below OD Newlyn (tide gauge readings are directly applicable to soundings).

MAX. SIZE: Max. LOA 520 ft. 25 ft. draft taking bottom on soft mud at low water. Vessels greater than 350 ft. LOA length must either be towed into or out of port. Vessels for North Quay must not exceed 250 ft. length, draft 17 ft.

HEALTH: See "Health-All Ports" before first UK port.

RADIO: Radio Station Newhaven Radio, call sign Newhaven Radio.

RADAR/VHF: No radar service. Ship's may contact West Pier control point on Channel 16, working on Channel 12.

TUGS: One tug available upon request, owned by Newhaven Port and Properties Ltd.

BERTHING: Vessels may be berthed at any time, with prior notice given.

CRANES: 4×3 ton and 1×30 ton (container gantry).

BRIDGES: Vessels requiring to berth at North Quay must arrive within 2 hours either side of HW in order to pass through swing bridge which governs access to this quay.

STEVEDORES: ETA should be given as far in advance as possible and not less than 24 hours before ETA.

DENSITY: Salt water.

FRESH WATER: Available on request. Supplied by shore hosepipe.

FUEL: Available by previous arrangement.

FIRE PRECAUTIONS: Usual no-smoking precautions on quayside in port area.

CONSULS: Norwegian Vice-Consul and French Consular Agency.

REPAIRS: Repairs of a temporary nature only may be carried out by Newhaven Port and Properties Ltd. workshops, Ship & Industrial Repairs Ltd., Unit A3, Beach Road, Newhaven and C. R. Irving Ltd., Chapel Street, Newhaven.

GANGWAY/DECK WATCHMEN: Not provided by Port Authorities but recommended at discretion of Ship's Master.

AIRPORT: Nearest airport Gatwick, distance 30 miles. Served by regular airlines and Shoreham, distance 17 miles.

POLICE/AMBULANCE/FIRE: Police: Civil, Newhaven 515219; Port, Newhaven 514131 (extension: 229). Ambulance: 0830 – 1700 hrs., Lewes 515400; 1700 – 0830 hrs., Lewes 512819; Fire: 999.

SHORE LEAVE: Allowed.

AUTHORITY: Newhaven Port and Properties Ltd., Beach Road, Newhaven Harbour, Sussex BN9 0BG. *Tel:* Newhaven (0273) 514131. *FAX:* 512902. *Contact:* P.M. Doran, Port Manager.

NEWLYN: 50.06 N. 05.33 W. (See Plan)

PILOTAGE: Compulsory for all passenger vessels over 20 m. in length, and all other vessels over 50 m. in length. Call "Mount's Bay Pilots" on VHF Channel 16 (Tel: 0736-66113 (Office), 0736-61119 (Home) and 0860-207249 (Mobile)).

ANCHORAGES: As shown on B.A. Chart No. 2345, in Mount's Bay.

No anchoring within Newlyn Harbour.

MAX. SIZE: Length 90 m. Draft (loaded) 5.5 m. (forward) and 6.0 m. (aft).

VHF: "Newlyn Harbour" on Channels 16, 12 and 9.

BERTHING: See "Plan".

FRESH WATER: Available at up to 10 tonnes per hour.

FUEL: Fuel barge in harbour able to visit berths. Maximum capacity 450 tonnes.

Road tankers able to visit berths.

REPAIRS: Most electronic (radio, radar, etc.) repairs can be undertaken.

AIRPORT: Flights each day from Newquay to London (Heathrow) via Plymouth. Mounts Bay Boarding Service arrange collection and delivery of passengers between Newquay and Penzance. Travel time Penzance – Heathrow 2.5 hours.

Helicopters: British Airways operate a regular service between Penzance and the Isles of Scilly (30 miles S.W. of Land's End). Mounts Bay Boarding Service can charter helicopters to rendezvous with ships at sea.

BANKS: All large clearing banks available in Penzance (2 km.) from Newlyn.

Barclay's and Lloyd's in Newlyn.

GENERAL: Newlyn is primarily a fishing harbour with a turnover of £24m. of fish landed in 1990.

The only commercial traffic, using the port, are those calling for stone cargoes to be loaded from the South Pier, or vessels calling for bunkers, water or stores.

The width of the harbour entrance is 45 m. The area of the harbour is 33 acres and is tidal.

AUTHORITY: Newlyn Pier and Harbour Commissioners, Harbour Office, Newlyn, Penzance TR18 5HW. *Tel:* (0736) 62523. *FAX:* (0736) 51614. *Contact:* A.T. Munson, Harbour Master.

NEWPORT: 51.35 N. 02.59 W. (See Plan)

DOCUMENTS: Required for arrival.

C142	2 copies	Crew Declaration
C14	3 copies	Stores Declaration
C13	2 copies	General Declaration (completed by Agent)
C16	2 copies	Cargo Inward Declaration
C74	1 copy	Master's Authority (completed by Agents)
C1320	2 copies	Cargo in unregistered spaces

These documents are to be completed and presented with copies of manifests and ship's documents at the time of report.

PILOTAGE: Telegraphic address – "Sewpil G 498180". Advance notice required – 24 hours. VHF Channel – Channel 16 for contact, thence Channel 6 for conversation. Description of pilot boat – diesel launch, black hull, white superstructure. Particular light or sound signals to be made by vessels requiring a Pilot – Code Signal 8, i.e. 3 longs 2 shorts. Pilot boat is located in vicinity of Breaksea Lightvessel, or in vicinity of Merkur Buoy, for small vessels. Maintain VHF contact (if possible) with pilot cutter and obey instructions with reference to positioning of vessel to facilitate boarding of Pilots.

ANCHORAGES: Large vessel should anchor in deep water to North of one Fathom banks. Deeper water anchorage (10 – 14 fathoms) in area between Breaksea Lightvessel and East 1 Fathom Bank Buoys to the South, and shallow water off Barry Roads to the North. Small vessels will find safe anchorage in Barry Roads in varying depth, depending on weather conditions and draft.

RESTRICTIONS: Entrance to Newport Docks is by means of a sea lock 1,000 ft. long, 100 ft. wide. Entry possible from 4 hours before to 4 hours after HW, depending on size of vessel.

MAX. SIZE: Max. size of vessels accepted at Newport is 800 ft. long, 96 ft. beam, 34.5 ft. draft.

HEALTH: Port Health Authority board vessel at entrance lock and Pratique is automatic.

See "Health – All Ports" before first U.K. port.

RADIO: At sea – Land's End radio station, call sign GIL. Within Bristol Channel use Portishead Radio.

VHF: Vessels requiring entry can contact port on VHF radio Channels 16, 9 and 11.

TUGS: Normally join at Newport Deeps. Ship's line used.

BERTHING: South Dock, normal depth of water 35 ft. North Dock, normal depth of water 27 ft. Junction passage connecting South and North Dock restricts vessels to a max. size of 56 ft. 6 in. beam and 25 ft. draft.

CRANES: Heavy lift/container cranes: 2×25 tonne electro-hydraulic cranes.

Bulk handling: 6×11.5 tonne electric grabbing cranes.

General cargo: 6×11.5 tonne, 1×10 tonne and 130×6 tonne electric cranes.

Handling equipment up to 27 tonnes capacity with a comprehensive range of attachments is available.

SPECIALISED CARGO HANDLING FACILITIES:

Combi Ship Operations: Heavy lift/containers for combi vessels are handled by the 25 tonne cranes at the same berth where breakbulk general cargo is handled.

Forest Products: The North side, South dock area extends to over 11 hectares with 1 hectare under cover.

Hardwood Terminal: South Dock (East side) covering 3 hectares.

Banana Imports: There is a terminal of 3 hectares for a weekly Jamaican service importing bananas and exporting general cargo. Included within the terminal is a temperature controlled transit shed of 3,716 sq.m.

STEVEDORES: Labour is allocated to vessels on arrival.

Working Hours: Monday to Friday: 0800 – 1700 hrs., 0600 – 1400 hrs., 1400 – 2200 hrs.

Saturday: 0730 – 1200 hrs., 0600 – 1400 hrs., 1000 – 1400 hrs.

Sunday: 0600 – 1400 hrs., 1400 – 2200 hrs.

MEDICAL: No advance notice of medical attention for crew members is required and hospital facilities are available.

DENSITY: Average density of water in docks is 1016.

FRESH WATER: Available at all berths.

FUEL: All classes of fuel available.

REPAIRS: All wet dock and engine repairs possible.

DRY DOCK: Bristol Channel Ship Repairers Ltd., 454 ft. × 64 ft.

GANGWAY/DECK WATCHMEN: Available but not compulsory.

OPENING/CLOSING HATCHES: Normally carried out by crew.

CUSTOMS ALLOWANCES: Tobacco, 0.5 lb. per crew member, reduced by 50% on coastal trade. 1 pint of spirit and 1 pint wine per crew member, reduced by 50% on coastal trade.

REPATRIATION: All facilities for the changing of crew and repatriation are available.

AIRPORT: Glamorgan Rhoose Airport terminal 28 miles from Newport. Regular connection planes to London Airport.

TIME: BST, GMT plus 1 hour. GMT in Winter months.

HOLIDAYS: Work not undertaken on Christmas, Easter, Spring and Summer Bank holidays. With the exception of Christmas holiday (25th and 26th December) dates on other holidays vary.

POLICE/AMBULANCE/FIRE: Telephone number 999 stating which service is required.

TELEPHONES: Telephone facilities are available aboard vessels.

SERVICES: Tank cleaning equipment. Facilities for tank washing, compass adjusting are available.

SHIP SUPPLY SERVICE: A ship supply service could be provided by Cory Ship Towage with their tugs at Cardiff if required. Address: Cory Ship Towage Ltd., S.E. Wales Office, Alexandra Dock, Newport, Gwent, NP9 2NP. Tel: Newport 56835/6.

SHORE LEAVE: No restrictions to crew members.

IDENTIFICATION CARDS: Not required.

AUTHORITY: Associated British Ports, Dock Office, Alexandra Dock, Newport, Gwent NP9 2UW. *Tel:* (0633) 244411. *Telex:* 498585. *FAX:* (0633) 221285. *Contact:* R.C.F. Williams, Port Manager.

PADSTOW: 50.35 N. 04.55 W.

PORT LIMITS: A line from Stepper Point to Gulland Rock, thence to Newland Rock, thence S.E. to Pentire Point.

DOCUMENTS: All usual documentation required by H.M. Governm

PILOTAGE: Pilot compulsory. Contact via Harbour Office, Tel: Pad (0841) 532239. VHF via Padstow Harbour Office on Channel 16 d all office hours and 2 hours either side of HW at Padstow. ETA's sh be given at least 12 hours before arrival, amendments up to 2 h before ETA. Pilot boards off Stepper Point in normal condition adverse conditions ships should endeavour to close the pilot boa near to the starboard hand buoy as possible in safety. Padstow experiences heavy ground swell. Anchorage not recommende onshore wind or sea.

MAX. SIZE: Max. length approximately 350 ft. (depending on d Max. draft 11 ft. any tide. Up to 18 ft. draft on Spring tides. No air restriction.

VHF: Harbour office, call sign 'Padstow Harbour' listens VHF Channe during office hours and 2 hours either side of HW at Pads Call on Channel 16, working Channel 12.

TUGS: Not available. Local fishing vessels may assist.

BERTHING: All berths dry to firm mud or sand bottom. Depth alongs South Jetty 11 ft. every tide and 18 ft. Springs. Depth alongside S Dock and West Quay 9 ft. every tide and 16 ft. Springs. Lesser de in Inner Harbour and Outer Basin.

Inner Harbour to be kept "wet" with entry either side of high wate the use of a tidal gate. Max. size 45 m. LOA, 9.5 m. beam and 3.5 draft.

CARGO HANDLING: Undertaken by Padstow Harbour Commission Dry bulk and unitised cargoes handled. Limited storage facilities. Cra hired by Harbour Commissioners to suit requirements.

FRESH WATER: Available, delivery from standpipes.

FUEL: Marine gas oil available direct from bunker tank on South

REPAIRS: Welding and general engineering services readily avail

DRY DOCKS: A & J Marine (Cornwall) Ltd. Tel: 0841-533114. One dock – 70 ft. × 32 ft. × 12 ft. draft at Springs.

STORES: All usual stores available.

GARBAGE DISPOSAL: Skips available onshore.

WASTE OIL DISPOSAL: Can be arranged through the harbour of

SEAMAN'S CLUBS: Assistance available.

CURRENCY: U.K.Pound (U.K.£).

PENZANCE: 50.07 N. 05.32 W. (See Pl

PORT LIMITS: The seaward boundaries of the Port for the purpos charter parties are considered to be the harbour walls.

DOCUMENTS: H.M. Customs require the Master or Agent of any ve arriving from a Port outside the United Kingdom to present the follo documents at the Customs House within 3 hours of the vessel's ar during office hours (0900–1230) Monday to Friday or within 6 h during night hours.

1 copy	Crew Declaration (Form C.142)
1 copy	General Declaration (Form C.13)
1 copy	Stores and Livestock Declaration (Form C.14)
2 copies	Deck Cargo Declaration (if any) (Form SUR.238)
2 copies	Crew List (IMO Fal.Form 5)

The above is intended to be a guide only, not a definitive list.

PILOTAGE: Pilots are available at all times. Call "Mounts Bay Pilots" during normal working hours or when vessel is expected on VHF Channel 16. Working Channels 12 and 9 are also available. Ships are asked to give advance notice by R/T or telegram through Land's End Radio (GLD) to either the Pilot or Local Agent. Alternatively, through the Port Radio which maintains watch on Channel 16, 12 and 9. The Pilot boards at a point immediately adjacent to the Low Lee Buoy (50° 05.6′ N., 05° 21.2′ W.) from the pilot boat operated in Mounts Bay. The boat operated from Newlyn has a black hulled, white deck house with "Dayglow" roof.

The pilot boat only cruises when a vessel is expected.

ANCHORAGE: Vessels awaiting orders or entry into Penzance may anchor in a minimum depth of 15 m., in position 50° 06.1′ N., 05° 31.5′ W.

RESTRICTIONS: The dock gates at Penzance are normally open, enabling vessels to enter from 2 hours before high water until one hour after high water, although this period may be increased so that the gate is open earlier or later by prior arrangement. The depth on the dock gate at MHWS is 5.49 m. and at MHWN 4.4 m. The entrance is 15.3 m. wide.

MAX. SIZE: Vessels up to a maximum of 95 m. in length and 2,000 net registered tonnes may normally enter within the draft and beam limitations listed.

HEALTH: No health or Pratique documents are required under normal circumstances.

RADIO: Vessels may pass messages, telegrams or link calls through Land's End Radio (GLD).

VHF: Penzance Harbour maintains VHF Radio watch on Channels 16 and working Channels 12 and 9, whenever the dock gates are manned from 2 hours before high water until one hour after high water on both tides, 7 days a week throughout the year. In addition, the radio is manned Monday to Friday between 0830 hrs.–1200 hrs. and 1300 hrs.–1630 hrs.

RADAR: There is no port radar.

TUGS: Tugs are available with prior notice, however, normal berthing is undertaken with the aid of pilotage workboats.

BERTHING: The wet dock has an entrance 15.3 m. wide and has 5 berths. Vessels discharging cargo should have a maximum length of 90 m.

The outer harbour has 4 berths. Berth No. 1 is for the use of the Isles of Scilly Ferry and Berth No. 7 is normally designated as a drying out berth for ship repair.

CRANES: Cranes are available with maximum lifts of up to 15 tonnes. Dual gear is normally used for discharge and mobile cranes of greater capacity are available locally.

BULK CARGO FACILITIES: Bulk cargo is discharged and loaded by Grab.

SPECIALISED CARGO HANDLING FACILITIES: There is one drying berth with an operational depth of 4.7 m. at MHWN which has been adapted for heavy lift Ro/Ro vessels. This berth is available by prior arrangement.

BRIDGES: A swing bridge provides access into the dry dock basin.

MEDICAL: Full hospital and dental services are available in Penzance through the Agents or Port Medical Officer. Evacuations are arranged through the Port Medical Officer and the Mounts Bay Boarding Service.

STEVEDORES: Generally 24 hours notice is needed to provide stevedores.

DENSITY: The density of the dock water is 1025. Fresh water can be provided on all berths, delivery rates nominally 15 tonnes per hour.

FRESH WATER: Available on all berths.

FUEL: Marine gas oil by pipeline at 3 bunkering points along the South Pier with up to 55,000 litres available immediately from harbourside tanks. Greater quantities may be supplemented by road tanker. Lubricating oil and other fuel plus liquid petroleum gas available through ship's Agent.

CONSULS: Vice–Consuls for France and the Netherlands are resident in Penzance and Consulates for Denmark, France, Greece, Norway, Spain, Sweden and Germany are located nearby.

REPAIRS: All types of engine and deck repairs carried out to both cargo and tanker vessels.

DRY DOCKS: There is one dry dock 74.73 m. long with a breadth of 11.9 m. and a maximum draft of 3.35 m.

SURVEYORS: Department of Transport, Lloyd's, Norsk Veritas, Bureau Veritas, American Bureau and the Salvage Association have surveyors readily available at Penzance, as are several independent surveyors and consultants.

GANGWAY/DECK WATCHMAN: The employment of a watchman would only be needed in Penzance wet dock if the vessel is un–manned.

OPENING/CLOSING HATCHES: The opening and closing of hatch covers is usually carried out by the ship's crew.

CUSTOMS ALLOWANCES: The following are permitted from Ports within Home Trade limits:

Items	*Descriptions*	*Quantities*
Tobacco	Cigarettes	100
	Cigarillos	50
	Cigars	25
	Smoking Tobacco	125 grams
Alcohol	Over 20% volume	0.25 litre
	Under 20% volume and fortified or sparkling wine	0.50 litre
	Still table wine	1 litre

Arrival from Ports outside home trade limits:

Items	*Descriptions*	*Quantities*
Tobacco	Cigarettes	200
	Cigarillos	100
	Cigars	50
	Smoking Tobacco	250 grams
Alcohol	Over 20% volume	0.50 litre
	Under 20% volume and fortified or sparkling wine	1 litre
	Still table wine	2 litres

REPATRIATION: Facilities are readily available for effecting crew changes and repatriation where this is necessary and may be done with medical escort or not as required (See "Ship Supply Service").

AIRPORT: Newquay Airport has connecting flights to London (Heathrow) via Plymouth and/or Exeter and also regular flights to Aberdeen. Total travel time Penzance to London (Heathrow) is 2.5 hours. There is also a Heliport in Penzance with regular flights between the Isles of Scilly.

TIME: Local time is GMT with Summertime being kept at GMT plus one hour.

HOLIDAYS: Public Holidays in the United Kingdom: New Year's Day, Good Friday, Easter Monday, early and late May Bank Holidays (Mondays), August Bank Holidays (first and last Monday), Christmas Day and Boxing Day.

The Harbour does not close for any of these holidays.

FIRE/POLICE/AMBULANCE: The Emergency Services are obtainable by dialling 999 or on more routine matters on the following telephone numbers: Police (0736) 62395; Fire Service (0736) 62918; Ambulance (0872) 78181; Coastguard (0326) 317575.

EMERGENCY CO–ORDINATION CENTRE: Falmouth Marine Rescue Co–ordination Centre is available on Falmouth (0326) 317575 or on Telex 45560. The station maintains a 24 hours, 365 day watch.

SERVICES: Compass adjusting at 2 hours notice, vessels can be swung in daylight hours in Mounts Bay. Divers, engineers, welding, hydraulic repair, radar, radio and other electronic repairs or servicing are available 7 days a week.

BANKS: The four principal clearing banks have branches in Penzance: Midland, Lloyd's, Barclays and National Westminster.

STORING: Vessels can be stored alongside from lorries which park immediately alongside the vessel. The operation can usually be carried out by the ship's crew, however, fork–lift trucks can be made available.

SHIP SUPPLY SERVICE: *Mount's Bay Boarding Service:*

By helicopter: British International Helicopters operate a regular service between Penzance and the Isles of Scilly (30 miles S.W. of Land's End). Mount's Bay Boarding Service (MBBS) can charter helicopters for rendezvous with ships at sea for transfer of equipment and personnel.

Parcels: MBBS collect and despatch stores, parts, charts, etc, via British Rail "Red Star" parcels service, T.N.T. "Overnite" and "Courier", part of the G.P.O. Datapost and Securicor.

Charts: All British Admiralty charts and publications are available within 12 hours.

Stores: Fresh, frozen and dry stores are obtainable within 6 hours notice, while Bonded stores are available at 24 hours notice.

Spare parts: MBBS arrange clearance, forwarding and transport of spare parts to meet vessels on arrival. Undivided lifts of 1.5 tonnes can be handled (up to 10 tonnes by arrangement).

Crew transfer: MBBS can land and clear crew through Customs and Immigration as well as arranging for their travel onward to worldwide destinations. MBBS can also meet crew and either embark or accommodate them until the vessel's arrival.

Landing sick crew: Although in urgent cases, vessels are in direct contact with Falmouth's Coastguard MRCC, MBBS arrange the landing of non-urgent cases. In both instances MBBS liaise with local Coastguards, Customs, Immigration, Doctors and Hospitals, and can usually provide interpreters for non–English speaking crew. MBBS visit and look after the interests of hospitalised crew, and can report to their company/family. MBBS arrange travel and repatriation of crew members either with or without medical escort, according to Doctors' or hospital instructions.

Contact: J.H. Bennetts Ltd., 72 Market Jew Street, Penzance, Cornwall TR18 2LF. Tel: 0736-330808 (Direct), 330505 (Exchange). Fax: 0736-67024.

SHORE LEAVE: There are no restrictions on crew shore leave.

IDENTIFICATION CARDS: An International Seaman's Card is sufficient identification for crew members.

REGULATIONS: There are no unusual Regulations affecting the Port.

DELAYS: Vessels will berth on the tide and will either commence discharge upon arrival or the following morning if they have arrived overnight.

GARBAGE DISPOSAL: Skips are available on quays. Also contact BIFFA (Tel: (0736) 60736).

WASTE OIL DISPOSAL: By road tanker, contact Pellows (Tel: (0872) 863927).

DEVELOPMENTS: Port development is under review.

AUTHORITY: Penwith District Council, St. Clare, Penzance, Cornwall TR18 3QW. *Tel:* (0736) 62341. *FAX:* (0736) 66114.

Harbour Master, Harbour Office, Wharf Road, Penzance, Cornwall TR18 4AB. Tel: (0736) 66113 office hours; 62341 Ext: 294 office hours; 61119 outside office hours. *FAX:* 0736-66114. *Contact:* Captain M. Tregoning, Harbour Master. Mobile Tel: 0860-207249.

PERTH: 56.24 N. 03.25 W. (See Plan)

LOCATION: On River Tay, 35.4 km. above Dundee and 48.3 km. from sea.

DOCUMENTS: Normal documentation for arrival and departure U.K.

PILOTAGE: Navigation on the River Tay between Dundee and Perth is difficult and can be hazardous. The Perth Harbour Master will arrange for the services of local Pilots to assist vessels in making passage between Dundee and Perth. The contract for the services of a Pilot is between the Pilot and the vessel's Owner. The account will be rendered direct from the Pilot to the Shipping Agent for the charge to the Owner. Masters are strongly advised to make use of this facility, although it is not compulsory and is not provided under the terms of the Pilotage Act 1987. Pilotage from sea to Dundee is compulsory.

ANCHORAGES: Off Birkhill, depth 5.0 m. at L.W.O.S.T. (Emergency use only).
RESTRICTIONS: Air draft – Road Bridge at Dundee 22.0 m. Railway Bridge at Dundee 23.8 m. M.H.W.O.S. Vessel's draft for acceptance at the discretion of Perth Harbour Master, up to a maximum of 4.2 m. (F.W.). Normal safe F.W. draft is 0.2 m. less than predicted tide height, weather conditions permitting.
MAX. SIZE: LOA 88.0 m., beam 12.8 m. and deadweight 3,000 tonnes.
RADIO/VHF: Perth Radio on Channel 9 for upper river transit.
TUGS: Tug assistance is not normally required, however during periods when River Tay is fast running, tug assistance may be necessary and can be arranged through Agent.
BERTHING: Vessels sit on bottom (soft mud).

Berths No. 1 and 2 – total length 146 m.

Berth No. 3 normally only used for harbour requirements – length 55 m.

Berths No. 4 and 5 – length 145 m.

Berth No. 6 – 67 m.

Average depth throughout harbour – 0.76 m. at L.W.O.S.T. Harbour never dries out.

Tidal Range: Spring tides: M.H.W.S.T. 4.26 m. M.L.W.S.T. 0.76 m.

Neap tides: M.H.W.N.T. 2.89 m. M.L.W.N.T. 1.08 m.

Loading and discharging at all berths is by shore equipment. Lighting for nightwork is available at all berths.
CRANES: Ample mobile cranes available with S.W.L. between 5 tonnes and 40 tonnes. Ample forklifts and elevators for handling bulk cargoes.
STEVEDORES: Tay Stevedoring and Storage Ltd. Tel: (0738) 21114. Fax: (0738) 21682. Telex: 76342.

Calport of Perth. Tel: (0738) 26675. Fax: (0738) 39039. Telex: 76458.

Normal working hours for both companies 0800 hrs. – 1700 hrs. Overtime will be worked on request, night-time, weekends and holidays.
DENSITY: Fresh water at Perth Harbour.
FRESH WATER: Available at all berths. Rate of delivery 5 t.p.h. – 7 t.p.h. Cost (1994): £ 1.75 per cubic metre – minimum charge £ 20.00.
FUEL: Available by road tanker, arranged through Agent.
REPAIRS: Small repairs undertaken locally by good engineering firm. Major repairs undertaken at Dundee.
SURVEYORS: Cargo surveyors, samplers and tallying available by arrangement through Agent. Classification surveys available by arrangement through Agent.
REPATRIATION: Available by arrangement through Agent.
AIRPORT: Edinburgh 70 km., Glasgow 115 km., Aberdeen 160 km. and Dundee 35 km. Good main road system to all airports.
HOLIDAYS: Stevedores may work on Public Holidays if required.
POLICE/AMBULANCE/FIRE: Police: 21141. Ambulance: 22123. Fire: 22226. All three services can be reached by dialling 999.
SERVICES: Provisions available.
GARBAGE DISPOSAL: Garbage bag supplied to each ship on arrival for small quantities of domestic refuse, then collected by District Council. Removal of larger quantities of refuse and other items can be arranged through agents.
WASTE OIL DISPOSAL: Collection service available by road tanker from all berths. Arrangements can be made through Agent.
SEAMAN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: (a) Tayside Regional Council, Roads & Transport, Transport Unit, Parker Street, Dundee, DD1 5RW. *Tel:* (0382) 23281. *Contact:* G. Fraser, Assistant Director.

(b) Perth Harbour Office, Lower Harbour, Friarton Road, Perth PH2 8BH. *Tel:* Perth (0738) 24056. *FAX:* (0738) 22263. *Contact:* Captain N.H. Lawrance, Harbour Master. F.G. Bissett, Assistant Harbour Master.

PETERHEAD BAY HARBOUR: 57.30 N. 01.47 W. (See Plan)

DOCUMENTS: Vessel's arrival and departure documents required for presentation to H.M.Customs and Excise are as follows:
On arrival ("Report"):

2 copies Master's Declaration, Form C13.
2 copies Crews Declaration, Form C142.
Cargo Declaration (Manifest).
2 copies Cargo Release.

If these "Report" documents have not been collected from the vessel, within 3 hours of making fast alongside (24 hours of anchoring), by H.M.Customs and Excise or the vessel's Agent, then one copy of Forms C13 and C142 are to be lodged in one of H.M.Customs and Excise's post boxes, keeping the other copy together with the manifest and release notes on board. There is one post box on the ASCo North Base, one on the ASCo South Base and one at the Customs House.
On departure ("Clearance"):

2 copies Master's Declaration, Form C13.
Cargo Declaration (Manifest), normally presented by the Charterer or Agent.

PILOTAGE: Pilotage is compulsory for all vessels over 3,500 g.r.t. unless the Master or Mate has a valid Pilotage Certificate. Pilotage is also compulsory for vessels carrying dangerous goods in bulk and all tankers, unless the Master or Mate has a valid Pilotage Certificate. Masters must call "Peterhead Pilots" on VHF Channel 16, giving minimum one hour's tice of ETA.

In the message of ETA, the following information must be included:

1. Name/call-sign of vessel.
2. Nationality.
3. Length, draft and g.r.t.

Pilot boards within 0.5 miles of breakwaters in fair weather. In adverse weather Pilot boards inside the breakwaters.

ANCHORAGE: Depth within bay up to 12.5 m. Poor holding in Eas gales.
VHF: Peterhead Harbour Radio – Channel 14. Pilotage operation Channel 9.
TUGS: Harbour towage can be arranged through shipping Age provided sufficient notice is given.
BERTHING: Aberdeen Service Co. (North Sea) Ltd. operate purpose-built North Sea Oil service bases:

The North Base consists of a 2 berth open pile jetty with dep 7.0 m. The North Breakwater, which has a purpose-built rig moo system provides 4 additional berths with depths of 14.0 m.

The South Base consists of a 470 m. quay, depths of 6.8 m. a contains 7 berths supported by warehousing and storage space. T South Breakwater provides 5 berths with depths of 7.8 m.

The Tanker Jetty built to import fuel oil for the nearby Peterhead Po Station, is designed to accommodate vessels up to 50,000 ton deadweight with a draft of 11.5 m. and a length of 250 m. It is also u for the servicing of North Sea supply vessels, diving support vess survey vessels and vessels loading grain and other similar bulk carg It may also be available for the short term lay-up and maintenanc oil rigs.
Note: Breakwaters are subject to closure during adverse weather a vessels must be ready to leave at short notice.
CRANES: Numerous mobile cranes available including a 200 Manitowoc crane.
TANKERS: See "Berthing".
FRESH WATER: Available at Tanker Jetty, South Base, North B Jetty and North Breakwater. There is no fresh water at the So Breakwater.
FUEL: Marine gas oil available by pipeline at South Base, North B Jetty and North Breakwater. Bunkering by road tanker is possible at Tanker Jetty and South Breakwater.
REPAIRS: Most deck and engine repairs can be carried out.
REPATRIATION: Crew changes and repatriation possible.
AIRPORT: Aberdeen, Dyce 34 miles. Feeder routes to m international airports, some continental air transportation.
TIME: GMT. Clocks advanced 1 hour last Sunday in March.

Last Sunday in October, clocks retarded 1 hour.
POLICE/AMBULANCE/FIRE: Emergency 999. Police 725 Ambulance 72494. Fire (emergency only) 999.

RESCUE CO-ORDINATION CENTRE: Aberdeen Coastguards. Cal VHF Channel 16 or telephone No. 0224-592334.
GARBAGE DISPOSAL: Skips for ship's garbage are provided o quays.
WASTE OIL DISPOSAL: Collection service available through Sha & McEwan, Blackdog Centre, Murcar, Aberdeen, Tel: 0224-248445
SEAMAN'S CLUBS: Royal National Mission to Deep Sea Fisherm Union Street, Peterhead, Tel: 0779-72940.
CURRENCY: U.K.Pound (U.K.£).
DEVELOPMENTS: A new 170 m., 3 berth open piled jetty is prese under construction in the S.W. corner of the harbour, adjoining the AS Oil Service Base. Depth alongside 6.8 m. The jetty is scheduled completion by June 1994.

Adjacent to the jetty is a new fully serviced yacht marina.
AUTHORITY: Peterhead Bay Authority, Bath House, Bath Str Peterhead AB42 6DX. *Tel:* Peterhead (0779) 474020, after hours (07 474281. *Telex:* 73749. *FAX:* (0779) 475712. *Contact:* Captain A.M. F Chief Executive/Harbour Master.

PLYMOUTH: 50.22 N. 04.09 W. (See Pla

DOCUMENTS: Importer to supply Agent with Customs documenta e.g. original B/L with cheque to cover various details; plus copie Invoice and Forms C.105 with packing lists. Derat or Exemp Certificate required.
PILOTAGE: Compulsory for merchant vessels. Call sign FSG, or 4 s blasts on whistle. Vessels not subject to compulsory pilotage may ob Docking Pilot in Plymouth Sound otherwise pilot station off Penlee P

Pilot boat is motor boat with white upperworks, black hull. "Pilot black on wheelhouse.
ANCHORAGES: In Plymouth Sound.
MAX. SIZE: Maximum depth of water 9.0 m. Vessel drawing 8. would leave anchorage 2 hours before HW. Also see "Berthing".
Ro/Ro Berth No. 1: Max. LOA 145 m. Max. beam 20 m. Max. draft 5.
Ro/Ro Berth No. 2: Max. LOA 200 m. Max. beam 30 m. Max. draft 8.
HEALTH: Pratique – Apply to Customs Waterguard. Pratique iss when requirements satisfied.

See "Health – All Ports" before first U.K. port.
RADIO: *Pilots:* The calling and listening frequency is 2182 kHz and working frequencies are 2246 or 2301 kHz. A listening watch is kep 2182 kHz at every even hour to 15 minutes past, local time and longer periods when a ship is expected.

VHF: The pilot vessel is equipped with VHF and should be called on Channel 16; the working Channels 6, 8 or 12 should be used for passing messages. Alternatively the shore-based Trinity House Pilot Station, Plymouth, call sign "Cattewater Harbour Radio", maintains a continuous watch on Channel 16 (calling Channel) and is fitted with Channel 12 (first choice Port Operations Channel) and 18.

TUGS: Available in Sound by arrangement.

BERTHING: *Millbay Docks:* (Associated British Ports).

Outer Harbour:

Water Area	11.00 Hectares
Length of West Wharf	200 m.
Depth alongside MLWST	8.6 m. – 9.0 m.
Length of Trinity Pier	146 m.
Depth alongside Northside at MLWST	4.6 m.
Ro/Ro Berth No. 1 (3 Round dolphins)	
Max. length of vessel	145 m.
Depth alongside MLWST	6.5 m.
Ro/Ro Berth No. 2	
Max. length of vessel	200 m.
Depth alongside MLWST	9.0 m.

Fresh Water available at all berths.

Large transit sheds on Trinity Pier and West Wharf.

Note: Inner Basin closed to shipping.

Victoria Wharves: Pier No. 1. Length 475 ft. Depth 20 ft. LWOST. Pier No. 2. Length 350 ft. Depth 20 ft. LWOST. Max. beam 45 ft. (Larger with prior notice.) Max. d.w.t. 5,000 tons. Bulk products (grain, clay and feed) loaded by conveyor ex-lorry. General cargo handled. 3×15 ton mobile cranes.

Cattedown Wharves: Length 712 ft. Depth 24 ft. – 26 ft. LWOST. Max. LOA 560 ft. Max. draft 26 ft. Max. size 12,000 g.r.t. 1×5 ton and 2×3 ton cranes.

CRANES: 4 quayside cranes of 6 tonnes capacity. 3 mobile cranes up to 28 tonnes capacity.

STEVEDORES: Commodities regularly handled include fresh fruit and vegetables, timber and general cargoes.

Imports: Fertiliser, clinker, pumice and bulk cargoes.

Working Hours: Monday – Thursday 0800 – 1700. Friday 0800 – 1600. Overtime by arrangement.

Shift working is also regularly undertaken 7 days per week to meet specific requirements, (i.e. Ro/Ro vessels in ABP – Millbay Docks).

MEDICAL: No advance notice required; hospital facilities in Plymouth.

TANKERS: Tankers of up to 10,600 g.t. can be handled at Cattedown Wharves. Max. draft 26 ft. 4 hose connections, diameter 10 in. 1 for black oil and 3 for white oil.

FRESH WATER: Available from shore at all berths.

FUEL: All normal grades available at short notice.

CONSULS:

POOLE: 50.43 N. 01.59 W. (See Plan)

DOCUMENTS: As for other British ports.

PILOTAGE: Pilot compulsory for all vessels over 50 m. LOA, unless Master holds a current Poole Pilotage Exemption Certificate. Pilots board 0.5 mile South of Poole Bar Buoy from cutter. Prefer ladder 0.50 m. from water and a good lee. VHF watch kept on Channel 16 working Channels 9 and 14. As much notice as possible. Address: Pilots, Poole.

ANCHORAGE: Vessels can anchor anywhere in Poole Bay and Studland Bay. Good holding ground and protected in all but Easterly gale.

RESTRICTIONS: Vessels drawing up to 5.2 m. can enter at any state of tide. Drafts in excess of 5.2 m. must wait for the tide.

NOTE: Advertised depth in main shipping channel:

From Bar Buoy Entrance to Terminals 2 and 3 is 6.0 m. at Chart Datum, but to Terminal No. 1 it is 5.2 m. at Chart Datum.

MAX. SIZE: Max. length 140 m., beam – no limit, draft 5.2 m.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Vessels using the Port may call direct on VHF Channel 16 – working frequency Channel 14 call-sign "Poole Harbour Control".

TUGS: 2 tugs, 8 ton and 7 ton bollard pull. Join at Stakes Buoy, by special application arrangements can be made to join at North Haven Point. Ship's lines. No difference in charges.

Pilots will advise whether a tug is necessary or not. Any vessel in excess of 1,000 d.w.t. or 300 ft. LOA due to pass through the Poole Bridge is required to take a tug. The gap in the bridge is 60 ft.

BERTHING: Berthing time depends on draft at some private quays. No restriction at New Quay or Ro/Ro berths.

Ro/Ro Terminal (CFFT):

Size of vessel:
Max. draft 5.5 m.
Max. length 160 m.
Max. depth 5.2 m. at Ro/Ro No. 1 and 6.5 m. Ro/Ro No. 2 and 3 at Chart Datum.

Berths/Equipment: Three linkspan berths for Ro/Ro vessels, Berth No. 1 utilises mooring dolphins, Berth No. 2 has 90 m. long working quay. Berth No. 3 has 130 m. long working quay and a two tier linkspan. Vehicles up to 180 tonnes gross weight can be handled subject to prior approval of Port Authority. A total of some 16 hectares (40 acres) of terminal is surfaced to a high standard, providing parking places for 400 heavy goods vehicles. A further 2 hectares (5 acres) of reclaimed land is available for future port expansion. Warehousing facilities; self weighing weighbridge; fleet of Tugmasters and fork lift trucks; 35 tonne gantry crane in Terminal for handling 20/30/40 ft. containers to/from road.

New Quay:

Length: 158 m.
Depth alongside: 16 ft. (4.9 m.) at Chart Datum.

Equipment: 3 ton capacity level luffing rail-mounted crane, 25 ton and 32 ton Scotch derricks and 35 tonne capacity crawler crane equipped for hook/bulk/grab/spider grab duties giving an operational capacity of 6 tonnes at 18 m.; warehousing 3,000 sq.m. plus open storage; mobile crane capacity up to 200 tonnes.

Yard Quay:

Length: 200 ft. (61 m.).
Depth alongside: 2.6 m. at Chart Datum.
Equipment: Warehousing facilities; limited open storage.

Ballast Quay:

Length: 256 ft. (78 m.).
Depth alongside: 4.0 m. at Chart Datum.

Equipment: 6.5 ton capacity level luffing crane fitted with grab/hook for bulk handling/general cargo duties.

Poole Town Quay:

Length: 1,300 ft. (396 m.).
Depth alongside: 3.6 m. – 4.5 m. at Chart Datum.
Equipment: Mobile crane capacity 40 tonnes.

Bulwark Quay:

Length: 91 m.
Depth alongside: 4.3 m. at Chart Datum.

Equipment: 25 ton Scotch Derrick; warehousing facilities; open storage.

Private Quays:

J. T. Sydenham (Timber Wharf)
Length: 250 ft. (76 m.).
Depth alongside: 4.2 m.
Equipment: Mobile crane capacity 45 tonnes.

Other Private Quays:

Corrals (Fuel)
J. Bolson & Son Ltd. (Marine Repair & Engineering).
South Coast Sand & Ballast (Sea Dredged Aggregates).
Southern Ocean Shipyard Ltd. (Yacht Builders).
Dodd – Yacht Berths.
Central Electricity Generating Board.
Dean & Dyball (Marine Construction).
Sydenhams (Timber).

Oil Jetty:

Length: 270 ft. (82 m.).
Depth alongside: 4.9 m. at Chart Datum.

BRIDGES: Poole Bridge (Max. width 60 ft.) at West end of Poole Quay. Will open at any time on request by commercial vessel.

STEVEDORES: Normal notice for gangs.

MEDICAL: Advance notice required for ambulance services. Normal medical and hospital services available. Distance to hospital is 2 miles.

TANKERS: 2 oil berths. Diameter of load/discharge lines 6 in.

DENSITY: 1021.

FRESH WATER: Delivery 25 t.p.h. by 2 in. hose.

FUEL: Gas oil only.

CONSULS: At Southampton.

REPAIRS: All types deck and engine repairs can be carried out. Slipways (2) available for vessels up to 220 ft. LOA by 40 ft. beam and 120 ft. LOA by 30 ft. beam.

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: Work carried out by crew.

AIRPORT: Charter flights for crew changes can be carried out from Hurn Airport 9 miles away from port.
POLICE/AMBULANCE/FIRE: Call 999 and ask for service required.
SHIP SUPPLY SERVICE:
Poole Harbour Commissioners: 2 small tugs (448 Kw and 320 Kw) speed 7 knots and 10 knots.
J. Harvey & Sons (Poole) Ltd.: West Quay Road, Poole. Tel: 674063. Operators of small passenger boats.
Crosons Ltd.: New Quay Road, Hamworthy, Poole. Tel: 673201. Operators of passenger vessels carrying up to 200 persons
Hurn Airport: Situated 9 miles from Poole. Full international facilities. Suitable for helicopter landing etc.
IDENTITY CARDS: Required in Ro/Ro terminal.
GARBAGE DISPOSAL: Free skip service available for cargo vessels loading/discharging at the commercial quay. Skips located adjacent to all berths.
WASTE OIL DISPOSAL: Waste oil collection service provided by local road haulier for all ships using the port at all berths. Prior arrangement and charges through local agents.
SEAMAN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: Poole Harbour Commissioners., Harbour Office, Town Quay, Poole BH15 1HG, Dorset. *Tel:* (0202) 685261. *Telex:* 41134 PHC G. *FAX:* (0202) 665703. *Contact:* Captain J.S. Barton, Harbour Master.

PORT ASKAIG: 55.51 N. 06.07 W. (See Plan)

Operated mainly as a ferry port although other shipping may use the facilities available.

The wharf operated by Strathclyde Regional Council (SRC) is 60 m. long with a depth of 4.06 m. below Chart Datum. It has a Ro/Ro ramp suitable for use by end loading vessels. Fresh water is available. Strathclyde Regional Council operate a second Ro/Ro berth at Port Askaig.
GARBAGE DISPOSAL: No facilities.
WASTE OIL DISPOSAL: No facilities.
SEAMAN'S CLUBS: None.
AUTHORITY: Strathclyde Regional Council (SRC), Department of Roads, Strathclyde House, 20 India Street, Glasgow G2 4PF. *Tel:* 041-204 2900. *Contact:* D. Carruthers, Director.

Strathclyde Regional Council, Department of Roads, Manse Brae, Lochgilphead, Argyll PA31 8RD. *Tel:* 0546-602233. *FAX:* 0546-603749. *Contact:* The Area Engineer.

Port Askaig: Piermaster, *Tel:* (049) 684 208.

PORT ELLEN: 55.37 N. 06.13 W.

Operated by Caledonian MacBrayne Ltd., used mainly by ferries. Chart B.A. 2037 covers the area.
APPROACHES: Harbour entrance 7 cables wide, depth 7 to 8 fathoms.
PILOTAGE: Not compulsory.
ANCHORAGE: Approach with Carraig Fhada Light bearing 332°(T) until 2 cables off light. Alter course to 026°(T) till lighthouse bears 270°(T) × 2.2 cables, then altering course to 353°(T). Anchorage position is reached when lighthouse bears 206°(T) × 3.6 cables, equidistant with Na Sglithean Beach, 3.6 cables. Depth at anchorage 5 fathoms.
BERTHING: Car Ferry Berth can accommodate vessels up to 1,200 g.r.t. either side of the dolphin. Inner Berth can accommodate vessels up to 600 g.r.t. Depth at pier 12 ft. LWOST, range 3 ft. to 4 ft.
MEDICAL: Doctor's surgery locally and dentist 10 miles from pier.
GARBAGE DISPOSAL: Collection service available on request. Tel: (0496) 810332.

Skip for garbage available on pier at all times (Caledonian MacBrayne owned) Tel: (0496) 302209, 302047.
WASTE OIL DISPOSAL: No collection service available.
SEAMAN'S CLUBS: No seamen's clubs locally. The shops are 3 minutes walk from pier.
Church of Scotland and Baptist Church locally.
Local football pitch within 5 minutes of pier.
Sub-Post Office within 3 minutes of pier.
Local taxi service available.
CURRENCY: Royal Bank of Scotland within 2 minutes of pier.
AUTHORITY: Caledonian MacBrayne Ltd., The Ferry Terminal, Port Ellen, Isle of Islay, PA42 7DW. *Tel:* (0496) 302209 or 302047. *FAX:* (0496) 302557. *Contact:* D. Ramsey, Port Manager - Port Ellen.

PORT ST. MARY, Isle of Man: 54.04 N. 04.44 W. (See Plan)

PILOTAGE: Not compulsory.
MAX. SIZE: See "Berthing".
VHF: Channels 16 and 12 available only when vessels expected.
BERTHING: Outer Harbour (Alfred Pier): Max. LOA 170 ft., draft not to exceed 10.5 ft. to lie afloat over LWST.

Inner Harbour: Max. LOA 160 ft., draft 8.5 ft. at Neaps, 12 ft. at Springs. Harbour dries out at LW. No quay space for storage.
AUTHORITY: Department of Highways, Ports and Properties, Sea Terminal Building, Douglas, Isle of Man. *Tel:* 0624-23813. *Telex:* 629335 Iomhar G.

PORT TALBOT: 51.35 N. 03.49 W. (See Pl

DOCUMENTS: Documentation required for arrival:

C142	2 copies	Crew Declaration
C14	3 copies	Stores Declaration .
C13	2 copies	General Declaration (completed by Agent)
C16	2 copies	Cargo Inward Declaration
C74	1 copy	Masters Authority (Agents complete)
C1320	2 copies	Cargo in unregistered spaces

These documents are to be completed and presented with copie Manifest and ship's documents at the time of report.
PILOTAGE: Compulsory. Station – Swansea Bay. Usual Internatio signals. VHF Channels 16 and 12.
ANCHORAGES: Swansea Bay.
RESTRICTIONS: *Ore Terminal* in New Harbour, entrance chan 1.5 miles long, 550 ft. wide. Depth 60 ft. MHWS, 53 ft. MHWN.
MAX. SIZE: *Bulk Terminal:* Approximately 100,000 tons d.w.t. b carriers fully loaded at draft 48 ft. 6 in. Larger vessels partly loade 48 ft. 6 in. draft are accepted.

Largest cargo to date under these conditions: 130,000 tons of i ore in M.V. "British Steel" (LOA 287 m., beam 47.07 m., full deadwe 173,000 tons).
HEALTH: See "Health – All Ports" before first U.K. port.
TUGS: Join off Breakwater.
BERTHING: *New Harbour:* British Steel Plc provide 3 unload appliances on the South side of the jetty and also a conveyor-belt syst to carry iron ore and coal to stocking grounds. The three dischar appliances can achieve approximately:

Iron ore – maximum 5,000 t.p.h. – average 3,000 t.p.h.

Coal – maximum 2,000 t.p.h. – average 1,000 t.p.h.

The berth on the North side of the jetty has been designed for use self-discharge vessels equipped with their own conveyor/boom. D restrictions at this berth are the same as the grab berth at 48 ft. 6 i

Discharge rates of 2,800 t.p.h. for iron ore and 1,000 t.p.h. for c have been achieved.
STEVEDORES: ETA advices sent by vessels to local Agent and th advised to British Steel Corp. as stevedores. Labour ordered by Ag from B.S.C.
DENSITY: Ore Terminal 1025.
FRESH WATER: By gravity 10 t.p.h. Harbour pumping 100 t.p.h.
FUEL: By barge or road tanker. Any grade available.
CONSULS: None at Port Talbot, contact Swansea.
REPAIRS: Facilities exist.
SURVEYORS: Cargo Surveyors available locally.
Hull surveyors available from Swansea and Cardiff.
GANGWAY/DECK WATCHMEN: None, but bye-laws state that ves must be manned.
OPENING/CLOSING HATCHES: Performed by crew.
CUSTOMS ALLOWANCES: Tobacco, 1 oz. per day/man, max. 8 da Wine/Spirits, 0.25 pint per day/man, every 4 days.
REPATRIATION: All facilities exist.
AIRPORT: Rhoose Airport 25 miles away. Mainly short trips connec with main airports.
TIME: GMT plus 1 hour. GMT in Winter months.
HOLIDAYS: It is the custom, at the Tidal Harbour, to work on Ba Holidays, except Christmas and New Year.
POLICE/AMBULANCE/FIRE: Dial 999 and ask for service required
EMERGENCY CO-ORDINATION CENTRE: Search and Rescue Ce – Mumbles. Tel: Swansea 66534.
TELEPHONES: Can be connected on board.
BANKS: Lloyds Bank Ltd., Station Road. Tel: Port Talbot 891401.
Barclays Bank Ltd., Station Road. Tel: Port Talbot 887655.
STORING: See "Prelims".

1. Yes.
2. None.
3. Yes.
4. No.
5. Usual regulations.
6. Riggers not available.

SHIP SUPPLY SERVICE: It is the practice for pilot cutters of Swan and Port Talbot to ferry personnel, stores, etc. to vessel off shore due to dock at the respective ports.
Contact: Swansea and Port Talbot Pilotage, Port Office, King's D Lock, Swansea. Tel: 0792-650855
IDENTIFICATION CARDS: Crew members are advised to carry ide documents when ashore. Security checks are carried out by mo patrols and at the entrances.
DEVELOPMENTS: Two new 2,800 t.p.h. grab unloaders were insta during 1991 to replace the two oldest units.
AUTHORITY: Associated British Ports, Harbour Office, Lockh King's Dock Lock, Swansea, West Glamorgan SA1 1QR. *Tel:* Swan (0792) 650855. *Telex:* 48150. *FAX:* (0792) 650729. *Contact:* A.R. Ki Port Manager. Captain M. Ingamells, Dock and Harbour Master.

PORTLAND: 50.34 N. 02.26 W.

PILOTAGE: Available from Weymouth. Pilot boards in position Lat. 50° 36′ N., Long. 02° 24′ W.
ANCHORAGE: Vessels seeking shelter from Westerly gales are likely to find more room and better shelter outside the breakwaters in Weymouth Bay.
VHF: All Harbour movements are controlled on VHF Channel 13.
Traffic Regulations: Due to the frequent movements by naval vessels in the vicinity of Portland Harbour, all vessels approaching Portland Harbour, which are fitted with VHF, should make reports on the appropriate channel to Queen's Harbour Master, Portland, when passing through various Radio Reporting Points, whose positions can best be seen on the charts. In addition it is mandatory that such vessels should keep watch on the appropriate channel when within 3 nautical miles of "A" Head (50° 35′ N., 20° 25′ W.). For details of frequencies see 'Admiralty List of Radio Signals'.
Radio Reporting Points:
Positions 'EE' and 'CB' are for inward bound vessels.
Position 'CH' is for inward bound vessels proceeding to the Noise Range buoys, moored 0.75 miles S.E. of "D" Head, and for outward bound vessels proceeding between Bill of Portland and The Shambles.
Position 'CG' is for inward bound vessels, and for outward bound vessels proceeding East of The Shambles.
Position 'CF' is for inward bound vessels approaching Portland Harbour from East, and for outward bound vessels proceeding in an Easterly direction.
Reports should include the following information:
Inward bound vessels:
Name of ship.
Position (i.e. Reporting Point letters).
Destination and ETA.
Outward bound vessels:
Name of ship.
Position (i.e. Reporting Point letters).
Intended route East or West of The Shambles (if appropriate).
TUGS: Admiralty tugs available.
BERTHING:
Castletown Pier: Castletown Pier is a commercial wharf and leased to A.R.C. for the discharge of fertilisers. Max. LOA of vessel 82.3 m, beam 12 m. with max. draft 5.3 m.
CRANES: 1 mobile crane.
FUEL: Available by road tanker.
GENERAL: The Harbour and the immediate vicinity are classified as a Dockyard Port under the supervision of the Queen's Harbour Master, Portland. Attention is drawn to Chart 2268 which gives details of the Restricted Area around the Naval Base, of designated Anchor Berths for H.M. Ships, of Prohibited Anchorage areas and of the numerous Admiralty moorings and telephone cables. The Harbour, which is protected by breakwaters, is easily accessible by the North Ship Channel (12 m. LWS) or East Ship Channel (12.5 m. LWS). The South Ship Channel is blocked both above and below the surface and is only suitable for small boats.
AUTHORITY: Naval Base Commander, H.M. Naval Base, Portland. *Contact:* Queen's Harbour Master, H.M. Naval Base, Portland, Dorset DT5 1BQ. *Tel:* Portland (0305) 820311 Ext. 2102.

PORTREE: 57.24 N. 06.07 W. (See Plan)

PILOTAGE: Pilot available with 24 hours notice.
ANCHORAGE: No defined areas, left to the discretion of the ship's Master. Care should be taken not to anchor near sewage line.
RESTRICTIONS: Berthing of larger vessels dependent on state of the tide. Larger vessels tend to anchor off and transhipment carried out by ship's tender.
MAX. SIZE: LOA 65.5 m., beam 11.25 m., draft 4.08 m. (Summer) and 3.99 m. (Winter).
VHF: Harbour Master's office on Channels 16 and 12.
BERTHING: Depth alongside 4.8 m. (Neaps) and 6.3 m. (Springs). Depth at entrance 9.1 m.
TANKERS: Fuel oil discharged to B.P. storage depot by means of fuel line under pier.
MEDICAL: Hospital, doctor and dentist located nearby.
FRESH WATER: There are 2 water supply outlets.
FUEL: Ordinary gas oil available from B.P. Depot during normal working hours.
GANGWAY/DECK WATCHMEN: At the discretion of the ship's Master.
OPENING/CLOSING HATCHES: By ship's crew.
CARGO GEAR: Ship's gear used. 18 tonne mobile crane available.
REPATRIATION: No facilities.
AIRPORT: At Broadford, 50 km. from the harbour.
TIME: GMT in Winter. GMT plus 1 hour in Summer.
HOLIDAYS: January 1st, 2nd and 3rd; Good Friday; Easter Monday; May 1st; Christmas Day and Boxing Day.
POLICE/AMBULANCE/FIRE: Police Tel: Portree 2888.
EMERGENCY CO-ORDINATION CENTRE: Coastguard: Shetland District for Portree. Tel: Oban 63720. Station at Portree not continually manned.
SERVICES: The following are NOT available: Radio, radar, tugs, stevedores, consuls, repairs, surveyors, telephones.
BANKS: Royal Bank of Scotland plc, Bank Street, Portree.
Clydesdale Bank plc, Portree.
Bank of Scotland, Somerled Square, Portree.
SHIP SUPPLY SERVICE: Launch available.
GENERAL: General stores, fruit and vegetables available in local shops.
GARBAGE DISPOSAL: Skip available on pier.
WASTE OIL DISPOSAL: Oil tank with capacity 150 gallons available.
SEAMAN'S CLUBS: No club available. Contact Harbour Master to arrange football matches. Shops and swimming pool available locally.
AUTHORITY: Highland Regional Council, Department of Roads and Transport, Regional Buildings, Glenurquhart Road, Inverness IV3 5NX. *Tel:* (0463) 234121. *Telex:* 75313. *FAX:* (0463) 710184. *Contact:* R. Massie.
The Harbour Master, Divisional Engineer's Office, Dunvegan Road, Portree, Isle of Skye. *Tel:* Portree (0478) 2926. *FAX:* (0478) 2255. *Contact:* Captain M. MacArthur, Harbour Master.

PORTSMOUTH: 50.48 N. 01.07 W. (See Plan)

DOCUMENTS: (Those marked* to be produced to H.M. Customs Boarding Officer.)
*1 Maritime Declaration of Health.
*1 Crew's Effects List C142.
2 Ship's Reports by Master.
*1 Home Office Form 1B6.
*1 Stores List.
*1 Certificate of Deck Cargo Tonnage.
*1 Grain Certificate.
1 Light Dues Certificate.
1 Port Dues Certificate.
*1 Passenger List.
*1 Landing Card for each non-British passenger.
*Ship's Certificate of Registry.
Mercantile Marine Office Certificate (British ships only).
*Load Line Certificate.
*Safety Equipment Certificate.
Lloyd's Certificate.
*Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.
*List C143 for packages not cargo or crew/passenger effects.
*Danish Tollpass for ships arriving from Denmark.
Form of Authority for Agent to make Report and clear vessel outwards for Master.
Note: Where cargo is to remain on board for unloading at another port after Portsmouth, 3 copies of Ship's Report are required by the Customs House.
APPROACHES: *The Main Channel:* The outer part of the main approach channel into Portsmouth Harbour lies between Horse and Dean Sand and Spit Sand. The inner part of the channel lies between Spit Sand and East Sand with a narrow coastal bank fronting the coast North-West of Southsea Castle. The channel is dredged to a depth of 9.5 m. and is well marked by leading marks and light buoys. Within the harbour entrance the main channel is bounded on both sides by the 10 m. line.
Portsmouth Harbour has a mean tidal range of 4.1 m. at Springs and 2.0 m. at Neaps. Particular reference should be made to Admiralty Charts and other publications for information on tidal streams in the Harbour entrance and approaches.
PILOTAGE: Pilot boarding points are in the vicinity of the Nab Tower, Warner Buoy and North Sturbridge Buoy. Pilot boat can be called direct on VHF Channels 11 or 12, and Queen's Harbour Master and Portsmouth Harbour Radio on Channel 11. Pilots require 24 hours notice of arrival. This notice to include draft, length, beam, particulars of cargo, last port of call and intended berth. Vessels should also contact Pilot 8 hours and 1.5 hours prior arrival at the Warner Buoy.
When leaving the port, the Pilots require 8 hours notice (Tel. No. (0705) 297395).
Strict compliance with the requirements of the Merchant Shipping (Pilot Ladders) Safety Rules is requested by the Pilots, who may refuse to board vessels with unsatisfactory and dangerous ladders. Manropes are not required. Ladders should reach to about 3 ft. from the water, each rung resting firmly against the ship's side; a good lee should be provided whilst making approximately 3 to 7 knots headway.
Notice: The following is part of local Notice to Mariners (No. 34 of 1992), dated 24th June 1992.
Compulsory Pilotage:
3. The following categories of vessels are subject to compulsory pilotage:
(a) A vessel of 48 m. or more in overall length.
(b) A vessel of 20 m. or more in overall length, carrying more than 12 passengers.
4. The following categories of vessels are exempted from compulsory pilotage by Portsmouth CHA:
(a) A vessel in transit through the Solent on passage to or from any position West of the line Gilkicker Point Light to Ryde Pier, provided such vessel does not proceed North of a line from Gilkicker Point Light to Horse Sand Fort Light to Horse Elbow Foul Buoy.
(b) A vessel in Government service, except when berthing or unberthing at any non-Ministry of Defence facility.
(c) A vessel with an Admiralty Pilot embarked while proceeding to or from any Ministry of Defence facility. Such a vessel, proceeding between a Ministry of Defence facility and a commercial facility, is not exempt compulsory pilotage for the berthing or unberthing operation at the commercial facility.
(d) An inward vessel bound to any position West of the line Gilkicker Point Light to Ryde Pier, or going to an anchorage in St.Helen's Roads.

(e) A vessel of an overall length not greater than 150 m., while to the S.E. of the line from Nettlestone Point (Lat. 50° 43.27′ N., Long. 01° 06.40′ W.) to the Warner Buoy, thence in a N.W.'ly direction to Horse Elbow Foul Buoy, thence due North to the shoreline.

Pilot Boat Recognition and Boarding Points:

5. The Portsmouth Pilot Boat may be recognised by the legend 'Portsmouth Pilots' in black letters on each side of the wheelhouse. There will not be a pilot boat permanently on station.

6. (a) The boarding points for vessels to the South and East of the Isle of Wight are:

(1) For vessels requiring pilotage from the NAB Tower, a position 1 mile to the West of the Nab Tower.

(2) For vessels of an overall length not greater than 150 m., the Pilot will board in vicinity of 1 mile South of the Warner Buoy.

(b) For vessels approaching from the Western Solent, the boarding point for Portsmouth Pilots is approximately 0.8 nautical miles West of the North Sturbridge Buoy.

7. In adverse weather, these points may be altered, and up-to-date information can be obtained from 'Portsmouth Pilots' on VHF Channel 11.

8. Direct communication may be made with the pilot boat on VHF Channel 11 or 12 when on station.

9. Portsmouth Pilots can be contacted on Telex: 9312110368 PMG or on Tel: (0705) 297395. Further details of Ordering Procedures including Notice Required are contained in the Pilotage Arrangements Handbook, obtainable from Port Manager's Department, Harbour Offices, Continental Ferry Port, George Byng Way, Portsmouth PO2 8SP.

Also see "Southampton" – "Notices".

ANCHORAGES: Merchant vessels may only anchor in the Man-of-War Anchorage at Spithead, with the permission of The Queen's Harbour Master, Portsmouth.

If anchorage is prohibited in Spithead, St. Helen's Roads, Ryde Roads or Cowes Roads are the nearest safe anchorages. Mooring Buoy No. 3, off North Corner in the Harbour is sometimes used. Pilots will be fully informed before the vessel's arrival.

RESTRICTIONS: *Speed:* Speed limit of 10 knots in harbour and when within 1,000 yards of shore in any part of the dockyard port; 12 knots within 1,000 yards of any H.M. ships in any part of the Dockyard Port not covered by the 10 knots limit. Dockyard Port boundaries are shown on Admiralty charts.

Also see "General".

MAX. SIZE: See "Berthing".

HEALTH: Foreign arrivals to complete Maritime Declaration of Health. They are cleared immediately on arrival by either a Port Doctor or an officer of H.M. Customs, depending on where ship comes from and whether there is sickness on board.

Vessels arriving from ports within accepted area (North European ports) and coastal arrivals need not present Declaration in all cases; when there is sickness on board, Port Health Authority must be informed, preferably not more than 12 hours nor less than 3 hours before arrival.

See "Health – All Ports" before first U.K. port.

RADIO/VHF: Dockyard Port of Portsmouth – Local Notice to Mariners – No. 32 of 1991.

VHF Communications in the Solent:

1. The Queen's Harbour Master Portsmouth has overall jurisdiction concerning measures for the safety of navigation within the Dockyard Port of Portsmouth, inclusive of Portsmouth Harbour, the East Solent and Eastern Approaches thereto, as defined on Admiralty Charts. The co-ordination of shipping movements within the Solent is carried out by Southampton Vessel Traffic System (Call sign "Southampton VTS"). Portsmouth Harbour Control (Call sign "QHM") controls the traffic entering or leaving Portsmouth Harbour, North of a line between Fort Gilkicker and Horse Sand Fort.

2. This Notice is issued taking note of current Notices to Mariners issued by the Port of Southampton and when taken together the contents of these Notices provide for continuity of communications and the co-ordination of shipping movements. It is issued in agreement with the Harbour Master Southampton.

3. *Entry to the Solent:* Southampton VTS has radar coverage of the East Solent up to a line joining Horse Sand Fort and No Mans Land Fort (but not the Portsmouth Harbour approach channels, North of a line joining Gilkicker Point and Horse Sand Fort). The Duty VTS Officer, responsible to the Port of Southampton Harbour Master, maintains radar surveillance and VHF communications in accordance with current Notices to Mariners issued by the Port of Southampton.

4. All vessels in excess of 20.0 m. in length bound to or from, or passing through the Port of Southampton, vessels bound to or from Portsmouth or passing through the Dockyard Port of Portsmouth and vessels bound to or from anchorages or other locations in the Solent are required to communicate by VHF with Southampton VTS as shown on Admiralty Charts and in the Admiralty List of Radio Signals Volume 6, Part 1.

5. *Use of VHF Channels:* All vessels entering and leaving the East Solent are to report to Southampton VTS on VHF Channel 12 when passing Lat. 50° 40′ N., giving their position as a distance East or West of Nab Tower. Vessels proceeding to an anchorage in the Solent for shelter or subsequent berthing must report to Southampton VTS when anchored, together with their approximate position. Whilst at anchor, vessels must maintain a listening watch on VHF Channel 12. Vessels leaving a sheltered anchorage must also report and advise Southampton VTS of their intended destination and whether they are leaving the Solent via the East or West Solent.

6. *Entry to Portsmouth:* After making the appropriate reports, vessels are to revert back to listening watch with Southampton VTS until passing across a line drawn between Fort Gilkicker and Horse Sand Fort when listening watch is to be changed to Channel 11. Vessels not fitted with VHF Channel 11 should remain on VHF Channel 16. Vessels not using the main approach channel are to report before entering the Swashway.

7. *Portsmouth Harbour:* The Queen's Harbour Master Portsmouth co-ordinate all shippig movements within Portsmouth Harbour and approach channels to the North of the line joining Gilkicker Point a Horse Sand Fort. Advice will be given regarding other shipp movements and matters affecting navigation in the Harbour. T Queen's Harbour Master maintains a continuous listening watch on V Channels 11 and 13 and uses these channels for the co-ordination shipping movements. Portsmouth is now one of the busiest harbour the U.K. and the need for strict circuit discipline on Channels 11 and cannot be too strongly emphasised. Routine administration traffic is to be passed on these channels. The Commercial Port Manager (C sign "Portsmouth Harbour Radio") also maintains a constant watch Channel 11. Channel 13 is the Naval Port Operational channel and used by the Royal Navy to control tugs. In the event of overloading Channel 11, QHM may authorise the use of Channel 13, in which ca it is the responsibility of QHM to rebroadcast pertinent information.

8. *Requirement by all Vessels to maintain a Listening Watch:* vessels, if more than 20.0 m. overall length when underway Portsmouth Harbour and approach channels North of the line join Gilkicker Point and the Horse Sand Fort, are to maintain a continu listening watch on VHF Channel 11. All such vessels must requ permission from the Queen's Harbour Master to sail or move within Harbour before leaving their berth.

TUGS: Tow-boat services are available for commercial vessels commercial berths. In addition Admiralty tugs available at commer berths by arrangement with Queen's Harbour Master.

BERTHING: Commercial berths: Camber – length 80 m., depth 2 below C.D. Flathouse – length 300 m., depth 7.0 m. below C.D. Vess up to 156 m. LOA can be accommodated. Albert Johnson Quay – leng 195 m. Depth 7.0 m. below C.D. Continental Ferry Port Ro/Ro Linkspa – Max. length 180 m., depth No. 1 – 5.0 m. below C.D., depth No. 2 and 4 – 7.0 m. below C.D. North Quay – Max. LOA 110 m., depth 3.5 below C.D.

Vessels at the Camber Quay must expect to take the bottom in s mud.

CRANES: 32 ton Scotch Derrick at Flathouse Quay. Mobile cra provided by stevedoring companies.

STEVEDORES: Available by arrangement with stevedoring compani

MEDICAL: All medical facilities available. Agent should be advised advance. (See "Southampton" entry if arrival is solely to land s personnel).

DENSITY: 1025 salt water.

FRESH WATER: Available.

FUEL: Fuel and Diesel Oil available by road tanker or bunker ba from Fawley.

FIRE PRECAUTIONS: Notices will be delivered to Master if berthing any jetty where special precautions apply.

CONSULS:

Belgium	Finland	Netherlands	Sweden
Denmark	France	Norway	

REPAIRS: Minor deck and engine repairs can be carried out loca Larger repairs and dry dock facilities at Southampton.

OPENING/CLOSING HATCHES: By ship's crew.

CUSTOMS ALLOWANCES: As for "Southampton".

REPATRIATION: All facilities exist.

AIRPORT: Fast train service from Portsmouth to London Airp Eastleigh Airport local, but mainly short flights to Channel Islands a feeder services.

TELEPHONES: None on board.

GARBAGE DISPOSAL: Vessel operators contract with various wa management companies to provide a service for their ships. Sepa contracts are maintained by each vessel operator. Bins are provided Camber Quay.

WASTE OIL DISPOSAL: Vessel operators contract with various wa management companies to provide a service for their ships.

SERVICES: All marine, radio and radar services can be obtained fr Southampton.

SHIP SUPPLY SERVICE: J. Butcher & Sons (Port Services) Lt 19 Pembroke Road, Old Portsmouth PO1 2NS. Tel: (0705) 8225 After hours 821347 and 821033.

The Company provides the majority of the towing services in t commercial port, operating in the Eastern Solent from Cowes to N Shoal including Spithead, The Mother Bank and St. Helen's Roads fleet of 11 vessels is operated, headed by the 525 b.h.p. Kort Noz Tugs "Janet James" and "Carol James" providing towing serv (including tow boats for smaller ships) and boats for mooring, r running and berthing purposes. The passenger launch and work service transports ships' crews, Agents, technicians, stores a equipment within the harbour area and Eastern Solent.

The tugs and tow boats have been purpose built for berthing a unberthing ships up to 140 m. at the commercial port.

Services of an Admiralty tug available on application to the Quee Harbour Master.

GENERAL: *Dockyard Port of Portsmouth – Local Notice to Marin No. 44 of 1992.*

Portsmouth Harbour – Local Visual Signals:

Notice is hereby given that the following signals affecting traffic hoisted by H.M. ships or at signal stations at Portsmouth. All o signals are to purely Naval interest.

	Signal	*Meaning and Application*	*Hoisted/Displayed*
1. *Day*	Red Flag with white diagonal bar.	Large vessel underway in Main Channel or Harbour.	Central Signal Sta Blockhouse Signa Station.
Night	Red Light over 2 Green Lights vertical.	Other vessels may be required by QHM to wait alongside or hold in a waiting position.	

2. Day	Red Flag with white diagonal bar over one black ball.	Large vessel leaving Harbour. Vessels entering Harbour will be kept clear by QHM.	Central Signal Station Blockhouse Signal Station.
Night	White Light over Green Light.	Vessels leaving Harbour will be allowed to proceed clear of the large vessel.	
3. Day	One Black Ball over Red Flag and white diagonal bar.	Large vessel entering harbour. Vessels leaving harbour will be kept clear by QHM.	Central Signal Station Blockhouse Signal Station.
Night	Green Light over White Light.	Vessels entering harbour will be allowed to proceed clear of the large vessel.	
4. Day	International Code Pennant. Superior to Pennant Zero.	Warship or RFA underway in Main Channel or Harbour warning signal to other ships. Specific instructions will be given by QHM.	Warship or RFA.
5. Day	International Code Pennant Superior to Pennant NINE.	Warship or RFA underway in Main Channel or Harbour warning signal to other ships. Specific instruction will be given by QHM.	Central Signal Station Blockhouse Signal Station.
Night	Three Green Lights vertical.		
6. Day	Flag E	Submarine entering or leaving Haslar Creek. Warning signal to other ships.	Blockhouse Signal Station, Blockhouse Pierhead (Note: The Amber Light at Blockhouse Pierhead will flash when submarines are actually underway).
Night	Red Light Amber Light	Specific instructions will be given by QHM but all vessels less than 20 m. in length are to be kept clear.	

NOTES:

(a) Within the context of this Notice, a large vessel is deemed to be one that is constrained by her length or draft to maintain the centreline of the Channel.

(b) Instructions from QHM will be passed on VHF Channels 11 or 13 as appropriate.

(c) Vessels less than 20.0 m. may continue to use the Portsmouth Harbour Entrance Boat Channel (See Notice 11/92) when the signals in paragraph 1, 2 or 3 are being displayed.

Dated: 14th September 1992.

Signed: Queen's Harbour Master, Portsmouth.

DEVELOPMENTS: With the opening of the Portsmouth section of the M27 and M275, there is immediate access to Albert Johnson Quays at the Rudmore Roundabout. At present, P & O operate services to Bilbao, Cherbourg and Le Havre; Brittany Ferries to Caen, St. Malo and Santander.

C. & M. Shipping operates freight ferries to the Channel Islands.

AUTHORITY: City of Portsmouth, Port Manager's Department, Harbour Officers, George Byng Way, Continental Ferry Port, Portsmouth PO2 8SP. *Tel:* Portsmouth (0705) 297391 (Administration), 297395 (Operations). *Telex:* 9312110368 PM G. *FAX:* (0705) 861165. *Contact:* Rear-Admiral A.S. George, Port Manager. Captain M.S. Putman, Harbour Master.

RAMSEY, Isle of Man: 54.19 N. 04.21 W. **(See Plan)**

PORT LIMITS: Line joining Shellag Point (3.25 miles North of harbour entrance) and Cor Stack (2.75 miles S.E. of harbour entrance) defines the port limits.

DOCUMENTS: Same as other U.K. ports.

PILOTAGE: Service provided by Harbour Master and is not compulsory. There is no regular pilot boat. Pilot will board 0.5 miles East of harbour entrance.

Contact Harbour Master direct by telephone (0624) 812245 or by VHF Channels 16 and 12 at tide times only. In all cases as much notice as possible should be given.

ANCHORAGES: No specific anchorages, but anchoring not permitted within 4 cables of harbour entrance or within 4 cables of Queen's Pier (3.5 cables S.E. of harbour entrance). Moderately good holding ground in sand, often used by sheltering vessels in S.S.W. or N.W. gales.

RESTRICTIONS: Harbour dries out each LW.

MHWN: Max. available depth 3.80 m.

MHWS: Max. available depth 5.50 m.

MAX. SIZE: For East Quay and West Quay: Max. length 61 m., breadth 9.0 m. Draft 3.0 m. on Neap tide, 4.0 m. at Spring tides.

For Channel Berth: Max. length 70 m., breadth 13 m.

For all berths max. available depth will vary according to tide.

HEALTH: Standard U.K. procedure.

RADIO: R/T, W/T and VHF through Portpatrick Radio (GPK) or Anglesey Radio (GLV).

VHF: Coverage from Harbour Master's Office includes port and approaches, Channels 16 and 12 at tide times only.

Coverage of North Irish Sea from Snaefell Summit by Douglas Harbour Radio, continuous 24 hour watch on Channel 16. Messages may be passed through Douglas Harbour Radio to amend ETA Ramsey, etc.

RADAR: No port radar.

TUGS: None.

BERTHING: All berths dry out each LW. Bottom is sand and shingle.

Name	*No.*	*Length* (m.)	
Channel Berth	1	76	
East Quay	2 & 3	116	
West Quay	4	80	
North Quay	10	73	For lay-by only. Use restricted by sea conditions.

With exception of North Quay all berths readily accessible to road traffic. Load/discharge by ship's gear or shore equipment at ship's discretion.

CRANES: No cargo handling gear at any berth. Mobile cranes can be arranged through Agents with reasonable notice.

BULK CARGO FACILITIES: Bulk cement handling facility at East Quay No. 2 Berth with 2×500 ton silos. Privately owned.

SPECIALISED CARGO HANDLING FACILITIES: No Ro/Ro or bulk liquid handling facilities. Privately owned container handling facilities available.

BRIDGES: Access to upper harbour through swing bridge, by arrangement with Harbour Master. Sufficient depth of water usually available 2 hours either side of HW. At least 24 hours' notice required to swing the bridge outside normal working hours, weekends and holidays. Within normal working hours less notice is acceptable.

STEVEDORES: Arranged through Agent. A minimum of 24 hours' notice required and all working hours are negotiable in advance. Main commodities discharged are all types of general cargo and coal by mobile crane with grab – average discharge rate is approx. 90 t.p.h. Occasional grain cargo loaded by mobile elevator at approx. 40 t.p.h.

MEDICAL: Hospital and dental facilities available without prior notice.

TANKERS: No tanker facilities or berths available.

DENSITY: 1025.

FRESH WATER: Available by hose at approx. 30 t.p.h. on East, West and North Quays. Labour charge £8.20 per hour (minimum 2 hours) plus £1.55 per 1,000 gallons.

FUEL: Delivery by road tanker from Douglas and Peel to all berths except North Quay. Gas oil and medium fuel oil available at 24 hours' notice. Manx Petroleum (Shell), Tel. 0624-74652. 100 gallons minimum. Total, Tel. 0624-844000. 100 gallons minimum.

CONSULS: None.

REPAIRS: All types of deck and engine repairs possible by small shipyard in upper harbour.

DRY DOCKS: No dry docks but 2 slipways; one for vessels about 200 g.r.t. and one for about 50 g.r.t. Both slipways in upper harbour.

Also a grid in upper harbour which dries out at approx. half tide, length 40 m., breadth 7.5 m. This grid used occasionally by vessels of up to 300 g.r.t. for bottom plate inspection/repairs. At least 72 hours' notice required, more if possible. Grid hire arrangement through Harbour Master.

SURVEYORS: D.H.P.P., Marine Administration. Tel: (0624) 686634.

GANGWAY/DECK WATCHMEN: Not required.

HATCHES: Normally handled by ship's crew.

CUSTOMS ALLOWANCES: Standard U.K. allowance.

CARGO GEAR: Loading/discharging of general by ship's gear or mobile crane. Discharge of bulk by grab equipped mobile cranes. A wide range of mobile cranes up to 25 tons available for hire at reasonable notice.

REPATRIATION: Facilities available for repatriation of crew members.

Daily scheduled aircraft connections to London and other U.K./Irish airports. Daily ferry services to Heysham. These services operate all year with supplementary air and sea services to other destinations during the Summer.

AIRPORT: 25 miles distant.

TIME: GMT and BST.

HOLIDAYS: New Year's Day, Good Friday, Easter Monday, May Day, Whit Monday, Senior TT Race Day (usually 1st or 2nd Friday in June), Tynwald Day (5th July), August Bank Holiday, Christmas Day, Boxing Day.

Cargo not normally worked on these days but all working hours are negotiable in advance.

POLICE/AMBULANCE/FIRE: All emergency services available by telephoning 999 on any telephone, no charge is made for this call. Assistance possible from H.M. Coastguard on VHF Channel 16.

EMERGENCY CO-ORDINATION CENTRE: Liverpool Coastguard. Tel: 051-9313341. Telex: 629448. Fax: 051-931-3347. VHF: Channel 16.

TELEPHONES: There are no facilities for telephones to be placed on board.

SERVICES: Lloyd's Agent available. Decca, Kelvin Hughes, Furuno, etc., repairs and servicing available locally. Divers available via Harbour Master.

BANKS: Barclays Bank, 52 Parliament Street. Tel: (0624) 813124.

I.O.M. Bank, 20 Parliament Street. Tel: (0624) 812829.

Lloyd's Bank, 71 Parliament Street. Tel: (0624) 812225/814233.

Midland Bank, St. Paul's Square. Tel: (0624) 814000.

Nat. West Bank, Douglas. Tel: (0624) 29292.

Major banking facilities are available in Douglas.

STORING: See "Prelims".
1. Vessel may be stored by barge or truck.
2. No restrictions unless dangerous cargo being handled. If dangerous cargo being handled as cargo or as part of the stores then all other cargo work/storing to cease.
3. Berths accessible to all road traffic.
4. Fork lift trucks may be used on quayside.
5. Bonded stores available through local agent, who will arrange necessary clearance, etc. H.M. Customs may attend at their discretion.
6. Riggers may be arranged through local agent at reasonable notice.

SHIP SUPPLY SERVICE: See "Douglas".
SHORE LEAVE: When Immigration and Customs requirements satisfied (for vessels arriving from a port outside the U.K.), no restriction on crew shore leave provided that they rejoin prior to the vessel's departure.
IDENTIFICATION CARDS: Not required.
DELAYS: Berthing delays are not usual (disregarding awaiting tide) except when strong N.E. to S.E. winds make navigation in the harbour entrance hazardous. These conditions may cause 1-2 days delay if severe.
GARBAGE DISPOSAL: Garbage skip on East Quay, near to Harbour Office. No charge for this service. Access available at all times.
WASTE OIL DISPOSAL: Collection service available at all berths by road tanker operated by Colas (Isle of Man) Ltd. (Tel: 0624-823360) capacity 2,000 gallons.
SEAMAN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: Isle of Man Department of Highways, Ports and Properties, Harbours Division, Sea Terminal Building, Douglas, Isle of Man. *Tel:* 0624-686626 . *Telex:* 629335 IOMHARG. *FAX:* 0624-626403. *Contact:* Captain D.M. Cowell, Chief Harbour Master.

RAMSGATE: 51.20 N. 01.24 E. (See Plan)

(A) RAMSGATE WESTERN TERMINAL (PORT RAMSGATE)
(B) ROYAL HARBOUR

(A) RAMSGATE WESTERN TERMINAL (PORT RAMSGATE)

DOCUMENTS:
- 2 copies C142, Crew Declaration.
- 3 copies C13, General Declaration, including stores (normally completed by Agent).
- 2 copies C16, Cargo Declaration (if no manifests).
- 1 copy C74, Master's Authority (completed by Agent).
- 2 copies C1320, Cargo in Unregistered Spaces.

These documents should be completed and presented with copies of all manifests and ship's documents when making report.

APPROACHES: *Approach Channel:* The approach channel extends East from Long. 01° 25.30′ E. for a distance of 2,133 m. from the Ramsgate breakwater heads. The channel has a depth of −6.5 m (CD) with a base width of 110 m.

The tidal range is +0.3 m. (CD) to +6.2 m. (CD) (predicted).

CHANNEL MARKINGS:
East Brake Buoy: East Cardinal QK FL. 3 every 10 seconds W; Lat. 51° 19.46′ N., Long. 01° 29.1′ E.
Starboard Channel Buoy No. 1: Green conical with green conical topmark. FL. every 5 seconds G; Lat. 51° 19.51′ N., Long. 01° 27.2′ E.
Port Channel Buoy No. 2: Red can with can topmark. FL. 4 every 10 seconds R; Lat. 51° 19.45′ N., Long. 01° 27.2′ E.
Channel Buoy No. 3: Green conical with green conical topmark; FL. every 2.5 seconds G; Lat. 51° 19.51′ N., Long. 01° 26.65′ E.
Channel Buoy No. 4: Red can with red can topmark. QK FL. R; Lat. 51° 19.45′ N., Long. 01° 26.65′ E.
Dike Buoy No. 5: South Cardinal. QK FL. 6 plus 1 every 15 seconds W; Lat. 51° 19.51′ N., Long. 01° 26′ E.
Quern Buoy No. 6: North Cardinal. QK FL. W; Lat. 51° 19.45′ N., Long. 01° 26′ E.
East Breakwater Light Tower: Lat. 51° 19.31′ N., Long. 01° 25.34′ E. Day mark red and white. Qk. Fl. Green.
West Breakwater Light Tower: Lat. 51° 19.25′ N., Long. 01° 25.30′ E. Day mark green and white. Qk. Fl. Green.
Front Lead Beacon: Lat. 51° 19.29′ N., Long. 01° 24.59′ E. Occulting 8 secs. on, 2 secs. off. Racon beacon fitted. Coloured sectors light: green 10°, white 2°, red 10°.
Rear Lead Beacon: Lat: 51° 19.29′ N., Long. 01° 24.44′ E. Fl. every 8 secs. White.
Harbour Signals: The harbour has established, at the West Pier Signal Station, signals which conform with the International Harbour Signals Regulations.
Port Ramsgate Turning Basin: Maximum dimensions 500 m. North – South; 550 m. East – West, giving a free swing diameter of 300 m. (ref. to Chart No. 1827 Ramsgate Harbour and Approaches).

VHF: *Vessel Traffic Services:* All arriving vessels are to notify the Ramsgate VTS Office at the West Pier Control Tower on VHF Channels 14 or 16, or by telephone (0843) 592277 (24 hours), of intended arrival and requirements.

Vessels should report when approximately 1 hour from Point "R" (Romeo) which is defined as a radius of 2.5 miles from the centre of a line joining the Channel Entrance buoys.

PILOTAGE: Compulsory for most merchant vessels. Tel: (0843) 592277 (24 hours). VHF Working Channels 16 and 9.

Minimum notice: Inward 12 hours. Outward: 2 hours.

ANCHORAGE: Anchorages available at Margate Roads, Broadsta Knoll and The Downs off Deal (Chart No. 1828; Dover to North Forela applies).
TUGS: 1×13 tonne bollard pull and 1×45 tonnes bollard pull.
BERTHING: Berths/Linkspans No. 1, 2 and 3: All have a depth −6.5 m. (CD). Beam 25 m. (vessels). 9 point mooring system along centre line of the berthing structure, 4 fenders on each side.

Fender positions from the front face of the pontoon: No. 1 – 38 m No. 2 – 63 m.; No. 3 – 80 m.; No. 4 – 100 m. (the outer bollard posit 110 m.).

All 3 linkspans are of the same pontoon type, depth moulded 4.4 depth working 1.0 m., ship ends freeboard variable.

Ramp Details: Length 40 m., width 9.1 m. – 10.7 m.; free wid 7.0 m. – 9.7 m.; axle loads 50 tonnes.

CARGO HANDLING FACILITIES: *Port Plant:*
3 (4×4) terminal tractors, 70 tonnes drawbar pull.
9 (2×4) terminal tractors, 50 tonnes drawbar pull.
Forklifts of 12 tonnes, 7.5 tonnes, 1.5 tonnes and 1 tonne capaci
Container handling forklift truck of 38 tonnes capacity.
Container transhipment gantry of 32 tonnes capacity, handling 20 30 ft. and 40 ft. units.
4×80 passenger motor buses.
Baggage trolleys.
Freight shed of 25,000 sq.m. internal area, equipped with full handl equipment.
Cold store facilities for cargo inspection.
Open storage areas, total parking areas of 126,000 sq.m.
Craneage available up to 100 tonnes capacity at 24 hours notice.
Hazardous bund facilities.
Tipping pen and conveyor for handling bulk Ro/Ro cargoes.

MEDICAL: Hospital, doctor and dentists available.
FRESH WATER: Available at all 3 berths.
FUEL: Available at berths by road tanker.
FIRE PRECAUTIONS: Fire hydrants available at all berths.
REPAIRS: Possible.
A. & P. Appledore, Military Road, Ramsgate.
Ramsgate Marine, Royal Harbour, Ramsgate.
Walkers Marine, Military Road, Ramsgate.

REPATRIATION: Possible.
EMERGENCY CO-ORDINATION CENTRE: Coastguards: Based Dover. Tel: (0304) 210008 – VHF Channels 16 and 11.
AIRPORT: 3 miles West of Ramsgate is Kent International Airp (Manston).

Having bought a 125 year lease from the Ministry of Defence in 19 the airport's owner has built a £2 million passenger terminal which w opened in October 1989.

With the longest runway of all regional airports in the Midlands a Southern England, 24 hours Customs, and its easy access to Londo the airport is ideally situated for air-freight shipments, or as an inla clearance depot for trucks coming over from Europe.

Currently there is a regular cargo flight from Colombia and holid flights to Majorca and Jersey.

The airport is in discussions with various airlines, and hopes develop commuter services to major European destinations.

DEVELOPMENTS: Since commencing operations in 1981 in excess £24 million has been invested in the development of Port Ramsgate an all-weather Ro/Ro port. The present land area is 143,000 sq.m., of which has been reclaimed from the sea.

The port's facilities include a six-bay freight inspection a transhipment shed, a cold store and chilled cargo inspection unit a freight drivers cafe and wash room facilities in addition to the norm ferry passenger terminal buildings and passenger car parks.

In order to handle the increasing demand for container and swap bo traffic, a 38 tonne container handling forklift has been brought in operation to augment the 32 tonne container gantry.

1991 also saw the streamlining of the port's traffic whilst within t port area and the completion of the first phase of the re-developme of the terminal complex, an on-going development which will result the construction of new accommodation for the port staff and port offic bodies and passenger processing areas.

A new access route, by-passing the town of Ramsgate, linking t port area directly with the A299 trunk road is projected.

(B) ROYAL HARBOUR

ANCHORAGE: Vessels waiting to enter Ramsgate may ancho Margate Roads or in the vicinity of the Broadstairs Knoll Buoy, pa due regard to the presence of submarine cables.

APPROACHES: *Approach Channel:* The main channel, 110 m. wid the base, extends 2,133 m. to seaward from the harbour entra Additionally a turning area has been dredged West of the harb entrance and in the vicinity of the ferry terminal. The centre of channel is indicated by leading lights and marks 090° – 270° True.
Harbour Signals: Permission to enter the channel and the Royal Har may be requested by radio from the Harbour Control. Harbour sig to conform with the International Harbour Signals, are displayed by Harbour Control and also at the Lock Head to the marina.

RESTRICTIONS: *Times of Entry:* The main channel has been dredged to a depth of 6.5 m. below datum, allowing unrestricted entry to the Western Terminal. The entrance to the Royal Harbour is maintained at 2.5 m. below datum and vessels are advised that this normally allows entry for at least 2 hours on either side of HW.
MAX. SIZE: Max. LOA 105 m. Max. draft 4.8 m. (2 hours either side of HW).
VHF: *Vessel Traffic Service:* Vessels wishing to enter Ramsgate Harbour must report to the Harbour Control on Channel 14 when arriving at a point 2.5 miles from the channel entrance buoys. This point is referred to as "Point Romeo" and permission must be obtained to enter the channel before proceeding further.
BERTHING: Commercial Quay: Length 109 m. Width 18.0 m. Berthing possible on the East side.
Ro/Ro Berth: Linkspan available.
CRANES: 1×18 ton crane available. Private cranes up to 130 tons capacity may be hired. Fork lift trucks available.
STEVEDORES: Available locally.
MEDICAL: Hospital, doctors and dentists available locally.
FRESH WATER: Available.
FUEL: Small quantities available by barge. Larger quantities available by road tanker.
CONSULS: See "Dover".
REPAIRS: Minor repairs possible. Slipway for up to 500 tons capacity.
SURVEYORS: Available locally.
HATCHES: Opened and closed by crew.
AIRPORT: See "Port Ramsgate".
POLICE/AMBULANCE/FIRE: Dial 999.
EMERGENCY CO-ORDINATION CENTRE: The RNLI maintains a motor lifeboat stationed in the harbour.
SERVICES: The following are available: radio repairs, ship chandler, diving services, charts, compass adjusting, Derat and fumigation.
GARBAGE DISPOSAL: A collection service is provided daily and skips are provided for all vessels.
WASTE OIL DISPOSAL: A disposal facility for waste oil is available on request for large amounts. This is done by road tanker.
SEAMAN'S CLUBS: There is no seaman's club. The Royal Temple Yacht Club provides certain club facilities for visiting seamen and yachtsmen. There is also a Sailors Church within the harbour (Church of England) holding regular services.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: Thanet District Council, P.O.Box 9, Margate, Kent CT9 1XZ. *Tel:* (0843) 25511. *Telex:* 966182.

Ramsgate Harbour Office, Military Road, Ramsgate, Kent CT11 9LG. *Tel:* (0843) 592277. *Telex:* 965861. *FAX:* (0843) 590941. *Contact:* Commander C.H. Marsh, General Manager. Captain P. Dickens, Harbour Master.

RYE: 50.56 N., 00.47 E. (See Plan)

PORT LIMITS: An imaginary line between No. 2 red light and No. 1 white light.
DOCUMENTS: Usual documents required for Customs.
PILOTAGE: Call "Rye Pilots" 1 hour before to 1 hour after HW. Pilots attend station when vessels expected – ETA 24 hours in advance.

Vessels fitted with VHF Radio should keep watch on Channel 14 when arriving and sailing from Rye and call for instructions on traffic movements.

Pilotage compulsory for vessels over 30 m. LOA.
ANCHORAGES: Vessels may anchor at the Fairway Buoy or shelter from Southwesterly winds in the East Roads (St.Mary's Bay).
NAVIGATION: *Leading Marks:* Inner Leading Light – Occulting Green 4 secs. with white sector 326°T to 331°T.
Tide Signals: Shown from harbour office, 0.75 miles inside harbour entrance on East Bank.

Night – 7 ft. to 10 ft. on bar. Fixed Green.
Over 10 ft. on bar. Fixed Purple.

Day – None, but horizontal timbers on tripod beacon at harbour entrance indicate plus 5 ft., plus 10 ft., plus 15 ft. above Ordnance Datum.
Traffic Signals: International signals showing either 3 fixed red lights or Green – White – Green when commercial traffic moving.

Day – on Flagstaff yard arms behind Harbour Office denotes expected shipping movements on tide.
One Black Ball – ship arriving from sea.
Two Black Balls side by side – ship sailing.
Three Black Balls in a triangle – ships arriving and sailing.
Fog Signals: East Pierhead Horn every 7 secs.
RESTRICTIONS: Night navigation possible for vessels of less than 240 ft. LOA, subject to Harbour Master's approval.

Also see "Berthing".
MAX. SIZE: LOA 235 ft. Max. draft 13 ft. 06 in.
VHF: Call sign "Rye Harbour Radio" Channels 16 and 14. 0900 – 1700 hrs. daily. "Dover Coastguard" VHF Channels 16 and 67.
TUGS: None available. Harbour launch will assist if requested.
BERTHING: Cargo vessels entering Rye Bay should follow the coast from Dungeness coming from the East or Fairlight coming from the West keeping at least 2 miles offshore until Rye Fairway Buoy is reached (Spher. R.W. Fl. 10 secs.), position 149° T, 1.8 miles from the harbour entrance. Anchorage 5 fathoms. at MLWS.

The entrance is 42 m. (140 ft.) wide and is recognised by a conspicuous tripod beacon (Fl. 5 secs. Red), 30 m. seaward of the West Groyne which is 240 m. seaward of the East Pier with the light tower (Qk. Fl.(9) 15 secs.). The channel virtually dries and is liable to change. The East Pier submerges at HWS and is marked by starboard hand beacons. There is a strong eddy inside the East Pier during the flood stream.

Inside the entrance the channel narrows to 30 m. and runs straight for half a mile (329°T) to Rye Harbour Village where there is an inner leading light (Occ. W.G. 4 secs.). Strict attention should be paid to Port Hand Beacons (4 with Qk. Fl. Red) which mark a training wall on the West side of the channel (submerged at plus 8.3 O.D.N.)

The Rother has a strong flood stream and as the harbour dries out it should NOT be approached 3 hours either side of LW. In gales from the S.E. through to S.W. waves break across the entrance.

The best time for any vessel to enter or leave the port is 1 hour either side of HW but care is needed because movement of cargo vessels takes place during this period (See "Navigation" – "Traffic Signal"). Visiting yachts may berth at the Admiralty Jetty by the Harbour Office and in mud berths at Strand Quay in Rye by arrangement with the Harbour Master. Subject to weather conditions it is possible for vessels drawing less than 1.5 m. to enter the harbour at HW minus 2.5 hours (before the flood tide flows at maximum rate) to plus 3 hours.

H.M. Customs clear craft entering from Non-E.E.C. Countries at the Harbour Office.

Wharf is located 1 mile from the entrance on the West bank of the river.

Length of quay 600 ft. Berth handles grain, aggregate, fertilisers, general cargo, etc.
CRANES: 2 mobile cranes of 3 tons (SWL) available for cargo handling. Stores are loaded by these cranes.
BRIDGES: No air draft restrictions.
STEVEDORES: Stevedores ordered through vessel's agent. Usual working hours 0730 – 1700 hrs., Monday to Friday. Overtime is possible by arrangement.
MEDICAL: Conquest Hospital at Hastings (15 miles) maintains a 24 hour casualty service. Doctors and Port Health Officers available locally.
TANKERS: No facilities.
DENSITY: 1025.
FRESH WATER: Available from the quay by hose.
FUEL: Agent arranges supply through a local supplier.
FIRE PRECAUTIONS: Usual precautions necessary.
CONSULS: None locally.
REPAIRS: Minor engineering repairs possible. Radio and radar repairs by arrangements.
DRY DOCKS: None locally.
SURVEYORS: Cargo inspectors arranged by agent. No Classification Society surveyors locally.
GANGWAY/DECK WATCHMEN: Not available.
OPENING/CLOSING HATCHES: Normally carried out by crew.
CUSTOMS ALLOWANCES: Standard British allowances.
REPATRIATION: Possible. Crew may be repatriated through Heathrow or Gatwick Airports, or Dover and Newhaven for continental ferry services.
AIRPORT: Heathrow or Gatwick.
EMERGENCY CO-ORDINATION CENTRE: Contact Dover Coast Guard on VHF Channels 16 and 67.
TELEPHONES: Not available.
SERVICES: Any services required should be arranged with the agent prior to arrival.
BANKS: Major banks located in Rye.
STORING: See "Prelims".
1. By truck.
2. N.A.
3. Yes.
4. Yes.
6. Yes.
SHORE LEAVE: Permitted.
DELAYS: None.
GENERAL: *Tidal Information:* These tide tables are referred to Ordnance Datum Newlyn and GMT.

Chart Datum equals O.D. Newlyn minus 4 m. (13 ft.)
O.D. Newlyn equals Chart Datum plus 4 m. (13 ft.)
Duration of Mean Rise at Rye Harbour:
Spring – 3 hours 15 minutes.
Neaps – 5 hours 00 minutes.

Latest Surveys (September 1987) indicates that the main channel leads E.S.E.'ly from red light marking end West Groyne. Average depth in the channel at the entrance:
At MHWS – 5.5 m. (19.2 ft.)
At MHWN – 4.5 m. (15 ft.)
Depth over bar:
At MHWS – 4.2 m. (13.8 ft.)
At MHWN – 2.5 m. (8.2 ft.)

For depth at HW at Alsford's Quay add 1.52 m. (5 ft.) to predicted height given in tables.

For depth at HW at Strand Quay mud berths deduct 0.6 m. (2 ft.) from predicted height.

The following approximate corrections for level and time of HW should be added/subtracted to convert these tables for use at the undermentioned coastal areas:

Hastings	minus 0.8 ft.	minus 2 minutes
Dungeness	plus 0.9 ft.	minus 6 minutes
Folkestone	minus 1.6 ft.	minus 15 minutes

GARBAGE DISPOSAL: Collection arranged through wharf owners. (Tel: 0797-222501). Closed approved skips on quayside.
WASTE OIL DISPOSAL: Oil disposal arranged through wharf owners. 45 gall. drums available and disposal is via local chemical works.
SEAMAN'S CLUBS: No clubs but town is within easy walking distance.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: National Rivers Authority, Guildbourne House, Chatsworth Road, Worthing, West Sussex BN11 1LD. *Tel:* (0903) 820692. *FAX:* (0903) 821832.

Harbour Office, New Lydd Road, Camber, Rye, East Sussex TN31 7QS. *Tel:* (0797) 225225. *FAX:* (0797) 227429. *Contact:* Captain C. Bagwell, Harbour Master.

SCALLOWAY: 60.08 N. 01.16 W. (See Plan)

Scalloway is a small port on the Atlantic side of the Mainland of Shetland and is located only 7 miles by road from Lerwick.

The main trade is centred around the catching, processing and export of fish, but there has been a marked increase in general trade since the recent improvement of port facilities.

Most services are available and can be arranged through the local shipping Agents.

Communications: Listening watch is maintained on Channel 16 only during office hours. At other times contact to be made through Shetland Radio. Local shipping agent Tel: Scalloway 636 (office), after hours: Scalloway 304. Pier Master's Office, Scalloway 574, home Scalloway 324. Assistant Pier Master, Lerwick 3485.
ANCHORAGES: Good holding bottom in Scalloway Bay.

Anchorage may also be obtained at several locations within the port approaches and vessels intending to do so should advise the Scalloway Pier Master via VHF who will provide advice on areas encumbered by static fishing gear.
PILOTAGE: Licensed Pilots are available and requests for pilotage should be made at least 12 hours in advance of ETA and confirmed 1 hour before arrival by calling Scalloway Harbour Radio on VHF Channels 12 or 16. Requests for pilotage should be made through Scalloway Harbour Office (Scalloway 574), through Sullom Voe Port Control Tel: 0806 – 242551 or Telex: 75142 (manned 24 hours), or through agents. No particular light or sound signals are required and pilot boat freeboard is 1.5 m. Pilot boarding stations are charted on the current edition of BA. Chart No. 3294. Masters should advise the intended pilot boarding station when confirming ETA and should note that the Northerly station is preferred in bad weather or high swell. Pilotage is not compulsory except for vessels carrying hazardous cargoes for which it is compulsory.
RESTRICTIONS: No night time or tidal restrictions. Largest scale and up to date charts essential.
MAX. SIZE: Max. loaded displacement 3,500 tonnes. Maximum length 90 m., max. draft 6.0 m. Vessels exceeding these dimensions may be accepted by prior arrangement. A tide gauge has been installed, and precise tidal heights will be available on request by radio.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Shetland Radio.
VHF: Vessels should listen to Channel 16 VHF when in VHF range.
BERTHING:

Berth No.	*Length* (m.)	*Least Depth* (m.)
1	66	7.5
2	53	4.0
3	77	4.2
4	75	6

A new general cargo berth with length 120 m. and depth 6.5 m. has been constructed. Further development work is in progress.
CRANES: Mobile cranes available. Ships normally employ their own cranes.
STEVEDORES: Should be arranged through Agents.
MEDICAL: Doctor based at Scalloway. Hospital at Lerwick.
FRESH WATER: Available from standpipe at all berths, rate 10 t.p.h.
FUEL: Marine gas oil by pipe or from road tanker. 1 hour advance notice through Agent.
REPAIRS: Most types deck and engine repairs.
SLIPWAYS: Slip accommodation for vessels up to 180 tons.
SURVEYORS: Lloyd's Agency at Lerwick: Hay and Company (Lerwick) Ltd., 106a Commercial Street. Tel: (0595) 3057. Telex. 75295.
CUSTOMS ALLOWANCES: See "Lerwick".
REPATRIATION: Facilities for effecting crew changes.
AIRPORT: Sumburgh Airport 25 miles. British Airways several times daily. Tingwall Airstrip 3 miles.
HOLIDAYS: Cargo or shipping operations not affected by holidays.
POLICE/AMBULANCE/FIRE: Dial 999.
TELEPHONES: No arrangement for placing telephones on board. The Port Authority provide a telephone box in the harbour area.
SERVICES: Compass adjusting. Provisions of all kinds can be obtained locally.
SHORE LEAVE: Crew members allowed ashore.
AUTHORITY: Shetland Islands Council, Marine Operations Department, Port Administration Building, Sella Ness, Graven, Mossbank, Shetland ZE2 9QR. *Tel:* Sullom Voe (0806) 242551. *Telex:* 75142. *FAX:* (0806) 242237. *Contact:* Captain G.H. Sutherland, Director of Marine Operations. Captain K.J. Radley, Deputy Harbour Master/Deputy Port Director.

SCAPA FLOW (Flotta Terminal), Orkney Isles: 58.53 N. 03.05 W. (See Pla

NOTICE: Issued by Director of Harbours in August 1993.
Recommendations on Navigation for vessels bound to or from the Flo Oil Terminal and Scapa Flow:

The tidal flow in the Pentland Firth is such that Masters should p particular attention to the information and details contained in t Admiralty Tidal Stream Atlas – Orkney and Shetland Islands (NP 20 prior to their arrival in the area and also before departing Scapa Flo Failure to do so could result in difficulties arising for their vessels, d to the strong tidal currents experienced in the area.

RECOMMENDED ROUTES:

The recommended routes for arriving at the Pilot Station for the fi time are as follows:

Approaching from South East, bound for Westerly Pilot Boarding Ar

Vessels should pass 1.5 miles East of Duncansby Head then stee course to pass midway between Swona and Stroma Islands.

When approaching with the flood tide (Easterly flow) vessels shou maintain a Westerly course until at least 1.5 miles West of Swona Isla before proceeding to the Pilot Boarding Area.

With the Ebb tide (Westerly flow) vessels can steer towards the Pi Boarding Area once they are clear of the South end of Swona Islan

Approaching from West, to Westerly Pilotage Boarding Area:

Vessels should pass at least 2.5 miles South of Torness on the Isla of Hoy before setting course to the Pilot Boarding Area.

Easterly Pilotage Boarding Area - North of Swona Island:

It is not recommended that first time callers proceed between t islands of Swona and South Ronaldsay unless instructed to do so b the Pilot who should be on station at the Boarding Area prior to t vessel entering the Harbour area. Masters who are familiar with the ar may proceed between Swona Island and South Ronaldsay, but mu ensure that when proceeding with the flood tide they do not set on t the Lother Rock and with ebb tide do not set on to Swona Island.

Passage between South Ronaldsay and Muckle Skerry:

It is not recommended that vessels use this Channel.

DEPARTING SCAPA FLOW:

Recommended Routes following disembarking Pilot:

The Pilot will normally disembark between Nevi Skerry and Stang Head to allow the vessel to build up to full sea speed prior t encountering the tidal flow in the Pentland Firth.

West Bound Vessels:

The Master should proceed into the Pentland Firth passing one mi East of Switha Island and set a course to pass at least 1.5 miles Sou East of South Walls.

South East Bound Vessels:

The Master should proceed into the Pentland Firth passing one mi East of Switha Island and then proceed on a South Westerly cour keeping at least 1.5 miles West of Swona Island. A course can then b set to pass midway between Swona and Stroma Islands.

The vessel should then make a course to pass 1.5 miles North Ea of Duncansby Head.

The Master must keep a careful watch on the effect that the flood an ebb tides have on his vessel whilst turning to port.

With the ebb tide the vessel may be slow to respond due to t vessel's bow encountering the ebb tide whilst the stern is still in t eddy West of Swona.

Passage East of Swona Island:

It is not recommended that first time callers use this Chann Providing Masters are fully aware of the tidal currents which will effe the vessel when passing between Swona Island and the Lother Roc it is acceptable for vessels to proceed down this Channel.

It cannot be emphasised strongly enough that vessels will experien strong tidal set both Eastwards with flood tide and Westwards with e tide as they proceed down this Channel and also once clear of the Sou end of Swona Island.

Masters should make a course to pass midway between Swona an South Ronaldsay when Stanger Head is 0.5 miles abeam.

When abeam of the North end of Swona Island the Master shou steer a course keeping to the middle of the Channel. A careful wat must be maintained on the vessel's course and speed as the very stro tides can quickly set the vessel towards the Lother Rock with flood ti and towards Swona Island with the ebb tide.

Once clear of the Lother Rock a course can then be set to pa 1.5 miles East of Duncansby Head.

Passage between South Ronaldsay and Muckle Skerry:

It is not recommended that vessels use this Channel.

MANOEUVRING SPEEDS - BOARDING AND LANDING PILOTS:

Masters should where possible, when approaching the Pilot Boar Area, maintain full sea speed until advised to reduce by the Pilot. Mas should also bring their vessels up to full sea speed once the Pilot h disembarked. The normal speed for boarding and landing pilots 6 knots.

The Master should ensure that his vessel is in hand steering and in automatic pilot prior to entering the Pentland Firth and also until w clear of the area.

Normal *Rule of the Road* applies in all cases when vessels a approaching or departing the Pentland Firth or Scapa Flow.

SUSPENSION OF BOARDING AND LANDING PILOTS:

In severe weather conditions boarding and landing of Pilots may suspended. Masters will be advised by Orkney Harbour Radio as so as possible when these restrictions are in operation. They will be k fully informed on the most suitable area to await instructions to proc to the Pilot Station once boarding and landing of Pilots is resumed

ORKNEY HARBOUR RADIO:

Masters should contact Orkney Harbour Radio on VHF Channel 16 at least 2 hours prior to arrival at Pilot boarding areas for update on shipping, tidal and pilotage information.

If in any doubt regarding pilotage, tidal or shipping movements in the Pentland Firth or Scapa Flow contact Orkney Harbour Radio on VHF Channel 16.

Masters and Owners should note that the above details are recommendations only and the final decision remains with the Master regarding the safe navigation of his vessel.

Editor's Note: Please also see Notice to Mariners No. 44 of 1993 (Notice No. 3706 – Scotland, North Coast – Shetland Islands – areas to be avoided and precautionary areas), and Admiralty List of Radio Signals – Volume 6 (specifically Notice to Mariners No. 45 of 1993 – Notices A 1591 and A 1599 which come into force on 28th November 1993).

DOCUMENTS:

Maritime Declaration of Health (Form supplied by Pilot or Agent).
Vaccination List.
Immigration Form H.O. Form IS6.
Crew Lists — 2 required.
Ship's Stores List.
Crew Personal Effects Declaration, Customs Form C.142.
Last Port Clearance.
Ship's Register.
Load Line Certificate.
Safety Construction Certificate.
Safety Radio and Safety Equipment Certificates.
Derat Certificate.
Previous British Light Dues Receipts.

Customs and Health: Weather permitting, Customs, Immigration, Health and Agent will embark inside Scapa Flow.

Customs House: Customs clearance inward and outward will be the responsibility of ship's Agents.

Light dues will be paid by the vessel.

Cargo Documents: Bills of Lading; Cargo Manifest, Quantity and Quality Report; Tanker Time and Loading Report; Certificate of Origin; Ship's Cargo and Ullage Reports; Master's Receipt for Shipping Documents and Documentation Transmittal Reports will be prepared by Company Representative.

Ship's Agent: All ship's business other than Cargo and Customs documentation and the shipping documents under section above will be conducted by the ship's Agent.

EDP: Early Departure Procedures apply to most vessels. Blank Bills of Lading are signed by the Master on arrival, and the tonnages inserted on completion of loading.

APPROACHES: The approach to the Terminal is through the Pentland Firth from East or West, and then Northward through Hoxa Sound, the main entrance to Scapa Flow. Consult Admiralty Sailing Directions Vol. 1, and Admiralty Tidal Stream Atlas for Orkney and Shetland, Publication No. 209. Principal charts are as follows and Decca coverage is available: Admiralty Chart Nos. 2162, 2581, 35.

PILOTAGE: Pilot vessels *Scapa Pathfinder, Scapa Pilot* and *Scapa Pioneer* watch VHF Channel 16.

Inside pilot station (Lat. 58° 46′ N., Long. 03° 07′ W.) located 2 miles 180° from Cantick Head Lighthouse.

Unfamiliar vessels, VLCCs, also any vessel without full information about the unusually strong currents in Pentland Firth is recommended to embark the Pilot at the appropriate outside position (Refer to Tidal Stream Atlas, Admiralty Publication H.O. Number NP 209).

Port Restrictions which may cause delays: Weather preventing embarkation of Pilot at either inside or outside positions.

Local wind conditions in Scapa Flow preventing a safe approach to the berth.

Remarks: In Scapa Flow the weather conditions, in particular the wind, can change suddenly and quickly deteriorate, not only in Winter but at any time of the year.

Mooring Masters: A Company Mooring Master will board vessels to the Northward of the Calf of Flotta or at her designated anchorage within Scapa Flow prior to berthing at any Terminal Facility. A Company Mooring Master will be on board during the time that a vessel is moored and he will liaise between the Terminal and ship personnel throughout any deballasting, loading or discharging operation.

The Company Mooring Master may ensure that Masters of vessels are familiar with, and strictly observe, all local regulations concerning the safety of operations and pollution of the sea by oil whilst laid at the Company's facilities.

Vessels using the Company's facilities are required to provide the Mooring Master with accommodation and messing of a standard equivalent to that enjoyed by the vessel's officers.

ANCHORAGE: Inside Scapa Flow several anchorages are available depending upon prevailing winds. Sea anchorage outside, in the approaches to the Pentland Firth, is not possible.

MAX. SIZE/RESTRICTIONS: The current maximum sizes of crude tankers permissible at Flotta is 200,000 d.w.t. at the SPMs and 150,000 d.w.t. at the jetty.

Since the advent of segregated ballast tankers, an anomaly has arisen between the physical size of tankers, upon which these maximums are based and the deadweight capacity. In order to prevent confusion as to the size of tanker that is acceptable, the following guidelines will be enforced.

	Conventional Ballast Tankers	*Segregated Ballast Tankers*
SPMs	200,000 d.w.t.	170,000 d.w.t.
Jetty	150,000 d.w.t.	130,000 d.w.t.

Prior to accepting crude vessels it must be clarified whether the vessel is a segregated ballast tanker or a conventional ballast tanker. If a segregated ballast tanker then the deadweight must be indicated. If the tanker has been converted from a conventional ballast tanker to a segregated ballast tanker, then the original deadweight should also be indicated.

RADIO: Arrival Notices.

Pilots: By coastal radio station 24 hours and 12 hours prior to arrival. VHF contact at least 3 hours prior to arrival at the pilot station.

Terminal: By coastal radio station 7 days, 72, 48 and 12 hours prior to arrival at the pilot station.

VHF contact should be established at least 3 hours prior to arrival at the pilot station.

The Terminal must be advised by VHF via the "Harbour Control", when the Pilot has boarded or when 6 miles from Stanger Head at the entrance to Hoxa Sound.

INFORMATION REQUIRED PRIOR TO ARRIVAL:

Radio Advice Prior to Arrival: Terminal operated by Elf Enterprise Caledonia Ltd., Flotta Terminal, Telex: 75212 (Eecflo G), via Portishead Radio, of ETA with following details. Also advise Agent of ETA, drafts fore and aft for arrival, and any immediate requirements on arrival.

Standard Message to Crude Vessels (Initial Visit): Masters are advised that reception facilities are available for clean ballast only. All ballast must be discharged to reception facilities ashore. No ballast from either cargo or permanent ballast tanks is permitted to be discharged into Scapa Flow.

Please advise the following details:

AAA	Arriving and sailing drafts and ETA.
BBB	Cargo requirements in metric tonnes.
CCC	Grade of previous cargo.
DDD	Quantity of Cargo tank ballast and position uplifted.
EEE	Quantity of permanent ballast and position uplifted.
FFF	Quantity of ballast for discharge ashore.
GGG	Last port and destination.
HHH	Is inert gas system fully operational and cargo tanks inerted?
JJJ	Oxygen level in cargo tanks.
KKK	Gross nett and summer d.w.t. tonnages.
LLL	Maximum loading rate.
MMM	Total time for deballast.
NNN	Number and size of cargo manifolds.
OOO	Availability of reducers to adapt manifolds to suit 16 in. 150 ASA flanges three required.
PPP	Can vessel load and deballast simultaneously while maintaining a minimum of a two valve separation?
QQQ	Is vessel equipped with a patent A.K.D. stopper or similar capable of accepting an 80 mm. end link?

Vessels are required to load part cargo prior to discharging ballast.

Minimum 10 ton SWL derrick required on port side for SPMs. Derrick required at jetty if it is necessary to fit spool pieces to accept loading arms. Ballast manifold is aft of two crude connections on SPM.

Your attention is drawn to the serious view taken by Port and Terminal Authorities of pollution. Heavy fines are imposed to which is added the cost of clean-up operations. Please ensure all crew members are conversant with and comply with pollution requirements.

Principal pollution causes are leaking sea valves overboard discharge valves and cargo or bunker overflows. We recommend sea valves, overboard discharge and bilge discharges are checked tight. Prior arrival cargo and bunkering procedures should be reviewed with chief officer and chief engineer. All scuppers to be plugged.

NOTE: On subsequent visits vessels should only answer AAA to JJJ inclusive.

Standard Message to Liquid Gas Carriers (Initial Visit):

LIQUID GAS CARRIERS ARRIVING AT SCAPA.

LPG vessels arriving at Flotta Terminal with ballast for discharge to Scapa Flow will comply with the following instructions in respect of this ballast.

1. Ballast for discharge must have been taken on board within 24 hours of arrival and at a distance of at least 12 miles off shore.

2. The Master will provide the Terminal with signed advice stating date, time and positions between which ballasting operations were carried out, quantity of ballast for discharge and tanks in which it is contained.

Harbour Authority Officials may board vessels to ascertain that these procedures have been adhered to and the quality of the ballast is suitable for discharge. The Authority's decision as to whether or not the ballast is acceptable for discharge will be final. Non compliance will result in delays being occasioned by the vessel.

Masters are advised that this concession for discharge of permanent ballast relates only to LPG carriers and your attention is drawn to the serious attitude adopted by Port and Terminal Authorities to pollution incidents of any kind.

To prevent problems arising due to surge pressures caused by too rapid closure of emergency shutdown valves (ship side) it is required that the minimum closure rate from fully open to completely closed be 9 seconds when loading LPG or 13 seconds for Ethane loading.

Please advise the following details:

AAA	Arriving and sailing draft and ETA.
BBB	Cargo requirements in metric tonnes.
CCC	Previous cargo and quality of tank atmospheres.
DDD	Tank temperature on arrival.
EEE	Time required for cooldown.
FFF	Height of manifold above water line at arrival draft.
GGG	Closure timed of emergency shutdown valves.
HHH	Quantity of ballast and amount to discharge.
JJJ	Last port and destination.
KKK	Gross, nett and summer deadweight tonnages.
LLL	Maximum and cooldown loading rates.
MMM	Availability of deck tanks to accept coolant and quantity required.
NNN	Size of cargo/vapour return manifold and position of vapour return manifold relative to cargo manifold.

Purging and/or coolant is not carried out alongside.

Vessel will require to load sufficient coolant for purging and/or coolant to be carried out at anchor.

NOTE: On subsequent visits vessels should only answer AAA to JJJ inclusive.

VHF: *Harbour Pilots and Harbour Control:*
VHF Listening: 16 Telex: 75475
Working: 9, 11 and 20
Mooring Masters/Terminal:
Mooring Masters 161.15 } Private Frequencies Only
Terminal 161.30 }
Loading Operations 161.15 } Private Frequencies Only
" " 161.30 }

N.B. Launches are fitted with VHF Listening Channel 16.
Working Channels 14, 12, 8, 6

HEALTH: See "Health – All Ports" before first U.K. port.

READINESS: *Notice of Readiness to Load/Discharge:*

Notice of Readiness will be accepted subject to the following conditions;—

a. The Terminal is open (this decision shall be communicated to the Master of the vessel by the Company).

b. (i) The vessel has been boarded by the Company Mooring Master prior to her proceeding towards the berth *or*

(ii) The vessel has anchored within the anchorage area awaiting a berth.

N.B. Although vessels will be loaded in order of acceptance of Notice of Readiness, it should be borne in mind that acceptance of Notice of Readiness is contingent upon complete compliance with all the requirements of Port Conditions.

c. Acceptance of Notice of Readiness may be withdrawn by the Company upon the occurrence of any of the following events:

The decision by the Mooring Master that the vessel's drafts, equipment and/or appurtenances are not suitable for berthing at the Terminal. If this decision has not been taken, for reasons within the Mooring Master's control, within 24 hours from Acceptance of Notice of Readiness, the Company shall be deemed to have waived its right to withdraw acceptance under this sub-paragraph.

Any supervening decision of the Harbour Authority which prevents the vessel from berthing.

N.B. A derrick or crane with a safe working load of not less than 10 tons is required for handling hoses at the SPM berths.

TUGS: 3 tugs (2×50 ton bollard pull and 1×54 ton bollard pull) are available, and compulsory, for berthing. They are fire fighting tugs and equipped with Warren Springs pollution dispersent equipment.

Whenever a tanker is on a berth, 1 stand-by tug is anchored in the close vicinity for safety and pollution purposes. Fire wires must be rigged off-side forward and aft.

1 tug (standby tug) is towing aft whilst tanker is moored to SPM.

BERTHING:

Position:
SPM 1: Lat. 58° 52′ 11.86″ N., Long. 3° 07′ 20.68″ W.
SPM 2: Lat. 58° 52′ 17.72″ N., Long. 3° 05′ 47.79″ W.
Main Control Building (Radio Mast): Lat. 58° 50′ 31.05″ N., Long. 3° 07′ 08.01″ W.

SPM Particulars:
Pillar Type Single Buoy Mooring – 2.
Tanker Size – 35,000 d.w.t. – 200,000 d.w.t.
Minimum Water Depth – 75 ft.
Max. Draft – 72 ft.
Mooring System – 10 m.×3 in. chain, 40 m.×21 in. rope grommet, 10 m.×3 in. chain and 6 m.×2.625 in. chain.
Crude Manifolds – 2×16 in.
Ballast Manifolds – 1×16 in.
Maximum Loading Rate – 80,000 bbls.p.h.
Hose Weight – Minimum 7.5 tons

Ballast connection is positioned aft of the 2 crude connections.

A load monitoring system is fitted to each SPM giving constant strain readings to the Terminal Control Room and the Mooring Master on board the tanker. In adverse weather conditions strain gauge readings will indicate when vessel should prepare to vacate the berth.

LPG/Crude Oil Jetty:
Finger type jetty with breasting dolphins.
Tanker Size – 4,000 d.w.t. – 150,000 d.w.t.
Minimum Water Depth – 63 ft.
Maximum Draft – 62 ft.
LPG Manifolds – 1×10 in. loading plus 1×10 in. vapour return.
LPG Loading Rate – 10,000 bbls.p.h.
Crude Manifolds – 4×16 in.
Crude Loading Rate – 80,000 bbls.p.h. maximum.
Ballast Manifold – 1×16 in. (crude gantry only).
Maximum Deballasting Rate – 40,000 bbls.p.h.

LPG: Gas tankers also load at the jetty and in their case the only relevent restriction is a requirement for the cargo manifold flange to be able to work within the operating envelope of the LPG loading arms which have the following parameters:- Max. Airdraft 13.18 m.; Min. Airdraft 1.75 m.; Max. distance ship's side to flange 7.0 m.; Min. distance ship's side to flange 3.1 m.

Terminal Capacity:

1. Crude Oil:

There are 5 tanks, each of 500,000 bbls. nominal capacity for storage of stabilised crude oil, plus a further 2 of 1,000,000 bbls. each.

2. Liquid Petroleum Gas:

There are 2 tanks, each of 100,000 bbls. nominal capacity for storage of propane.

3. Ethane:

There are 5 ethane tanks, each of 500 cu.m. nominal capacity.

Remarks: Vessels moored to the SPMs are required under conditions to maintain a tug towing astern to keep the mooring system under a tension of 15 tons – 20 tons.

When ship's piping does not permit the pumping of permanent ballast through the manifold, the possibility to load some cargo prior to deballasting the cargo tanks' clean ballast may be granted by prior arrangement with the terminal. In all cases where ships intend to deballast and load simultaneously there must be at least a 2 valve separation.

Lightering Operations: Ship-to-ship lightering operations can be car out in Scapa Flow on vessels up to 72 ft. draft.

Tug facilities and oil pollution equipment readily available.

DENSITY: 1025.

MOORING AND HOSE HANDLING:

On SPMs: Ship's derrick (SWL 10 tons) and manifold connections w require to be prepared on the port side. An accommodation ladder w be rigged to starboard with a pilot ladder ready to port.

Securing equipment for single chain mooring forward and ho connecting gear will be hoisted on board from Company work laun by ship's derrick. A good mooring line will be required from forecas head as a messenger for the buoy mooring.

Tanker Loading Pier: The loading pier is equipped with rigid articula pipe arms mounted on gantries for loading liquid petroleum gas and a for loading crude oil. The crude oil gantry is also fitted with a balla discharge arm.

There is an access roadway between the Pier head and the sho Mooring lines are run to dolphins by terminal mooring boats. Vesse with tension winches when moored at the pier must have winches 'Manual brake'.

Arrival Draft: Vessels must arrive at the Company's facility in a adequate ballast condition compatible with safe manoeuvring dur handling. Excessive trim or insufficient ballast could incur delay un such time as an acceptable condition is reached.

BALLAST: All berths are equipped with water ballast discharge line There is a water ballast tank of 500,000 bbls. capacity and a balla treating facility capable of handling 40,000 bbls.p.h. It is prohibited discharge water ballast into Scapa Flow.

Bilge Ballast Discharge: Vessels should arrive in Scapa Flow with cle ballast only.

The discharge of bilges and/or ballast by vessels into Scapa Flow strictly prohibited.

N.B. All ballast water including permanent ballast must b discharged through the Terminal ballast reception and cleaning faci

Discharge of ballast and simultaneously lifting of cargo is not permit unless approval has been given by the Mooring Master.

The salvage in ballast shall become the property of the Company, consideration of the Company's operation of the Terminal balla reception and cleaning facility.

MEDICAL: Medical and dental services are available by arrangemen Hospital facilities are available at Balfour Hospital, Kirkwall.

FRESH WATER: Not available.

FUEL: Bunkers not available at present, but lubricants in small quan available. Ships should cable requirements to Agent as soon as possib

CONSULS: Denmark, Netherlands, Norway and Germany.

REPAIRS: There are no dry-docking facilities available, but loc engineering firms undertake minor repairs to machinery and equipme

Immobilisation of Engines: Not allowed on any of the berths, and n recommended when at anchor. When at the anchorage, however, special circumstances, and provided the Harbour Master's permiss is first obtained, it may be possible.

TRAVEL: There are daily air services, during the week, to Aberdee Inverness, Glasgow and Edinburgh from Kirkwall Airport. There is n service on Sunday, There is a daily ferry service from Stromness Scrabster to connect with British Rail. During the Winter months the is no service on Sunday.

LAUNCH SERVICES: Launch services from Flotta and SPM berths a available by arrangement with local Agents to Scapa Pier.

SAFETY: Should communications fail, the Mooring Master will authori continuous soundings of the ship's whistle or siren as a signal to s loading (ships in the vicinity capable of so doing should inform t Terminal Control by VHF that this signal is being sounded in case it inaudible ashore). Ships hearing the signal and unable to contact t Terminal should inform "Harbour Control".

SERVICES: Stores are of good quality, and the laundry facilities a good, but limited. Tank cleaning facilities are not available.

GARBAGE DISPOSAL: Skip provided on Scapa Pier free of char and collected as required, otherwise by arrangement through loc agent.

WASTE OIL DISPOSAL: No waste oil disposal facility.

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£).

SHORE LEAVE: There are no restrictions on shore leave for shi personnel. For vessels moored at SPMs arrangements can be ma with the Agent for a launch service to be operated to the shore. F safety reasons, the boat selected for this service must have goo stability, to prevent accidents in cases of hazardous boarding due weather conditions.

GENERAL:

Accidental Spills and Leakage: All oil spills and leakages must b immediately reported to the Mooring Master, who will inform the Harbo Authority forthwith. All deballasting/loading/discharging operations w be immediately suspended until the cause of the spill/leakage has be determined, and rectified to the satisfaction of the Mooring Master, a the Harbour Authority.

Galley and Other Refuse: Dumping of all refuse into Scapa Flow a approaches is prohibited. Refuse must be retained on board in sea containers. (Vessels in port over a long period may make arrangem with their local Agent for collection).

Lighting: Sufficient lighting must be provided in the way of all overbo discharge points to facilitate detection of leaks or spillage. Adequ lighting must also be provided at the loading manifold.

Lifting of Stores; When tankships are at SPMs, loading or off-loadin stores, provisions, drums or any other goods or articles on, to or fr the main tank deck is prohibited while cargo is being lifted.

Under certain circumstances and with the approval of the Compa Mooring Master, stores may be worked on the poop during the ca lifting.

When tankships are moored at the pier, vessels and boats are prohibited from coming alongside during cargo lifting, unless all cargo operations are shut down, all tank openings are closed and secured, and permission from the Mooring Master has been obtained.

Working of stores over the pier will not normally be allowed.

During Loading/Deballasting Operations at SPMs: Mooring Masters will carry Company communication equipment. Ship's VHF must also be available to the Mooring Master at all times. Ship's whistle must be available throughout the time a Mooring Master is on board.

Emergency signals in the event of complete communication failure will be as follows:

By day: Continuous blasting of ship's whistle accompanied by the hoisting of 2 black balls in a position conspicuous to the Terminal Control Room.

By night: Continuous blasting of ship's whistle accompanied by continuous flashing on an Aldis type signal lamp aimed towards the Terminal Control Room.

In the event of such a communication failure all loading operations shall cease until an effective means of communications has been established.

AUTHORITY: Orkney Islands Council, Department of Harbours, Harbour Authority Building, Scapa, Orkney KW15 1SD. *Tel:* 0856-873636. *Telex:* 75475. *FAX:* 0856-873012. *Contact:* Captain R.C. Sclater, Director of Harbours. Call Sign "Flotta Terminal". *Contact:* Duty Marine Superintendent.

SCRABSTER: 58.37 N. 03.33 W. (See Plan)

LOCATION: Inside Holborn Head on Thurso Bay.
PILOTAGE: Not compulsory. Pilots can be contacted on Channel 16, working Channel 12.
ANCHORAGE: Excellent anchorage in bay, close to high land on North side. Good shelter.
APPROACHES:

Scrabster Harbour Ro/Ro ferry pier – LT.QK.FL.G4.M.
Inner harbour entrance East pier head – LT.2FG(vert).
West pier head – LT.2FR(vert).

MAX. SIZE: Ro/Ro Berth: LOA 90 m., draft 6.0 m.
Lay-By: LOA 80 m., draft 4.5 m.
LOA 120 m., draft 3.0 m.

The entrance to the tanker berth is 26.0 m. wide and to the inner harbour 15.0 m. wide.

VHF: Multi-Channel VHF set in Harbour Office. Calling Channel 16, working Channel 12 (24 hours).
TUGS: None.
BERTHING:

Berth	*Length* (m.)	*Depth at L.A.T.* (m.)
Deep Water – Ro/Ro	96.0	5.5
Lay-By	100.0	4.5
Tanker Berth	72.0	3.0
Old Fish Market	114.0	1.0
New Fish Market	123.0	4.5
New Landing/Lay-By	140.0	4.5

Ro/Ro Facility: Ramp: 100 tonne maximum on 8 axles, 4 m. wide roadway. No height restrictions, all states of tide.
CRANES: Mobile cranes up to 100 tons available.
SPECIALISED CARGO HANDLING FACILITIES: Mineral handling by single grab at rate of 500 tons per day direct into lorries. No storage available at present.
STEVEDORES: Cargo worked 24 hours.
TANKERS: Vessels up to 2,000 d.w.t. can use Tanker Terminal.
FRESH WATER: Available at all berths.
FUEL: Available from BP Terminal or Texaco by road tanker. No overtime charges.
REPAIRS: Engine and hull repairs can be undertaken at 24 hours notice.
AIRPORT: Nearest at Wick, 32 km. away.
HOLIDAYS: Usual U.K. holidays.
GENERAL: *Charts:* B.A. Charts No. 2162 and 1462.
Ice Plant: 50 tonnes per day. Storage 90 tonnes tube ice.
Tidal Reference: H.W. Dover – 2 hours 30 minutes. Range 5.0 m. M.H.W.S. and 3.7 m. M.H.W.N.
Stores: Available.
Bonded Stores: Available at 48 hours' notice.

AGENT: Scrabster Harbour Trust, Shipping Agents, see above.

SEAHAM: 54.50 N. 01.19 W. (See Plan)

PILOTAGE: Not compulsory. Pilotage Service available with VHF watch on Channel 16 over tidal period. Call sign: Seaham Harbour Pilots. Tel: (091) 5813246.
ANCHORAGE: Good anchorage approximately 1 mile N.E. of North Pier Lighthouse. Shallow water and rocks to South of South Pier (Liddle Scars). Depth on bar at HWST 6.85 m.
RESTRICTIONS: The entrance to harbour is formed by North and South Piers and is 84.34 m. wide. South Dock gates are manned from 2.5 hours before HW to 1.5 hours after HW. Gateway to South Dock 19.81 m. wide.

No vessel can enter at LW and entrance should not be attempted during strong on-shore winds.

MAX. SIZE: *Largest Vessel:* 120 m. LOA, 16 m. beam and draft subject to tidal rise.
VHF: VHF watch on Channel 16 over tidal period and during office hours (0800 – 1800 hrs.) Monday – Friday. Working Channels 6 and 12.
TUGS: 1 tug with 8 tons bollard pull available.
BERTHING: *South Dock:* 8 berths. 625 m. quayage with cranage up to 100 tons capacity. Gravity spouts and conveyors for loading vessels up to 6,000 tons. 60 ton weighbridges with 18.4 m. platforms available. Railway connections.
North Dock: Used by fishing boats only.
CRANES: Five crawler cranes with capacity up to 35 tons.
BULK CARGO FACILITIES: Chute, conveyor and cranage handling facilities available for loading/discharging bulk cargoes from/to road transport.
SPECIALISED CARGO-HANDLING FACILITIES: *Container and Ro–Ro Facilities:* Area available for handling containers. 42 ton container handling forklift truck available.
STEVEDORES: *Working Hours:* Monday to Friday 0800 – 1200 hrs., 1300 – 1700 hrs. Overtime to be ordered by 1300 hrs.

Saturday and Sunday: Work at overtime rates can be arranged with 8 hour minimum period. Weekend overtime to be ordered by 1600 hrs. Friday.

Public Holidays: Overtime possible except New Year's Day, Christmas Day and Boxing Day.

MEDICAL: Hospital at Sunderland, distance 6 miles.
TANKERS: No facilities.
FRESH WATER: Available on quay.
FUEL: Available by barge or road tanker.
REPAIRS: Facilities available at Sunderland and the Tyne.
OPENING/CLOSING HATCHES: By crew.
AIRPORT: Newcastle Airport, 32 km. Teesside Airport, 40 km.
HOLIDAYS: Christmas Day, Boxing Day and New Year's Day.
POLICE/AMBULANCE/FIRE: Dial 999.
EMERGENCY CO-ORDINATION CENTRE:
Maritime Rescue and Search Centre. Tel: North Shields 091–2572691.
BANKS: Barclays, National Westminster, Lloyd's and Midland.
GENERAL: *Chart:* B.A. Chart No. 1627.
Weather: The prevailing winds are from the West.
Tides: Normal range in enclosed dock: 1.97 m. Spring range 4.42 m. Neap range 3.5 m.
Provisions: Available from local chandlers.
Storage: Transit shed of 1,394 sq.m. and warehouse space of 16,000 sq.m. Open storage of 10 acres also available.
GARBAGE DISPOSAL: Bins and skips are sited in port area for galley and operational waste. No charge unless large quantities involved.
WASTE OIL DISPOSAL: Road tanker collection service available via Port Authority. Charges are quoted case by case on request.
SEAMAN'S CLUBS: Seaham Seafarers Centre is adjacent to the port entrance, facilities include telephone, television, book exchange, pool table and bar.
CURRENCY: U.K.Pound (U.K.£).

Hicks, Operations Director/Harbour Master.

SHARPNESS and GLOUCESTER: 51.43 N. 02.29 W. (See Plan)

The Port of Gloucester comprises the enclosed Docks at Sharpness and Gloucester connected by the 16 mile ship canal named "The Gloucester and Sharpness Canal" and all waters within.

Gloucester Harbour, the esturial waters of the River Severn, extending N.E. from the limits of the Ports of Newport and Bristol to Bigsweir on the River Severn. Gloucester Harbour Trustees act as the Navigation Authority responsible for all pilotage and conservancy matters.

PORT LIMITS: Sharpness Dock sea lock sill.
DOCUMENTS:

1 Crew's Effects List.
2 Ship's Report by Master.
1 Home Office Form 1B.6.
3 Stores Lists.
1 Cargo Declaration – Non EEC Cargoes Form C1600A.
1 Grain Certificate.
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List.
1 Landing Card for each passenger.
Ship's Certificate of Registry.
Oil Pollution Certificate.

In addition Manifests and Bills of Lading are usually sent to Agent direct from loading port.

PILOTAGE: Pilotage is compulsory. Masters of vessels bound for the Ports of Gloucester, Sharpness, Chepstow and Lydney requiring the services of a Pilot at the Barry Roads Station must give at least 24 hours notice of their intended arrival at the Pilot Station. Failure to give this notice could lead to a vessel being delayed. Draft and Summer d.w.t. are also required. Masters who expect their passage time to be less than 24 hours should send advice from their sailing port with d.w.t. tonnage, draft, speed and ETA. Masters of vessels bound for Chepstow should also state mast height above the appropriate water line and whether masts can be lowered. (Vertical clearance limited by Bridge to 52 ft. (15.8 m) above MHWS)

Vessels are boarded at Barry Roads by the Bristol and Gloucester Pilot Cutter which is equipped with VHF Channels 16, 6, 8, 9, 11 and 14. Radio contact with the Cardiff Pilot Cutter should be made not later than 1 hour before arrival at Breaksea Buoy. In fog ships sound "9" (4 longs, 1 short). Pilot replies the same. Masters can send ETAs direct to the Duty Pilot. Tel: (0860) 232736.

Dock Pilots: Dock Pilots are available, not compulsory but advisable for berthing in Sharpness Dock, transit of the Sharpness Canal and in Gloucester Dock.

ANCHORAGES: Barry Roads afford good anchorage in moderate weather for vessels awaiting a Pilot.

RESTRICTIONS: 3 ft. (0.9 m.) water clearance over outer sill for vessels of maximum draft 21 ft. 6 in. (6.55 m.) Neap tides impose certain restrictions.

Beam	*Clearance Required*
Less than 10.36 m.	0.61 m.
10.36 m. – 13.71 m.	0.76 m.
13.72 m. – 16.76 m.	0.91 m.

Note: Sharpness Dock cill dries out at LW.

MAX. SIZE: Maximum Length – no restriction. Maximum beam – 55 ft. (16.76 m.) Maximum draft – 21 ft. 6 in. (6.55 m.) fresh water.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Niton Radio, Lands End Radio, Ilfracombe Radio.

VHF: Sharpness Radio Channels 16, 17, 14 and 9. Range normally within pilotage waters only.

TUGS: *(River):* Larger vessels normally pick up tugs off Avonmouth if required by Pilot. *(Dock Tugs):* Not suitable for river work. 3 tugs available in Sharpness Dock and for use between Sharpness and Gloucester if required. All tugs take ships lines.

BERTHING: Max. draft 21 ft. 6 in. (6.55 m.) Fresh Water. Range of dock level 4 in. (0.1 m.)

Available Berths: 10 to 14 berths depending on ship length. This includes a scrap berth. Available length of Quay – 12,000 ft. (3,660 m.).

Cargo Equipment and Methods: Cranes 3×3 tons, 5×6 tons, all Portal and 1 Scotch Derrick of 32 tons. 3×6 tonnes Mobile Cranes, Grabs, Slings and Pallets, etc. Load/discharge by shore gear.

BULK CARGO FACILITIES: 1×10,000 ton grain silo, 2 cement silos, 1 timber terminal, 1 coal terminal, 1 scrap terminal, 300,000 sq.ft. covered storage space, 1 Ro/Ro berth. 1 fertiliser terminal. Wide range of equipment, including bagging – blending facilities. Ample open storage area.

BRIDGES: 16 swing bridges between Sharpness and Gloucester. Mast height restriction 32 m. (105 ft.)

STEVEDORES: British Waterways Board.

Normal Working Hours: Monday – Thursday 0745 hrs. – 1300 hrs., 1400 hrs. – 1700 hrs. Friday 0745 hrs. – 1300 hrs., 1400 hrs. – 1600 hrs. Overtime as requested.

MEDICAL: Absolutely necessary for Agent to have as much notice as possible if any medical attention is required. All facilities available.

DENSITY: 1000/1003.

FRESH WATER: Available by stand pipe, 20 t.p.h.

FUEL: Through Agents, 12 hours notice, most grades available.

FIRE PRECAUTIONS: According to local laws available on request.

CONSULS: See "Bristol".

REPAIRS: All types of deck and engine repairs are possible.

DRY DOCK: 360 ft. by 47 ft. by 14 ft. over blocks.

SURVEYORS: Most Societies are available.

GANGWAY/DECK WATCHMEN: Ship's personnel, but watchmen can be arranged if necessary.

HATCHES: Opened by ship's crew.

CUSTOMS ALLOWANCES: As for other U.K. ports.

REPATRIATION: All arrangements through Agents.

AIRPORT: London or Birmingham within 2 hours. Local taxi service available.

TIME: BST is GMT plus 1 hour. GMT in Winter months.

HOLIDAYS: Easter (varies). May Day. Spring Bank Holiday (last Monday in May). August Bank Holiday (varies, usually last Monday in August). Christmas Day (25th December), Boxing Day (26th December). Work can usually be arranged on these holidays although unusual to work 25th/26th December.

POLICE/AMBULANCE/FIRE: Telephone 999 ask for service required.

TELEPHONE: No ship to shore connection. Public telephone kiosks available.

SERVICES: Taxi. Laundry. Ship chandlery.

SHORE LEAVE: Possible.

IDENTIFICATION CARDS: Not necessary unless being repatriated.

GARBAGE DISPOSAL: Garbage skips provided on quays with frequent collections and no separate charges. Any special requirements arranged through agents.

WASTE OIL DISPOSAL: Collection by tanker trucks from working berths. Arranged and charged through ship's agents.

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£).

REGULATIONS: British Waterways Board Byelaws 1962.

GENERAL: *Gloucester and Sharpness Canal and Gloucester Doc*
Maximum size of vessel: Length 205 ft. (62.5 m.), beam 31 ft. (9.45 m draft 11 ft. 6 in. (3.5 m.) fresh water. Vessels exceeding the dimensions may be considered subject to Harbour Master's approva

Vale, General Manag Captain G.A. Boyack, Harbour Master. Captain K. Badsey, Assista Harbour Master. D. Simmons, Operations Development Manager.

SHOREHAM: 50.50 N. 00.15 W. (See Pla

DOCUMENTS and all general information, refer to "London". Distan from London, 80 km.

PILOTAGE: Pilotage is compulsory for all vessels over 50 m. LOA. Se ETA 12 hours and 2 hours in advance, including max. draft. Pilot boar within 2 nautical miles of harbour entrance. Tel: Brighton (0273) 5923 VHF: Channels 16 and 14. Hours: Tidal hours.

ANCHORAGE: Off Harbour. Depths as per English Channel Charts

RESTRICTIONS: No night restrictions. Locks manned 4 hours eith side of HW. According to size and draft these times can be extend by prior arrangement.

Main entrance channel, 122 m. wide, leads into a 91.4 m. channel the Eastern arm.

Dimensions of Prince Philip Lock: 113.9 m. length, 17.3 m. width.

MAX. SIZE: *Canal:* Length 105.9 m., beam 16.4 m., draft 6.7 m. (subje to tide). Vessels over 103 m. are subject to the Harbour Maste approval.

Western Arm: Length 82.3 m., beam 14.3 m., draft subject to tide a up to a maximum of 5.5 m.

East Arm: Max. LOA 120 m. Max. Draft 6.7 m., subject to tide a Harbour Master's approval.

HEALTH: See "Health – All Ports" before first UK port.

RADIO: Niton Radio/Northforeland Radio. ETA to Shoreham Harbo Master 24 hours prior to arrival.

VHF: When within VHF range advise Harbour Master (via "Shoreha Harbour Radio"), ETA, draft, beam, LOA and of any circumstanc which may affect seaworthiness or handling capacity of the vessel.

Port Operation and Information Service manned continuously, conta by VHF calling Channel 16, working Channel 14. Station is situated the locks. Tel: Brighton (0273) 592366.

TUGS: One tug (Bollard Pull 10 tonnes). Tug lines used for which extra charge. Communications between vessel and tug take place VHF Channel 11.

BERTHING: See "Restrictions".

Bulk wine terminal capable of handling 1,653,462 litres of wine available.

A grain silo terminal with a storage capacity of 13,000 tonnes ha been constructed within the canal.

STEVEDORES: Reasonable ETA is sufficient for gangs to be called

MEDICAL: All facilities available.

TANKERS: Texaco in the Canal.

DENSITY: Approx. 1025.

FRESH WATER: Available at most berths.

FUEL: Available by road tanker.

CONSULS: Denmark.

REPAIRS: Minor repairs possible.

SURVEYORS: Available locally.

GANGWAY/DECK WATCHMEN: Recommended.

HATCHES: Opening and closing by crew.

REPATRIATION: Possible.

AIRPORT: Gatwick Airport.

POLICE/AMBULANCE/FIRE: Dial 999.

TELEPHONES: There are no arrangements for placing telephone aboard ship.

BANKS: Barclay's, National Westminster, Lloyd's and Midland Bank have branches locally.

STORING: No restrictions. Stevedores not required to load stores.

SHORE LEAVE: Possible.

GARBAGE DISPOSAL: Individual berth operators provide sk alongside.

WASTE OIL DISPOSAL: Service available from local contractor by ta vehicles only. Contact Hales Waste Control Ltd. (Tel: Burgess H 243444).

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: Shoreham Port Authority, Harbour Office, Albion Stre Southwick, Brighton BN4 4ED. *Tel:* Brighton (0273) 592613. *FAX:* (02 592492. *Contact:* Captain J. Robertson, Harbour Master. P. La General Manager.

SILLOTH: 54.52 N. 03.24 W (See Plan)

PORT LIMITS: A vessel is considered to be an "arrived vessel" for the purposes of stemming when she arrives at the pilot station off Workington (see Admiralty Chart No. 1346). Laytime normally commences when the vessel berths in the New Dock, Silloth.

DOCUMENTS: Normal U.K. requirements.

PILOTAGE: Compulsory for all vessels of 50 m. in length and over, except for those qualifying for special exemption. Vessels should send their ETA to local Agents or to the Dock Master, Silloth, at least 12 hours before arrival. Pilot boat is stationed at Workington when vessels are expected and listens out on Channels 16, 14 or 12 VHF. Pilot boards vessels between 2.5 hours and 1.5 hours before HW, Silloth.

ANCHORAGES: Vessels may anchor at the pilot station in good weather, but are advised to seek shelter in Ramsey Bay, Isle of Man or Wigtown Bay in adverse weather conditions.

RESTRICTIONS: The port lies in a relatively sheltered position in the Solway Firth, and in consequence, access during adverse weather is mainly governed by the practicability of boarding and landing Pilots off Workington.

MAX. SIZE: *Neap Tides:* Length 85 m., beam 15 m., draft 4 m.
Spring Tides: Length 85 m., beam 15 m., draft 6 m.

Typically, the port is used by vessels of between 500 tonnes and 2,500 tonnes deadweight.

VHF: A "Port Operation" and Information Services operates on Channels 16 and 12 from 2.5 hours before HW, Silloth, call sign, "Silloth Harbour Radio".

TUGS: There are no tugs available at the port.

BERTHING: The port comprises two docks:

The outer, Marshall Dock is tidal and contains no berths.

The inner, New Dock is enclosed by dock gates which are opened from 1 hour before to 1 hour after HW. Minimum depths in the New Dock are maintained at 5.0 m. on Neaps and 7.0 m. on Springs. The specific gravity of the water in the dock is normally about 1.022.

Cargo Berths: The New Dock contains 7 berths:

Berth No. 1: A "single user" bulk grain import berth operated by Carr's Flour Mills Ltd. Suction elevators, 60 tonnes p.h.

Berth No. 2: A general cargo berth with limited quay space.

Berth No. 3: A specialised bulk molasses import terminal operated by Carr's Flour Mills Ltd. and general cargo berth.

Berth No. 4 'A': A "common user" import terminal for bulk agricultural materials (mainly animal feeds) operated by D. A. Harrison & Co. Suction elevators and grabs; 100 tonnes p.h., automated handling and storage.

Berth No. 4 'B': A specialised import/export bulk cement terminal operated by D. A. Harrison & Co. 100 tonnes p.h., automated handling and storage of cement powders.

Berth No. 5: Main general cargo berth. Mobile cranes and elevator, heated-covered storage.

Berth No. 6: Specialised livestock import terminal under the control and supervision of M.A.F.F. officials. Lairaging facilities for 800 cattle. The berth can also be used for general cargo.

Berth No. 7: General cargo berth for small vessels of up to 50 m. in length.

BULK CARGO FACILITIES: See "Berthing".

CRANES: 3×30 tonne mobile cranes are permanently available in the port. Larger or additional cranes can be conveniently hired in. Ship's gear is never used.

STEVEDORES: D.A. Harrison & Co., Anvil House, West Newton, Aspatria, Cumbria. Tel: (06973) 20529. Telex: 64493. Working hours in the port are unlimited 24 hours per day, 365 days per year.

Storage: Stevedores D.A. Harrison & Co. also operate a large covered storage facility adjacent to the Port with a capacity of more than 40,000 tonnes, and can provide inland road transport to and from this facility to all parts of the United Kingdom using own vehicles.

W & S Midlands, c/o Pasturefields Garage, Great Haywood, Nr. Stafford, Staffs (Tel: (0889) 270710) with covered storage at nearby Kirkbride.

FRESH WATER: Available at all berths.

FUEL: Fuel oil can be loaded from road tanker.

REPAIRS: Any type of repair which does not require dry dock facilities can be carried out by local contractors.

DRY DOCKS: None.

HATCHES: Always handled by ship's crews.

AIRPORT: Nearest airports are Carlisle, 39 km., Newcastle 140 km., Prestwick 225 km. and Manchester 260 km.

POLICE/FIRE/AMBULANCE: Police: Tel. 999 or (06973) 31313; Fire: Tel. 999; Ambulance: Tel. 999. Local doctor's surgery (06973) 31309. The nearest public telephone is at the entrance to the docks.

BANKS: The Midland Bank, Station Road, Silloth. The National Westminster Bank, Eden Street, Silloth.

GARBAGE DISPOSAL: Skips are provided alongside and can be ordered through the agent or port authority. Skips delivered and collected during normal office hours, or outside by arrangement.

WASTE OIL DISPOSAL: Up to 10 tonnes can be collected by road tanker. Contact D.A.Harrison. (Tel: 06973-44000).

SEAMAN'S CLUBS: No Seaman's club. A small town is within 5 minutes walk, and can provide most requirements.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: Associated British Ports, Dock Office, Silloth Docks, Cumbria CA5 4JQ. *Tel:* (06973) 31358. *Cables:* Dock Office, Silloth. *Contact:* Captain C. Puxley, Dock and Marine Superintendent.

SOUTHAMPTON (Including Fawley): 50.54 N. 01.24 W. (See Plan)

DOCUMENTS:

1 Maritime Declaration of Health.
1 Crew's Effects List.
2 Ship's Reports by Master.
1 Home Office Form 1B6.
1 Stores List.
1 Certificate of Deck Cargo Tonnage.
1 Grain Certificate.
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List.
1 Landing Card for each Passenger.
Ship's Certificate of Registry.
Mercantile Marine Office Certificate – for British ships only.
Load Line Certificate.
Safety Equipment and Safety Construction Certificates.
Lloyd's Certificate.
Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.

In addition, Manifests and Bills of Lading are usually sent to Agent direct from loading port.

APPROACHES:

(a) Prolonged high barometric pressure or strong N.E./N.W. winds may reduce predicted tide levels by 0.45 m. – 0.6 m.

(b) Deep drafted vessels enter via the Nab dredged channel. The tidal currents set at almost 90° to this channel, at certain stages of the tide, and, as it is marked by buoys on one side only, care must be taken to keep within the confines of the channel. At its Northern end the channel swings about 45° to the West, but it is not marked on either side.

CAUTION: Dangerous wreck exists in position Lat. 50° 43.1′ N., Long. 00° 59.46′ W., marked by N, S, E and W Cardinal Marks (Portsmouth local Notice to Mariners No. 23/91 refers).

(c) When passing Portsmouth, ships should be prepared to encounter crossing traffic to and from that port.

(d) The most difficult part of the navigation between Nab and Fawley is that between Prince Consort Buoy, Cowes Roads, Black Jack Buoy and Calshot, particularly for VLCCs on maximum draft which have to take a wide sweep down to East Gurnard Buoy, before making a 145° starboard turn into Western approach channel which narrows to 305 m. Tidal currents in this area are somewhat uncertain but can reach up to 3.5 knots on a Spring ebb tide and 2.5 knots on a Spring flood tide. In Summer many yachts and other small pleasure craft are encountered. The closest contact should be maintained with Southampton VTS.

(e) VLCCs are not to enter the Thorn Channel on a flood tide when the wind is between West and S.W. and in excess of 30 knots. The Pilot will board VLCCs with the latest weather report and will advise Masters accordingly.

(f) It is also important, before the VLCC and container vessel enters Thorn Channel, that Southampton VTS is contacted to confirm that no ship which, by virtue of its size or draft, could interfere with the safe navigation and manoeuvring of the VLCC, will be allowed to enter the main channel between Cadland and Prince Consort Buoys after the VLCC has entered this channel.

PILOTAGE: Pilotage in the Port of Southampton Competent Harbour Authority area (See "Plan") is compulsory, except for Pilotage Exemption Certificate holders, naval vessels and other small exemptions.

In addition to 48 hours notice to local Agent, advise Southampton VTS Centre as appropriate, ETA 48 hours, and again 2 hours to 3 hours immediately prior to arrival. The pilot boarding areas are serviced by fast launches (black hulls, orange wheelhouses) under the control of the VTS Officer at the VTS Centre, Associated British Ports, Berth 37, Eastern Docks, Southampton. The VTS Officer keeps a continuous watch on VHF Channel 16, call sign "Nab", "Sturbridge" or "Lepe Pilot" as appropriate. Working frequency Channel 9 only. No medium frequency facility, M/F and R/T messages via Niton Radio. VTS Centre Telephone No. (0703) 632345/6. Telex No. (0703) 477161. Fax: (0703) 232991.

The launches only put to sea when required. Failure to send an accurate ETA 2 hours to 3 hours before arrival could cause delay to the offending vessel.

Strict compliance with the requirements of the Merchant Shipping (Pilot Ladders) Safety Rules is requested by the Pilots who may refuse to board vessels with unsatisfactory and dangerous ladders. Manropes are required. Ladders should reach to approximately 1.0 m. from the water, each rung resting firmly against the ship's side; and a good lee provided whilst making approximately 5 knots to 7 knots headway.

Eastern Outer Limit: All vessels over 150 m. (492 ft.) LOA, and all vessels carrying LPG/LNG in bulk (i.e. in tanks which form part of the permanent structure of the vessel), pilot boarding point is at the Nab Tower. Vessels exceeding 70,000 d.w.t. may board Pilots 3 miles South of Nab Tower by arrangement.

(Note: Vessels having carried cargo referred to above, and which have not been rendered gas free or the cargo spaces completely inerted, will be subject to the same conditions as specified above).

Eastern Inner Limit: All other vessels for which compulsory pilotage applies not specified above, the pilot boarding point is in the vicinity of the North Sturbridge Buoy area. Voluntary Pilotage is also available from the Nab Tower.

Western Limit: All vessels for which compulsory pilotage applies, the pilot boarding area is in the vicinity of the West Lepe Buoy in the West Solent.

Voluntary/Optional Pilotage: West Solent including the Needles Channel. A facility is available by prior arrangement to engage a Pilot on a voluntary/optional basis from the Needles Fairway Buoy to the Western Compulsory Pilotage Limit of the Port of Southampton CHA pilotage area.

Voluntary/Optional Pilotage: East Solent from Nab Tower to the Eastern Inner Limit and vice-versa. A facility is available, by prior arrangement, to engage a Pilot on a voluntary/optional basis for those vessels under 150 m. (492 ft.) LOA to/from the Inner Compulsory Pilotage Limit in East Solent.

GENERAL NAVIGATION: A VTS Officer, responsible to the Harbour Master Southampton, maintains a continuous watch in the VTS Centre (Berth 37), call sign "Southampton VTS". He is to be informed prior to any movement to, from or within the port area, and will give information on the movement of other vessels.

Harbour radar information and guidance will be given on request. The radar reference line shown on the Admiralty Charts is superimposed on the Harbour Radar displays. Particular attention should be paid by Masters to the designated "Reporting Points" marked on the Admiralty Charts. Reports should be made on VHF to "Southampton VTS", to enable the proper identification and co-ordination of the ship movement, to be made to the benefit of all mariners navigating within the Solent area. This applies equally to naval and non-compulsory vessels.

The following VHF Channels are operated within the port:

Southampton VTS: Channels 16, 14, 12, 9, 18 and 20.

Harbour Patrol Launch (call sign S.P.): Channels 16, 14, 12, 9 and 6.

Southampton Pilot Launches (call sign Nab/Sturbridge/Lepe Pilot as appropriate): Channels 16, 14, 12, 9 and 6.

Tugs when berthing vessels: Channels 71 or 74.

Esso Petroleum Terminal, Fawley: Channels 16, 14 and 19.

BP Oil UK Ltd, Hamble: Channels 16, 19, 46 and 71.

A patrol launch (Harbour Master flag by day, all-round blue light by night) is controlled by the VTS Officer Southampton for pollution detection and keeping channels clear of pleasure craft for the passage of large vessels.

Vessels (a) drawing more than 10.5 m., (b) more than 288 m. in length, and (c) or more than 100,000 d.w.t., exhibit a large black cylinder by day and 3 vertical red lights by night. Vessels showing these signals, and LPG vessels, are not to be passed or overtaken within channel limits between the "West/East Bramble" and "Hook" Light Buoys; these vessels are considered to be constrained by their draft and restricted in their ability to manoeuvre, and may not be able to comply with the Collision Regulations. Will indicate inability by 5 short blasts on the whistle. "Clear Channel" control is exercised by the VTS Officer at the VTS Centre, Associated British Ports, Berth 37, Eastern Docks, Southampton. Also see "Notices".

ANCHORAGES: The Thorn Channel has a limited depth of 12.6 m. at low water datum. Up to 7 vessels, other than LPG vessels (only 3 LPG) of under 91.4 m. in length, are permitted with prior permission to anchor out of the channel to the East of the "Hook" Buoy in the designated Small Ships Anchorage, the limits of which must be strictly observed. Three numbered anchorages are available in an emergency for vessels not exceeding 168 m. in length in Fawley Reach, where vessels must moor to two anchors. Permission to anchor, including within the Small Ships Anchorage and numbered anchorages, must be obtained from the VTS Officer, Southampton VTS Centre.

Also see "Notices".

MAX. SIZE: The largest passenger and container vessels call regularly at Southampton. Tankers: Fawley can accept partly loaded VLCCs up to 14.9 m. draft.

HEALTH: See "Health – All Ports" before first UK Port.

MEDICAL: Doctors and hospital facilities available. Agent should be advised in advance of any medical attention required.

An organisation exists for hospitalisation of sick seamen from vessels off Cowes, Isle of Wight. Arrange through Niton Radio, Nab, Lepe or Southampton Pilot or through vessel's Agent. Minimum delay to vessel.

BERTHING: The Pilot boarding the ship at the Sea Station or anchorage will also berth the ship. Non-compulsory vessels can obtain or disembark a Pilot in the vicinity of the "N.W. Netley" or "Hook" Buoys by contacting "Southampton Pilot" on VHF.

Dock or Quay	*Berths Nos.*	*Nominal Dredged Depth * below Chart Datum†* (m.)	(ft.)	*Length of Quays* (m.)	(ft.)

	36	9.9	32.5	200	656

Other berths are available. Lesser draft berths not shown. The depths of water are maintained as far as practicable, but are subject to variation and are not guaranteed.

* To find the depth of water in the berths add the tidal rise to the depths shown in the above table.

† Chart datum is approximately the lowest low water level.

TUGS: 2 firefighting/anti-pollutant tugs are permanently stationed at Fawley. During loading operations at Hamble, an anti-pollutant and a firefighting tug are standing by. If more than 2 tugs are required, it should be noted that weekend requirements have to be advised to the tug operators not later than 1530 hrs. on Friday of each week. If a vessel requires more than 2 tugs and is due to arrive at Fawley between 0001 hrs. Saturday and 0900 hrs. Monday, ETAs must be submitted well in advance of 1530 hrs. on the Friday prior to arrival. It is usual to use the wires provided by the tugs for towing.

All VLCC's bound for Fawley are required to take the services of an escort tug from South of the Nab Tower to the berth.

BULK HANDLING FACILITIES: Grain handling at Berths No. 36, 47, 102, 107 and 109.

Berth 36: Southampton Grain Silo: 8×1,600 tonnes capacity cells and 4 cells with total capacity 15,000 tonnes.

Receiving rate by truck 500 t.p.h. 1×1,000 t.p.h. shiploader available with travel of 135 m. (443 ft.).

Berth 47: Continental Grain: 16×1,000 tonnes silos. 1×1,000 t.p.h. shiploader with travel of 220 m. (720 ft.).

Western Docks: 1×32,500 tonne grain silo.

Ro/Ro facilities at Berths No. 105 and 201 – 202 (Linkspan).

Eastern Docks: Ro/Ro facilities at Berths No. 25 and 30 (Linkspan).

CRANES:

Type	*No.*	*Capacity in tonnes*
Container cranes	8	Up to 65
Quayside cranes	26	Up to 10
Floating crane	1	200
Mobile cranes	2	10

TANKERS: Esso Marine Terminal, Fawley.

For further details of information contained herein, refer to Fawley Marine Inspection Group and/or the Fawley Marine Terminal Manoeuvring Guidelines.

All ships normally berth stemming the tide. If the Master/Pilot considers conditions warrant an alteration to this plan, discuss with Esso Headquarters when passing Hook Buoy.

For VLCCs there is a turning width of about 1.5 ship's lengths off Berth No. 5 which is the Pilots' preferred swinging position. Because of these tight turning conditions it is VERY IMPORTANT that:

(a) The ship is in the correct position in relation to the channel before commencing to swing. For this the Pilot uses the 326°–327° leading lights shown on the chart.

(b) THE SHIP MUST BE STOPPED OVER THE GROUND BEFORE COMMENCING TO SWING. For several reasons the Pilots prefer to swing to port, i.e. to the West and towards the jetty and a serious accident has occurred because a VLCC was not stopped over the ground whilst swinging and collided with the jetty.

In order to protect both ship and jetty, equipment to positively indicate to the ship that it is stopped over the ground is being provided on the jetty.

Procedures: On closing the berth, either after swinging or when berthing port side to, advice as to the bodily speed of approach will be provided for all VLCCs using Berth No. 5 over UHV pocketfone, one of which is also issued to the Pilot acting as communications officer. The MAXIMUM IMPACT VELOCITY SHOULD NOT EXCEED 0.21 knots (21 ft./minute) normal to the jetty faceline.

The doppler speed of approach equipment can also be used to provide accurate speed along the channel axis information up to a point when ship is about 500 m. South of Berth No. 5.

Prior to arrival off the berth, mooring lines should be lowered to 3 m. above the water and the winches of the first ropes on the mooring plan provided by the Pilot to be in gear ready to pay out the moorings to the rope running launches. Prevailing winds are off berth and the emphasis is on the use of springs and breast lines. The number used will depend on the size of the ship, condition of mooring lines and positions of fairleads, but generally minimum requirements are 2 spring lines and 3 breast and 2 level/stem lines each end, or according to the pre-determined mooring plans forwarded direct to the Pilots. Additional head and stern lines may be required. Mooring plans are taken on board VLCC's by the Pilot. These must be closely followed.

Backsprings are always first lines ashore.

Tugs on hooks usually let go and push up on offside during the mooring operation.

Approach: Terminal is approached by either the Nab or the Needles. The Nab with a dredged channel of 43 ft. (13.3 m.) below Chart Datum admits the larger vessel. Double HW with an average tidal range of 13.25 ft. (Springs) and 7.75 ft. (Neaps). Rate of Spring tide 2 knots, Neap tide 1 knot.

Anchoring in the Small Ships Anchorage adjacent to the terminal requires permission from Southampton VTS. Approval will only be given to vessels of 300 ft. or under. Usual practice is not to moor with both anchors. This applies to Controlled Anchorage only. Depth of 41 ft. LW is available. Anchorages in the Solent and Cowes Roads are more generally used. Good holding ground with depth of 50 ft. LW.

Accommodation: Terminal has 2 approach trestles, 1,900 ft. long leading seaward to the main pierhead trestle with its 9 berths. This trestle is 4,575 ft. long and lies parallel with the channel. 5 main ocean berths are on the seaward side and the 4 coastal berths on the landward side. Dimensions of the berths are as follows:

Berth	*Length of 'T' Head*	*Distance between centres*
No. 1	222 ft.	800 ft.
No. 2	222 ft.	800 ft.
No. 3	222 ft.	800 ft.
No. 4	222 ft.	800 ft.
No. 5	300 ft.	1,000 ft.
No. 6	80 ft.	395 ft.
No. 7	80 ft.	400 ft.
No. 8	80 ft.	400 ft.
No. 9	100 ft.	440 ft.

Equipment: Suitable cargo hose handling equipment is positioned at each of the 9 berths. To facilitate the handling of mooring lines, air powered hoists are available at each of the berths. Mooring boats are in attendance for running lines. VLCCs are required to meet minimum standards with regard to their mooring equipment. All water ballast containing oil or likely to contain oil must be pumped ashore. 2×67,000 barrel ballast tanks are provided on shore. With the approval of the Terminal Manager minor repairs can be undertaken whilst discharging/loading at the Terminal. Major repairs can be undertaken at anchor or at Southampton Docks. Working is continuous throughout. Facilities installed at the berths and available for use by tankers include fresh water, bunkers, steam, compressed air, nitrogen. Ship's stores of all kinds are available in any quantity at Southampton. All deliveries of stores must be made by water transport. For quarantine purposes vessels are either boarded prior to berthing or immediately after berthing. Two firefighting tugs of at least 2,530 h.p. are permanently stationed at the Marine Terminal. Additional tugs can be provided on notice from Southampton.* All tugs are equipped with Radio Telephone and operate on Channels 8 or 10 of the Port Operations Service. Provision of shore steam is made in exceptional circumstances.

*A stand-by charge is levied on all vessels. Subject to availability, an escort tug, for which a charge will be levied, will be deployed to escort all vessels 60,000 d.w.t. and above on the inward and outward passage. The tug will be attached to the stern of the vessel.

Pilotage: Compulsory. Inward-bound vessels embark Pilots at the Nab or Lepe entrances. Tankers up to 250,000 d.w.t. berthed at any time during the day or night subject to tidal conditions.

Berthing:

1. Cautionary Advice:

Prevailing strongest winds are off berth and a considerable number of large container ships, passenger ships and ferries pass the terminal at close quarters. Drift-offs and excessive surging have been experienced at Fawley berths and have caused damage. It is therefore very important that ships, particularly deep draft or high freeboard ships, pay particular attention to moorings.

2. Mooring Requirements and Procedures:

In the case of VLCCs, minimum mooring rerquirements are laid down. These preclude mixed moorings except under special circumstances agreed prior to acceptance of the ship.

Moorings reeled on winches must be held by brakes hardened up to full torque. Self-tensioning devices are not allowed. The moorings must be reeled in such a direction as to assist the brake, not oppose it. Where split drum winches are used, a minimum of one layer should be on the working drum when the mooring reaches the shore bollards or mooring hooks. Brakes must be in good condition and certificate of brake holding power should be available.

VLCCs should strictly adhere to requested order of running. This is done by motor launches.

There are limits applicable to freeboard both from a windage point of view and also because of the upper reach limit of the hard arms. These together with maximum operable wind speed will be discussed with Masters of VLCCs by a terminal supervisor shortly after the ship berths.

Special attention must be paid to ballasting of permanent ballast spaces and use of over-deck systems into emptied cargo tanks during cargo discharge and, if necessary, and with the agreement of terminal supervision, into emptied cargo tanks using the cargo system, in order to keep the freeboard within reasonable limits.

The ship must be held firmly against the fenders at all times. It is unnecessary and dangerous to slack away lines, even if they appear taut, if the ship is not against fenders.

Rules for Berth Planning: The following limitations are now in force when planning berth movements.

1. Berth size restrictions:
   Berth No. 1: Max. size of vessel 51,000 tonnes displacement.
   Berth No. 2: Max. size of vessel 83,000 tonnes displacement.
   Berth No. 3: Max. size of vessel 66,000 tonnes displacement.
   Berth No. 4: Max. size of vessel 179,000 tonnes displacement.
   Berth No. 5: Max. size of vessel 244,000 tonnes displacement.
   Berth No. 6: Max. size of vessel 4,900 tonnes displacement.
   Berth No. 7: Max. size of vessel 3,600 tonnes displacement.
   Berth No. 8: Max. size of vessel 3,600 tonnes displacement.
   Berth No. 9: Max. size of vessel 8,200 tonnes displacement.
2. Vessels on Berth 6 must not exceed 330 ft. (100.5 m.) in length.
3. Distance between vessels secured on any berths must be 100 ft. (30.48 m.) or more. (This is required under local by-laws for fire regulations.)
4. Distance allowed for berthing vessels must not be less than vessel's length + 40% length. (Agreement with Pilots).
5. Maximum draft of vessels:
   Berth No. 1 33 ft. 03 in. (10.2 m.)
   Berth No. 2 41 ft. 00 in. (12.6 m.)
   Berth No. 3 41 ft. 00 in. (12.6 m.)
   Berth No. 4 49 ft. 00 in. (14.9 m.)
   Berth No. 5 49 ft. 00 in. (14.9 m.)
   Berth No. 6 18 ft. 06 in. (5.6 m.)
   Berth No. 7 18 ft. 06 in. (5.6 m.)
   Berth No. 8 18 ft. 06 in. (5.6 m.)
   Berth No. 9 21 ft. 08 in. (6.6 m.)

These drafts are subject to change and are therefore updated as required. Deep draft vessels must refer to Fawley Draft Memo, to ensure arrival draft will not interfere with berthing prospects.

6. Tide charts are to be prepared for Nab and Thorn Channels for vessels over 40 ft. (12.19 m.) draft.
7. Check product can be loaded on nominated berth.
8. Check product or ullage availability before berthing vessel.
9. Any maintenance must be sanctioned by the direct permission of the Marine Terminal.
10. No vessels to berth on Ocean Berths with mean wind speed above 30 knots from N.W. through to S.W. to S.E. through N.E.
11. On coaster berths with 25 to 30 knot wind from N.W. through S.W. to S.E., then after consultation with Pilot/Master and Marine Superintendent/Deputy, vessels may berth/sail, providing a suitable tug is used.
12. Ensure liaison maintained with VTS regarding sailings coinciding with movement of high speed vessels (catamarans and hydrofoils).

Fawley Coastal Berth Manoeuvring Requirements: Fawley Coastal Berths comprise Berths 6, 7, 8 and 9 and are situated on the inside (Western Side) of the Marine Terminal complex.

Before any manoeuvring is undertaken on these Berths the following requirements are to be followed:

1. Marine Controllers are to be informed of vessel manoeuvring plan.
2. Vessels without bow thruster capability should berth stemming the tide.
3. All vessels over 61 m. (200 ft.) LOA must have the assistance of the Esso mooring boat when:
   (a) berthing.
   (b) sailing if berthed starboard side to, if wind on berth is over 15 knots.
4. Vessels over 85 m. (279 ft.) in length will not normally swing West of a line between Fawley Buoy and the S.E. of Fawley Jetty. Exceptions may be made only *after* consultation between Terminal and the Pilot or Master of the vessel. Due account must be made of wind, tide, weather and time. Only then will vessels be permitted to swing West of that line referred to above.
5. Vessels over 85 m. (279 ft.) LOA without bow thruster capabilities must have in attendance when berthing port side to or sailing after being starboard side to:
   (a) Esso mooring boat, *and one tug*.

Such vessels when berthing starboard side to or sailing after being port side to must have in attendance:
   (a) Esso mooring boat.

They may also be required to have a tug if prevailing conditions require it.

6. Vessels of 91.5 m. (300 ft.) LOA or more when berthing at Nos. 6, 7 or 8 to have at least one adjacent berth vacant during the berthing movement.
7. No vessel to berth when wind is from South to West with mean wind speed above 25 knots, i.e. within S.W. quadrant.
8. The Esso mooring boat will be made available on request to assist with any vessel not covered in these instructions. Its communication Channel is 71 (74 in an emergency). These boats must not be used for towing.

Grade/Rates:

B.P. Terminal, Hamble. Situated immediately opposite Fawley. Lat. 50° 50′ 54″ N., Long. 01° 19′ 32″ W.

Ship's personnel must be transported by bus through the Terminal to the Main Gate. Hamble Village is close by, where public transport to Southampton is frequent.

Limits:

D.W.T.: 110,000 tonnes.
Displacement: 64,000 tonnes.
LOA: 260 m.
Draft: 13.10 m.
Depth – approaches: 11.25 m. U.K.C. – 1.30 m.
– alongside: 13.60 m. U.K.C. – 0.50 m.

Loading Arms: Crude oil 5.1 m. to 21.94 m. Operating Envelope.

Fresh Water: Available alongside via a meter.

Type/Moorings: Alongside.

Berth: Coasters acceptable as they lie between dolphins and against fendered jetty head. Minimum height of manifold above waterline 2.74 m., therefore it may be necessary to disconnect over low water period and incur subsequent delay.

Product tankers must comply with "closed loading" requirements.

Length: Minimum parallel mid-body length for crude oil tankers is 47.5 m. forward and aft of manifold centreline; no restriction for product carriers.

Draft: Max. draft 13.10 m., at all states of the tide.

Cargo Grades: 2×16 in. crude loading arms. Vessel must present 16 in. 150 ASA flanges. Height above waterline max. 21.94 m., min. 5.1 m. Manifolds must conform to OCIMF standards.

3×10 in. 150 ASA product loading arms. Vessels must arrive with appropriate reducing pieces fitted. Vessels unable to comply may be acceptable subject to prior check with terminal. Height above waterline max. 15.88 m., min. 2.74 m.

Dirty Ballast: Clean ballast from segregated ballast system may be discharged overboard, subject to Port and Terminal approval and hydrocarbon contamination not to exceed 5 ppm. No shore reception facilities for ballast or contents of slop tank.

General: Berth operated by B.P. Oil U.K.

Products are imported from various size vessels, and on occasions exported. Crude oil is exported (from Wytch Farm), cargo sizes have ranged from 43,000 tonnes to 81,000 tonnes.

Bunkers are not available at the berth.

Also see "Notices".

For further information contact B.P. Oil U.K., Hamble. Tel: (0703) 456654.

BUNKERS AND WATER: All grades of fuel oil and diesel oil are available and water is piped on all berths. Bunkers and stores can also be obtained by barge in Cowes Roads anchorage, but water is not readily obtainable there.

REPAIRS/DRY DOCKS: All ship repairs can be effected. Largest dry-dock is 1,141 ft. long overall, 132.5 ft. wide and has 34 ft. over the blocks.

SURVEYORS: Lloyd's Register. Tel: 220353.
Salvage Association, Tel: 227983.
Topmarine, Tel: 220585.
Murray Fenton & Associates, Tel: 229787.
International Shipping Trustees (UK) Ltd. Tel: 37596.

OIL POLLUTION: Southampton Water is an international yachting centre and has many holiday beaches on its shores. Consequently, oil pollution is treated very severely and heavy fines are imposed on offenders.

The Esso Refinery, the B.P. Oil Terminals, Williams Shipping and the Oil Spill Service Centre operate a clean-up service, the full economic cost of which is billed to the offending ship.

CUSTOMS ALLOWANCES: By statute, crews of vessels in port are allowed 25 cigarettes per day per man. 0.3 litres (0.5 pint) of spirits and 1 bottle of table wine per day per man.

AIRPORT: Eastleigh Airport. Air U.K. have flights to Guernsey and Jersey.

TIME: British Standard Time is GMT plus 1 hour, reverting to GMT in Winter months.

HOLIDAYS: Good Friday (variable date); Easter Monday (variable date); May Day; Spring Bank Holiday (variable date); Autumn Bank Holiday (variable date); Christmas Day (25th December); Boxing Day (26th December); New Year's Day (1st January).

CONSULS:

Country	*Status*	*Address/Telephone No.*
Belgium	Consul	c/o P & O Container – Europe, Richmond House, Terminus Terrace, Southampton, SO9 1GG Tel: 635200/310318 Telex: 47384
Denmark	Vice-Consul	c/o Ackerleys, Canute Chambers, Canute Road, SO9 1FJ Tel: 227171
Dominican Republic	Consul	Mascot Ships Agents, c/o MacIntyre Scott & Co. Ltd., West Bay Road, SO9 4NW Tel: 634033
Finland	Vice-Consul	c/o Sandell Bros. Ltd., Ryde Terrace, SO9 2UL Tel: 30966
France	Consular Agent	R. H. Hammond Ltd., 236 Winchester Rd., SO1 2SB Tel: 772442
Germany	Consul	c/o Wainwright Bros. Bowling Green House, 1 Orchard Place, SO1 1BR Tel: 223671
Greece	Vice-Consul	c/o Keller Bryant & Co. Ltd., 21-22 Queens Terrace, SO9 3FD Tel: 28566
Italy	Consular Agent	c/o Herbert Ferryman Ltd., Galen House, 1-9 Oakley Road, SO9 7AT Tel: 788011
Netherlands	Consul	c/o Macship Agencies Ltd., 4th Floor Havelock Chambers, Queens Terrace, SO1 1BP Tel: 229051
Norway	Consul	c/o G. Haswell & Co. Ltd., 28 Queen's Terrace, SO9 2UJ Tel: 23555
Philippines	Consul	Mann & Son (London) Ltd., Test Road, Eastern Docks, Southampton Tel: 637233
Spain	Consul-General	Richmond House, (First Floor) Terminus Terrace, College Street, SO1 1EJ Tel: 35835
Sweden	Consul	c/o Meadows Freight, 12-14 Queens Terrace Tel: 225033

POLICE/AMBULANCE/FIRE: Dial 999 from any telephone and ask fo service required.

SHIP SUPPLY SERVICE: Williams Shipping Company (Fawle Limited, Clyde Buildings, Town Quay, Southampton SO1 1L Tel: (0703) 225271. Telex: 47436.

Services Supplied: Fast launches for personnel ship to shore, essentia small packages and/or sick crew members.

D.O.T. approved to operate; not more than 6 passengers, are Swansea to Selsey, not more than 5 miles offshore.

Motorised barges for all types of supplies, deck and engine, an stores. Also, vessel with U.K. load line that can meet vessels passi in the English Channel with essential stores.

Mainly used for storing vessels in Oil Terminals, Cowes Roads an Motherbank.

Also see "Cowes".

NOTICES: *Notice to Mariners No. 2 of 1992.*

SOUTHAMPTON
VESSEL TRAFFIC SERVICES AND PROCEDURES

VESSEL TRAFFIC SERVICES embracing VHF COMMUNICATIONS PILOTAGE, NAVIGATIONAL AND RADAR ADVISORY SERVICES TRAFFIC INFORMATION, DATA COLLECTION/EVALUATION an effective in the PORT OF SOUTHAMPTON and its PILOTAGE ARE

Messages on Port Operations channels must be restricted to th movement and safety of ships and life. Communications should normal be established on the working channels indicated, avoiding Channel 1

All signal message traffic concerning Dangerous Substance Pilotage, EEC Tanker Check List, ETA's and other ship visit informatio addressed to the Harbour Master – Southampton must be prope addressed.

Registered Telegraphic Address – Harbour Master Southampton
Telex Number – 477161.
Telephone Number – (0703) 339733.
Facsimile – (0703) 232991.

1. MARINE INCIDENTS AND ACCIDENTS:

A vessel involved in a marine incident must report immeditaly to "Southampton VTS", and state whether assistance is required.

THE SOLENT AND SOUTHAMPTON WATER MARINE EMERGENCY PLAN (SOLFIRE):

This plan has been prepared to deal with any serious marine incident occurring in the Ports of Portsmouth and Southampton or elsewhere in the Solent, and is intended to ensure that adequate Service and Civilian resources are made available to deal with any emergency.

2. VHF COMMUNICATIONS (See "Appendix"):

(a) The Vessel Traffic Services Centre Southampton, call sign "Southampton VTS", maintains watch on Channels 9, 12, 14, 16, 18, 20 and 22, and monitors Channels 71 and 74.

(b) The Queen's Harbour Master Portsmouth, call sign "QHM", guards Channels 11, 13 and 73.

(c) Vessels should maintain watch on VHF Channel 12 and report to "Southampton VTS" when passing the designated reporting points and, in addition if embarking a pilot, when the pilot has boarded.

3. PILOTAGE:

The Port of Southampton is responsible for providing Pilotage Services throughout the East and Central Solent, Southampton Water, Rivers Itchen and Test. Pilotage is compulsory for all vessels exceeding 61 m. LOA (Pilotage is non-compulsory in the West Solent/Needles).

SHIPS requiring a pilot must signal "Southampton VTS" through a U.K. Coastal Radio Station, not less than 12 hours in advance of ETA. Ship Owners, Masters or Agents may order a Pilot by Telex No. 477161, Fax. No (0703) 232991 or Telephone No. (0703) 632345. Destination, draft and BOARDING POINT must be indicated. The ETA should be verified with "Southampton VTS" 2 hours prior to arrival.

3.1 BOARDING POINTS:

(a) NAB PILOT STATION provides pilots for all vessels exceeding 150 m. LOA, bound for the Port of Southampton from the East (embracing all wharves, jetties, docks and oil terminals). Pilots are embarked/disembarked at NAB TOWER in moderate weather, deep draft ships exceeding 70,000 d.w.t. may board 3 miles South by appointment. During stormy weather, the service is withdrawn to ST.HELEN'S or SPITHEAD. Radio call sign "NAB PILOT".

(b) STURBRIDGE PILOT STATION provides pilots for vessels not exceeding 150 m. LOA, bound for the Port of Southampton from the East. Pilots may be embarked/disembarked in the vicinity of North Sturbridge Buoy. Radio call sign "STURBRIDGE PILOT".

(c) LEPE PILOT STATION provides pilots for all vessels exceeding 61 m. LOA, bound for the Port of Southampton from the West via the Needles Channel. Pilots may be embarked/disembarked between East Lepe and West Lepe Buoys. Radio call sign "LEPE PILOT".

NOTE: PILOT BOATS DO NOT CRUISE ON STATION but put-out when their services are required by appointment.

4. CO-ORDINATION OF SHIPPING MOVEMENTS:

(a) A continuous watch is kept by the Duty VTS Officer (VTSO) responsible to the Harbour Master Southampton.

Telephone (0703) 330022, extn: 2440 (office hours).
Telephone (0703) 339733 (other times).
Telex 477161 DHMSPR.
Facsimile (0703) 232991.

(b) The movement of vessels and the general situation in the Port and its approaches are monitored continuously. Information will be passed to Masters and Pilots. The fullest exchange of information is essential to efficient operations, and the need to maintain communications with "SOUTHAMPTON VTS" is emphasised.

(c) In co-ordinating the movement of vessels, it will be necessary for the Duty VTSO to instruct certain vessels to remain alongside or at anchor, or regulate their time of entry, departure or progress.

5. MOVEMENT REPORTING PROCEDURE:

(a) All vessels in excess of 20 m. in length, bound to or from or passing through the Port of Southampton, vessels bound to or from or passing through the Dockyard Port of Portsmouth, and vessels bound to or from anchorages or other locations in the Solent are required to communicate by VHF with "Southampton VTS" (Call sign "Southampton VTS"). Specifically vessels are to establish contact with "Southampton VTS".

(b) *All vessels in excess of 20 m. LOA, entering or leaving the East Solent, are required to report to "Southampton VTS" (Vessel Traffic Services) on VHF R/T Channel 12 when passing Latitude 50° 40' N., giving their position as a distance East or West of Nab Tower.*

(c) Vessels proceeding to an anchorage for shelter in the Solent or subsequent berthing, must report to "Southampton VTS" when anchored, together with their approximate position. Whilst at anchor, vessels must maintain a listening watch on VHF R/T Channel 12.

(d) Vessels leaving a sheltered anchorage must also report and advise "Southampton VTS" of their intended destination, and whether they are leaving the Solent via the East or West Solent.

(e) Inbound vessels should establish communications with VTS when approaching Nab or Needles.

(f) Vessels outbound from the Port of Southampton should establish communications at least 15 minutes prior to leaving the berth and obtain permission from "Southampton VTS" before letting go.

(g) Vessels clearing Portsmouth Harbour should establish communications with VTS when passing Southsea War Memorial.

(h) Vessels leaving an anchorage, whether inbound or outbound, should establish communications with VTS at least 15 minutes before getting underway.

(i) Vessels inbound or outbound from Portsmouth Harbour are also required to report to "QHM". See Dockyard Port of Portsmouth – Local Notices to Mariners.

6. MOVEMENT REPORTING POINTS:

(a) Vessels inbound or outbound from the Ports of Southampton and Portsmouth, or other destinations in the area or passing through the Solent, are required to report by VHF when passing Movement Reporting Points indicated on Admiralty Charts.

(b) The initial report by all inbound vessels should include:
1. Ship's name and International Radio Call Sign (IRCS).
2. Deepest draft.
3. Destination and last Port of Call.
4. ETA at various locations as requested.
5. Deficiences of ship, navigation equipment, machinery and cargo.
6. Additionally tankers should report any change in the information notifiable under the Merchant Shipping (Tankers) (EEC Requirements) Regulations 1981, and confirm that a Check List has been completed.

(c) The initial report by vessels outbound from the Port of Southampton should include:
1. Ship's name and IRCS.
2. ETD.
3. Deepest draft.
4. Other information requested.
5. Where applicable, tug working channel to be used.
6. ETA at various locations as requested.
7. Next Port of Call.

(d) The initial report by vessels from anchorages and other locations in the Solent should follow the procedure for inbound and outbound vessels as appropriate.

7. HARBOUR PATROL:

The Duty VTSO is supported by a Marine Officer who maintains a continuous surveillance of seamarks and shipping channels from a harbour patrol launch and guards VHF Channels 12 and 16, call sign "SP". At night, the harbour patrol launch exhibits a blue all round light at the mast head.

8. HEIGHT OF TIDE:

Automatic tide gauges are located at Calshot, Dock Head and Prince Charles Container Port. Tidal information is available upon request and is recorded.

9. WIND SPEED AND DIRECTION:

Wind speed and direction information is available upon request and is recorded.

10. HARBOUR RADAR:

(a) Remote controlled Radar Stations are situated at Calshot Spit and Hythe. Each station is fitted with a 25 ft. horizontal aperture scanner 110 ft. above MHWS, searching over a 0.3° horizontal and 4° vertical beam width, rotating at 20 r.p.m. in winds up to 80 knots.

(b) Vessels can be supplied with continuous information relating to their progress, approach to navigation marks and other vessels, transits and turning marks, channel margins and the manner in which the vessel is progressing round the West Bramble and Calshot turns. Manoeuvring instructions will not be given unless specifically requested by the Master or Pilot.

(c) An independent scanner is fitted at the VTS Centre to monitor shipping in the RIVER TEST, but the computer assisted measurement, accuracy of bearings, distance and tracking associated with CALSHOT and HYTHE scanner is not available.

(d) Computer Assisted Measurement System:

This system employs a small digital computer and a variable marker which can be placed over any target on the display to provide the following information:
1. The bearing and distance between the scanner and selected target.
2. The bearing and distance between any two targets.
3. The course made good by a selected target.

Facilities are available to store up to 24 targets, such as navigation buoys, vessels at anchor, etc. The bearing and distance from any selected target to any one of the stored targets can be quickly obtained, and the closest point of approach determined.

(e) Accuracy of Bearing and Distance Measurement:

Accuracy of bearing from Point A to Point B is to 0.5°, and distances are to ±25 m., or to 0.3% of the most distant echo from the scanner, whichever is the greater.

(f) Radar Reference Line:

An alternative position fixing system indicates the position of a vessel relative to a Reference Line electronically produced as points one cable apart on the radar display linked to the Calshot Radar only. The Radar Reference Line is shown on the Admiralty Charts of the area as a broken line with points at one cable and circles where the line changes direction.

(g) Radar Coverage:

Effective radar coverage extends to a line joining NO MAN'S LAND FORT and HORSE SAND FORT to the East and STANSORE PT. and SALTMEAD BUOY to the West.

A vessel underway upon request will be given her position using the distance between the points of the Reference Line as a scale to estimate the position:

1. As a distance RIGHT or LEFT of the Reference Line, relative to her direction of progress.
2. As a distance along the Reference Line to a navigational mark or marks in transit.

The position of another vessel will be given:

3. As a distance from the Reference Line ON THE SAME SIDE or ON THE OTHER SIDE.
4. As a distance along the Reference Line.

NOTE: In areas where a Reference Line is not shown, progress will be indicated relative to navigational marks and other vessels.

(h) Bearings and Distances:

Bearings and distances will be related to the bow of the vessel concerned unless otherwise stated.

11. CANCELLATION OF PREVIOUS NOTICES:

Notices to Mariners No. 2 of 1989, No. 6 of 1990 and No. 2 of 1991 are hereby cancelled.

This Notice is issued in agreement with QHM Portsmouth.

Signed: Harbour Master – Southampton.
Dated: 1st January 1992.

Notice to Mariners No. 4 of 1992:

PORT OF SOUTHAMPTON APPROACHES
CALSHOT REACH AND WESTERN APPROACH CHANNEL

NOTICE IS HEREBY GIVEN that:

1. DIRECTIONS TO BE OBSERVED BY MASTERS OF VESSEL WITH LENGTH OVERALL OF 183 M. (600 FT.) OR MORE:

No two vessels each having a length overall of 183 m. (600 ft.) o more shall pass or overtake each other in WESTERN APPROAC CHANNEL, THORN CHANNEL or CALSHOT REACH to seaward Hook Buoy. (PORT OF SOUTHAMPTON HARBOUR BYE LAW NO. (1) refers).

2. OUTBOUND VESSELS - FLAG SIGNALS:

Yachts and other small craft in the Solent sometimes experienc confusion when an outbound vessel in the Thorn Channel is approachin the West Bramble Buoy, as there is doubt whether the vessel will dire its course to the East (Nab) or West (Needles).

To improve safety, outbound vessels shall hoist the followin INTERNATIONAL CODE flag signals during daylight hours.

Hoist	Meaning
ECHO over ANSWERING PENDANT	I am bound East (Nab)
ANSWERING PENDANT over WHISKY	I am bound West (Needles)

It is important that these signals should be read as indicating only local geographical direction.

3. CANCELLATION OF PREVIOUS NTM – Notice to Mariners No. of 1989 is hereby cancelled.

Signed: Dock and Harbour Master – Southampton.
Dated: 1st January 1992.

Notice to Mariners No. 7 of 1992:

THE DOCKYARD PORT OF PORTSMOUTH
AND THE PORT OF SOUTHAMPTON
MOVEMENT OF GAS TANKERS IN THE SOLENT

1. NOTICE IS HEREBY GIVEN that these directions have been joint promulgated by the Queen's Harbour Master Portsmouth and th Harbour Master Southampton to ensure the safe navigation of ga tankers within the Solent.

2. This Notice applies to all gas tankers loaded or partly loaded an gas tankers which have not been rendered gas free.

3. Gas tankers in transit within the Solent may not enter an area which the visibility is less than 0.5 miles.

4. Before navigation within the area between the North Sturbridge Buo and the Warner Buoy, all gas tankers must establish communication with the Queen's Harbour Master Portsmouth on VHF Channel 11 advise of their transit and to ascertain movements into and out Portsmouth Harbour.

5. Gas tankers when navigating between Hook Buoy and We Bramble Buoy in the Western Approach Channel should be given th sole occupancy of that channel.

6. Gas tankers when navigating between East Bramble Buoy an Calshot Buoy in the North Channel shall be given the sole occupan of that channel.

7. No vessel may anchor closer to a gas tanker than a distance equa twice their combined lengths.

8. At no time will more than 3 gas tankers be permitted to remain anchor within the designated Small Ships Anchorage in Southampto Water.

9. Gas tankers exceeding either 8,000 cu.m. total capacity 6,000 g.r.t. ARE NOT PERMITTED to enter or leave the Port Southampton by the West Solent.

10. Notice to Mariners No. 7 of 1989 is hereby cancelled.

Signed: Harbour Master – Southampton.
Dated: 1st January 1992.

Notice to Mariners No. 8 of 1992:

DANGEROUS SUBSTANCES IN HARBOUR AREA
REGULATIONS 1987 (SI No. 37 OF 1987)
RELATED TO THE PORTS OF SOUTHAMPTON,
PORTSMOUTH COMMERCIAL DOCKS AND
DOCKYARD PORT OF PORTSMOUTH

1. NOTICE IS HEREBY GIVEN that Masters of all vessels carryi Dangerous Substances when entering, leaving or lying in the Port Southampton or the Commercial Port of Portsmouth, will be required comply with these Regulations. Failure to do so may lead to th prohibition or removal of the dangerous substance, its container and th vehicle or vessel from the Port in accordance with Clause 7 of th Regulations.

2. APPLICATION:

These Regulations apply in every Harbour and Harbour Area and any part of a Harbour in the territorial waters of Great Britain. Dangerou Substances are defined at Clause 3 of the Regulations.

NOTE: The expression Harbour Authority when used in the followi text shall mean:

(a) Alongside in Southampton, Fawley and Hamble: Harbour Mas Southampton.
(b) Underway in the approaches to Southampton or in the East West Solent: Harbour Master Southampton (call si "SOUTHAMPTON VTS".
(c) Underway in the Dockyard Port of Portsmouth, North of Ou Spit Buoy: Queen's Harbour Master (call sign "QHM").
(d) Alongside in the Commercial Port of Portsmouth: Harbour Mas Commercial Docks.

3. MARKING AND NAVIGATION OF VESSELS:

(a) Flags and Lights to be displayed by vessels:

Vessels carrying Dangerous Substances to which these Regulations apply are required to show a red flag during the daytime and, when moored or anchored, an all round red light at night. The use of the red light at night when a vessel is underway or moving within the Solent will not be permitted.

(b) Vessels to keep a safe distance from moored or anchored vessels displaying the flags or light required by Paragraph 3(a):

A Master shall not bring his vessel alongside a moored or anchored vessel which is displaying any flag or light required by Paragraph 3(a), without the permission of the Harbour Authority and the Master of that vessel, and shall otherwise keep his vessel at a safe distance from that vessel.

(c) Use of VHF:

The Master of a vessel to which these Regulations apply shall ensure at all times in the Port of Southampton or in the approaches to the Port in the East and West Solent, a listening watch is kept on VHF Channels 12 or 14, or when North of Outer Spit Buoy on VHF Channel 11 or 13.

Except

1. When a vessel is at a berth; or
2. For short periods when the radio is tuned to another frequency for operational purposes.

(d) Anchoring and mooring of vessels:

The Master of a vessel which is carrying a dangerous substance or on board which any dangerous substance is to be loaded, shall anchor or moor his vessel only at such places and at such times as the Harbour Authority directs, and shall ensure that any conditions imposed by the Harbour Authority with regard to anchoring or mooring are complied with. The Master shall not permit his ship to be moved from anchorage or berth until he is so authorised by the Harbour Authority.

(e) Mobility of vessels:

The Master of a vessel carrying dangerous substances, must ensure that his vessel is in a state of readiness to be moved at all times, tidal conditions permitting, and shall not immobilise his vessel without first seeking an Exemption Certificate in writing from the Harbour Authority. Any such exemption may be granted subject to conditions and to a limit of time and may be revoked at any time by a certificate in writing. Vessels carrying Class 1 Dangerous Substances (Explosives) will not be given an exemption.

4. FITNESS OF VESSELS:

The Master of a vessel which is designed to carry either Dangerous Chemicals in bulk or Liquified Gases in bulk shall not carry, load or unload any dangerous liquid or dangerous substance in bulk in either Portsmouth or Southampton unless:

(a) The vessel has a valid Certificate of Fitness for the carriage of the substance in bulk issued under the authority of the Government of the country of registration of the vessel, and he complies with any conditions of carriage laid down in that certificate.

(b) The Harbour Authority has given permission in writing.

5. PERMISSION FOR TRANSFER BETWEEN VESSELS:

The Master of a vessel carrying a liquid dangerous substance in bulk shall not cause or permit that substance to be transferred by pipeline to another vessel unless the Harbour Authority, and where the vessel is at berth, the Berth Operator, have given their permission in writing for that transfer to take place.

6. OPERATIONS FORBIDDEN ON VESSELS WITHOUT PRIOR PERMISSION:

(a) The Master of any vessel carrying or which has recently carried, a liquid dangerous substance in bulk shall ensure that none of the following operations are commenced:

1. The discharge of ballast or slops contaminated with any dangerous substance.
2. The cleaning or ventilation of any tank which was last used to carry a dangerous substance.
3. The pumping overside of bilges contaminated with any dangerous substance.

(b) The Master of any vessel carrying or which has recently carried, flammable liquid in bulk shall ensure that none of the following operations are commenced:

1. The gas-freeing of any tank which was last used to carry the substance.
2. The cleaning of such a tank with water, stem, detergents or other chemicals.
3. The purging of such a tank with inert gas.
4. The washing of a tank with crude oil while unloading.

Unless the following conditions have been complied with:

(a) Where the vessel is at a berth:

1. The Berth Operator has given permission, or
2. The Harbour Authority has given permission to manned vessels.

(b) Where the vessel is not at a berth, the Harbour Authority has given permission.

7. UNTOWARD INCIDENTS:

The Master of a vessel carrying any dangerous substance shall immediately inform the Harbour Authority and if the vessel is at a berth, the Berth Operator, of any untoward incident which has occurred on the vessel. Untoward incident means an incident involving or threatening the containment of a dangerous substance.

8. VESSELS LOADED WITH EXPLOSIVES TO BE TAKEN OUT OF THE HARBOUR AREA:

When loading a vessel with explosives has been completed, the Master shall ensure that the vessel is taken out of the Harbour or Harbour Area as soon as reasonably practicable, unless the Harbour Authority and, where the vessel is at a berth, the Berth Operator, otherwise agree.

9. NOTICE OF ENTRY OF DANGEROUS SUBSTANCES ARRIVING BY SEA FOR DISCHARGE OR IN TRANSIT:

Advance notification of dangerous substances arriving by sea into the Solent Area will be required in the form shown in Paragraph 10 by the Harbour Authority from Masters of vessels or their Agents, and must be received at least 24 hours prior to the arrival of the vessel in the Solent. In the case of tankers in excess of 1,600 g.r.t./g.t., this report will combine the details required under the Merchant Shipping (Tankers) (EEC Requirement) Regulation 1981 (SI No. 1077 of 1981).

It should be noted that tankers having carried one or more cargoes and which have not been rendered gas free, purged or cargo spaces completely inerted, will also be required to provide the advance notification.

The advance notification report should be sent to:

(a) In the case of Southampton, the Harbour Master – Southampton and received in writing by one of the following means:

1. Telex: 477161 DHMSPR.
2. Ships Telegram Service – Telegraphic Address: Harbour Master Southampton.
3. By hand to the Harbour Master, Vessel Traffic Services Centre, Berth 37, Eastern Docks, Southampton.
4. Facsimile: (0703) 232991.

In the event of vessels whose passage time is less than 24 hours inbound to the Port of Southampton, the notification should be sent by telex from the last port of call, to ensure that details have been received prior to the vessel's arrival at the Nab/Needles area.

(b) In the case of the Portsmouth Commercial Docks, the Harbour Master Portsmouth Commerical Docks, marked DANGEROUS SUBSTANCES NOTICE and received in writing by one of the following means.

1. Telex 265452 MONRES G or electronic mail network number 9312110368 PM.
2. By hand to the Harbour Master, Harbour Offices, Continental Ferry Port, Portsmouth.

Where the voyage is less than 24 hours duration, a shorter period of notice may be accepted, but notice must ALWAYS be given BEFORE the ship passes the Nab or Cowes inbound for Portsmouth in the form prescribed, except in the case of Dangerous Substances for Albert Johnson Quay, Flathouse Quay and private wharves, and Dangerous Substances of Class 1 and Class 7 for the Continental Ferry Port, for which the minimum period of notice is 24 hours in ALL cases. Only those Class 1 materials which are of Division 1.4 – Compatibility Group 5, or any other explosives (except Compatibility Group L) of total quantity not exceeding 10 kilograms, will be considered for Portsmouth Commercial Docks.

(c) In the case of the Queen's Harbour Master and on the assumption that the information has already been passed to the Harbour Master – Southampton and the Harbour Master – Portsmouth Commerical Docks, the information be passed by VHF Channel 11 in the form shown in Paragraph 11, but is only required on sailing from either Southampton or Portsmouth or on passing Nab Tower inbound.

10. NOTIFICATION OF DANGEROUS SUBSTANCES:

(a) Non-Tankers:

1. Ship's name and International Radio Call Sign (IRCS).
2. Flag.
3. Overall length, draft and beam.
4. Destination within the Harbour Area.
5. ETA Nab or Needles.
6. Last Port of Call.
7. Possession of a Certificate of Fitness, where appropriate.

(b) Dangerous Substances being carried:
(Specify for discharge or in transit).

1. Correct technical name of Dangerous Substance.
2. UN Number.
3. Quantity of each substance.
4. Classification.
5. Details of the number and type of packages to be individually handled (where appropriate), including the carrying unit type, e.g. vehicle, container, etc.
6. Flashpoint in degrees Centigrade (where appropriate).

(c) In the case of Explosives:
(Specify for discharge or in transit).

1. UN Number.
2. Class.
3. Division.
4. Compatibility group.
5. Net explosive content.

(d) Tankers (Vessels under 1,600 g.r.t./g.t.):

1. Ship's name and IRCS.
2. Flag.
3. Overall length, draft and beam.
4. Destination within the Harbour Area.
5. ETA Nab or Needles.
6. Last Port of Call.

(e) Dangerous Substances being carried:
(Specify for discharge or in transit).

1. Correct technical name of Dangerous Substance.
2. UN Number.
3. Quantity of each substance.
4. Classification.

(f) Tankers (Vessels over 1,600 g.r.t./g.t.):
1. Ship's name and IRCS.
2. Flag.
3. Overall length, draft and beam.
4. The harbour where the Master intends first to berth the tanker, i.e. anchorage or berth.
5. Destination within the harbour area.
6. ETA Nab or Needles.
7. Last Port of Call.
8. Nature and quantity of any chemicals, gas or oil carried by the tanker.
9. Whether tanker is fitted with an inert gas system and, if fitted, is fully operational.
10. Whether the cargo tanks have an atmosphere which has been rendered non-flammable.
11. Whether or not a certificate has been issued in respect of the tanker:
   (a) If its cargo includes chemicals, that it complies with the IMO Code for Ships carrying Dangerous Chemicals; and
   (b) If its cargo includes gas, that it complies with the IMO Code for Existing Ships carrying Liquified Gases.
12. Defects in hull, machinery or equipment of the tanker which may:
   (a) Effect materially the safe manoeuvrability of the tanker; or
   (b) effect materially the safety of other vessels in or in the vicinity of, the approaches to the harbour; or
   (c) constitute a hazard to the Marine Environment; or
   (d) constitute a hazard to persons or property on land or in the vicinity of the harbour.

(g) Dangerous Substances being carried:
(Specify for discharge or in transit).
1. Correct technical name of Dangerous Substance.
2. UN Number.
3. Quantity of each substance.
4. Classification.

11. DETAILS REQUIRED BY THE QUEEN'S HARBOUR MASTER PORTSMOUTH:

Details required by the Queen's Harbour Master Portsmouth on ship's departure from Portsmouth or Southampton or on arrival Nab Tower.
1. Ship's name and IRCS.
2. Flag.
3. Overall length, draft and beam.
4. Either
   (a) Destination within the Solent, or
   (b) Time of passing Nab Tower.
5. Reference of the letter, telex or facsimile sent to Harbour Master – Southampton or Habour Master – Portsmouth Commercial Docks, containing the information required by Paragraph 10. If this information has not been forwarded, a full report in accordance with Paragraph 10 is required.

12. This Notice issued jointly by the Queen's Harbour Master Portsmouth, the Harbour Master Southampton and the Harbour Master Portsmouth Commercial Docks.

13. Notice to Mariners No. 8 of 1989 and No. 6 of 1990 is hereby cancelled.

Signed: Harbour Master – Southampton.
Dated: 1st January 1992.

Notice to Mariners No. 10 of 1992:

THE DOCKYARD PORT OF PORTSMOUTH AND THE PORT OF SOUTHAMPTON
VESSELS CONSTRAINED BY THEIR DRAFT

1. NOTICE IS HEREBY GIVEN that these directions, jointly promulgated by the Queen's Harbour Master – Portsmouth and the Harbour Master – Southampton are compatible with the Collision Regulations to ensure the safe navigation of large vessels in the East Solent and the dredged approach channel to Southampton Water.

2. There are two areas in the Solent in which vessels constrained by their draft inbound from the Nab Tower to Southampton, are in particular danger from outbound vessels; these are when passing the Portsmouth entrance channel, and when passing the North Sturbridge Buoy and shaping course to pass to the South of Ryde Middle Shoal. Vessels proceeding to seaward out of the Portsmouth entrance channel or from Southampton, North of the Ryde Middle Shoal, should take every possible precaution to avoid endangering the movements of these vessels, and in particular to avoid presenting them with a crossing sitation.

3. DEFINITIONS:

In the Dockyard Port of Portsmouth and the Port of Southampton, a vessel having a draft of 10.5 m. (34.5 ft.) or more, a length of 288 m. (945 ft.) or more, or a deadweight tonnage of 100,000 tons or more shall be considered to be a VESSEL CONSTRAINED BY HER DRAFT for purposes of definition within the International Regulations.

4. ACTION TAKEN TO AVOID IMPEDING THE SAFE PASSAGE OF A VESSEL CONSTRAINED BY HER DRAFT:

Vessels are warned that in taking action to avoid impeding the safe passage of a vessel constrained by her draft within the navigationally restricted waters of the Solent and Southampton Water, due regard must be given to the safe navigation of the latter vessel, which may prevent her from keeping her course and speed.

5. SHIPPING MOVEMENT CONTROL:

Vessels constrained by their draft or size, and vessels restricted in their ability to manoeuvre, shall not operate in the Dockyard Port of Portsmouth or the Port of Southampton without the permission of the Queen's Harbour Master – Portsmouth or the Harbour Master – Southampton respectively.

6. SOUTHAMPTON DEEP WATER CHANNEL:

All vessels navigating within the Port of Southampton shall ensu that a vessel constrained by her draft or size shall be given the so occupancy of the Deep Water Channel between Hook Buoy and th seaward limit of the WESTERN APPROACH CHANNEL.

7. Notice to Mariners No. 10 of 1991 is hereby cancelled.

Signed: Harbour Master – Southampton.
Dated: 1st January 1992.

Notice to Mariners No. 11 of 1992:

SPEED OF VESSELS AND PASSING DISTANCES OFF JETTIES AND BERTHS

1. NOTICE IS HEREBY GIVEN that special care must be exercise by all vessels navigating within the limits of the Port. Vessels shou proceed at a reduced speed as safe navigation permits, and in such manner as not to endanger the lives of persons ashore or afloa including passengers embarking or disembarking from harbour ferries or cause damage to vessels alongside or at moorings, or to sea wa and other works. Particular care should be exercised when passing O Terminals where vessels are loading or discharging petroleum produc and hazardous chemicals.

2. Special consideration should be given to the effects caused by th underwater form and the draft of vessels in order to reduce the resultin pressure waves and displacement of water. Particular attention shou be given to the increased effects caused during low water periods.

3. Attention is drawn to Merchant Shipping Notice No. M 930 - INTERACTION BETWEEN SHIPS.

4. The special attention of Masters, Pilots and others having comman or charge of vessels is drawn to the presence of vessels loading o discharging petroleum products or stores from small craft at ESS MARINE TERMINAL – FAWLEY and BP OIL TERMINAL – HAMBL and other vessels loading stores or cargo in anchorages. Attention i also drawn to the presence of craft at moorings or alongside the Milita installations at HYTHE and MARCHWOOD.

5. As safe navigation permits, vessels drawing 6.0 m. (19.7 ft.) an over when approaching or passing the ESSO MARINE TERMINAL - FAWLEY and BP OIL TERMINAL – HAMBLE must not exceed 7 kno over the ground. All ferries and vessels of less than this draft a reminded of the dangers inherent with oil terminals, and should reduc speed as safe navigation permits (Port of Southampton Bye Law No refers).

6. Any vessel passing the ESSO MARINE and BP OIL TERMINALS should navigate not less than 130 m. from the face of the jetties. Th limit is intended to protect vessels moored alongside, guard against th interaction of passing vessels and the risk of naked lights and spark within these areas (Port of Southampton Bye Law No. 9 refers).

7. Notice to Mariners No. 12 of 1989 is hereby cancelled.

Signed: Harbour Master – Southampton.
Dated: 1st January 1992.

Notice to Mariners No. 2 of 1993: (See "Plan").

PORT OF SOUTHAMPTON
WESTERN APPROACH CHANNEL
INTRODUCTION OF A MOVING PROHIBITED ZONE AROUND VESSELS EXCEEDING 150 M. LOA

1. Notice is hereby given that the Main Navigable Channel, as define on Admiralty Charts No. 1905, 394 and 2040, which lies between a lin drawn from Prince Consort to South Bramble Buoys and a line draw between Black Jack and Reach Buoys is designated as an "Area o Concern".

2. All vessels of over 150 m. length overall (LOA) whilst navigating the "Area of Concern" will be given a "Moving Prohibited Zone" aroun the vessel of 1,000 m. ahead and 100 m. either side of the vessel a depicted on the accompanying chartlet (See "Plan").

3. Small vessels of under 20 m. LOA will be prohibited from enterin the Moving Prohibited Zone. This measure coincides with the spirit o Rule 2 and the Steering and Sailing Rules of the Internation Regulations for Preventing Collisions at Sea 1972.

4. Nothing in this notice shall relieve vessels of less than 20 m. i length or sailing vessels from their obligation under Rule 9 of the collisio regulations to not impede the passage of any vessel which can naviga only within a narrow channel or fairway.

5. All vessels of over 150 m. LOA when navigating in the "Area o Concern" are required to display, where it can best be seen by day, a Black Cylinder, and by night 3 all-round red lights in a vertical line, a defined by Rule 28 of IRPCS to visually indicate the presence of th moving prohibited zone ahead and either side of the vessel.

6. Nothing in this Notice will prevent "Vessels Constrained by the draft" as defined by Notice to Mariners No. 10 of 1992 from display these lights and shapes as required by IRCPS in other areas of th Solent or Southampton Water.

7. When operationally possible, the Southampton harbour pa launch (VHF call sign "SP" Channel 12) will precede these vesse within the "Area of Concern" showing, in addition to the normal steam lights, a blue flashing light. The absence of the patrol launch will n invalidate the implementation of the moving prohibited zone.

8. To assist recreational vessels, the Port of Southampton Vess Traffic Centre (Call sign "Southampton VTS") will make hourly tra information broadcasts on VHF Channel 12 on the hour from 0600 h to 2200 hrs. Fridays to Sundays, inclusive of Bank Holiday Monda from Easter to the last weekend in October. From 1st June t 30th September the traffic information broadcast will be made on a da basis between the hours specified above. The broadcast will iden those large vessels and approximate times in which a moving prohib zone will apply whilst navigating in the "Area of Concern" and any oth relevant information for the safety of small vessels.

9. Details of this Notice to Mariners has been widely circulated and prior consultation has taken place with Shipowners and recreational sailing interests on behalf of the users of the Solent and the Port of Southampton.

10. Notice to Mariners No. 18 of 1992 referring to the restricted area off Calshot Spit is hereby cancelled.

Signed: Harbour Master.

Vessel Traffic Services Centre
Berth 37
Eastern Docks
Southampton
1st January 1993

Owners, Agents, Charterers, Marinas, Yacht Clubs and recreational sailing organisations should ensure that the contents of this Notice are made known to the Masters or persons in charge of their vessels or craft.

AUTHORITY: Associated British Ports, Ocean Gate, Atlantic Way, Southampton SO1 1XQ. *Tel:* (0703) 330022. *Telex:* 47334. *FAX:* (0703) 336402. *Contact:* A. Kent, Port Manager. Captain J.S. Chestnutt, Deputy Port Manager and Harbour Master.

STORNOWAY: 58.12 N. 06.22 W. (See Plan)

PORT LIMITS: Extend to a line from Southern end of Holm Island on the East to Rudh A'Bhaigh Uaine on the West – approximately 7.5 cables to seaward of Arnish Point Light.

PILOTAGE: Pilotage not compulsory. Vessels requesting Pilot request same with ETA 24 hours prior to arrival. Confirmation or amendment required 2 hours prior to arrival. Boarding off Arnish Point Lighthouse.

ANCHORAGES: Anchorage in harbour between Goat Island and mouth of Creed River, 8 fathoms.

RESTRICTIONS: Entry night or day and at any state of tide. No bar on entrance.

MAX. SIZE: 400 ft. by 60 ft. by 22 ft. draft to berth alongside, 600 ft. length by 35 ft. draft for anchorage in bay.

HEALTH: The customary flying of "Q" flag.

Also see "Health – All Ports" before first U.K. port.

RADIO: Wick Radio or alternatively Stonehaven Radio.

RADAR/VHF: R/T-VHF established in harbour, call "Stornoway Harbour" on Channels 16 and 12. Emergency messages may be passed through Stornoway Coastguard on 81.8 m. There is a radar set in the watchroom but no V.T.S. service is provided.

TUGS: No tugs available at port. Fishing vessels have been used, when necessary, for this purpose.

BERTHING: Vessels can be berthed at any time, provided berth is free.

Ro/Ro ferry terminal for Stornoway/Ullapool service in operation.

Depth of Water at Low Water Spring Tides: West side No. 1 Pier: 24.5 ft. shallowing to 12 ft. at junction of North Beach Quay. East side No.1 Pier: 24.5 ft. shallowing to zero at inward end. West side No. 2 Pier: 17.5 ft. shallowing to zero at inward end. East side No. 2 Pier: 16.5 ft. shallowing to zero at inward end. Inner Harbour decreases from 12 ft. at junction of Esplanade Quay to 8 ft. at upper end of Cromwell Street Quay.

STEVEDORES: Arranged by Agents on receipt of ETA.

MEDICAL: Advance notice desirable, Hospital facilities available in the town.

TANKERS: Normal safety requirements. One tanker berth only 15 ft. mean draft, max. length 220 ft.

DENSITY: Practically always dead salt; 1025 density.

FRESH WATER: Fresh water available by hose at 15 t.p.h.

FUEL: 24 hours notice required.

CONSULS: French, Swedish, Norwegian; Tel: Stornoway 702920, 702054, 703173 respectively.

REPAIRS: Minor deck and engine repairs can be carried out locally.

DRY DOCKS: No dry dock but one slipway of 750 tons displacement.

SURVEYORS: Marine & Engineer Surveys (Hebrides) Ltd., Stornoway.

GANGWAY/DECK WATCHMEN: Service of watchmen not necessary. Watchmen from shore may be employed if required.

OPENING/CLOSING HATCHES: Normally crew.

REPATRIATION: Facilities exist for this service.

AIRPORT: 3 miles from port, served regularly by British Airways from Glasgow and Inverness.

HOLIDAYS: New Year's Day, Christmas Day and all other local Bank Holidays. Cargo work can be arranged except New Year's Day. (No Sunday work.)

POLICE/AMBULANCE/FIRE: Police, Stornoway 702222 (can deal with all three services).

EMERGENCY CO-ORDINATION CENTRE: Stornoway Coastguard Tel: 702013 or 702014.

TELEPHONES: Can be arranged by prior application through Aberdeen office.

STORING: See "Prelims".

1. By truck.
2. –
3. Yes.
4. Yes.
5. Notice No. 69.
6. Yes.

IDENTIFICATION CARDS: Not required.

GARBAGE DISPOSAL: Skips available at no charge.

WASTE OIL DISPOSAL: Only small amounts by tanker truck (7,000 litres capacity). Service carried out by local authority, but arranged through Port Authority.

SEAMAN'S CLUBS: Royal National Mission to Deep Sea Fishermen, North Beach Street, Stornoway. Tel: (0851) 704424.

GENERAL: ETA to be sent 24 hours beforehand so that necessary arrangements can be made.

AUTHORITY: Stornoway Pier and Harbour Commission, Amity House, Esplanade Quay, Stornoway, Isle of Lewis PA87 2XS. *Tel:* (0851) 702688. *Cables:* Harbour Commission. *FAX:* (0851) 705714. *Contact:* M. Macleod, General Manager. Captain A.M. Mackenzie, Harbour Master.

STRANRAER: 54.55 N. 05.02 W. (See Plan)

DOCUMENTS: As for other British ports.

PILOTAGE: Not compulsory.

ANCHORAGE: Deep water anchorage at Lady Bay.

MAX. SIZE: Largest vessel handled 130 m. long. Working draft 5.0 m. at Stena Sealink.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: VHF watch kept on Channel 16 at Stena Sealink Ports Ltd. Ferry Terminal. Working Channel is 14.

TUGS: Not available.

BERTHING: *East Pier:* 2 berths, depth 5.0 m. at L.A.T. One with vehicular ramp (single tier).

Ross Pier: Length 153 m. Dredged to 5 m. at L.A.T. Double tier vehicular ramp at this berth.

MEDICAL: Medical Centre and hospital in town.

FRESH WATER: Available at all berths.

FUEL: Limited quantities of fuel oil can be supplied from road tankers.

REPAIRS: Small repairs can be carried out by local engineering firm.

GENERAL: Inshore lifeboat based at Stranraer.

AUTHORITY: *East Pier:* Stena Sealink Ports Ltd., Sea Terminal, Stranraer Harbour, Stranraer DG9 8EL. *Tel:* (0776) 702262. *Telex:* 778125. *FAX:* (0776) 706586. *Cables:* Sealink Port Stranraer. *Contact:* E.S. Bird, Ship and Port Manager.

West Pier: Dumfries and Galloway Regional Council, Ailsa House, Sun Street, Stranraer DG9 7JL. *Tel:* Harbour Office (0776) 702460. *Contact:* John C. Colvin, Harbour Master.

SULLOM VOE: 60.27 N., 01.17 W. (See Plan)

GENERAL: The Port of Sullom Voe is a major deep water harbour. It is owned and operated by the Shetland Islands Council as Harbour Authority.

The Sullom Voe Oil and Gas Complex is located within the port limits on Calback Ness in position 60° 27.5′ N., 01° 17.0′ W. and is operated by BP Petroleum Development Limited on behalf of several oil company participants. The oil delivered to Sullom Voe through the Brent and Ninian pipelines is collected from a group of oilfields located in the East Shetland basin.

The Port Administration Building, from which all marine operations are monitored and controlled, is located on Sella Ness in position: Lat. 60° 26.8′ N., Long. 01° 16.5′ W.

Services offered by the Harbour Authority and financed through conservancy charges include port radar, navigational advice to Shipmasters, intensity controlled navigational lighting to assist in poor visibility, meteorological advice and shore access gangways at all oil and gas jetties. Services offered and financed through separate charging structures include pilotage and mooring boat services. Boat hire can be arranged for vessels anchored or standing off. Helicopter hire is also available at times. The towage service is operated by a separate towage company and financed directly through towage charges.

The harbour is presently designed to routinely accept tankers up to around 365 m. LOA, with a draft of up to 22.6 m. and LPG carriers up to around 260 m. in length with a draft up to 15.9 m. In addition to liquid bulk and LPG cargo, the port is designed to handle general, dry bulk, Ro/Ro, containerised cargo and quarried rock.

There are 2 entrances to Yell Sound. The primary Northern route, suitable for oil and gas tankers, lies on the Western side of Yell Sound and is marked by leading lights situated on Gluss Isle. The South Eastern approach is considered suitable for vessels of up to 200 m. LOA and having a draft of not more than 11.6 m.

Both routes merge at the entrance to Sullom Voe; the lead into the Voe is indicated by leading markers located on Fugla Ness. In the case of vessels other than coasters, all manoeuvres South of Lamba Island will be assisted by tugs.

Ships will generally be berthed starboard side alongside at the oil loading berths. This will involve swinging each vessel within the Voe in areas adjacent to the tanker jetties. Vessels may be berthed port side alongside during adverse wind conditions.

For the purpose of manoeuvring within the harbour area a minimum under keel clearance of 2.0 m. is required at all times.

Although current rates of up to 7 knots may be experienced in areas of Yell Sound, records indicate that the maximum current likely to be experienced within Sullom Voe on the deep draft route, is unlikely to exceed 1 knot.

The maximum tidal range within the Harbour Area is 2.3 m. at Springs and minimum 0.6 m. at Neaps. The main tidal current flows to the South on the flood and to the North on the ebb.

Moorings: Strong winds are frequently experienced at Sullom Voe and may be accompanied by sudden gusts from any direction. The prevailing wind direction is S.W.

It is essential that whilst alongside the jetty, moorings are tended carefully and regularly and conform with the mooring requirements. (See "Plan").

SHIP SYSTEM FAILURES: Following the main engine problems experienced by the vessels in Sullom Voe, the following additional regulations are in effect:

1. In the event of a vessel suffering a machinery failure affecting seaworthiness or ability to manoeuvre prior to berthing or whilst alongside, an independent survey must be commissioned into the ability of the ship's machinery to perform after repair. Any surveyor appointed must be approved by a recognised classification society; be fully able to certify the integrity of the machinery or repair and must not, at the time of survey, be a member of the vessel's crew. The vessel will not be permitted to sail until the Director of Marine Operations is satisfied by the surveyor that the vessel is fully operational in every respect or that there are satisfactory arrangements in place to ensure that the vessel may depart from Shetland waters safely. All survey and other costs involved in this matter will be for the ship's account.
2. In the above circumstances, the vessel will be required to employ 4 tugs for sailing, which will remain in attendance until the vessel has cleared port.
3. No large scale crew changes for vessels stemmed for Sullom Voe will be permitted in Shetland waters.

CONDUCT OF VESSELS ENTERING YELL SOUND:

(a) Masters of tankers and gas carriers entering the Port of Sullom Voe are advised to refer to Charts B.A. 3298, 3297 and 3292.

(b) Navigation within the Harbour Area is prohibited unless the vessel is mechanically and navigationally sound, anchors are ready for letting go and there is a responsible person who can speak and understand English on the bridge.

(c) The berthing of tankers and gas carriers is suspended when wind speeds are regularly and frequently gusting in excess of 30 knots. Masters will be advised by Port Control in the event of such suspension.

(d) Vessels should afford a safe lee for the pilot boat during boarding and landing operations.

(e) When inbound tankers are at Reporting Point B ('Bravo') the Master should alert the crew in preparation for securing tugs, while speed is reduced accordingly.

(f) The bow and stern tugs will be made fast when it is considered safe to do so, soon after passing the Outer Skerry.

(g) The alongside tugs shall be secured as soon as possible thereafter.

(h) The vessel's speed must not exceed 5 knots South of a line joining Skaw Taing and Trumba Point.

(i) Standard practice requires vessels to be swung on arrival (except when weather conditions dictate otherwise) and berthed starboard side alongside the jetty designated (See "Plans" for mooring guidelines).

Note: Tugs will use their own lines for securing.

MINIMUM REQUIREMENTS: In order to avoid delays, all vessels programmed for Sullom Voe should comply with the recommendations of the Council of the European Committee for Vessels Transiting Community Seaports, and be fitted with:

(i) Fully operational radar.
(ii) Fully operational VHF radio with Channels 16, 14, 20 12, 10 and 9.
(iii) Sufficient crew to handle tugs' lines and moorings efficiently.
(iv) Efficient propulsion and deck machinery.
(v) Efficient and adequate moorings to secure vessels safely.
(vi) Efficient signalling equipment.
(vii) Fully operational tachometer, rudder and helm indicators.
(viii) Efficient mooring stations communications systems.
(ix) An efficient anchor windlass and anchors.
(x) A complete and valid set of Safety Certificates.
(xi) All officers to be properly qualified and carry recognised certificates of competency.

Note: If any vessel cannot comply with any of the above, Sullom Voe Port Control should be advised prior to arrival or departure.

DOCUMENTS:

General Declaration (C13). In duplicate.
Crew List (IMO FAL 5) or equivalent.

In additional to the above, the following are required if arriving from a Non-EC Port.

Cargo Manifest (if appropriate).
Crew Declaration (C142). In duplicate (incorporating small parcels).

Procedure:

(i) The Master of a ship is responsible for making Report.
(ii) The Report is to be completed in duplicate on arrival.
(iii) If the ship is visited on arrival, the Report is to be handed to the visiting Officer.
(iv) If the ship is not visited on arrival, the original copy of the Report is to be lodged at the Designated Place (H.M. Customs & Excise, Charlotte House, Lerwick), not later than 3 hours after the ship has arrived at its place of loading or unloading.

PILOTAGE: Pilotage is compulsory within the Sullom Voe harbour area.

Pilots: Authorised Pilots are available on a 24 hour basis. A continuous VHF watch is maintained. Call "Sullom Voe Harbour Radio" on Channel 16 or Channel 14.

Pilot Boarding Arrangements: In all normal circumstances the boarding and landing of Pilots at Sullom Voe will be carried out by the Authority's pilot vessels, which are approved for this purpose. Helicopters may be used at certain times and under certain conditions as set out below.

Harbour Area: The Sullom Voe Harbour Area is defined in 'The Sul Voe Harbour Revision Order 1980' as: "The entire area of Yell Sou and Sullom Voe and adjacent inlets within a line commencing at Ell W thence in a Northerly direction along the line of the low water mark the West side to a point in Latitude 60° 38.27′ N., Longitu 01° 18.27′ W. on the line of low water mark at the Northern extremity the Point of Fethaland, thence in an Easterly direction following a straig line to a point in Latitude 60° 38.23′ N., Longitude 01° 11.13′ W. on th line of low water mark at the Northern extremity of Fogla Lee on th Island of Yell, thence generally in a Southerly and Easterly direct along the line of low water mark on the East side to a point in Latitu 60° 29.15′ N., Longitude 01° 05.80′ W. on the line of low water mark the South–eastern extremity of the Ness of Copister, thence in Southerly direction to a point in Latitude 60° 28.68′ N., Longitu 01° 05.97′ W. on the line of low water mark at the South–Easte extremity of the Island of Orfasay, thence in a South–westerly direct following a straight line to a point in Latitude 60° 27.73′ N., Longitu 01° 08.37′ W. on the line of low water mark at the Southern extrem of Samphrey Island, thence in a Westerly direction following a straig line to a point in Latitude 60° 27.75′ N., Longitude 01° 10.82′ W. at th root of Mossbank Pier and thence generally in a Northerly and Souther direction following the line of low water mark to the point commencement.

Pilot Boarding Areas: Ships arriving from sea which are compelled take a pilot in compliance with this Direction, or otherwise require a pil shall take the pilot on board in the following areas:

(a) Ships approaching the North Entrance of Sullom Voe Harbo Area should rendezvous with the pilot in position Lat. 60° 38.3′ N Long. 01° 14.8′ W., with Point of Fethaland lighthouse bear 260° (T)×1.8 miles.

(b) Ships approaching the South East Entrance of Sullom Vo Harbour Area should rendezvous with the pilot in position La 60° 28.5′ N., Long. 00° 56.5′ W., with Firths Voe lighthous bearing 260°(T)×7 miles.

(c) Ships may take a pilot on board in other areas only if express directed to do so by an authorised pilot or the Harbour Maste

Note: Vessels boarding pilots by helicopter will usually carry out suc operations near North of the normal boarding position for the Nor Entrance given in (a) above. This may be varied due to weather or othe cause and vessels should proceed in accordance with advice fro Sullom Voe Port Control when helicopters are used.

Exemption from Compulsory Pilotage: Without prejudice to th generality of the foregoing, the following ships shall be exempt fro compulsory pilotage within the Sullom Voe Harbour Area unless as ma otherwise be directed by the Harbour Master:

(a) All ships of not more than 300 tons gross registered tonnag which do not have on board dangerous substances to which th provisions of the Dangerous Substances in Harbour Are Regulations 1987 apply.

(b) All fishing vessels.

(c) All tugboats operating as such exclusively within Sullom Vo Harbour Area.

(d) All ships *in transit* through the Sullom Voe Harbour Area whic do not pass South of a line joining the most Northerly point o Gluss Isle and the most Northerly point of Calback Ness.

(e) All ships belonging to Her Majesty.

Pilotage Exemption Certificates: The Secretary of State has direct that the Shetland Islands Council may refuse to grant such Certificat in respect of vessels using Sullom Voe Harbour Area.

Pilot Boats: The Authority has 3 boats for use at the Port of Sullom Vo

(i) "Sullom Mareel" LOA 16.2 m., service speed 16 knots.
(ii) "Sullom Spindrift" LOA 19.8 m., service speed 20 knots.
(iii) "Sullom Shoormal" LOA 19.8 m., service speed 20 knots.

All boats are of GRP construction and are fully equipped with mode navigational aids.

The freeboard of each boat is approximately 1.5 m.

Pilot Ladder Requirements: All vessels calling at the Port of Sullom Vo must comply with "The Merchant Shipping (Pilot Ladders and Hois Regulations 1987 (S.I. 1961)".

The following points are stressed:

(i) The rigging of pilot ladders and the embarkation a disembarkation of Pilots thereby shall be supervised by responsible deck officer of the ship.

(ii) Every pilot ladder shall be secured in a position clear of a possible discharges from the ship, and so that each step res firmly against the ship's side.

(iii) Every pilot ladder shall be secured in a position where the Pi can gain safe and convenient access to the ship after climb not less than 1.5 m. and not more than 9.0 m.

(iv) Whenever the distance from the water to the point of access t the ship exceeds 9.0 m., access to the ship must be by mea of a combination of a pilot ladder and an accommodation ladd or an equally safe and convenient means.

(v) Owners, Charterers and Masters of vessels should be aware th Sections 6 and 7 of the M.S. (Pilot Ladders and Hois Regulations 1987 specifies very clearly the conditions un which accommodation ladders are permitted to be used i combination with a pilot ladder when the freeboard exceeds 9 The attention of those involved is drawn particularly to Sect 7(2)(A) of these regulations which reads as follows ". . . the low end of the accommodation ladder rests firmly against the side the ship within the parallel body length of the ship and, as far is practicable, within the mid-ship half section *and leading* a Masters are advised that these regulations will be strictly enfo by the Harbour Authority. Any vessels unable to comply with th above section in every particular way should contact their Ag in good time before arrival in order to arrange alternative mea for embarking the Pilot.

Any delays and/or additional costs incurred by vessels unable comply with the above regulations will be strictly to the ship's a account.

(vi) Adequate lighting shall be provided at night so that the pilot ladder overside and also the position where the Pilot boards the ship shall be properly illuminated.

(vii) Actual sea conditions for small craft are not always appreciated when viewed from the bridge of a large vessel. Boarding and landing of pilots is a potentially hazardous operation which requires whole-hearted co-operation between those in control of both the tanker and pilot boat. Hard and fast rules cannot be laid down to fit every set of circumstances but the following points of guidance should be noted.

(a) All vessels being serviced should be at the pilot station at the agreed time and not significantly early or late.

(b) All vessels being serviced should be ready to respond to all reasonable requests from the pilot boat to ensure a safe transfer. Agreement as to how and where the transfer is to take place should be reached in ample time and the manoeuvre executed where sufficient sea room exists.

(c) All vessels being serviced should inform the pilot boat of their intention to change their heading and when that change of heading has been completed.

Pilot Hoists: Pilots are not obliged to use pilot hoists. Any use of these devices must only be at the option of the Pilot, and in general, pilot hoists are not acceptable for the boarding and landing of Pilots at Sullom Voe. Any pilot hoist offered must, in any case, comply fully with IMO recommendations on performance standards for mechanical pilot hoists and also with the recommendations of the European Maritime Pilots Association.

Note: Because of the low ambient air temperature combined with strong wind conditions, experience has shown that it is not uncommon for pilot hoists driven by compressed air to freeze. Careful attention should be paid to this equipment during the Winter months.

Pilot Transfer by Helicopter: Sea conditions at the North Entrance to Yell Sound can at times prevent the boarding and landing of Pilots by boat even though wind speeds may be within operational limits. Helicopters may be used at the discretion of the Authority to carry out Pilot transfer when such conditions exist. Helicopters may also be used in cases where a vessel is unable to provide a satisfactory pilot ladder/accommodation ladder. Factors affecting the use of helicopters for these purposes are set out below.

1. At present an MBB Bolkow 105 helicopter is contracted to the Authority on a sole user basis for purposes of Pilot transfer. This helicopter may also be available for ad hoc use by application to the Director of Marine Operations.
2. The first choice helicopter is capable only of landing on vessels to be serviced. Winching operations cannot be carried out by this aircraft. It is a small twin-engined helicopter of approximately 2 tonnes weight and with a rotor height of 3 m. Experience has shown that this helicopter can safely land on 90% of vessels calling at Sullom Voe.
   Winch-capable helicopters may be available but will take much longer to obtain and delays could result to the requesting vessel.
3. The permission of the Master and/or Agents as appropriate will be obtained prior to any transfer taking place using the MBB Bolkow 105 helicopter.
4. All transfers by helicopter will be carried out strictly in accordance with the U.K. CAA Regulations and the Procedures set out in the "Guide to Helicopter/Ship Operations" published by the International Chamber of Shipping (see extracts reprinted below).
5. Any helicopter service is available only to crude carriers and combination carriers provided with suitable helicopter operating areas. It is not available to LPG carriers.
6. Any helicopter service is available during daylight hours only. Service by winch – capable aircraft may be available only during ordinary airport opening hours which are typically 0730 – 2030 weekdays and 1045 – 1430 Sundays.
7. No extra charge will accrue to the vessel when pilots are boarded and landed by the MBB Bolkow 105 helicopter for reasons of weather and/or adverse sea conditions. The regular and published boarding and landing fee is applied.
8. When the MBB Bolkow 105 Helicopter is used to service a vessel with defective boarding and landing equipment, a charge of £1,500 plus the regular published boarding and landing fee per operation plus re-charges at cost will be applied.
9. Helicopter operations are co-ordinated by Sullom Voe Port Control. Vessels serviced in this manner should follow instructions issued by Sullom Voe Port Control to facilitate such transfers.
10. Helicopters used at Sullom Voe are operated only by the well-established companies, currently Bond Helicopters Ltd. and British International Helicopters Ltd., which operate to the highest standards and are approved by the Harbour Authority to carry out transfers of personnel.
11. Only experienced aircrew are used and Marine Pilots of this Authority are all experienced in this mode of transfer and trained in accordance with Section 8(h) of the ICS Guide to Helicopter/Ship Operations.
12. When continuous service by MBB Bolkow 105 Helicopter is not available, vessels which require helicopter services for reasons of defective pilot boarding equipment must give early and specific advice of this requirement if delays are to be avoided. Helicopters may be obtained on an ad hoc basis for this purpose subject to availability and will generally transfer by winching only. Only helicopter operators approved by the Harbour Authority will be used.

Note: The Sullom Voe Harbour Authority will endeavour to advise a vessel's Agent or Operator when an additional cost is likely to be incurred due to use of a helicopter for pilot transfer(s). However, all Agents and Operators should be aware that notwithstanding the above, the Harbour Authority will, at its sole discretion, secure helicopters for the purpose of pilot transfers when they deem such service is required. The costs of such operations will be charged to the vessel as appropriate.

For convenience of ships Masters the following extracts from the current "Guide to Helicopter/Ship Operations" are reproduced by kind permission of the International Chamber of Shipping:

5.1 Operational Checks

The Officer in charge should check all operational requirements on deck shortly before the arrival of the helicopter. Different types of ships may require specialist checks.

The general requirements for all types of ships are listed below.

5.1.1 Ship Checks

(a) All loose objects within and adjacent to the operating area must be secured or removed;
(b) All aerials and standing or running rigging above or in the vicinity of the operational area should be lowered or secured;
(c) Fire pumps should be running with sufficient water pressure on deck;
(d) Fire hoses should be ready. (Hoses should be near to but clear of and, if possible, upwind of the operating area pointing away from the helicopter);
(e) Foam equipment operators (at least 2 wearing the prescribed firemen's outfits) should be standing by, and have foam nozzles pointing away from the helicopter;
(f) A rescue party should be detailed with at least 2 members wearing firemen's outfits;
(g) The man overboard rescue boat should be ready for immediate lowering;
(h) The following items of equipment should be to hand:
  (i) Portable fire extinguishers.
  (ii) Large axe.
  (iii) Crowbar.
  (iv) Wirecutters.
  (v) Red emergency signal/torch.
  (vi) Marshalling batons (at night).
  (vii) First aid equipment.
(i) The correct lighting and signals (including special navigation lights) should be switched on prior to night operations;
(j) The deck party should be ready, and all passengers clear of the operating area;
(k) Hook handlers should be equipped with electricians' strong rubber gloves and rubber soled shoes to avoid electric shocks from static discharge;
(l) All the deck crew should be wearing bright coloured life vests and protective helmets securely fastened with a chin strap;
(m) The Officer of the watch on the bridge should be consulted about the ship's readiness.

5.1.2 Landing On (These checks are additional to those in 5.1.1):

(a) The deck party should be made aware that a landing is to be made;
(b) The operating area should be free of heavy spray or seas on deck;
(c) Awnings, stanchions and derricks and, if necessary, side rails should be lowered or removed.

As outlined under "Pilot Transfer by Helicopter" the Port Authority uses a MBB Bolkow 105 Helicopter for boarding and landing of pilots in certain circumstances.

The primary purpose is to provide a service when sea and swell conditions at the boarding stations are such that boatwork must be suspended, but it is also used when vessels are unable to provide the correct pilot boarding equipment.

This helicopter cannot carry out pilot transfer by winching and must land on the vessel to be serviced. The arrangements approved by the United Kingdom Civil Aviation Authority for the MBB Bolkow 105 to land on vessels are shown in the "Plan Section". However, for a trial period, approval has been given by the CAA which allows the helicopter to land on vessels to be serviced at Sullom Voe without the necessity for the vessel to lower the shipside rails. This temporary approval may not continue in the longer term and owners and managers of vessels trading to Sullom Voe who wish to continue to avail themselves of the service must now consider carrying out the minor structural modifications shown in the "Plan Section".

The modifications required are adaptation of the ship-side rails in way of the landing area to allow these to fold down inboard and remain secured in the folded down position and the application of non-skid paint to the landing circle. Both items are inexpensive and may be carried out without waiting for the next drydock or repair schedule.

Operators of ships trading regularly to Sullom Voe are hereby strongly urged to ensure that their vessels are adapted and equipped to comply with this requirement at the earliest opportunity.

Should further clarification be required this may be obtained by contacting the Port Authority.

APPROACHES: *Routeing and Aerial Surveillance in Shetland Waters.*
Vessel routes in Shetland Waters:

Applicable to all tankers, combination carriers and LPG vessels, loaded or in ballast calling at Sullom Voe.

Shetland Islands Council, conscious of the dangers to navigation around the Shetland coast, due largely to offshore obstructions, strong tides, rapid weather changes and the presence of fishing vessels, vigorously discourages navigation close to the Shetland coastline. The International Maritime Organisation has now ratified this "area of avoidance" as from 16th November 1991, with extended areas as from 28th November 1993 and a new area is established around Fair Isle.

1. Mariners should observe the IMO scheme as detailed on the navigation charts for the Shetland area. Any vessels found within an "Area to be Avoided" will be reported to the flag state in addition to Owners and Charterers.
2. Vessels which use the pilot station at the South East entrance to Yell Sound are requested to navigate as follows:
   (a) Vessels approaching the Shetland Islands from the South and making for the pilot station at the South East entrance to Yell Sound or wishing to anchor in Colgrave Sound are advised to navigate to a position 20 miles East of Out Skerries, before altering course to the pilot station or to Colgrave Sound.
   (b) Vessels approaching from the North and making for the pilot station at the South East entrance to Yell Sound or wishing to anchor in Colgrave Sound are advised to navigate to a position 20 miles East of Fetlar, before altering course to the pilot station or Colgrave Sound.
3. Where for any reason of safety or emergency, it is not possible to comply with the foregoing, you are required to notify immediately your intentions with reasons, to Sullom Voe Port Control by VHF Channel 16 or via Agents.
4. Charts should not be cleaned off before berthing at Sullom Voe to allow checking by Harbour Authority.
5. In the event of breakdown and your vessel drifts, or is likely to drift, within the Areas to be Avoided/Precautionary Areas, you must contact Sullom Voe Port Control or Shetland Coastguard by VHF Channel 16 at the earliest opportunity.

Areas to be Avoided:

1. Area to be Avoided, North of Shetland:
   Vessels should avoid the area bounded by lines connecting the following positions:
   (1) 60° 39.5′ N., 1° 09.3′ W.
   (2) 61° 04.3′ N., 1° 09.3′ W.
   (3) 61° 04.3′ N., 0° 29.7′ W.
   (4) 60° 38.4′ N., 0° 12.2′ W.
   (5) 60° 34.2′ N., 0° 48.0′ W. (Funzie Ness)
   (6) 60° 33.8′ N., 0° 53.5′ W. (Rams Ness)
   Thence up the Eastern side of Colgrave Sound to
   (7) 60° 35.8′ N., 0° 55.4′ W.
   (8) 60° 36.8′ N., 0° 58.0′ W.
   (9) 60° 38.4′ N., 0° 58.8′ W.
   Thence along the coastline to position (1).
2. Areas to be Avoided, West and South of Shetland:
   Vessels should avoid the area bounded by lines connecting the following positions:
   (10) 60° 02.50′ N., 1° 10.20′ W. (Heli Ness)
   (11) 59° 59.87′ N., 1° 09.37′ W. (Perie Bard Lt.)
   (12) 59° 41.0′ N., 1° 12.0′ W.
   (13) 59° 42.7′ N., 1° 26.0′ W.
   (14) 60° 02.0′ N., 2° 48.0′ W.
   (15) 60° 15.0′ N., 2° 48.0′ W.
   (16) 60° 42.5′ N., 2° 09.0′ W.
   (17) 60° 42.5′ N., 1° 22.0′ W.
   (18) 60° 40.0′ N., 1° 17.0′ W.
   (19) 60° 37.3′ N., 1° 17.9′ W.
   Thence along the West coastline to position (10).
3. Areas to be Avoided, Fair Isle:
   Vessels should avoid the area contained wihtin a circle of radius 6.5 nautical miles centered 59° 32.0′ N., 1° 38.0′ W.
4. Precautionary Area, Northern Approaches to Yell Sound:
   Bounded by a line connecting the following positions:
   (20) 61° 04.3′ N., 1° 09.3′ W.
   (21) 60° 39.5′ N., 1° 09.3′ W.
   (22) 60° 40.0′ N., 1° 17.0′ W.
   (23) 60° 42.5′ N., 1° 22.0′ W.
   (24) 60° 42.5′ N., 2° 09.0′ W.
5. Precautionary Area, Southern Approaches to Yell Sound:
   Bounded by a line connecting the following positions:
   (25) 60° 27.4′ N., 1° 02.4′ W.
   (26) 60° 24.0′ N., 0° 02.5′ W.
   (27) 60° 38.4′ N., 0° 12.2′ W.
   (28) 60° 34.2′ N., 0° 48.0′ W.
   (29) 60° 33.8′ N., 0° 53.5′ W.
   Thence up the Eastern side of Colgrave Sound to
   (30) 60° 35.8′ N., 0° 55.4′ W.
   (31) 60° 36.8′ N., 0° 58.0′ W.
6. Precautionary Area, Approaches to Lerwick:
   Bounded by a line connecting the following positions:
   (25) 60° 27.4′ N., 1° 02.4′ W.
   (26) 60° 24.0′ N., 0° 02.5′ W.
   (12) 59° 41.0′ N., 1° 12.0′ W.
   (11) 59° 59.87′ N., 1° 09.37′ W. (Perie Bard)
   IMPORTANT: By local agreement with the oil industry at Sullom Voe, all vessels loaded or in ballast should abide by the above Areas to be Avoided and Precautionary Areas.

ANCHORAGES: There are no suitable anchorages available for large tankers in the Port of Sullom Voe.

However, certain vessels may be anchored in the harbour at the discretion of the Harbour Master.

Vessels are permitted to anchor in Colgrave Sound (Lat. 60° 35′ N., Long. 00° 57′ W. approx.) when circumstances dictate that this is appropriate. In doing so, Masters should make reference to charts B.A. 3282 and 3292, the North of Scotland Pilot – NP. 52, page 99 and "Routeing and Aerial Surveillance in Shetland Waters", see "Approaches".

In addition, the following guidance to the usage of Colgrave Sound is relevant and all vessels intending to anchor there should comply with the advice given herein.

1. Colgrave Sound is used extensively by fishing craft throug the year and Masters of other vessels are requested and requ to give such fishing vessels a wide berth.
2. Three designated anchorages in Colgrave Sound have be identified as being suitable for large vessels and clear established fishing grounds. These anchorages should be us in preference to any other area of Colgrave Sound. (See "Pla
3. Colgrave Sound is outside the Sullom Voe Harbour Area and a outside the extended area of coverage of the Harbo surveillance radar. It is however observed several times each d by the surveillance aircraft. Therefore any information given Sullom Voe Port Control to vessels proposing to anchor Colgrave Sound is given in good faith and on the understand that neither the Harbour Authority nor its servants will acc liability for the consequences of any vessel dragging anch colliding with any other vessel, stranding, causing pollution, any other occurrence occasioned by or to the vessel concern whilst navigating or at anchor within Colgrave Sound and approaches.
4. Sullom Voe Harbour Authority will, however, give ev assistance to any vessel seeking information about the Colgra Sound area with the objective of establishing orderly navigatio disciplines in the area for the benefit of all users.
5. To this end any vessel (including oil rigs, oil exploration vesse barges and supply craft) wishing to anchor in Colgrave Sound requested, in the first instance, to contact Sullom Voe P Control. The vessel will then be advised which designa anchorage is believed to be unoccupied and which may thereb be used by the vessel.
6. The designated anchorages are identified by the numbers 1 and 3 (See "Plan") and also by bearing and distance of the Wh Hill Lighthouse (Lat. 60° 34.9′ N., Long. 01° 00.1′ W.) as follo
   Anchorage 1: White Hill Lighthouse bearing 238°T×1.50 mile
   Anchorage 2: White Hill Lighthouse bearing 253°T×0.95 mile
   Anchorage 3: White Hill Lighthouse bearing 260°T×1.68 mile
7. Masters of vessels making use of any of the designa anchorages are requested to provide Sullom Voe Port Con with details of their anchorage position when brought up.
8. Masters of vessels approaching or at anchor within Colgra Sound are requested to strictly observe the regulations prohibi the dumping of industrial debris, offensive and noxio substances and oil pollution.

Masters should beware of 2 submarine oil pipelines on the East S of Shetland shown on the latest charts and referrred to in "North Co of Scotland Pilot", pages 94 and 95.

Except when advised otherwise, Masters should proceed to a po 10 miles off Gruney Island (Lat. 60° 39′ 00″ N., Long. 01° 18′ 00″ W Thereafter, Masters should follow directions in "North Coast of Scotla Pilot", page 54, noting, however, that there are areas of poor V communication with Sullom Voe Harbour Radio to the West and No of Yell Sound.

MAX. SIZE: See "Berthing", "Loading/Discharging Facilities" a "Liquefied Petroleum Gas Facilities".

HEALTH: The following Port Health procedure applies at the Sull Voe Terminal.

The Master has no need to obtain health clearance unless:

(i) An authorised officer otherwise directs.
(ii) A death or illness has occurred as defined in the Public Hea (Ships) (Scotland) Regulations.
(iii) An abnormal mortality among rats or mice on board has occu

Where it is necessary to obtain "Free Pratique" for health purpos the Master should provide the following documents:

(i) Maritime Declaration of Health.
(ii) A list of passengers and crew leaving the ship, together with t addresses they are going to in the United Kingdom.

Derat Exemption Certificates: The Sullom Voe Terminal is "approved" Port, and Derat Exemption Certificates will be issued by Director of Environmental Health and Trading Standards of the Shetla Islands Council.

Also see "Health – All Ports" before first U.K. port.

RADIO:

ETA Requirements: Vessels bound for Sullom Voe are require provide the Harbour Authority with the following information.

(i) An estimated time of arrival at least 24 hours prior to arriva on leaving the last port (whichever is later). In addition to t ETA, Masters are to include the estimated time of cros Lat. 58° 20′ N. and estimated longitude on crossing that latitu and the intended inward courses and turnpoints from that posi to the Pilot Station. Vessels arriving from the North Atlantic Northern North Sea should use a position 200 miles from the p station.
(ii) Confirm the vessel's ETA at least 6 hours before arrival at t seaward limit of the Harbour Area and thereafter notify a significant change in excess of 1 hour.
(iii) On coming within range of "Sullom Voe Harbour Radio", the E to be given by VHF (Channel 16 or Channel 14).

Pre-Arrival Information: 24 hours prior to arrival, all vessels callin Sullom Voe should cable "Portcontrol Sullomvoe" the follow information (metric units to be used where appropriate):

(i) Ship's name and call sign.
(ii) Port of Registry.
(iii) Name of Master.
(iv) G.R.T.
(v) Summer deadweight (metric tonnes).
(vi) Length overall and beam (metres).
(vii) Draft fore and aft.
(viii) Bunkers/Fresh Water/Stores quantity on board.
(ix) Whether loaded or in ballast. If loaded, nature and quan cargo.
(x) Whether vessel is carrying segregated ballast.

(xi) If so, quantity and at which port taken onboard.
(xii) Dirty ballast quantity (tonnes).
(xiii) Berthing deadweight as a percentage of the Summer d.w.t. (minimum acceptable 35%).
(xiv) Which pilot station on arrival.
(xv) Pilot boarding arrangements.
(xvi) Number of crew.
(xvii) Last Port of call.
(xviii) Does ship have a fully operational inert gas system and are all cargo/deep tanks inerted to a maximum of 8% oxygen content (2% for LPG carriers)?
(xix) Your vessel will be required to "closed-load" at all times even during topping off, can you comply? Y/N.
(xx) P & I Club name.
(xxi) Is all navigation, safety, anchoring and mooring equipment fully operational and ready for use? If not, specify. All anchors to be cleared away on arrival at the pilot station.
(xxii) Confirmation to be given that vessels are complying in all respects with "The Merchant Shipping (Tankers) (EEC Requirements) Regulations 1981".
(xxiii) Confirm that engines will be tested to come astern before pilot boards.
(xxiv) Vessel's Inmarsat and Telex numbers.

NOTE: All segregated ballast tanks are sampled and analysed before permission is given to discharge into the harbour.

VHF Radio Communications:

1. Sullom Voe Harbour Radio maintains a continuous listening watch on the following VHF Channels: 16, 9, 10, 12, 14 and 20. Vessels should, where possible, only use Channel 16 for initial calling and refrain from using Channel 10, which is designated for emergency purposes and Channel 9 which is the primary pilotage/tug working channel.
2. ALL vessels entering or leaving the Sullom Voe Harbour Area are requested to contact "Sullom Voe Harbour Radio" initially on VHF Channel 16, or Channel 14. This includes all vessels in transit through Yell Sound.
3. Any vessel intending to use the deep water channels marked by the leading lights of Gluss Isle, the white sector of Queyfirth Light, the white sector of Skaw Taing Light, the Fugla Ness leading lights or the Sella Ness leading light, for the purpose of fishing must report such intentions to "Sullom Voe Harbour Radio" and report at intervals not exceeding 2 hours while fishing.
4. Any vessel may receive traffic information on request by contacting "Sullom Voe Harbour Radio" on Channel 16 or Channel 14.
5. Brief local weather forecasts will be broadcast on request. Call "Sullom Voe Harbour Radio" on Channel 16 or Channel 14.

Misuse of VHF Radio:

Owners, Masters and Skippers are reminded to read Merchant Shipping Notice No. M1026, which refers to the misuse of VHF Radio.

The improper use of VHF is illegal and can cause serious disruption to communications concerned with the movement of shipping in the port area.

The co-operation of all port users is requested to ensure that such misuse does not occur.

VHF: *Port Operation and Control Services:* All shipping movements within the Harbour Area are monitored from a Port Control Room in the Port Administration Building at Sella Ness.

The Port Control Room is manned on a 24 hour basis by Marine Officers who are licensed Pilots.

These Marine Officers, in their capacity as Port Controllers, maintain a continuous VHF and radar watch. They provide advice to Masters and Pilots on all navigational aspects (including weather forecasts) within the area, direct shipping movements within the port, and liaise with the Terminal Operator and emergency services.

The following VHF Channels are continuously monitored in the Port Control Room:

Channel 16	Calling, Safety and Distress.
Channel 9	Tanker pilotage and tug handling.
Channel 10	Port emergency, fire or oil pollution.
Channel 12	Secondary Port Control working frequency.
Channel 14	Main Port Control working frequency.
Channel 20	Secondary Port Control working frequency.

The call-sign for Sullom Voe Pilots is "Sullom Voe Harbour Radio".

In addition, Sullom Voe Terminal monitors Channels 16 and 19. Pre-arrival information will be given on Channel 19. Initial contact should be made on Channel 16 using call sign "Sullom Voe Terminal".

It is emphasised that Masters should try to contact the Terminal as soon as possible prior to arrival at the Pilot Boarding Area, so that loading information may be exchanged before commencing the inward passage through Yell Sound.

Channel 24 — Link calls for commercial radio traffic can be arranged on this channel. Call-sign "Collafirth Radio".

Control of Traffic: The Port Controller may direct the movement of any vessel within the Harbour Area. Overtaking and passing is prohibited in the Deep Water Channel within an area bounded by a line joining Queyfirth Light and the Northern extremity of Lamba Island and a line joining Skaw Tang Light and the front leading light on Gluss Isle.

No vessel having an overall length in excess of 50 m. shall navigate so as to pass or overtake an LPG carrier underway anywhere within Yell Sound or Sullom Voe between lines drawn between the Northern extremity of Muckle Holm (Lat. 60° 35.1′ N., Long. 01° 15.8′ W. approximately) and the Northern extremity of the North Holm of Burravoe (Lat. 60° 35.4′ N., Long. 01° 18.2′ W. approximately) and between the Northern extremity of Lunna Holm (Lat. 60° 27.5′ N., Long. 01° 02.4′ W. approximately) and the Southern extremity of Heoga Ness (Lat. 60° 29.4′ N., Long. 01° 02.4′ W. approximately).

Reporting Positions: During transits of Yell Sound and approaches to Sullom Voe, all vessels are required to report to Port Control when passing the following positions:

A. Lat. 60° 38.25′ N., Long. 01° 14.82′ W. with Point of Fethaland Lighthouse bearing 260° T×1.8 miles.
B. Lat. 60° 34.95′ N., Long. 01° 16.56′ W. with Muckle Holm Lighthouse bearing 105°T×0.35 miles.
C. Lat. 60° 31.35′ N., Long. 01° 18.49′ W. with Queyfirth Lighthouse bearing 285°T×0.49 miles.
D. Lat. 60° 29.32′ N., Long. 01° 17.47′ W. with Skaw Taing Lighthouse bearing 118°T×0.41 miles.
X. Lat. 60° 28.50′ N., Long. 01° 10.70′ W. with Mossbank Lighthouse bearing 175°T×1.25 miles.

RADAR: Full radar coverage exists for Yell Sound and Sullom Voe. Comprehensive coverage includes the 'funnel' of approach to the Northern Pilot Boarding Station and also the S.E. entrance channels and the associated seaward approaches.

The main scanner is located on the Hill of Vats Houlland (Lat. 60° 27.96′ N., Long. 01° 17.49′ W. and the secondary scanner, which provides coverage of the S.E. entrance and Western approach channels, is located near Brough (Lat. 60° 28.90′ N., Long. 01° 13.04′ W.). Both scanners are connected by microwave links to displays in the Port Control Room.

Port Control maintains a continuous radar watch, and the passage of each vessel is monitored and recorded. Advice is available to vessels on request.

TUGS: At present a fleet of harbour tugs provide a towing service for vessels at the Port of Sullom Voe. These are stationed at the Sella Ness Jetty adjacent to the Port Administration Building.

The fleet is operated by Shetland Towage Ltd., a private company owned and operated by a joint venture between Shetland Islands Council, Clyde Shipping Company and Cory Ship Towage.

The fleet consists of 3 twin screw 3,800 h.p. vessels, each having a bollard pull of 55 tons. These vessels are fully equipped as fire-fighting tugs and pollution control vessels and were built by Hall Russell and Company Ltd., in Aberdeen, in 1978. Named after Shetland birds, they are:

"Stanechakker", "Swaabie", "Lyrie"

Two additions to the fleet are Voith water tractors, built in 1983 by Ferguson Ailsa Ltd., at Port Glasgow. These vessels have twin 32G Voith units developing 4,000 b.h.p. and a bollard pull of 45 tons. Also given bird names, they are:

"Tirrick", "Shalder"

The use of tugs and their numbers will be as directed by the Harbour Master. Prior to arrival, vessels should ensure that heaving lines of adequate length and breaking strain are readily available to assist in securing the tugs.

Tugs will normally meet incoming vessels at a position close South of Outer Skerry. Officers and crew should be standing by to receive lines and all necessary tugs must be secured before the vessel's ability to manoeuvre becomes restricted.

When a vessel is berthing, tugs will be secured to the bow and stern of the vessel with towing lines and alongside in a push pull mode. Their mode of operation and disposition will be fully explained by the Pilot on arrival. Tug lines will normally be used throughout, either from towing hook or towing winch.

It is requested that wherever possible tug orders for movements before 0900 hrs. be placed before 1700 hrs. on the preceding day.

BERTHING: The following criteria apply to conventional vessels loading at crude and gas jetties at Sullom Voe.

The minimum under-keel clearance permitted is 1 m. alongside jetties and 2 m. elsewhere in the Harbour Area.

Oil tankers/combination carriers in the range of 18,000 tons deadweight to 350,000 tons deadweight may be accepted at Sullom Voe, as a matter of routine.

Vessels outside the parameters listed below and vessels of unconventional design may be accepted at Sullom Voe subject to individual consideration by the Harbour Master and Terminal Operator.

Limiting Vessel Sizes:

Jetty No. 1:	**Crude Oil Carriers**
LOA	170 m. to 280 m.
Depth alongside	16.9 m.(minimum)
Max. allowed draft	15.9 m.
	LPG Carriers
LOA	140 m. to 260 m.
Capacity	10,000 cu.m. to 75,000 cu.m.
Jetty No. 2:	**Crude Oil Carriers**
LOA	210 m. to 365 m.
Depth alongside	23.1 m. (minimum)
Max. allowed draft	22.1 m.
Jetty No. 3:	**Crude Oil Carriers**
(Jetty No. 3 was taken out of service in September 1989)	
Jetty No. 4:	**Crude Oil Carriers**
LOA	170 m. to 365 m.
Depth alongside	23.6 m. (minimum)
Max. allowed draft	22.6 m.

Note: (i) Vessels entering in ballast or partially loaded conditions should ensure that their draft does not exceed 13 m. as this is the draft normally allowed in the South Turning Area.

(ii) In all cases where the arrival draft is likely to exceed 13 m., prior permission from the Harbour Master shall be obtained before the vessel is fixed to load at Sullom Voe.

Loading Systems:

All crude loading arms are 150 ASA 16 in. hydraulic connections. This includes Jetty No. 1 where 16 in. connections are attached to 12 in. arms. All LPG loading arms have 150 ASA Camlock connections.

No. 1	Crude	4×12 in.	Loading arms	hydraulic connections.
	LPG	2×12 in.	Loading arms	hydraulic connections.
		1× 8 in.		
No. 2	Crude	4×16 in.	Loading arms	hydraulic connections.
No. 4	Crude	4×16 in.	Loading arms	hydraulic connections.

Manifold Heights:

	Heights above chart datum	
	Max.	*Min.*
No. 1 Crude	22.70 m.	1.80 m.
LPG	21.50 m.	3.50 m.
No. 2 Crude	31.30 m.	2.60 m.
No. 4 Crude	31.30 m.	4.23 m.

Maximum allowable pressure on lines and connections: 150 p.s.i.

Jetty Orientation:

No. 1	280°/100°
No. 2	135°/315°
No. 4	145°/325°

Gangway: Shore tower type gangways are provided at all times. If for any reason, a shore gangway will not be available, ships will be advised in good time, and will themselves be required to provide ship/shore access.

MOORING: The 3 loading jetties (and No. 3 Jetty which is now retired) are located in deep water on the Northern shores of Sullom Voe, adjacent to the Terminal complex at Calback Ness.

The berths are numbered 1 to 4 in sequence from East to West. Jetty No. 1 has facilities for both crude and LPG carriers and can accommodate vessels up to 120,000 d.w.t. Jetties No. 2 and 4 have crude loading facilities only and are designed to accommodate tankers up to 350,000 d.w.t. range. (Larger tankers may be accepted at the discretion of the Harbour Master and Terminal Operator). Jetty No. 3 was taken out of service in September 1989.

Each jetty is of conventional "T" shaped construction with 4 breasting dolphins in line with the jetty head. The mooring dolphins are offset from the line of breasting dolphins to provide an optimum lead for mooring lines. Vessels may land at a maximum angle of 8° to the jetty face. Quick release mooring hooks are fitted on all dolphins. For use with large vessels, quick release mooring pulleys have been fitted on Berths No. 2 and 4. These pulleys, one at each end of the berth are designed to accept a ship's mooring wire in the form of a bight.

Large flexible rubber fenders are fitted to the outer faces of each breasting dolphin. Each has a generous energy absorbing capacity.

Each mooring operation will be assisted by a purpose-built mooring boat.

ACTIONS TO BE TAKEN IN SEVERE WEATHER CONDITIONS

1. At least 1 tug shall be called out by the ship's Master to assist in keeping *any* vessel alongside when all the following conditions exist:
   (a) Where the mean freeboard height of the vessel exceeds the mean draft,
   (b) When the wind is of sufficient speed for loading to be suspended.
   (c) When the wind is from a direction within an arc extending from 10° seaward of the berthing line through North to 10° seaward of the berthing line.

2. At the time of suspending loading/deballasting operations because of deteriorating weather conditions, the Terminal Loading Supervisor will advise Port Control immediately of any vessels in the condition stated in 1(a) above.

3. When a tug is called out under the conditions stipulated in (1) above:
   (a) The Terminal Loading Supervisor will notify the Master of the situation and request that the vessel be brought to a state of immediate readiness.
   (b) With the exception of the Port Controller, such Pilots as are available will station themselves aboard those vessels which are considered to be most vulnerable, and any vessel with a tug alongside must be attended by a Pilot throughout the period a tug is required.
   (c) The Duty Harbour Master will be notified by the Port Controller.

4. Tugs may be necessary to assist in keeping vessels alongside when some of the conditions in (1) above are absent, and may or may not be called for by the vessel. In such circumstances any vessel requiring tug assistance will also be attended by a Pilot who will board the vessel as soon as possible and remain on board throughout the whole period a tug is in attendance. In these circumstances the Duty Harbour Master will be informed by the Port Controller.

5. Notwithstanding anything contained in 1 – 4, the Duty Port Controller may, *before consultation with the Harbour Master,* call out such tugs as are required, at any time, if he feels the situation warrants this action. In the case of large vessels in light condition for example, it may be prudent in certain circumstances to call out the tugs when the wind off the berth is less than that stated in paragraph 1(b) above. In such cases the Duty Port Controller should exercise his discretion.

6. In all situations where tugs are required to assist a vessel moored alongside, a Pilot will also be stationed on board that vessel as soon as possible after tugs are called out, and will remain on board throughout the whole period the tugs are in use.

General Mooring Requirements:

1. Masters should ensure that mooring lines are in good condition. Winch brakes or securing devices should be in efficient operating order and should have a holding power of at least 60% of the breaking load of the vessel's mooring lines. (On vessels constructed before 1978 these conditions may be met by placing the winch in gear and applying power in addition to applying the brake).
2. Any known defects in the vessel's mooring system or limitation of mooring winch brakes should be reported to the Pilot and the Terminal before arrival in order that, if necessary, additional precautions may be agreed.
3. In order to avoid damage to loading arms and the serious consequences of oil pollution, the vessel should be kept close alongside at all times.
4. It is recommended that wires (or wires fitted with synthetic fibre rope tails of at least 25% greater breaking load than the wire), should be used for all mooring lines.
5. The following mooring requirements shall apply to all crude a gas tankers in excess of 10,000 tons gross and in general mooring operations shall be conducted in accordance with t OCIMF "Guidelines and Recommendations for the Safe Moor of Large Ships at Piers and Sea Islands".
   5.1 Where a crude or gas tanker has undergone a mooring au on a previous visit to Sullom Voe, the ship must be moo exactly in accordance with the mooring plan. If for a reason this is not possible the ship should be secured compliance with Section 5.2, 5.3 or 5.4 as appropriate a the details reported to the Port Controller for the atten of the Director of Marine Operations. Audited mooring pla shall not be altered, amended or edited without the appro of the Director of Marine Operations.
   5.2 Where a crude or gas tanker is equipped with synthe mooring lines or a random mixture of synthetic and w mooring lines, the ship shall be secured by a minimum 4 head lines/stern lines, 4 breast lines and 2 springs at ea end of the ship.
   5.3 Where a crude or gas tanker is equipped with wire moor lines only, the ship shall be secured in accordance with t appropriate mooring guide plan (See Plan).
   5.4 Where a crude or gas tanker has not undergone a moor audit and is not designed or equipped to comply with t requirements outlined in Section 5.2 and 5.3 it shall b secured as near to these requirements as possible and any case to the satisfaction of the Master, the Pilot and t Loading Supervisor. If such ships cannot be secu satisfactorily, the loading arms must not be connected a the duty Harbour Master shall be contacted immediately
   5.5 Mooring lines leading in the same directon of restraint sh be of similar material and construction throughout th lengths from jetty mooring point(s) to vessel's secur point(s).
6. Particular care should be taken to ensure sufficient transver restraint from breast moorings. When synthetic fibre mooring lin are used, pre-tensioning of these lines on making fast will he prevent drift of the vessel away from the berth in "off the ber wind conditions.
7. As soon as the vessel is secured, brakes on all mooring winche should be firmly applied. Winches must not be left on automa tensioning. Full steam pressure or power to all mooring winche should be maintained at all times when alongside. On split dr mooring winches only one layer of rope shall be permitted on t working half of the drum. *Notwithstanding any of the foregoi it is the Master's responsibility to ensure that his vessel remai securely moored at all times*.
8. An efficient watch must be maintained on the vessel's moori at all times to ensure that all lines are properly tensioned a tended when required. The deck watch should make requ checks that mooring winch brakes are applied at the corr setting.

NOTE: A Master advised (December 1992) that rope tails on wi should be about 9.0 m. in length.

LOADING: *Maximum Loading Rate per Arm:*

Crude:		
Jetty 1	12 in. loading arm	2,500 metric t.p.h.
Jetty 2	16 in. loading arm	5,000 metric t.p.h
Jetty 4	16 in. loading arm	4,100 metric t.p.h.
LPG:		
Jetty 1	8 in. loading arm	900 cu.m./hr.
Jetty 1	12 in. loading arm	2,100 cu.m./hr.

Connection of Loading Arms: Confirmation to be given that vessels arrive with the required spool pieces fitted to their manifold for eit crude or LPG fitting.

Manifolds should comply with latest OCIMF Standards. As a minim there must be 500 mm. between faces of spool/reducer presented t connection. Reducers must be equally tapered.

Failure to present correct reducer/spool will result in delays. T Terminal does not have reducers, but does have 16 in. to 16 in. sp pieces. Should it be necessary to use the Terminal's spools a char will be levied.

CRUDE The connection of loading arms will be undertaken by sh personnel. Vessels should arrive with 16 in. 150 AS manifolds, ready for connecting to the loading arms.

LPG The connection of loading arms will be undertaken by sh personnel. Vessels must have 150 ASA manifolds connection to the loading arms. Sizes will either be 12 i 8 in. as directed by the Terminal.

Ships manifolds should be presented as Class 150 ASA using sh reducers.

Failure to present correct reducer/spool will result in Terminal lev a charge for their own equipment, if available.

Masters should ensure that the deck firemain is pressurised a times and fire extinguishers and fire hoses are ready for use at the sh manifold in accordance with Jetty Regulations.

Crude Oil Storage: 16 conventional floating roof storage tanks constructed, each with a capacity of 600,000 bbls. These provide sto facilities in the event of berthing delays and ensure sufficient stoc enable tankers to load without delay.

The storage tanks have been constructed with bases as muc 30 m. above sea level, to allow gravity loading. However 6 oil loa pumps are installed to increase the loading rate as may be requir the vessel.

Loading Rates: Maximum loading rates of 10,000 tonnes/hr. at Je 20,000 tonnes/hr. at Jetty 2; 16,400 tonnes/hr. at Jetty 4 can be prov at the terminal.

The LPG loading system delivers up to 3,000 cu.m./hr.

Cargo Measurement: Meters are installed for cargo measure Bill of Lading quantities are calculated from meter readings.

LIQUEFIED PETROLEUM GAS FACILITIES: There is a single LPG insulated pipeline from the LPG storage area to Jetty No. 1 for tanker loading. The LPG tankers using Jetty No. 1 range in size from 10,000 to 75,000 cu.m. capacity and they transport butane and propane under refrigerated conditions as in the onshore tankage.

Navigation, Mooring, Berthing: Except by permission obtained from the Harbour Master, no LPG ship shall at any time be navigated in, lie in, or be moored in any part of the harbour.

No LPG ship shall be anchored or moored except

(a) at a quay duly approved by the Harbour Authority
or
(b) in such position as the Harbour Master shall from time to time direct

and no LPG ship shall be removed from such last mentioned position except in accordance with the order or permission of the Harbour Master or for the purpose of leaving the harbour forthwith.

An LPG ship shall at all times lie safely afloat.

While an LPG ship is at a quay

(a) it shall be securely made fast as close alongside as possible in a manner approved by the Harbour Master.
(b) its moorings shall be adjusted from time to time to allow for the rise and fall of the tide and for the loading and discharging of cargo.

Except in accordance with such conditions as may from time to time be prescribed by the Harbour Master, no ship or harbour craft shall, when moored, unmoored or anchored, lie or pass within 30 m. of any LPG ship which is moored or anchored, without permission of the Harbour Master.

Loading and Discharging: All jetty LPG drains and ships' scuppers whereby LPG can, in case of spillage, escape to the Harbour shall be open before loading or discharging commences and shall be kept open during the whole period of such operations.

All vessels calling at Sullom Voe Terminal must be in possession of a Certificate of Fitness under the terms of the IMO code for the construction and equipment of ships carrying liquefied gases in bulk, and be in possession of an appropriate Classification Society's Certificate.

Also see "Report" dated October 1983.

DRY CARGO FACILITIES:

Construction Jetty: A concrete pier suitable for coastal traffic is located in Garths Voe, East of Jetty No. 1.

This pier, orientated on a 108°/288° axis is 100 m. long and can accept ships on both the North and South faces.

The North Berth is equipped with a fixed Ro/Ro ramp which has a width of 10.7 m., a total length of 23.7 m. and a fixed gradient of 1:22. The height of the sill is 1.67 m. above MHWS.

The pier is well fendered with patent fenders and tyres. The depths at the pier range from 9.9 m. at the Eastern extremity, rising to 3.9 m. at the Ro/Ro ramp.

Bunkers can be supplied by road tankers to vessels using this jetty.

There is no permanent dock labour force available on site at Sullom Voe. However, stevedoring services can be obtained as and when required from Lerwick, arrangements for which should be made through the local ships' Agents or receivers of cargo, as appropriate.

Garths Pier: This 2 finger jetty is situated adjacent to Sella Ness Industrial Estate.

The inside berths have a length of 41 m. and the outside berth a length of 65 m. Each finger is 7.3 m. wide. There is a depth of 4 m. alongside for the lengths stated; thereafter the depth decreases rapidly.

Graven Pier: A small concrete fishing pier is situated on the Southern shore of Garths Voe. The pier has been designated as an unsafe structure and must not be used. Vessels previously using Graven Pier should now use Garths Pier.

Tug Jetty: Harbour tugs and pilot boats are stationed at an "L" shaped jetty located on the Southern shore of Garths Voe adjacent to Sella Ness. This jetty, of cellular design is constructed of concrete and steel.

Fendering arrangements consist of used tyres suspended at intervals along the jetty face. This pier is suitable for coastal traffic but is not used as such on a regular basis.

The present minimum depth off the main face of the jetty is approximately 6.9 m.

Limited supplies of gas oil are available from a bunkering point on this jetty. Further supplies are available by road tanker.

Gaza Jetty: (Lat. 60° 26′ 10″ N., Long. 01° 21′ 02″ W.).

A small jetty has been constructed at Gaza near Sullom for the purpose of exporting aggregates from nearby quarries. The jetty face is located on the N.E. side of the seaward extremity of a rock armoured causeway. The jetty face is 30 m. in length and is well fendered. The orientation is on a 111°/291° axis. The depths alongside the pier range from 4.5 m. to 3.7 m. below chart datum at the landward extremity.

An anchor with cable and clump weight has been laid S.W. of the jetty head. A wire is attached to the cable for the purpose of attaching the vessel's mooring lines.

At the Harbour Master's discretion vessels up to 75 m. in length may use the jetty.

Colla Firth Pier: (Lat. 60° 32′ 24″ N., Long. 01° 20′ 47″ W.).

A small jetty has been constructed in the North West corner of Colla Firth which is located on the West side of Yell Sound. The pier is utilised by both fishing and commercial vessels and is licensed to handle explosives.

The main berthing face is 55 m. in length and has an orientation of 100°/280° and a minimum depth of 6 m. Berthing for smaller vessels is also available on the Northern side of this pier.

OIL POLLUTION SURVEILLANCE: Only clean ballast contained in tanks completely segregated from main cargo tanks will be allowed to be discharged into the Harbour, but then only after testing by the Terminal Operator and approval by the Port Authority.

Recent pollution of beaches and serious damage to wildlife around the shores of Orkney and Shetland suggests that certain vessels have disregarded the IMO Conventions on Oil Pollution and discharged dirty ballast whilst approaching or immediately after sailing from Sullom Voe.

Such procedures cannot be condoned by the U.K. Department of Transport, Local Authorities or the Terminal Operator, and with the object of preventing this practice (which is contrary to internationally agreed rules) air surveillance of all shipping in waters around Orkney and Shetland has been introduced.

As detailed in the section entitled "ETA Requirements" (See "Radio"), Masters are requested to advise Sullom Voe Port Control (Telex: Sulvoe 75142. Telegraphic Address: Portcontrol Sullomvoe) of their ETA 24 hours in advance of arrival. In addition, this message is to include the estimated time of crossing Lat. 58° 20′ N., Longitude on crossing this Latitude, and the intended inward courses and turnpoints to the Gruney Island Pilot Station (Lat. 60° 38.6′ N., Long. 01° 15.3′ W.). Vessels arriving from the North Atlantic or Northern North Sea should use a position 200 miles from the pilot station.

Prior to sailing from Sullom Voe, all vessels are requested by the Harbour Authority to indicate intended outward bound courses and turnpoints until South of Lat. 58° 20′ N. or 200 miles from the pilot station as appropriate. This should be detailed on the Tanker Safety Check List provided by your Agent.

Any vessel sighted discharging dirty ballast will be immediately reported to the U.K. Government Authorities for appropriate action to be taken. In such circumstances, vessels may be liable to extensive delay until investigations have been completed.

Prevention of Oil Pollution: Prior to arrival, vessels must ensure that all crew members are conversant with the anti-pollution regulations, which must be complied with at all times.

Principal causes of pollution are leaking ship side valves, cargo/bunker overflows and pumping engine room bilges. Therefore it is recommended that sea valves, overboard discharges (which should be shut) and ballast/cargo/bunker/bilge operations are checked by the Chief Officer and the Chief Engineer before arrival. Scuppers must be plugged on main and poop decks in respect of vessels loading/discharging bulk oil.

On arrival the terminal will give all assistance necessary but are empowered to take action in the event of contravention of pollution prevention requirements.

Masters must advise if their vessel has sustained any damage which could cause oil pollution and confirm any known oil losses from hull or sea valves.

Vessels are required to arrive at the Sullom Voe Terminal with a total deadweight of not less than 35% of Summer d.w.t including bunkers, fresh water and stores.

Vessels should confirm in advance the amount of ballast, including the quantities of segregated ballast, and cargo tank ballast, separately. (See "Radio" – Pre-arrival information).

BALLAST:

Ballast Requirements: For the purpose of manoeuvring, all vessels are required to maintain a reasonable ballasted condition, subject to the requirements specified in the section dealing with Oil Pollution Surveillance.

Vessels should carry sufficient ballast so that the propeller remains immersed whilst maintaining a reasonable stern trim.

Masters are advised that the Port Authority requires, unless otherwise directed by the Harbour Master, that the propeller of any ship to be immersed at all times when vessels are alongside. When operations permit, the proportion of cargo loaded to ballast remaining onboard must be such as to ensure that the vessel can be safely manoeuvred at any time whilst in the harbour. It must be understood that shifts of wind and changes of wind force in Sullom Voe are at times violent and the adoption of an adverse trim in relation to the ship's optimum manoeuvring characteristics will not be accepted.

Ballast Reception Facilities: It is prohibited to discharge any ballast other than segregated clean ballast into the waters of Sullom Voe.

All dirty ballast or non-segregated ballast will be discharged ashore for treatment.

Non-segregated ballast includes ballast contained in any tank designed for or capable of being used for the carriage of crude oil. Tanks having a permanent connection to the cargo piping system are not considered to be segregated ballast tanks.

The Terminal can accept dirty ballast whilst providing the vessel with cargo. Ballast will initially be pumped into settling tanks where excess oil will be skimmed off into recovered-oil tanks. The remaining ballast will undergo further treatment before being discharged into Yell Sound. The ballast water will be monitored throughout the cleaning process.

The Terminal is unable to accept tank washings or slops from a cargo which has been heated or where the pour point is such that heating is required.

Inert Gas: A random check of the quality of the inert gas in several of the vessels' tanks will be made on arrival alongside to ensure the vessel complies with the statutory requirements regarding inert gas. If any of the tanks are found to have an oxygen content in excess of 8% the vessel will be required to vacate the berth and return to sea to complete inerting.

Purging of tanks whilst alongside is not permitted.

Vessels must arrive at the berth with positive I.G. pressure.

Discharge of Dirty Ballast Water: The discharge of ballast water from oil cargo tanks or non-segregated ballast tanks or any ballast water containing quantities of oil or high levels of mineral or chemical pollutant, into the waters of the harbour is prohibited.

The discharge of ballast water from segregated or permanent ballast tanks into the waters of the harbour will be permitted provided that:

1. The Master of the vessel advises the Harbour Authority prior to arrival:
   (a) The place at which the ballast was taken.
   (b) The quantity of the ballast.
   (c) That to his knowledge the ballast is free from oil contamination.
2. Samples have been taken and analysed by the Terminal Operator. Hydrocarbon level to be 5 p.p.m. or less.

The Oil Pollution Control Officer of the Harbour Authority will on occasions board vessels carrying segregated ballast to obtain samples. Analysis will be made of these samples to ascertain the quantity of hydrocarbon, colliforms and heavy metal pollutants within the ballast. The Harbour Authority may, as a result of information so obtained, refuse permission for the discharge of segregated ballast water taken on board in certain locations.

The discharge of segregated ballast is not to commence before permission has been received from the Loading Supervisor. He will have confirmed with the laboratory that the hydrocarbon level is 5 p.p.m. or less.

MASTERS ARE STRONGLY ADVISED TO CLOSELY MONITOR THE DISCHARGE OF SEGREGATED BALLAST AT REGULAR INTERVALS TO ENSURE THAT OIL IS NOT ENTRAINED IN THE BALLAST WATER.

CONSULS: In Lerwick.

MEDICAL: Medical attention for ship's crews is available on request through Agents. Some specialist services including inoculation and vaccination are available.

FRESH WATER: Potable water can be supplied to tankers at Sullom Voe in an emergency. A small charge is levied for the use of the facility.

Vessels requiring fresh water should inform their Agents prior to arrival.

FUEL: There are no bunkering facilities available for tankers calling at the Port of Sullom Voe.

REPAIRS: Engineering facilities are available to carry out repairs afloat to hull and machinery. Drydock facilities do not exist for vessels over 120 ft.

Electronic Navigational Aids and Radio: All major companies have agencies in Shetland. Repair facilities exist for all types of electronic equipment.

Engine Readiness: Main engines must be maintained in a state of readiness for vacating the Terminal at short notice at all times except in the cases of approved repair work as detailed in Regulation 19 of "Jetty Safety Regulations".

CUSTOMS: A selective system of boarding commercial vessels arriving from a non-U.K. port, will apply at the Sullom Voe Terminal.

REPATRIATION: Crew changes can normally be arranged. Air and sea connections are available to mainland destinations.

It should be borne in mind, however, that during the Winter months delays to air traffic are not uncommon due to prevailing weather conditions whilst in Summer delays can be experienced due to low visibility.

Ships will not be permitted to retain their berth awaiting the arrival of crew members.

Also see "Ship System Failures".

AIRPORT: Shetland's airport network is within easy reach of Sullom Voe and scheduled flights are available daily to all major U.K. cities, with connections to worldwide destinations.

BANKS:

Bank of Scotland. Tel: Lerwick 2624. Telex: 75309.

Clydesdale Bank. Tel: Lerwick 5664.

The Royal Bank of Scotland. Tel: Lerwick 4520.

GENERAL:

The following services can be provided for vessels by the Shipping Agencies. Masters are requested to provide notice of requirements prior to arrival.

Compass Adjusting: A service is available for large vessels. Requests should be made in good time to ship's Agents in order that the adjuster may board with the Pilot on arrival.

Storing: Due to the high berth occupancy at Sullom Voe it is not possible to carry out major storings. However, a limited amount of fresh provisions for immediate store requirements can be supplied providing it can be easily handled by the ship's crew.

Fresh and frozen meat can be supplied in any quantity with Shetland lamb a speciality. Shetland knitwear goods of high quality are available at reasonable prices. Other local products include sheepskin rugs, traditional jewellery, handicrafts and salmon (fresh and smoked).

Bonded Stores: Bonded stores are available in any quantity.

Lubricating Oils: Most major oil companies have authorised dealers in Shetland. Lubricating oils of all grades are available at competitive prices.

Charts and Nautical Publications: Available on application to ship's Agents. Advance notice is required for the supply of large sets.

Lloyd's and Salvage Association: If service or survey is required, this may be obtained through their Shetland Agents, Hay & Co. (Lerwick) Ltd.

Sea Travel: P&O Ferries maintain a regular Ro/Ro and Passenger fe service between Lerwick and Aberdeen.

Provisioning: This service is provided by ship's Agents on request.

Shore Leave/Taxis: All personnel proceeding ashore must be possession of a shore pass, a supply of which is handed to Masters the vessel's arrival.

Transport is provided free from the root of each jetty to Seafare Centre, and taxis can be arranged for those wishing to travel furt afield in Shetland.

There is a limited public transport service serving the Sullom V area.

Telephones: This facility is provided at the Seafarers' Centre opera by the British Sailors' Society and situated outside the main gate.

There are public telephone boxes on the roadside adjacent to the e of each jetty. There are portable telephones available for use aboar vessel, however, these are NOT intrinsically safe and must only be us within the accommodation spaces. The ship's Agent will supply a lis all call details after use.

Weather Routeing: This service is available to Shipmasters application to Shetland Weather Centre.

British Sailors' Society: The British Sailors' Society has a Seafare Centre just beyond the Terminal Entrance. A free mini-bus service provided between the jetties and the centre which is open from 1100 h to 2300 hrs. Monday to Saturday and from 1230 hrs. to 1430 hrs. a 1900 hrs. to 2300 hrs. on Sundays.

Amongst the facilities provided are the following: A Chapel, Libra 3 International Telephones, Television Room, Snooker and Pool Table Darts, Shop, Fully Licensed Bar and Light Meals.

The resident manager, Mr. David Hughdie, is there to assist seamen whatever their Nationality, Colour or Creed and there a 3 Honorary Chaplains whose services are also available.

Any Seafarer in need of practical, spiritual or welfare help is invi to contact the manager or his staff on Sullom Voe 242715.

NOTICES:

Landing in Great Britain of Live Animals, Live Birds and Meat

The attention of Masters is drawn to "Notice to Masters of Vess and Commanders of Aircraft (IM24 (Rev 79))" of which the following a extracts:

Diseases of Animals Acts 1950 and 1975, Rabies Act 19 Destructive Imported Animals Act 1932 and Ponies Act 1969.

WARNING: Her Majesty's Government exercise strict controls at p and airports to prevent the introduction of animal disease and destruc animals into Great Britain. Severe penalties may be applied to th who do not comply with the import regulations.

Dogs, cats and other mammals (including ship's pets) brought to Gr Britain on board a vessel which are not intended to be landed do need a licence, but must at all times be securely confined in an enclos part of the ship so as to prevent their escape and must not come contact with any other animals except those similarly confined. T authorities must be informed immediately if any animal should esca

Mariners are requested to exercise caution when navigating i vicinity of these locations.

Notice to Mariners 5/88:

Navigating Large Vessels in Areas where Fishing Vessels Opera

Masters of vessels which load at Sullom Voe Oil Terminal are ad that a significant number of fishing vessels operate in the sea which are regularly used by the tankers and it is recommended tha vigilance and caution be exercised at all times on passage to o Sullom Voe.

Masters should note in particular that use of Deep Draft Route West of the Hebrides does not give deep draft vessels any privileges whatsoever when navigating this Route and responsibilities in relation to other vessels, as set out in Rule 18 of the 'International Regulations for Preventing Collisions at Sea 1983', still apply.

HYDROGRAPHIC NOTES:

Prohibited Anchorages

1. Owing to the existence of the tanker turning area within the vicinity of Sella Ness and Scatsta Ness, Mariners are advised that anchoring East of a line joining the following positions is prohibited, viz.:

From Position: Lat. 60° 26′ 57″ N., Long. 01° 19′ 17″ W.
To Position: Lat. 60° 26′ 32″ N., Long. 01° 18′ 10″ W.

2. Owing to the existence of an outfall pipe between Skaw Taing and Swarta Taing, all vessels are advised that fishing and anchoring is prohibited within the area bounded by Little Roe and lines produced seawards from 2 sets of day transit marks diamond in shape and yellow in colour which are established in the following positions:

A: Lat. 60° 29′ 15″ N., Long. 01° 16′ 42″ W.
Lat. 60° 29′ 10″ N., Long. 01° 16′ 44″ W.
B: Lat. 60° 29′ 10″ N., Long. 01° 16′ 21″ W.
Lat. 60° 29′ 06″ N., Long. 01° 16′ 21″ W.

Outfall Marker Buoy – Calback Ness: A yellow spherical navigational buoy with a yellow St. Andrews cross topmark and a radar reflector showing a light Gp. Fl. 4(Y). ev. 12 secs. has been established in position:

Lat. 60° 29′ 29″ N., Long. 01° 16′ 08″ W.

This buoy marks the seaward end of the ballast water outfall pipe.

Permanent Navigation Marks at Tanker Jetties – Sullom Voe

Permanent navigation marks have been established on the mooring dolphins at either extremity of the tanker jetty complex as follows:

Jetty No. 1 East end dolphin in position Lat. 60° 27′ 21″ N., Long. 01° 17′ 02″ W., two fixed red lights vertically disposed 2 m. apart, the lower of which is 5 m. above MHWS.
Visible 3 miles.

Jetty No. 4 West end dolphin in position Lat. 60° 27′ 56″ N., Long. 01° 18′ 20″ W., two fixed red lights vertically disposed 2 m. apart, the lower of which is 5 m. above MHWS.
Visible 3 miles.

SAFETY: *Smoking:* Smoking is prohibited in vessels during loading operations, except in 2 or at most 3 smoking rooms allocated by the Master and approved by the Terminal Representative.

Matches and lighters must not be carried by personnel outside the approved smoking areas, or on the jetties or anywhere within the terminal.

The Seaman's Pass issued to personnel going ashore by Sullom Voe Terminal carries the information that matches are available at the Main Gate for use outside the Terminal premises. The matches are issued free of charge.

Special arrangements have been made for ship's personnel leaving or joining vessels at the terminal, details of which are in the Terminal Regulations, or can be advised by the ship's Agent.

Fire Precautions: Every vessel's fire-fighting appliances, (including main and emergency fire pumps) must be kept ready for immediate use with at least 1 fire pump maintaining pressure on the main.

Before deballasting and loading/discharging operations commence, and during periods when permitted repair work is being carried out, at least 2 fire hoses must be uncoiled and connected to the fire main. One of the fire hoses must be sited forward and the other abaft the manifold.

An International Shore connection shall be available on the vessel's fire main in the vicinity of the gangway.

Jetty Fire-Fighting Facilities: The oil loading jetties are each equipped with 2 independent fire-fighting systems, one for water alone and the second for either water or foam mixture.

These jetties supply hydrants which are spaced along the jetty access road and jetty head.

Monitors are installed to provide a water curtain in the area of the jetty head and between the access tower and manifold area. Elevated monitors are also positioned at the top of the access and monitor towers. A sprinkler system protects the access tower.

Hose couplings are 2.5 in. standard instantaneous female type and the fire main to the access tower can accept international connections.

The working pressure of the fire system is 250 – 260 p.s.i. A fire hose connection is situated on the construction jetty to allow fire-fighting tugs to link into the system.

POLLUTION: It will be appreciated that oil spillages are viewed seriously by Government, Local Authorities, Port Authorities and Terminal Operators. Spillages will be investigated by the appropriate authorities and the Master and/or Owner may be liable to prosecution. Delay to the vessel could well arise.

Masters are therefore requested to ensure that every precaution is taken to prevent oil spillages at the Sullom Voe Terminal.

COASTGUARD SERVICES: H.M. Coastguard is the authority responsible for initiating and co-ordinating all sea and coastal search and rescue operations in the Shetland sea area. They also keep in close touch with the S.A.R. organisations of all countries in adjoining sea areas.

Regular stations are maintained at Lerwick M.R.S.C. (Marine Rescue Sub-Centre), with sector offices in the Port Administration Buildings at Sella Ness and Lerwick. Stations manned by Auxilliary Coastguards are maintained at Baltasound, Mid Yell, Gloup, Fetlar, Out Skerries, Whalsay, Bressay, Noness, Sumburgh, Fair Isle, West Burra Isle, Walls, Huxter, Hillswick, North Roe and Papa Stour.

N.B. Sector Offices and Auxilliary stations are not constantly manned. All enquiries should be directed to Lerwick MRSC. A 24 hour radio watch on VHF Channel 16 is maintained by Lerwick MRSC which enables safety and distress calls from up to 40 miles out from Shetland to be picked up on the Coastguard VHF network.

On receiving a call for assistance or advice, the Coastguard can instantly alert the appropriate facility.

Weather forecasts are broadcast every 4 hours on VHF Channel 67 at 0105, 0505, 0905, 1305, 1705 and 2105 GMT, followed by a ship movements broadcast.

Other VHF Channels available are 0, 6, 10, 67 (working) and 73.

A VHF/DF facility on Channels 0, 6, 10, 67 and 73 is maintained at Compass Head.

A Civilian SEARCH AND RESCUE HELICOPTER is based at Sumburgh, contracted by the Department of Transport (H.M. Coastguard) for long range search and rescue purposes. The helicopter is fitted for winching, and carries comprehensive rescue equipment including a de-watering pump and inflatable dinghy capable of being dropped to vessels in distress.

It has a speed of about 110 knots and a radius of action of approximately 150 nautical miles from Sumburgh. Navigation equipment includes V.O.R., I.L.F., Decca A and D/F Console. Communications facilities are:

MF	2182, 3095 and 3023 kHz.
VHF AM	118/135.95 MHz.
VHF FM	Marine frequencies.

R.N.L.I. STATIONS: The following lifeboats are on station:

Lerwick: 52 ft. Arun Lifeboat 'Soldian'.
Details: Speed 18 knots, range approximately 220 nautical miles.
Navigation – Radar, Decca, VHF/DF, MF/DF.
Communications – MF and VHF/FM (Marine Band) 60 channel set.

Aith: 52 ft. Arun Lifeboat 'Snolda'.
Details: Speed 17 knots, range approximatel 220 nautical miles.
Navigation – Radar, Decca, MF D/F, VHF D/F.
Communications MF and VHF/FM (Marine Band) 60 Channel set.

All requests for lifeboat or helicopter assistance should be routed through Shetland Coastguard M.R.S.C.

MEDICOS: Vessels requiring medical advice or medical assistance should adhere to the radio regulations and contact either Collafirth or Shetland Radio on Channel 16 VHF. If unable to contact the radio station, vessels can contact Shetland Coastguard direct on Channel 16 VHF.

EMERGENCY SERVICES AND PROCEDURES:

Fire Tel: (0806) 242798 Ambulance Tel: (0806) 242798
Security Tel: (0806) 242798 Oil Pollution Tel: (0806) 242798

All emergency services at the oil terminal are co-ordinated by the "Emergency Response Control Room" situated at the Terminal fire station.

On vessel's arrival at the Terminal, the responsible ship's officer and the Loading Supervisor will discuss action to be taken in an emergency situation. The Master of the vessel should study and comply with the 'Jetty Safety Regulations', a copy of which will be supplied.

Safety inspections will be undertaken by Terminal personnel throughout the vessel's stay alongside. Spot checks will also be made by the Terminal's Operations Support Branch.

In the event of an emergency, vessels should immediately contact Sullom Voe Port Control 242494/242495/242551 or VHF Channel 10 and emergency messages will be passed to the Terminal Emergency Response Control Room.

GARBAGE DISPOSAL: Skips are provided on board, and collected. No charge is currently made. Arrangements made by Shetland Islands Council.
WASTE OIL DISPOSAL: Available on request. Contact ship's agent.
SEAMAN'S CLUBS: British Sailors Society, Tel: 0806-242715, is situated just outside the terminal.

Norwegian Seamen's Mission, "Havly", Lerwick, Shetland, Tel: Lerwick 4369, situated about 30 miles from terminal.

Also see "General".
CURRENCY: U.K.Pound (U.K.£).

SHIPMASTER'S REPORT: 1983.

It is necessary to provide access to the vessel on the offshore side, in the form of accommodation ladder with vessels having high freeboard, at all times when alongside.

All crew members require passes for shore leave and must use transport from the jetty. This transport is arranged by the security guard in the hut at shore end of jetty.

Usually with moorings it is springs first then breast lines. The Terminal is not concerned with head or stern ropes. Some of the dolphins are fitted with shore based pulley systems and these count as 2 ropes for mooring purposes.

Telephone calls may be made from the Mission (U.K. and International) and paid for in pounds sterling.

REPORT: October 1983.
Gas Carriers: Gas carriers shall conform to the following requirements and the pipeline operators concerned shall, at the time of nomination, confirm to the terminal operator that the carrier nominated so conforms throughout the time she will be within the port limits.

a. The tanker conforms to the standards required in the EEC memorandum of understanding or to state control.
b. The tanker complies with the Statutory Instrument 1981 No. 1077 Merchant Shipping, Merchant Shipping (Tankers) (EEC requirements) Regulations 1981.
c. The tanker can comply with the conditions of carriage as specified on her IMO Certificate of Fitness.
d. The tanker will during the loading and simultaneous handling of ballast follow the procedures as outlined in her approval trim and stability document.
e. The tanker can be adequately moored to equivalent OCIMF standards, i.e. resisting loads due to any of the following current conditions acting simultaneously with a 60 knot wind from any direction:
   3 knots at 0° and 180°
   2 knots at 10° and 170°
   3/4 knots from direction of maximum beam current loading.
f. The tanker can accept a minimum bulk loading rate per hour of 3% of her total cargo carrying capacity up to a maximum of 3,000 cu.m./hr.
g. The tanker reliquefaction units are capable of handling a minimum bulk loading rate per hour of 3 per cent of her total cargo carrying capacity up to a maximum of 3,000 cu.m./hr.:
   (a) without venting to atmosphere and:
   (b) without the use of a vapour return line to shore.
h. All cargo tanks will be cooled down on arrival and the vessel ready to commence loading. Any vessel that cannot comply and requires to purge and/or cooldown prior to loading will only be accepted on the basis of prior agreement having been reached between the terminal operator and the pipeline group nominating the vessel.
i. That the following tests will be carried out within 24 hours before arrival and any defect, and any change in the status of the systems thereafter, be reported to the Port Authorities:
   (a) ventilation of compressor/pump/control room.
   (b) gas detection system
   (c) emergency shut down system
   (d) pressure and temperature control units
   (e) cargo tanks' safety relief valves setting.

SHIPMASTER'S REPORT: August 1984 (Updated 1988).
Vessel: 140,000 d.w.t.
Tugs: Normally 4 tugs for berthing and 2 tugs for sailing, tugs' lines. All tugs make fast and 2 push. On arrival the forward tug requires a heaving line from the main deck, he then steams forward to pass his line up through the centre fairlead.
Moorings: Under normal conditions first 2 back springs, then 2 to 3 breasts, then 2 to 3 head/stern lines.
Gangway: Shore gangway.
Departure: On departure Pilot normally boards 1 hour after completion of loading. EDP is standard procedure.
Surveyor: Lloyd's Surveyor comes from Aberdeen and requires 2 to 3 days' notice.

AUTHORITY: Shetland Islands Council, Marine Operations Department, Port Administration Building, Stella Ness, Mossbank, Graven, Shetland ZE2 9QR. *Tel:* Sullom Voe (0806) 242551. *Telex:* 75142 Sulvoe G. *FAX:* Sullom Voe (0806) 242237. *Cables:* Portcontrol Sullomvoe. *Contact:* Captain G.H. PILOTAGE: Call Sunderland Harbour Radio, Channel 16, work Channel for port is 14. Pilotage compulsory in South Docks and upri of Corporation Quay. Pilotage also compulsory on all vessels carry dangerous goods or with mechanical defects, under tow. Pi maintaining continuous watch on VHF Sound signals for vessel requir Pilot is Morse Code No. 6. Pilot boards 0.5 to 0.75 miles off piers bad weather pilot cutter leads vessel into inner harbour, and Pilot boa there.
ANCHORAGES: 0.5 to 0.75 miles N.E. of Roker Pier Lighthouse.
RESTRICTIONS: Vessels may enter South Dock from 2 hours bef until half an hour after high-water. Vessels may lock in outside of the times depending on draft and state of tide. For North Dock a Corporation Quay restrictions depend on draft and state of tide.
MAX. SIZE: South Dock – length 142 m. beam 18.9 m., draft 8.08 with Spring tides, 7.16 m. with Neap tides.

River – length 183 m., beam – no restriction, draft 8.38 m. subject siltage.
HEALTH: Pratique procedure: Pratique granted by Port Health Author on arrival.

Suspected disease or fever: All ships from suspected areas must ra Port Health Authority 24 hours in advance of arrival, stating gene condition of crew members. Pratique is automatic when ships arr from other U.K. ports.

Also see "Health – All Ports" before first U.K. port.
RADIO: Cullercoats.
TUGS: Join vessel at or outside harbour entrance. Tug's ropes norma used.
BERTHING: In South Dock vessel must arrive from 2 hours before to 30 minutes after high water. Vessels may lock in as und "Restrictions". At Corporation Quay small vessels berth at any tim Large vessels usually berth at same time as mentioned for South Doc

Bridge swung to allow vessels to pass through.
BRIDGES: In South Dock bridge swung to allow vessel to pass throu Railway Bridge clearance, 25.1 m. MHWS.
STEVEDORES: A close knit dedicated labour force is engaged on car handling operations.
Arrangements and Hours of Working:
Normal hours of operation are:
0800 – 1700 hrs. (Monday to Thursday).
0800 – 1600 hrs. (Friday).

Work outside these core hours (overtime working) may be ordered required.

On bulk cargo a continuous working day is available from:
0700 – 1900 hrs. (Monday to Thursday).
0700 – 1600 hrs. (Friday).

Weekend working on Saturday and Sunday and Bank Holiday work can be arranged as necessary, with the exception of Christmas D Boxing Day and New Year's Day.
MEDICAL: Well served with General practitioners and hospital faciliti and attention can be arranged at very short notice. However, unle urgent, 24 hours notice desirable.
TANKERS: 4 installations (lines either 0.16 m. or 0.2 m.) 3 installati in South Dock and 2 berths, the S.E. Oil Berth 98 m., the S.W. Oil Be 89 m. 1 vessel of maximum length 142 m. can use this berth, dr 8.08 m. Spring tides; 7.16 m. Neap tides. At Corporation Quay ves 183 m. long, draft 8.58 m.
DENSITY: Usually 1025. May be less after heavy rain.
FRESH WATER: Available. Arrangements can be made to supply wa at any time.
FUEL: Bunkers supplied at Corporation Quay pipeline from Petro All grades available – Corporation Quay and Hendon Dock. Viscosi range from 32 secs. to 3,500 secs., and can be blended to r requirement in this range. 12 hours' notice necessary. Rate 250 t

DOCUMENTS:

C142	2 copies	Crew Declaration
C14	3 copies	Stores Declaration
C13	2 copies	General Declaration (completed by Agent)
C16	2 copies	Cargo Inward Declaration
C74	1 copy	Master's Authority (Agents complete)
C1320	2 copies	Cargo In unregistered spaces

These documents are to be completed and presented with copies of manifests and ship's documents at the time of report.

PILOTAGE: Compulsory for vessels of 1,600 g.r.t. (Based on International g.r.t. in Lloyd's Register) and above. Request Swansea Bay Pilots by telephone call. Telegraphic address for Swansea Pilots is "Pilority, Swansea".

Advance notice of ETA required at least 12 hours. VHF Channels 14, 11 and 6. Pilot boat has bright yellow hull with red boot-topping or black hull; superstructure painted white. Pilot cutter's sound signal is "SM", 3 short and 2 long blasts. The area of boarding is usually 1 mile S.E. of Mumbles Lighthouse in all weathers. Usual requirements for ladders are in force, and Pilots require ladder to be about 4 ft. to 5 ft. above water.

ANCHORAGE: About 1 mile S.E. of the Mumbles Lighthouse.

RESTRICTIONS: Berthing is in accordance with tide. King's Dock Lock operates for a maximum of 8 hours on Spring tides. River-side berths and Swansea Ferryport Terminal operate over a greater period.

No night-time restriction of entry.

MAX. SIZE: Max. size for entry is 655 ft. long, 88 ft. beam, 32 ft. 6 in. draft.

These vessels are docked over HW period. Any vessel whose dimensions are approaching maximum for port should advise Port Manager well in advance. Special arrangements may be necessary, such as daytime only docking.

HEALTH: Usual international health regulations are to be observed. Any vessel which is suspect should inform Port Medical Officer of Health.

RADIO: All communications for ship movements through "Swansea Dock Radio" VHF Channel 14 calling and working. Agents, receivers, etc., can be called through usual coastal radio stations – this includes Ilfracombe Radio.

TUGS: Towage undertaken by private operators. The Alexandra Towing Co. Ltd., at present use a modern fleet of tugs at Swansea and Port Talbot. It is optional whose lines are used, but if tugs line is taken, an extra charge will be made.

BERTHING:

Dock	Quay Length (Total) (m.)	Depth of Water (Absolute Min.) (m.)	Maximum Size of Vessel			
			Length (m.)	Beam (m.)	Draft (m.)	Approx. d.w.t.
Kings Dock	3,586	10.1	199	26.5	9.9	30,000
Prince of Wales Dock	2,050	8.1	122	20.7	7.3	—
Queen's Dock	Oil Jetties (Operated by BP Co.)	10.7	199	26.5	9.9	30,000

Ro/Ro Berth: Situated on the East bank of the River Tawe, this facility provides a 137 m. berth, hinged shore bridge 76 m. long, with a 6 m. roadway. Adequate vehicle marshalling areas and Customs/ passenger facilities are available. The nose of the bridge can be lowered through 12.95 m. to allow for variation in tides and ship's flotation.

Containers: Swansea Container Terminal plc operates a full container terminal with a 35 tonne gantry crane.

BULK HANDLING FACILITIES: *Petro Chemicals:* One jetty in Queen's Dock. 4 jetties for bulk liquid fuels, feedstock, etc. operated by BP Chemicals International Ltd., also in Queen's Dock.

Bulk Cargoes (Coal, ores, etc.): Two berths in King's Dock equipped with 1×7.5 ton and 5×10 ton grabbing cranes. Operated by Associated British Ports. Private berths use mobile cranes.

Ferryport: On East bank of River Tawe.

CRANES: 2×25 ton and 9×11.5 ton, 4×7.5 ton and 7×6 ton electric cranes.

40 forklifts up to 11.5 tons, 1×25 tonnes capacity, 1×40 tonnes capacity and 3×28 tonnes capacity.

BRIDGES: One in dock bridge is under direction of duty Assistant Dock Master. A vessel which has to pass will be informed by the Assistant Dock Master as to the availablity.

STEVEDORES: Stevedoring services are provided by Associated British Ports and Swansea Container Terminal plc. Advice of labour requirements must be received by the following times:
General Cargo: By 0700 hrs. to start work at 0700 hrs.

Weekend work to be ordered by 1030 hrs. on Friday.

MEDICAL: Port Medical Officer of Health has an office on King's Dock Lock. Medical attention can be obtained at short notice. In emergencies, the duty Assistant Dock Master can be communicated with, to obtain medical help. Hospital facilities available, and there is a first-class medical centre on the Prince of Wales Dock. Vaccination and fever certificates will be examined when receiving Pratique.

TANKERS: All tankers arriving, working cargo, and departing are required to observe port's Petroleum By-laws and Oil in Navigable Waters Act. British Petroleum Company has further private directives for oil tankers. 5 main tanker berths, 1 petrochemical berth, 2 coastal tanker berths and 2 lay-by berths in Queen's Dock. 1 tanker/general cargo berth in King's Dock. Deepest draft permitted is 32 ft. 6 in.

Tankers of 1,600 g.r.t. and over to observe Merchant Shipping (Tankers – E.E.C. Requirements) Regulations 1981.

DENSITY: King's Dock Lock density is 1025.

FRESH WATER: Fresh water supplied from hydrants on quays by watermen. Rate of delivery is 2,000 g.p.h., approx., depending on the demand.

FUEL: Various grades of gas oil and diesel can be supplied by barge or road vehicles, or it can be delivered ex-pipeline at Queen's Dock.

FIRE PRECAUTIONS: All matches and lighters must be declared at entrance to oil installation. There are arrangements at the Queen's Dock depot for shore cooking and eating. There is an oil boom between the King's Dock and Queen's Dock to serve as an oil fire break between two docks.

CONSULS:

France	Tel: Swansea 650021
Norway	Tel: Milford Haven 2313

Vice-Consuls:

Belgium	Tel: Milford Haven 2313
Sweden	Tel: Gorseinow 895881

REPAIRS: All types of deck and engine-room repairs are possible.

DRY DOCKS: 2 dry docks in port are entered from King's Dock. Dry docks: "Duke of Edinburgh" 670 ft.×92 ft.; "Palmers" 560 ft.×75 ft. Operated by Swansea Dry Docks Ltd.

SURVEYORS: Cargo Inspectors available locally.

Ship Surveyors located in Swansea and Cardiff.

GANGWAY/DECK WATCHMEN: Under Port Regulations, there shall always be on board sufficient men to move or take care of the vessel. Some vessels employ watchmen.

OPENING/CLOSING HATCHES: Normally done by the ship's crew, but if riggers are employed by vessel for general duties they open up hatches.

CUSTOMS ALLOWANCES: At discretion of local H.M. Customs Inspectors.

CERTIFICATES:

Certificate of Freeboard.
Certificate of Registry.
Certificate of Pratique.
Light Bill.
Manifest.
Bill of Health.
Bills of Lading.

REPATRIATION: Arrangements can be made for repatriation through the Consular Channels.

AIRPORT: Nearest airport at Swansea, 8 miles from Docks. Next are Rhoose (Cardiff) and Bristol Airports where regular scheduled flights are handled.

TIME: Local time is British Standard Time which is plus 1 hour to Greenwich Time. Reverting to GMT during Winter months.

HOLIDAYS: Christmas (25th December); Boxing Day (26th December); New Year's Day; Easter, Good Friday and Monday (movable dates); Spring Holiday, May Day, Summer Bank Holiday (both movable dates). No cargo is worked on these days.

POLICE/AMBULANCE/FIRE: Call 999 from any telephone, and ask for service required.

EMERGENCY CO-ORDINATION CENTRE: S.A.R. Centre based at Mumbles. Tel: Swansea 66534.

TELEPHONES: Arrangements at most berths for placing telephones on board ships in port.

BANKS: Lloyd's Bank Ltd., 25 Wind Street, Swansea. Tel: 475555.
Barclays Bank Ltd., 57 Wind Street, Swansea. Tel: 465007.
National Westminster Bank, 52 Wind Street. Tel: 652125.

STORING: See "Prelims".
1. Yes
2. No interference with cargo work.
3. Yes
4. Yes
5. —
6. Yes.

SHIP SUPPLY SERVICE: It is the practice for the Swansea and Port Talbot pilot cutter to ferry personnel, stores, etc., to vessels offshore and due to dock at the respective ports. Alternative arrangements have to be made for large quantities and heavy items (contact A.Doig & Co.).

Swansea and Port Talbot Pilotage, Port Office, King's Dock Lock, Swansea, West Glamorgan, South Wales. Tel: (0792) 650855.

IDENTIFICATION CARDS: Not compulsory, but they are helpful if a crew member has to identify himself to Authorities.

GARBAGE DISPOSAL: Arranged through local Agents.

Brisco. Tel: (0792) 584585.

Dragon Skip Hire. Tel: (0792) 310688.

WASTE OIL DISPOSAL: Arranged through local Agents.

Caarleon Ltd. Tel: (0792) 458646.

SEAMAN'S CLUBS: Flying Angel, Kings Dock, Swansea. Tel: (0792) 653436. Hours: 1900 – 2300 hrs. Full facilities, except for accommodation.

GENERAL: Entrance lock is 875 ft. in length, 90 ft. across at cope level. The inner sill is 7 ft. higher than the outer sill. The outer sill is 2.8 m. below Admiralty Chart datum (Chart No. 1161).

Tugs are available at the port for in-dock as well as sea towage.

A diver can usually be obtained by enquiry to the A.B.P. Port Engineer, Swansea.

Port Manager: Tel: 650855/265. Port Engineer: Tel: 650855/275. Dock Master and Fire Officer: Tel. 650855/260.

AUTHORITY: Associated British Ports, Harbour Office, Lockhead, Kings Dock, Swansea, Glamorgan SA1 1QR. *Tel:* (0792) 650855. *Telex:* 48150. *FAX:* (0792) 650729. *Contact:* A.R. Klinck, Port Manager. Captain M.J. Ingamells, Harbour Master.

TEES RIVER: 54.39 N. 01.08 W. (See Plan)

PORT LIMITS: The Port facilities extend from the river entrance to the I.C.I. Billingham Oil Jetty 16 km. up river.

Arrival in the port is accepted as time of passing South Gare Lighthouse inward, or time of anchoring in the Tees Bay.

DOCUMENTS: Ship's official papers including:

Register.
Load Line Certificate.
Derat Certificate.
Safety Equipment Certificate.
Radio Safety Certificate.
Construction Safety Certificate.
U.K. Light Dues.
Oil Pollution Certificate. (Tankers).
Crew List.
C14 Ship's Stores List.
C13 Arrival General Declaration.
C142 Crew Declaration.
Tanker Check List (Tankers over 1,600 g.r.t.)

ANCHORAGE: Vessels are prohibited from anchoring:—
(i) inside the dredged channel.
(ii) within a radius of 1,113 m. of the charted position of the Fairway Buoy.
(iii) within the limits of 2 divergent lines starting and extending from the dredged channel limits 244 m. apart at the South Gare Light Station, to 550 m. apart between their respective points of intersection with the circumference of the circle defined in (ii).

Vessels should not anchor within 2.5 cables of the Ekofisk Oil Pipeline or the Everest Gas Pipeline.

Caution should be exercised by the Mariner wishing to anchor in Tees or Hartlepool Bays, especially during periods of onshore winds. Local weather forecasts may be obtained from the Coast Guard or Coast Radio Station. Continuous anchor watches must be maintained and frequent confirmation of the vessel's position obtained to ensure that the vessel is not dragging. Engines should be maintained in a state of readiness so that the vessel may heave up if required.

PILOTAGE: The Tees Pilotage Area is that part of the harbour for the time being, as specified in the Tees & Hartlepool Port Authority Act 1966 and all statutory modifications thereto falling within an area from the waters of the River Tees below the Newport Bridge at Middlesbrough, including all docks and tidal creeks connected therewith and the waters of the sea bounded by a line bearing 047°(True) from the Port Boundary Stone at Seaton Carew and extending seaward from that stone for a distance of 3.95 miles, thence clockwise along a circle of a radius of 3.5 miles from the South Gare Lighthouse at the mouth of the River Tees to the shore at Redcar, always excluding any port of the area enclosed by a circle of radius of 1.5 miles from the seaward end of the Hartlepool Breakwater.

Official address: The Tees & Hartlepool Pilotage Co. Ltd., 13 – 17 Queen's Square, Middlesbrough, Cleveland. Tel: (0642) 485648 (24 hours).

Pilot station is situated at South Gare and pilot cutter on duty is moored there. Cutters are painted blue with white or orange upper structure and fly the pilot flag by day when on duty and International Regulation lights by night. The duty cutter is equipped with VHF Radio, call sign "Tees Pilots" on Channel 16. Radar is also fitted.

As much advance notice of a vessel's arrival as possible should b given to Pilots. Minimum requirement for vessel arriving is 1 hour a for vessel sailing 1 hour 15 minutes.

Pilot boards in vicinity of Tees Fairway Buoy although smaller vesse are occasionally boarded off the South Gare lighthouse. During seve weather the duty cutter may move to Tees Dock and the Pilot will boa as far seaward as the conditions permit.

Pilotage is compulsory for certain classes of vessel.

Class of ship requiring a Pilot:
1. (a) Ships of 95 m. LOA and over, navigating in the "Tees Approa Channel" and the "Tees River Channel" seawards of Light Bu No. 27 (Position: Latitude 54° 35′ 02.2″ N., Longitu 01° 11′ 46.8″ W.).
   (b) Ships of 80 m. LOA and over, navigating in the "Tees Riv Channel" between Light Buoy No. 27 and Tees "Newpor Bridge.
2. Ships navigating in the "Tees Approach Channel" or "Tees Riv Channel" up to Tees "Newport" Bridge.
   (a) Of 20 m. LOA and over, having on board a dangero substance.
   (b) Requiring the services of a tug.

Pilotage Exemption Certificates: Certain Masters and Mates may b entitled to a "Pilotage Exemption Certificate" upon application to t Tees & Hartlepool Port Authority. Details are obtainable from t Harbour Master, Harbour Master's Office, Tees Dock, Grangeto Middlesbrough, Cleveland, TS6 6UD.

RESTRICTIONS: *Traffic Control:* This is operated by the Harbour Mas when vessels over 200 m. in length are moving within the river limits. Th primary purpose is to allow the subject vessel to negotiate the chan without embarrassment from other traffic. Overtaking/passing is decid by the Harbour Master when circumstances favour such actions.

Restricted Transit Control: This is imposed by the Harbour Master up vessels carrying certain hazardous cargoes. The subject vesse intended to proceed from sea to berth or from berth to sea witho meeting other traffic. As a consequence such vessel must be restrai from entering the main channel until an 'all clear' route is availab Some regulated passing.

Port Safety Control: Masters of ALL vessels before committing th vessels to the River Tees Channel are required to satisfy the Harbo Master in respect of shipboard equipment by affirming to the follow questionnaire:—

Question No. 1: Your vessel is in all respects seaworthy.
Question No. 2: All secondary power or mechanical systems are operation and *immediately* available in the even failure of any primary system.
Question No. 3: Steering is under direct manual control.
Question No. 4: Anchors are ready for use.

In view of the controls it is essential for contact to be made with t Harbour Master before considering entering the river, leaving the ber

VHF Radio use Channel 14 to contact. Tel: (0642) 4525 Telex: 58145.

MAX. SIZE: This matter is constantly under review. At present t largest dimensions acceptable are quoted as: Length 305 m. (1,000 f Beam 45.7 m. (150 ft.); Draft 16.76 m. (55 ft.). This depends on the ber nominated, tidal influence and prevailing weather.

Vessels requiring in excess of 16.15 m. (53 ft.) draft should be t subject of prior consultation with the Harbour Master.

A vessel with unusual dimensions e.g. oil rig, or any vessel w dimensions approaching the port maxima, must be the subject consultation with the Harbour Master.

HEALTH: New Regulations. The Public Health (Ships') Regulations force from 1.4.78.

See "Health – All Ports" before first U.K. port.

RADIO: Ships approaching from the North or at anchor in Tees B use Cullercoats Radio. Ships approaching from Southward use Hum Radio or Whitby Radio which is a slave-station to Cullercoats.

VHF Station	*Call Sign*	*Channel Fix (min.)*
Harbour Master's Office	TEES PORT CONTROL	14,16,22,12

Tees Pilot Station (South Gare)		16,14,9
Tees Tugs	NAME	16,14,12,8,6, et

Tees Port Control is manned 24 hours per day and is also availab Hartlepool shipping for relaying port operational messages.

Channel	*Use*
14	Port Operations (Tees)
22	Port Operations (Tees)
12	Port Operations (Hartlepool)
9	Pilot Operations (Tees and Hartlepool)
16	Calling and Safety.

Vessels should listen on Channel 14 at all times when underwa the port.

RADAR: 3 scanner sites give full radar coverage from Tees Offs Base/Tees Dockyard Ltd. to Fairway Buoy and up to 20 mile seaward. Advice/information available to Masters/Pilots at any t Advice in poor visibility in prescribed form. Call "Tees Port Con (See "VHF").

The Ekofisk oil pipeline runs 220 miles from the Ekofisk oilfiel Teesside, coming ashore just North of the Tees Entrance; the Ev high pressure gas pipeline runs from the Central Graben gas/oil f coming ashore just South of the Tees Entrance; the inshore sec are vulnerable to anchor damage from large ships and to giv pipelines optimum protection, a computerised radar has been ins in the Harbour Office.

TUGS: Official Address: Cory Towage (Tees) Ltd., Tees Wharf, Dockside Road, Middlesbrough, Cleveland TS3 6AB. Tel: Middlesbrough 247277 day and night.

Fleet of 7 tugs between 2,200 h.p. and 3,650 h.p. Tugs join vessel in Redcar Reach between Buoys No. 9 and No. 17 depending on size, draft and destination. Tug's lines are used.

Tugs are on duty daily and available on 6 hours' notice for sailing and arriving after normal office hours.

BERTHING: Small vessels can usually berth at any stage of the tide. Deep drafted vessels enter in accordance with the tide.

T.H.P.A. General Cargo Facilities:

Tees Dock: Quay No. 1: 4 conventional general cargo berths each of 183 m. length, 1 of 208 m. in length with flush faced quay. Road and rail access to all vessels. Ample cranage and spacious sheds/open ground. Nominal dredged depth 10.9 m. below LAT.

Quay No. 2: Two berths, one at 183 m. in length and one at 208 m. in length, equipped with electric luffing cranes up to 25 tonnes capacity and 1×100 tonnes capacity Demag mobile crane. Nominal dredged depth 10.9 m. below LAT.

BULK HANDLING FACILITIES: *Redcar Ore Terminal:* Handles iron ore imports for British Steel. Berth dredged to nominal 17.30 m. and able to accommodate vessels up to 305 m. in length, approx. 150,000 d.w.t. 3 ore dischargers capable of handling 2,000 t.p.h.

Teesbulk Handling Ltd.: Built on the East side of Tees Dock, this loading/discharging facility is for the export of Potash mined in North Yorkshire. Dredged to a nominal depth of 10.90 m., the quay is intended to accommodate vessels simultaneously. The main loader is capable of 1,500 t.p.h. or 1,000 t.p.h. each to 2 vessels. A silo on the site has a storage capacity for 56,900 tons. Grain is exported from the terminal utilising a 7,500 ton silo as well as direct transport. Coal, soda ash and bentonite also handled.

ROLL-ON/ROLL-OFF FACILITIES: A link span Ro/Ro berth in Tees Dock can accommodate ships of up to 160 m. in length and 23.7 m. beam. Nominal dredged depth of 8.7 m.

Designed for loads up to 182 tonnes (when carried on 4 axles).

A second Ro/Ro pontoon is located at Tees Dock, Berth No. 5 and can accommodate vessels of up 200 m. LOA, and has a nominal dredged depth of 10.4 m. below LAT.

CONTAINER FACILITIES: A privately operated (Bell) purpose-built Container Berth utilising 2 gantry cranes of 32 tonnes and 45 tonnes capacity is established downstream of Tees Dock.

CONSTRUCTION FACILITIES: There are a number of yards specialising in oil-rig module construction work, all capable of handling flat-top barges up to 92 m. and unit loads to 4,000 tons.

SLP Engineering and Redpath Offshore South are on the South side of the river, while Redpath Offshore North are on the North side.

STEVEDORES: In order to prepare for loading/discharging, i.e. ordering of gangs, transport, etc., it is necessary to give ETA through their Agents not less than 24 hours before arrival.

In Tees berths, the port works 2 shifts daily, i.e. 0600 – 1400 hrs. and 1400 – 2200 hrs. Mondays to Fridays, with voluntary overtime at weekends.

TANKER BERTHS:

Jetty/Berth Name	*Max. LOA* (m.)	*Nominal Depth* (m.)	*Max. d.w.t.*
Phillips No. 1	305	18.2	150,000 (Crude)

No. 1	120	7.2	5,000
"A"	140	7.0	5,000
Billingham Oil Wharf	100	4.5	4,000

Clarence/Deep Water Wharves also handle tankers.

Note: Depths given are nominal and subject to siltation. Updated information should be sought from Tees Harbour Master.

Report: *Cautionary Advice:* Vessels approaching River Tees should have B.A. Charts 2566 and 2567. Both are large scale charts, having complete coverage of River Tees and associated terminals, and Tees Bay. B.A. Charts 134, 152 and 1191 are recommended for use from seaward to the Tees Bay area.

It should be noted that there are two 15 m. wrecks outside the 30 m. line in positions within 3 miles of the Fairway Buoy (54° 41′ N., 1° 02′ W. and 54° 42.5′ N., 1° 24′ W. (PA)). Tides in the vicinity of the Fairway Buoy and the pilot boarding areas set at approximate right angles to the channel, with rates up to 1.5 knots. Great care should be exercised when slowing down to embark the Pilot.

During or after Northeasterly gales, a heavy ground swell can build up in this area.

Phillips North Sea Petroleum Teesside: Docking and Berthing: It is the normal practice to berth port side to. The vessel is swung in Seaton Channel turning circle and backed into the berth. There are no approach speed indicators on the jetties. Mooring boats are used to run the lines ashore (usually spring lines first, followed by a head line and a stern line). All moorings should be of the same construction and material.

ICI North Tees: Docking and Berthing: Vessels may berth either side to any of these jetties, according to tide and weather conditions, but port side to is favoured by Harbour Authorities so that the vessel is heading seaward. If the vessel is berthing port side to, normal practice is to swing off Tees Dock. There are no approach speed indicators. Also see "Shipmaster's Report" – April 1988.

Tees Storage Terminal: Docking and Berthing: Vessels may berth either side to at No. 2 Jetty according to tide and weather conditions prevailing, but port side to is favoured by Harbour Authorities so that the vessel is facing seaward. Vessels berthing port side to are swung in the Tees Dock turning circle and then pushed into berth with the aid of tugs.

Teesport Oil Jetties: Docking and Berthing: Vessels may berth either side to these berths according to tide and weather conditions prevailing, but starboard side to is favoured by Harbour Authorities so that the vessel is facing seaward. If the vessel is berthing starboard side to, it is swung in the Tees Dock turning circle. There are no approach speed indicators.

Billingham Oil Jetty: Docking and Berthing: Vessels may berth port or starboard side to depending on weather and tidal conditions prevailing at the time.

If vessel berths port side to, an anchor is sometimes used when swinging the vessel off the berth. 2 springs are run from each end of the vessel, then 2 messengers are passed from jetty deck to vessel, one to bow and one to stern. 2 shore head lines and 2 shore stern lines are brought on board and made fast.

B.A.S.F. Terminal: Docking and Berthing: Vessels may berth either side to according to tide and weather conditions prevailing at the time, but port side is favoured by Harbour Authorities so that vessel is facing seaward. If vessel is berthing port side to it is swung in the turning circle off Tees Dock and then pushed into the berth with the aid of tugs.

MEDICAL: All medical facilities available. Vessels requiring doctor to board are advised to give maximum notice. Emergency medical attention can be arranged through VHF radio contact to Tees Port Control on Channels 22, 16 or 14.

DENSITY: The density of the river water fluctuates with the seasons and rain amount, being between 1015 and 1025 mainly. Below Tees Offshore Base/Tees Dockyard Ltd. the fresh water influence is minimal.

FRESH WATER: Plentiful from wharf and small quantities available from tug in emergency, approx. 20 t.p.h.

FUEL: All grades available by road or river delivery. 48 hours notice of requirements is requested for barge delivery.

CONSULS: Sweden, Norway, Denmark, Netherlands, Germany, Finland. Also French Consular Agency.

REPAIRS: Facilities available for all deck or engine repairs.

DRY DOCKS: Tees Dockyard Ltd. has 3 dry docks:

No. 1 Dry Dock 175 m.×22.25 m., capacity 26,000 tons.
No. 2 Dry Dock 83.21 m.×17.31 m.
No. 4 Dry Dock 137.16 m.×20 m.

Cranage: 5 tons, 10 tons, 15 tons and 30 tons.

SURVEYORS: 1. SGS Redwood Ltd., and Caleb Brett cargo inspectors available.

2. Lloyd's Register, American Bureau, German Lloyd, Bureau Veritas, Salvage Association, U.S. Salvage, N.K.K., RIMA and Corporation of China available.

GANGWAY/DECK WATCHMEN: Recommended. Majority of berths are tidal with 5 m. range at Springs.

OPENING/CLOSING HATCHES: Always by crew. Riggers available.

CUSTOMS ALLOWANCES: 0.5 lb. tobacco or 200 cigarettes. (0.25 lb. tobacco for coasters). 1 spirit and 1 wine bottle (0.5 bottle spirit and 0.5 bottle wine for coasters).

REPATRIATION: All facilities exist.

AIRPORT: Teesside Airport with regular flights to London, etc. is 12 miles from Middlesbrough Centre.

Air U.K. have flights to Aberdeen, Amsterdam, Bergen, Humberside, Norwich and Stavanger.

TIME: GMT in Winter months. BST (GMT plus 1 hour) operates between late March and mid-October as decided by government.

HOLIDAYS: Normal English Bank Holidays. On certain holidays work can be arranged if suitable notice is given.

POLICE/AMBULANCE/FIRE: Telephone 999 in emergency. If no phone available contact the Harbour Master on VHF Radio Channel 16 or 14.

EMERGENCY CO-ORDINATION CENTRE: H.M. Coast Guard Maritime Rescue Sub-Centre, Tyne/Tees. Tel: Tyneside (091) 257-2691. Telex: 58839.

TELEPHONES: Many berths can be connected to telephone system using coin boxes; a connection charge is made.

BANKS: All major U.K. banks have branches in Middlesborough, Redcar and Hartlepool.

STORING: See "Prelims".

1. Both.
2. Tankers – No.

Storing may take place before or after cargo operations, while all tanks are battened down.

3. No. Distance varies from 100 yards to half mile depending on berth.
4. No.
5. Applicable to spirits, cigarettes, tobacco and bonded meat only.
6. Yes, but normally by suppliers/ship's crew.

GARBAGE DISPOSAL: There are several reputable firms in the area. Collection service is available by arrangement through local shipping agencies, but must be sanctioned by the berth operator (this is particularly important at tanker berths). Skips are usually about 6 cu.m. and charges vary according to time involved, but average about £35 to £40 per skip in normal working hours.

WASTE OIL DISPOSAL: Collection can be arranged by local shipping agencies, however it is necessary to specify what oils and chemicals are present in the waste oil. Usually collected by road tankers of about 20 tons capacity and charges would vary according to quantity and content. Typical current charge for Lub and Fuel Oil waste, £150 per 1,000 galls.

IDENTIFICATION CARDS: Not used in Tees.

SEAMAN'S CLUBS: The Missions to Seamen, The Flying Angel Club, Tees Dock, Grangetown, Middlesbrough, Cleveland, TS6 6UD. Tel: 0642-460994, 468527, 460244.

German Seamen's Mission, 67 The Avenue, Linthorpe, Middlesbrough, Cleveland, TS5 6QU. Tel: 0642-825084.

Swedish Missions Church, 386 Linthorpe Road, Middlesbrough, Cleveland, TS5 6HA. Tel: 0642-819878.

Seafarers Christian Friends Society, 7 Lampton Road, Stockton on Tees, Cleveland, TS19 0ER. Tel: 0642-603247.

CURRENCY: U.K.Pound (U.K.£).

DEVELOPMENTS: The Port Authority is undertaking a feasibility study into provision of a coal terminal on the redundant oil terminal site. The terminal is to be a common user terminal for 80,000 d.w.t. and 140,000 d.w.t. (part loaded) vessels.

SHIPMASTER'S REPORT: April 1988.

Chart: BA. Chart No. 2566.

Pilot: Pilot boards at Tees Fairway Buoy (Racon) from a fast sea cutter. If the weather is poor the Pilot boards inside South Gare.

When leaving, extra charges are incurred if the Pilot has to standby for more than 1 hour.

Entry: It is about 30 minutes from the Pilot to ICI North Tees.

Tugs: There are several powerful tugs available. Tugs are not normally used by small vessels. When ordering tugs, 2 hours' notice required.

Berthing: For ethylene, Jetty A only can be used, depth of water approximately 7.5 m. at low water.

When berthing, side alongside is dependent on the tide, but in general vessels berth starboard side to. Vessels swing off the berth and sometimes the anchor is used. Good fendering is provided by 3 large 'Yokahama' type fenders which ride up and down with the tide on the wooden quay face. Mooring boat assists with running the lines.

Great care should be taken when lining vessel up with the manifolds as shore personnel alignment may not be accurate. The ICI Jetties can handle Gas Ships up to a maximum of 60,000 cu.m.

Cargo: There is an 8 in. liquid line and a 6 in. vapour line. The shore personnel connect and disconnect the Chicksan arms. There are often long delays between connection of arms and commencement of operations.

The shore compressor extracts ship's vapour, so can use all ship's plant for internal cooling.

Negative cool down on completion. We had a temperature of −101.7° C on completion of loading. This can vary from −101° C to −102° C, depending on the time of year.

Average loading rate 124 t.p.h. (shore maximum). We stopped loading 12 tonnes before being full (there is a stop button at the ship's manifold) and the remaining product was blown to the ship in about 45 minutes.

Oxygen samples taken before loading.

All documentation, including Bills of Lading, handled by Surveyor, who accepts Notice of Readiness and Protests. The Supervisor is located in a cabin near the vessel and was very helpful.

General: Fresh water is obtainable from a hydrant on the Jetty and is free.

Transport delivering stores is permitted to within 25 m. of the ship's side.

Ship's gangway used but was troublesome due to the rise and fall of the tide.

There is a public telephone near the vessel. Collect calls may be made via the operator (no coin box). The Master is able to use the telephone in the Supervisor's office for any local official business.

Customs are very strict, all forms are to be completely correct.

AUTHORITY: Tees and Hartlepool Port Authority, Harbour Master's Office, Tees Dock, Grangetown, Middlesbrough, Cleveland TS6 6UD. *Tel:* (0642) 468127. *Telex:* 58145 HMTees G. *FAX:* (0642) 467855 (office hours only). *Contact:* Captain P.J. Lewis, Harbour Master.

TETNEY MARINE TERMINAL: 53.32 N. 00.07 E.

LOCATION: Tetney Marine Terminal is the deep water crude oil terminal of Crude Oil Terminals (Humber) Limited, operated by Conoco Limited.

The position of the mono-buoy is 53° 32′ 18″ N., 00° 06′ 48″ E., accommodating vessels up to 50 ft. draft and about 2.5 miles offshore.

Tetney is an open roadstead in the entrance of the River Humber on the East coast of England. The tidal rates in the vicinity of the mono-buoy reach 3.5 knots during Spring tides and the direction of the ebb and flood tides is generally East and West respectively. The tidal range varies between 7 ft. and 22.5 ft.

DOCUMENTS: The following documents should be completed arrival:

General Declaration – Form C13 (duplicate).
Crew Declaration – Form C142 (duplicate).
Crew List – IMO (duplicate).
Tanker Check List Log 22.

Normally the Agent will board the tanker from one of the berthing prior to berthing, and the previously mentioned documentation, with exception of the Tanker Check List (which will be handed to the Berth Master, together with cargo documents) will be handled by him.

Stores can be taken at the berth provided the Agents are given order at least 72 hours before arrival.

The Master of the tanker shall notify to the Harbour Master prior arrival the information required under S.I. 1981 No. 1077, The Merch Shipping (Tankers) (EEC Requirements) Regulations 1981.

PILOTAGE: Vessels are requested to send ETA and draft to Spurn P 12 hours before arrival and any adjustment to that time at least 2 hou before arrival. Spurn Pilots listen continuously on VHF Channel 16 a use Channel 14 as a working frequency.

Additionally, Agents should be advised of ETA 72 hours before arri and the following information should be included in the cable: Am draft, bow to manifold distance and cargo manifold size.

Pilotage is by Humber Pilots who board in the vicinity of the Humb Light Vessel from a fast launch. Additional berthing information can b obtained from Tetney Base.

The Berthing Masters will board as the vessel approaches the mon buoy and will assist the Pilot in the mooring operation. They will adv the ship's Officers during the mooring operation, hose connection a disconnection, and will act as Company representatives throughout t vessel's stay in the berth. Berthing Masters (2), Pilot and Ca Surveyors(s) remain onboard during vessel's stay.

Vessels must provide a pilot ladder for the Pilot and Berthing Maste to board and whilst in the berth a suitable gangway with a pilot lad near the end in order to board from a small boat. The ladder must clean and conform to SOLAS Regulations.

RESTRICTIONS: Berthing on H.W., sailing at any time.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: *Pre-Arrival Procedure:*

In addition to the ETA requirements the following informatio required by the terminal within 6 hours of clearing the previous port as soon as receiving orders for Tetney.

(a) Name of ship.
(b) Name of the last port from which the vessel cleared and the na of the loading port if different from above.
(c) Estimated date and time of arrival at Humber.
(d) Cargo loaded (barrels and metric tons – gross and nett).
(e) API and gravity.
(f) Arrival draft fore and aft.
(g) Lifting capacity of derricks.
(h) Size of manifolds.
(i) Slops in cargo.

About 48 hours from the pilot station a second cable should be s to the Agent with the following information:

(a) Name of Ship and Master.
(b) Amended time of arrival.
(c) Names of crew leaving the vessel.
(d) Requirements in way of doctor and dentist.
(e) Stores and water.
(f) Additional requirements.

About 24 hours from the pilot station a final cable should be sen the Agent confirming:

a) Time of arrival.
(b) Ship's bond remaining on board.
(c) Amendments.

VHF: There is a VHF station at Tetney which is manned 24 hours a and has the call sign, 'Tetney Base'. A continuous watch is kept on V Channels 16, 21 and 48. Channel allocation is as follows, 16 calling ship to shore, and 48 port operations. UHF (467.725 MHz) is alloca for use by the Conoco Berthing Master, Tetney Terminal and the Con owned work boats.

The Pilot and Berthing Masters carry portable VHF hand sets for during berthing for inter-ship and ship to tug communicat Channel 73.

BERTHING: Hose hang-off chains and securing equipment are pla aboard the vessel when the Berthing Masters board from the Con service craft, "Spurn Haven".

Vessels will moor using an OCIMF Approved Mooring Stopper su for use with 76 mm. chafe chain.

The vessel approaches the mono-buoy on a Westerly heading messenger (min. 40 mm. diameter) should be lowered to the water this will be picked up by the Conoco mooring launch "Monogirl" w approx. 150 m. from the mono-buoy. This messenger will be made to a 64 mm. × 90 m. polypropylene pick up rope which should be hea up as the vessel makes the final approach to the buoy. When the cha chain is in the fairlead it is secured to the bow stopper.

HOSES: Hoses are taken on the port side and the port derrick (minim S.W.L. 10 tons) should be rigged and ready for use on arrival.

2×16 in. hoses are taken aboard, manifolds should be 16 in. 150 Should a vessel have any other size of manifold or be unable to pro adaptors to suit 16 in., Tetney Terminal will need to be notified at 72 hours before arrival.

Hose connection and disconnection is carried out by the ships under the supervision of the Berthing Master. Upon completio discharge the hoses will be filled with sea water by the ship after disconnection can commence. When the hoses are blanked off the be hung off until just before sailing when they will be lowered t Spurn Haven for towing clear.

POLLUTION: It is the Master's responsiblity to see that no oil kind is pumped or spilled overboard from his vessel. This inclu water from the bilges, crude residues from previous voyages other matter that may result in the pollution of the sea. Owners and Masters should comply with any international regulations and recommendations concerning the prevention of pollution of the sea, especially in regard to the river Humber.

SHORE LEAVE: None of the officers or crew shall be allowed shore leave and no boats of any kind, except in an emergency, shall be lowered during the vessel's stay in the berth.

GARBAGE DISPOSAL: Skip provided, arranged through Agent.

WASTE OIL DISPOSAL: No facilities.

OPERATOR: Tetney Marine Terminal, Crude Oil Terminals (Humber) Ltd., Tetney Lock Road, Tetney, Nr. Grimsby, South Humberside DN36 5NX. *Tel:* (0472) 814101. *Telex:* 527055 Coth G. *FAX:* (0472) 210275. *Contact:* Captain R.C. West, Harbour Master.

TYNE DISTRICT: 55.01 N. 01.24 W. (See Plan)

(Including Newcastle, North and South Shields, Jarrow, Tynemouth, Wallsend and Gateshead).

PORT OPERATIONS AND INFORMATION SERVICE: VHF: Call sign "Tyne Harbour Radio" on Channel 16, frequency 156.80 MHz and on Channel 12, frequency 156.60 MHz. The control station is situated at the Harbour Master's Office, North Shields (Tel: 091 – 2572080, 2570407), and is manned on a 24 hour basis. Vessels must obtain permission by VHF from the control station before entering the port, similar permisson must be obtained before movement within, or before sailing from the port. A service is provided for the passing of information to shipowners and Agents.

DOCUMENTS:

1 Crew List for H.M. Immigration Office.

1 Form C.142 (Tobacco List) supplied by H.M. Customs.

1 List of Private Addressed Packages not manifested (C.143), supplied by H.M. Customs.

Details of Oil in double bottom tanks, also measurement in cubic feet of cargo in non-registered spaces.

PILOTAGE: Pilotage is compulsory for all vessels over 50 m. LOA. The Port of Tyne Authority pilotage district includes the port and its seaward approached within a radius of 3 miles from the North and South Piers. Pilot will board by arrangement either inside piers or at sea.

24 hours advance notice via agent required.

Call 'Tyne Harbour Radio' on VHF Channels 16 and 12 to order Pilot. Efficient pilot ladder required as per D.O.T. Regulations.

ANCHORAGE: Off entrance River Tyne, recommended 1.5 mile N.E. of North Pier. Minimum 12 fathoms.

RESTRICTIONS: Depths below Chart Datum (L.A.T.) from piers to Jarrow Quay Corner 8.6 m. thence to West end of Jarrow Staith 6.0 m., thence to Swing Bridge 5.2 m. (except in main channels of Swing Bridge and High Level Bridge) thence to Redheugh Bridge 5.61 m. West of Redheugh Bridge there is no authorised dredged depth.

MAX. SIZE: Harbour entrance, length and breadth: no limit. Draft 8.0 m. any state of tide: up to 11.0 m. at high water.

Riverside Quay, draft up to 10.00 m.

Esso Oil Terminal, draft up to 9.00 m.

Newcastle Quay, 27 – 28 berths – 6.0 m.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Cullercoats Radio W/T "GCC." Cullercoats Radio on R/T.

TUGS: Normally join inside piers, tow ropes optional except manufactured of man-made fibres. Orders for week-end arrivals must be given before 1030 hrs. Saturday. Rates on application to Tyne and Wear Tugs Ltd. Tel: (091) 4553361.

BERTHING:

Albert Edward Dock:

Heavy Load Berth (Ro/Ro No. 2) for heavy unit loads on transporters up to 510 tonnes; depth of water 7.9 m.

Tyne Commission Quay: 335 m. long, depth of water 7.11 m.

Car Ferry Terminal:

Ro/Ro No. 3: 125 m. long, depth of water 7.11 m.

Ro/Ro No. 4: 140 m. long, depth of water 7.5 m.

Whitehill Point Jetty: 90 m. long, depth of water 5.5 m.

Tyne Dock:

North West Quay: 243 m. long, depth of water 8.2 m.

Factory Quay: 196 m. long, depth of water 7.0 m.

Riverside Quay: 514 m. long, depth of water 10.5 m.

Tynegrain Ltd. (Extension of Riverside Quay): Terminal, 36,500 tonnes silo capacity. Loading rate 1,000 tonnes per hour. Max. size 40,000 d.w.t. Depth of water 10.51 m.

Tyne Coal Terminal: 1 berth, depth of water 10.5 m. Loading rate 2,000 tonnes per hour.

Tyne Car Terminal: 3 berths, depth of water 6.5 m. – 9.5 m.

Newcastle Quay:

Spillers Tyne Mill: 237 m. long, depth of water 6.0 m., discharge rate 75 tonnes per hour. Silo capacity 34,000 tons.

BRIDGES: At Newcastle 10 miles from entrance, Swing Bridge negotiated against tide; other bridges, maximum mast height 24.7 m. above MHWS.

STEVEDORES: Principal Stevedores Port of Tyne Authority. All arrangements through Agent. Stowage plan required prior to arrival.

Plant pool as follows:

Albert Edward Dock:

Ro/Ro Berths – 4 terminal tractors.

Whitehill Point: 2 cranes, 10 tonnes.

Tyne Dock:

Riverside Quay – 4 cranes, 1 – 10 tonnes; one 40 tonne capacity crane; 1 container gantry crane 35 tonne capacity under spreader, 40 tons capacity under the hook beam.

North West Quay – 5 cranes, 5 tonnes – 10 tonnes.

Factory Quay – 1 crane, 3 tonnes.

There is a pool of 25 forklift trucks of 2,500 kg. to 42 tonnes capacity, available for any location. These trucks can be fitted with attachments for handling paper, pulp, etc.

Container handling plant – 1 Hyster 40 tonnes, 4 yard tractors, 9 Mafi 408 flatbeds.

Also see "Dry Docks".

MEDICAL: Hospitals available, Advise Agent in advance if medical attention required on arrival.

TANKERS:

Velva Liquids, North Shields:

Ocean Jetty: 274 m. long, depth of water 9.5 m.

Tanker Berth: 248 m. long, depth of water 7.1 m.

Coaster Jetty: 167 m. long, depth of water 6.0 m.

Jarrow Oil Jetty: Length 189 m.

Rohm & Haas Ltd. Jarrow: Chemical Berth, length 180 m. Depth 5.6 m.

Report: *Cautionary Advice* – Port Approaches: The approach to the Tyne Piers is clear of danger and adequate navigation aids are provided and well maintained. The entrance, however, is exposed to Easterly winds and early contact should be made with "Tyne Harbour Radio" on VHF when bad weather prevails to facilitate boarding and avoid unnecessary delays.

In addition to close attention to other coastal traffic, a sharp lookout should be maintained for local fishermen whose craft are often badly lighted and poorly painted, with colours which may blend rather than contrast with the background.

Entry: Provided that the out-going stream is not making strongly, which causes maximum turbulence, there should be no difficulty entering the port with winds between N.E. and S.E. It is preferable to enter while the in-going stream is still running although at that time it also sets across the entrance. This precaution is especially necessary during N.E. gales, which cause the heaviest seas at the entrance. In Northerly gales vessels should keep close under the lee of North Pier and in Southerly gales, especially with the out-going stream running, close under the lee of South Pier.

Entry: After embarking Pilot prior to entry, vessel proceeds at half to full speed keeping leading lights in line 258°(T).

Normal entry times for maximum draft vessel (although sufficient water at any state of tide) from 3 hours before HW to HW River Tyne North Shields.

During this period tide sets across entrance from North to South in a 160° direction with Spring rates up to 1 knot.

Vessels must approach entrance with sufficient speed and set allowed to maintain a true course of 258°(T) keeping leading marks and lights in line.

Leading line must be disregarded as soon as the Tyne Piers are passed, when a vessel should reduce speed and be guided by the light buoys and beacons.

Inside the piers, tidal streams tend to run with the channel at rates up to 3 knots during Spring tides.

Vessels should pass in mid channel between Nos. 1 and 2 light buoys on the North side and Herd Light Buoy and Herd Groyne Light Structure on the South side.

Regulations also state that vessels are to keep Southward of mid channel when proceeding to sea and Northward of mid channel when entering, so as to pass each other port side to port side.

Distance from Tyne Piers to Herd Groyne 0.8 miles, course approx. 255°(T).

Tugs meet vessel in the area between Tyne Pier and Herd Groyne.

Passage up river from Herd Groyne to Tynemouth Terminal is approximately another 2 miles. Vessels speed when transitting this region should be between Dead Slow and Slow. This tends to be a very busy area with numerous riverside berths. Two bends, one to port and one to starboard, are negotiated before vessel reaches the swinging area off Tynemouth Terminal.

Vessels late for the tide are accepted on a spot basis and have been berthed up to 2 hours after HW. In these cases, vessels go straight alongside, starboard side to, and swing in the turning area outward bound.

Prescribed turning area is 360 m. in diameter.

Tugs are made fast between Herd Groyne and the swinging area, and normal practice is to swing to starboard heading vessel to the jetty when all way is off the vessel.

Mooring boats are employed for running the ship's lines to shore.

DENSITY: Entrance/Tyne Dock – 1025; Tyne Dock/Jarrow 1020; Newcastle Quay 1005/1010.

FRESH WATER: Available ex-water boat, rate of delivery up to 150 t.p.h.

FUEL: Available at Tyne Tanker Berth or by road tanker.

GANGWAY/DECK WATCHMEN: Available if required.

OPENING/CLOSING HATCHES: Crew allowed open and close.

CERTIFICATES:

Register.

Load Line.

Safety Construction.

Safety Equipment.

Safety Radio.

Trinity House Light Bills.

CUSTOMS ALLOWANCES: At the discretion of Local Customs Inspector. Normal allowances are equivalent of 0.5 lb. tobacco per man and equivalent to 1 bottle wine per man. Allowances may be halved for home trade vessels. Vessels in port more than 3 or 4 days may receive extra allowances.

WEYMOUTH: 50.36 N. 02.27 W.

LOCATION: Situated to the North of Portland Bill, midway between Southampton and Plymouth. Weymouth is the nearest U.K. port to Cherbourg and the Channel Islands.
PILOTAGE: Compulsory for all vessels exceeding 150 ft. LOA. The Pilot boards 1.0 miles East of the Harbour entrance. Notice of ETA and request for a Pilot must be advised at least 24 hours in advance and any amendment of this ETA must be made not less than 2 hours prior to vessel's arrival at the Pilot Station. Weymouth Pilot listens on VHF Channel 16 and working frequency is Channel 9. Messages for the Pilot may be relayed via Weymouth Harbour Radio (VHF 16/12) or Portland Coastguards (VHF 16/67) or Queen's Harbour Master, Portland (VHF 16/13).
ANCHORAGE: Good holding ground can be found 1.5 miles to 1.0 miles East of the Harbour entrance.
RESTRICTIONS/MAX. SIZE: Vessels up to 125 m. LOA with a maximum draft of 5.2 m. can enter or leave at all states of the tide, entrance being made to a sheltered harbour between two piers. The Pier Heads are 137 m. apart and the channel is 76 m. wide.
HEALTH: Weymouth Port Health Authority offer facilities for food/meat examination and health clearance requirements.
RADIO: Weymouth Harbour Radio, hours of duty when vessel expected or during working hours 0630 – 2200. Calling Channel VHF 16, Working Channel VHF 12.
VHF: See "Pilotage" and "Radio".
TUGS: Several tugs are available from the Naval Dockyard at Portland.
BERTHING: There is a deep-water berth inside the pier heads with a dredged depth of 5.2 m. (Berth No. 1). This berth can take vessels of up to 115 m. LOA and is used for Lo/Lo operations of bulk cargoes and Ro/Ro side loading/discharging.

Linkspan and Ro/Ro facilities are available at Berth No. 3 with further general cargo/lay-by berths at Berths No. 5 and 6.
CRANES: Berth No. 1 has a 20 tonne SWL Mobile Crane. Other cranes can be hired locally up to 80 tonnes SWL.
STEVEDORES: As required.
MEDICAL: Full hospital facilities are available without notice.
TANKERS: No facilities.
FRESH WATER: Available at all berths.
FUEL: Available at all berths by road tanker.
CONSULS: All consulates and agencies are at Southampton.
REPAIRS: Hull and engine repair facilities are available.
DRY DOCKS: None.
SURVEYORS: At Southampton.
HATCHES: Opened and closed by crew.
REPATRIATION: Possible.
AIRPORT: Hurn and Exeter Airports.
POLICE/AMBULANCE/FIRE: Dial 999.
EMERGENCY CO-ORDINATION CENTRE: Contact U.K. Coastguard, Tel: (0305) 760439.
TELEPHONES: Not available.
SERVICES: Radio and radar repairs. Charts and publications available.
SHORE LEAVE: Permitted.
GARBAGE DISPOSAL: Collection service available by hired skip or contractor facility. Contact Drinkwater Sabey Ltd.
WASTE OIL DISPOSAL: Collection service available by mobile tanker from contractors. Contact Drinkwater Sabey Ltd., or Cleansing Service Group. Tel: 04892-2232/6.
SEAMAN'S CLUBS: None.

AUTHORITY: Weymouth and Portland Borough Council, Harbour Master's Office, Municipal Building, North Quay, Weymouth, Dorset DT4 8YA. *Tel:* (0305) 206422, 206278. *FAX:* (0305) 760971. *Contact:* John New, General Manager.

WHITBY: 54.30 N. 00.36 W. (See Plan)

PORT LIMITS: Within 2 miles of the entrance.
DOCUMENTS: C13 Master's Declaration, C142 General Declaration, 1 Crew List and all normal trading certificates.
PILOTAGE: Pilotage is compulsory for all vessels over 30 m. LOA entering the harbour. Call Whitby Harbour Radio on Channel 16/11 during office hours. To arrange a Pilot in advance, telephone Whitby Harbour Office on 0947-602354. Vessels can enter 2 hours either side of high water.
ANCHORAGES: Vessels may anchor safely to the West of the Fairway Buoy. Holding ground moderate, untennable in heavy weather from N.E. to N.W.
MAX. SIZE: LOA 85 m., beam 14.0 m. and draft 4.5 m. Larger vessels and deeper draft possible on Spring tides by arrangement.
HEALTH: See "Health – All Ports" before first U.K. port.
TUGS: None. Pilot boat can provide some assistance.
BERTHING: Endeavour Wharf, upper harbour, West side, 203 m.

Eskside Wharf, upper harbour, East side, 122 m.

Vessels will sit aground on soft mud at L.W. on both berths.
BRIDGES: Commercial berths and marina are in the upper harbour above the swing bridge. The bridge is manned 2 hours either side of H.W. and can be contacted on VHF Channels 16/11.
STEVEDORES: Available by arrangement with Agents, Whitby Port Services. Tel: 0947-602272.
Cranes and Cargo Handling Gear: Cranes up to 20 tons. Higher capacity mobile cranes can be brought in, if required, with suitable notice. Forklifts up to 28 tons. Container spreaders. Bulk grabs. All usual equipment.
MEDICAL: Routine matters by arrangement with Agent. Emergencies handled at local hospital.
FRESH WATER: Available on all berths.
FUEL: Available by road tanker.
REPAIRS: Most repairs can be carried out by local firms.
DRY DOCKS: One floating dock, max. lifting capacity 300 tons.
HATCHES: Opened and closed by ship's crew.
CUSTOMS: Standard U.K. allowances.
REPATRIATION: Fully available, good road and rail links, nearest airport Teeside (40 miles).
TIME: GMT in Winter. BST (GMT + 1 hour) in Summer.
HOLIDAYS: New Year's Day, Good Friday, Easter Monday, May Day, Spring Holiday, Late Summer Holiday, Christmas Day and Boxing Day.
POLICE/AMBULANCE/FIRE: Dial 999, ask for the service required.
STORES: Provisions available locally, stores by truck alongside.
SHORE LEAVE: Allowed.
AUTHORITY: Scarborough Borough Council, Harbour Master's Office, Pier Road, Whitby, N.Yorkshire YO21 3PU. *Tel:* 0947-602354. *FAX:* 0947-602354. *Contact:* Captain W. Estill, Harbour Master.
Operator: Whitby Port Services Ltd., Endeavour Wharf, Whitby, N.Yorkshire YO21 1DN. *Tel:* 0947-602272. *Telex:* 58295. *FAX:* 0947-606229. *Contact:* P. Bradley, Assistant General Manager.

WHITEHAVEN: 54.33 N. 03.36 W. (See Plan)

DOCUMENTS: Usual required for clearing a vessel from foreign port, i.e. Crew List, Passenger List, Customs Documents, Ship's Register, Manifest and Bills of Lading.
PILOTAGE: Request for Pilot is made by International Code signal G, sound and visual. ETA should be sent 12 hours in advance either to ship's Agent or Harbour Master or both. Area for taking Pilot on board 4 to 5 cables West of Harbour. Pilot boats are Trinity House Pilot Boats – "Viking" and "Cumbria". VHF is installed.
ANCHORAGE: Same area as for boarding Pilot according to draft.
RESTRICTIONS: Vessels may dock from 1.5 hours before HW till 1 hour after HW according to draft.
MAX. SIZE: 270 ft. length, 40 ft. beam and 17 ft. draft (deepest) on Spring tides, 14 ft. draft (deepest) on Neap tides.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Port Patrick and Anglesey Radio Stations.
TUGS: No tugs.
CRANES:

2×10 tonnes lifting capacity.
1×15 tonnes lifting capacity.
1×5 tonnes lifting capacity.

MEDICAL: Agent should receive notice in advance of any medical treatment required. Hospital services are readily available.
DENSITY: Any state of tide density is 1025.
FRESH WATER: Fresh water is available on all berths, any quantity on request to ship's Agent.
FUEL: Most grades and types available.
FIRE PRECAUTIONS: Usual precautions are taken when inflammable cargo is being loaded or discharged.
CONSULS: Norway, Sweden, Denmark and the Netherlands.
REPAIRS: All types of deck and engine repairs carried out.
GANGWAY/DECK WATCHMEN: Advisable to have a watchman but not absolutely necessary.
OPENING/CLOSING HATCHES: Always opened and closed by crew.
CERTIFICATES: Derat Certificate, Load Line Certificate, Radio R/T Certificate, etc.
CUSTOMS ALLOWANCES: 200 cigarettes, 1 bottle spirits.
REPATRIATION: Facilities exist for effecting crew changes and arranging any necessary repatriations.
AIRPORTS: Nearest airports are at Manchester, Newcastle and Prestwick, all approx. 130 miles away.
HOLIDAYS: Cargo may be worked on following days: New Year's Day, Good Friday, Easter Monday, Whit Monday, August Monday, Christmas Day and Boxing Day.
POLICE/AMBULANCE/FIRE: Telephone numbers of these services in order are: Whitehaven 692616, 693181 and 692151.
TELEPHONES: No special arrangements exist for placing telephones on board vessels.
SHORE LEAVE: Crew members may come and go at all times.
IDENTIFICATION CARDS: None required.
GARBAGE DISPOSAL: Skips are available for garbage disposal at two sites in the Queens Dock.
WASTE OIL DISPOSAL: A road tanker service can be made available for waste oil disposal. There is no special berth for this purpose but a berth can be made available.
SEAMAN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
DELAYS: There are very seldom any delays in berthing and none in loading, discharging or bunkering.
AUTHORITY: Whitehaven Harbour Commissioners, Harbour Office, Pears House, 1 Duke Street, Whitehaven, Cumbria CA28 7HW. *Tel:* Whitehaven (0946) 692435. *Contact:* R. Rigg, General Manager.

WHITSTABLE: 51.21 N. 01.02 E. (See Plan)

APPROACHES: Vessels are advised to arrive at the Whitstable Street Buoy not later than 1.5 hours before HW.

To ensure that vessel's approach on the correct heading, (122.5°), and to assist in identifying the entrance, the Whitstable Oyster Buoy has been established in a position bearing 310°×1,950 ft. from the light on the Dolphin on the Western side of the Harbour. This is a red can, flashing 2 red every 10 seconds.

The entrance to the Harbour is marked by a Sector Light fixed to the West Quay Dolphin and shows White, Green and Red. The outer end of the East Quay is marked by 2 fixed Vertical Red Lights. The outer end of the West Quay is marked by 2 fixed vertical green lights. There are fixed Red Leading Lights on the South Quay bearing 122.5° from seaward.

Harbour Signals: A fixed Red Light shown below the fixed Harbour White Light at night means entry of vessels is prohibited. A fixed White Light *only* means Port open for entry.
PILOTAGE: Pilotage is available but Pilots must be ordered through the local Agent. A minimum of 4 hours notice is required as Pilots are from Medway Ports Authority.
MAX. SIZE: The Harbour is tidal and dries out at LW with berths of soft mud capable of accepting vessels of up to 2,000 tonnes capacity (largest vessel: LOA 95 m., max. draft 4.5 m. and 3,274 d.w.t.). There are 4 quays having a total overall length of 2,205 ft. (679 m.), with accommodation for up to 8 vessels at drafts of 15 ft. 6 in. (4.72 m.) at Spring tides and 12 ft. 0 in. (3.66 m.) at Neap tides.
VHF: Ship to shore communication is maintained by VHF Radio, the call sign being "Whitstable Harbour Radio", listening on Channel 16 and working Channels 12 and 9. The station is manned for 3 hours before HW to 1 hour after HW and daily from 0800 hrs. – 1700 hrs.
TUGS: The services of a tug can be made available via Lloyd's Agent, 24 hours notice is required.
BERTHING:
East Quay: Length 228 m. 3 berths.
Bins – Stone, Slag and Ballast.
South Quay: Length 500 ft. (152.4 m.). 2 berths. 100 m. used for commercial purposes and remainder for fishing vessel.
Storage – 1. Warehouse 9,000 sq.ft. (836 sq.m.)
2. Warehouse 7,000 sq.ft. (650 sq.m.)
Open Storage – Bulk Stone, etc. – 2,000 tonnes.
Open Storage and Trailer Park – 5,000 sq.ft. (464 sq.m.)
North Quay: Length 58 m. Fishing vessels only.
West Quay: Length 172 m., width 40 m. Timber storage.
Depth of Water:

Quay:	*HWS*	*HWN*
North	13 ft. 6 in. (4.11 m.)	10 ft. (3.05 m.)
South	15 ft. 6 in. (4.72 m.)	12 ft. (3.66 m.)
East	15 ft. 6 in. (4.72 m.)	12 ft. (3.66 m.)
West	15 ft. 6 in. (4.72 m.)	12 ft. (3.66 m.)

CRANES: Cranes are privately owned and consist of 2 mobile cranes on tracks. SWL up to 10 tonnes.
FRESH WATER: Available.
FUEL: Available.
GARBAGE DISPOSAL: Skips are provided. Black plastic bags available.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: Canterbury City Council, Whitstable Harbour Of Harbour Street, Whitstable, Kent CT5 1AB. *Tel:* Whitstable (02 274086. *FAX:* (0227) 265441. *Contact:* Captain J.E. Clayton, Harb Master.

WORKINGTON: 54.39 N. 03.34 W. (See Pla

DOCUMENTS: Standard U.K. documents.
PILOTAGE: Compulsory. Minimum notice 12 hours via vessel's Agen Pilot boards 1 mile West of entrance.
ANCHORAGES: 1.5 miles to 2 miles N.W. of the entrance.
MAX. SIZE: 10,000 d.w.t., length 137.2 m. beam 20.4 m. and d 8.0 m.
HEALTH: Standard U.K. procedure.
VHF: Workington Harbour Radio operates on Channels 16, 14 and A listening watch is maintained daily from 2.5 hours before HW u 2 hours after HW.
TUGS: Vessels over 92 m. LOA shall, if the Harbour Master so requ be assisted by a tug or tugs.

The port has its own tug on permanent station (10.5 ton bollard p 24 hours notice required.

The Port Authority also reserves the right to appoint a tug or tug attend any vessel if, with due regard to the prevailing circumstan the Harbour Master deems it necessary.
BERTHING: *Tidal Harbour:* 853 m. of quayage for fishing vessels other small craft. Depths are from 4.1 m. Neap tides to 7.2 m. Sp tides.
Prince of Wales Dock: Enclosed dock, width of entrance 21.2 m. Th is 772.7 m. of quay frontage with depths from 7.2 m. Neaps to 10.2 Springs. The dock is 97.8 m. wide at the West end, 76.2 m. at the E end. There is a transit shed situated at the general cargo berth.
CRANES: 1 × 7 tonnes and 1 × 10 tonnes cranes are available. Th are also 2 new dockside cranes with a capacity of 12 tonnes at 2 radius and 28 tonnes at 13 m. radius.
BULK CARGO FACILITIES: All dock cranes equipped for bulk handl Average tonnage rate 300 t.p.h. – 400 t.p.h.
SPECIALISED CARGO HANDLING FACILITIES: Ro/Ro fac available.
STEVEDORES: Normal working 0800 hrs. – 1700 hrs. with 3 ho evening overtime if requested. Shift working is available on request f 0600 hrs. – 1400 hrs. and 1400 hrs. – 2200 hrs.
TANKERS: Tanker Terminal operated by Simon Storage Limite Berth No. 4.

Facility for storage up to 42,000 tons of bulk liquids, inclu phosphoric acid, petroleum products and chemicals.
FRESH WATER: Available.
FUEL: Available.
CONSULS: Denmark and the Netherlands: J.G. Oldfield & Co. Shipp Limited, Prince of Wales Dock, Workington, Cumbria. Tel: 0900-64 Fax: 0900-604823.
TIME: GMT plus 1 hour (late March – late October), otherwise GM
GARBAGE DISPOSAL: One large skip provided by port whic emptied every Friday. Garbage skip's can be hired from Alco and pla immediately alongside ship (Tel: 0900-602205). Rates by agreeme
WASTE OIL DISPOSAL: No shore tanks. Disposal is by tanker tru capacity 20 tonnes. Contact Alco (Tel: 0900-602205, Fax: 0900-601 or Unblock (Tel: 0900-825549).
SEAMAN'S CLUBS: None available. The port is 10 minutes walk f town of Workington.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: Cumbria County Council, Port of Workington, Dock O Prince of Wales Dock, Workington, Cumbria CA14 2JH. *Tel:* (0 602301. *Telex:* 64253. *FAX:* 0900-604696. *Contact:* Cap W.S. Worthington, Harbour Master and General Mana D.P. Cousins, Operations Manager.

United States of America

GENERAL

SHIPMASTER'S REPORT: January 1987.

Preparation for arrival in U.S.A. Ports

Refer to:

1. Annual Summary of Notices to Mariners (British) No. 22 – Charts and Publications.
2. C.F.R. Title 33, Part 164 (especially 164.25/164.30/164.33, 35, 37, 38, 41, 53, etc. Also 159.59 and 155.440, 700, 740, 750).

Action Required:

Purchase (if necessary) large scale U.S. charts, current Coast Pilot and Light Lists, Tide Tables, Loran Charts, Tidal Stream Tables; but British publications are usually acceptable if up to date and charts are of largest scale.

Arrival Preparations:

U.S. Department of Agriculture prepare for inspection of:

1. Galley, storerooms, and possible sealing of prohibited fruits and meats.
2. Covered and leakproof garbage cans.
3. Rat guards.
4. Declare all animals and birds.
5. Hold inspections for grain, etc. Carried out by teams of 2 men, and extremely severe. Failure of holds will result if loose paint scale, loose rust scale, insects or deposits of past cargoes are found. High powered flash-lights used to probe the most remote corners. They are very experienced and know where to look!

U.S. Public Health Service: Ship not boarded unless sickness is reported or vessel is from an infected area.

U.S. Coast Guard: Do a preliminary check, using a "Vessel Compliance Check-List" or an old "Vessel Inspection Form". Before arrival ensure navigation equipment is tested as per C.F.R.33, Part 164.25 and a good Log entry has been made. Check Oil Record Book (151.35); Placard re-discharge of Oil (155.440); Oil transfer procedures are posted (155.750); Marine Sanitation device is working and instructions for use are visible.

Read British Annual Notice to Mariner 4B (The Amver System), especially paragraph 5, (Constructive compliance with C.F.R.33, Part 161.7).

U.S. Customs: Will examine all Certificates.

U.S. Bureau of Labour: Will examine Cargo Gear Register and Certificates.

Documents:

4 Crew Lists (Form I-418).
4 Passenger Lists (Form I-418).
4 Ship's Stores Declarations (Form 1303), to include Shop and Bond Lists, Steward Stores Lists, Medicine Lists, Fire-arms Lists.
4 Crews' Effects Declarations (Form 1304).
1 Master's Oath (Form 1300).
3 Cargo Manifests (Form 1302), if cargo on board original showing all cargo on board and 2 copies showing only cargo for this port.
1 General Declaration (Form 1301), usually completed by Agent.

All ship's certificates should be to hand. Also Last Port Clearance and previous Tonnage Tax Vouchers.

All entry papers must be prepared on proper U.S. Customs Forms, with no attachments permitted.

The Crew List must be made out correctly in alphabetical manner as prescribed. Also a Crew List must be prepared at the previous port and visaed by the U.S. Consulate. For this purpose 2 copies are made.

The original has Columns 1 to 3 completed as usual, but the duplicate must list in Column 4 the date, city and country of birth, and in column 5 the Place and Authority issuing the crew member's passport or document. If this visaed Crew List cannot be produced on arrival a waiver can be granted, for which the Agent must pay U.S.$15 in cash. If the vessel has crew from the People's Republic of China or other communist countries, then shore leave will not be granted at all, without that visaed Crew List. No waiver will be issued for them.

Crewman's Landing Permits (Form I-95A) must be prepared before arrival for each man. Previously used shore passes can be used again, but only if the seaman is still on the same ship.

Some ports require less than the number of documents stated above. The Mississippi consists of 3 Custom areas (New Orleans, Gramercy, and Baton Rouge). If the the ship moves to another area, then new forms may be needed, so extra copies are useful, in the case of Forms 1303 and 1304.

AGRICULTURE: All ports.

Arrival Notification: The vessel's Master or Port Agent must provide advance notification of intent to arrive. Notice is to be received by the U.S. Department of Agriculture (USDA) no less than 12 hours before the estimated time of arrival and must include:

1. The name or other identifying feature of the vessel.
2. The date and estimated time of arrival.
3. The specific location of arrival (dock, pier, mole, anchorage, etc.).
4. The names of all foreign and noncontinental United States ports where any cargo, crew or passenger destined for the continental United States has been boarded since the vessel's most recent arrival in the United States.

Changes in the above information must be communicated as soon as known. If the place of arrival is an anchorage; subsequent movement to a pier, wharf, etc., must be reported as soon as known.

Documents: The cargo, stores, and crews' effects lists or manifests must be available for review by the boarding USDA Inspector.

Inspection: The USDA Inspector will examine the galleys, storerooms, lockers, mess areas, and crew quarters in some instances for prohibited plant materials (fruits, vegetables, and plants) and meat products. Also, inspections may be made of on-board cargo and cargo holds.

Stores Sealing: The USDA Inspector will place under seal certain fresh fruits and vegetables in stores aboard vessels calling at ports in Florida, Mississippi, Alabama, Louisiana, Texas and California. Routine sealing will be limited to fruits likely to carry exotic tropical fruit flies. In addition, USDA Inspectors at any port may require sealing of any vessel stores when pest infestations are detected. It is recommended that each vessel construct a special compartment for sealing fruits and vegetables so that it will not be necessary to seal the entire vegetable locker.

Garbage: All food wastes aboard vessels arriving from foreign or offshore areas (except Canada) must be handled in accordance with USDA Regulations. Garbage must be held aboard vessels in leakproof, covered containers inside the rails for later disposal or, it may be removed with permission and under supervision of a USDA Inspector for incineration or sterlisation in approved facilities.

Penalties: Monetary civil penalties may be imposed for violation of USDA Regulations including, but not limited to:

1. Failure to provide adequate arrival notification.
2. Breaking U.S. Department of Agriculture seals.
3. Unauthorised or unsupervised removal/disposal of garbage.
4. Unauthorised removal of fruits, vegetables, meats or animal products, or live plants.
5. Failure to keep garbage in other than closed, leakproof containers.

Treatments: If quarantine-significant pests are found aboard a vessel, an Emergency Action Notification may be issued to the Master. It will prescribe what treatments are required to the affected articles or area of the vessel and when this treatment must be accomplished.

Honeybees: Honeybees may not be brought into the United States. This is a precaution to keep out Africanised bees, which could gravely upset beekeeping in North America. Do not disturb any signs of bees on board, such as live swarms, dead bees, or hives. Contact the ship's Agent before entering U.S. ports for appropriate instructions regarding disposal and treatment from the USDA inspector.

Animals/birds: All live animals or birds aboard vessels must be retained on-board and reported to the USDA Inspector.

For additional information: Write to "Quarantines", U.S. Department of Agriculture, Federal Building, Hyattsville, MD 20782. Tel: (301) 436–8295, 436–8455.

Notice

To: Ship's Masters:
From: United States Department of Agriculture, Animal and Plant Health Inspection Service.

On April 1st, 1985, the Animal and Plant Health Inspection Service (APHIS) will implement routine sealing of certain fresh fruits and vegetables in stores aboard vessels calling at ports in Florida, Mississippi, Alabama, Louisiana, Texas and California. Routine sealing will be limited to fruits likely to carry exotic tropical fruit flies. In addition, APHIS Officers at any port may require sealing of any vessel stores when pest infestations are detected.

This is an interim measure in preparation for full implementation of a new Maritime Clearance and Monitoring Guideline on or about June 1st, 1985. You will receive additional information in the near future.

It is recommended that each vessel construct a special compartment for sealing their fruits and vegetables so that it will not be necessary to seal the entire vegetable locker.

You are reminded that the following may result in a civil/monetary penalty:

1. Breaking U.S. Department of Agriculture seals.
2. Unauthorised or unsupervised removal/disposal of garbage.
3. Unauthorised removal of fruits, vegetables, meats or animal products, or live plants.
4. Failure to keep garbage in other than closed, leakproof containers.

Further information can be obtained by calling (713) 229-3541.

Purser's Note: It is advisable to have a locker ready prior to arrival in order that fruit and vegetables may be transferred for sealing.

ALCOHOL:

OPERATING A VESSEL WHILE INTOXICATED
COMMERCIAL VESSELS (33 CFR PART 95)

1.	*Applicability:*	Any crew member, pilot, or watchstander not a regular crew member, on any U.S. vessel anywhere or any foreign vessel in the national waters of the U.S. (out to three miles offshore).
2.	*Standard of intoxication:*	Blood alcohol concentration of 0.04% or more by weight; *OR* Effect of intoxicant (drug or alcoholic) on person's manner, disposition, speech, muscular movement, general appearance or behaviour is apparent by observation.
3.	*Evidence of intoxication:*	Chemical test or personal observation.
4.	*Who may require testing:*	Law enforcement officer or marine employer when reasonable cause exists.
5.	*Reasonable cause for testing:*	When individual is directly involved in marine casualty; *OR* Individual is suspected of being intoxicated.
6.	*Refusal to submit to test:*	Is admissible as evidence in any administrative procedure if ordered by marine employer *and further* will be cause for presumption of intoxication if ordered by law enforcement officer.
7.	*Prohibited acts of individual while aboard vessel:*	A. Be intoxicated at any time. *B. Perform or attempt to perform any scheduled duties within four hours of consuming any alcohol. *C. Consume any intoxicant while on watch or duty.

8. *Penalties (46 USC 2302(C):* A. Civil penalty of up to $1,000.
B. Criminal penalty of up to $5,000 and/or imprisonment for up to one year.

9. *Responsibilities:* Marine employers shall exercise due diligence to ensure compliance.
If any marine employer has reason to believe a person may be intoxicated he shall not allow that individual to stand watch or perform any other duties.

*Apply only to vessels which are inspected or subject to inspection (U.S. and foreign).

HEALTH: All ports.

The U.S. Public Health Service does not maintain Quarantine Stations at each port of entry. The smaller ports are under the jurisdiction of Quarantine Stations located at strategic ports of entry. Matters of public health significance occurring on vessels destined to ports not staffed by Public Health Service personnel should be reported to the Quarantine Station having jurisdiction over that port.

Masters of Vessels arriving at United States ports

Effective July 1, 1973, Radio Pratique as a method of Quaran Clearance was discontinued at all ports under control of the Un States.

Vessels Subject to Public Health Inspection

The only vessels that will be subject to on-board public he inspection upon arrival or during stay at ports under control of the Un States are those carrying crew or passsengers having:

1. Temperature of 100°F.(38°C.) or greater, accompanied by a glandular swelling, or jaundice, or which has persisted for more t 48 hours; or

2. Diarrhoea, defined as the occurrence in a 24-hour period of t of more loose stools or of greater than normal (for the person) an of loose stools; or

3. On-board occurrence of death, regardless of the signs symptoms above.

Procedures. In accordance with regulations, you must, through vessel's Agent, inform the quarantine station, having jurisdiction the intended port of your vessel's first arrival in the United States, occurrence of illness as specified above. Arriving vessels no longer to complete a Maritime Public Health Declarataion.

These changes reflect our confidence that you will continue to in advance of arrival in the United States, the on-board occurrenc death or illness compatible with the signs and symptoms spec above, or death or illness while in port if such occurs after arrival

AUTHORITY: Department of Health and Human Services, Public H Service, Centers for Disease Control and Prevention, National C for Prevention Services, Division of Quarantine, Program Opera Branch (E-03), Atlanta, Georgia, GA. 30333. *Tel:* (404) 639-8107

CONTROLLED FLAG VESSELS:

SHIPPING AGENT GUIDELINES
UNITED STATES
PORT ENTRY REQUIREMENTS
FOR
SPECIAL INTEREST VESSELS
REVISED JUNE 1993
PREVIOUS EDITIONS OBSOLETE
Issued by Department of Transportation
Commandant U.S. Coast Guard (G-MPS)
2100 2nd Street, S.W.
Washington, DC 20593-0001

PLEASE NOTE: The following is under constant review due to political changes taking place (See "Notes" at end of text).

1. General Requirements.

A. *INTRODUCTION.*

1. *Applicability:* This document provides guidance on requirements for entry into the United States territorial sea, internal waters, and ports for vessels registered to, or under the effective control of the nations listed below. These port entry requirements apply to commercial cargo, passenger, fishing and fisheries support vessels, public vessels and private yachts. Owners, Masters, Agents or persons in charge of these vessels should adhere to these requirements to facilitate legitimate entry of their vessels into the U.S. territorial sea, internal waters and ports.

(a) Restricted countries:
Armenia
Azerbaijan
Byelarus
Georgia
Kazakhstan
Kyrgyzstan
Moldova
Russia
Tajikistan
Turkmenistan
Ukraine
Uzbekistan
Peoples Republic of China

(b) Non-entrant countries:
Cambodia
Cuba
Iran
Iraq
Libya
Peoples Republic of Korea (North Korea)
Syria
Vietnam

Vessels registered to, owned or operated by, or chartered by *Non-Entrant Nations* are not permitted to enter the U.S. territorial sea or U.S. ports. Nations appear on this list because of U.S. diplomatic sanctions against them.

(c) Although shipping Agents may be hired to provide services for *public vessels*, all public vessel Entry Applications and changes are handled on a government-to-government basis at the embassy level via the Department of State, and should be made at least 14 days prior to desired entry date. See Section 1.B.11. for a definition of a public vessel.

2. *Intent:* These guidelines are intended to assist shipping agents in obtaining port calls for vessels associated with the nations listed in Section 1.A.1. Access to U.S. ports by *any* foreign vessel is subject to compliance with applicable laws and regulations of the federal government and state and local authorities in the areas of their jurisdiction. Vessels from nations listed in Section 1.A.1. must comply with all applicable foreign vessel regulations *and* any additional requirements found in these guidelines.

3. *Authority:* National security interests require that the movement of any vessel within the territorial sea or internal waters of the United States be subject to U.S. Government review. Authority for this is found in the Magnuson Act (Title 50, United States Code, Section 191, 1950). The President implemented this statute by Executive Order (E.O.) 10173, as amended since by E.O.s 10277, 10352 and 11249. These orders promulgated regulations in Part 6, Chapter 1, Title 33 of the Code of Federal Regulations (CFR). These regulations assign port security responsibilities to the U.S. Coast Guard.E.O. 10173 further directed all agencies and authorities of the United States Government and all state and local authorities to support, conform to, and assist in the enforcement of these regulations and any supplemental regulations issued.

4. *Maritime Agreements:* These guidelines implement and support provisions of treaties, conventions, agreements and similar instruments in force between the Government of the United States and the Governments of certain nations concerning maritime matters. Title I, United States Code, Section 112a, directs the Secretary of State to compile a publication *United States Treaties and Other International Agreements* (UST) which contains all treaties to which the United States is a party. It also states that the UST "shall be legal evidence of the treaties, ... in all courts of the United States, ...". In some instances, these instruments and supporting documents state specific procedures for entry to United States ports, should be consulted for a complete understanding of requirements applicable to affected vessels. These guidelines address only those port entry requirements administered by the U.S. Coast Guard.

B. *DEFINITIONS.*

1. *2-Day Request (for Itinerary Changes).* This period is exactly 48 hours. It commences at the hour and minute that an Agent's Change Application Message is received at Coast Guard Headquarters. Weekends and federal holidays have no effect on 2-Day Requests.
2. *3-Day Notice:* This period is 72 hours after time of receipt, (e.g. to obtain clearance for a port call on a Saturday 0800 hrs., the notice is required at the local COTP no later than the preceding Wednesday 0800 hrs.).
3. *4-Day Request:* This period excludes the day of receipt and the day of entry (e.g., to obtain clearance for a port call on a Tuesday, the request must be received by Commandant (G-MPS) no later than the proceding Thursday).
4. *7-Day Request:* This period excludes the day of receipt and the day of entry, but not weekends or federal holidays. For example, to obtain clearance for a ship to call on the 15th, the request must be filed by the 7th of that month.
5. *Government-to-Government:* These requests are co-ordinated at the embassy level. They are handled through diplomatic channels between the two governments only. When the Initial Itinerary Request is government-to-government, all desired future itinerary changes must also be handled on a government-to-government basis.
6. *Agent-to-Coast Guard:* Co-ordination of applicable port entry requests, itinerary changes, and special waivers are specifically conducted between the U.S. Coast Guard Headquarters Special Interest Vessel Desk and the U.S. Shipping Agent representing vessels covered by these guidelines.
7. *U.S. Coast Guard Special Interest Vessel (SIV) Desk:* The individual entry of all vessel's covered by these guidelines into the U.S. territorial sea and ports is co-ordinated by the USCG's SIV Desk. The SIV Desk or Duty Officer is available 24 hours a day. During working hours, call (202) 267-0476; after hours and weekends for *non-routine matters,* call Coast Guard Headquarters Command Center at (202) 267-2100, and ask for the Port Security Watch Officer.
8. *Port Call:* A port call includes anchoring or mooring within the territorial sea or, for ports not adjacent to the territorial sea, the waters of the geographical limit of the port area described in "Enclosure No.1". A vessel may be within these limits as long as it is either en route to an approved port call or departing from such a port call. A vessel's presence within these limits is only permitted within the time frame of the previously approved port call. Vessels must have either a Commandant (G-MPS) approved itinerary or provide advance notification to the local Captain of the Port for any U.S. port call.
9. *Port Area Descriptions:* Geographical port limits are defined for certain U.S. ports for purposes of administering this programme. See "Enclosures No.1 and 2" of port area descriptions. The port area descriptions apply to port calls involving the nations covered by these guidelines. Port areas, for which there is no geographical description, include that area which encompasses the physical facilities of the port, the internal water approaches, and the seaward approaches to the limits of the territorial sea.
10. *Free-Flag Vessel:* Any vessel which is registered to or owned by any nation other than those listed in Section 1.A.1.(a) or (b) of these requirements.
11. *Public Vessel:* A vessel which is owned or operated by a state and used only in non-commercial, government service. The term state (or nation) includes political subdivisions of the state as well as agencies of the state or its subdivisions. The term public vessel does not include vessels merely subsidised by the government, state-owned vessels chartered to private parties and engaged in commercial activities, or privately-owned vessels operated by government personnel that are engaged in commercial activities.
12. *Yacht:* Any vessel, under power or sail, operating for pleasure and not carrying cargo or passengers for hire.
13. *Greenwich Mean Time (GMT):* All times used in message communication are in GMT. Agents are responsible for converting GMT to local time as necessary.

C. *CHARTERED VESSELS:*

The U.S. Port Security Program also applies to free-flag vessels chartered by nations listed in Section 1.A.1.(b) of these guidelines.

1. Free-flag vessels chartered by *non-entrant nations* are considered to be under the effective control of the chartering nations, and are held to the same restrictions as vessels from non-entrant countries.

D. *NON-STANDARD ENTRIES:*

1. *Force Majeure:* Force majeure is a doctrine of international law which confers limited legal immunity upon vessels which are forced to seek refuge or repairs within the jurisdiction of another nation due to uncontrollable external forces or conditions. This limited immunity prohibits coastal state enforcement of its laws which were breached due to the vessel's entry under force majeure. A claim of force majeure is supported only by the existence of overwhelming conditions or forces of such magnitude (e.g. severe storm, fire, disablement, mutiny) that they have threatened loss of the vessel, crew or cargo, unless immediate corrective action is taken. Vessels entering U.S. waters under claim of force majeure are subject to boarding to validate the claim, and may be directed to a specific location, and not to the port of their choice. Each Coast Guard Captain of the Port has the authority to verify and accept or reject claims of force majeure for the purpose of enforcing applicable laws.

2. *Innocent Passage:* All foreign ships, including warships, are entitled to the right of passage through the U.S. territorial sea, provided the passage is innocent under the United Nations Conventions on the Law of the sea. Innocent passage means continuous and expeditious traversing of the territorial sea either without entering internal waters or passage for the purpose of proceeding to or from internal waters. It may include stopping or anchoring only when this is incident to ordinary navigation (such as when awaiting a favourable tide to traverse a particular narrows).

   Innocent passage specifically does not include hovering, stopping or anchoring for other reasons, and it does not include fishing. Anchoring or slow steaming within the U.S. territorial sea to avoid early arrival in port for which the vessel holds an approved itinerary will not be considered innocent passage and may result in cancellation of the vessel's itinerary, except when the vessel's movements are directed by a Coast Guard Vessel Traffic Service (VTS) for purposes of safety or navigation.
3. *Medical Emergency:* Foreign flag vessels not previously approved for a U.S. port call may enter U.S. waters for the sole purpose of removing a crew member in need of *immediate* medical attention, or for the removal of a deceased crew member. The cognisant Coast Guard District Commander may grant permission for a vessel to enter territorial waters for a MEDEVAC (Medical Evacuation) or may also arrange a MEDEVAC outside the territorial sea. If the vessel is given permission to enter the territorial sea for a MEDEVAC, the vessel must depart upon completion of the transfer of the affected crew member. Notify the Coast Guard District Commander as soon as possible prior to desired entry.
4. *Repatriation:* It is the Department of State's position that repatriation of foreign nationals who have been evacuated for emergency medical treatment should be arranged and paid for by their countries of citizenship. Local INS and Customs should be notified of proposed repatriations. Requests for entry of vessels into U.S. territorial seas for the purpose of repatriation should be forwarded to Commandant (G-MPS) for consideration.
5. *Vessels Enroute Canadian Ports:* All vessels, including those from non-entrant nations, must pass through U.S. waters in the St.Lawrence Seaway, the Great Lakes or the Straits of Juan de Fuca enroute to ports in Canada. Vessels transiting U.S. waters for this purpose are considered to be engaged in innocent passage and Coast Guard permission for such passage is not necessary.
6. *Remote Ports Under U.S. Jurisdiction:* The requirements of this program apply to remote Alaskan ports as well as to Guam, American Samoa and the Commonwealth of the Northern Marianas Islands (CNMI – Saipan, Rota, Tinian).
7. *Deepwater Ports:* Port calls at U.S. deepwater ports require the same conditions of advance notification for entry as applicable in U.S. coastal ports (refer to Title 33, U.S.C., Section 1518(c)).

2. Port Entry Application Procedures.

A. *PORT ENTRY APPLICATION REQUIREMENTS.*

1. *General:* Agents should file Itinerary Requests for only those U.S. ports for which they will be acting as Agents. All port entry applications must be in writing. Telephone inquiries are welcome during normal business hours (0700 hrs. to 1530 hrs. Eastern time). The Special Interest Vessel Desk, in the Port Security Branch at U.S. Coast Guard Headquarters, can be reached by calling Tel: (202) 267-0476. For non-business hour emergencies, call U.S. Coast Guard Headquarters Command Center at Tel: (202) 267-2100. Port Entry Applications (except government-to-government) should be submitted by the vessel's Agent directly to Coast Guard Headquarters. *Telex messages are preferred.* Port Entry Applications will *not* be accepted by local or regional Coast Guard commands. Shipping Agents are responsible for ensuring that requests, whether sent electronically, by mail, or delivered by hand, arrive at Coast Guard Headquarters in time to meet all requirements. Coast Guard Headquarters will send a receipt confirmation telex within 24 hours of receiving a telex from a shipping Agent. *If you do not receive this confirmation telex within 48 hours, call the SIV Desk to inquire about your request.*

   Make application only to one of the following USCG Headquarters addresses:
   (a) Telex address: "Commandant (G-MPS), U.S. Coast Guard, Washington, D.C. 20593-0001. Telex No. 892427, Answerback COASTGUARDWSH."
   (b) TWX address: "Commandant (G-MPS), U.S. Coast Guard, Washington, D.C. 20593-0001. TWX No. 710 822 1959, Answerback CGDOTWSH."
   (c) Western Union address: "Commandant (G-MPS), U.S. Coast Guard, 2100 2nd Street, S.W., Washington, D.C. 20593-0001." (Prepaid).
   (d) Port entry applications may also be sent by mail or delivered by hand. The mailing address is:

   Commandant (G-MPS-2)
   U.S. Coast Guard Headquarters
   2100 Second Street, S.W.
   Washington, D.C. 20593-0001.

2. *Required Information:* All port entry applications must provide certain information in an orderly manner (See Figure 3-A of Enclosure 3 for an example of an Initial Itinerary Request). Agents should double check all information, including spelling of foreign translations, since requests with incomplete information will be denied. All Port Entry Applications *must* include the following:
   (a) Shipping agent's complete address, commercial telephone number, point of contact, and Telex/TWX number with answer back code or Western Union address.
   (b) Appropriate message title identification: For example, 4-Day Request or 7-Day Request.
   (c) Itinerary number: For example, Initial Itinerary, or Change 1, 2, 3, ...
   (d) Vessel type: This information must precede the vess name. Use applicable abbreviation as follows:

Merchant Vessel	M/V
Passenger Vessel	P/V
Fishing Vessel	F/V
Fishing Support Vessel	F/V
Research Vessel	R/V
Sailing Vessel	S/V
Yacht	YCT

   (e) Vessel's name, flag, call sign, and Lloyd's Number.
   (f) Itinerary Information:
      (1) U.S. ports of call in the order desired. See Section for the definition of a port call.
      (2) Desired arrival and departure dates.
   (g) Cargo information: Type of cargo loaded/unloaded; load port of cargo being discharged; destination for cargo b loaded.
   (h) Masters' name.
   (i) Next and last foreign port of call.

   (*Note:* Information above is *required*; failure to provide requ information will result in denials or cancellations.)
3. *Arrival and Departure Dates:*
   (a) Only one day overlap is allowed for multiple port calls Port St. Joe, 6/17-6/19, Port Canaveral 6/19-6/21, Pensa 6/21-6/27).
   (b) All Approved Itineraries automatically terminate upon vessel's departure en route a foreign port of call, except w the vessel departs en route to Canadian ports, which h been noted on the Initial or Change Itinerary Message.
   (c) An Approved Port Call terminates upon departure of vessel from the described port area. For instance, if a ves is approved 6/04-6/10, but departs the port area on 6 it cannot re-enter port unless a new Initial Itinerary is file
   (d) The vessel's official notification period begins upon recei the agent's telex request or notice at Coast Gu Headquarters communication center. By return te Commandant (G-MPS) will inform the agent of the e *Greenwich Mean Time* (GMT) his message was receive
   (e) Port approvals are in effect through 2359 (one minute be midnight) GMT on the final day stated on Port Call Appro Vessels must be outside of the port area by this time. Ves may not wait until this time to begin their outbound depar
4. *Advance Notices of Arrival:* None of the procedures outlined in document relieves the Master or Agent of the requiremen provide advance notice of arrival to each local Coast Guard Cap of the Port (COTP) in accordance with 33 CFR 160, Subpar and to comply with other applicable laws and regulations.
5. *Approved Itinerary Entry Times: (Port Entry).* If the vessel's itine is approved, the Agent will be notified by message specifying dates that the vessel is authorised to be in the port(s). The ves may enter that specified port at any time during the approved da The vessel must depart the port no later than 2359 GMT o final day stated on the port call approval unless the Agent requested and received approval for an extension of the port
6. *Denials:* Vessels will be denied U.S. entry when there is insuffic information or if the agent's application message does not m the time limits required by these guidelines. All denials are sen the vessel's agent by the end of the working day, following the of receipt of the telex. An agent may, however, submit a corrected Entry Application for the vessel. In such cases, the of notification period commences upon receipt of the corrected E Application, not the original Entry Application which was deni
7. *Early Arrival:* A vessel which holds an Approved Itinerary f United States port entry shall not enter the U.S. territorial sea ea than the first day on the approved itinerary. A vessel is consid to have arrived in port when it enters U.S. territorial waters, or ports not adjacent to U.S. territorial waters, the port descriptions listed in "Enclosure No.1".

B. *ITINERARY CHANGE REQUESTS.*

1. *General:* Agents seek Itinerary Change Requests general three reasons: To add ports, to change the previously app port call sequence and/or dates, and to cancel planned port after receiving approval to enter. In each case, the agent's mess request must list the vessel's full remaining itinerary, in addi the desired change. Failure to list the vessel's entire desired port calls will lead to cancellation of the vessel's itinerary other the requested change. For example, if the Initial Itinerary requ Providence, Morehead City and Miami, and the Agent se change listing only Providence, the vessel would be consi only for entry into Providence. Two days is the minimum necessary to process itinerary change requests. Use the for Figure 3-B to Enclosure 3 for Itinerary Change Requests. Al applicable to three types of itinerary change requests follow

   -
2. *To add Port Calls:* Requests for additional port calls are rev using the same criteria as for initial port calls. The following
   (a) Agent messages should be titled CHANGE 1, 2, 3, etc
   (b) Additional ports must be requested far enough in advan comply with the applicable request period (i.e. 7-days
   (c) When an initial government-to-government requ required, all requests for additional ports must be made Embassy level.

3. *To Change Port Call Sequence/Dates:* Change requests to a vessel's approved port call sequence/dates are accepted by Commandant (G-MPS), and normally approved, provided the following criteria are met:

(a) The initial port request was not government-to-government. (All others which are government-to-government must continue to be handled at the Embassy level).

(b) The Itinerary Change Request was submitted far enough in advance. Two days is the minimum processing time required by the Coast Guard to process requests for changes in port sequence or dates. Whenever possible, the Coast Guard will try to expedite the itinerary changes, however, requests made within the minimum processing time may be delayed. Agents should submit change requests *as early as possible*.

(c) The change was submitted prior to the close of the approved itinerary (See Section 2.A.5.).

(d) The new date requested meets the minimum advance request period specified.

4. *Cancelled Port Calls:* Occasionally, cargo loading plans change and certain previously requested U.S. port calls may not be desired. Agents should notify the Coast Guard of cancelled port calls as far in advance as possible. Failure to arrive at a port within the approved itinerary dates will lead to cancellation of a vessel's remaining itinerary, and may subsequently delay entry to a previously approved port.

5. *Waivers:* The Coast Guard recognizes that unusual circumstances arise, which require agents to request waivers of the advance itinerary request period. *Approval of waiver requests will be the exception rather than the rule, and all waiver requests should be well documented.* Agents must fully elaborate on their justification for the Coast Guard to consider a waiver of these entry requirements. Agents should allow at least 48 hours for waiver requests to be processed. Waivers are not ordinarily approved for purely economic reasons.

3. Specific Entry Requirements for Restricted Nations.

A. GENERAL: Vessels that bear the flag of Restricted nations may enter the territorial sea, ports and internal waters of the United States subject to certain limitations. The following contains specific entry requirements by country for vessels registered to Restricted countries.

B. *People's Republic of China (CH):*

(1) Access for vessels from the PRC is governed under the bilateral Maritime Transport Agreement of 15th December 1988. Under the agreement, commercial cargo, fishing, fisheries support vessels, vessels engaged in hydrographic, oceanographic, meteorological or terrestrial magnetic field research, and private yachts bearing the flag of the PRC must submit a 4-day request to Commandant (G-MPS) and receive an approved itinerary for entry into Controlled Ports.

(2) Commercial cargo, passenger, fishing, fisheries support vessels, vessels engaged in hydrographic, oceanographic, meteorological or terrestrial magnetic field research, and private yachts bearing the flag of the PRC need only submit advance notice of arrival required by 33 CFR 160, Subport C, for entry into all other U.S. ports.

(3) All other PRC vessels must submit a government-to-government request and receive approval from the Department of State for entry into U.S. ports.

C.

Armenia	*(AM)*	*Moldova*	*(MD)*
Azerbaijan	*(AJ)*	*Russia*	*(RS)*
Byelarus	*(BO)*	*Tajikistan*	*(TI)*
Georgia	*(GG)*	*Turkmenistan*	*(TX)*
Kazakhstan	*(KZ)*	*Ukraine*	*(UP)*
Kyrgyzstan	*(KG)*	*Uzbekistan*	*(UZ)*

(1) Commercial cargo, passenger, fishing, fisheries support vessels and yachts bearing the flag of the above countries must submit a 7-Day Request to Commandant (G-MPS) and receive an approved itinerary for entry into the following Controlled Ports:

Kings Bay, GA
New London/Groton, CT
Port Canaveral, FL
Port Hueneme, CA
San Diego, CA

(2) Commercial cargo, passenger, fishing, fisheries support vessels and yachts bearing the flag of the above countries must submit a 3-Day Notice to the appropriate COTP for entry into the following controlled ports:

Charleston, SC
Hampton Roads, VA
Honolulu, HI
Panama City, FL
Pensacola, FL
Portsmouth, NH
Port St. Joe, FL

(3) Public vessels bearing the flag of the above countries must submit a government-to-government request and receive approval from the Department of State for entry into controlled ports.

(4) Vessels from the above listed countries need only submit advance notice of arrival required under 33 CFR 160, Subpart C, for the entry into all other U.S. ports.

Enclosure No. 1.
PORT AREA DESCRIPTION:

U.S. Port	*Geographical Description*
Alameda, California	See San Francisco, California.
Albany, New York	North of Castleton, New York Bridge Mile 135.6 on the Hudson River and South of U.S. Lock 1 at Troy, New York on the Hudson River.
Anchorage, Alaska	The waters of Cook Inlet, Northward from line drawn between Cape Douglas and Cape Elizabeth.
Antioch, California	See Stockton, California.
Apra Harbour, Guam	The waters of Apra Outer Harbour and Apra Inner Harbour.
Astoria, Oregon	Coincident with Clatsop County, Oregon.
Baltimore, Maryland	North and West of a line from North Point to Bodkin Point, but including Annapolis anchorage area between the Chesapeake Bay Bridge and Kent Point.
Bar Harbor, Maine	The waters of Frenchman Bay and Blue Hill Bay, North of Great Duck Island, East of Blue Hill Neck, and West of Schoodic Point.
Baton Rouge, Louisiana	See New Orleans, Louisiana.
Bay City, Michigan	The Saginaw River entrance to the limits of navigation.
Beaumont, Texas	The Neches River, from the Intracoastal Waterway (ICW) to Interstate 10 Bridge.
Bellingham, Washington	Bellingham Bay.
Benicia, California	See San Francisco, California.
Berkeley, California	See San Francisco, California.
Boca Grande, Florida	Boca Grande Channel, from sea buoy to Port Boca Grande on Gasparilla Island.
Boston, Massachusetts	Boston Harbour proper, including Mystic River and Chelsea River to limit of navigation and the harbors of Gloucester, Lynn, Salem and Plymouth, Massachusetts.
Brownsville, Texas	The Brownsville Ship Channel, from the sea buoy to the Brownsville Turning Basin.
Buffalo, New York	Outer Harbour, including Buffalo River to limits of navigation. Black Rock Canal, from the entrance channel downstream to its termination abeam of Placid Harbour. The Niagara River, downstream from Placid Harbour to limits of navigation.
Burnside, Louisiana	See New Orleans, Louisiana.
Camden, New Jersey	See Philadelphia, Pennsylvania.
Cape Cod, Massachusetts	An area extending from the Western Terminus of the Cape Cod Canal, Eastward (including Cape Cod Bay, Chatham, Sandwich and Provincetown).
Charleston, South Carolina	See "Enclosure No. 2."
Charlotte Amalie, St. Thomas, U.S.V.I.	St. Thomas Harbour, including East and West Gregerie Channels, Long Bay, Cay Bay, Crown Bay, Krum Bay and the Inner and Outer Harbor Anchorages.
Chicago, Illinois	Between Burns Harbour (including Burns Waterway Harbour) and Northern limits of Chicago Harbour, including Lake Calumet and other waterways, inland to intersection of the Chicago Sanitary and Ship Canal with Calumet Sag Channel.
Christiansted Harbour, St. Croix, U.S.V.I.	Christiansted Harbour proper.
Cleveland, Ohio	Cleveland Harbour, including Cuyahoga River to limits of navigation.
Coos Bay, Oregon (including North Bend)	All of Coos Bay to North of Coos River.
Corpus Christi, Texas	The Corpus Christi Channel, from the sea buoy to the Viola Turning Basin, and the La Quinta Channel from its junction to the Corpus Christi Channel.
Detroit, Michigan	All waters of the United States within the St.Clair River, Lake St.Clair, and Detroit River from Fort Gratiot Light to the Detroit River Light.
Duluth, Minnesota/Superior, Wisconsin	Duluth/Superior Harbour only.
Dutch Harbour, Alaska	The bays and harbours of Dutch Harbour, Illiliuk Bay, Illiliuk Harbour, Captain's Bay, Nateekin Bay, Broad Bay, Wide Bay, and Unalaska Bay to a distance 3 miles seaward of the Northern end of Unalaska Island.
Erie, Pennsylvania	Presque Isle Bay.
Eureka, California	Humboldt Bay.
Everett, Washington	N.E. end of Possession Sound.
Fall River, Massachusetts (Including North Tiverton, Rhode Island and Somerset Massachusetts)	Mount Hope Bay and Taunton River.

Fernandina, Florida	All waters of the St. Mary's River Entrance Channel West of the COLREGS Demarcation Line as described in Title 33 CFR Part 80.720 (c) and all waters of the Amelia River South to Intracoastal Waterway Statute Mile 718.
Frederiksted, St. Croix, U.S.V.I.	Frederiksted Harbour proper.
Freeport, Texas	Freeport Entrance Channel of the Old Brazos River to the Stauffer Turning Basin, to include the Brazos Harbour.
Galveston/Texas City, Texas	The Galveston and Texas City Channels from their intersection with the Houston Ship Channel to their respective Turning Basins.
Georgetown, South Carolina	Entrance channel between Sand and North Island and North Island at South Island Bend through Wingah Bay, including all Georgetown and Sampit River, North to where Waccamaw River and Pee Dee River merge at U.S. Route 17.
Gloucester, Massachusetts	See Boston, Massachusetts.
Green Bay, Wisconsin	Port area of Green Bay, including the Fox River upstream to the limit of commercial navigation.
Guanica, Puerto Rico	Bahia de Guanica proper.
Guayanilla, Puerto Rico	Bahia de Guayanilla and Bahia de Tallaboa.
Gulfport, Mississippi	Ship Island Pass and Gulfport Ship Channel from the sea buoy to the harbour basin.
Hampton Roads, Virginia (including Norfolk, Newport News, Jamestown, Yorktown and Portsmouth, Virginia)	See "Enclosure No. 2"
Harrisville, Michigan	See Detroit, Michigan.
Hilo, Hawaii	Eastern end of Kohio Bay on N.E. coast of the Island of Hawaii.
Honolulu, Hawaii	See "Enclosure No. 2".
Houston, Texas	The Houston Ship Channel, from Five Mile Cut to the Houston Turning Basin and the Bayport Turning Basin.
Humboldt Bay, California	All waters of Arcata Bay and South Bay shoreward of a line drawn from Humboldt Bay Entrance Light 4 to Humboldt Bay Entrance Light 3.
Huron, Ohio	Huron River to limits of deep draft navigation.
Jacksonville, Florida	All waters of the St. John's River upriver of the COLREGS Demarcation Line as described in Title 33 CFR part 80.723 (c) terminating at the Highway 295 bridge.
Juneau, Alaska	Auke Bay and Gastineau Channel, N.W. of a line between Pt. Salisbury to Marmion Island and S.E. of a line between Pt. Louisa to outer point on Douglas Island.
Kalama, Washington	See Longview, Washington.
Kenosha, Wisconsin	Line drawn from Breakwater Light to South Pier Light.
Ketchikan, Alaska	Tongass Narrows Northwest of a line between Mountain Point and Gravina Point, and Behm Canal North of a line between Vallenar Point and Caamano Point, and South of a line between Point Francis and Escape Point, including Vallenar Bay.
Kings Bay, Georgia	See "Enclosure No. 2".
Kodiak, Alaska	All waters of Woman's Bay, St.Paul Channel and Chiniak Bay N.W. of line from Cliff Point to Southern point of Woody Island.
Laguna de Las Mareas, Puerto Rico	Laguna de Las Mareas proper.
Lake Charles, Louisiana	The Calcasieu River, from Light "83" North to the Interstate 10 Bridge, including the Industrial Canal, Prien Lake, Lake Charles and the Turning Basins.
Limetree Bay, St. Croix, U.S.V.I.	Limetree Bay, Limetree Bay Channel, and Krause Lagoon (also known as Alucroix or Martin Marietta Channel).
Long Beach, California (including Eastern part of Terminal Island).	That portion of San Pedro Bay and Cerritos Channel within the City of Long Beach, California.
Longview, Washington	Columbia River, between Mile 62 and Mile 70.
Los Angeles, California (including San Pedro, Wilmington, and Western Terminal Island)	That portion of San Pedro Bay and Cerritos Channel within the City of Los Angeles, California, and the Chevron El Segundo Offshore Mooring.
Louisiana Offshore Oil Port (LOOP)	All waters comprising the LOOP Safety Zone and Safety Fairway as described in 33 CFR Appendix A and 33 CFR 166.200(d)(52) respectively.
Martinez, California	See San Francisco, California.

Mayaguez, Puerto Rico	Bahia de Mayaguez, Mayaguez Approach Channel and Mayaguez Terminal Channel.
Menominee, Michigan/ Marinette, Wisconsin	Breakwater entrance to the limits o navigation.
Miami, Florida	Upper Biscayne Bay, South of MacArthur Causeway and North of Rickenbacker Causeway, including Government Cut. The Miami River of the Brickell Ave. Bridge.
Milwaukee, Wisconsin	Milwaukee Breakwater to limits of navigation.
Mobile, Alabama	The Mobile Ship Channel, from the buoy to the Cochran Bridge, and the Hollinger's Island Channel from its junction with the Mobile Ship Chann
Morehead City, North Carolina	Morehead City Harbour, including Island from the sea buoy at Beaufo Inlet, North Carolina.
Muskegon, Michigan	Muskegon Lake to limits of navigati within Muskegon Breakwater.
New Bedford, Massachusetts (including Fairhaven, Massachusetts)	The area North of a line extending Wilbur Point in the East to Mishau Point in the West.
New Harbor, Maine	The waters of Muscongus Bay, Nor Monhegan Island, East of Pemaqu Point, and West of Georges Island.
New Haven, Connecticut	The waters of New Haven Harbour bounded on the South by a line fro Oyster River Point, West Haven, CT the RW"NH" Mo (A) Buoy, thence Morgan Point, East Haven, CT. and the North by the Quinnipiac River Bridge.
New London and Groton, Connecticut	See "Enclosure No. 2".
New Orleans, Louisiana	Sea Buoy to Mississippi River Mile 255.2. Includes New Orleans, Bato Rouge and Burnside, Louisiana.
New York, New York (including the Port Authority of New York and New Jersey).	North of a line drawn between San Hook, NJ. and East Rockaway, NY. West of the Throgs Neck Bridge, S of the George Washington Bridge a East of Interstate 95 in New Jersey
Newport, Rhode Island	Narragansett Bay, South of a line extending from Conanicut Point to Point.
North Bend, Oregon	See Coos Bay, Oregon.
Oakland, California	See San Francisco, California.
Ogdensburg, New York	Ogdensburg Harbour, including the Oswegatchie River to the limits of navigation.
Olympia, Washington	Coincident with Thurston County, Washington.
Orange, Texas	The ICW from Mile 276.5 to Mile 2 the Sabine River from the intersecti with the ICW; North to the Navy Ya
Oswego, New York	Oswego Harbour, including Osweg River to Lock 8.
Pago Pago, American Samoa	Pago Pago Harbour and access channel, located on the South side Tutuila Island at 14° 16.5′ S., 170° 42′ W.
Pascagoula, Mississippi	From the sea buoy of Horn Island Channel Pass to Mile 1 of the Pascagoula River, including the Pascagoula Channel; and from the Bayou Cassote Harbour proper to t junction buoy of Bayou Cassotte Channel and the Pascagoula Chan
Panama City, Florida	See "Enclosure No. 2".
Pensacola, Florida	See "Enclosure No. 2".
Philadelphia, Pennsylvania	The waters of the Schuylkill River, Delaware River, and Delaware Ba from Trenton, New Jersey to the L Demarcation at the entrance to Delaware Bay, excluding the port o of Wilmington, Delaware.
Pittsburg, California	See Stockton, California.
Point Comfort, Texas	The Matagorda Ship Channel from sea buoy to the Calhoun County Navigation District Turning Basin.
Point Judith, Rhode Island	Narragansett Bay South of a line extending from Sauga Point Eastw to Conanicut Point.
Ponce, Puerto Rico	Bahia de Ponce proper.
Port Arthur, Texas	The ICW from Mile 276.5 to Mile 2 including the East Basin, West Ba and Turning Basin of Taylor Bayo
Port Canaveral, Florida	See "Enclosure No. 2".
Port Everglades, Florida	The Atlantic Intracoastal Waterwa South of the 17th Street Causewa North of, but not including the Da Cutoff Canal, including the Outer B Cut and Bar Cut.
Port Hueneme, California	See "Enclosure No. 2".
Port Huron, Michigan	See Detroit, Michigan.
Port St.Joe, Florida	See "Enclosure No. 2".

Portland, Maine	Hussey Sound and Fore River to the limits of navigation at the Veterans Memorial Bridge at Mile 3.0 on the Fore River.
Portland, Oregon	Three Oregon Counties: Multnomah, Clackamas, and Washington, and the Port of Vancouver, Washington.
Portsmouth, New Hampshire (including Kittery, Maine, and Dover, New Hampshire, on the Piscataqua River).	See "Enclosure No. 2".
Providence, Rhode Island (including East Providence and Pawtuckett)	Seekonk River, Providence River and Narragansett Bay extending North of a line stretching from Sauga Point East to Conanicut Point and Carr Point.
Quonset Point, Rhode Island	Includes that area between and including Sauga Point, Quonset Point and Davisville, Rhode Island.
Redwood City, California	See San Francisco, California.
Richmond, California	See San Francisco, California.
Richmond, Virginia	James River from Benjamin Harrison Memorial Bridge, Hopewell, Virginia, to limits of navigation.
River Rouge, Michigan	See Detroit, Michigan.
Rockland, Maine	The waters of Rockland Harbor and West Penobscot Bay North of a line drawn from Owls Head Light to Browns Head Light and South of a line drawn from Northeast Point to Webster Head.
Rota Harbour, Rota, CNMI	The waters of Sasanhaya Harbour, all waters North of a line drawn between Puntan Pona and Puntan Taipingot. The waters of Sasanlago Harbour, all waters West of the Island of Rota within an arc of 1.5 miles drawn from the centre of the town of Rota.
Sacramento, California	All waters of the Sacramento River Deep Water Ship Channel from Sacramento River Deep Water Ship Channel Light 1 to the William G. Stone Lock.
San Diego, California	See "Enclosure No. 2".
San Francisco, California (including Alameda, Oakland, Berkeley, Richmond, Martinez, Benicia, and Redwood City)	All waters of Suisan Bay, the Carquinez Straits, and San Pablo Bay and all waters of San Francisco Bay shoreward of a line drawn from Point Bonita Light through Mile Rocks Light to the shore.
San Juan, Puerto Rico	Bahia de San Juan proper.
San Pedro, California	See Los Angeles, California.
Savannah, Georgia	Savannah River from the Route 17 Bridge to the territorial sea limit.
Seattle, Washington	Waters coincident with King County, Washington.
Seward, Alaska	All headwaters of Resurrection Bay to a line from Cape Resurrection to Callisto Head.
Sitka, Alaska	Sitka Sound and Silver Bay, North of a line between Cape Edgecomb on Kruzof Island to Pavorotni Point on Baronof Island and South of a line between Point Brown on Kruzof Island to Lisianski Point on Baronof Island.
Skagway, Alaska	Taiya Point (in Tiaya Inlet on Lynn Canal) to the town of Skagway, Alaska.
Stockton, California	All waters of the New York Slough, the San Joaquin River, and the Stockton Deep Water Channel from Suisan Bay Light 30 to the Interstate 5 Bridge.
Superior, Wisconsin	See Duluth, Minnesota.
Tacoma, Washington	Coincident with Pierce County, Washington.
Tampa, Florida	That portion of Tampa Bay contained within Hillsborough County.
Tanapag Harbour, Saipan, CNMI	The waters of Garapan Lagoon and Puetten Tanapag (Tanapag Harbour) North of 15° 30.0′ N. and South of 15° 15.5′ N.
Terminal Island, California	See Los Angeles, California.
Texas City, Texas	See Galveston, Texas.
Tinian Harbour, Tinian, CNMI	The waters of Tinian Harbour and Sunharon Roads enclosed within a line drawn between Carolinas Point and Gurguan Point.
Tiverton, Rhode Island	Sakonnet River from the Route 138 Bridge to a line extending from Sachuset Point to Sakonnet Point.
Toledo, Ohio	Maumee River to limits of navigation.
Trenton, Michigan	See Detroit, Michigan.
Vancouver, Washington	See Portland, Oregon.
Whittier, Alaska	All waters of Passage Canal, West of Trinity Point.
Wilmington, California	See Los Angeles, California.
Wilmington, Delaware	The waters of the Delaware River and Bay, including the Christina River and the Salem River, from the Delaware/Pennsylvania state border to the Line of Demarcation at the entrance to Delaware Bay.
Wilmington, North Carolina	The Cape Fear River, from the Sea Buoy to Point Peter, and then the N.E. River to the Turning Basin at Mile 2.
Woods Hole, Massachusetts	See New Bedford, Massachusetts.
Yabucoa, Puerto Rico	Puerto de Yabucoa proper.

Enclosure No. 2:

CONTROLLED PORT AREA DESCRIPTIONS:

U.S. Port	*Geographical Description*
Charleston, South Carolina	Charleston Harbour and approaches from the sea buoy to the navigable limits of the Cooper River, Wando River and Ashley River.
Hampton Roads, Virginia (including Norfolk, Newport News, Jamestown, Yorktown and Portsmouth, VA.)	All the waters of a line from Cape Henry Light to New Point Comfort, which includes the Southwest portion of Chesapeake Bay, Hampton Roads, and the Elizabeth and York Rivers.
Honolulu, Hawaii	All internal waters and waters of the Pacific Ocean out to three nautical miles from and including Honolulu Harbor Westward to and including Barbers Point Harbor (with the exception of Pearl Harbour).
Kings Bay, Georgia	All waters of Cumberland Sound from the entrance to St.Marys River at Intracoastal Waterway Statute Mile 712.5 North to the entrance of Crooked River at Statute Mile 705.
New London/Groton, Connecticut	All waters encompassed by a line from Goshen Point, Waterford, CT. to Dumping Ground Buoy Y"NDA", thence to Avery Point, Groton, CT.
Panama City, Florida	From the Panama City Harbour Channel Entrance Buoy "SA" to Panama City proper, including St.Andrews Bay.
Pensacola, Florida	The Pensacola Ship Channel from the sea buoy to Pensacola Bay, inclusive.
Port Canaveral, Florida	All waters of the Atlantic Ocean within 3.0 nautical miles of the seaward extremity of the Port Canaveral Entrance Channel jetties including all waters of the Entrance Channel Westward to the Canaveral Barge Canal Lock.
Port Hueneme, California	The waters of Port Hueneme Harbour shoreward of a line drawn from Port Hueneme East Jetty Light 4 to Port Hueneme West Jetty Light 3.
Port St. Joe, Florida	From Port St.Joe Harbour proper to Buoy 6 of the Port St.Joe Entrance Channel, the entrance to the Gulf County Canal and St.Joseph Bay.
Portsmouth, New Hampshire (including Kittery, Maine and Dover, New Hampshire on the Piscataqua River)	Portsmouth Harbor from the COLREGS Demarcation Line to the limits of navigation on the Piscataqua River to include Kittery and Eliot, Maine, and Portsmouth, Newington and Dover, New Hampshire.
San Diego, California	San Diego Bay and all waters of the Pacific Ocean adjacent to the cities of Ocean Beach, San Diego, Coronado, National City and Chula Vista out to three nautical miles.

Enclosure No. 3.

Master: Ivan Boranoff
Last Port of Call: Baltimore, MD.
Next Port of Call: Vladivostok, RS.

On behalf of the vessel's Owners, we request that the vessel be allowed to enter the port of New London with only a 2-Day Request due to failure of refrigeration system causing food to thaw and spoil. Estimate repairs to be completed within 48 hours.

NOTE: This must be received at the SIV desk no later than the close of the Official Port Approval Date and Time.

PILOTAGE: North West Coast of U.S.A.

Columbia River Bar Pilots are "Sea Pilots" for all ports in Columbia and Willamette Rivers. Namely, Astoria and Portland (Oregon), Longview, Kalama and Vancouver (Washington) – when entering from sea and if providing above Astoria, Columbia River Pilots relieve Bar Pilots for balance of transit.

COLUMBIA RIVER BAR PILOTS
Foot of 14th Street,
P.O.Box 87, Astoria, Oregon 97103
TWX 9104668014
FAX (503) 325-5630
Marisat 00259104668014+
Telephones (503) 325-2641 or 325-2642

RADIO FACILITIES

Pilot Boat Peacock	WS 7217
Pilot Boat Columbia	WYE 7344
Bar Pilots Office, Astoria (Ch. 16) (156.80 MHz)	KOK 360
Astoria Marinephone "KFX"	
Ship's Call on	2206 kHz
KFX Answers on	2598 kHz.

Or call on and receive KFX on Channel 26.

In order there be no delays, vessels due to arrive at the Columbia River and desiring a Bar Pilot, must cable or telephone the Columbia River Bar Pilots. (Pilot normally not on station unless cable or telephone message received.) USE RADIO STATION KLB, EVERETT, WASHINGTON at least 12 hours before arrival at the lightship. Code address, "BAR PILOT ASTO, STATING THE TIME OF ARRIVAL". If transmitted by any other radio station, delay may occur. If vessel is equipped with VHF, use Channel 16 (156.80 MHz) to call the pilot boat or Bar Pilots' Office, Astoria (KOK 360) and shift to Channel 13 (156.65 MHz).

PILOT LADDER INSTRUCTIONS

1. Please contact the pilot boat via voice radio (Channel 1 Channel 13 approximately 30 minutes prior to arrival for desired lee boarding instructions.

2. The Columbia River Bar Pilots have 2 pilot vessels; the "Peaco and the "Columbia". When the "Peacock" is on station, Masters wi instructed to rig their pilot ladder 4 ft. above the water's edge. When "Columbia" is on station, the Master will be instructed to rig the lad 10 ft. – 12 ft. above the water's edge. The above-mentioned distan above the water are of the utmost importance, particularly in the c of the "Columbia", as the pilot boat can and has pulled the ladder do when it becomes pinched between the pilot boat and the side of vessel. Pilot ladders and boat ropes shall not be permitted to dra the water. No tag lines, pull ropes or trailing lines shall be attache the bottom of the ladder. All pilot ladders must comply with SOL Regulations.

3. Pilot ladders shall be rigged amidships, over "draft marks" c of all obstructions, such as accommodation ladders, and clea overside discharges from the engine room and deck scuppers.

4. The pilot ladder should be kept clean and used for embarking disembarking Pilots only. The ladder shall be made in one continu length, not 2 sections shackled or lashed together. The ladder shal equipped with spreaders approximately 10 ft. apart in accordance SOLAS regulations. The ladder must be in good condition, the tre horizontal and the upper surface of rough non-skid quality.

5. The ladder must be adequately lit at night by means of a shining well over the ship's side in the vicinity of the ladder. The a of the deck where the Pilot boards and leaves should be free of de and well lighted. Where portable stanchions and bulwark steps are us they shall be rigidly attached to the ship's structure. A life ring with w light and lifeline attached should be ready at hand. Rigging of the lad and embarking and disembarking of the Pilot must be under supervision of a licensed officer.

6. Boat ropes are not to be used, all pilot boats are power propel

7. Manropes shall be of manila 3 in. circumference. The manro shall be free of any knots including the lower end. The manropes sho be rigged 1 ft. – 2 ft. longer than the pilot ladder. Manropes are no be rigged for boarding unless otherwise advised.

8. If vessel is to take a deck load of logs, please discuss with y Agent the building of a catwalk to provide safe passage to and from pilot ladder.

Long Island Sound and Connecticut Ports:

The Connecticut State Pilots Association is offering pilot service fo foreign and registered vessels en route to and from Connecticut P via the Long Island Sound. U.S. enrolled vessels will continue t services by Interport Pilots using the same boats and pilots. Pilots licensed by the Federal Government and the State of Connecticut

The Pilot Station established off Montauk Point provides a more d route to Long Island Sound ports. Vessels using Connecticut State p through the mile wide, 58 ft. deep, Montauk Passage, will save betw 1 hour and 3 hours steaming time as opposed to being diverted to stations at Point Judith or Brenton Reef, Rhode Island.

The U.S. Navy uses the Montauk Passage for its nuclear subma bound to and from Connecticut ports and, as Interport Pilots, we h used this route for vessels in the coastwise trade for over 30 years

Notice of Arrival is required. A 24 hour to 36 hour advance notic ETA is suggested. A 12 hour update and a 6 hour update is neces in order to co-ordinate dispatching of pilots.

The Pilot boarding point is 3 miles East of Montauk Sea Buoy.

Connecticut State Pilots Association, State Pier, New London 06320. Tel: 1 (800) 346-4877 or in New Jersey 1 (201) 291-1 Cables: Port Pilots, Atlantic Highlands, N.J. Pilot Boat: Call Si "Connecticut Pilot".

Constitution State Pilots Association also offer pilot service in L Island Sound and all Connecticut ports.

Constitution State Pilots Association, offer a pilotage service in B Island Sound, Long Island Sound, the Harbours of Bridgeport, Haven and New London, Connecticut and Long Island Sound platfor They also provide docking pilot services in the afore-menti harbours, and have 2 Pilot Stations, one located at Montauk Poi Block Island Sound (Lat. 41° 01.7′ N., Long. 71° 41.8′ W.) 3 miles of Montauk Sea Buoy, and the other station at Block Is (Lat. 41° 18′ N., Long. 71° 35′ W.). These stations are serviced by Pilot Boat "Constitution", a 65 ft. blue and white vessel which mon VHF Channels 16 and 8.

Constitution State Pilots Association, 500 Waterfront Street, Haven, Connecticut 06512. Tel: 203-468-0255 (24 hours). Fax: 582-6550. Telex: 940103 WU Pubtlx BSN. All Constitution State carry cellular telephones and are in constant communication with A and Terminals.

The Long Island Sound State Pilots Association is offering tota service for all foreign and registered vessels on Long Island Sou Connecticut Harbours, also New York Platforms.

U.S. Enrolled Vessels will also be served by Long Island Sound Association. Licensed by the U.S. Federal Government and Sta Connecticut, Long Island Sound State Pilots Association established the first pilot boat station off Montauk Pt., Long Island York, for a shorter route to the Sound and Connecticut (See "Pl

Vessels using Long Island Sound State Pilots Association wil between 2-3 hours of steaming time, as opposed to being diver pilot station at Pt.Judith, Rhode Island.

Long Island Sound State Pilots have been serving the Indus over 30 years.

Long Island Sound State Pilots Association Inc., 1440 W Avenue, Suite 123, New Haven, Connecticut 06515. Tel: (203) 77 (24 hours). Cables: Lispilot New Haven, Connecticut. Fax: (30 9392.

Southwest Alaska Pilots Association: P.O. Box 977, Homer, Alaska 99603. Tel: (907) 235-8783. Fax: (907) 235-6119.

SWAPA is the only service authorised to provide pilotage in the Southcentral Alaska region which extends from 141° to 156° West longitude. This includes Icy Bay, all of Prince William Sound, Seward/Resurrection Bay, all Cook Inlet ports and all Kodiak Island ports.

Pilotage services can be arranged through the Agent or directly to the Pilots. SWAPA maintains 24 hour dispatch at Homer via Tel: (907-235-8783) for all ports except Valdez. Facsimile messages during business hours (Monday – Friday, 0800 hrs. – 1700 hrs.) can be sent to the Homer Dispatcher (907-235-6119).

Pilot Boarding Stations:

(1) Ice Bay – 9.0 miles × 180° true from Claybluff Point Light; approximate position Lat. 59° 49.0′ N., Long. 141° 35.0′ W.
(2) Cordova – 2.0 miles × 180° true from Sheep Point; approximate position Lat. 60° 35′ N., Long. 146° 00′ W.
(3) Valdez and Whittier – approximately 3.6 miles × 246° true from Bligh Reef Buoy; approximate position Lat. 60° 49′ N., Long. 147° 01′ W.
(4) Seward – 1.1 miles × 152° true from Caines Head Light; approximate position Lat. 59° 58′ N., Long. 149° 22′ W.
(5) Cook Inlet – 1.0 miles × 180° true from Lands End Light; approximate position Lat. 59° 35′ N., Long. 151° 25′ W.
(6) Kodiak (City) or Womens Bay – 2.0 miles × 100° true from St. Paul Harbor Entrance Light; approximate position Lat. 57° 44′ N., Long. 152° 22′ W.
(7) Discoverer Bay – 2.0 miles × 000° true from Posliedni Point; approximate position Lat. 58° 28′ N., Long. 152° 20′ W.
(8) Port Wakefield – 1.0 miles × 298° true from Kekur Point; approximate position Lat. 57° 52′ N., Long. 152° 49′ W.
(9) Port Bailey – 1.5 miles × 000° true from Dry Spruce Bay Light; approximate position Lat. 57° 59′ N., Long. 153° 06′ W.
(10) Uganik – 2.0 miles × 284° true from East Point; approximate position Lat. 57° 51′ N., Long. 153° 32′ W.
(11) Larsen Bay – 1.0 miles × 090° true from Harvester Island; approximate position Lat. 57° 39′ N., Long. 153° 57′ W.
(12) Alitak – 2.4 miles × 131° true from Cape Alitak Light; approximate position Lat. 56° 49′ N., Long. 154° 15′ W.
(13) Old Harbor – 1.0 miles × 082° true from Cape Liakik; approximate position Lat. 57° 07′ N., Long. 153° 25′ W.

AUTOMATIC RADAR PLOTTING AIDS: With effect as from July 1st, 1982, vessels carrying oil or hazardous materials in bulk must have automatic radar plotting aids.

A fine for failure to carry an ARPA could be multiplied by the number of days of the violation.

The United States Coast Guard has stressed, however, that its official policy is enforcement by denial of entry and restriction of operation and not primarily by the enforcement of fines.

While the Coast Guard recognises that the Public Law enables financial penalties to be incurred, it is believed that the terms of the Port and Tanker Safety Act under which the U.S. Coast Guard operates directs it to monitoring and identification of previous offenders and enforcement by prevention of entry into U.S. ports or subsequent restriction of trade and departure.

COAST GUARD REGULATIONS: The U.S. Coast Guard has announced its intention to develop the following regulations implementing sections of the 1978 U.S. Port and Tanker Safety Act requiring:

1. Existing crude oil carriers of 20,000 d.w.t. or above but less than 40,000 d.w.t. to have segregated ballast tanks (SBT) or a crude oil washing system (COW) by January 1st, 1986, or when they reach 15 years of age, which ever occurs later; and
2. Existing product carriers of 20,000 d.w.t. or above but less than 40,000 d.w.t. to have SBT or dedicated clean ballast tanks (CBT) by January 1st, 1986, or when they reach 15 years of age, whichever occurs later.

POLLUTION: Any vessel which does not have a valid I.O.P.P. Certificate on board will not be allowed to transit U.S. waters.

NOTICE: *B.A. Notice to Mariners No. 3013(T) of 1983:*

UNITED STATES OF AMERICA – Chart and Publication requirements.

A statement concerning the U.S. Navigation Safety Regulations relating to Navigation, charts and Publications has been issued in the U.S. Notices to Mariners Weekly 44/83. This is reproduced below. Admiralty Annual Notice to Mariners No. 22 will be amended as appropriate in the 1984 edition.

CHART AND PUBLICATION REQUIREMENTS

Sections 164.30 and 164.33 of Title 33 of the Code of Federal Regulations Part 164 (33 CFR 164), which detail requirements for the carriage of nautical charts and publications, are amended effective October 28, 1983. The regulations contained in these sections are applicable to each self-propelled vessel of 1,600 g.r.t. or more, operating on the navigable waters of the United States, except the St. Lawrence Seaway, and are reprinted as follows:

§164.30 Charts, publications, and equipment: General.

No person may operate or cause the operation of a vessel unless the vessel has the marine charts, publications, and equipment as required by §§164.33 through 164.41 of this part.

§164.33 Charts and publications.

(a) Each vessel must have the following:

(1) Marine charts of the area to be transited, published by the National Ocean Service, U.S. Army Corps of Engineers, or a river authority that:

(i) Are of a large enough scale and have enough detail to make safe navigation of the area possible; and
(ii) Are currently corrected.

(2) For the area to be transited, a currently corrected copy of, or applicable currently corrected extract from, each of the following publications:

(i) U.S. Coast Pilot.
(ii) Coast Guard Light List.

(3) For the area to be transited, the current edition of, or applicable current extract from:

(i) Tide tables published by the National Ocean Service.
(ii) Tidal current tables published by the National Ocean Service, or river current publication issued by the U.S. Army Corps of Engineers, or a river authority.

(b) As an alternative to the requirements for paragraph (a) of this section, a marine chart or publication, or applicable extract, published by a foreign government may be substituted for a U.S. chart and publication required by this section. The chart must be of large enough scale and have enough detail to make safe navigation of the area possible, and must be currently corrected. The publication, or applicable extract, must singly or in combination contain similar information to the U.S. Government publication to make safe navigation of the area possible. The publication, or applicable extract must be currently corrected, with the exceptions of the tide and tidal current tables, which must be the current editions.

(c) As used in this section, "currently corrected" means corrected with changes contained in all Notices to Mariners published by Defense Mapping Agency Hydrographic/Topographic Centre, or an equivalent foreign government publication, reasonably available to the vessel, and that is applicable to the vessel's transit.

SHIP'S OFFICER'S REPORT: The information given for the port of New Orleans (U.S.A.) applies to all the ports in the U.S.A. in the event of the vessel arriving from abroad or from a previous U.S. port. All the documents such as Crew List, Passenger List (Form I-418), Deck, Engine, Steward's and Bonded Stores Lists (Form 1303), Crew's Effects Declaration (Form 1304), are required in duplicate at each port for entry inward.

ALBANY, New York: 42.40 N. 73.45 W. (See Plan)

DOCUMENTS: If first port of call in U.S., 2 complete Customs Manifests describing all cargo on board and ports of discharge. Also 1 Cargo List for Albany cargo, 3 Crew Lists, 3 Stores Lists, 3 Curio Lists, Ship's Register, Load Line Certificate and Tonnage Tax Certificate.

PILOTAGE: Hudson River Pilot boards vessel off Yonkers, N.Y. Cable address: "Hudpilots, Yonkers, N.Y."

ANCHORAGES: Several anchorage areas in Hudson River en route to Albany if required due to weather. Vessels cannot anchor at Port of Albany.

RESTRICTIONS: Hudson River Channel to Albany has controlling depth of 32 ft. MLW. Vessels with draft in excess of 28 ft. will be required to transit river on favourable tide as directed by Pilot.

MAX. SIZE: Max. permissible length 750 ft., breadth 110 ft., draft 30 ft. Turning basin at Albany 1,100 ft. in width.

HEALTH: See "Health: All Ports" before first U.S.A. port. Illness Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port.

TUGS: One 2,500 h.p. tug stationed at port at all times; additional tugs available upon advance request. Normally 1 tug is sufficient for turning and docking. Tug's lines are used.

BERTHING: 5,000 linear ft. of marginal wharf available at APDC terminal for general cargo, grain, lumber, etc., 30 ft. alongside wharf. Various privately operated deep-water petroleum terminals in port area.

Facilities: 13.5 million bushel grain elevator. 17 million gallon molasses storage – 2 terminals. Scrap Iron Terminal, 300,000 sq. ft. covered warehouse space.

Equipment: Available at the Port of Albany:

2 Gas powered 5,000 lb. lift trucks.
8 Diesel powered 9,000 lb. lift trucks, all are available with bale clamps.
1 Diesel powered 30,000 lb. lift truck.
1 Diesel powered 50 ton top loader.
1×225 ton capacity crawler type crane.

BRIDGES: Minimum vertical clearance of bridges on Hudson River en route to Albany is 135 ft.

STEVEDORES: Rates and information can be obtained from Meehan Overseas Terminals, Ltd.

TANKERS: Bray/Getty Terminal:

Location: The Bray/Getty Terminal is located approximately 126 miles from the Battery (NYC), about 0.8 miles Northward of Island Creek. It is an offshore wharf 250 ft. long with a dock height above the waterline of 11 ft.

Berthing: Normal berthing is starboard side to with the use of only one 1,800 h.p. tug. An additional tug may be required if adverse weather conditions exist. The vessel approaches the berth from midstream on approximately a 30° angle to the pier. The tug is used on the port bow to control the direction of the vessel during the approach. Once alongside the pier, spring lines are run out and the vessel is held in position with her own engines until the tug is secured. See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: Not available at this terminal.

Bunkers: Fuel is not available at this terminal.

Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.

Security: The terminal is fenced and guarded.

Pollution: Although an oil boom is permanently in place inside the dock area, outside contractors must be contacted for clean-up in the event of the oil spill.

Firefighting: The terminal is equipped with one 150 lb. dry chemical extinguisher with additional firefighting support by shorebased fire trucks.

Cirillo Terminal:

Location: The Cirillo Terminal is located approximately 125 miles from the Battery (NYC), about 0.5 miles Northward from Island Creek. It is a bulkhead wharf 280 ft. long with a dock height above the waterline to 10 ft. It is owned by Albany Port District Commission and operated by Cirillo Brothers.

Berthing: Normal berthing is port side to with the use of one 1,800 h.p. tug. An additional tug, may be required if adverse weather conditions exist. The vessel approaches the berth on the ebb tide and slowly approaches the marginal berth in the usual manner. The current in this area sets fair with the dock face creating an ideal docking environment. See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: The terminal can supply fresh water upon request.

Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.

Security: The terminal is fenced and guarded at all times.

Pollution: Although an oil boom is readily available for oil spill containment, all clean-up must be performed by outside contractors.

Metropolitan/Arco Terminal:

Location: The Metropolitan/Arco Terminal is located approximately 126 miles from the Battery (NYC). The dock is of an offshore wharf construction with dolphins.

Berthing: Normal berthing is starboard side to with the use of 2×1,800 h.p. tugs. All ships are usually docked at Slack High Water. The vessel approaches the dock from the centre of the channel and is carefully breasted alongside the pier, using her tug and the current to slide over against the breasting dolphins. Spring lines are run first, followed by breasts, then head and stern lines. See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: Piped fresh water is available.

Bunkers: Fuel is not available at the dock.

Slop/Deballast: The terminal is not equipped for slops or dirty ballast receipt.

Security: The terminal is fenced and guarded. The main gate is locked when no vessels are at the dock. When a vessel arrives the dock is continually manned by terminal employees.

Pollution: The terminal is equipped with a workboat and 1,000 ft. of boom for spill containment. Local contractors must be contacted for clean-up operations.

Firefighting: The dock is equipped with one 150 lb. dry chemical extinguisher. Additional back-up is supplied by local firefighting departments.

Niagara/Mohawk Terminal:

Location: The Niagara/Mohawk Terminal is located approximately 125 miles from the Battery (NYC).

Berthing: Normal docking is port side to with the assistance of one 1,200 h.p. tug. The vessel approaches the marginal berth at minimum velocity with the ship's engines used to maintain relative position of vessel while lines are passed. The tug assists in the breasting of the vessel towards the dock. See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: Piped fresh water is available at the dock.

Bunkers: Fuel is not available at this terminal.

Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.

Security: The terminal is fenced and guarded.

Pollution: The dock is equipped with 2,500 ft. of boom for oil spill containment.

Firefighting: Portable CO_2 extinguishers provide adequate firefighting capabilities.

Sears Terminal:

Location: The Sears Terminal is located approximately 124 miles from the Battery (NYC), about 1.2 miles Southward of Island Creek. It is an offshore wharf 191 ft. long with a dock height of 10 ft. above the waterline.

Berthing: Normal berthing is port side to with the use of one 1,800 h.p. tug. An additional tug may be required if adverse weather conditions exist. The vessel approaches the dock on the first of the ebb tide, slowly stemming the tide during the approach. The tug is positioned on the starboard bow to control the vessel's movements. After a normal approach, the vessel is spotted and spring lines are led out. The vessel is then held in position with the tug and own engines while the breast, head and stern lines are led out. See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: Not available at this dock.

Bunkers: Fuel is not available.

Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.

Security: The terminal is fenced and guarded at all times.

Pollution: Although the terminal is equipped with a workboat and boom for oil spill containment, all clean-up equipment and personnel must be secured through local contractors.

Roseton, N.Y.: Central Hudson Gas & Electric Terminal:

Location: The Central Hudson Gas and Electric Terminal is located on the Hudson River approximately 74 miles from the seabuoy.

Berthing: Normal berthing is starboard side to with use of one 3,500 h.p. tug. An additional tug may be required during adverse weather conditions. The vessel proceeds to a point opposite to or a little above the dock, turns midstream with the aid of the tug and comes down parallel to the dock. She is then breasted in and held alongside by the tug while the spring and breast lines are led out. The tug then handles the head and stern lines (synthetic required). See "Plan"

Gangway: The terminal does not provide a gangway.

Fresh Water: Not available at the dock.

Bunkers: Fuel is not available at this terminal.

Security: The terminal is fenced and guarded.

Pollution: Booms and absorbent materials are available on the dock in the event of an oil spill.

Firefighting: The dock is equipped with one 250 lb. purple K extinguis 2×2.5 in. fire hoses with fog nozzles on a 6 in. main.

Ravena, N.Y. (Port of Albany): Atlantic Cement Terminal:

Location: The Atlantic Cement Terminal is located on the Hudson R approximately 127 miles from the seabuoy and is under the jurisdic of the Port of Albany.

Berthing: All vessels must dock and undock during daylight hours o Normal berthing is port side to with the use of one 2,100 h.p. tug additional tug may be required during adverse weather condition when docking on a rising tide. The dock is of a marginal design, para to the channel axis. Normal approach is with a tug breasting the ves onto the dock.

Gangway: The terminal does not provide a gangway.

Fresh Water: Not available at the dock.

Bunkers: Fuel is not available at this terminal.

Slop/Deballast: The terminal is not equipped to receive slops or d ballast.

Security: Although the terminal is not fenced or guarded, dock person are in attendance at all times.

Pollution: In the event of an oil spill, the containment and clea equipment available at the dock consists of:

1. 7,400 ft. of 12 in. collar boom.
2. Oil retention gate mounted on dock.
3. 23 ft. 150 h.p. tow boat.
4. 30 ft. deck barge for oil boom.
5. 500 ft. of 2.5 in. fire hose.
6. 100 bags of oil absorbent material.
7. 15 bags plastic "Oil Snares".
8. Air bubbling system-along dock face.

Firefighting: The dock is equipped with one 500 lb. dry chem extinguisher, 350×2.5 in. hose and fog nozzles located adjacent to t dock manifold.

FRESH WATER: Supplied during regular working hours daily, exc Saturdays, Sundays, and holidays, at $2.75 per 100 cu. ft. plus $22 service charge per daily delivery on straight time. Additional charg supplied during other periods.

CONSULS: Italian Vice-Consulate located at Albany, other consula available at New York City.

REPAIRS: Minor deck and engine repairs can be handled.

GANGWAY/DECK WATCHMEN: Available via ship chandler, required but recommended.

AIRPORT: 7 miles distant from port: served by Allegheny, Amer Altair and Executive Airlines.

TIME: Eastern Daylight Saving, (GMT minus 4 hours) from first Sun in April till last Sunday in October.

HOLIDAYS: Standard U.S. holidays; cargo work can be arranged o holidays at overtime rates, except July 4th, Labour Day and Christm Day.

SHORE LEAVE: Crew members allowed ashore unless restricted Customs or Immigration requirements.

GARBAGE DISPOSAL: Service not available.

WASTE OIL DISPOSAL: Arranged through local Agents.

SEAMAN'S CLUBS: None.

SHIPMASTER'S REPORT: February 1980.

Pilotage: Compulsory. Pilot boards at Ambrose Light Tower and Hud River Pilot boards at Yonkers.

Restrictions: Vessels able to enter and leave during darkness at a stage of the tide.

Max. Size: LOA 750 ft. (Approx). Max. Draft: 31 ft. to 32 ft. depen on height of river.

Tugs: One tug stationed at Albany (approx. 2,500 h.p.). Additional t come from New York.

VHF: Tug only listens out on VHF before vessel arrives.

Services: Following services available: Fresh water, fresh provisi small repairs, machine shop, airport, Lloyd's surveyor (from New Yo Salvage surveyor (from New York), lubricating oil, groceries and me

Berthing: Pier No. 2 Albany: Berth located 3 miles from Albany and miles from the entrance. Vessel's size limited by draft and sp available in swinging room in basin. Max. size approx. LOA 600 ft., 31 ft. Least depth of water in channel from sea to berth 33 ft. (appr Vessels able to dock and undock at any stage of the tide, day or ni

ANCHORAGE, Alaska: 61.12 N. 150.00 W. (See Plan)

DOCUMENTS:
3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (Curio List).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List (Form I-418).
Customs Boarding Officer will also examine Ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port:
Master's Oath (Customs Form 1300).
All foreign clearances.
U.S. Certificates of payment of tonnage tax (Customs Form 1002).
Certified Crew List.
PILOTAGE: The pilot station for Anchorage is at Homer, Alaska (See "Homer").
ANCHORAGES: The best anchorage for deep-draft vessels is West of Anchorage in depth of 10 fathoms to 12 fathoms, silt bottom. Holding ground is good.
TIDE AND CURRENTS: The diurnal range of tide is 29.6 ft., currents from 1.7 knots to 6 knots or more in mid-channel.
RESTRICTIONS: Flow and pan ice is encountered in the Cook Inlet from approximately the end of November until the end of February. This ice does not freeze solid due to the tidal action. The port is in year-round use and expert information on Winter conditions may be obtained from any of the highly qualified licensed ship pilots available in the area.
MAX. SIZE: All berths 35 ft. MLLW.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Port of Anchorage "KBT-42" on HF-AM and SSB. "WHJ-82" on VHF-FM.
Radio Advice: Masters must notify Agents at Anchorage of ETA at Homer Spit, Alaska, as early as possible. Homer Spit position: 59° 35′ N., 151° 40′ W. To avoid confusion ETA message to Anchorage should indicate Time Zone used. Alaska Communication System Stations are located at Juneau – call sign AKM – Keeping watch on 500 kHz and working on 452 kHz. This station is reported to be very difficult to contact and is closed during weekends.

The fastest way to forward radio messages in the North Pacific is via San Francisco Radio KPH.

The U.S. Coast Guard Station Kodiak – call sign NOJ – keeps W/T watch on 500 kHz, working on 470 kHz.

Due to difficulties reported in contacting local Alaskan stations, Masters of vessels engaged on trans-Pacific crossings are advised to route radio messages to Alaska and Europe via Singapore Radio or Choshi Radio until the dateline, thereafter via San Francisco radio.
TUGS: Join vessel 1.5 miles S.W. of docks.
BERTHING: 180 ft. P.O.L. No. 2 "T" Dock with dolphins (600 ft. max. LOA).
415 ft. P.O.L. Terminal with dolphin.
600 ft. General Cargo Terminal No. 1, apron width 95 ft., live road limit 600 lb. per sq. ft.
General Cargo Terminals No. 2 and 3, 610 ft. and 893 ft. respectively, apron width 69 ft.
Depth alongside all Terminals 35 ft. at MLLW.
SPECIALISED CARGO HANDLING FACILITIES: 2×30 ton Paceco and 1×40 ton Mitsubishi container cranes servicing general cargo Terminals 1, 2 and 3; private bulk cement pipelines to shore silos. Ro-Ro service available.
CRANES: Portable, Paceco and Mitsubishi container cranes. Capacity: Portable to 150 tons. Container cranes 30 tons and 40 tons. Outreach from fender face is 79 ft. for the Paceco and 86 ft. for the Mitsubishi. Clear height above MLLW is 132 ft.
STEVEDORES: *Working Hours:* Stevedores do not work on January 1st, September 6th, November 25th and December 25th. The first 6 hours of any shift between 0800 hrs. and 1500 hrs. is at the straight time rate. Work performed on Saturdays, Sundays, holidays and between 1700 hrs. and midnight is at overtime rate. Meal breaks are 1145 hrs. to 1300 hrs. and 1745 hrs. to 1900 hrs. Stevedores work between 0100 hrs. (double overtime rate) and 0700 hrs.
MEDICAL: All facilities available. 3 local hospitals.
TANKERS: Petroleum Terminal No. 1 at the Port of Anchorage is contiguous to the general cargo piers. The POL Pier is 612 ft. long and contains multiple petroleum manifolds. Depth alongside 35 ft.

Petroleum Terminal No. 2 is a new "T" Pier located South of the existing facility. POL No. 2 is 645 ft. long including dolphins and contains multiple manifolds. Pier will accommodate vessels to 600 ft. Depth alongside 35 ft.
DENSITY: From 1009 to 1010.
FRESH WATER: Public Health Service certified water station.
FUEL: All grades available.
SURVEYORS: B. J. Logan and Associates, (Lloyd's Agency; correspondence to AIMU; National Cargo Bureau), 237 E. Third Avenue, Anchorage, Alaska 99501. Tel: (907) 272-7724.
GANGWAY/DECK WATCHMEN: Required shipside.
OPENING/CLOSING HATCHES: By stevedores.
CUSTOMS ALLOWANCES: At the discretion of Customs Officer. Normal allowance is 200 cigarettes or 2 lb. tobacco and 1 quart wine or spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.
AIRPORT: 5 miles; served by regular foreign and domestic airlines.
HOLIDAYS: New Year's Day (January 1st); Lincoln's Birthday; Washington's Birthday; Seward's Day (March 30th); Memorial Day; Independence Day (July 4th); Labour Day; Columbus Day; Alaska Day (October 19th); Veterans' Day; Thanksgiving Day; Christmas Day (December 25th).
POLICE/FIRE/AMBULANCE: Police 786–8900; Ambulance/Fire 267–4900.

ASHTABULA, Ohio: 41.53 N. 80.48 W. (See Plan)

Refer to "St. Lawrence Seaway" for important general information.
PILOTAGE: Nearest pilot station is the Welland Canal, Canada.
ANCHORAGES: No anchorage inside boundaries. Good anchorage outside to East of the entrance, depth approx. 20 fathoms.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Chicago Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Contact Lorain, Ohio ship-to-shore station for local connections.
TUGS: Tugs normally join vessels just inside harbour entrance. Use ship's or tug's lines optional; if tug lines used an additional charge of 10% of the tonnage will be added. For tug service call ship-to-shore tug Idaho, FM Channel 51.
BERTHING: Pinney Dock and Transport Co.: Dock No. 4 – length 2,000 ft., depth 27 ft. 2×45 ton cranes

Pinney Dock and Transport Co. (Ex-Con Rail Minnesota slip): Realigned berth with length 1,500 ft. and depth 28 ft.

Con Rail: Dock No. 10 – length 1,200 ft., depth 27 ft. 1 shiploader, rate 7,000 t.p.h. Max. size: LOA 1,000 ft., beam 105 ft. and max. draft 26 ft.
STEVEDORES: Work gangs for loading and unloading provided by the Pinney Dock and Transport Company.
MEDICAL: Vessels requiring medical attention call U.S. Coast Guard station located in the main river by calling AM Channel 20. Ambulance and hospital service available. No inoculation, vaccinations, or fever certificates required.
DENSITY: Fresh water.
FRESH WATER: Available at stevedoring dock.
FUEL: Available on 24-hour notice.
FIRE PRECAUTIONS: City fire department. Also water line on face of the dock available.
CONSULS: Nearest at Cleveland.
REPAIRS: All types of deck and engine repairs available; also topside shell repairs.
GANGWAY/DECK WATCHMEN: Overseas stevedoring dock enclosed wire fence, watchmen on dock at all times, guard at main gate.
OPENING/CLOSING HATCHES: Optional by crew or stevedores.
CUSTOMS ALLOWANCES: Only allotments per person consumed aboard allowed.
REPATRIATION: Can be arranged.
AIRPORT: Nearest airport approx. 10 miles South with commuter services to Cleveland Hopkins Airport. Cleveland Hopkins Airport approximately 70 miles West.
TIME: Local Eastern Standard Time except from first Sunday in April till last Sunday in October – Daylight Saving Time.
HOLIDAYS: Stevedoring docks double time on holidays and time plus one-half on Saturdays and Sundays.
POLICE/AMBULANCE/FIRE: Police, 998-2221; Ambulance, 998-2345; Fire, 998-2121.
TELEPHONES: No provisions for placing telephones aboard vessels.
SHORE LEAVE: Crew allowed ashore.
IDENTIFICATION CARDS: Required.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Service available. 72 hours notice required.
WASTE OIL DISPOSAL: Service available using tanker trucks. 72 hours notice required.
SEAMAN'S CLUBS: None.
CURRENCY: U.S.Dollar (U.S.$).
AUTHORITY: Ashtabula Port Authority, P.O.Box 889, Ashtabula, Ohio 44044. *Tel:* (216) 992 8428. *Contact:* Robert Weiner, Chairman. Nicholas Paulchel, Harbour Master.

ASTORIA, Oregon: 46.11 N. 123.50 W. (See Plan)

PILOTAGE: Columbia River Bar Pilots, Astoria, Oregon, 97103. See "General – Pilotage" before first U.S.A. port (Albany).
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Tugs are available for assisting ships at the option of the vessel.
BERTHING: The 3 piers, including Ro-Ro facilities and barge ra comprising the Port of Astoria Terminals are located in the Western p of the City of Astoria at the confluence of Youngs Bay and the Colum River. Astoria is served by 1 railroad, 3 major highways and 6 ba lines. The piers extend to the main ship channel, allowing vessels berth or sail at any time. The terminals are operated by the Por Astoria Commission as a public property open to all carriers a shippers.

Pier No. 1:
Location: Foot of Portway Street, adjacent to Pier No. 2, and separa therefrom by a water slip 400 ft. in width.
Principal Commodities: General commodities, break bulk, plywo frozen tuna, grain, sacked goods.
Berths: 2 vessels. 875 ft. face or Northerly end; 1,000 ft. slip or Weste side, depth 40 ft.
Pier Apron: Width 24 ft., slip side; 70 ft., face or end. Dock is 16.1 above MLW.
Equipment: Dock tractors, 2 container straddle carriers, fork lift truc trailer trucks, hand trucks and other necessary miscellaneous ca handling equipment.
Water Services: Portable meters and hose connections for ves service. Rates of delivery, 10,000 g.p.h. Water pressure about 110 p stand pipes.
Fire Protection: Complete automatic dry pipe sprinkler system and h stand pipes.
Electric Current: Face Pier No. 1 – 440 volt, 3 phase. Lighting 110 v 2 phase, 60 cycle, 35 amperes, alternating current. Portable meters a plug-in service available at all berths.

Pier No. 2:
Location: Between Piers No. 1 and 3. Separated from Pier No. 1 b water slip, 400 ft. wide, and from Pier No. 3 by a water slip, 350 ft. w
Warehouse Shed: 65,000 sq.ft. steel building with foundation a sprinkler system.
Principal Commodities: Lumber, logs, general cargo, break bulk, b cargo in open storage.
Berths: 5 vessels; 425 ft. face or Northerly end; 1,307 ft., slip Easte side, 40 ft. depth; 1,445 ft., slip Westerly side, 35 ft. depth.
Open Dock: 535,000 sq.ft. Dock level 16.1 ft. above MLW.
Equipment: Modern lighting. Tractors, fork trucks, etc. as listed un Pier No. 1, when required. Portable meters and hose connections. P lines on pier for bunkering.
Barge Ramp: A barge ramp capable of handling loads up to 50 ton now in operation at the outer berth of Pier No. 2. The ramp is utili for transfer of cargo from barge or vice versa.
Water Service: City service. Portable meters and hose connections service to vessels. Rate of delivery, 10,000 g.p.h. Water pressure ab 110 p.s.i.
Electric Current: Lighting 110 volt, single phase, 60 cycle, 35 amper alternating current. Power 220 volts, 3 phase, 60 cycle, 35 amper alternating current. Portable meters and plug-in service at all berth

Pier No. 3:
Location: Foot of Hamburg Avenue, (adjacent to and separated fr Pier No. 2 by water slip 350 ft. wide).
Principal Commodities: Canned goods, wood pulp, paper produ general cargo, break bulk, dry bulk.
Berths: 2 vessels. 1,750 ft. slip on Easterly side; 35 ft. in depth.
Warehouse Transit Shed: Floor area 248,000 sq.ft. Floor load 600 East side; 1,000 lbs. West side, per sq.ft.

Shed width 160 ft. Shed length 1,550 ft. Mill type reinforced conc walls and floor construction. Concrete and blacktop floor. Comp automatic sprinkler system.
Pier Apron: Width, slip side 24 ft. Dock level, 16.1 ft. above MLW.
Equipment: Tractors, trailers, fork trucks, etc., as listed under Pier N when required.
Water Supply: Portable meters and hose connections for servic vessels. Rate of delivery, 10,000 g.p.h. Water pressure about 110 p
Fire Protection: Automatic dry sprinkler system. Hose stand pipes.
Electric Current: Lighting 110 volts, single phase, 60 cycle, 35 ampe alternating current. Power 220 volts, 3 phase, 60 cycle, 35 ampe alternating current. Portable meters and plug-in service available a berths.
CONTAINER HANDLING: Container Yard (West of Pier No 11.5 acres paved, fenced and lighted.
CRANES: 30 ton crane on Pier No. 2 and 1 × P+H 6250TC m crane.
STEVEDORES: Stevedore Services of America and Jones-Ore Rogers.
FRESH WATER: Available, delivery to vessel through portable ho
FUEL: Bunkering oil facilities for ocean vessels are maintained at No. 2. The rate of delivery for heavy fuel oil is 1,500 b.p.h., an diesel oil, 800 b.p.h.
GARBAGE DISPOSAL: Garbage disposal is available locally American vessels; foreign vessels calling at Port of Astoria can com this service through companies located in Portland, Oregon.
WASTE OIL DISPOSAL: Waste oil disposal not available on loc This service may be obtained through companies located in Port Oregon, who can truck/barge waste disposal away.
GENERAL: The Port of Astoria Terminals are located 10 miles stream from the mouth of the river and 86 miles downstream fro City of Portland, Oregon.

The channel in the Columbia River, from the ocean to Astoria, h width of 600 ft. and project depth at low water of 53 ft.

At Astoria, the mean range of tide is 7.5 ft. with extreme tidal r of about 12 ft. On a flood tide a velocity of 2 knots is seldom exce but the velocity sometimes attains 5 knots during the ebb tide variation is due largely to the strength of the river discharge maximum velocity during the freshets which occur during the mon May, June and July. These freshets, however, do not effect the l of water at Astoria. The Columbia River is navigable through year.

A total of 9 berths at the Port of Astoria Terminals are periodically dredged to 35 ft. and 40 ft. at zero tide, but depths vary from time to time.

AUTHORITY: Port of Astoria, 1 Portway, Astoria, Oregon 97103. Tel: (503) 325-4521. *FAX:* (503) 325-4525. *Contact:* Ron Larsen, Acting Director.

BALTIMORE, Maryland: 39.17 N. 76.35 W. **(See Plan)**

PORT LIMITS: North Point is the outer limit of Baltimore Harbour for arrival purposes. The anchorage off Annapolis at Thomas Point, for vessels assigned thereto, is considered arrived for charter purposes.

DOCUMENTS:

3 copies Cargo Manifest (Form 1302).
Direct Arrival – 2 All Cargo on Board.
1 Cargo this Port.
Coastwise Arrival – 1 All Cargo on Board.
2 Cargo this Port.
3 copies Crew Manifest (Curio List) (Form 1304).
3 copies Stores Lists (Form 1303).
3 copies Passenger List (Form I-418).
3 copies Crew List (Form I-418).

Customs Boarding Officer will also examine Ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port.

Master's Oath (Customs Form 1300) 3 copies.
General Declaration (Customs Form 1301) 3 copies.
All foreign clearances.
U.S. Certificates of payment of tonnage tax (Customs Form 1002).
U.S. vessels from foreign ports to submit Form 226 "Foreign Repairs" in order to calculate duty.
Certified Crew List (Visa Crew List – U.S. Immigration).
International Tonnage Certificate showing the official gross and nett tonnage of the vessel.

Note: Masters must retain all CF 368 "Customs Receipts" on file from previous U.S. ports of call.

PILOTAGE: Each vessel entering the Chesapeake Capes under foreign flag or carrying foreign cargo is required to employ a Pilot of the Association of Maryland Pilots. Pilots are furnished with a small transistorised portable radio unit, which provide ships' bridge to bridge communication system to ensure navigational safety while traversing the waters of Chesapeake Bay. It is a positive means of communication to ensure ship's position reporting, the safety and movement of vessels, as well as messages related to the operational needs of vessels proceeding to the port, and provide the Pilots' communications instructions expediting operations of vessels when they are aboard.

Send ETA via Telex to pilots or vessel's agent, 48 hours before arrival and confirm 24 hours before arrival.

The ETA message should state whether arriving via Chesapeake and Delaware Ship Canal or Cape Henry, and deepest draft and speed of vessel.

Cable address of Pilot: "Marpilot Baltimore". Cape Henry Pilot Tower on VHF Channels 11, 13 and 16. Telex: 87-574. Telephone: (410) 342-6013. Fax: (301) 276-1364.

The large ocean station pilot vessel has been removed from station. Inbound and outbound traffic is monitored by the new Cape Henry Pilot Tower on shore just seaward of Cape Henry Light. The Pilot Tower maintains both a radar and radio watch for the area. Vessels should contact the Pilot Tower on VHF Channel 16 whence they will be directed to a working frequency. Vessels are requested to contact the tower 2 hours prior to arrival at the pilot boarding area.

Pilots are despatched from Lynnhaven Inlet by high-speed all-weather boarding launches and will rendezvous with vessels at CBJ Buoy, approximately 2 miles ENE of Cape Henry Light.

Pilots may request a relief pilot during transit who will board the vessel at the Pilot Transfer Station located 90 miles Northward near the Patuxent River. Under certain conditions of speed and draft, 2 pilots will be provided at the outset of the transit (Currently a second Pilot is provided if the passage is expected to be more than 15 hours). Relief pilots are provided at no extra charge.

ANCHORAGES: Numerous anchorages located within harbour limits for ocean-going vessels. 6 such areas are available for vessels of light and deep draft. 4 of these anchorages are located on the East side of the main ship channel between the entrance channel to the Canton Grain Elevator and Fort Carroll. 2 are on the West side of the main ship channel. Anchorage space is limited for large vessels and a 72 hour limit is in effect. At Thomas Point, approximately 22 miles South of Baltimore, there is an emergency anchorage in natural deep water with depth of 50 ft. or more. The U.S. Coast Guard is responsible for the anchorages, but in practice, the Pilots make the assignments.

RESTRICTIONS: There are two different approaches and exits to the sea lanes. The principal route is by way of the Southerly course through the Chesapeake Bay and Cape Henry to the ocean. The distance by this route is approximately 150 nautical miles. There is a main ship channel 20 miles long from Baltimore to the Chesapeake Bay; this channel is 700 ft. wide and 50 ft. deep.

The other route to the sea lanes is via the Chesapeake and Delaware Ship Canal. This offers a short protected route between Baltimore and other leading North Atlantic ports by way of Delaware Bay and allows ships serving North Atlantic European ports to save about 125 miles sailing distance.

Entrance to the Chesapeake and Delaware Ship Canal is located about 50 miles North of Baltimore. Depth of channel 35 ft. The width of the channel is 450 ft. Max. LOA 960 ft. Vessels longer than 760 ft. must have bow thruster. Max. draft 33 ft. 06 in. The canal itself is 15 miles in length, and from the Delaware Bay side the distance to sea lanes is about 60 miles. Navigation lights are maintained so the canal is open to navigation day and night. Mean range of tide is 1.1 ft. at Baltimore. Currents are 0.8 knot on flood and ebb tides.

MAX. SIZE: Length 1,250 ft., draft 50 ft. at Consolidated Coal Sales and Bayside Coal Piers. No restriction on beam.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: See "Pilotage".

TUGS: The port has an efficient fleet of tugs in operation. The tugs usually take vessel in tow at Francis Scott Key Bridge. Tug's lines are used at no extra charge.

BERTHING: Major piers and terminals:

Abbreviations:

WC = Whirley Crane (Tower Gantry)
CC = Container Crane
M.T. = Marine Terminal
LT = Long Ton
T = Net Ton

Breakbulk – Container, General Cargo:

Name	*Berths (ft.)*	*Water Depth (ft.)*	*Cranes*	*Other Features*
Pennwood Wharf	1–870	32		
Dundalk M.T.	1–1050	38	10 CC at 40 LT	2 Ro-Ro ramps
	1–840	38		7 container berths
	2–730	34		
	1–750	38	2 WC at 60 T	
	7–600	34		
Sea Girt M.T.	1–700	32	1 CC at 27.5 T	1 container berth
	3–1000	42	7 CC at 50 T	3 container berths
Rukert Terminals	1–575	34		
	1–525	36		1 ore crane
Clinton St. M.T.	4–550	32		
Locust Point, North Piers 3, 4 & 5	7–600	34	2 WC at 75 T 1 CC at 40 T	
Locust Point, South	4–850	36	3 CC at 40 LT 1 WC at 100 T	2 container berths
Chesapeake Terminal	1–700	30		
Atlantic Terminal	1–500	33		Mooring dolphins
Fairfield Auto Terminal	1–832	35		Mooring dolphins

Dry Bulk:

Name	*Berths (ft.)*	*Water Depth (ft.)*	*Commodity*	*Cranes*
Sparrows Point	2–1020	45	Iron Ore	3×26 T Ore unloaders
Curtis Bay Ore Pier	1–650	42	Ore	2×22 T Ore cranes

BP-Texaco Pier	1–435	33	Petroleum and petroleum products
Amerada Hess Pier	1–700	37	Petroleum and petroleum products
Apex Oil Co.	1–800	40	Petroleum Products

CRANES: *Floating:* 1×150 tons.
Also see "Berthing".

BRIDGES: The Chesapeake Bay Bridge-Tunnel is located across the entrance to the Bay, between Cape Henry and Cape Charles. This vehicular crossing consists of fixed causeways and bridges 15 miles in length, and 2 tunnels – one under the Chesapeake Channel and one under the Thimble Shoal Channel. A horizontal clearance of 1,400 ft. at 60 ft. water depth exists.

The Francis Scott Key Memorial Bridge crosses the main ship channel in Baltimore Harbour and is 8,640 ft. long, with main channel horizontal clearance of 800 ft. and vertical clearance of 185 ft. Vessels en route to the harbour from the ocean via the Chesapeake Bay pass under the Chesapeake Bay Bridge (2 parallel bridges), about 138 statute miles above the ocean entrance to the bay. This bridge is 3.7 miles long from shore to shore; its Western end is 0.5 miles S.W. of Sandy Point and its Eastern end is on Kent Island, 4 miles S.W. of Love Point. Least clearance width of 1,500 ft. and vertical clearance 186 ft.

By way of the Chesapeake and Delaware Canal the least horizontal clearance is 500 ft. and vertical clearance to + 136 ft. (Current air draft for vessels is 136 ft.).

The Curtis Creek and Middle Branch sections of harbour are each crossed by highway and railroad bridges (lift and swing).

DENSITY: Brackish (1005 – 1008).

MEDICAL: All facilities available.

TANKERS:
Apex: The Apex Oil Terminal in Baltimore Harbour is located 153 miles from the Sea Buoy and consists of one berth. The controlling depth at this terminal is:
Navigation Channel – 49 ft. Berth 40 ft.
The max. size vessels received:
LOA 800 ft.
97,179 d.w.t.

Vessels dock and undock at all stages of the tide. Constant Northwesterly winds may cause some variation in tide.

At this terminal there are terminal personnel on the scene at all times who will advise vessels of any critical conditions.

When docking and undocking, vessels normally use 2 tugs.

On approach to the berths, vessels transit the Fort McHenry Channel with a controlling depth of 50 ft. MLW and minimum width of 700 ft.

FRESH WATER: Can be supplied at berths. At general cargo berths, vessels supply hoses. Water barge service available from Vane Bros. Co. (Tel: 631-7773).

FUEL: All grades supplied by numerous oil companies by barge, tanker truck or ex-wharf at the oil berths.
Bunkering, Fuel Oil and Lubricants:
Aqua Tankers, Inc. Tel: 410-631-7494. Fax: 410-631-7781.
Fewell Trading Co., Inc. Tel: 410-532-2335. Fax: 410-532-7756.

DEVELOPMENTS: Brewerton Extension Channel to Baltimore is dredged to 35 ft. and widened to 450 ft., with portions to 600 ft.

SHIPMASTER'S REPORT: October 1991 (Updated 1994).

Charts:

Delaware: B.A. Charts No. 2564 and 2603.

Chesapeake and Delaware Canal: B.A. Chart No. 2922.

Chesapeake: B.A. Charts No. 2919, 2920, 2921 and 2850.

Pilotage: If vessel is coming from the North it is best to take Delaware Pilot at Cape Henlopen and transit the Delaware River, and Chesapeake and Delaware Canal. This reduces the distance to the port by some 153 miles, as opposed to entering through Chesapeake Bay.

The Delaware Pilot embarks at Buoy No. 8 from a fast cutter which is stationed in the breakwater harbour.

Pilots have radar coverage which extends out to Five Fathoms Light Float. The Delaware Pilot takes the vessel to Chesapeake City in the Chesapeake and Delaware Canal. The Maryland Pilot takes over about 13 miles from the Delaware entrance.

The distance from Cape Henlopen to Locust Point berths at Baltimore is 106 miles.

From Baltimore to Cape Henry using Chesapeake Bay is 150 miles (or about 12 hours at 13 knots). For vessels with an expected transit time of more than 15 hours, 2 Pilots are required (Note: No extra pilotage fee). In this case, either 2 Pilots board or a single Pilot changes at Patuxent River which is 75 miles above Cape Henry. The pilot launch is stationed at Solomon's Island in the river mouth and the actual boarding position is Lat. 38° 20′ N., Long. 76° 20′ W.

Channel: The Delaware River allows transit for vessels drawing 40 ft. (FW) and transit for deep-draft vessels takes place on a rising tide.

Deep-draft vessels occasionally have to wait outside Cape Henlopen if there is a swell, to avoid "bottoming" off Cape Henlopen.

The Chesapeake and Delaware Canal is continuously being improved with bend straightening, and dredging in the Western part. The present maximum draft is 33 ft. 6 in. (1994) (FW), with Panamax vessels usually being the largest vessels to transit. At the present time traffic is reduced to 3 or 4 ocean-going vessels per day.

Transit from the Delaware River entrance (Dutch Neck) to Tolchester Channel takes about 5 hours at 10 knots (46 miles). The Canal is under the control of a Despatcher on the South bank opposite Chesapeake City. There are video cameras at intervals along the Canal and speed is strictly observed. The Canal is open throughout 24 hours each day of the year, except at times of fog and if the vessel is already in the Canal it proceeds at its own risk.

Chesapeake Bay has been dredged to 50 ft. from Baltimore to the sea at Cape Henry and the present maximum draft is 47 ft. but may be increased to 48 ft. in the near future.

Anchorages: Bigstone Beach Anchorage (B.A. Chart No. 2564) on the Delaware River can accommodate 12 large tankers with up to 55 ft. draft.

There are numerous anchorages in the upper reaches for smaller vessels.

The Chesapeake and Delaware Canal has anchorages in the Western part.

Vessels have been known to anchor in the Canal itself if proceeding against the current.

Chesapeake Bay has numerous anchorage areas.

Berths: Baltimore is the largest latex port in the U.S.A. The berths are Locust Point No. 3 (Goodyear and Firestone), Locust Point No. 4 (Guthrie) and Locust Point No. 10 (Ennar Latex).

Locust Point No. 10: The berth is an old railroad dock which has been modernised and has a reported depth of 31 ft. at MLW, tidal range about 1 ft. Vessels can berth either side alongside. The berth is nearest to the city and is in the Northwest Harbour, about 1.5 miles from the Inner Harbour (See "Plan").

There are a lot of old pier piles near the berth so the berthing operation is to be conducted very carefully.

There is above ground latex tankage for about 300,000 U.S. gallons (10,500 tonnes). Shore pumps and lines used. Cargo is also discharged into rail cars.

Fresh water only available by barge. Brow gangway required. Storing is difficult as trucks are not allowed alongside. Asphalt also handled at this berth.

Locust Point No. 3: The berth is situated at the end of Pier No. 3 and is about 0.5 miles East of Berth No. 10.

Vessels berth starboard side alongside in order that they may leave the berth without tugs.

If weather conditions are favourable, Masters are requested to leave the berth without a pilot or tug in order to save expense (pilot not compulsory). The Bay pilot takes over once the vessel is in the Northwest Harbour. When we left the berth, the wind was very squally so we obtained a pilot and tug for departure.

The fenders on the quay were good. The berth is an old general cargo quay with 19 latex tanks above ground. Capacity of each tank is 30,000 U.S. gallons (1,000 tonnes).

Discharge is with shore pumps and lines, either direct into the tanks or to rail cars. The berth is very busy with product being continuously shipped out by road and rail tankers.

Depth alongside the berth reported to be 35 ft.

Brow gangway required. Stores truck can proceed alongside.

Fresh water is available from a shore hydrant through a meter at a reasonable rate. Ship's hoses and an international shore connection are required.

Fresh Water: There is a water barge with capacity 400 tonnes, early booking is recommended.

Fuel: Fuel is available by barge, or tank truck at Locust Point No. 3, but is reported to be expensive.

Health: Health inspectors may make lightning visits to the vessel and will impose fines for the slightest violations. One vessel was fined U.S.$300.00 when discarded fruit was found on the after deck.

Airport: Baltimore Washington International Airport is about 15 miles S.W. of Baltimore.

Chart Corrections: Maryland Nautical Sales (Tel: 1-800 572) is a British Chart agent and offers Class A correction. See "Ship Services".

AUTHORITY: Maryland Port Administration, World Trade Center Baltimore, Baltimore, Maryland 21202-3041, U.S.A. *Tel:* (410) 385-4400. *Telex:* 710-234-1075. *FAX:* (410) 333-1126. *Cables:* Marport. *Contact* : Michael Angelos, Executive Director.

BANGOR (including Brewer and Orrington), Maine: 44.49 N. 68.47 W. (See Plan)

LOCATION: Bangor is located on the West bank of the Penobscot River at the head of navigation. Brewer is on the East bank of the river opposite Bangor and Orrington is on the East bank of the river 2 miles below Brewer.

DOCUMENTS:

1 copy of Crew List.
1 copy of Passenger List.
2 copies of Stores Lists.
2 copies of Foreign Purchase Lists.
2 copies of Inward Foreign Manifest.
1 Form 1300 (Master's Oath on entry of vessel).
2 Forms 1374 Outward Foreign Manifest.

PILOTAGE: Pilotage is compulsory for all foreign vessels and U.S. vessels under register in the foreign trade, with a draft of 9 ft. or more, entering or departing from any port or harbour within the waters of Penobscot Bay and Penobscot River North of a line drawn from Marshall Point Livat Port Clyde, thence to Matinicus Rock Light, and thence to Western Head, Isle Au Haut. Pilotage is optional for vessels powered by sail.

Cable PENBAY via Chatham Radio. Ship's Agent usually notifies Pilot 48 hours and 24 hours before arrival at the pilot station. Pilot boat usually stands by on their radio 1 hour before ETA on RT 2182 kHz and VHF Channel 16. Pilot boards at Monhegan Is., Lat. 43° 45′ N., Long. 69° 22′ 5″ W. Pilot uses a white boat 36 ft. long and displays "H" by day and the Pilot signals at night. Vessels awaiting Pilot in bad weather must heave-to outside.

ANCHORAGES: The usual anchorage for vessels waiting at the river entrance for a towboat or favourable wind and tide is Northward of Fort Point on the West side of the channel.

Vessels bound up the river anchor anywhere in the channel where soft bottom is found. Vessels towing to Bangor, if the tide does not serve, often anchor off Winterport. On account of the strong ebb current, it is better for vessels going to Bangor, particularly large vessels, to anchor off Fort Point and start up the river about 3 hours after LW.

RESTRICTIONS: CHANNEL:– The controlling depth in the marked channel in Penobscot River from Bucksport to Bangor is 19 ft. to Winterport, thence 13 ft. to Bangor. The channel is marked by buoys to a point about 1.5 miles below South Brewer.

Caution: Deep-draft vessels should exercise caution above Fort Point as depths of 31 ft. to 32 ft. are in mid-channel, about 0.5 miles Eastward of Sandy Point, and rocky ledge, covered 34 ft., also in mid-channel, is reported about 0.2 miles S.W. of Odom Ledge Daybeacon.

The most difficult sections for vessels are off Lawrence and Luce Coves just North of Bucksport where it is difficult to mark the best water and off Frankfurt Flats where large vessels experience difficulty with the sharp turns.

The channel in Penobscot River is crooked and narrow in places, and frequent changes occur. Vessels should not attempt to carry drafts greater than 10 ft. to Bangor at LW. With a deeper draft a Pilot or towboat should be used; 14 ft. or 15 ft. is carried to Bangor and Brewer at HW, and deeper drafts occasionally to the oil berth at South Brewer. The safest time is on a rising tide. Navigation of the river at night is extremely dangerous due to lack of lighted navigation aids. After unusually high tides many logs, dangerous to small craft, are in the river. At times of maximum ebb currents, buoys are occasionally pulled under.

Tides: The mean range of tide varies from 10.3 ft. at Fort Point to 13.1 ft. at Bangor. Currents of 3 knots are not unusual from Odom Ledge to Orrington, and during Spring runoff currents approaching 5 knots may be encountered. Because of these currents, larger vessels should use caution navigating the river. Passage up the river is more advisable during flood current.

Ice impedes but usually does not prevent navigation above Winterport for nearly 5 months each year, beginning about December. During extreme Winters the river is closed to the mouth. The most difficult place below Winterport is abreast Fort Knox, where ice jams occur. If vessels can pass this point, they usually can go to Winterport. The river is kept open by an icebreaker, which prevents much of the damage that might otherwise be caused by ice and freshets. However, in recent years, according to local information, there has been very little ice and the river has seldom frozen over below Bangor. The brackish water formed by tidal action and the river current no doubt have contributed to this.

Freshets occur in the river during March and April; at times they are dangerous to vessels.

MAX. SIZE: At present ships of 560 ft. are taken up the river 2 hours before HW during daylight. Size and draft of ship depend on the berth.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Vessels arriving Bangor use radio station at Chatham, Mass., or call on the R/T through station WOU at Boston, Mass.

TUGS: 4 tugs available up to 1,200 h.p. Tugs join at Belfast to assist in turning and berthing.

BERTHING:

Texaco Oil Co. Terminal: A timber pile, timber-decked pier, approximately 5,250 sq.ft., used for berthing oil tankers. There are 8 storage tanks and 1 warehouse/office building with 1,920 sq.ft. of floor space.

Mobil Oil Co.: A timber crib pier approximately 8,500 sq.ft., used for berthing tankers. There are 10 storage tanks and a garage at this facility.

Webber Terminal Inc.: A timber crib pier, approximately 2,340 sq.ft. used for berthing tankers. Adjacent to this pier, there is another timber crib pier, approximately 5,280 sq.ft., also used for berthing tankers. There are 2 storage tanks and a storage building with 480 sq.ft. of floor space.

Astroline Petroleum Corp. of Maine: There is a log filled bulkhead used for berthing tankers. This facility includes 5 storage tanks and 1 tool shed.

Bangor Municipal Dock: A new wooden and steel float with gangway, 1,500 sq.ft. located just below the Joshua Chamberlain Bridge, so 4×4 ton guest moorings are available for recreational use.

Webber Tanks Inc. – Brewer: A rock and timber crib, timber decked pier, approximately 7,200 sq.ft., used for berthing tankers. There are 5 storage tanks and a warehouse with approximately 3,850 sq.ft. of floor area.

C. H. Sprague – Brewer-Orrington: A timber pile wharf, approximately 1,600 sq.ft., used for berthing tankers. The wharf is in Orrington and fuel is pumped to 3 storage tanks located in Brewer. There is one building, a pump house, approximately 600 sq.ft.

Hampden Recreational Boating Facility: 2 launch ramps with ground float; landing dock; 2 guest moorings, 8 ft. MLW to ramps, 80 ft. wide channel.

Town Launch Ramp – Orrington. This is a paved launch ramp; no docking facilities. There is a 40-space (30 car – 10 trailer) gravel parking area.

BRIDGES: 1 suspension bridge below Bucksport with a height of 135 ft. at HW. Horizontal clearance is 750 ft.

The overhead power cable that crosses the river just above Bucksport has a clearance of 145 ft.

MEDICAL: No advance notice required. There are 3 large hospitals.

TANKERS: 1 berth for ocean-going vessels. 1×8 in. hose with a 10 in. line. 22 ft. at low water. Also see "Berthing".

DENSITY: Nearly fresh water.

FRESH WATER: Supplied at ocean-going berth at the rate of 50 t.p.h.

FUEL: Only available at oil berth.

CONSULS: None.

REPAIRS: Only machinery repairs.

CERTIFICATES:

Load Line.
Foreign Clearance.
Safety Certificate.
Radio Operator's Licence.

CUSTOMS ALLOWANCES: 200 cigarettes per man, 1 bottle wine/spirits per man.

REPATRIATION: Arrangements must be made ahead of time by telegram.

TIME: GMT minus 5 hours in the Winter and minus 4 hours from first Sunday in April till last Sunday in October in the Summer.

AIRPORT: Bangor International is 2 miles from the city.

POLICE/AMBULANCE/FIRE: Police 9427377; Ambulance 9893311; Fire 9422293.

TELEPHONES: None put aboard. 1 pay phone on ocean-going berth.

SHORE LEAVE: Allowed subject to Immigration approval.

IDENTIFICATION CARDS: Form I – 95 must be filled out upon arriving unless seaman has made one out before on a previous trip.

AUTHORITY: State of Maine, Department of Transportation, State House Station No. 16, Child Street, Augusta, Maine 04333, U.S.A. *Tel:* (207) 287-2841. *FAX:* (207) 287-8300. *Contact:* Robert D. Elder, Director.

BATON ROUGE, Louisiana: 30.28 N. 91.12 W.

(See P

DOCUMENTS:

Original and 3 copies Crew Lists.
Original and 3 copies of Passenger Lists.
Clearance from last foreign port.
Original and 3 copies of Inward Manifest.
Derat Certificate.
Load Line Certificate.
Safety Certificate.
Ship's Register.
3 copies Curio List.

PILOTAGE: Advise Agents ETA sea-buoy 48 hours in advance. A then makes arrangements for Pilots. Seven 46 ft. pilot boats – red white cabins, flying white and blue pilot flags. Suggest pilot ladder above water level, no life-line. Call on 2738 kHz or VHF Chann 30 miles to 40 miles out. Safe anchorage within 2 miles South Pa S.W. Pass entrance.

ANCHORAGES: Anchorages within the river are limited; there whenever possible, vessels should utilise the large anchorage located East of the entrance of Southwest Pass.

RESTRICTIONS: No night-time restriction for entry or cleara docking or undocking.

Caution should be exercised when anchoring in the vicinity pipelines.

MAX. SIZE: Federal Project Depth of 45 ft., from the entrance to jetties to Head of the Passes and up to Mile 180, is obtained thro continuous maintenance dredging.

Exxon Terminal: LOA 810 ft. (246.8 m.); Beam, no restric Displacement, 90,000 ton; Draft, normally 45 ft. alongside.

HEALTH: See "Health: All Ports" before first U.S.A. port (Alba Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany **RADIO:** ETA cables can be routed through Tropical Radio WNU Orleans.

If destined for Exxon Terminal, send ETA messages to "Stan Baton Rouge"; 72 hours, 48 hours and 24 hours in advance of ar at Southwest Pass. Telex: 510-993-3575, Answerback: HOBRM. A contact Exxon Docks (KZA 891) on VHF Channel 16, 3 hours pri berthing. Berthing instructions will be provided on Channels 9 or 1

TUGS: Available at Baton Rouge for docking and undocking. Sh lines used.

At Exxon, 2 tugs are required for all vessels in excess of 12,000 d for docking and undocking.

BERTHING: No time restrictions on berthing. One general cargo d with total 462,000 sq. ft. transit shed and 3,000 ft. long, 40 ft. - 6 wide apron with double marginal tracks; grain elevator and bulk term at Burnside, for handling ores, concentrates, etc.; container marsha yard adjacent cargo docks; also 20-acre paved staging area for pr cargo.

CRANES: 4×150 ton crawler; 2×70 ton crawler; 1×250 ton craw

BULK HANDLING FACILITIES:

Grain: Cargill Grain Elevator: Max. draft 40 ft. Loading rate 1,000 t Silo storage 160,000 tons.

Dry Bulk: Burnside Terminal: 2 unloading gantries for bau Rate 2,000 t.p.h. Max. draft 40 ft. See "Burnside".

Molasses: Molasses terminal, leased to Westway, has an 11 mi gallon capacity.

Midstream Transfer: The Port's midstream anchorage buoy facili located in the Mississippi River just opposite its docks for the tran of cargo between barges and ships. Primarily for the transfer of ex coal, the operation is capable of handling import or export steel, coke, unitised cargoes in slings and other bargeborne commodities the use of floating cranes.

BRIDGES: Sufficient clearance for all stages of river at all ti 3 bridges cross at New Orleans, 1 at Baton Rouge, 1 at Gramercy 1 at Luling-Destrehan.

STEVEDORES: May be obtained by Agent with 4 hours' notice.

MEDICAL: Agents should receive 24 hours' notice when med attention is required. 2 excellent hospitals at Baton Rouge, U.S. P Health Hospital at New Orleans.

TANKERS: *Exxon Refinery Terminal:* 4 tanker berths available 2,260 ft. of berthing space. Normally handles 3 tanker simultaneou See "Max. size".

Exxon also have a gas dock on the West bank of the river oppo the tanker terminal.

Oil slop facilities available, but 48 hours advance notice requir be given to terminal.

Baton Rouge Port Authority: 4 berths; 914 m.; Apex Oil – heavy fu and Westway – Molasses.

Placid Oil Company: Crude and products, 330 m. berthing space

Formosa Plastics: Caustic soda, ethylene dichloride, 240 m. ber space.

Report:

Approaches – Cautionary Advice: Vessels make arrival at the S.W. Sea Buoy located in position Lat. 28° 52.7′ N., Long. 89° 2 Approach to the Sea Buoy should be made from the South to Vessels should remain in the fairways because of numerous struc in the approach area. Pilots board just South of the Sea B Precautions should be taken to remain to the East of the Sea B Buoy No. 1, and Buoy No. 3, when approaching the bar. At times s cross-currents are encountered in the area of S.W. Pass Ch Entrance and precautions should be taken to prevent the vesse being set onto shoal grounds on the West side of the channel. Th a large anchorage area to the East of the S.W. Pass Entrance Ch

Exxon Refinery Terminal:

Docking: 1 tug is used for docking and 1 is used for undocking. On a very high river with a swift current 2 tugs should be used to turn the vessel when sailing, due to the close proximity of the Baton Rouge Highway Bridge as well as the limited turning basin. 2 tugs should also be used when the ship must be berthed between 2 other vessels. Vessels berth starboard side to. Vessels should not drop anchor due to numerous submerged pipelines.

A normal mooring configuration should be used with additional head lines in view of the river current.

Cautionary Advice: Channel traffic which is passing close by could cause ships to move away from the berths which could result in damage to the hard arms. It is essential that more than usual attention be given to maintaining the ship in position alongside. It is recommended that several crew members be specifically assigned to tend the mooring lines and winches.

Under no circumstances should mooring lines be slack.

Exxon U.S.A. Refinery Terminal: 232 miles AHP: The refinery dock, consisting of 5 berths, is a concrete and steel structure 50 ft. wide and running in a North – South direction along the river bank for about 2,750 ft. The berths are numbered 1 through to 5 from South to North. All products are transferred through hoses or 10 in. hydraulically operated steel loading arms. The loading arms for crude oil at No. 1 Berth, however, are 12 in. connections. Cargo hoses are handled by electric hoisting equipment. Vessels are moored to 50 ton quick release hooks located on the dock. Electric capstans are used for hauling the mooring lines to the mooring hooks.

The loading arms and hose connections are manifolded to permit washing into a slop line for change of grade.

All hose diameters are 4 in., 6 in. and 8 in. The 10 in. loading arms have 8 in. reducers.

Each berth has an office equipped with a telephone which is tied into a public address system. In addition, each berthman is equipped with a portable radio for communicating with the dock as well as all control centres. The emergency shut down system for the dock can be operated from each office.

The main control centre for the entire dock is equipped with telephones, a process radio, an FM and AM marine radio and the control station for the public address system. All loading line pressures are displayed on a panel. The public address system provides communication with each transfer location or berth office. The dock emergency shutdown system may also be operated from the control centre.

Cargo Handled and Shore Installations: Berth No. 1 handles nearly all products except lubes and some chemicals. It is also the primary berth for receiving crude oil.

Berth No. 2 handles specialties, chemicals, carbon black, asphalt and wax. Caustic soda is not handled at this berth.

Berth No. 3 handles clean products, lubes, chemicals, carbon black and dirty products.

Berth No. 4 handles clean and dirty products, chemicals and carbon black.

All berths can handle crude.

Pipe-lines range from 4 in. to 24 in.

Berthing: The River Pilot berths the vessel starboard side to.

Approach to Berth No. 1 should never be attempted from directly below the dock, due to a shoal area. This shoal area is known to the Pilots and must be given a wide berth. The Pilot should be consulted as to the exact location of the shoal area.

Vessels should approach dock at dead slow ahead and as parallel to it as possible.

All vessels over 30,000 d.w.t. must use 2 tugs for docking and undocking. Light vessels under 30,000 d.w.t. must dock and undock with at least 1 tug. A bow thruster does not substitute for a tug. A normal mooring configuration should be used with additional head lines due to the river current. Minimum mooring requirements are 4 bow lines, 2 breast lines, 2 forward springs, 2 after springs and 2 stern lines. Mixed moorings in the same direction are discouraged.

When the Baton Rouge River gauge is 30 ft. and above, vessels greater than 30,000 d.w.t. must use a minimum of 6 bow lines plus 2 breast lines. In addition, all vessels over 60,000 d.w.t. must be attended by a tug actively pushing on the bow until the vessel has discharged 75% of its cargo.

When the Baton Rouge gauge is above 40 ft. a tug is required during entire time vessel is alongside Berth No. 1, regardless of ship size.

In the event of an emergency, tugs are readily available within 15 minutes. Tugs can be contacted via VHF Channel 13.

Mooring: Mooring is provided through the use of fairleads and quick release hooks at all of the ship berths. These hooks are rated at 38 tons and 50 tons throughout the berths.

The refinery provides a line handling crew for each ship berthing/unberthing. The line handling crew is assisted by electric driven capstans. This service is provided at no extra charge to the vessel.

Normal mooring line sequence: Forward springs, head and forward breast lines, after springs and stern lines. It is the ship's responsibility to provide all mooring equipment.

Terminal monitors mooring throughout operations and provides each vessel with a standard mooring plan.

Terminal has no requirements to limit wind area of vessel; however, in the event of unexpected high winds, vessel may be required to ballast down.

Manifold Criteria: The vessel's manifold must not be allowed to get more than 42 ft. above or below the dock deck. When connected to a vessel, the end of the arm should be positioned between 13 ft. and 19 ft. from the edge of the vessel if the 12 in. loading arms are used; between 4 ft. and 10 ft. for the 8 in. arms. The vessel's flanges to which the arms are to be connected must be spaced at least 3 ft. 6 in. apart and be vertical and parallel to the vessel's side. The vessel's flange should be no more than 3 ft. from the last permanent support and it should be attached to that support.

Before a vessel arrives at the dock, vessel personnel are advised of the size of flanges needed for connection to the loading arms or hoses.

Dock Communications: The Baton Rouge dock is equipped with a positive ship-to-terminal radio communications system. On arrival, vessel will be provided with a radio for which a signed receipt is required. The radio must be monitored by the English-speaking person in charge at all times. The ship's personnel will be instructed in the proper use of these radios at the time of receipt. If these radios are not returned in good condition, a charge of $2,000 will be levied against the vessel.

Each berthman is equipped with a portable radio on the same frequency as the radio provided to the ship. This will be the primary means of communication.

The main control centre for the entire dock is equipped with telephones, a radio on the same frequency as the berthman and an AM/FM marine radio with Channels 9, 16, 18 and 22.

Bunkers and Fresh Water: Bunker C, diesel and fresh water are available.

Ballast Facilities: Ballast facilities are limited to 20,000 barrels.

DENSITY: No tide – fresh water at all times.

FRESH WATER: At public docks. At Exxon, water available for flat fee, presently $300. Ship's crew to make water connections.

FUEL: All grades subject inquiry. Barging essential.

No fuel available at Exxon.

FIRE PRECAUTIONS: Usual fire lines and sprinkler systems. Fireboat "Exxon Bayou State" on station.

Ship's fire plan should be available at gangway.

CONSULS: Norwegian only, all other consuls at New Orleans – 85 miles distant.

REPAIRS: All types of deck and engine repairs may be carried out.

At Exxon, no repairs allowed without permission from terminal. Vessels shall be able to get underway as soon as possible.

SURVEYORS: *Testing, Sampling, Weighing and Cargo Certification:*

Caleb Brett USA Inc., P.O.Box 46039, Baton Rouge 70895. Tel: 927-0020.

Chas. Martin, Inspectors of Petroleum, 2835 Plank Rd., Baton Rouge. Tel: 355-8833.

Pittsburgh Testing Lab., 2166 Monroe Ave., Baton Rouge. Tel: 355-2641.

Saybolt, E. W. Co., 10023 Mammoth Avenue, Baton Rouge. Tel: 925-1231.

Transport Management & Consulting, Inc., 4137 Sherwood Forest Blvd., Suite 110, Baton Rouge 70816. Tel: 293-3025.

USDA, FGIS, Port Allen. Tel: 389-0373.

USDA, FGIS Field Office, Lutcher. Tel: 536-2811.

Marine Surveyors:

McAnally Engineering Co., Box 66012, Baton Rouge 70809. Tel: 766-8992.

National Cargo Bureau, 7414 Perkins Rd., Suite 180, Baton Rouge. Tel: 769-6353.

GANGWAY/DECK WATCHMEN: Only if Master requires.

OPENING/CLOSING HATCHES: Depending on terms of charter, usually by ship's crew.

CUSTOMS ALLOWANCES: Tobacco, each crew member allowed 1 carton cigarettes. Master allowed reasonable quantity. Wine and/or Spirit, each crew member allowed 1 bottle each of wine and spirits. Master allowed reasonable quantity.

CARGO GEAR: Safety Certificate required for ship's gear.

REPATRIATION: Crew repatriation and crew changes may be made.

AIRPORT: 6 miles to Ryan Airport, served by regular airlines.

TIME: Local time is Central Standard Time – GMT minus 6 hours; from April through October local time is CS daylight saving time, GMT minus 5 hours.

POLICE/AMBULANCE/FIRE: Tel. Nos. Public Dock: Police 343 – 9234; Ambulance 343 – 6691; Fire 343 – 6691.

TELEPHONES: No arrangements for placing telephones aboard.

SERVICES: Because of restricted river width inadvisable adjust compasses. This is usually accomplished below New Orleans where river of sufficient width to permit large vessels to swing. 3 firms engaged in tank cleaning, namely, Watson Marine, Robin Hood Fleeting and Port Allen Marine Cleaning Plant. Slop facilities available at the Exxon Oil & Refining Co. dock.

SHIP SUPPLY SERVICE: *Launch Service:*

Capital Marine Supply, Inc., Box 3018, Baton Rouge. Tel: 343-8379.

Tri-G Marine Supply, Inc., Box 3808, Baton Rouge. Tel: 344-7664.

SHORE LEAVE: Shore leave permitted except when detained aboard by U.S. Immigration.

IDENTIFICATION CARDS: Usual Passports.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Collection service available through Browning-Ferris Industries (Tel: (504) 356-2478). Garbage disposal boxes and liners are available at $2.00 each. Disposal of each box is $49. 24 hours notice is required before providing this service, collection as required. The boxes can be placed on board. The vessel's agent will make all the necessary arrangements with Browning-Ferris Industries.

WASTE OIL DISPOSAL: Waste oil will be received by Port Allen Marine Services Inc., for disposal. 24 hours notification period is required. The barge will come alongside the vessel to receive the waste oil and has the capability to pump from the vessel. The cost of this service depends on the mixture to be disposed of. The agent will make the necessary arrangements for this service.

SEAMAN'S CLUBS: A Seaman's Center is located on port property and a minibus is provided for transportation to and from the Center. The facility has indoor recreation such as table tennis and pool tables. Transportation is provided to the various locations within the area for shopping. International telephone service is available. The Seaman's Center is a function of the Ministries to Internationals. Judson Baptist Association located in Baton Rouge. Tel: (504) 927-6500. Rev. Joel Hilburn is the Center's coordinator who will arrange for seaman's activities at the Center.

CURRENCY: U.S.Dollar (U.S.$).

DELAYS: Normally no delays at Exxon Oil docks in berthing except when vessel's tanks unsuitable for loading. Normally no delay at city wharf.

Vessels loading Isopropanol Alchohol must have tanks approved before berthing.

NOTICE: To all Masters from a Ship's Agent:

Please be advised that the Agent will need a copy of the Notice of Readiness and Dry Tank Certificate. The Agent will pick these two certificates up from the Master on sailing of vessel. These are needed by the Agents to send out to the Owners and/or Charterers along with the other documents. We have been having problems receiving these documents from the terminal and/or Cargo Surveyor. The terminal will require, on the vessel's arrival at the berth, one copy of the Bill of Lading and/or Customs Manifest. It would be appreciated if you could make an additional copy of these documents when they are prepared by your vessel.

GENERAL: Tankers in ballast advised of drift wood conditions in river and ballast their vessels accordingly so as to avoid propeller damage.

AUTHORITY: Port of Greater Baton Rouge, P.O.Box 380, Port Allen, Louisiana 70767-0380, U.S.A. *Tel:* (504) 342-1660. *FAX:* (504) 342-1666. *Contact:* Gary C. Pruitt, Executive Director. Wesley Knox, Director of Trade Development. Richard Savoy, Director of Terminal operations.

BAYTOWN, Texas: 29.44 N. 95.01 W. (See Plan)

DOCUMENTS, PILOTAGE, etc.: Refer to "Houston".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO/VHF: Exxon Dock "KNQ-Baytown" on VHF Channel 19.

TUGS: Required. Tel: 713-928-5406.

BERTHING: All berths at Baytown 40 ft. (Fresh water). Agent should verify safe arrival/departure draft with Exxon Docks prior vessel arrival.

STEVEDORES: Available. Call L. S. Mitchell Co. Tel: 713-426-4575.

MEDICAL: All medical assistance available.

TANKERS: *Caution:* Channel traffic which is passing close by could cause ships to move away from the berths which could result in damage to the hard arms. It is essential that more than usual attention be given to maintaining the ship in position alongside. It is recommended that several crew members be specifically assigned to tend the mooring lines and winches.

Under no circumstances should mooring lines be slack.

The terminal prefers the use of self-stowing winches with mooring wires.

Berthing: Tugs of up to 4,000 h.p. and bollard pull of up to 60 tons are available. Tugs use the "alongside" method. Tugs normally use a head line and quarter line; however, larger tugs will usually use 2 head lines.

By pre-planning discussions with the Pilot, Masters are to assure themselves that a sufficient number of tugs, each with sufficient horsepower, are ordered well in advance by the Pilot.

Depending on the size and draft of the vessel, 2 – 4 tugs will meet the vessel in the vicinity of the tunnel about 1 mile below Baytown and escort the vessel into the turning area. Vessels scheduled to Berth No. 1 will moor starboard side to, bow up stream. Vessels at Berth No. 2 will be turned about and moor port side to. Vessels scheduled to Berths No. 3, 4, 5 or 6 will be turned and backed into the berth, bow out. There are virtually no exceptions to these mooring rules. Winch mounted wires are preferred, however, mooring ropes are acceptable. Additional lines will be required for vessels not equipped with all wire moorings. Vessels are passed close to by ships transitting the Ship Channel, therefore, all moorings must be well-tended and tight.

Tidal height is monitored by the Baytown Dock Co-ordinator. This information may be obtained prior to berthing by calling KNQ Exxon on VHF Channel 19.

This information is particularly important when turning ship and backing into Berth No. 5.

Exxon Berth No. 1: Vessels assigned to this berth must dock starboard side to, bow upstream.

Products handled at this berth include gasolines, distillates, lube oils, and various petro-chemicals. All products are handled through 4 in., 6 in. or 8 in. hoses. All hose connections are bolted-type connections. Maximum pressure that all products are pumped at is 100 p.s.i. Ballast and slops are handled at this terminal. Maximum pumping pressure for ballast and slops is 100 p.s.i.

Exxon Berth No. 2: Bow to manifold should not exceed 320 ft. and stern to manifold is limited to 400 ft. due to berth overhang and interface with Berth No. 3.

Vessels assigned to this berth must dock port side to, bow downstream.

Products handled at this berth include gasolines, distillates, lube oils, and various petro-chemicals. All products are handled through 6 in. or 8 in. hoses. All hose connections are bolted-type connections. Maximum pressure that all products are pumped at is 100 p.s.i. Ballast and slops are handled at this terminal. Maximum pumping pressure for ballast and slops is 100 p.s.i.

Exxon Berths No. 3 and 4: Berth No. 3 has a beam restriction o and Berths No. 3 and 4 have a restriction of maximum displaceme 50,000 tons.

Vessels assigned to these berths are backed alongside the ber then pushed by tugs against the dock. Extreme care should be not to approach the berth at too great an angle, and every effort s be made to manoeuvre into position prior to making contact w breasting works. 2 or more tugs are required depending on vesse and weather conditions.

Vessels always manoeuvre stern first into the slip utilising the tu area adjacent to the docks. Vessels are moored starboard side to B No. 3 and port side to Berth No. 4.

Winch mounted wires are preferred, but ropes are acceptable. U the spring lines are taken first followed by the stern then bow moo

Berthing of vessels at Berth No. 4 is predicated by the presence ship or tows at adjacent Berth No. 5. Terminal regulations are ba upon the sum of the beam of vessels in adjacent berths to allow suff room for manoeuvring.

Products handled at Berth Nos. 3 and 4 include motor fuels, avi fuel, distillates, solvents, petro-chemicals and bunkers. All products transferred through 6 in., 8 in. and 10 in. hoses, and 12 in. a Maximum pumping pressure for all products is 100 p.s.i. Ballast slops are handled at both berths.

Exxon Berths No. 5 and 6: Vessels always manoeuvre stern first the berth, utilising the turning area adjacement to the berth. 3 or 4 are usually used to assist the vessel, depending on vessel size weather conditions. Vessels are moored starboard side to Berth N and port side to Berth No. 6. Products handled include crude oil, pro gas oil and fuel oil. Products are transfered through 8 in. and 1 hoses. Max. pumping pressure for all products is 125 p.s.i.

Docking: There is a large round mooring dolphin at the head of finger-pier forming Berth Nos. 5 and 6 where loaded 80,000 – 90 d.w.t. vessels normally berth.

Although this dolphin has a fender system its sole purpose is to pro mooring points. It is not suitable to land on nor can it be used a turning dolphin. On several occasions ships have come into contact this structure resulting in both hull damage and damage to struc itself.

To prevent recurrence of such incidents it is necessary that the Mas

1. Before the berth approach is made reviews with the Pilot intended docking manoeuvres which provide the widest possible t to the mooring dolphin.

2. Monitors the docking manoeuvre carefully and plans corre action in a timely fashion so that ship's contact with the dolphin wi prevented.

Tug Assistance: 3 tugs of minimum 3,000 h.p. each are to be used loaded 80,000 + d.w.t. vessels. The tugs making fast on the out side – not facing the berth – should use 2 headlines and a quarter

The Master should include these tug requirements in his first E message to the port Agent and ask for confirmation that a arrangements have been made.

Tidal Information: Having knowledge of tidal conditions in the Bayt area is of particular importance with regard to the docking manoeu

Information on the velocity and direction of the current shoul obtained from the Pilot.

Water level information should be obtained from the Baytown D Co-ordinator by VHF radio.

DENSITY: Mainly fresh.

FRESH WATER: Available ex-wharf.

FUEL: No bunkering by barge.

REPAIRS: Should be cleared with terminal before vessel arrives at d

GANGWAY/DECK WATCHMEN: Required only if crew detained Immigration.

CUSTOMS ALLOWANCES: Each man 300 cigarettes or 100 cigar 1 lb. tobacco; 1 quart wine/spirits.

STORING: Permissible with advance notice/approval.

SHORE LEAVE: No restrictions. Terminal bus transports crew f dock to refinery entrance.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. (Albany). Service available. Contact BFI - Tel: 635-6225.

WASTE OIL DISPOSAL: Ballast system can only handle clean bal

SEAMAN'S CLUBS: None.

AUTHORITY: Port of Houston Authority.

Operator: Exxon Company, U.S.A., P.O.Box 3950, Baytown, Te 77520, U.S.A. *Tel:* (713) 425-4452, 425-4453. *FAX:* (713) 425-3 *Contact:* Dock Co-ordinator.

BEAUMONT, Texas: 30.05 N. 94.05 W. **(See Plan)**

LOCATION: On Neches River, above Sabine Lake.
DOCUMENTS, PILOTAGE, RADIO, etc., Refer to "Port Arthur".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Meet vessel in Neches River before arriving at berth. Normally 2 tugs used for docking, 1 for undocking.
BERTHING:

Wharf	*Length* (ft.)	*Depth* (ft.)	*Remarks*
1	580	30	
2, 3 and 4	1,373	38	Ro-Ro Ramp
5, 6 and 7	1,483	36	
Harbour Island Marine Terminal	1,200	40	Ro-Ro Ramp
Carroll St. Wharf	1,165	40	
Grain Wharf	543	40	3.5 million bushel grain elevator Loading Rate: 1,875 t.p.h. (grain); 1,100 t.p.h. (soya).

CARGO HANDLING FACILITIES: For container ships, conventional break-bulk ships, heavy lift ships or side-loading Ro-Ro ships, the Harbour Island Marine Terminal – 1,200 linear ft. berthing space; 150,000 sq.ft. transit shed; 93 ft. wide apron facing transit shed; 18 acres heavy duty hard stand adjacent to wharf; twin marginal rail tracks for full length of wharf; 220 ton capacity truck-mounted mobile crane for containers and heavy lifts; 40 ton forklift machine with, expandable spreaders for container handling and 3-high container stacking or, blades for heavy cargo; 780 ft. undercover working track for all-weather rail car unloading inside transit shed; 40 linear ft. of truck height unloading platform along rear of open wharf; 20 ft. high × 18 ft. wide shed doors for high wide loads and entry for all-weather truck unloading or container stuffing; 40 ft. of water alongside; 1,200 lb. per sq. ft. deck load capacity.

Carroll Street Wharf extension, recently constructed, provides an additional 700 linear ft. of open dock and berthing area. This facility also provides an additional 600 linear ft. of barge docking area and 40 linear ft. of truck height unloading platform on open dock.

For stern loading Ro-Ro vessels, wharves 2 and 3 – 758 ft. in length with 75 ft. wide Ro-Ro platform at one end of the wharf. Ro-Ro platform deck elevation +15.89 ft. above mean low Gulf. (12 ft. 7 in. above average tide) 36 ft. of water alongside wharf; convenient roadway access to Ro-Ro platform from 15 acre storage area adjacent to the wharf; double marginal rail tracks for full length of wharf; 60 ton capacity gantry crane travels 700 ft. along face of wharf; 120,000 sq. ft. open wharf space; wharves 2 and 3 may also be used as an alternate to Harbour Island Wharf for containers, conventional break bulk, heavy lift or side loading Ro-Ro vessels. Covered wharf 4 is adjacent, extending total wharf length to 1,300 ft. and offering 57,000 sq. ft. covered area.

For security of cargo, all Port of Beaumont wharves are entirely within a chain link, barbed wire topped security fence, and all vehicular access is through the port's main gate, guarded 24 hours a day. The port is an approved outport of the Military Traffic Management Command, Eastern Areas, U.S. Army, is heavily used for shipments of military material, equipment and supplies, and is subjected to regular security inspections by Army personnel who have given the port high ratings.

For security of small, high value items that are considered especially subject to possible pilferage, the port will permit fencing and shelving of a limited designated security area within a transit shed.

For heavy lift requirements beyond the capacity of the 60 ton gantry (at Wharf No. 2 & 3) or the 220 ton mobile crane (at Harbour Island Marine Terminal), a 500 ton capacity derrick barge is available.

STEVEDORES: *Public Wharves:* Normal working hours 0800/1200 and 1300/1700 Monday to Friday.
MEDICAL: All facilities available.
TANKERS: *Amoco:* Terminal is located on the Neches River Channel 44 miles from the sea buoy. The controlling depth for the channel and turning basin is 40 ft. while the controlling depth for the North and South berth is 35 ft. The water is fresh (density 1000). The maximum size vessel normally received at the terminal is approximately 28,000 d.w.t. The limited strength of the docks combined with passing traffic should be noted. Vessels dock and undock day and night. A minimum of 2 tugs are used to dock and undock vessels. Pilings are not to be used as turning points. Vessels in ballast are turned prior to berthing starboard side to. Loaded vessels are berthed port side to and turned after discharge. Judicious use of tugs during turning manoeuvres is essential as vessels have a tendency to "overshoot" the pier when turning. Several mooring dolphins have been knocked out of position. Short wire springs are accepted. All other lines must be rope due to the weak pile clusters. Docks do not have winches nor do they supply a gangway.

Fuel and water are not available.

The terminal is fenced and guarded.

Pollution Control: Consists of 2,000 ft. of spill booms and a launch. Amoco is a member of Neches River Oil Control Committee.

Fire Protection includes a foam system with a tank on the dock. Water monitors and hoses are kept in readiness.

Mobil: Terminal is located on the Neches River Channel 56 miles from the sea buoy. The controlling depth for the channel and turning basin is 40 ft. The water at the terminal is brackish. The maximum size vessel normally received at the terminal is 50,000 d.w.t. Depth alongside 36 ft. The berths are subject to passing traffic and Master's are advised to keep mooring lines tight. No repair work may be done while transferring cargo at this port.

While berthing, a minimum of 2 tugs are used. 1 tug is needed when unberthing. 3 hours advance notice is required when ordering tugs.

Vessels normally proceed to the berth directly from the channel, prior communications establish whether ship will berth head-up or head-down the channel depending upon the LOA and hose connections. Ships can berth starboard side to; however, port is preferred. A normal complement of mooring lines is used. Wire lines are accepted with nylon pendants recommended. A mooring contractor is employed. The vertical range of hoses is 40 ft., 50 ft., if vessel uses its own derrick.

Fuel and fresh water are available at the Mobil Terminal.

The terminal is fenced and guarded.

Pollution Control consists of 1,500 ft. of spill boom and a launch. Terminal has vacuum trucks.

Fire protection is provided by a terminal fire brigade. Monitors are situated on the shore, foam and water along with dry chemical are located on the dock. Fire hose is on reels, water is under pressure and spray nozzles are located under the wharf.

Also see "Smith's Bluff".

DENSITY: Fresh water.
FRESH WATER: Available at berths, or by barge.
FUEL: Available ex-wharf at Mobil Terminal. All grades available by barge to other locations.
CONSULS: Nearest at Houston.
REPAIRS/DRY DOCKS: Beaumont's Trinity Shipyard offers all types ship repair or reconditioning – plus vessel conversion and jumboizing. 2 side-launching ways over 800 ft. each. Floating dry dock with extreme length of 648 ft.; length on bottom 576 ft.; breadth at entrance, 87 ft.; and lifting capacity 17,500 tons. Active in design and construction of mobile drilling platforms and oil and gas production and storage facilities for service offshore.
GANGWAY/DECK WATCHMEN: Not required unless crewmen detained by Immigration.
CUSTOMS ALLOWANCES: 300 cigarettes and 1 quart wine/spirits for each man.
HOLIDAYS: Longshore holidays are: New Year's Day: Martin Luther King's Birthday (January 15th); Lincoln's Birthday (February 12th); Washington's Birthday; Texas Independence Day (March 3rd); St. Patrick's Day (March 17th); Good Friday; Memorial Day (last Monday in May); Emancipation Day (June 20th); Fourth of July; Labour Day; Columbus Day; Veteran's Day (November 11th); Thanksgiving Day; Christmas Day.
IDENTIFICATION CARDS: Foreign crew require only Immigration landing permit.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Service provided by Browning-Ferries Ind. Waste Systems, 100 Ginger St. & Hwy. 69, P.O.Box 1056, Nederland. Telex: 77627. Services provided: Shoreside and ship generated garbage collection alongside as required. Collection service provided. Reference: MARPOL Annex V. No monies involved.
WASTE OIL DISPOSAL: Service available from Carotex Inc., 110 Yacht Club Rd., P.O.Box 3901, Port Arthur, Texas 77642. Services provided: Provide for the receipt of oily waste from ships at the Port of Beaumont in accordance with MARPOL 73/78 (33CFR 154-156) Annex V.
SEAMAN'S CLUBS: Beaumont International Seamen's Center, Port of Beaumont, Harbor Island Terminal, Beaumont, Texas. Tel: (409) 833-8931. Services available: International telephone services, minibus transportation, postage service, games available, library books, give-away bibles all languages, snacks available free of charge.
CURRENCY: U.S.Dollar (U.S.$).
AUTHORITY: Port of Beaumont, P.O.Drawer 2297, 1255 Main Street, Beaumont, Texas 77704, U.S.A. *Tel:* 409-835-5367. *FAX:* 409-835-0512. *Contact:* Billy G. Masters, Port Director.

BELLINGHAM, (Including Cherry Point), Washington: 48.45 N. 122.31 W. **(See Plan)**

DOCUMENTS: Refer to "Tacoma".
PILOTAGE: Compulsory.
ANCHORAGE: Deep water available, but poor holding ground.
RESTRICTIONS: Channel depth 32 ft.
HEALTH: See "Health: All Ports" before first U.S.A. Port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Available, join vessel in Bellingham Bay.
BERTHING: Whatcom International Shipping Terminal, Berths No. 1 & 2, length 1,400 ft., depth alongside 31 ft. MLLW. Berth No. 3, length 400 ft., depth alongside 25 ft. MLLW. Georgia Pacific Dock, Berthing length 600 ft., depth alongside 28 ft. MLLW. Ro-Ro facilities available within the port.
STEVEDORES: 8 local gangs. Additional gangs imported if required.
MEDICAL: All medical facilities available. 2 local hospitals.
TANKERS: Cherry Point: 48° 52′ N., 122° 30′ W. 3 oil jetties.

Arco Jetty: Depth 70 ft.
Intalco Jetty: Depth 37.5 ft.
Mobil Jetty: Depth 43 ft.
Deadweight limit in Puget Sound is 125,000 tons.

DENSITY: Salt water.
FRESH WATER: Available at all wharves.
FUEL: Available. Barge delivery only.
REPAIRS/DRY DOCKS: *Fairhaven Terminal:* Home to Maritime Contractors, Inc., large vessels repair and the Port's 2,800 ton capacity floating dry dock, which can accommodate vessels up to 116 m. length and 18 m. beam. 1×50 ton floating crane.
GANGWAY/DECK WATCHMEN: Required only if detainees aboard.
CUSTOMS ALLOWANCES: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.
AIRPORT: 3 miles from the city.

HOLIDAYS: See "Tacoma".
TELEPHONES: Available.
GARBAGE DISPOSAL: Ship's Agent makes arrangements.
WASTE OIL DISPOSAL: See above.
SEAMAN'S CLUBS: None.
AUTHORITY: Port of Bellingham, P.O.Box 1737, 625 Cornwall Avenue, Bellingham, Washington 98227-1737. *Tel:* (206) 676-2500. *FAX:* (206) 671-6411, 738-0282. *Contact:* Jim Darling, Executive Director.

BENICIA, California: 38.03 N. 122.10 W. (See Plan)

DOCUMENTS: Health and all General Information: Refer to "San Francisco".
PILOTAGE: Port located about 25 miles above Golden Gate Bridge. River Pilot joins at San Francisco, using VHF for traffic information. Passage includes passing under 2 bridges, Carquinez Strait Bridge having the least clearance, with 146 ft. (HW) and 151 ft. (LW) (using North Channel). River passage is timed to arrive at Benicia at the first of ebb tide; this is approximately 2.5 hours after HW at Fort Point (Golden Gate).
ANCHORAGE: At San Francisco.
RESTRICTIONS: Tankers must lighten to 36 ft. fresh water draft. This is done at No. 7 Anchorage, 1.5 miles East of Alcatraz Island. This cargo will later be pumped back to the tanker as barges cannot overcome shore back pressure. Turning basin off the berths, radius 1,800 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to San Francisco Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: 1 small tug assists berthing. Only 1 normally required for unberthing.
BERTHING: Continuous wharf 2,404 ft. long with berth for 3 vessels. The West berth is used for the loading of petroleum products, and the centre and East berths are equipped for handling general and bulk cargoes. East of this facility is another berth that will accommodate one tanker for discharge of crude oil (Exxon), depth alongside – 38 ft.
MOORINGS: 2 head wires, 4 breasts and 2 springs forward. This is necessary because of current off the bank during ebb tide. 2 stern lines, 2 breast lines and 2 springs aft.
BULK HANDLING FACILITIES: Waterside silos' capacity 26,000 tons with loading conveyor belt capacity 1,000 t.p.h.
TANKERS: Crude oil discharge through 2×12 in. Chicksan arms and 36 in. shoreline, 2.5 miles long. Shore tanks are situated 164 ft. above sea level, initial back pressure 65/70 p.s.i.
FRESH WATER: Available from shore lines.
FUEL: Can only be delivered by barge. Averate rate 300 t.p.h.
DEVELOPMENTS: Current plans call for development of a complete container terminal.
AUTHORITY: Benicia Port Terminal Company, P.O.Box 315, Benicia, California 94510, U.S.A. *Tel:* (707) 745-2394. *FAX:* (707) 746-1485. *Contact:* J.A. Gaidsick, Vice-President.

BOCA GRANDE, Florida: 26.43 N. 82.15 W. (See Plan)

LOCATION: On the Eastern side of the Southern end of Gasparilla Island, about 60 miles South of Tampa Bay.
DOCUMENTS: See "Tampa".

Government Officials must travel from Tampa to Boca Grande at vessel's expense.

APPROACHES: The oil tanks are clearly indicated on the radar at approximately 25 miles distance.
PILOTAGE: Compulsory for all foreign-going merchant vessels. The Pilot boards vessel near the sea buoy. Pilotage available 24 hours a day.

Request should be made to ship's Agents via Tampa Marine Operator. VHF Channels 16, 12 and 13.

ANCHORAGES: Good holding ground near the sea buoy (Lat. 26° 39.8′ N., Long. 82° 19.6′ W.)
RESTRICTIONS: The channel is less than 300 ft. wide in some places. Project depth 32 ft. at MLW. The traffic is one way and vessels enter only when the stream is half strength or less. Strong Westerly winds may cause a swell which prevents vessels using the channel.
MAX. SIZE: Beam: 80 ft. with 24 ft. max. distance from outside ship's hull to inside hatch coaming.

Draft: 28 ft. recommended by Pilots. The channel is 30 ft. deep at MLW.

Length: 700 ft. should be a maximum.

HEALTH: Same procedure as for any other U.S. port.

A U.S. Public Health physician is located on the island.

RADIO: Tampa Radio – WPD.
VHF: Pilots on VHF Channels 16, 12 and 13. U.S. Coast Guard on Channel 16.
TUGS: A small tug for light towing operations is available.
BERTHING: An oil handling berth with 28 ft. depth is located close Southward of the phosphate pier.
TIDES: Approximately 2 ft. variation.
TANKERS: *Oil Terminal:* Depth 28 ft.

Vessels enter and berth only when currrent is at half strength or The strength of the current has been reported to reach 4 knots. current generally flows in 030°–210° direction, although the flood varies in direction. The pier face lies in a 060°–240° direction. A ve uses an anchor to swing around and then to hold its head up int current while mooring lines are run out to mooring buoys and breasting cells. 2 mooring buoys forward for headlines and 2 moo buoys aft for stern lines are used. A total of 14 mooring lines are requ to safely tie up. Wires are permitted as spring lines only. Lines mu carefully tended and maintained in a tight condition with vessel alongside at all times.

Also see "Berthing".

DENSITY: Salt water.
FRESH WATER: Available.
FUEL: No local facilities. Prior arrangements with ample notice mu made via the ship's Agent at Tampa.
CONSULS: See "Tampa".
REPAIRS: No local facilities. To be arranged via Agents with a notice.
SURVEYORS: The nearest Lloyds' office is at Jacksonville. Amer Bureau available from Tampa.
STORES AND PROVISIONS: No facilities available for normal chandlering. Prior arrangements should be made via Tampa.
GENERAL: All agents are based at Tampa, about 100 miles by ro

- 3 copies Cargo Manifest (Form 1302), 2 copies showing all carg board, and 1 copy showing only cargo for this port.
- 3 copies Crew Manifest (Form 1304).
- 3 copies Stores List (Form 1303).
- 3 copies Passenger List (Form I-418).
- 3 copies Crew List (Form I-418).

Customs Boarding Officer will also examine Ship's Register, Sa Equipment Certificate and Load Line Certificate. In addition, the follo documents will be required for formal entry to be made within 48 ho of arrival from abroad, or 24 hours from arrival from a United Sta Port:

- General Declaration (Form 1301).
- Health Pratique.
- Master's Oath (Customs Form 1300).
- All foreign clearances.
- Certificate of Financial Responsibility (Oil Pollution).
- U.S. Certificates of payment of tonnage tax (Customs Form 10
- Certified Crew List.

PILOTAGE: Pilotage is compulsory for all foreign vessels, with exceptions, and for United States vessels under register in foreign tr It is optional for coastwise vessels which have on board a Pilot licen by the Federal United States government for these waters.

Pilot boats meet vessels within sight of Boston Lighted Horn Buo During Winter, with a Northwesterly wind, pilot boats may meet ves to the Northwestward of Boston Approach Light Buoy BG. Pilot bo often land or pick up Pilots at the town wharf at Nahant Harbour.

Both the 70 ft. (21.3 m.) "Boston Pilot" and the 52 ft. (15.8 "Thomas Knox" have black hulls with the word "Pilot" in black le on either side of the white superstructure. Both are equipped with ra and maintain a 24 hour radio watch on VHF Channel 16 and a 070 1800 hrs. watch on VHF Channel 11.

Vessels are asked to give a 4 hour advance notice of their tim arrival. Pilots for Weymouth, Quincy, Lynn and Saugus are obta from the Boston pilot boat. Pilots can be notified by radio, telegrap by radiotelephone through the Boston Marine Operator.

Boston Pilots: Pier 1, Bremen Street, East Boston, MA. 02 Tel: (617) 569-4500. Cable: BOSPILOT.

ANCHORAGES:

ANCHORAGE No. 1. *Upper Harbour Anchorage:* Steam and m vessels permitted to anchor in this basin anchor within the follo area: S.E. of a line bearing 205° True from N.E. corner of Boston Albany Pier No. 5, East Boston; N.E. of a line bearing 122° True S.E. corner of Lewis Wharf, North Pier; S.W. of a line bearing 292° from N.E. corner of Southernmost Airport Approach Pier; N.W. of a bearing 025° True from Buoy No. 12, Fl.R.6 sec.

ANCHORAGE No. 2. *President Roads Anchorage* (40 ft. anchora All vessels anchoring in this basin anchor within an area beginn a point bearing 237°, 522 yards from Deer Island Light; thence to a p bearing 254°, 2,280 yards from Deer Island Light; thence to a p bearing 261°, 2,290 yards from Deer Island Light; thence to a p bearing 279°, 2,438 yards from Deer Island Light; thence to a p bearing 319°, 933 yards from Deer Island Light; thence to a point bea 319°, 666 yards from Deer Island Light; and thence to point of begi *President Roads Anchorage* (35 ft. anchorage): All vessels anch in this basin anchor within an area beginning at a point bearing 2,603 yards from Deer Island Light; thence to a point bearing 258°, yards from Deer Island Light; thence to a point bearing 264°, 3,967 from Deer Island Light; thence to a point bearing 261°, 2,290 yards Deer Island Light; and thence to point of beginning.

ANCHORAGE No. 3. *Nantasket Roads Anchorage:* Vessels anchoring in this anchorage basin anchor within following area: Westerly of a line bearing 143° from wharf at Gallups Island to Bell Buoy No. 2, S.W. of Georges Island; Northerly of a line bearing 260° from Bell Buoy No. 2, Georges Island, to the Northerly end of Rainsford Island; Northerly of a line bearing 273° from the Northerly end of Rainsford Island to Bass Point, Long Island; Southerly of a line bearing 270° from the wharf at Gallups Island to Long Island.

ANCHORAGE No. 5. *Peddocks Island and Explosive Anchorage:* Vessels anchoring in this anchorage basin anchor within following area; S.W. of a line bearing 122° True from the Easterly end of Rainsford Island to the N.E. end of Rainsford Island to the N.E. end of Peddocks Island, N.E. of a line bearing 165° True from the Westerly end of Rainsford Island to the S.E. end of Peddocks Island.

RESTRICTIONS: There are 3 main entrance channels from sea to President Roads.

Broad Sound North Channel from Broad Sound to President Roads from N.E. Dredged 35 ft. deep and 1,500 ft. wide and is deepened to 40 ft. in a width of 900 ft. to 1,100 ft. It is well marked by lighted buoys.

Broad Sound South Channel from Broad Sound S.W. and Westerly to President Roads. Dredged 30 ft. deep and 1,200 ft. wide. This channel is well marked by buoys and ranges but most aids to navigation are not lighted.

The Narrows is channel leading into Boston Harbour from S.E. between Boston Lighthouse and Lovells Island on the N.E. and Point Allerton, Georges Island and Gallups Island on S.W. Depth is 27 ft. Width is generally 1,000 ft. except in a section between Narrows Light and Georges Island where shoaling on N.E side limits it to 700 ft. Channel is well marked.

The Main Ship Channel of Boston Harbour extends from President Roads to the mouths of the Chelsea and Mystic Rivers and to Charlestown Bridge on the Charles River. Channel has been dredged 35 ft. deep and 1,200 ft. wide to the inner end where widths decrease near the river mouths. It has been deepened to 40 ft. for 600 ft. width from President Roads to the mouth of the Mystic River, with a widening to 1,200 ft. at the bend just Northerly of Commonwealth Pier No. 5, South Boston.

Charles River is approach by water to Cambridge and Watertown. About 0.5 mile above the lower bridge there is a dam with a lock 45 ft. by 350 ft. with depth of 17 ft. over the lower sill. Depths above dam decrease gradually to 9 ft., basin level, at head of navigation.

Mystic River is approach by water to Everett, Malden and Medford. Controlling depths are 35 ft., from Mystic River bridge to approximately 1 mile above, thence 20 ft. from the 35 ft. channel to 800 ft. above the Malden Bridge to a point abreast Monsanto Chemical Company plant.

Chelsea River is approach to City of Revere. Channel from entrance to a point opposite the Belcher Oil Co. Terminal has a controlling depth of 35 ft.

Weymouth Fore River is approach by water to Quincy and Weymouth. Controlling depth is 30 ft. to Fore River Bridge. Controlling depth for a distance of 2,800 ft. above Fore River Bridge is 30 ft.

Town River extends N.W. from Weymouth Fore River at Quincy Point. River has a controlling depth of 34 ft. from deep water in Weymouth Fore River to a point opposite the Quincy Oil Co. Terminal. Opposite Quincy Oil Co. Terminal there is a turning basin 34 ft. deep, 400 ft. wide and 1,000 ft. long.

MAX. SIZE: The primary entrance to Boston Harbour is via the North Channel and President Roads. Controlling depth is 35 ft. MLW. Average rise of the tide in Boston is 9.5 ft.

Generally speaking, vessels drawing 40 ft. are taken at the top of the tide to Belcher Oil Terminal and Exxon only. Vessels going to berths in the Mystic River above the Mystic River Bridge are limited by the bridge's vertical clearance of 135 ft. MHW.

Vessels consigned to berths in the Chelsea Creek are limited to a length of 661 ft., beam of 90.5 ft. and draft of 36 ft. high water docking. Furthermore, vessels which exceed 630.5 ft. length and 85.5 ft. beam going above the Chelsea Street Bridge are restricted to daylight docking. Daylight sailing is required from the berths above the McArdle Bridge if the vessel is over 585 ft. long.

As a rule, vessels are docked bow in at the Chelsea Creek berths. If docked between the bridges, departure is stern first through the McArdle Bridge. If docked above the Chelsea Street Bridge, then on sailing, the vessel is turned in the basin West of the B.P. and Belcher Terminals.

The controlling depth in the channel leading to Weymouth Fore River is 28 ft. MLW. Vessels with a max. draft of 33 ft. 6 in. will be taken at high water, but it should be noted that docking and undocking in Fore River are daylight operations – between sunrise and sunset – and no vessel longer than 628 ft. will be handled.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

RADIO: *Advance Notice of Arrival:* 24 hours advance notice of arrival be given. This notice is made to the office of the Captain of the Port – 223-3025.

The information to be provided consists of: Vessel's Agent's name; Vessel's name, type, flag, and call sign; the ETA; Berth; Last port and next port; Dangerous cargo on board. In return the Captain of the Port will assign a consecutive log number to the vessel.

In event the vessel's ETA is changed by more than 24 hours from first notice, the Captain of the Port should be so notified, identifying the vessel by its assigned log number.

VHF: The following VHF Channels are able:

Coast Guard, Boston pilot boat and shore station: 6, 10, 11, 12, 13, 14, 16, 21, 22, 23, 81 and 83.

Distrigas: 16 and 10.

In the event of an emergency, Channel 16 or 13 will be guarded.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Vessels can proceed from the sea to Boston Upper Harbour under own power. Barges usually left by the outside tugs at the anchorage grounds, to be docked later by harbour tugs.

Tugs up to 4,300 h.p. are available at Boston for towing, docking, undocking and shifting. Tugs maintain radio communications on VHF Channel 18. Inbound vessels are usually met in the vicinity of Anchorage Areas 1 or 2. Arrangements are usually made in advance through ship's Agents.

BERTHING: There are 114 piers or wharves in the Port of Boston. Many of them have railroad connections. The depths of water available alongside these terminals range up to a maximum of 40 ft. at mean low water. Practically all terminals fronting on main ship channel are in close proximity to storage warehouses, both cold and dry which greatly facilitates transfer of cargo between vessel and warehouse.

Conley Terminal, Castle Island, South Boston:

Operator – Massachusetts Port Authority. Tel. 973-5354.

Stevedore – John T. Clark and Son. Tel: 330-7810.

Type of Pier – Single face. 6 berths 3,705 ft. (Berths No. 11 – 16). Berths No. 12 – 15 handle break bulk general cargoes. Berth No. 11 – containers. Berth No. 16 – automobiles. 4 million sq.ft. open storage (including 32 acres fenced in automobile storage), total 103 acres. 50 ton crane, rail service. Terminal equipped with 2×40 ton gantry cranes and 1 × 30 ton Paceco portal crane.

Depth alongside at MLW – 40 ft.

Normal ship side to dock – Varies.

Line handling boat not required.

Access to vessel (for stores and repairs) – trucks to ship's side. Minimum 40 ft. apron.

Products handled – General cargo, containers.

J. F. Moran Container Terminal, Charlestown:

Operator – Massachusetts Port Authority. Tel. 973-5354.

Type of pier – Single face, 1,100 ft. long. 1×45 ton container crane, 1×70 ton container crane, 38,000 sq.ft. container stuffing shed, 50 acre container storage area, rail service.

Depth alongside at MLW – 40 ft.

Normal ship side to dock – Varies.

Line handling boat not required.

Access to vessel (for stores and repairs) – trucks to ship's side.

Products handled – Containers.

Boston Army Base, South Boston:

Operator – Port Terminals, Inc. Tel. 542-4500.

Type of Pier – Single face, three sides: South 3,705 ft., East 351 ft., North 964 ft., 950,000 sq.ft. covered storage, rail service, 2×27.5 ton rail mounted cranes.

Depth alongside at MLW – 35 ft.

Normal ship side to dock – Varies.

Line handling boat not required.

Access to vessel (for stores and repairs) – trucks to ship's side. 50 ft. apron incorporates rail lines.

Products handled – General cargo, containers.

Massport Marine Terminal – South Boston:

Owned and operated by: Massport, Maritime Department. Tel: 973-5391.

Adjacent to the former South Boston Naval Annex, this terminal features a 47 acre (19 ha.) site used for discharge and handling of automobiles; 800 ft. (244 m.) face; 38 ft. (11.58 m.) alongside depth; 16 ft. (4.88 m.) deck height; 750 lb./sq.ft. (340 kg./sq.cm.) load capacity. Railway track connection; stevedore equipment available as needed. An estimated 50,000 imported cars processed here yearly.

Black Falcon Cruise Terminal, South Boston:

Operator – Massachusetts Port Authority, Maritime Department. Tel. 330-1500.

Type of Pier – Single face, 600 ft.

Depth alongside at MLW – 32 ft.

Normal ship side to dock – Varies.

Line handling boat not required.

Access to vessel (for stores and repairs) – trucks to ship's side. 20 ft. apron incorporates rail lines.

Used for docking excursion vessels, and occasional passenger vessels.

Pier 1, East Boston: No cargo activity.

Operator – Massachusetts Port Authority. Tel. 567-0331.

Type of Pier – Single face, three sides: East and West 605 ft., South 390 ft., 196,000 sq.ft. covered storage.

Depth alongside at MLW – 35 ft.

Normal ship side to dock – Varies.

Line handling boat not required.

Access to vessel (for stores and repairs) – trucks to ship's side.

Coastal Oil New England, South Boston:

Operator – Coastal Oil New England. Tel. 284-4494.

Type of Pier – Single face.

Depth alongside at MLW – 40 ft.

Normal ship side to dock – Port (bow in).

Line handling boat – required.

Access to vessel (for stores and repairs) – limited, trucks can approach only to within 150 ft. of gangway or ship's side.

Products handled – Avjet, Heating Oil, No. 6 Oil, Molasses.

Size and number of pipelines – Numerous – 24 in., 20 in., 16 in., 12 in.

Bbls. per hour discharge capacity – 12,000 to 18,000.

Average distance to storage tanks – 1,000 ft.

Pollution control equipment – 1,600 ft. boom, 16 ft. boat, 300 absorbent pillows, 2,000 gallon pumpout truck.

Atlantic Fuels Marketing Corp., Chelsea:
Operator – Atlantic Petroleum. Tel. 729-3000.
Type of Pier – Timber pile, offshore.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Starboard (bow in).
Line handling boat not required.
Access to vessel (for stores and repairs) – by hand cart only.
Products handled – Heating Oil, No. 6 Oil.
Size and number of pipelines – 2 × 8 in.
Bbls. per hour discharge capacity – 6,000 to 8,000.
Storage tanks adjacent to berth.
Pollution control equipment – 1,000 ft. boom, 18 ft. boat, 50 absorbent pillows, 150 gallons Aqua-clene.
Note:– Bow to manifold 370 ft. No wire ropes used to moor vessel. Vessels require 3 tugs while docking, depending on the deadweight of the vessel. A minimum of 2 tugs are required for undocking. Caution is advised while docking and undocking due to traffic congestion in this area of the channel.

Exxon Company U.S.A., Everett:
Operator – Exxon Company U.S.A. Tel. Marine Department 387-1733, Marketing Terminal 381-2828.
Type of Pier – Timber pile wharf with caissons.
Depth alongside at MLW – 42 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – by rail-mounted hand cart.
Products handled – Asphalt, Chemicals, Diesel Oil, Jet Fuel, LPG, Kerosene, Gasoline, No. 2 and No. 6 Oil.
Size and number of pipelines – numerous.
Bbls. per hour discharge capacity – Up to 35,000.
Average distance to storage tanks – 5,000 ft.
Pollution control equipment – 1,500 ft. boom, skiff.
Vessels meet tugs and Docking Master off Castle Island and then proceed up the main channel. Vessels pass under the Mystic Bridge on the approach to the berth and then dock starboard side to. If the vessel is equipped with a bow thruster 2 tugs are required when docking and undocking, otherwise 3 tugs are required. The vessel turns on departure from berth. A gangway is provided by the Terminal.

Distrigas of Massachusetts Corporation, Everett:
Operator – Distrigas of Mass. Corporation. Tel. 381-9444.
Type of Pier – Single face, 165 ft. long, with 900 ft. berthing space with dolphins and use of adjacent wharves. Concrete platform contains 5 Chicksan Marine LNG unloading arms.
Depth alongside at MLW – 36 ft.
Normal ship side to dock – Port (bow out).
Line handling boat is required.
Access to vessel (for stores and repairs) is limited.
Products handled – Liquefied Natural Gas.

Prolerized New England, Everett:
Operator – Prolerized New England Company. Tel. 389-8300.
Type of Pier – Straight face.
Depth alongside at MLW – 36 ft.
Normal ship side to dock – Port (bow out).
Access to vessel (for stores and repairs) – trucks to ship's side, but access may be limited due to vessel's position at conveyor.
Products handled – Ferrous scrap (including Prolerized shredded scrap).
General notes: Pier is equipped with 2×50-ton cranes. Shredded scrap is loaded from fixed conveyor requiring vessel to be shifted as each hatch is served.

U.S. Gypsum, Charlestown:
Operator – U.S. Gypsum Co. Tel. 241-9100.
Type of Pier – Single face. (410 ft.).
Depth alongside at MLW – 27 ft.
Normal ship side to dock – Port.
Line handling boat not required.
Access to vessel (for stores and repairs) – access to berth.
Products handled – Gypsum rock from Nova Scotia, carried in company's own vessels, specially fitted and adapted for discharge at this berth. Silo storage 25,000 tons. Open storage 38,000 tons.

Mobil Oil, East Boston:
Operator – Mobil Oil Corporation. Tel. 567-9080.
Type of Pier – Straight face, with centre relieving platform.
Depth alongside at MLW – 32 ft.
Normal ship side to dock – Starboard.
Line handling boat required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Gasoline, Heating Oil.
Size and number of pipelines – Various.
Bbls. per hour discharge capacity – 8,000.
Average distance to storage tanks – tank farm adjacent to berth.
Pollution control equipment – 950 ft. boom.

Amerada Hess Oil Terminal – East Boston: (No cargo activity).
Owned and operated by: Amerada Hess Corp.
For receiving and shipping petroleum products; 20 ft. (6 m.) face, 296 ft. (90.2 m.) total berthing space with dolphins, 35 ft. (10.67 m.) alongside depth, 13 ft. (3.96 m.) deck height. Pipe-lines extend from wharf to 10 steel storage tanks with total capacity of 595,250 bbls.

Gibbs (B.P.) Oil Company, Revere:
Operator – Gibbs (B.P.) Oil Company. Tel. 289-4201.
Type of Pier – Timber pile, wooden deck.
Depth alongside at MLW – 10 ft. – 35 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – only by hand cart.
Products handled – Heating Oil, Gasoline.
Size and number of pipelines – 3×10 in., 2×12 in.
Bbls. per hour discharge capacity – 8,000 per line.
Average distance to storage tanks – 2,500 ft.
Pollution control equipment – 1,600 ft. boom, 16 ft. boat.
3 tugs are normally used for docking and undocking vessels a berth. Vessels normally dock starboard side to.

Belcher New England Ship Pier – Revere:
Owned and operated by: Belcher New England, Inc.
Used for receiving and shipping petroleum products, the South of pier has 600 ft. (182.88 m.) of berthing space; 37 ft. (11.27 m.) alongside depth; 15 ft. (4.57 m.) deck height. Pipe-lines extend storage tanks with 1.25 million barrel capacity.

Coastal Oil New England Inc., Revere:
Operator – Coastal Oil New England Inc. Tel. 284-4494.
Type of Pier – Timber pile, wooden deck.
Depth alongside at MLW – 37 ft.
Normal ship side to dock – Port.
Line handling boat required.
Access to vessel (for stores and repairs) – only by hand cart.
Products handled – Heating Oil, Mogas, Alcohol, No. 6 Oil.
Size and number of pipelines – 5×12 in.
Bbls. per hour discharge capacity – 8,000 per line.
Average distance to storage tanks – 2,500 ft.
Pollution control equipment – 1,600 ft. boom, 16 ft. boat. (Shared B.P., Arco, Northeast.)
Vessels meet tugs and Docking Master in vicinity of Castle Isl The maximum size vessel which can be safely accommodated at berth is about 38,000 d.w.t. Vessel normally require 2 tugs when doc and undocking at Union Oil Terminal. Vessels dock starboard side and when undocking are turned in the turning basin. Vessels must u their own gangway at this berth. Fully loaded vessels are docke undocked at HW only, day or night.

Gulf Oil Company, Chelsea: (Cumberland Farms)
Operator – Gulf Oil Company. Tel. 884-5980.
Type of Pier – Single face.
Depth alongside at MLW – 36 ft.
Normal ship side to dock – Port.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Heating Oil, Gasoline, Jet Fuel.
Size and number of pipelines – 5×12 in.
Bbls. per hour discharge capacity – 8,000 per line.
Average distance to storage tanks – 1,000 ft.
Pollution control equipment – 1,600 ft. boom, 16 ft. boat.
Vessels require 3 tugs when berthing and normally 2 when unberth Vessels dock daylight only, normally port side to, and when undock proceed up river to the turning basin and are turned before procee outbound.

Atlantic Fuels, Chelsea:
Owned and operated by: Atlantic Petroleum Inc.
Used for receiving and shipping petroleum products, bunke vessels; can accommodate vessels up to 690 ft. (210.3 m.) in len 33 ft. (10 m.) alongside depth; 14 ft. (4.26 m.) deck height. Pipe-l extend from wharf to 14 steel storage tanks with total 660,000 b capacity.

Coastal Oil New England, Chelsea:
Operator – Coastal Oil New England. Tel. 289-4494.
Type of Pier – Single face.
Depth alongside at MLW – For 575 ft. vessels: 31 ft. fwd., 34 ft. For 624 ft. vessels: 21 ft. fwd., 34 ft. aft.
Normal ship side to dock – Port.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Avjet, Diesel Oil, Gasoline.
Size and number of pipelines – 7×12 in.
Bbls. per hour discharge capacity – 5,000 to 10,000.
Average distance to storage tanks – tank farm adjacent to berth.
Pollution control equipment – Automatic boom being installed.
3 tugs are normally required for berthing and 2 for unberthing. Ves require a 300 ft. messenger fore and aft for handling lines. Ves normally dock port side to. Due to the limited manoeuvring area adja to the berth, vessels when unberthing are towed out stern first and turned in the main channel.

Quincy Oil, Quincy:
Operator – Quincy Oil Company. Tel. 773-2500.
Type of Pier – Timber pile, timber deck, offshore wharf.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Port.
Line handling boat not required.
Access to vessel (for stores and repairs) – by hand cart only.
Products handled – Gasoline, Heating Oil.
Size and number of pipelines – 2×8 in.
Bbls. per hour discharge capacity – 6,000.
Average distance to storage tanks – tank farm adjacent to berth.
Pollution control equipment – 800 ft. boom, work boat.
Vessels meet tugs and Docking Master in the vicinity of Nan Roads and then proceed up the Weymouth Fore and Town Rive the Quincy Terminal.

Vessels should enter Town River at S.W. Extreme caution should be used when turning into Town River because of the narrow channel. Narrow channels demand extreme caution when navigating up to the terminal. Vessels normally berth port side to, and are swung around in the turning basin when unberthing. 3 tugs are required when docking or undocking. Vessels must utilise their own gangways.

Proctor and Gamble, Quincy:

Operator – Proctor and Gamble. Tel. 770-3155.
Type of Pier – T-head with dolphins.
Depth alongside at MLW – 32 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Palm Oil.
Size and number of pipelines – Various.
Bbls. per hour discharge capacity – 8,000.
Average distance to storage tanks – tank farm adjacent to berth.
Pollution control equipment – shared with Sprague.

C.H. Sprague & Son Co., North Weymouth:

Operator – C.H. Sprague & Son Co. Tel. Terminal 337-2040, Offices (603) 431-1000.
Type of Pier – Timber pile, concrete deck.
Depth alongside at MLW – 35 ft. 06 in.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – No. 6 Oil.
Size and number of pipelines – 2×12 in.
Bbls. per hour discharge capacity – 10,000 per line.
Average distance to storage tanks – 2,500 ft.
Pollution control equipment – 500 ft. boom, 16 ft. boat. (Shared with Mobil.).

Vessels dock and sail during daylight only. 3 tugs are required when berthing and unberthing. Vessels met the tugs and Docking Pilot in the vicinity of Nantasket Roads and then proceed to the manoeuvring area near the berth where the vessels are turned and berthed starboard side to. Vessels must utilise their own gangway at this berth.

Citgo Petroleum Corp., Braintree:

Operator – Citgo Petroleum Corp. Tel. 848-2595.
Type of Pier – 4 cylindrical caissons.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Heating Oil, Gasoline.
Size and number of pipelines – 1×10 in., 4×12 in.
Bbls. per hour discharging capacity – 10,000.
Average distance to storage tanks – 2,500 ft.
Pollution Control Equipment – 1,500 ft. boom, work boat.

Vessels meet tugs and Docking Master in the vicinity of Nantasket Roads and then proceed up the Weymouth Fore River, through the Fore River Bridge, and berth starboard side to at the terminal. Vessels dock and undock during daylight hours only. 3 tugs are normally required when docking and undocking. Vessels must utilise their own gangways.

Bulk Cement Piers:

There are 2 berths in Boston used exclusively for the discharge of bulk cement from barges. Both are in the Mystic River.

No. 28: Independent Cement Corp.
No. 33: Blue Circle Atlantic Cement Company, Inc. Tel: 241-9040.

CRANES: 1×60 ton floating crane and mobile cranes up to 150 tons capacity.

SPECIALISED CARGO HANDLING FACILITIES: Also see "Berthing".

Berthing at all berths normally effected on a rising tide. It is the practice of the port for deep draft vessels to pump part cargo overtide in order to bring vessel to a safe draft by the next Low Water. Berthing at Sprague, North Weymouth is usually starboard side to, which involves swinging vessel.

LNG/LPG: Handled at Distrigas on the Mystic River, Everett.

U.S. Coast Guard Instructions: The following is only part of the instructions. Full copies may be obtained from U.S.C.G. Marine Safety Office, 447 Commercial Street, Boston, MA 02109-1096. Tel: (617) 565-9000.

Foreign flag vessel owners intending to transport liquefied gases in U.S. ports must obtain a Certificate of Compliance from the Coast Guard. The procedures for obtaining a Certificate of Compliance are detailed in 46 CFR 154. Both U.S. and foreign flag vessels must meet essentially the same requirements. Most requirements conform to the IMO Gas Carriers Code, but some construction requirements are more stringent.

PART A – LNG/LPG VESSEL OPERATIONS IN BOSTON HARBOUR

I. NOTIFICATION

The Master of an LNG/LPG vessel notifies COTP Boston 72 hours in advance of arrival at Broad Sound Anchorage. This advance notice of arrival is by message and includes the vessel's Agent in Boston, distance from keel to highest projection, maximum draft, and a statement by the Master to the effect that:

"To the best of my knowledge and belief, there are no known casualties to this vessel or its machinery which might affect her seaworthiness. I further state that all cryogenic handling and detection equipment is in proper operating condition and has been operating for the duration of this passage."

Signed
Master________________

Should any deficiency develop after the 72 hour advance notice is given, another message describing the discrepancy or condition in detail is sent to COTP Boston immediately.

Telex 910-2506309 (Answerback "US CG")

In addition to the certification of equipment, the Master includes the names and qualifications of crew that have changed since the last port visit.

The Vessel Movement Office (VMO) at the U.S. Coast Guard Marine Safety Office, Boston is the contact point for all notifications and requests of the COTP. Upon notification of arrival, the VMO:

a. Initiates an action file including vessel data, messages, letters, etc.
b. Reviews the vessel history and communicates any special requirements with the Coast Guard inspectors.
c. Notifies appropriate Coast Guard units.
d. Maintains daily updates of the vessel's estimated time of arrival.
e. Arranges and co-ordinates Coast Guard inspection, escort and monitoring details.
f. Passes any unusual or additional information to interested parties.
g. Obtains a long range weather forecast for the period of transit and transfer and compiles updates as they occur.

One day prior to arrival of the vessel, the VMO:

a. Firms up probable transit time for planning purposes.
b. Prepares and transmits Oporder and marine information broadcast messages, and
c. Notifies other concerned parties of the estimated time of harbour transit and any special requirements affecting harbour transit.

II. ARRIVAL AND ENTRY

U.S. Coast Guard inspectors from MSO Boston board and inspect each vessel prior to its entry into port. The purpose of this inspection is to ensure that the vessel meets the requirements of its certificate and that all cargo control equipment and safety equipment is operative. Vessels will normally anchor in Broad Sound pending inspection.

The vessel's Master must provide safe access for the Coast Guard inspectors. Should sea conditions preclude a safe boarding while anchored, the LNG/LPG vessel may be required to resume manoeuvring and provide a lee. A combination of the vessel's accommodation ladder and pilot ladder is acceptable.

While the vessel is at anchor, a live bridge watch shall be maintained. LNG/LPG vessels arriving at the Port of Boston must maintain a radio guard on VHF-FM Channels 13 (156.65 MHz) and 16 (156.8 MHz). A round of bearings fixing the vessel's position shall be taken and recorded at least hourly, followed by a report if there is a significant change in position or other problem aboard the vessel. The report may be made to COTP Boston by radio via the U.S. Coast Guard Group Boston or via the vessel's agent if timely notification is possible.

An LNG/LPG vessel must have its cryogenic sensing and indicating instrumentation and gas detection system in operation while the vessel is in U.S. waters. The Master of the ship must be prepared to demonstrate that the cryogenic handling and gas detection equipment is in proper working order. The vessel shall have on board a cylinder of properly certified span gas for testing the gas detection system.

In addition to a valid Certificate of Compliance, vessels must have onboard all required ship's documents and an up-to-date set of plans, in English, specifying:

a. Cargo tank arrangement
b. Cargo tank venting arrangement
c. Cargo piping arrangement
d. Capacity plan
e. Firefighting plan
f. Up-to-date cargo system operating and safety procedures.

The vessel may enter the harbour only after the vessel equipment, publications and documents are inspected, confirmed to be in satisfactory condition, and COTP Boston has cleared the vessel for entry.

The U.S. Coast Guard, Captain of the Port must ascertain that crews are qualified to carry out transfer operations safely. On U.S. flag vessels carrying LNG, the Master, Chief Engineer, Chief Mate and First Assistant Engineer must be licensed and certified by the Coast Guard. On vessels other than U.S. flag, a valid Certificate of Compliance issued by the Coast Guard and a valid Certificate of Fitness (issued in compliance with the IMO Gas Carriers Code) is evidence of compliance with specific U.S. equipment requirements and home state requirements for certification.

Crew training standards of the Code (Chapter 18) require that personnel involved in cargo operations be adequately trained. All officers should be trained to deal with emergencies involving cargo leaks, spills or fires. The code also refers to the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers, 1978.

Each officer and rating with specific duties involving cargo and cargo equipment should complete a course of instruction, or undergo onboard training, applicable to his or her duties. As crew members change, the operator must keep the Coast Guard apprised of the new members' training. A company initiated letter or message indicating the completion of an administration approved formal training course will serve as evidence of this training. All crew members should have formal training, or onboard instruction, in the special hazards of LNG and LPG and an awareness of the general safety features of the vessel.

Serious discrepancies found during any boarding or examination which affect the safety of the port must be corrected prior to vessel entry or cargo transfer operations. Examples of serious discrepancies are leaking cargo tanks, inoperative leak detectors or inoperative fire-fighting equipment. Determination to permit or deny port entry or cargo transfer is made by the COTP. In unusual circumstances, however, Commandant (G-MTH) may be requested to advise or furnish a technical representative.

A fully or partially loaded LNG/LPG vessel will always transit the harbour within a moving safety zone. This concept enhances safety by avoiding crossing or passing situations. The LNG/LPG vessel may not enter the main ship channel until clearance is received from COTP Boston and a U.S. Coast Guard escort vessel is in position to begin the escort.

III. LNG/LPG VESSEL TRANSIT MANAGEMENT

Fully or partially loaded LNG/LPG vessels may transit the harbour only during the hours between sunrise and sunset and then only during periods of adequate visibility.

One hour prior to scheduled LNG/LPG vessel transit, the Vessel Movement Officer assumes the watch in Group Boston Communications Centre, to perform the following duties:

a. Ensure that the tugs and the Coast Guard escort vessel are in position, two emergency towing lines are rigged fore and aft on the LNG vessel within 6 ft. of the water, and the inspectors have found no discrepancies in the condition of the vessel.
b. Contact the LNG/LPG vessel and initiate the transit.
c. Ensure that the Marine Information Broadcast is being properly sent by Group Boston and the escort craft. Keep Group Boston Duty Officer informed of LNG/LPG vessel position as reported by the escort vessel.
d. Notify Logan Airport Control Tower of the LNG/LPG vessel transit when the vessel approaches Deer Island.
e. Monitor Channel 13 VHF-FM and communicate with vessels to ensure no unauthorised vessels get underway in violation of the safety zone.
f. Address all vessel movement questions received via radio and telephone during the transit.
g. Keep the COTP informed of the progress of the evolution.
h. Notify Group Boston Duty Officer when safety broadcast can be terminated.
i. Maintain a logbook with appropriate entries (transit commenced, escort craft and adequate number of tugs on scene, emergency tow lines rigged, names of Boston Pilot and Docking Master onboard, vessel moored etc.).

The Vessel Movement Officer (VMO) can be contacted at the Marine Safety Office (565-9000) or by radio (Channel 13 VHF-FM)

If the visibility falls to less than 2 miles at any point in the transit, the Master shall notify the VMO of the situation and request authorisation to proceed.

When the LNG/LPG vessel enters Boston North Channel inbound, the Master notifies the Vessel Movement Officer via Channel 13 VHF-FM. The VMO will then notify the Chief or Assistant Chief Controller at Logan Airport. The Federal Aviation Administration imposes flight restrictions over the LNG/LPG vessel in keeping with the desire to maintain maximum standards of safety during an LNG/LPG vessel movement.

The vessel's Master shall ensure that calculations are made comparing the air draft of the LNG/LPG vessel to the height of any fixed objects under which it must pass. These calculations are to be made available to the Docking Master as an assurance that the LNG/LPG vessel can safely transit Boston Harbour.

Tugs meet the incoming LNG/LPG vessel at the Eastern e President Roads and are used as needed during the vessel's tra Boston Harbour. During the docking and undocking operation the will be strategically positioned consistent with the Master's judgement and consultation with the Docking Master. Emergency to lines must be rigged fore and aft within 6 ft. of the water during t

For vessels under 60,000 cu.m. cargo capacity, a minimum of 3 with total of 5,400 shaft horsepower or greater shall attend the of the vessel.

Vessels of 60,000 cu.m. or over will be required to use a minimu 5 tugs. Two of the tugs must be 3,000 h.p. or greater. The rema 3 tugs must be 1,200 h.p. or greater. Note that the referenced 3 tugs are minimums. Nothing herein should be construed to overru Master's sound judgement in employing additional tugs.

While a fully or partially loaded LNG/LPG vessel is underway i harbour, all other vessels in the harbour are required to remain mo unless otherwise authorised by the COTP. The COTP has permission for towing vessels without tow and other vessels u 100 gross tons to transit outside the main ship channel:

IF they establish bridge to bridge radio contact with the LNG vessel upon their approach and advise the Master of their i AND they can safely navigate outside the main ship channe

Other examples of vessel movements that may be allowed are

a. A cargo ship requests permission to get underway in the ship channel and transit Boston Harbour outbound while a L LPG vessel is inbound. Permission may be granted by the C for the transit outbound if the cargo ship will not approach 2 nautical miles ahead or one nautical mile astern of the L LPG vessel.
b. A tankship requests permission to get underway for inb transit of the harbour at the same time an LNG/LPG vess inbound. Permission by the COTP may be given for the ta to proceed but to remain at least one nautical mile astern LNG/LPG vessel.

During an LNG/LPG vessel transit, the maximum allowable spee any vessel permitted within the moving Safety Zone will be 8 knots. speed applies to all vessels within the restricted area. At least one C Guard escort craft will be present to enforce the safety zone restric Additional craft may be assigned to the escort if conditions warran

Marine information broadcasts will be made on Channel 16 VHF switching to Channel 22, beginning 24 hours prior to the ship's har transit. The escort craft will issue a broadcast bridge to bridg Channel 13 at the beginning of the transit and every 30 min thereafter until the LNG/LPG vessel is moored. At the end of broadcast, the escort craft will state the current location of the LNG vessel.

The escort craft should normally take station several hundred ahead and to one side of the bow of the LNG/LPG vessel and pre it through the harbour. The escort craft is responsible for enforcing vessel movement requirements of the safety zone. The escort cra monitor and use Channel 13 VHF-FM to provide vessel traffic co during the transit of the LNG/LPG vessel.

An officer from MSO Boston will be assigned to ride each LNG vessel during the inbound transit. The senior member of the pre-a inspection team will assume this role when the inspection and t occur on the same day. When these events occur on separate arrangements will be made to place an officer aboard the vessel to commencing the harbour transit.

This officer will remain in the pilothouse, maintain communications with the VMO via Channel 13 VHF-FM, and sha responsible for the following:

a. Serve as a direct communications link to the VMO to repor casualties or unusual incidents, obtain amplifying informatio relay instructions to the vessel's Master or Pilot as direct the VMO.
b. Assist in making determination as to the nature and serious of a casualty and if the inbound vessel should be directed t the harbour and return to anchorage in Broad Sound or if it s be permitted to proceed to its berth.
c. Remain vigilant and report any situation that could affec safety of the port or that could adversely impact the safety and vessel escort.

Should an emergency situation occur aboard the LNG/LPG v (loss of steering, grounding, fire, etc.) the Master/Pilot will immedi notify the MSO Officer on board who will inform the VMO o emergency via Channel 13 VHF-FM. The escort craft will then pro traffic control to keep all vessels (other than tugs, fireboats, etc.) of the LNG/LPG vessel.

IV. CARGO TRANSFER OPERATIONS

The COTP will provide personnel to ensure safety during the pro of cooling down and to monitor the progress of transfer operatio Coast Guard patrol craft will also be present to provide contin waterside safety zone enforcement to prevent any vessel approa within 50 yards of the LNG tanker while it remains in a loaded con or is conducting cargo operations.

LNG/LPG vessels must moor bow to seaward with at least 2 cable mooring lines (firewarps) at the water's edge, fore and aft o outboard side, for emergency towing hook-up if the need should The vessel must be maintained in a state of readiness with suf crew on board to enable the ship to get underway and clear the an emergency within 30 minutes of notification. The LNG/LPG must also be capable of navigating out of the Port of Boston, usi main ship channel, at all times and under all prevailing tidal con

The following minimum personnel must be on board the vessel transfer operations:

a. Two Licensed Officers, fully qualified to supervise cargo tr operations.
b. Two deckhands.
c. One Licensed Deck Officer for duties other than cargo tr

The officers on the vessel supervising cargo transfer operations should be fully rested prior to commencing tranfer operations. A minimum of 8 hours sleep is recommended. All ship's personnel directly involved in the transfer operation must be able to communicate in the English language, or be provided with an interpreter.

Venting cargo gas to the atmosphere is not permitted in port. However, nothing in this instruction should be construed to require or authorise elimination of installed ship safety equipment. If emergency venting is necessary, the officer supervising cargo transfer on the vessel will immediately notify the COTP Boston. This notification should include location and amount of venting, the cause of the emergency venting, wind velocity and direction at the time of venting.

All LNG/LPG facilities in the Port of Boston shall meet the requirements of 33 CFR 127. The facility will be responsible for controlling access to the vessel while it is at the dock.

The facility and the vessel must discuss arrangements for emergency shutdown of cargo transfer and emergency breakway of the vessel from the facility.

During cargo transfer, the facility shall have at least one person onboard the vessel and one person in the facility control centre who will be in constant communication with each other at all times. In addition to sufficient personnel to safely conduct all physical transfer operations, a person specially trained and certified as knowledgeable in the properties and hazards of the cargo to be tranferred shall oversee all discharge operations.

The permission of the Captain of the Port is required before loading stores or bringing vessels alongside the LNG/LPG vessel during cargo transfer operations. Bunkering or other transfer of petroleum products or other compressed or liquefied gases is prohibited while the vessel has gas or liquid cargo in the transfer piping.

The transfer of liquid cargo shall not begin until the Coast Guard inspector is satisfied with cooldown. The inspector must certify that all items in the Cooldown Inspection List are examined. The primary function of this inspection is to ensure that all connections, piping, pumps, etc. are in satisfactory operating order and that no deficiencies develop during the cooldown phase. Full pumping may commence upon satisfactory completion of cooldown operations.

The monitoring detail supervises the LNG/LPG transfer operation from hookup to disconnect and maintains an official logbook. The primary function of the monitor is to ensure compliance with safety requirements during the transfer and to maintain an alert security posture.

The individual Coast Guardsmen that make up the monitoring detail represent the Captain of the Port. Their responsibility is to keep informed of the progress of transfer and to oversee the safety of the operation. The person representing the facility onboard the vessel and the vessel cargo officer *must* promptly report all problems or abnormal conditions encountered during transfer operations, on the vessel or facility, to the Coast Guard watchstander. Updates of the condition and corrective action planned are also required.

The monitoring detail logs the commencement of pumping, completion of pumping, disconnecting times and any unusual occurrences and informs the COTP at each stage in the operation.

All cargo operations must cease if electrical storms are observed nearby. However, cargo transfer connections should be maintained. If gale warnings are posted, additional mooring lines and/or tug assistance may be required.

Should an emergency occur, the monitoring detail should immediately get clear and inform the COTP of the situation. Detailed emergency instructions to the monitoring detail can be found in Part B (Emergency Operations) of this plan.

The safety zone enforcement craft will be located so that vessel movements within a mile of the LNG/LPG vessel can be readily observed in order to detect any unusual waterborne activities that may pose a threat to either the vessel or the facility. Any unusual circumstances such as suspicious craft in the vicinity of the LNG/LPG vessel, approaching thunderstorms, sudden changes in the direction or increase in wind speeds, or any leaking gas vapour cloud wil be reported to the monitoring detail.

All firefighting equipment on the safety zone enforcement craft will be on standby, ready for immediate use in the event of an emergency. In the event of a threat of or actual fire or explosion, the enforcement craft will be positioned upwind and clear of the danger area to assist in response efforts.

Upon completion of the transfer operations when all cargo transfer piping is disconnected, the monitor on watch will notify COTP Boston. The MSO Duty officer will ensure that the safety zone broadcast is cancelled. A safety zone will normally be continued after cargo operations are complete and until the LNG/LPG vessel clears Deer Island Light *only* if the LNG/LPG vessel is partially loaded. When the vessel is empty, the VMO notifies Group Boston Communications Centre and releases the safety zone enforcement vessel.

V. LNG/LPG VESSEL DEPARTURE

A fully or partially loaded LNG/LPG vessel will always transit the harbour within a moving safety zone. This concept enhances safety by avoiding crossing or passing situations involving other vessels in the harbour. A U.S. Coast Guard escort craft will enforce the safety zone until the outbound LNG/LPG vessel clears Deer Island Light. The same requirements set forth in Section A-III will be used for transit of LNG/LPG vessels if a safety zone is set for departure.

LNG/LPG vessels departing the Port of Boston that are empty (in heel) will not require a safety zone. A Coast Guard escort or other additional requirements may be established in certain circumstances at the discretion of COTP Boston. Empty LNG/LPG vessels may transit the harbour during darkness.

When an empty LNG/LPG vessel gets underway outbound, the Master notifies the Vessel Movement Officer. The VMO will then notify the Chief or Assistance Chief Controller at Logan Airport. The Federal Aviation Administration imposes flight restrictions over the LNG/LPG vessel in keeping with the desire to maintain maximum standards of safety during an LNG/LPG vessel movement.

CERTIFICATES AND DOCUMENTS

(May be completed by Master prior to vessel entry and checked by attending inspector.)

REPAIRS/DRY DOCKS: Any type of repair undertaken.

East Boston, Massachusetts	Length	Capacity
Floating Dry Dock No. 1	622 ft.	18,000 tons
Floating Dry Dock No. 2	479 ft.	20,000 tons
Graving Dry Dock No. 4	256 ft.	

Modern facilities for repair, overhaul, and conversion of vessels of all sizes:

(a) a 10,000 ton capacity floating dry dock serviced by 2×150 ton overhead cranes with a yoked capacity of 350 tons. The 5-section dock is 415 ft. long, 120 ft. wide, and has an inside dimension of 85 ft. 7 in.

(b) 3 building basins (actually a 3-positioned graving dock). 2 are 132 ft. wide, 867 ft. long; 1 is 150 ft. wide, 938 ft. long. Each basin serviced by 2 Whirley type cranes of 75 and 50 ton capacity.

(c) 4 outfitting piers capable of handling up to 10 ships simultaneously provide adequate space for dockside work and for mooring personnel or service barges.

(d) 3 conventional "sliding" ways capable of handling ships up to 1,000 ft. in length.

Major Shops: 2-bay fabricating shop served by 17 bridge cranes. Machine shop equipped with large vertical and horizontal mills planers, lathes and a complete small machine complement. Fully equipped sheet metal, joiner, boiler, blacksmith, pattern foundry, galvanising, pipe and copper, and electrical shops. Complete facilities for inspection of all types including non-destructive testing such as radiography, magnetic particle, liquid penetrant and ultrasonic.

General Ship Corporation, East Boston: Dry docks for vessels up to 680 ft. × 90 ft. Damage and voyage repairs.

CUSTOMS ALLOWANCES: At the discretion of Customs officers. Normal allowance is 200 cigarettes or 2 lb. of tobacco and 1 quart wine or spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.

GANGWAY/DECK WATCHMEN: Available at prevailing prices.

OPENING/CLOSING HATCHES: Performed by stevedores.

REPATRIATION: Good facilities exist.

AIRPORT: Logan International Airport, East Boston.

HOLIDAYS: New Year's Day (1st January); Martin Luther King's Birthday (15th January) Washington's Birthday (3rd Monday in February); Evacuation Day (17th March); Patriots' Day (3rd Monday in April); Memorial Day (last Monday in May); Bunker Hill Day (17th June); Independence Day (4th July); Labour Day (first Monday in September); Columbus Day (8th October); Veteran's Day (11th November); Thanksgiving (fourth Thursday in November); Christmas Day (25th December).

Note: "Or any day celebrated in lieu thereof".

POLICE/AMBULANCE/FIRE: Boston Fire Dept. 725-2880; Boston Police Dept. (Harbour Master) 242-6096; Everett Fire Dept. 387-7443; Everett Poice Dept. 3878-1212; Chelsea Fire Dept. 884-1410; Chelsea Police Dept. 884-1212.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Service available through the following contractors:

BFI Waste Systems (Brown-Ferris Industries), 170 Market Street, Brighton, MA 02135. Tel: (617) 254-1800.

Laidlaw Waste Systems, 66 Cambridge Street, Charlestown, MA 02129. Tel: (617) 445-8383.

Waste Management of MA, Inc., 530 East First Street, South Boston, MA 02127. Tel: (617) 269-5800.

Charles Lee Disposal, Inc., 1 Ellery Street, So. Boston, MA 02127. Tel: (617) 361-3900.

TIME: Eastern Standard Time, GMT minus 5 hours. Daylight saving time from first Sunday in April till last Sunday in October.

WASTE OIL DISPOSAL: Oil Pollution Clean-up Contractors:

Clean Harbors, 900 East First Street, Boston, MA 02127. Tel: (617) 269-5830.

BRIDGEPORT, Connecticut: 41.07 N. 73.11 W. (See Plan)

DOCUMENTS: Refer to "New York".

APPROACHES: *Via New York:*

Charts: 12339, 12366, 12367, 12363, 12369.

Vessels leaving New York bound for Bridgeport will be transitting New York's East River and Western Long Island Sound. All shoals and rocks are well marked and the close proximity to the shore line provides an excellent radar target for position checking. During Summer months, thick fog will present a hazard on this route. Long Island Sound is also a major yachting centre, so extreme care must be exercised while transitting this area. There are several dangers to be wary of when making the passage from New York to Bridgeport.

In order of approach they are:

1. East River and Hell Gate are areas of strong tidal currents averaging 4.6 knots for the ebb current which sets in Southwesterly direction. Vessel drawing up to 35 ft. may transit Hell Gate at slack High Water only. Sluggish handling vessels should arrange for tug assistance up the East River and through Hell Gate.
2. 26-ft. Buoy "32A" usually passed well clear to the South.
3. Cable and Anchor Reef usually passed to the South.

Via Block Island:

Charts, 13205, 13215, 13209, 12354, 12369.

Block Island's Southern shore high rock cliffs provide a good radar target. Also, bearings can be taken from the RDF station at S.E. Light. Care should be exercised by vessels deeper than 30 ft. to always approach Block Island to East in views of the numerous shoals on the Western side of the Island.

It is also advisable to remain at least 1 mile to the East of Block Island due to the numerous shoals close in shore.

There are numerous dangers to be wary of when making the passage from the pilot station to Bridgeport. In order of approach they are:

1. Block Island North Reef Buoy "1B1" marks a dangerous shoal and should be passed well clear.
2. The Race is a narrow channel into Long Island Sound. Strong East to West currents exist during maximum ebb or flood and knowledge of position should be maintained in view of the possibility of unusual set. Valiant Rock may be passed on either side.
3. Great caution should be exercised during the Summer months when transitting through Block Island and Long Island Sound due to the heavy small boat traffic, especially the area in proximity to The Race.
4. Dense fog is prevalent during the Summer months. Good judgement should be used before transitting the area during fog.

Good water is found in Long Island Sound from The Race to Bridgeport as long as the mid-channel Buoys "P1" and "CF" are passed close aboard and care is taken so as not to pass North of Twenty-Eight Foot Shoal buoy.

Vessels usually pass one mile to the South of Stratford Shoals light before altering course for Bridgeport. Radar is the best navigational aid in this area. There are numerous RDF stations that can be used in conjunction with echo sounder readings to ascertain positions.

PILOTAGE: Vessel usually notifies Agent 48 hours before arrival, who will arrange Pilot boarding. Pilot boards either at Brenton Reef in position Lat. 41° 25′ N., Long. 71° 23′ W. or Point Judith in position Lat.41° 17′ N., Long. 71° 29′ W.

Note: Non-U.S. flag vessels and U.S. flag vessels under registry approaching from Block Island embark Pilot about 2.5 miles South of Point Judith.

U.S. flag vessels under enrolment approaching from Block Island embark Pilot 1.4 miles East of Old Harbour - Block Island.

Constitution State Pilots provide Docking Masters for the port.

Notice from State of Connecticut, Department of Transportation:

Pilotage is compulsory for vessels transitting the waters of Long Island Sound via Block Island Sound bound to or from ports and harbours in Long Island Sound. Vessels bound for Bridgeport via Block Island/Long Island Sound usually board a pilot at either the Point Judith Pilot Station (41° 17.2′ N., 71° 28.5′ W., 2 miles South of the Point Judith R "2" whistle buoy) or the Montauk Pilot Station (41° 02′ N., 71° 42′ W., 3 miles due East of Montauk whistle buoy Mo (A) "MP"). Some Block Island/Long Island Sound pilots also serve as pilots for Bridgeport Harbour. If a local harbour pilot is to be boarded, he will usually board vessel in vicinity of Bridgeport Sea Buoy, marked "BH" – short and long flash; red and white vertical stripes.

ANCHORAGE: 2 miles South of the entrance with depths in exce 50 ft.

RESTRICTIONS: Entrance channel has a project depth of 35 ft. at l is 400 ft. wide and 3 miles in length.

Normal time allowed for transit from outside to off the dock is 30 minutes. Docking time varies from 30 minutes to 1 hour, depende which terminal is the destination, and weather conditions.

The New Haven – Bridgeport Pilots Association believe 4 ft. of w in excess of the ship's draft is needed. As a rule of thumb, 31 ft. a to 37 ft. at high. Any variations from this, a Pilot should be d consulted. The range of tide is 6.7 ft. Wind strongly affects the t the main entrance channel. Flood and ebb cross the channel at a angle, and velocities depend on the rise of tide for the day.

Vessels up to 70,000 d.w.t. and LOA 825 ft. call at the port.

MAX. SIZE: See "Berthing and Restrictions".

HEALTH: Vessel to cable Agent 24 hours prior to arrival of any i on board, otherwise Radio Pratique not necessary.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Alban

RADIO: Vessels arriving from North use Chatham Radio. Vessels South use Amagansett Radio on Long Island.

BERTHING: *Cilco Terminal:* Cilco is a bulkhead dock, l approximately 1,100 ft. Vessels dock port or starboard side to. Two s can moor at the same time. This is a dry cargo facility. Ships lo discharge all kinds of products. Several mobile cranes are avai Depth 33 ft. at MLW. Bunkers are only available by truck. Fresh w is available.

TUGS: Tugs available from Red Star. The Despatcher monitors and is available 24 hours a day through Channel 24 at Bridgepor

MEDICAL: All facilities available.

TANKERS: *Bridgeport Shell – Buckley Bros.:* The Shell berth is loc on the East side at right angles to the main entrance, and ships m be turned 90° to approach the dock. The dock is approximately 2 long with 2 main dolphins and catwalks to shore. Head lines and s lines are run ashore by a messenger. The size of vessels is gove by manifold distance. Light oil products 300 ft. and heavy oil 3 Vessels of length 700 ft. have been moored, 38 ft. at MLW in ship b Ships dock port side to.

Bunkers and fresh water are available.

United Illuminating: Berth is 0.6 miles inside the breakwater on the l side of the channel. A turn to port of 120° must be made into a dre cut 140 ft. wide. The dock is concrete caissons on pilings with catw and centre platform. Depth 32 ft. to 37 ft. at MLW. Vessel 70,000 d.w.t. call, but bow to manifold distance governs size of ve (350 ft. – 375 ft.). Vessels dock starboard side to.

Fresh water is available, but bunkers are not. Every tanker, w moored here, has an anti-pollution boom placed around it.

FRESH WATER: Available at all berths.

FUEL: No fuel barge service available. In emergency, tank truck del can be arranged.

CONSULS: All countries represented in New York.

AIRPORT: Bridgeport Airport about 3 miles away. New York air about 50 miles distant.

TIME: Daylight Saving Time, GMT minus 4 hours from April to Oct

HOLIDAYS: New Year's Day (1st January); Lincoln's Birthday (February); Washington's Birthday (18th February); Good Fr Memorial Day; Independence Day (4th July); Labour Day; Colu Day (14th October); Veterans' Day; Election Day (5th Novem Thanksgiving Day (28th November); Christmas Day (25th Decem

SERVICES: Ship's stores and launch service available from New Ha Vessels must provide their own gangway at all docks.

AUTHORITY: Bridgeport Port Authority, 177 State Street, Bridge Connecticut 06604, U.S.A. *Tel:* (203) 384-9777. *FAX:* (203) 384-9 *Contact:* Joseph C. Savino Jr., Harbour Master (After h Tel: 374-7795).

BROWNSVILLE, Texas: 25.54 N. 97.28 W. (See Pl

DOCUMENTS: See "Houston".

PILOTAGE: When a vessel is scheduled to arrive at Brownsvil vessel's Agent notifies the Harbour Master's office of the approx ETA. Later, when a firm ETA is received, the Harbour Master's o notifies the pilot office that the vessel is expected on the bar at a c time and also gives the time which she would like to enter.

The telegraphic address of the pilot office is: Brazos-Santiago P c/o Harbour Master, Port of Brownsville, Brownsville, Texas.

If possible, it is desired that the Harbour Master's Office be no 2 hours in advance of the ETA of any vessel.

The VHF Channel to be used when contacting the pilot boa Harbour Master is 16. When contact is made, this will be switch Channel 12.

The pilot boat is a steel hull length 43 ft., beam 16 ft. and dra 250 h.p. diesel. Gross tonnage 36 tons.

No light or sound signals are necessary from vessels requiring a although light signals may sometimes be used at night – ordina vessel is picked up by visual sighting.

The pilot boat is located on the South tip of Padre Island – the station is adjacent to the entrance to ship channel with a clear v the approach to the jetties.

The Pilot is taken on board an incoming vessel at the sea buoy w is located 2 miles off shore.

The anchorage for a vessel awaiting Pilot is 1.5 miles North o buoy.

ANCHORAGES: Anchorages are marked on charts.

RESTRICTIONS: *Brazos Island Harbour:*

Name of Channel	*Width* (ft.)	*Dredged Dimensions Length* (miles)	*Depth* (ft.)	*Minimum depths in channel entering from seaward* *Left Outside Quarter* (ft.)	*Middle Half of Channel* (ft.)	*Right Outside Quarter* (ft.)
Brazos Santiago Pass: Entrance Channel	300	1.9	38	40.0	39.0	37.0
Channel across Laguna Madre	200	2.9	36	38.0	38.0	38.0
Brownsville Channel: Junction Basin to Boca Chica Passing Basin	200	4.0	36	38.0	38.0	38.0
Boca Chica Passing Basin to Goose Island Passing Basin	200	5.4	36	38.0	38.0	38.0
Goose Island Passing Basin to Brownsville Turning Basin	200	2.8	36	37.0	38.0	37.0
Brownsville Turning Basin (extension)	500	1.4	36	37.0	38.0	37.5
Brownsville Turning Basin	500-1000	0.5	36	36.0	37.0	35.0

MAX. SIZE: The max. permissible length 875 ft., beam 135 ft., draft 35 ft.

RADIO: ETA cables to Agent, etc., should be addressed to the Agent via WLC – Galveston, WLO – Mobile or Slidell Radio. When within 60 miles range of the port, calls may be made through the Harbour Master's office on VHF Channel 16 and the calls will then be transferred to land lines to any point. Also Brownsville Marine Operator, VHF Channel 26.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

VHF: A vessel approaching the Port of Brownsville may contact the Harbour Master's office on VHF Channel 16.

TUGS: Tugs normally join an incoming vessel 1.25 miles before she enters the turning basin. The tug's lines are used for which there is no charge.

BERTHING: Cargo facilities include over 7,500 ft. of modern, marginal dry cargo wharves, 9 deep sea dry cargo docks, 4 deep sea liquid cargo docks and 10 barge berths, together with over 583,000 sq.ft. of transit shed space. In addition there is 242,000 sq.ft. of open storage space at the deep-draft docks and 271,000 sq.ft. of open storage at the shallow draft docks.

BULK HANDLING FACILITIES:

Public Grain Elevator: Located at the approach to the Turning Basin, the privately and operated elevator has a capacity of over 3,800,000 bushels. An adjacent bulk plant provides flat storage for all types of dry bulk commodities.

Two large gantry cranes handle the loading of vessels. The maximum spout clearance for loading vessels is 45 ft. above the water.

Equipped with two truck dumps and two hopper car dumps, the elevator has the rated loading capacity of 1,200 short tons per hour (1,000 L/T per hour on bulk carriers without wing tanks and 600 L/T per hour on tween deckers).

The 400 ft. wharf is 12 ft. above water and has an unlimited berth length. The draft at dockside is 34 ft. and the channel control depth is 36 ft.

The grain elevator also has the flexibility of unloading vessels (barge unloading capacity is 300 t.p.h.).

Liquid Bulk Handling: Total liquid bulk storage available for petrochemicals and combustible oils is 3.4 million barrels, tank capacities from 1,000 to 200,000 barrels, at Itapco, Statia, Petro Liquids, and Brownsville Refinery terminals. Additionally, Citgo and Interlube maintain private terminals. Four liquid cargo docks on the North side of channel and one on the South side serve these entities. Three terminals, Itapco, Petroliquids and Statia, have Foreign Trade Zone status.

CRANES: Two large floating cranes, rated at 150 metric tons each, are available for heavy lifts at any dockside location in the port area.

STEVEDORES: To arrange for gangs the vessel needs to notify the ship's Agent of ETA; the Agent will in turn notify the stevedores. It is necessary that the Agent be advised of an ETA before 1900 hrs. for an 0800 hrs. start.

Main commodities and average load discharge rates:

Grain	Bulk carrier 1,200 t.p.h.
Grain	tween deck 600 t.p.h.
Cotton	100 bales per hour per gang
Lead and zinc pigs	40 tons per hour per gang
Citrus in boxes	22 tons per hour per gang
Onions and carrots in bags	22 tons per hour per gang
General cargo	25 tons per hour per gang

MEDICAL: When medical attention is required, advance notice should be given to the Agent by ship's radio.

TANKERS: Ballast facilities are available up to 6,000 barrels per hour. The port loads refined petroleum products. The port has 4 tanker berths, with max. draft 34 ft. 7 in.

Vessels proceeding to Brownsville normally turn in the basin and berth Port side to. Berthing at Port Isabel Oil Wharf also generally Port side to. Mooring boat employed.

DENSITY: The average density is 32 parts per 1,000.

FRESH WATER: Fresh water is available and can be delivered to a vessel through hose or pipeline at 150 gallons per minute.

FUEL: No fuel is available locally. It must be barged in from Corpus Christi – advance arrangements are necessary.

FIRE PRECAUTIONS: Preferred berthing for tankers, head out.

CONSULS: Mexico: Tel. 542-4431.

REPAIRS: Amfels, located at the port, is equipped to handle all normal temporary ship repairs.

DRY DOCKS: None available.

GANGWAY/DECK WATCHMEN: Such services are necessary only when detainees are held on board.

AIRPORT: The regional airport, Valley International, is located 30 miles from the port. American, Southwest and Continental Airlines provide passenger service.

Brownsville – South Padre Island International Airport, 5 miles from seaport, provides freight/package service via Federal Express, Burlington Northern and Continental passenger service.

OPENING/CLOSING HATCHES: This work is done by the stevedores.

REPATRIATION: There are facilities for this service.

TIME: Local Time is 6 hours behind GMT.

HOLIDAYS: The following holidays are observed here: Veterans' Day (4th Monday of October); Thanksgiving; Christmas; New Year; Washington's Birthday (Feb. 22nd); Texas Independence Day (March 2nd); Emancipation Day (June 20th); July 4th; Labour Day (1st Monday in September); Decoration Day (last Monday in May).

No work shall be performed on Labour Day or Christmas Day except in case of fire or where property is in danger. When holidays fall on Sunday, the following day will be recognised as the holiday. Also, no work will be performed between 1600 and 1900 hrs. on election days.

POLICE/AMBULANCE/FIRE: Sheriff 544-0860; Emergency Fire and Ambulance, dial 911.

TELEPHONES: Telephones are not available for placing on ships.

SERVICES: Tank cleaning service is available at the port. Ballast facilities are available at Oil Docks 1, 2 and 3. P.I.B. can take care of compass adjusting, etc.

IDENTIFICATION CARDS: Immigration requires Form No. I - 95 Landing permit.

GARBAGE DISPOSAL: BFI Waste Systems. Tel: 512-542-5550.

Containers provided by reservation, alongside or may be lifted aboard ship. Collection as required.

WASTE OIL DISPOSAL: Bilge water and contaminated ballast water discharge available at Oil Dock No. 1. Contact party, S.A.Beckwith, Port Safety Director/Environmentalist. Tel: 512-831-4592. Fax: 512-831-5006. Vessel must provide hoses to manifold. List of waste engine oil disposal companies available upon request.

SEAMAN'S CLUBS: Port of Brownsville International Seaman's Centre, P.O.Box 4033, Brownsville, Tx. 78520. Tel: 512-831-4304. Rev. Wilbur Aten. Facilities: Shop, international telephone service for seafarers, church services, mini-bus collection, postage facilities, games.

DELAYS: There are no delays unless an incoming ship has been assigned to a berth now occupied. Bunkers must be barged in; arrangements may be made ahead of time to avoid delay.

DEVELOPMENTS: The Federal Government has commenced deepening the channel to 42 ft., widening up to 400 ft., and enlarging the turning basin to 1,200 ft. Anticipated completion date May 1995.

One new liquid cargo dock, 42 ft. depth, out for construction bids in September 1994.

One new heavy lift/dry bulk dock, 42 ft. depth, for construction 1995/1996.

The Port of Brownsville/Mexico International Truck/Rail Bridge Project is awaiting Presidential Permits from the U.S. and Mexican Federal Governments. Funding for the project is in place.

AUTHORITY: Brownsville Navigation District, Port of Brownsville, P.O.Box 3070, Brownsville, Texas 78523-3070, U.S.A. *Tel:* (512) 831-4592. *FAX:* (512) 831-5006. *Contact:* C. James Kruse, Port Director. E.E. Cockrill, Deputy Port Director – Marine Services. Rey Ramirez, Harbour Master. Judy Adams, Foreign Trade Zone Manager.

BRUNSWICK, Georgia: 31.09 N. 81.30 W. **(See Plan)**

DOCUMENTS:

Crew Lists: 1 certified copy for Immigration; 2 copies uncertified for Customs.

1 copy Pratique.

3 copies Inward Customs Manifests.

3 copies each Stores, Curio & Narcotics List.

APPROACHES: The harbour is located about midway between Savannah and Jacksonville. The harbour is reached by a channel from the Atlantic Ocean, running between St. Simons and Jekyll Island. The channel has a minimum width of 500 ft. and a depth of 32 ft. to St. Simon's Sound, thence a width of 400 ft. and a depth of 30 ft. to Sidney Lanier Bridge, where the channel divides, 13 miles from sea. The Northern branch leads to Lanier Dock, State Dock and the city, 400 ft. wide and 30 ft. deep. The other branch leads N.W. to the pulp plant dock, chemical docks and electrical generating plant, 300 ft. wide and 30 ft. deep.

PILOTAGE: Compulsory. 24-hour Pilot service arranged by Agent with 48 – 24 hour prior notice from ship. Pilot boards vessel day or night approximately 1 mile outside "STS" Buoy (Lat. 31° 03′ 20″ N., Long. 81° 15′ 20″ W.). Distance to East River Terminals is 13 miles. Pilot contacted on VHF Channels 12, 14 and 16. Pilot boat is 25 ft. white hull. Marking is "Pilot" on hull.

Brunswick Bar Pilots' Association, 411 Arnold Road, St. Simons Island, Ga. 31522. Tel: (912) 638 2380.

ANCHORAGES: 3 miles S.E. of Buoy "STS", sand and mud bottom. In event of deep draft (30 ft.) and high winds, anchorage obtained near Ocean Buoy "2B" and inform Pilot as in "Pilotage". Vessels in need, or for other good reason, may anchor in St. Simon's Sound, depth 10 fathoms.

RESTRICTIONS: Vessels with a draft of 28 ft. may enter at any time and over 28 ft. on flood tide. Max. size vessel is Panamax. Vessels with draft of 34 ft. may proceed to or from Colonel's Island on high tide. Vessels with 30 ft. draft berth in the East River on high tides. Tidal range 6 ft. – 8 ft.

MAX. SIZE: Max. permissible length 650 ft. Max. d.w.t. over 33,000 tons.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Prior arrival, use Commercial Lantana, Chatham Radio for advices to Agent, 48-24 hours in advance.
TUGS: Tugs join vessel near Sidney Lanier Bridge if inbound for the East River and Mayor's Point Terminals and just West of Lanier Bridge if bound for Colonel's Island. Harbour pilot on board vessel carries out the docking manoeuvre with tugs. 3 small tugs (500 h.p.)
BERTHING: 1,600 ft. continuous marginal wharf; steel and concrete construction, 57 ft. wide apron. Vessels normally turned to moor port side alongside unless deck cargo or other vessel obstruction means cargo may not be worked over port side. Gantry crane of 27 tons capacity available.

The Brunswick Port Authority operates a bulk commodity terminal at Lanier Dock. The facility is 500 ft. long and constructed of steel and concrete, with a project depth of 30 ft. MLW (mean low water), equipped with a grab bucket, conveyors and marginal tracks for handling bulk cargoes at rates up to 600 t.p.h. It operates covered warehouses with a capacity of approx. 60,000 tons. A limited amount of open storage space is available equipped with a conveyor system and reclaim facilities. Lanier Dock lies directly adjacent to the Brunswick State Docks and warehouses. Both wharves have a turning basin of 1,000 ft. in length and 600 ft. wide with a project depth of 30 ft. MLW also Barge Dock facility 250 ft. long.

Colonel's Island: Multi-product dry bulk facility. 1×2,400 t.p.h. travelling ship-unloader, outreach 100 ft. Length of berth 600 ft. Storage area 135,000 sq.ft.

Mayor's Point: 3 berths. Total length 1,500 ft. 235,000 sq.ft. of transit sheds and 5 acres of open storage.
BRIDGES: Lanier Bridge lift bridge; 235 ft. horizontal clearance between fenders, 139 ft. vertical clearance in up position at HW. Vessels under control of Pilot and tugs when passing through.
STEVEDORES: Radio to Agent 48-24 hours prior arrival with number of gangs, working hatches and space in hatch, and special factors, e.g. pilferable cargo, autos, heavy-lifts, etc.
MEDICAL: Advance notice to Agent, or notify on arrival.
TANKERS: Liquid bulk cargo is pine oil distillates loading. Petroleum storage 310,000 barrels, 3 tanks.

Outward Passage – Cautionary Advice: The berth is located just up river from the Sidney Lanier Bridge.

In view of the short distance to the bridge and the fact that a considerable course alteration must be made to port just before reaching the bridge, it is essential that the ship is properly lined up on the bridge before proceeding into the bridge passage.

It is advisable that the Master acquaints himself with the Pilot's plan for the approach and passage of the bridge.

An anchor party should be standing by and anchors should be ready to let go. Special attention should be given to make certain that the helmsman accurately follows the Pilot's orders.
DENSITY: Average 1016 (high) to 1014 (low). Water inside considered brackish.
FRESH WATER: From shore connections at 20 t.p.h.
FUEL: Bunker "C" available at piers. Distillate and blends by barge, if required. 72 hour advance notice to Agent, giving type and quantity.
CONSULS: None. Consulates at Savannah, Ga., and Jacksonville, Fla., may be used as required by vessel.
REPAIRS: Limited to minor replacement parts to engine, radio, radar of standard makes. Major repairs may be arranged with shipyards of Savannah or Jacksonville.
DRY DOCKS: None.
SURVEYORS: American Bureau of Shipping (912) 232-3793. Atlantic Marine Surveying, Inc. (912) 354-9938. Coleman, Kenney & Silas, Inc. (912) 352-7420. International Adjusters Southern Ltd. (912) 352-7420. National Cargo Bureau, Inc. (912) 236-1527. SGS Control Services, Inc. (912) 232-1995. L. O. Smith, Inc. (912) 233-9876. Southeastern Marine Surveying Company (912) 233-4157. J. W. Tarver, Jr. (912) 233-6661. Charles T. Theus, Inc. (912) 233-3588.
GANGWAY/DECK WATCHMEN: Not required but available.
OPENING/CLOSING HATCHES: "MacGregor" hatches must be opened by vessel prior working. All others may open at discretion to save turn-around time.
CERTIFICATES: Registry, U.S. tonnage tax, CFR Pollution, Load line, SOLAS, Derat.
CUSTOMS ALLOWANCES: Tobacco, 2 cartons. Customs will open bonded stores on request. Spirits, reasonable amount.
REPATRIATION: Through Agent.
AIRPORT: 20 minutes' drive from quays; 4 flights daily.
TIME: GMT minus 5 hours. Daylight Saving Time from first Sunday in April till last Sunday in October. April: advance; October: retard.
HOLIDAYS: 1st January, 22nd February, 30th May, 4th July, 1st Monday in September, 4th Thursday in November, 25th and 26th December.
POLICE/FIRE/AMBULANCE: Numbers given in Boarding Brochure.
TELEPHONES: None placed aboard. Public pay (coin) telephones on quay clearly marked.
IDENTIFICATION CARDS: U.S. Immigration Landing Permits.
GENERAL: Brunswick, Georgia, is a small port specialising in export of woodpulp in bales, pine-tree products in drums. Imports bulk salt, oil, fertiliser materials and gypsum, some break-bulk general cargo. Vessel requirements handled by Agent in residence, communication by wireless or R/T essential in advance.
AUTHORITY: Brunswick Port Authority, P.O.Box 1039, South Yards, Brunswick, Georgia 31521-1039. *Tel:* (912) 265-3700. *Telex:* TWX 810-7825071. *Contact:* Robert W. Turner, General Manager.

BUFFALO, New York: 42.55 N. 78.55 W. (See P

DOCUMENTS: For vessels arriving from foreign ports:
- 3 Unfreighted copies of Complete Manifest covering all cargo discharged in the Great Lakes.
- 4 Personal Effects Lists.
- 4 Crew Lists.
- 4 Narcotics Lists.
- Vessel's Registry and copies of Paid Tonnage Tax Certificates
- Health Pratique.
- Clearance from previous port.

PILOTAGE: Not compulsory. Seaway Pilots will assist if required
ANCHORAGE: Inside South Breakwater, depth 27 ft.
RESTRICTIONS: St. Lawrence Seaway navigation sea Approximately from 1st April to 15th December. Controlling depth
MAX. SIZE: Limited by Seaway Locks. 730 ft. length and Seaway
HEALTH: See "Health: All Ports" before first U.S.A. port (Alb Illness Reports made to New York Quarantine Station.
RADIO: WBL – Buffalo.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Alban
TUGS: Available, but not normally required.
BERTHING: Outer Harbour: Total berth space 2,400 ft.; depth along 27 ft. LW. 2 transit sheds – total of 184,000 ft. dry dock space; spr system equipped, seaway piers for bulk cargoes. South and North 3,506 ft. of berth space, 200 acres open storage area. Depth along 27 ft.
BULK HANDLING FACILITIES: *Grain:*

Stone, Sand and Dry Bulk:

Gateway Metroport: Operator: Gateway Trade Centre, Inc. Dock Length: 3,900 ft. Depth: 26 ft. Storage Capacity: (West side) – 40,000 tons; salt – 25,000 tons; steel – 100,000 tons. (East side) – 300,000 tons; steel – 200,000 tons; salt – 300,000 tons. Loa Equipment: (West side) 1×100 tons movable crane; 2 port conveyors (800 t.p.h. each). (East side) 1×100 tons movable crane 1×230 tons gantry crane. Rail alongside entire dock. Short line se with connections to all Class 1 railroads.
SPECIALISED CARGO HANDLING FACILITIES: A mobile g crane capable of handling lifts of 55 tons at 40 ft. and portable conveyors. Crawler crane, capacity 230 tons. Conveyor, cap 2,200 t.p.h. Additional heavy lift equipment available from the Po Buffalo and commercial sources.
STEVEDORES: Gangs to be ordered by 1700 hrs. for 0800 hrs following day, ample gangs available.
MEDICAL: U.S. Public Health Outpatient Clinic as well as nume hospital facilities.
DENSITY: Fresh water.
FRESH WATER: Available at most berths.
FUEL: All grades available by tank truck delivery or by harbour barge.
CONSULS: Canada, Costa Rica, Ecuador, France, Germany, Mexico, Netherlands and Sweden.
REPAIRS: Machinery and above-water repairs available.
AIRPORT: 5 miles, served by 4 regular airlines.
SHORE LEAVE: No restrictions when cleared by U.S. Immigra Officials.
GENERAL: Refer to "Great Lakes Pilot".
AUTHORITY: Gateway Metroport, 2544 Clinton Street (P.O.Box Buffalo, NY 14224. *Tel:* (716) 826-2890. *FAX:* (716) 826- *Contact:* Fred W. Finger, Marketing Director.

BURNS HARBOUR, Indiana: 41.38 N. 87.11 W.

(See Plan)

The entrance to Burns International Harbour is at Lat. 41° 38′ N., Long. 87° 11′ W., and is located on the South shore of Lake Michigan at Portage, Indiana, some 30 miles East of Chicago in an area known as the Indiana Dunes.
PILOTAGE: Compulsory.
RESTRICTIONS: Average Navigation Season: Domestic cargo by lake freighters – March 15th to February 1st. Ocean going vessels via Seaway – April 1st to December 15th. Lake river barges – 12 months.
Approach to Harbour: Controlling depth of water at harbour entrance 30 ft., entry is from deeper water. Length and beam limitations – none. Approach open 24 hours per day.
Harbour: Controlling depth of water for outer harbour 28 ft.; East and West harbour arms 27 ft. Turning basin – 1,600 ft. radius with water depth of 28 ft. Accessible 24 hours a day. Length and beam limitations – none.
MAX. SIZE: Max. draft 8.22 m. (27 ft.).
VHF: Port on Channel 16.
TUGS: Available if required.
BERTHING: General Cargo, Ro-Ro and Bulk: 9 berths for vessels up to 230 m. (755 ft.) in length; depth alongside 8.22 m. (27 ft.).
Liquid bulk and containers also handled at these berths.
Tankers: 114.3 m. (375 ft.) barge berth, and 198.11 m. (650 ft.) ship berth.
Storage/*Warehousing:* Warehouse storage capacity of 13,560 sq.m. (146,000 sq.ft.) for general cargo; 2 dry bulk storage buildings of 5,600 sq.m. (60,000 sq.ft.) and 19,500 sq.m. (210,000 sq.ft.), or 60,000 tons and 150,000 tons respectively; open storage area of 7.3 ha. (18 acres); grain elevator storage capacity of 176,196 cu.m. (6,222,360 cu.ft.); refrigerated storage capacity of 465 sq.m. (5,000 sq.ft.).
Equipment:
1×300 ton 4600 W. Manitowoc.
4×240 ton Manitowoc.
2×150 ton 4000 Manitowoc.
1×80 ton 318 link belt.
1×60 ton 3900 Manitowoc.
1×40 ton wagon crane.
Buckets: 1×26 cu.yd.; 1×22 cu.yd.; 2×21 cu.yd.; 1×11 cu.yd.; 1×10 cu.yd.; 1×6 cu.yd.
6×72 in. magnets.
3 grapples.
14 caterpillar loaders.
2 D6 caterpillar bulldozers.
3 light loaders (bobcats).
24 forklifts.
1×100 ton Winslow truck scale.
1×60 ton Cardinal truck scale.
Loading conveyors: 42 in × 130 ft. portable belt type; 3 tractors with 3 low-boy 100 ton trailers; 3×100 ton dump trailers; specialised gear for heavy-lift or project cargo on site.
MEDICAL: Porter Memorial at Valparaiso.
TANKERS: See "Berthing".
DENSITY: 1000.
FRESH WATER: Available.
FUEL: Available.
CONSULS: See "Chicago".
REPAIRS: Facilities available.
AIRPORT: Chicago (O'Hare International) and Gary Regional.
HOLIDAYS: *Port Holidays:* New Year's Day; President's Day; Good Friday; Memorial Day; Independence Day; Labor Day; Election Day; Veteran's Day; Thanksgiving Day and Christmas Day.
SERVICES: Launch service, provisions, gyro/radio repairs, surveys, dirty ballast, garbage collection.
AUTHORITY: Burns International Harbour – Port of Indiana, Indiana Port Commission, 150 West Market Street, Suite 603, Indianapolis, IN. 46204, U.S.A. *Tel:* (317) 232-9200. *Telex:* 510-601-4224.

BURNSIDE, (including Convent and St. James), Louisiana: 30.08 N. 90.55 W.

(See Plan)

Also see "South Louisiana".
DOCUMENTS/PILOTAGE: For all general information refer to "New Orleans".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made out to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Normally required, see "Tankers".
BERTHING: Bulk Marine Terminal: Berth 877 ft. long, 45 ft. depth.
Ormet Corporation: Situated at Mile 170 AHP. Max. LOA 305 m. Max. beam 41 m. Max. draft 12.19 m. (60,000 d.w.t. or 130,000 d.w.t. part load) 2 travelling gantry cranes (1,000 t.p.h. each) and 1 shiploader (1,500 t.p.h.). Height above LWL 27.5 m., outreach 19.2 m. Travel 198 m. Loading rate 600 – 1,000 t.p.h.
Rogers Terminal and Shipping (Cargill Inc.): Floating feed transfer facility at Convent. 330 ft.×75 ft. Loading rate to vessels 1,300 t.p.h.
TANKERS: *Shell – St. James:* The facility is located on the West bank of the Mississippi River at Mile 160 above Head of Passes (AHP).
There are 2 berths, one of which is 800 ft. long and the other 1,100 ft. long. At the newer dock there are 2×16 in. arms and the berth is capable of unloading 28,000 bbls.p.h.
The depth alongside these berths is 55 ft. to 60 ft. However, the draft of the vessel is limited to that available at Southwest Pass.
It is important to note that due to the design of this terminal it is impracticable for vessels to receive stores at this location. Additionally there are no bunkers provided at this terminal nor is there any fresh water available from the terminal and there is no authorised anchorage in the immediate area of this facility. Vessels expecting less than 24 hours delay awaiting berth are generally anchored at New Orleans and then proceed to the terminal (which is a different port of entry for Customs) otherwise vessels would have to anchor at Burnside which is about 10 miles up river from St. James.
Because of an underwater pipeline near the dock, the terminal management requires all vessels using their facility to have at least 1 tug of 1,800 h.p. to assist in docking and undocking.
As a point of reference it generally takes approximately 15 or 16 hours transit from Southwest Pass to St. James Terminal for most vessels.
Texaco – Convent: The Texaco Dock is located 167 miles AHP. The berths are located near the edge of the navigable channel and interaction caused by downbound laden vessels can result in excessive surge by deeply loaded vessels docked alongside.
Current in the river at this location varies between 3 and 8 knots, depending on the height of the river.
The docks are located near an area of revetment, therefore anchors should not be used while alongside.
Cargo Handled and Shore Installations: Berth No. 1 handles mainly clean products and petrochemicals, e.g., aviation gas, jet fuel, unleaded gasoline, hi-test gasoline, etc., and serves mainly as a loading dock.
Berth No. 2 handles clean as well as dirty products including crude oils, charge stocks, petrochemical feed stock, furnace and fuel oils, etc. This dock both ships and receives cargoes.
All cargo transfer is made through 12 in. Chicksan arms which are bolted at the ship's manifold. Maximum rail pressure for discharging vessels is 125 p.s.i.
An emergency loading stop control is located in each dock house and portable unit is provided for vessels docked at the berths.
Docking: Docking is always performed by the River Pilot or Docking Master, with the aid of at least 2 tugs. 2×1,800 h.p. tugs are required for vessels up to 60,000 d.w.t. docking and undocking, vessels larger than 60,000 d.w.t. are required to use 3×1,800 h.p. tugs for these operations. Approach is made parallel to the berths, stemming the current with 2 or 3 tugs on the port side. Mooring lines, either wire or synthetic, are run to mooring dolphins by boat.
At least 12 mooring lines are required for all vessels, i.e., 2 head lines, 2 stern lines, and a combination of 4 breast and or spring lines, depending on available leads, both forward and aft.
Nylon messengers or heaving lines are not permitted and will be refused by line handlers in the boats or on the docks.
Bunkers and Fresh Water: Bunker-C and fresh water are available upon request; however, no barges are allowed alongside vessels at any time.
Ballast/Slop Facilities: A maximum of 10,000 bbls. of oily slops may be discharged ashore for storage/treatment.
DENSITY: Fresh water, 1000.
FRESH WATER: Available ex-berth.
FUEL: Not available.
NOTICE:
Agent to Shipmaster:
Vessels over 100,000 Summer Deadweight:
This is to advise you that the Pilots will not allow your vessel to transit outbound between Pilottown and Southwest Pass during darkness hours if your vessel is at a draft in excess of 35 ft. fresh water upon arrival at Pilottown outbound. The times involved are from 1600 hrs. until 0700 hrs. the next day.
We feel certain with various ballasting procedures you will be able to comply with this draft upon reaching Pilottown even though you may leave the *St. James Berth* at a greater draft. If you cannot comply, please advise your Agent boarding with this letter in order that he may inform all parties interested.
By anchoring at Pilottown you will be costing yourself an additional $3,500 minimum in tug and Pilot expense. Therefore, we sincerely require your utmost co-operation.

SHIPMASTER'S REPORT: February 1979.
Location: St. James – West Bank.
Documents: Ship's stamp on cash receipts.
Anchorage: Usually at Grandview in the Customs District of Gramercy, where launch service available and about 1 hour's drive to New Orleans.
From Capline (St. James) about 45 minutes' drive to Baton Rouge.
VHF: All berthing and river pilotage on Channel 13.
Tugs: 3 tugs recommended.
Berthing: Always port side to. No shore gangway, moorings 4, 2, 2 each end for tankers of 100,000 d.w.t. and upwards.
Cranes: Not available.
Tankers: Require ship's gangway at Berth No. 2.
Consuls: Honorary British Consul at New Orleans. (321 St. Charles Avenue). Open 1000 hrs. – 1200 hrs. and 1400 hrs. – 1600 hrs.

AUTHORITY: Port of Greater Baton Rouge, P.O.Box 380, Port Allen, Louisiana 70767, U.S.A. *Tel:* (504) 342-1660. *FAX:* (504) 342-1666. *Contact:* Gary C. Pruitt, Executive Director.
Burnside Bulk Marine Terminal, P.O.Box 25, Highways 44 22, Burnside, Louisiana 70738. *Tel:* (504) 473-0793. *Contact:* Dan Hales, Vice-President and General Manager. Glenn Schernayer, Sales.
The Port of South Louisiana, 152 Belle Terre, P.O.Box 909, La Place, Louisiana 70069-0909. *Tel:* (504) 652-9279, 568-6269. *FAX:* (504) 652-9518. *Contact:* Virginia D.Simons, Assistant Port Director - Economic Development.
Note: The Port of South Louisiana has jurisdiction from River Mile 114.9 A.H.P. to River Mile 168.5 A.H.P. which area includes St.Charles, St.John the Baptist and St.James parishes.

CAPE COD CANAL, (including Sandwich Oil Terminal), Massachusetts: (See Plan)

The Cape Cod Canal is a sea-level canal, extending from a point on Cape Cod Bay about 50 miles S.E. of Boston Harbour, Mass. to Cleveland Ledge Lt., Buzzards Bay, Massachusetts.

PILOTAGE: The Corps of Engineers, Department of the Army , does not maintain pilot service but independent Pilots, licensed by the U.S. Coast Guard, are usually available at the canal.

Pilotage is compulsory and available 24 hours.

Pilot boards:

1. East Entrance: Position Lat. 41° 47.9′ N., Long. 70° 28.5′ W., midway between the Sea Buoy and the breakwaters.
2. West Entrance: Near West end of Cleveland Ledge.
3. By special request: Near Brenton Reef Light (Lat. 41° 25.6′ N., Long. 71° 23.4′ W.) or 2 nautical miles South of Point Judith Light Buoy No. 2 in position Lat. 41° 19.2′ N., Long. 71° 28.5′ W.

Pilots are available from the following associations:

Northeast Marine Pilots Incorporated, Newport, Rhode Island (Tel: 401-847 9050 (HJ), 401-331 4824 (HN) and 800-274-1216).
Interport Pilots Associates. Tel: 201-291 1310 and 800-346-4877.
Boston Pilots, East Boston. Tel: 617-569 4500.
Associated Coast Pilots. Tel: 201-887 7114.
Association of East Coast Pilots. Tel: 609-435 1239.

NAVIGATION: Navigators are warned to be on the alert for possible "bank suction" and "bank cushion", the effects of which may cause a vessel to take a sudden and decided sheer. Shipmasters are directed to notify the Marine Traffic Controller in advance of entering the channel of any known defects their ship may have which would effect the handling of their vessel in the Canal.

(a) Vessel traffic drawing 25 ft. and over are directed not to enter the Canal Channel at the Cleveland Ledge Light entrance and shall lay-to or anchor in the vicinity of Buzzards Bay Buoy No.11 (FL.W & Bell) until clearance is granted by the Marine Traffic Controller.

(b) Vessel traffic with drafts in close proximity to the 32 ft. mean low water project depth of the Canal should make themselves fully aware of the controlling dimensions of the waterway and transit the Canal during the maximum stages of high water at a speed consistent with safe navigation.

Aids to Navigation:

(a) Aids to navigation for the Cape Cod Canal approach channels are under the jurisdiction of the First Coast Guard District, Boston, Massachusetts, and are shown on U.S.Coast & Geodetic Survey Charts No. 13230, 13236, 13246 and 13218, and are described in Department of Transportation, U.S.Coast Guard, "Light List, Atlantic Coast of the United States, Volume I, CG-158", and amendments thereto.

(b) The channel limits of Cleveland Ledge and Hog Island Channels are defined by buoys. The navigation beacon lights in Hog Island Channel No. 3, 5, 7, 9 and 11, and No. 4, 6 and 8, are located 125 ft. outside the limits of the channel, in shoal water. Beacon lights No. 12, 18 and 20 are located on Hog Island, Basset Point, and Greenwood Point, respectively, and are South of the Southerly limit of the channel as follows: No. 12, 481 ft.; No. 18, 100 ft. and No. 20, 90 ft. Beacon Light No. 27 is a fixed yellow mercury light located 120 ft. North of the Northerly channel limit at Canal Station 391 (Canal Administration Area).

(c) The Canal in the Land Cut Section is lighted at night by Lamps 500 ft. apart, 140 ft. from the edge of the channel and 25 ft. above mean high water. The lights are yellow on the North bank and white on the South bank.

(d) Red navigation lights are installed on the lower chords of the Bourne and Sagamore Highway Bridges 250 ft. North and South of the centre line to mark the 480 ft. wide channel. Green lights denote the centre of the channel.

(e) Immediately preceding the lowering of the Railroad Bridge span, the operator will sound 2 long blasts on an air horn. Immediately preceding the raising of the span, the operator will sound one long blast on an air horn. When the bridge span (normally maintained in an open or raised position) is in a down or lowered position, during periods of low visibility, there will be 4 blasts on an air horn on the span every 2 minutes. The navigation lights (360°) are fixed green when the lift span is in a fully raised position and stay green until the span starts to lower (6 ft. to 8 ft.) when it becomes a fixed red. The 4 red flasing lights affixed to the top of the bottom chord on both East and West sides of the bridge start flashing when the centre light becomes red and continue to flash red until the bridge returns to the raised position, when the centre light becomes green.

RESTRICTIONS:

	Width bottom (ft.)	Length (miles)
Easterly Entrance (Station -75 to Station -12)	540	1.2
Canal Land Cut, (Station -12 to Station 413)	480*	8.1
Hog Island Channel, (Station 413 to Station 661)	500	4.7
Cleveland Ledge Channel, (Station 661 to Station 880)	700	4.1

*Except narrows to 450 ft. opposite State Pier (Buzzards Bay) and 466 ft. through the railroad bridge.

The canal and approach channels have been dredged to the project depth of 32 ft. below MLW.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

RADIO/VHF: Direct communications with the Cape Cod Cana available at all hours by means of telephone and radio telephone telephone number is 508-759-4431. Direct radio communications be made with the Cape Cod Canal office on VHF radio telephone the Cape Cod Canal office on Channel 13 to establish contact. The transmissions will then be switched to Channel 12 or 14 as the wo channels to pass information. Channel 16 is also available at the C office; however, Channel 16 use should be limited to emerg situations or whenever vessels do not have one of the other a channels.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany

TUGS: The U.S. Army Engineer Division, New England, Co Engineers, Cape Cod Canal Field Office does not supply towage se except in emergency situations

BERTHING: *Mooring Basins:* Mooring basins are located at the and West ends of the Canal Land Cut.

The East Mooring Basin is located on the North side of the Cana Sandwich. It is 550 ft. wide and 1,660 ft. long at the line of dolphins approximately 3,000 ft. in length at the approach to the basin from Canal channel and has been dredged to a depth of 25 ft. at M.L There are 9 steel mooring dolphins located along the Northerly b limit, spaced approximately 85 ft. apart.

The West Mooring Basin is located on the S.E. side of Hog Is Channel, Buzzards Bay. It is 350 ft. wide and 2,700 ft. long at the of dolphins and approximately 4,000 ft. in length at the approach t basin from the Canal channel and has been dredged to a depth of 3 at M.L.W. There are 7 steel mooring dolphins along the Southerly of the basin for a length of 775 ft. Vessels moored at the Sand Bulkhead and East and West Mooring Basins shall have sufficient aboard at all times to ensure the safety of the vessel.

Small Boat Basins and Channels:

(a) The East Boat Basin located on the South side of the C opposite the East Mooring Basin has been dredged to 13 M.L.W. for 4.3 acres and 8 ft. M.L.W. for 4 acres.

(b) An improved channel, 15 ft. at M.L.W. and 100 ft. in width le from the N.W. side of Hog Island Channel, abreast of Hog Isla to the existing harbour for small vessels in Onset Bay.

(c) An improved channel, 7 ft. deep at M.L.W. and 100 ft. wide, le from a point opposite the Easterly end of the West Mooring B at approximately Canal Station 435 and extends to deep w in Cohasset Narrows at the approach to Buttermilk Bay. T natural channel leading into Buttermilk Bay is crossed by 2 h bridges, having a least horizontal clearance of 25 ft. and a ver clearance of 6 ft. at M.L.W.

Seasonal Yacht Facilities:

(a) At the Easterly entrance of the Canal in the East Boat Ba water, fuel, oil and gasoline are obtainable for the convenie of vessels from private sources.

(b) At the West end of the Canal Land Cut, there is a 15 ft. impro channel into Onset Harbour where water, fuel and supplies kinds are obtainable from local, private sources.

Coast Guard Station: A U.S. Coast Guard Station is located near Easterly entrance of the Canal on the South bank.

BRIDGES: 2 fixed span high-level highway bridges and 1 vertica railroad bridge cross the canal. The horizontal distance between cha piers is 550 ft. at the highway bridges and 500 ft. at the railroad br

The minimum bridge clearance for the available width of channels as follows:

	Horizontal Clearance	*Vertical Clearance (MHW)*
Highway Bridges	480 ft.	135 ft.
Railroad Bridge (vertical Lift)	466 ft.	135 ft. (open) 7 ft. (closed)

TANKERS: See "Shipmaster's Report".

GENERAL: *Tides:* The mean tidal range in Cape Cod Bay is 9.4 ft. in Buzzards Bay it is 4.0 ft. Predicted times and heights of tides for e day of the year can be obtained from the National Oceanic Atmospheric Administration publication, "Tide Tables, Atlantic Oc East Coast of North and South America, (including Greenland)". A C Tide book is published annually and is available from the Cape C Canal Field Office at Buzzards Bay, Massachusetts.

Currents: Strong tidal currents occur in the Canal. Predicted times velocities of maximum Eastward and Westward currents and predic time of slack tide for each day of the year are given in the Nat Oceanic and Atmospheric Administration Tidal Current Ta publication, "Current Tables, Atlantic Coast of North America".

Cable Crossings: A submarine telephone cable crosses the Hog Is Channel, positioned in a direction of 319° True at a point on the ce line of the channel, 1,000 ft. West of Hog Island Beacon No. 9. The d depth of water over the utility is 36 ft. at M.L.W. Two aerial power ca cross the Canal at Bournedale, 1.2 Statute Miles West of the Saga Bridge and have a least vertical clearance of 160 ft. above M.L.W

Traffic Lights: Red, Green and amber yellow signal lights, visible distance of about 2 miles in clear weather, day or night, are loca the following points:

(a) Eastern (Cape Cod Bay) entrance on the South side of the C with a mean elevation of 55 ft. above M.H.W.

(b) Western (Buzzards Bay) entrance to Hog Island Chann Wings Neck, East side of the Canal at a mean elevation of 4 above M.H.W.

Two Way Traffic: Two way traffic through the Canal will be allowed w in the opinion of the Division Engineer's representative charged controlling traffic, conditions are suitable.

SHIPMASTER'S REPORT: September 1984.

Sandwich Oil Terminal: 41° 46.3′ N., 70° 30.9′ W. (See "Plan")

Location: 2,200 m. inside North Breakwater from Cape Cod Bay, S side of Cape Cod Canal.

Max. Draft: 40 ft. (salt water).

Salinity: 1025.

Anchorage: Good anchorage N.E. of Breakwater.
Berthing: Berthing and unberthing only when slack tide.
Berthing port side alongside when arrival from Cape Cod Bay.
Berth must be approached with care.
Ship's gangway to shore.
Derrick rigged to take onboard two cargo hoses 10 in. diameter.
After discharging, vessel to proceed through Cape Cod Canal as there is no turning basin. Max. draft 28 ft. Airdraft 135 ft. when passing 3 bridges.
Vessel can also enter from Buzzard Bay but draft according to Canal Control is 28 ft.
AUTHORITY: Department of The Army, New England Division, Corps of Engineers, Cape Cod Canal Field Office, P.O. Box J, Buzzards Bay, Mass. 02532-1809, U.S.A. *Contact:* Engineer-in-Charge.

CASTLE ISLAND, Alaska: 56.39 N. 133.11 W.

Located in Duncan Canal off Kupreanof Island between Wrangell and Petersburg. Open all year.
DOCUMENTS: See "Anchorage, Alaska".
PILOTAGE: From sea via Dixon Entrance up Clarence Strait to Guard Island. Under pilotage from Guard Island.
ANCHORAGE: Fair weather anchorage only.
MAX. SIZE: Harbour depth 45 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TIDES: Diurnal range 16 ft. Also see "Berthing".
CUSTOMS: Quarantine and Immigration available from Guard Island. Customs available from Petersburg or Guard Island.
TUGS: From Wrangell, 3 available 500 h.p. each.
BERTHING: Alaska Barite facility: Dolphins and 2 floats. Present facilities limited to about 22,000 ton ships. Loading equipment consists of 1 loading spout for bulk cargo. Production average of 1,000 t.p.h.
STEVEDORES: Sufficient to work ore loading facility 24 hours a day when necessary.
MEDICAL: Facilities available in Petersburg or Wrangell.
REPAIRS/WATER/FUEL: None.
AIRPORT: Charter airplane only.
AUTHORITY: Chromalloy Mining and Minerals, P.O.Box 650, Petersburg, Alaska 99833. *Contact:* D.Brant, Harbour Master.

CHARLESTON, South Carolina: 32.47 N. 79.56 W.

(See Plan)

DOCUMENTS:
3 Crew Lists.
3 Curio Lists.
3 Stores Lists.
3 Manifests.
At least 1 copy of Bill of Lading, if provided by shipper, and 1 copy of Parting Crew List.
PILOTAGE: Shipmasters to notify Agent 48, 24 and 12 hours prior arrival at C-2 Buoy. Pilot may be contacted by VHF Channels 16 and 18. Pilot boards on lee side from black-painted launch with "Pilot" painted in white letters on the side. Normally vessel is berthed by Docking Master from tug company.
Charleston Branch Pilots Association: 2 North Adgers Wharf, Charleston. Tel: (803) 577-6695. Monitors VHF Channel 16 and 18A, Channel 14 also available.
Masters please advise ETA and deepest draft and changes in ETA as soon as possible. If no contact is made please announce ETA and draft over the air. Savannah and Cape Fear Pilot Stations will also pass on this information for you.
Pilot vessels: Call sign WZF 7266 "Carolina" 55 ft. length; "Palmetto State" 55 ft. length; "Sis" 37 ft. length.
Pilot vessel when on station guards following frequencies: VHF Channel 16; VHF Channel 13; VHF Channel 18A, 156.95 MHz.
Location of pilot station: Charleston C-2 Buoy Lat. 32° 40.7′ N., Long. 79° 42.9′ W., in 42 ft. of water.
Pilot ladder requirements: Have ladder in good repair, clean and approximately 6 ft. above water. Please provide escort to and from bridge. Personal portable VHF transceivers are carried by Pilots.

Distances from pilot station to all berths approximately:

	Nautical Miles
Union Pier	12
Columbus Street	12.5
Exxon Dock	14.5
Wando Terminal	14
Ship Yard River	15 – 16
Navy Yard	16 – 19
Other Oil Docks	19 – 20
State Port Terminals of North Charleston	21
Army Transportation Docks	22
Naval Weapons Station	25
Cainhoy	22.5

ANCHORAGES: Rarely required.
RESTRICTIONS: Only restriction affecting operation relates to channel depth of 35 ft. at low tide.
MAX. SIZE: Can handle vessels 930 ft. long. Present private tanker facilities measure 475 ft. from centre of discharge pipeline to end of dock.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.
RADIO: Normal procedure. No special or unusual procedures required.
RADAR/VHF: Services required are handled through Agent.
Tug Companies: Marine Contracting and Towing: 723-7442 Radio frequency Channel (7A).
White Stack Towing: 577-6556 Radio frequency Channel 19A.
Marine operator on Channel 26 VHF.
Weather Station on Channel 39 VHF.
TUGS: Tugs usually join tankers between Cooper River Bridge and Coal Pier, approximately 0.5 miles from dock. Tug lines used. No charge made for this service.
Tugs are required for any vessel docking at or sailing from any state port berth which has a crane.
BERTHING: *Union Pier:* State Pier No. 2: 4 berths. Break-bulk terminal, length 2,470 ft. (752.86 m.) Depth 40 ft. MLW. LASH barge handling capabilities, and 12 acres (48,561 m.) of open storage area.
Columbus Street Terminal: State Pier No. 8. 6 berths. Length 3,875 ft. (1,181 m.) Depth 40 ft. MLW. Terminal handles break-bulk and containers. 1×75 ton gantry crane, 1×50 ton gantry crane and 1×150 ton gantry crane serve 1,940 ft. of berthing space along the South end of the pier. 1×90 ton truck crane and 3×40 long ton container cranes.
North Charleston Terminal: State Pier No. 15: Total length 2,500 ft. 3 container berths, 6 container cranes, one grain elevator, capacity 1.5 million bushels. 131 acres open container support space.
Wando Terminal: 3 container berths, each 809 ft. length. 4 container cranes each 40 tons capacity and 2 IHI container gantry cranes. Depth 40 ft. MLW. Paved container storage area of 126 acres. Developments to be completed by January 1995 will add another berth (1,373 ft.), 70 acres of container storage and 3 container cranes.
BULK HANDLING FACILITIES: *Shipyard River Coal Terminal:* Operator: Massey Coal Terminal Corp. Max. size: 50,000 d.w.t. Max. draft 38 ft.
Accommodation includes a single ship berth at the confluence of the Shipyard and Cooper Rivers. The pier is served by a travelling and shuttling shiploader with telescopic chute, which has a maximum capacity of 2,500 t.p.h. and loads at an average of 1,650 t.p.h.
CRANES: 1×40 ton, 1×90 ton, and 2×140 ton mobile cranes are available to work any Port Authority Terminal.
BRIDGES: *Cooper River Bridges Specifications:* Main Channel Span: 150 ft. above MHW at Centre Line, 750 ft. horizontal.
Town Creek Span: 135 ft. above MHW at Centre Line, 750 ft. horizontal.
STEVEDORES: *Working Hours:* Labour may be ordered for work to start at the following times: 0800, 1000, 1200 and 1900 hrs. Labour will usually work as long as necessary; shift system not used in this port.
MEDICAL: Advance notice when possible.
TANKERS: *Private Facilities:* Discharge lines all 8 in. dia. and 1 solvent line 8 in. Adapter to conform to ship's discharge lines supplied. Draft not to exceed 35 ft. low tide. Tanker berths operated by Humble Oil, Shell Oil, Hess Oil, BPT, and Phillips Petroleum, all suitable for 35 ft. draft. Gulf Oil Berth, max. draft 30 ft. Texaco Berth, max. draft 32 ft.
Report: *Exxon Terminal:* The berth, located 14.5 miles from the Sea Buoy, is of marginal type construction, and traffic passes in close proximity to the facility. Passing traffic combined with tidal conditions experienced on ebb tide require that a vessel be moored as follows:

Vessels arriving at the Port of Charleston with a draft in excess of 33 ft. (salt) are scheduled to commence channel transit 2 hours after LW slack at the channel entrance. This schedule allows the vessel to berth and be fully secured prior to the start of the strong ebb current out of Shipyard Creek. (See Chart: U.S. 11524).

On arrival, the vessel is breasted into the berth port side to, and 1 forward spring run to assist in spotting and maintaining vessel's position.

With vessel positioned, attending tug will work bow of vessel in. Once an angle of 5° is attained, vessel will then run 5 head lines and 3 forward breast lines. Efficient stoppers shall be available to "stop off" mooring lines during transfer from winch to bitts without loss of tension. With aforementioned lines all fast, attending tug will then work stern of vessel in; any required adjustment of head and/or breast lines to attain equal tension on all leads shall be undertaken during this period. With vessel in position, an additional forward spring line will be used. Recommended stern leads are as follows:
(a) 2 spring lines.
(b) 2 breast lines.
(c) 3 stern lines.

Mooring lines are to be kept taut during cargo transfer. Any required slacking of head lines shall only be attempted during flood tide. Vessel to consult tide tables for times of HW and LW. Also see "Plan" for mooring arrangements.

Vessels arriving with a draft of less than 33 ft. begin transit approximately 1 hour after LW slack at the channel entrance and follow the same procedures when mooring.

The U.S. Coast Guard has recommended that moored vessels maintain a listening watch on VHF Channel 13 and to pay close attention to moorings while deep draft vessels are transitting the North Charleston and Filbin Creek Reaches. Since maintaining a bridge watch to monitor VHF during the entire discharge is not practicable, nor is it permissible to operate radio equipment at any time during cargo transfer, it is suggested that vessels consult with the Agent to obtain advice on expected times of transit of passing vessels. Prior to vessels passing, crews should exercise particular care in maintaining a close watch on mooring lines to make certain vessel is alongside and mooring lines are in taut condition.

Failure of vessels to moor in a safe and proper manner will result in terminal's refusal to connect cargo hoses. Tidal conditions experienced at the berth require a full deck and engine room watch be kept; failure to comply will result in suspension of cargo transfer.

FRESH WATER: Available via 2.5 in. hose at a rate of 500 bbls.p.h.

FUEL: Bunker "C" at API of 14.4 to 16.6 (approx.) and blended Bonded Intermediate grades from 1 to 30.

FIRE PRECAUTIONS: Normal precautions.

CONSULS:

Chile: Dr. Carlos Salinas, 948 Equestrian Dr., Mount Pleasant, S.C. 29464, Tel: (803) 792-2489, (803) 884-6224.

STORING: See "Prelims".

1. Yes
2. Yes
3. Yes
4. Yes
5. Standard U.S. Regulations
6. Yes

SHORE LEAVE: Subject to Shipmaster's permission and existing Immigration Regulations.

DELAYS: Normally, no delays beyond normal time required to connect/disconnect hoses.

DEVELOPMENTS: The main navigation channel has been deepened to 40 ft.

Floating Ro/Ro ramp in operation.

SHIPMASTER'S REPORT: April 1989.

Chart: B.A. Chart No. 2806.

Approaches: Found to be as charted and described in the Pilot book.

Depths: Controlling depth in Charleston Harbour is given by the Pilots (See "Developments" above).

Pilotage: Pilots require a minimum of 2 hours notice of arrival a departure. Radio signals show 2 days notice required.

Pilot Office monitors VHF Channels 16 and 18A and capable of u Channel 14.

Pilot vessels guard VHF Channels 16, 13 and 18A.

Pilot station is at the Sea Buoy with Racon 'K'.

Pilot ladder to be rigged 8 ft. above the water.

Pilots board from a large launch and request a speed of about 7 kno instructions will be given for any special requirements due to weath conditions.

Pilots leave either in the buoyed channel or at the Sea Buoy depend on weather conditions and entering traffic.

The dock Pilot boards from a tug.

Sea Pilot will leave by launch and will request a pilot ladder to rigged.

Tugs: When going to Shipyard River Coal Terminal, tugs will join t vessel just above the fixed bridges.

Berth: The Shipyard River Coal Terminal is on the South side of t entrance to Shipyard Creek, and is marked on the chart as dolph (Dns).

The face of the berth is well fendered and long enough for this ves to be loaded without shifting.

Accommodation ladder can be used at high water when light, but d to the dockside saveall and discharging conveyor belt, it is difficu land on the dockside, so a short brow is required for access at m times.

Ship's cranes will reach over the conveyor belt for storing, and acce for trucks is good.

Mean tidal range is given as 5.2 ft. (1.6 m.), but it is as much as 2.0 at Springs.

The dockside fenders are above the maindeck level when loade low water and for this reason every effort should be made to comp on high water or considerable damage could be done to shipside ra tank vents and timber stanchions. Possibly this could be considered a safe berth according to the Charter party, at low water.

The foreman advised that vessels had been loaded to 38 ft. on t Coal Berth and that dredging was expected to increase this to 40 ft. high water. There is therefore adequate water at all states of the t for this vessel.

Berthing: Vessel berthed starboard side to, turning with tug's assistan inside the Shipyard Creek.

One line boat is in attendance, taking lines first to the forward dolph and then coming aft for the stern lines.

Similar procedure for departure, letting go the head lines first then t stern lines.

Loading: Loading is by chute on a movable gantry and as mention before, all hatches can be loaded without shifting. Loading capabil about 600 tonnes per hour.

Cargo: All available cargo was loaded.

Stoker coal stowing at 52/53 cu.ft./ton (1.4498/1.4776 cu.m./tonn

Total cargo loaded by shore weights 6755.556 tonnes.

by draft survey 6761.71 tonnes (Ship's figure).

6760.28 tonnes (Surveyor's figure).

The Surveyor's figure was used for the Mate's Receipt and Bil Lading.

Hold distribution:

	Pre-stow Estimate	Actual	Slack	Possible Max.
No. 1	1531	1624.28	Nil	1624.28
No. 2	1800	1639.94	181	1820
No. 3	1800	1778.43	43	1820
No. 4	1697	1717.63	Nil	1717.63
Totals	6828	6760.28		6981.91

Pre-stow estimates were calculated using the untrimmed g capacities of the holds, charter party calling for spout trimmed stowa

Hold No. 4 was filled giving a stowage factor of 1.46 cu.m./ton (52.37 cu.ft./ton). Foreman's estimate of space remaining in Hold N was 40 tonnes and in No. 2 170 tonnes, working on the stowage fa from Hold No. 4, these holds would take 1820 tonnes, being clos the Foreman's estimate.

Estimating Hold No. 1 with the same stowage factor, it would b 1550 tonnes, however this hold was filled and shore weights 1624.28 tonnes were given, a stowage factor of 1.393 cu.m./ton (49.86 cu.ft./ton). Either the shore weights are incorrect or there is overestimation of the void space left in Hold No. 1. This is likely as distance to the fore and after ends of the hold are shorter than in Ho No. 2 and 3 and the fore end has less width, but the same percent loss is used as for the larger hatches although Hold No. 4 also h shorter ends but less taper has a smaller percentage loss. There estimate that in future 6,982 tonnes of this coal could be loaded and arrival draft of 21 ft. maintained with full bunkers at Charleston.

Fresh Water: Available from the berth, but delivery is reported t slow.

Services: All services expected in a United States port are availab

AUTHORITY: South Carolina State Ports Authority, Port of Charles 176 Concord Street, P.O.Box 817, Charleston, South Carolina 29 *Tel:* (800) 845-7106. *FAX:* (803) 577-8616. *Cables:* SC Ports *Contact:* W. Don Welch, Executive Director. William P. Lempe Harbour Master. *Tel:* (803) 577-8192.

CHICAGO, Illinois: 41.50 N. 87.45 W. (See Plan)

DOCUMENTS:
For Agent in Montreal:
3 unfreighted copies of Complete Manifest for Seaway Toll purposes, covering all cargo to be discharged in the Great Lakes.
In first U.S. port: a "Traveller" is made up by the Customs Inspector with the following documents:
2 complete sets of U.S. Cargo Manifests, plus 6 copies for Agents.
1 set Manifest of Cargo for first U.S. port.
4 Stores Lists.
4 Personal Effects Lists.
4 Firearms and Ammunition Lists.
4 Crew Lists, Form I-418.
4 Narcotics Lists.
4 Vessel's Itinerary Lists.
Vessel's Registry and copies of Paid Tonnage Tax Certificates.
Health Pratique.
Clearance from previous port.
2 sets Bills of Lading.
3 copies Stowage Plan.
In subsequent U.S. ports the following are required:
5 sets Manifest of Cargo for that port.
The "Traveller" and Permit to Proceed issued in previous port.
2 Stores Lists.
2 Personal Effects Lists.
2 Firearms and Ammunition Lists.
2 Crew Lists.
2 Narcotics Lists.
2 sets Bills of Lading.
3 copies Stowage Plan.

PILOTAGE: Compulsory unless Master holds Exemption "B" Licence. 24 hours' notice of arrival required by Agents who arrange Pilot.

ANCHORAGES: In Chicago Harbour, Anchorages A and B designated for merchant ships and marked on charts. In Calumet Harbour vessels should not anchor within 1,000 ft. of the breakwaters.

RESTRICTIONS: St. Lawrence Seaway navigation season approx. from April 1st to December 15th. Controlling depth 27 ft.

Inland waterways to New Orleans open 12 months.

MAX. SIZE: Limited at Seaway Locks. 740 ft. length, 26 ft. 03 in. draft and beam 78 ft. Depth alongside terminals 27 ft.

Inland waterway handles barges with draft 9.0 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.

RADIO: Port can be contacted by Illinois telephone station WAY. Vessels are required to give notice on radio upon entering Calumet River.

Notice of Arrival: Master must give at least 24 hours' notice to Commander, 9th Coast Guard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also at least 24 hours' notice of ETA at first U.S.A. discharge port is required.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available, not compulsory and not required at Iroquois Landing Terminals, but recommended for downriver transit to Lake Calumet berths.

BERTHING: *Calumet River Terminals:* Iroquois Landing Lakefront Terminals. Operator: Ceres Marine Terminals. Facilities at the mouth of the Calumet River. Handles general cargoes, steel products and containers. The terminal has 3,000 ft. of berthing space. Heavy lift cranes run from 75 tons to 140 tons in capacity. Also numerous lift trucks, with capacities to 46,000 lb.

2×100,000 sq. ft. terminal warehouse facilities. 90 acres of the 194 acre site has been set aside for maritime operations adjacent to the 3,000 ft. of berthing space on the South side of the Calumet River entrance at Lake Michigan.

Federal Marine Terminals Inc. handles general cargo, steel products and containers. This facility has 730 ft. of berthing space, 34,000 sq. ft. of covered storage space and 11 acres of open storage space. Heavy lift cranes at Federal Marine range from 20 tons to 150 tons. Lift truck capacities range up to 52,000 lb.

KCBX Terminals Co. on the Calumet River specialises in handling, storing and distributing raw materials or dry bulk commodities. KCBX's twin bulk loading facilities offer 2 deep-water berths, each more than 700 ft. long. The facility has railroad yards that accommodate 2,200 rail cars adjacent to the dock. The twin loading towers provide fast handling at up to 2,500 t.p.h.

Lake Calumet Terminals: Stolt Terminals (Chicago) Inc. in Lake Calumet transfers liquid bulk cargoes – animal fats, vegetable oils and chemicals. Stolt Terminals has 600 ft. of berthing space, with storage capacity of more than 750,000 barrels and 16,000 sq. ft. of drumming warehouse space. This facility has a transfer capacity of approximately 200 t.p.h. Stolt also has 5 miles of internal railroad trackage and a switch engine.

Ceres Terminals (North), Inc. at Lake Calumet handles steel, ores, pig iron, scrap and containers. The terminal was designed for easy interchange of cargoes to and from deep sea vessels. Mississippi River barges, Great Lakes vessels, railroads and trucks – both local and interstate. Truck and railcar weighing services are available also. Ceres has 1,500 ft. of berthing space; 45,000 sq. ft. of covered storage and 27 acres of open storage. Heavy lift equipment includes 5 cranes ranging from 125 tons to 150 tons. Lift truck capacities range up to 50,000 lb. per unit.

Reserve Warehousing, Inc. on Lake Calumet has 100,000 sq.ft. of general covered storage with access to additional 68,000 sq.ft. Equipment includes lift trucks to 52,000 lbs. capacity, cranes 100 tons –150 tons; 1,000 ft. of berthing for deep-draft vessels and inland barges. Speciality in steel, non-ferrous metals, lumber, pulp and general cargoes.

Emesco (Dockside) Terminals warehousing and marine terminal facilities on Lake Calumet are designed for efficient handling of steel, machinery, containers, scrap, pig iron, ferro-alloys and other metallic bulk commodities. Emesco's 800 ft. of heavy duty bulkhead and 2×75 ton gantry mounted cranes operating over 3,700 ft. of tracks provide more than 1,000,000 sq. ft. of open storage under cranes. Emesco has 100,000 sq. ft. of heated warehouse. Other features are 25 acres of open storage, miscellaneous auxiliary cranes, an electronic truck and rail scale, 25,000 ft. of railroad track, ship to barge transfer.

Port District operates Foreign Trade Zone No. 22 for warehousing, storage and distribution. 526,000 sq.ft. covered warehouse and 36 acres of open storage area have FTZ designation.

BULK HANDLING FACILITIES: Continental Grain Company's Elevator "B" on the Calumet River has a storage capacity of 6,800,000 bushels. Elevator "B" has 5 loading spouts with a shipping capacity of 40,000 bushels per hour. Unloading capacity from barges is 15,000 bushels per hour. Receiving capacity from rail cars is 10,000 bushels per hour and from trucks 15,000 bushels per hour. The berthing space at Elevator "B" is 1,025 ft.

The Cargill Inc. grain elevator on the Calumet River has a capacity of 23 million bushels. In addition to grain, this facility handles salt, molasses, and grain by-products. Cargill has 3,600 ft. of berthing space – 1,200 ft. of this for elevator use, and 20 acres of open storage. Loading capacity is 60,000 bushels per hour, while unloading is 12,500 bushels per hour. Cargill has 3 marine legs, and 5 loading spouts.

The Gateway Elevator of the Countrymark Co-Operative at Lake Calumet offers storage capacity of 6,500,000 bushels for bulk grains. The 8 loading spouts have a capacity of 20,000 bushels each per hour. Unloading speed is 10,000 bushels per hour. Berthing space is 1,000 ft.

Continental Grain's Elevator "C" at Lake Calumet has a capacity of 6,500,000 bushels of bulk grain and grain products. The 8 loading spouts have a capacity of 20,000 bushels each per hour. Unloading capacity is 10,000 bushels per hour. This facility has 1,000 ft. of berthing space.

DENSITY: Fresh water.

MEDICAL: Doctors, hospital and all facilities available.

FRESH WATER: Available at most berths.

FUEL: All grades available, ex-wharf, or delivered by barge.

COOS BAY, Oregon: 43.22 N. 124.13 W. (See Plan)

DOCUMENTS: Local Port Authority does not require any documents from merchant vessels entering this harbour. This does not preclude United States Customs requirements for documents.
PILOTAGE: No specified amount of advance notice of ETA required. Radio contact may be made on frequency 8182 kHz, also on frequency 2182 kHz. Most used frequency is VHF Channel 16. Pilot will be taken on board at entrance to Coos Bay Channel. No designated anchorages for vessels awaiting a Pilot.
ANCHORAGES: North of Entrance Buoy.
MAX. SIZE: Max. permissible length is 725 ft., breadth 110 ft. A 2 ft. clearance under keel is considered necessary for safe navigation. Vessels entering Coos Bay from sea draw down about 0.166 in. per foot of draft because of difference in density.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
RADIO: Pilots, Agents and stevedores monitor VHF Channel 16.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Pilot vessel acts as Tug. Emergency small harbour tugs available and ship's lines generally used.
BERTHING: *Note:* All berths with the exception of oil berths dredged to 35 ft. in 1979.
'T' Dock: Distance from entrance 6 miles.
Barge Facility: Distance from entrance 6.5 miles.
Roseburg Lumber Co. Dock: Length 1,000 ft. Depth alongside at MLW 38 ft. No fresh water available. Distance from entrance 8 miles.
Ocean Terminals Dock: Length 400 ft. Depth alongside at MLW 39 ft. No dock cranes available. Fresh water available. Distance from entrance 11 miles.
Export Services: Length: (Lumber Dock) 1,433 ft. (Wood Chip Dock) 694 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 12 miles.
Bayshore Dock: Length 504 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 13 miles.
Dolphin Terminals: Vessels moor to dolphins adjacent to apron 60 ft. long and 26 ft. wide which is joined to the shore by a causeway length 190 ft. and width 12 ft. Depth alongside at MLW 36 ft. Fresh water available. Distance from entrance 13 miles.
Central Dock: Length 1,380 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 13.5 miles.
Portland Dock: Length 576 ft. Depth alongside at MLW 36 ft. No dock cranes available. Fresh water available. Distance from entrance 15 miles.
Coos Bay Dock: Length 1,326 ft. Depth alongside at MLW 37 ft. No dock cranes available. Fresh water available. Distance from entrance 15 miles.
BRIDGES: 2 bridges cross the main ship channel. The Southern Pacific railway drawbridge 9 miles from the entrance and the Coast Highway Bridge 9.6 miles from the entrance. Clearance height of the Highway Bridge is 149 ft. in the centre of the span at MLW. Clearance width of swinging railway bridge 197 ft.
STEVEDORES: Should have minimum of 48 hours to arrange gangs. Also see "Radio".
MEDICAL: Advance notice of required medical attention is desirable, in order to expedite use of ambulance, if necessary.
TANKERS: 2 tanker berths, Standard Oil and Union Oil Co., draft 35 ft. Tankers discharge into tank farms. Union Oil Co. is the bunkering Agent.
FRESH WATER: Available. Cost per ton is negotiable.
FUEL: 24 hours advance notice desirable, both bunker and diesel fuel available.
CONSULS: None.
REPAIRS: Only minor deck and engine repairs possible.
DRY DOCKS: Largest dry dock handles vessels not exceeding 220 ft.
GANGWAY/DECK WATCHMEN: Service of watchman at discretion of ship's Master.
OPENING/CLOSING HATCHES: Normally by stevedores.
REPATRIATION: Repatriation through local Customs and Immigration Office.
AIRPORT: All docks within 5 miles of airport. Airport served by regular airlines.
TIME: GMT minus 8 hours, clocks advanced 1 hour on first Sunday in April, clocks retarded 1 hour last Sunday in October.
HOLIDAYS: All legal holidays observed, plus state-wide elections. Cargo work through negotiations with stevedore contractors.
POLICE/AMBULANCE/FIRE: Police: Coos Bay 269-1181, North Bend 756-3161; Ambulance 756-3234; Fire: Coos Bay 267-4123, North Bend 756-6111. Emergencies: Dial 911.
SHORE LEAVE: Crew members allowed ashore except when Federal Directives may be applied to a specific vessel.
IDENTIFICATION CARDS: Not required by local authorities.
SHIP SUPPLY SERVICE: For general ship stores: Day Ship Supply, 602 W. Hemlock St., Coos Bay, Oregon 97420. Tel: (503) 267-3813.

For transportation of personnel: The Coos Bay Pilots' Association, P.O.Box 254, Coos Bay, Oregon 97420. Tel: (503) 267-4186 would be the initial contact.

There are also numerous charter boat operators who provide charter services.

For emergency services the U.S. Coast Guard maintains a helicopter squadron in port. They bring sick crew members directly to the hospital. Their information phone number is (503) 756-4142, and their emergency number is 756-4141.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Service available through local contractors. Contact:

Coos Bay Sanitary Service. Tel: (503) 267-6675.
Les's Sanitary Service. Tel: (503) 267-2848.
North Bend Sanitation, Inc. Tel: (503) 756-5211.

WASTE OIL DISPOSAL: Service available through local contrac Contact: Environmental Services, Tel: (503) 269-5050. Services emergency spills, oil, gas, diesel, bilge cleaning, sewage disposal.
SEAMAN'S CLUBS: The Seamen's Centre of the Port of Coos Ba a non-profit organisation and is sponsored by thirteen area church Local No.12 of the International Longshoremen's and Warehousem Union, United Way of Coos County and other donations. The Cen open every night, including holidays, from 1800 hrs. to 2300 hrs. E church serves for one week and supplies hosts/hostesses and refreshments, and transportation between ships and the centre i fifteen passenger van. Information sheets have been printed in languages of seamen who call in the port and these are posted on bo the ships.

Telephone, postage, local maps, and church services are among facilities provided, also a games room which includes two pool tab two table tennis tables, a football table, a table shuffleboard, a bum pool table and darts. There are also two coin operated video games television set, snack bar, table games, magazines, telepho souvenirs, post cards and foreign language bibles are all availabl the "front room".

The Seamen's Center is located at 171 N.Broadway, Coos B Oregon 97420. The mailing address is: P.O.Box 628, Coos B OR 97420.
DELAYS: No delays in berthing, loading or discharging, or bunker can normally be expected.
GENERAL: New enterprise zone and foreign trade zone within p district.
DEVELOPMENTS: Depth of channel at entrance 45 ft. MLLW. In channel, to head of channel 35 ft. MLLW. An additional ancho (Turning Basin) will be installed, directly East of Beacon 17.
AUTHORITY: Oregon International Port of Coos Bay, Port Building, N. Front Street, Coos Bay, Oregon 97420. *Tel:* (503) 267-7 *FAX:* (503) 269-1475. *Contact:* Paul W.Vogel, General Mana Don Yost, Harbour Master.

CORDOVA, Alaska: 60.33 N. 145.46 W. (See Pla

Located at S.E. side of Prince William Sound at the head of Orca In Open harbour year round.
DOCUMENTS: See "Anchorage, Alaska".
APPROACHES: Via Prince William Sound.
PILOTAGE: Compulsory. Pick-up point is Sheep's Point. P arrangements required.
ANCHORAGES: Good holding ground. Mud bottom between Sp Island and Municipal dock.
MAX. SIZE: Recommend max. draft 25 ft. Tidal variation: 18 ft. - 1
HEALTH: See "Health: All Ports" before first U.S.A. port (Alba Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Contact port on VHF Channels 16 and 68; Citizens Ba Channel 5 or SSB 2509 kHz.
TUGS: Limited availability. Prior arrangements need to be made.
BERTHING: Berthing Permit required. Advance notice of 48 ho requested.

Municipal Dock: 25 ft. deep, 408 ft. long, 72 ft. wide. Open storag 10 acres. 1×45 ton crane.
Container and Ro/Ro Facilities: Movable ramp, 4.57 m. wide, avail for Ro/Ro operations. 4 ha. container staging area.
STEVEDORES: ILWU No. 66, Box 335, Cordova, Alaska, 99 Tel: (907) 424-5447.

Working hours – 24 hours.
MEDICAL: 23 bed hospital and a medical clinic, with 3 doctors, 1 de also public health nurse.
REPAIRS: Radio, radar, welding, machining and light engine rep can be effected.
FRESH WATER: Available at docks.
FUEL: No bunker "C" available. Fuel oil available.
CUSTOMS: Quarantine – local. Immigration and Customs f Anchorage, Alaska.
AIRPORT: 13 miles from city centre. Daily scheduled flights Anchorage and Juneau.
TIME: Alaska Standard time.
HOLIDAYS: None.
POLICE/FIRE/AMBULANCE: All available. Tel: (907) 424–6100.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. (Albany). Dumpsters are provided at the dock. Charges for this se are paid by the port. Collection daily.
WASTE OIL DISPOSAL: Tanker truck available upon request, co Tel: (907) 424-6400. For quantities under 100 galls. there is no ch For quantities over 100 galls. which meet standards for oil to be bu for energy recovery, the charges are $40.00 /man hour. If oil is uns for energy recovery, then the charges are $30.00/galls. plus $40.00 hour plus cost of shipping and handling.
SEAMAN'S CLUBS: None.
CURRENCY: U.S.Dollar (U.S.$).
AUTHORITY: City of Cordova, Box 1210, Cordova, Alaska 99 *Tel:* (907) 424-6400. *FAX:* (907) 424-6000. *Contact:* Dale M Harbour Master/Port Director.

CORPUS CHRISTI, Texas: 27.48 N. 97.23 W.

(See Plan)

PORT LIMITS: Corpus Christi's port limits include all of Nueces County, which has been officially designated as Port of Corpus Christi Authority of Nueces County, Texas. The Corpus Christi Turning Basin, Avery Point Turning Basin, Chemical Turning Basin, Tule Lake Turning Basin and the Viola Turning Basin are interconnected by the Industrial Canal; the Tule Lake Channel and the Viola Channel constitute the Corpus Christi Inner Harbour. Other Bay points included in the Port of Corpus Christi area are: Harbor Island, the North end of Mustang Island, near the inner end of the Aransas Pass Entrance, and Port Ingleside and La Quinta along the route of dredged deepwater channels on North side of Corpus Christi Bay; and the Rincon Barge Canal System. All of the ship channel has now been deepened to 45 ft.

DOCUMENTS:

3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (Form 1304).
2 copies Stores List (Form 1303).
2 copies Passenger List (Form I–418).
2 copies Crew List (Form I–418).

Customs Boarding Officer will also examine Ship's Register, Load-Line Certificate, Safety Equipment Certificate and Certificate of Financial Responsibility. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad,or 24 hours from arrival from a United States port:

Master's Oath (Customs, 2 copies Form 1300).
General Declaration (2 copies Form 1301).
All Foreign clearances.
U.S. Certificates of payment of tonnage tax (Customs Form 1002).
Certified Crew List.

PILOTAGE: Pilot boards off Port Aransas.

RESTRICTIONS: No restrictions, 24 hour service. The Port of Corpus Christi is situated on the West side of Corpus Christi Bay, in South-Western Texas. Port facilities at Inner Harbour lie along a 9.5 miles stretch of dredged channels and basins about 18 miles from Aransas Pass entrance at the Gulf of Mexico. Channel depth 45 ft., minimum width 400 ft.

Turning Basins: 5 turning basins in the Inner Harbour range from 800 ft. to 1,200 ft. wide and more than 1,000 ft. in length.

MAX. SIZE: Cargo vessels: 45 ft. draft. Tankers: 45 ft. draft.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

RADIO: KLC ITT-Radio-Arcadia, Texas. KLC RCA-Radio-Galveston, Texas.

VHF: KKQ 769 – Harbour Master – Channels 12 and 16. WR 8879 – Pilot Boat. KQU – Pilot Office – Aransas-Corpus-Christi Pilots Channels 12 and 16. KBP 384 – Harbour Tugs – Channel 12. U.S. Coast Guard – Channels 16 and 22. Pilot Office KQU 371.

TUGS: Tug assistance available. Tugs join vessels berthing at Harbor Island in Jetty channel. Tugs accompany vessels entering Inner Harbour outside Corpus Christi Harbour Bridge.

BERTHING: The Corpus Christi Main Turning Basin is over a mile long and 800 ft. wide. There are 4 additional basins in the Inner Harbour, which extends Westward from Corpus Christi Harbour Bridge for 7.5 miles. The water in all basins, channels and canals is 45 ft. deep.

Draft for public docks will be furnished upon request to the Harbour Master or steamship Agent. Draft for private docks will be furnished upon request to the dock owners or steamship Agents.

Also see "Port Limits" and "Developments".

Inner Harbour – Public Docks: The length limit indicator is not of necessity the max. length for a vessel as larger vessels can berth if adjacent berth is not occupied.

Cargo Docks No.	*Length Limit* (ft.)
2	700
8	1,060
9	750
10	700
12	700
14 – 15	1,000
Bulk Materials Dock 1	835
Bulk Materials Dock 2	1,300
Public Grain Elevator Dock	900

Inner Harbour – Private Docks: (Other than oil docks).

Citgo Cargo Dock: Length of pier 450 ft. Length of Head 100 ft. Producers Grain Port Terminal Elevator Dock; Gulf Coast Portland Cement Co. Dock; Berry Contracting Company; Centex Cement Company.

CONTAINER FACILITY: New container facility in operation located on 6 acres behind Cargo Dock 14. Terminal provides full service for receiving, delivering and handling of marine containers. Containers are handled with a M 250 Manitowac 275 ton crawler crane, a Taylor top lift machine and a Kalmar lift machine with capacity of 90,000 lb. The Kalmar and Taylor have spreaders for handling 20 ft. or 40 ft. units. U.S. Customs maintain on site inspection facilities.

BULK CARGO FACILITIES: *Ore, Minerals, Coal, Petroleum Coke:* Bulk Materials Dock with travelling unloading tower capable of direct discharge from vessels to railcars or trucks at rate of 1,000 t.p.h.

A Bulk Loading Terminal to load vessels directly from trucks, railcars or stockpiles at rate of 1,500 t.p.h. is also available. The dock has a 45 ft. draft alongside, 63 ft. airdraft and 1,300 ft. slip length.

Grain: 2 export grain elevators are located in the Inner Harbour. The Corpus Christi Public Elevator has a 5,000,000 bushel capacity. Rated truck unloading capability is 1,000 t.p.h.; railcars can be unloaded simultaneously at 2,000 t.p.h. The Interstate Grain Port Terminal Elevator is privately owned and has a 6,400,000 bushel capacity.

MEDICAL: Ample hospital and dental facilities available.

TANKERS: Between Corpus Christi Turning Basin and Viola Basin are 11 public and 10 private Oil Docks, some capable of berthing tankers of 150,000 d.w.t. capacity. Also see "Berthing".

Inner Harbour – Public Docks:

Oil Dock No.	1	Length Limit 1,000 ft. Max. Draft 45 ft. (SW)
No.	2*	Length Limit 260 ft.
No.	3*	Length Limit 246 ft.
No.	4†	Length Limit 850 ft. Max. Draft 45 ft. (SW)
No.	6*	—
No.	7†	Length Limit 850 ft. Max. Draft 45 ft. (SW)

No.	10*	
No.	11†	Length Limit 850 ft. Max. Draft 45 ft. (SW), subject to Pilot's approval
No.	12*	—

*Limited to barge operations.
†Larger vessels may be berthed when adjacent berth not occupied.

Inner Harbour – Private Docks:

Southwestern Refining Co.
  Oil Dock No. 1 (barge only).
  Oil Dock No. 2. Max. draft 40 ft. (SW).
  Oil Dock No. 3. Max. draft 45 ft. (SW).
Citgo Refining,
  Oil Dock No. 1. Max. draft 40 ft. (SW).
  Oil Dock No. 2 (barge only).
  Oil Dock No. 3. Max. draft 45 ft. (SW).
Valero Refining Co.,
  Oil Dock No. 1 (barge only).
  Oil Dock No. 2. Max. draft 45 ft. (SW).
  Oil Dock No. 3. Max. draft 45 ft. (SW).

Outside of Inner Harbour – Private Docks:

Harbor Island
  American Petrofina Oil Dock. Max. draft 45 ft. (SW). Also see "Shipmaster's Report" – dated September 1987.
Ingelside
  Sun Pipe Line Co. Oil Dock. Max. draft 45 ft. (SW).
La Quinta Channel
  Du Pont Ship Liquid Chemicals Dock.
  Du Pont Ship Liquid Chemicals Barge Dock No. 1.
  Du Pont Ship Liquid Chemicals Barge Dock No. 2.
  Reynolds Metals Co. Bauxite Unloading Pier. (Also see "Shipmaster's Report" – dated April 1988.)
  Reynolds Metals Co. Alumina Loading Dock. (Also see "Shipmaster's Report" – dated April 1988.)

Report: *Cautionary Advice:* Special precautions and procedures are required for all vessels calling at Harbor Island (our of service in 1994) because of tidal current, wind conditions and passing traffic. Masters must ensure that their vessels are properly moored at all times to minimise the effect of these conditions and prevent the vessel from breaking out of the berth.

The special precautions and procedures, for deep-loaded vessels (34 ft. draft or deeper) are:

Deep-loaded vessels experience maximum effect from tidal current during the flood tide which forces the vessel away from the dock, particularly when clearance between the keel and bottom is 5 ft. or less.

Accordingly, deep draft vessels are docked at the end of the flood tide to allow ample pumping time so that maximum underkeel clearance be attained before the next flood tide reaches full strength.

(Vessels should anchor off the sea buoy to await the suitable stage of the tide.)

Vessels equipped with segregated ballast capability should not commence ballasting these systems until draft is 30 ft. or less.

If during the flood tide the vessel's draft is in excess of 34 ft. (mean), a tug should be in attendance to assist the vessel in staying alongside the dock. To ensure tug availability, the Master should advise the Agent 3 hours in advance if planned pumping does not proceed to permit a lesser draft than 34 ft. at the full strength of the next flood tide.

Vessels with drafts that exceed 34 ft. (mean) should be equipped with 12 mooring wires. If they are not so equipped, the Dockmaster will require the vessel to use additional mooring ropes.

Wind Conditions: Winds from the Northern quadrants, which occur particularly during the Winter months, place heavy loads on mooring lines when a vessel is in a fully light condition.

A contract weather service provides an alert to Masters (via the Agent and/or Dockmaster) and to the Dockmaster when abnormal weather conditions are predicted. The Dockmaster will require cargo transfer shutdown when wind velocity exceeds established limits.

In order to minimise wind effect, the vessel's segregated ballast tanks should be filled before completion of cargo discharge.

Combined Wind and Tide Conditions: Particular attention should be paid to unfavourable combinations of wind, tide and current which will place high loads on mooring lines.

Passing Traffic: The close proximity of the Harbour Island Berths to the Corpus Christi Channel results in interaction from passing traffic. This can be severe, depending on the speed and displacement of the passing vessel.

Propeller wash from vessels (mooring/unmooring) at the Petrofina Berth and the wash from assisting tugs also have an unfavourable effect. Special attention must be given to spring lines to ensure they are kept taut at all times.

Harbor Island has established wind and current limitations at which cargo operations should be stopped. Cargo operations are also stopped if a vessel moves off the berth. Hoses are disconnected by the terminal when required due to wind, current, etc.

Port Approaches: Vessels should approach Aransas Pass through the prescribed Safety Fairways, exercising due caution at all times as the lanes are unmarked. Numerous fishing vessels may be encountered. The low shore lines will start to show on radar at a range of between 15 and 20 miles. A large number of shore lights in the background make it difficult to distinguish the navigational aids. The entrance channel through Aransas Pass is protected by jetties. The outer bar channel, the Jetty channel and the inner harbour basin have project depth of 45 ft.
Tugs: Tugs will come alongside at Buoys No. 9 and 10. A minimum of 3 tugs are usually required for a loaded vessel and 2 for a vessel in ballast under good conditions. Tugs up to 3,200 h.p are available.
CARGO GEAR: Heavy lift facilities: Mobile crane located at Dock No. 8 with a capacity of 275 tons; can handle containers and heavy lifts; otherwise ship's gear used. Heavy lift facility also available at Bay, Inc.

Facilities are available for all types of liquid cargo, dry bulk and general cargo, but cannot handle restricted cargo such as ammunition and explosives.
BRIDGES: Corpus Christi Harbour Bridge: Vertical clearance at MHW is 138 ft.

Upper Harbour Lift Bridge: Vertical clearance at MHW when raised is 138 ft.
FRESH WATER: Water available at all public docks for $2.50 per 1,000 gallons; minimum charge of $25.00 for each connection.
FUEL: 24 hours notice required.

Bunker C, Marine diesel, Light diesel – Pipe-line or Barge, Truck.
FIRE PRECAUTIONS: No working barges alongside (except bunkering barges) and normal precautions such as shut down cargo operations during lightning, storm, etc.
CONSULS: Danish Consul, 4517 Baldwin. Tel: (512) 884-6344.

German Consul, 5440 Old Brownsville Rd. Tel: (512) 289-2416.
Mexican Consul, 1740 First City Tower I. Tel: (512) 882-3375.
Spanish Consul, 19833 Melissa Lane. Tel: (512) 887-7246.
REPAIRS: See "Services".
SURVEYORS: American Bureau of Shipping; J. E. Orrell, Lloyd's Sub-Agency and National Cargo Bureau.
GANGWAY/DECK WATCHMEN: Not necessary.
HATCHES: Hatches may be opened by crew before entering harbour, after the ship has entered harbour it is carried out by stevedores.
CUSTOMS ALLOWANCES: 300 cigarettes per man. 1 quart liquor per man.
AIRPORT: Approximately 7.75 miles from Port. Serviced by 3 regular airlines.
TIME: Daylight Saving Time from first Sunday in April till last Sunday in October (minus 5 hours GMT). Central time remainder of year (minus 6 hours GMT).
HOLIDAYS: New Year's Day (January 1st); Martin Luther King's Birthday (January 15th); Lincoln's Birthday (February 12th); Washington's Birthday (3rd Monday of February); Texas Independence Day (March 2nd); Good Friday (varies); Memorial Day (last Monday of May); June 20th; July 4th; Labour Day (First Monday of September); Columbus Day (2nd Monday of October); Veterans' Day (4th Monday of October); Thomas W. Gleason's Birthday (November 8th); Thanksgiving (4th Thursday of November); Christmas Day (December 25th).

Possible to work on any holiday, except Labour Day or Christmas, only in case of fire or danger to property. If holiday falls on Sunday, Monday is observed.
POLICE/AMBULANCE/FIRE: Police 882-1911, Ambulance 882-5571, City Fire 884-5563 or 911, Refinery Terminal Fire Co. 882-7801.

Radio-Holland Texas, Inc., 6205 Brookhill, Houston, TX. 77087. Tel: (713) 649-2811.
SHIP SUPPLY SERVICE:
Helicopter Charter, Rental and Leasing:

Evergreen Helicopters, P.O.Box 7781, Corpus Christi, TX. 78415. Tel: (512) 854-995.

Home Office (Evergreen Helicopters), Route 3, Box 198, Galveston, TX. 77553. Tel: (409) 740-0231.

Omniflght Offshore, Inc., P.O.Box 7519, Corpus Christi, TX. 78415. Tel: (512) 289-1181.
SHORE LEAVE: Possible.
IDENTIFICATION CARDS: Standard Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for same vessel.
GARBAGE DISPOSAL: Shipboard garbage service is available through vessel's Agent.
WASTE OIL DISPOSAL: Collection service is available through SDC Services, 7330 Greenwood, Corpus Christi, Texas. Tel: (512) 855-4551. Fax: (512) 855-5419. Ability to handle ballast water, environmental waste (oil rags, etc.); vacuum truck service.

Alamo Petroleum Exchange. Mr. Pierre Kuypers. Tel: (512) 855-8658.
SEAMAN'S CLUBS: Corpus Christi International Seamen's Center, 1501 Mesquite Street, Corpus Christi, Texas 78401. Tel: (512) 883-5011, 883-8405. Services: Shop, international telephone service, church services, mini-bus collection, postage facilities, games.
CURRENCY: U.S. Dollar.

SHIPMASTER'S REPORT: September 1987.
Vessel: Tanker, 95,000 d.w.t.
Coastguard: For U.S.C.G. annual tank inspection, the authorities
to inspect the Cargo Gear Book, in addition to all other docume
Additionally U.S.C.G. require that for tankers, stores, gas cylinders,
must not be on cargo tanks.
Pilot: The Pilot requires the ladder 8 ft. above the water.
Berthing: Berthing carried out 24 hours a day.

At the Petrofina Berth at Harbour Island, fresh water and telep
are not available. Due to strong currents and passing vessels,
moorings consisted of 4 head/stern lines, 2 breast lines and 4 spr
at each end. Three tugs assisted in berthing. Bunkers may be t
whilst alongside but this will usually depend on the Charterer
Receivers permission.

Just off the Petrofina Berth there is a shallow patch where deep
vessels usually touch the bottom, but it appears to be soft mud.

The pilots, tugs and linesmen all require 2 hours notice.

At Oil Dock No. 8, 2 tugs are required and if vessel turns be
berthing then only 1 tug will be required when unberthing. Moor
consisted of 3 head/stern lines, 2 breast lines and 2 springs at e
end.

The ship's gangway was required at both berths.

If vessel is cleared for a foreign port and diverted to another U.S.
the Agent at the sailing port should be informed, in order that he
advise the authorities accordingly. If the authorities are not advised
vessel is liable to a fine of U.S.$1000.00. Vessels have to pay a
fee to U.S. Customs of U.S.$397.00 regardless of size. Also if vess
diverted to another U.S. port after being cleared for a foreign port, ad
the Agent of any slops on board for Customs purposes.

SHIPMASTER'S REPORT: April 1988.
Berth: Gregory.
Location: 27° 52′ 43″ N., 97° 15′ 38″ W.

The private docks of Reynolds Metals Co. are located on the N
side of Corpus Christi Bay, Texas, on Chart No. 11309. The facil
known as Gregory Reynolds Sherwin Plant Dock.
Weather: Humid sub-tropical climate with prevailing winds onshore
East and Southeast at 10 – 15 knots. "Northers" may be expected
November to March with winds over 20 knots. These may be se
from December to February and up to 50 knots. Generally lasting
1.5 – 3 days. Tropical storms/hurricanes may occur from Jun
October, reaching a peak in September, infrequently in May
November.
Communications: Reynolds Metal Co., Richmond, Va. Telex No. 82
AAB REMETCOGO RCH, or via Agent.

"KQU 371".
Time: GMT minus 6 hours. Summer time of GMT minus 5 hou
applied from first Sunday of April to last Sunday of October each
Channel: Navigation to Sherwin Dock is via Main Corpus Christi Cha
from Aransas Pass inlet, thence via La Quinta Channel to the D
Total distance 22 miles. Several commercial marine installations
private homes border the channel. These are susceptible to w
damage from vessels' wakes. Vessels are cautioned to reduce sp
on approaching such installations and enter the reduction in the s
log book.
Draft: Channel controlling depths are published in Notice to Mari
Draft is presently restricted to 45 ft. Bauxite Pier Facility No. 5 – d
of water 45 ft. Alumina Pier Facility No. 90 – depth available 38
MLW (subject to shoaling).
Density: Generally 1022.
Tidal Range: 1.4 ft. Strong winds also affect water levels in Co
Christi Bay as much as the tides.
Bauxite Pier Facility No. 5:

Max. LOA: 800 ft.

Max. beam: 106 ft. (larger vessels by arrangement).

Air draft: Max. of 50 ft. from top of hatch cover in open positi
water line.

Hold depth: Max. of 66 ft. from top of hatch cover in open positi
bottom of hold.

Min. hatch size 39 ft. × 39 ft.

Max. overhang into wings: 36 ft.

Min. distance after end last hatch to front of accommodation: 10

Washing of holds at the berth is permitted but the wash water ca
be pumped overboard or a fine will result. Free surface in the hol
also detrimental to the clean up process, as the vessel must be ke
level as possible because of the rotary motion on the tank to
unloader as it makes its final pass. Gantry travel of the Sumi
Continuous Unloader is 606 ft. Max. unloading rate 2,000 tonnes
hour. Overall average rate 1,000 – 1,200 tonnes per hour.
personnel used exclusively. Plant labour make a good job of res
removal, but at the same time 2 or 3 crew may work in hold during
clean-up.

Vessel design: Deck should be clear of obstructions such as cra
raised deck houses, light stands at side, log racks, etc.
Alumina Pier Facility No. 90:

Max. LOA: 680 ft. but this depends on distance from forward ha
stern, which should not exceed 550 ft.

Loading chute outreach from fender line: 67 ft.

Air draft: Max. of 31 ft. 06 in. at ship's rail/bulwark.

The chute travels out on an incline so can usually accept 33 ft.
at hatch coaming, depending on distance in from side of vess
necessary list the vessel to meet this requirement. A list of 5°-
considered the maximum allowable by plant personnel for working
and ballasting cannot be started until boarding party is off the
and a draft survey complete. Most large vessels find it necessar
one cargo hold with water ballast to meet this restriction and c
must be taken when deballasting not to exceed loading rate. L
rate about 500 tons per hour. Cargo stows at 55 lb./cu.ft. or 41
43 cu.ft./ton. Cargo is very dusty and abrasive. Wheelhouse sho

sealed and accommodation ventilation "air washers" should be used if fitted. It is also helpful if a positive pressure of about 1 p.s.i. can be maintained in the accommodation by adjusting the supply/exhaust fans. There is no shore scale and although Plant may use a Surveyor to determine Bill of Lading quantity, vessel is responsible to advise terminal when loading is complete.

Hatches must be clean, fresh water washed and dry, with no residue in hold or underside of covers. A Surveyor will carry out a "Cleanliness" inspection before the vessel will be accepted. Crew must open/close hatches and haul ship alongside berth during loading operation. Gangway of the vessel used and safety net is recommended. Vessels normally turn and berth head out, port side to, using 2 tugs.

Fuel oil and Diesel oil are available by barge and small amounts of diesel oil available by tank truck, but some vendors do not like to deliver during cargo operations due to dust. U.S.C.G. also prohibits tank truck hose from loading over water so coordination with loading sequence is essential at Alumina Berth. Barging cost from Corpus Christi is about U.S.$3,600.

Fresh water may be taken in quantities up to 300 – 400 tons at no cost, but ship's crew must connect/disconnect and use own hose. Connection must be tight with no water leaking to dock.

AUTHORITY: Port of Corpus Christi Authority, P.O.Box 1541, Corpus Christi, Texas 78403. *Tel:* (512) 882-5633. *FAX:* (512) 882-7110. *Contact:* John La Rue, Executive Director. Frank C. Brogan, Director of Engineering Services. Ed Altemus, Director of Trade Developoment. Jim Burns, Harbour Master.

DETROIT, Michigan: 42.19 N. 83.05 W. **(See Plan)**

Refer to "St. Lawrence Seaway" for important general information.
PILOTAGE: Compulsory unless Master holds Exemption "B" Licence. 24 hours' notice of arrival required by Agents who arrange Pilot.
ANCHORAGES: In depths from 29 ft. – 51 ft. in the Detroit River off the marine terminals and away from main channel.
RESTRICTIONS: St. Lawrence Seaway navigation season approx. from April 15th to December 15th. Controlling depth 27 ft. Minimum depth of 25 ft. in the Detroit River. The Amherstburg Channel has a depth of 27 ft. 6 in. for upbound traffic.
MAX. SIZE: Limited at Seaway Locks. 730 ft. length, 26 ft. draft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Available, not compulsory but recommended for some terminals.
BERTHING: *Detroit Marine Terminals:*
2,100 ft. dock with 27 ft. LW depth.
2 berths.
3×250 ton diesel crawler cranes.
1×200 ton diesel crawler crane.
1×50 ton diesel electric travelling gantry crane.
1×25 ton diesel electric travelling gantry crane.
1×15 ton diesel electric travelling gantry crane.
Lift trucks up to 65,000 lb. capacity.
Harridon Terminal, Inc:
790 ft. dock.
1 berth.
3×5800 link belt hydraulic crawler cranes.
Michigan Marine Terminal:
650 ft. dock.
Liquid bulk products (from No. 2 Oils to heavy residual fuels).
Liquid bulk products (asphalt).
17 storage tanks.
Can ship and receive by water, truck and rail. Can receive by Buckeye and Wolverine pipelines.
Hickman, Williams and Co.:
1 berth.
Load bulk materials with conveyor. Unloading by self-unloaders.
Nicholson Terminal & Dock Company:
3,400 ft. dock with 27 ft. LW depth.
4 berths.
195,000 sq.ft. covered storage.
Total 50 acres.
2 cranes, 70 ton capacity at 40 ft. radius.
2×4100 Manitowac crawler cranes.
2×12 ton gantry cranes.
3×30 ton diesel locomotive cranes.
1×85 ton Lima truck crane.
1×72 ft. combination rail/truck scale.
2×Diesel electric locomotive engines.
2×87 in. magnets.
11×65 in. magnets.
5×55 in. magnets.
12 buckets: 1.5 yds. to 30 yds. capacity.
4 front end loaders 8 yds. to 12 yds. capacity.
1×Trojan 1500 loader 1.5 yds. bucket.
25×forklifts 5000 lb. to 80,000 lb. capacity.
2×25 ton overhead cranes for cargo.
1×6 yds. scrap grapple.
Motor City Internmodal Distribution, Inc.:
500 ft. dock with 28 ft. LW depth.
1 berth.
140,000 sq.ft. covered storage.
Total 18 acres.
6 forklift trucks.
1×60 ft. truck scale 300,000 lb. capacity.
DENSITY: Fresh water.
MEDICAL: Doctors, hospital and all facilities available.
FRESH WATER: Available at most berths.
FUEL: All grades available, ex-wharf, or delivered by barge.

DONALDSONVILLE, Louisiana: 30.05 N. 91.00 W. **(See Plan)**

Also see "South Louisiana".

SHIPMASTER'S REPORT: September 1980 (Updated 1994).

The report was compiled over 4 visits between August 1979 and August 1980.
APPROACHES: The coastline is low at the mouth of the river and consequently does not give a good radar return. The Racon on East jetty shows up between 12 to 17 miles. Fog and mist is a complication as it is very prevalent with the added problem of the oil rigs. These are located mainly on the East side of the safety fairway but in August 1980 construction was proceeding on a structure right on the Western boundary of the safety fairway about 4 miles S.W. of the East pier.

The Sea Buoy is difficult to locate, vessel should approach as per the leading line indicated.

A strong West flowing current across the entrance can be encountered.

Draft restriction varies throughout the year and should be ascertained in good time. August 1980 at 40 ft.(FW) but patches of 39 ft. 6 in. in places. (Mud, so no difficulty.)

Officially the Bar at the S.W. Pass is the limiting factor but in practice other areas of the river up to New Orleans are as much of draft restriction factor.

Above New Orleans to Baton Rouge a battle is being fought against silting up and a large dredging programme will have to be commenced soon, otherwise the draft will be severely limited – still at 40 ft. officially.

A new road bridge about 15 miles above New Orleans is under construction called 'Ascension', clearance is likely to be 150 ft., the lowest on the river, at zero gauge or about 130 ft. at High River.
PILOTAGE: Pilot boards at Sea Buoy from a fast cutter. Ladder/gangway arrangements 6 ft. from water, normal port gangway at S.W. Pass.

Change at Pilot Town about 1 hour 45 minutes above S.W. Pass and New Orleans about 6 hours above Pilot Town.

If at anchor and requiring a Pilot a minimum of 3 hours' notice is required. Normally order Pilot through Agent. The Baton Rouge-New Orleans Pilots may only berth ships at Donaldsonville about 3 times per month.

ANCHORAGES:

Belle Chase	Mile post 75	1 hour below New Orleans	
12 Mile Pt.	Mile post 81	30 minutes below New Orleans	
Bonte Carre	Mile post 128	2 hours above New Orleans	
Burnside	Mile post 169	4 hours above New Orleans	

All anchorages are standing moor operations, if proceeding down river 2 tugs will be required to swing vessel into current, this is *essential* in High River season.

The bank is steep and muddy and as long as vessel lies quietly onto bank little damage can result. In fact this is preferable to hanging out in midstream and getting hit by passing barge strings and shipping.

VHF: Public correspondence as per ALRS. Moving upriver-Venice, New Orleans, Convent (Channel 25) and Baton Rouge. Just about in coverage all the way up from Pilot Town to berthing, all stations very busy in working hours.

Pilot ordered through Agent and on Channel 16.

USCG: Follow VTS booklet.

Boat service: At 12 Mile Point anchorage a launch service operates on Channel 20. Pilots and Agent board by this service.

MAX. SIZE: *C.F.I.:* Max. draft 40 ft.

TUGS: 'Crescent' tugs of around 2,000 h.p. are stationed at Burnside which are available if not handling larger vessels.

BERTHING: *Berth approach and depths:* This is the cause of most concern at Donaldsonville. The channel is at its narrowest off Triad Berth (the downstream berth 0.5 miles below C.F. Industries at Mile Post 173.5), having a minimum depth of 30 ft. (Zero Gauge at Donaldsonville) over a width of 140 ft. and is steep to, falling to 20 ft. over 180 ft. in width.

Gauge reading can vary from about +5 ft. after a dry Summer to +26 ft. or more at the end of the Winter season when the snows to the North are melting.

There is a set onto the Triad Berth varying with the main current. Again as the river height increases, the current varies from 0.5 knots in late Summer to upwards of 5 knots or more in late Winter. Effect is increased by a Northerly wind.

Berth Approach: Head upriver on berthing, unberth stern first until clear of shoal, approximately when bow is 50 ft. downriver of lower Dolphin on Triad Berth, then swing with aid of tugs. Actual depth alongside (Zero Gauge) C.F.I. Berth = 44 ft. (minimum) Triad Berth = 41 ft. (minimum).

Guidelines for berthing as follows:

C.F.I. Berth: Berthing or unberthing in daylight only. No vessels to be on Triad, berthing or unberthing.

Triad Berth: Night movements dependent on wind, tug power, etc.

The question of taking bunkers thereby increasing the draft arises. If berthing at Triad only, can take before berthing. If also berthing at C.F.I. it is best left until clear of C.F.I. Berth.

Berths: C.F.I. Berth: Reasonable condition. Short steel jetty with 2 dolphins plus mooring buoy at either end, the nearest dolphins either side of the jetty are interconnected by a catwalk.

At 26 ft. the maindeck is level with dolphins so gangway must be turned in. B.O.T. type gangway by pilot ladder position to after dolphin. Port side alongside.

Berth also used for loading bulk fertiliser. Watch the bulk boom as it is left unsecured and can be fouled.

Triad: 0.5 miles downstream from C.F.I. (plants back onto each other).

Basically the same as C.F.I. but dolphins not connected to jetty. No mooring buoys, all dolphins, not as good condition as C.F.I. Bulk fertiliser also loaded. Port side alongside, B.O.T. type gangway amidships.

Moorings: Basically 3, 2, 2, crossed after springs each berth. Mooring boat which moors forward first then aft. Lets go aft first – very handy as propeller is clear quickly. (See "Plan") – have moorings ready before arrival.

CARGO: Ammonia only at both berths plus bulk fertiliser. Labour on both berths assists in connecting up.

C.F.I.: Ship's 12 in. to 8 in. reducer plus shore 150 – 300 ASA spool piece.

No vapour return line, no venting. Loading at 450 t.p.h. but depends on pumps available, normally two. Emergency stop for ship operation.

Triad: Ship's 12 in. to 8 in. reducer. No VRL, no venting. Loading at 350 t.p.h. but again depends on available pumps. Shore tanks are set back further than C.F. Industries and line heating is apparent.

FRESH WATER: Not available at Triad Berth or C.F.I. Berth. Barge from New Orleans costs about $1,500.

TELEPHONE: On Triad berth through the terminal operator. Local calls free, long distance calls collect. Pay telephone on deck at C.F.I.

GENERAL: Donaldsonville Town nearby, about $5.00 in a taxi. Baton Rouge about 45 minutes away. The International Airport at New Orleans is about 1.5 hours away.

Stores: Lorries can back down jetty roadway to within a few feet of manifold area. A permit has to be obtained at both berths.

USCG: Usual pre-arrival hazardous ship reports to Coast Guard Captain, New Orleans.

Necessary to have a Coast Guard escort through New Orleans. Check must be made that the Pilot is advising the USCG of the vessel's position and that she requires an escort. Escort with blue flashing light (fast patrol launch) joins off Algies Point and goes through to Huey P. Long Bridge, and vice versa.

THE FOLLOWING REPORT (Dated November 1980) IS TO BE READ IN CONJUNCTION WITH THE REPORT ABOVE.

SW Pass: The West flowing current is very strong, about 5 knots across entrance and in region of Fairway Buoy. Steer well to the East.

9 Mile Anchorage: Boat charges $35.00 per boat, any number persons, 24 hour basis. Runs on hour every hour for shore leave purposes by arrangement. Call 'Port Ship Services Poydras' on Channel 20. Minibus to New Orleans at $5.00 per person can be arranged.

Tugs/Pilot: Minimum 2 hours' notice, order through Agent.

VHF: Agent: On Channel 16 and 73, Tricon (Trammo Agent) on Channel 16 and 73. Chandler: Sarussen Marine, on Channel 16 and 9.

Films: Sea View Films: Best to cable direct as per Walport Instructions. Also change Vidpack. Change from launch if required when passing New Orleans.

Burnside Anchorage: Boat Charges: $20 per boat plus $5 per pe
Call "Webber Marine" Burnside on Channel 16 and 18A.

Agents: Call Tricon Burnside on Channel 16 and 73 (Trammo Age

Donaldsonville: Depths – See latest chart, shoaling along
CF Industries and off Triad.

Berthing/Leaving scraped alongside Triad berth, maximum 30 ft

Turn when one ship's length below "Triad", lower dolphin.

Three "Parish" tugs used in and out.

To line up manifold at C.F.I., pilot ladder gate should be in line
gangway on lower dolphin.

Water rate is 5 t.p.h. from fire hydrant stand pipe, not hose.

Water by barge from Baton Rouge at $4.00 per tonne. Minim
100 tonnes plus $85.00 per hour for tug. Minimum 4 hours =$740

No bunkers officially allowed alongside, but can probably take de
at night.

Agents: Tricon in Burnside are now Trammo Agents.

AUTHORITY: *Operator:* C. F. Industries Inc., Donaldsonville Nitrog
Complex, P.O.Box 468, Donaldsonville, Lousiana 70346, U.

EL SEGUNDO, California: 33.54 N. 118.27 W.

OPERATOR: El Segundo is a Chevron U.S.A. offshore multi-buoy marine terminal and refinery.
LOCATION: The terminal Sea Buoy is located approximately 1,750 ft. due West of Berth No. 3 in 78 ft. of water at Lat. 33° 54′ 42″ N., Long. 118° 27′ 30″ W. This lighted bell buoy is painted red with 6 in. high white letters reading, "2 ES". It exhibits a white flashing light every 4 seconds (flash 0.4 secs., eclipse 3.6 secs.). The lantern is 13.5 ft. above water. A current meter and Racon beacon have been installed. The Racon transmitter will be transmitting Morse code "C".

In addition to the many tanks of the El Segundo Refinery, the chimneys of power plants adjacent to the Marine Terminal form prominent landmarks. 2×334 ft. chimneys painted with alternating red and white horizontal stripes mark the Los Angeles Department of Water and Power Scattergood Steam Plant located just North of the Terminal. Directly South of the Terminal is a set of 4 shorter chimneys at the Southern California Edison Co. Power Plant.
DOCUMENTS: Five copies each of the following documents are required for entry and clearance:
Crew List (I-418)
Crew's Effects Declaration (1304)
Ship's Stores Declaration (1303)
Inward Foreign Manifest (1302: If vessel is to discharge at more than one port, each port, with its cargo, must be listed on a separate manifest).

MAX. SIZE:

Berth No.	Maximum Draft (ft.)	Maximum Length (ft.)	Vessel Tonnage (d.w.t.)	Water Depth at MLW (ft.)
1	Removed 1984			
2	Removed 1993			
3	51	1,000	Up to 150,000	63
4	56	1,000	Up to 150,000	65

RADIO: *Pre-arrival radio message to ship:*

The vessel's Agent will normally advise the vessel by radio of the following general information when the vessel is approximately 3 days out:

Mooring Master boards 3 miles S.W. of sea buoy.

Have starboard hose boom derrick rigged (if so equipped) and 7 good strong mooring lines ready – 3 main deck forward, 3 main deck aft, 4 poop deck (polyester lines only).

Sumatran Crude average cargo temperature must be 125°F on arrival.

Anchor in Anchorage "A" or "B" as directed by message from shore.

Have pilot ladder rigged on starboard side.

Assure 125 p.s.i. pressure on riser during discharge.

Any Customs, quarantine, etc., special information.

Advise if all cargo pumps are in good operating condition, and best average discharge rate.

Radio Communication Prior to Arrival:

Estimated time of arrival (ETA) and requirements for services should be directed to the ship's Agent. ETAs should be sent 7 days, and repeated 3 days and 24 hours, prior to arrival.

Within 2 hours of arrival, communications may be established with the mooring launch via VHF radio Channel 10.

Radio and Telephone Ship to Shore Communications:

UHF Radio. The Mooring Master is equipped with a UHF radio for direct communications with the Terminal Control room at all times from the start of mooring until the vessel has cleared the mooring on departure.
BERTHING: It is expected that the vessel will provide berthing and messing facilities for the 3 man launch crew as well as for the Mooring Master and Environmental Cargo Officer.

Mooring Gear: Each anchor shall be equipped with no less than 10 shackles of chain. Vessels over 50,000 d.w.t. shall have at least 12 shackles on each anchor. Wires on mooring winches should be at least 1,000 ft. (preferably 1,200 ft.) and should have 130,000 lb. to 220,000 lb. breaking strength, depending upon the size of the vessel. Constant tension winches must be braked by means of manual brake.

Synthetic fibre lines of dacron or polyester must be at least 9 in. in circumference and 120 fathoms in length.

NOTE: Polyester/Dacron lines are the only lines acceptable. If vessel is not so equipped polyester mooring lines can be rented from the terminal.

Mooring lines should be located as follows:
1. At least 3 lines on the main deck forward
2. At least 3 lines on the main deck aft
3. At least 4 lines on the poop deck.

If vessel over 100,000 d.w.t. fittings must permit doubling of all lines. Each synthetic line requires a separate bitt.

Mooring Facilities: Berth No. 3 is a 7-point mooring used for the transfer of fuel, crude and refined products. It is located approximately 2,400 yards offshore. There are 2×12 in. hoses available.

Berths No. 2 and 3 are each equipped with 1 unlit spar buoy and a can buoy. The seaward spar buoy marks the location of the offshore end of the submarine hose when the hose is on the bottom. A can buoy, or hose marker buoy, is connected to the end of the submarine hose by a chain. The submarine hose string in Berth No. 3 is connected to the seaward end of a 26 in. submarine pipeline and a 12 in. line for circulation, by seven 16 in. diameter × 25 ft. lengths of hose followed by one 12 in.×25 ft. length hose and one 12 in. diameter × 30 ft. long over-the-rail hose.

Berth No. 4 is equipped with 1 unlit spar buoy and 1 unlit can buoy. The inshore spar buoy marks the end of the 36 in. submarine line and 14 in. circulation line. One hose string comes off the main 36 in. submarine line. The hose string consists of 5×35 ft. long lengths of 20 in. hose, followed by a reducer and then 2×25 ft. long lengths and 1×30 ft. long over-the-rail length of 16 in. hose. The end of the hose string is connected to a can buoy by a chain.

NOTE: VHF marine operator is also available, marine operators are located at Redondo Beach and San Pedro.

Hose Handling: The vessel will be expected to have suitable equipment on deck and ready for making the connection to the submarine hose.

Berth No. 3 requires a lifting capacity of at least 7 long tons for vessels up to 30,000 d.w.t. and at least 10 long tons for vessels over 30,000 d.w.t.

Berth No. 4 requires a lifting capacity (calculated load) of 10 long tons.

Procedure for Discharging: At the completion of most cargo discharges the vessel will be required to receive a 150 bbl. hose wash displacement of cutter stock or gas oil. This is to prevent the hose from plugging while not in use.

Product Transfer Rates, Pressure and Temperature: Gasoline and jet fuel loaded at Berth No. 3 are usually transferred at 7,000 – 12,000 bbls.p.h. with a pressure at the ship's rail not to exceed 50 p.s.i. Gasoline and jet fuel are discharged at Berth No. 3 with a pressure not to exceed 125 p.s.i. at the ship's rail. Hoses are rated to 150 p.s.i.

Fuels and crude are loaded at Berth No. 3 at rates to 20,000 bbls.p.h. No. 3 Berth hoses are heavy duty 275 p.s.i. rated. Vessels are expected to maintain discharge pressure of at least 125 p.s.i. at the ship's rail and/or a flow rate of 20,000 – 25,000 bbls.p.h.

No. 4 Berth hoses are heavy duty 275 p.s.i. rated, and the system has a normal working pressure of 180 p.s.i. On this one hose system, vessels are expected to maintain flow rates of up to 50,000 bbls.p.h.

Sumatran Crude cargo will not be accepted by the facility unless the ship's average tank temperature is at least 125°F. However, the average temperature for Sumatran Crude should not exceed 130°F. in order to

avoid excessive vaporization of the light fractions in the crude. Heavy viscous residue fuel cargo will not be accepted from a ship unless the ship's average tank temperature is at least 130°F.
MEDICAL: Several hospitals are available in the area. U.S. Coast Guard or local ambulance service may be expected to know what hospital is best suited to handle a particular emergency.
FRESH WATER: Potable water is not available at this mooring. Water barge service is not available in the area. Closest supply is the harbour at San Pedro.
FUEL: Bunker fuel for ship's use is not available in the moorings of the El Segundo Marine Terminal.
BALLAST: No ballast can be accommodated at the Terminal.
CONSULS: Consulates of most of the maritime Nations are maintained in both the cities of Los Angeles and Long Beach.
AIRPORT: The Terminal is located approximately 2 miles South of Los Angeles International Airport.
TIME: Standard Time along the entire West Coast of the United States is GMT minus 8 hours. Daylight Saving Time is from first Sunday in April till last Sunday in October. Clocks are advanced 1 hour in Summer.
WINDS/TIDES/CURRENTS: *Winds:* Westerly, onshore winds usually prevail. Gales are very rare in Santa Monica Bay, but the local thermal winds blowing from a Northerly direction sometimes necessitate interruption of transfer operations and require moving a ship from the mooring to anchor.

Northerly winds occur during the period from October through May.
In the Autumn and Spring, duration averages 4 to 6 hours
In November, December and January, duration averages 10 hours.
Velocities up to 52 knots have been recorded.

Tides and Currents: Normal tides of approximately 6 ft. pose no significant problems in this open roadstead.

Currents run unpredictably North or South along the coast in the vicinity of the Terminal. The current is most commonly from North to South and is stronger in Summer than in Winter.
GENERAL: *Supplies:* Modest quantities of supplies may be taken aboard while at the moorings if absolutely necessary, provided the Mooring Master gives prior approval. This practice is discouraged in view of the sea swell and wind conditions that can develop in the open roadstead of the moorings, as well as the long distances to normal marine supply facilities.
Launch service: A company operated launch may be chartered for vessel's use through the vessel's Agent at the option of the Owner's representative. This launch operates between the moorings and the Port-O-Fino Dock in King Harbour, Redondo Beach, on a published 4 hours' schedule which may be obtained from the Mooring Master. A one-way trip takes approximately 40 minutes.
Pilot Ladder: The vessel shall rig a safe and secure pilot ladder or pilot hoist (not accommodation ladder) for the Mooring Master and Government Officials to use in boarding and leaving the vessel.
Air Pollution: Any vessel showing visible smoke in excess of 3 minutes is in violation and may expect to be cited and required to pay substantial fines.
Dumping of Garbage: Dumping of rubbish or garbage overboard within 50 miles of the coastline is prohibited.
AUTHORITY: *Operator:* Chevron Shipping Co., 1006 Pier "F" Avenue, Long Beach, CA 90802, U.S.A. *Tel:* (310) 983-3660. *Telex:* TWX 910-345-6396. *FAX:* (310) 983-3666. *Contact:* Captain G.T. Robson, Port Superintendent.

U.S.C.G., Captain of the Port, Los Angeles/Long Beach, 165 N. Pico Avenue, Long Beach, CA 90802. Tel: (213) 590-2315.

El Segundo is an open roadstead marine terminal with no official Port Authority other than U.S.C.G.

ERIE, Pennsylvania: 42.10 N. 80.05 W. **(See Plan)**

Refer to "St. Lawrence Seaway" for important general information.
PILOTAGE: Not compulsory. Seaway Pilots will assist if required.
RESTRICTIONS: Navigation season from 14th April to 26th December approx. The port is connected to Lake Erie by an entrance channel, depth 28 ft. Vessel's size restricted by Seaway locks.
MAX. SIZE: 730 ft. length; 26 ft. draft.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station. Quarantine procedure undertaken at Quebec City for incoming vessels from foreign ports.
RADIO: Master must give at least 24 hours' notice to Commander, 9th Coastguard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also, at least 24 hours' notice of ETA at first U.S. discharge port is required.
TUGS: Available. Not compulsory, but sometimes necessary in bad weather.
BERTHING:
Erie Marine Enterprises, Inc.: New ship assembly yard with graving dock (largest on Great Lakes), available for dry dock repairs.
Ore Dock: 1,000 ft. long, 26 ft. – 27 ft. of water alongside. The ore dock has 400,000 ton storage pad available for lease.
Port Authority East Bay Industrial Site: 75 acres available for sale or lease.
Erie International Marine Terminal: Leased to Mountfort Terminals Ltd., stevedores for the Port of Erie; 1,400 ft. long, with 28 ft. of water. Terminal used for bulk and general cargo; 23 acres; 750,000 sq. ft. of warehousing and transit sheds with truck and rail loading facilities; 2×200 ton and 1×230 ton mobile cranes equipped with magnets, buckets and gear for heavy lifts, also 300 ton stiff leg crane. Terminal served by ConRail with reciprocal switching for N&W and B&LE railroads. A total of more than 100 acres of waterfront property is available where an industrial complex may be constructed.
DENSITY: Fresh water.
MEDICAL: All facilities available.
FRESH WATER: Obtainable by pipeline at all docks.
FUEL: All grades available by pipeline at all docks.
REPAIRS: Local shipbuilding company can handle most repa Dry dock available.
GARBAGE DISPOSAL: Service not available.
WASTE OIL DISPOSAL: Service not available.
SEAMAN'S CLUBS: None.
AUTHORITY: Erie-Western Pennsylvania Port Authority, 17 We Dobbins Landing, Erie, PA 16507-1424, U.S.A. *Tel:* (814) 455-75 *FAX:* (814) 455-8070. *Contact:* Larry Morosky, Executive Director.

EUREKA, California: 40.48 N. 124.10 W. **(See Pla**

DOCUMENTS: In addition to the documents detailed below, Agent present to Master normal Customs forms to be signed, such as Mast Oath, Permit to Lade, Inward & Outward Manifest, etc. These forms be filled out by local Agent and Customs Broker and presented to lo Customs house when entering and clearing vessel:
Foreign Flag Vessels:
I. Entering from another U.S. port:
3 Crew Lists.
3 Passenger Lists (only if passengers on board).
3 Curio Lists.
3 Stores Lists.
Permit to Proceed (issued at last U.S. port).
Travelling Manifest (only if there is foreign cargo on board).
Ship's Register.
II. Entering from a foreign port:
3 Crew Lists.
3 Passenger Lists (only if passengers are on board).
3 Curio Lists.
3 Stores Lists.
Travelling Manifest.
Permit to Proceed.
Ship's Register.
Ship's Tonnage Tax Certificate.
Clearance from a foreign port.
PILOTAGE: Telegraphic address of Pilot station "Humbar". 24 ho advance notice of ETA; in case of change in ETA give minimum 4 h notice. Contact pilot boat on VHF 156.8 MHz (Channel 16). Radio wa is maintained 2 hours prior to arrival at sea buoy on Channel 16. Work Channels are 13, 10 and 77.

No Pilot boat on station. Local Pilots use tug "Sea Otter" length 9 Tug colours: red funnel, buff and white superstructure and black h As no Pilot boat on station, sound signals not required. Vis international flag and light signals observed. Pilot will board vessel wi 1 mile radius North, South and West of sea buoy. Sea-buoy loca 1.4 miles from end of North jetty lined up with range lights bearing 1 true.

Specific requirements: *(a)* Pilot ladder with spreaders in accorda with Solas Regulations, and 12 ft. above water. *(b)* At night – bri light to illuminate ladder. *(c)* Recommended anchorage outs Humboldt Bay located 1 mile South of sea-buoy in 15 fathoms of wa
ANCHORAGES: Inside harbour, weather permitting. Light draft ves (22 ft. or less) South of Fairhaven Dock (Simpson) and West of Stand Oil Dock.
RESTRICTIONS: Humboldt Bay is a 24 hour port; restrictions if would depend upon manoeuvrability and horsepower of vessel du peak tide. Range of tide normally 6 ft., extreme cases 10 ft.
MAX. SIZE: Max. LOA 740 ft., max. beam 115 ft. Max. draft 35 ft.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany
HEALTH: See "Health: All ports" before first U.S.A. port (Alba Illness Reports made to San Francisco Quarantine Station.
RADIO: Send cables through one of the following stations:

ITT World Communications, Inc. – San Francisco Marine Ra Station KFS.

RCA Global Communications – San Francisco Marine Radio Sta KPH.
TUGS: 2 tugs available, 1 tug acts as pilot boat, other tug joins ve when in harbour. Tug's lines are normally used, occasionally a s line is used. No extra charge assessed for use of tug's line. Two t minimum are used.
BERTHING: No specific requirements relating to berthing; no procedures prevail. Vessel normally docks stemming the tide.

Berths presently available at Eureka as follows:
Simpson Pulp Co.
Sierra Pacific Industries.
Louisiana-Pacific Corporation.
Olson Terminal.
Chevron USA.
Unocal.
Louisiana Pacific Chip Export Dock.

Harbour channels maintained to 35 ft. zero tide except for Sou Channel to Olson Terminal which is maintained at 26 ft. Most of b at above-mentioned docks also maintained at 35 ft. zero tide; how some occasionally fill in and recommended check with Agent as to available at specific dock where vessel intends moor and load.

STEVEDORES: 4 local gangs available. Groups ordered at 0630 hrs. in the morning for both day and night gangs. Therefore essential that local Agent or stevedore company receives accurate ETA by 0600 hrs. in the morning. Normally, vessel will advise arrival sea-buoy with a 24-hour ETA and correct ETA at a later time if necessary. The basic commodities exported from Eureka are woodpulp, woodchips, logs and lumber.

Westfall Stevedore Co. Cable Address: Westfall, Eureka. Tel. (707) 443-5688.

MEDICAL: Not necessary for Agent to receive advance notice of required medical attention unless ambulance and doctor are required on arrival. 3 hospitals in immediate area. Inoculation and vaccination certificates should be up-dated.

TANKERS: 2 tanker berths available: Chevron USA – Barges only. Unocal – deepest draft 30 ft. at zero tide. Normally only Company tankers use own facilities. Facilities privately owned and are not available for bunkering other vessels.

DENSITY: 1024-1027 (depending on time of year).

FRESH WATER: Available all berths. Delivery by hose. Rate of delivery: 10 t.p.h.

FUEL: If bunkers required, Agent must go through major contractors, who in turn will inform their local supplier of requirements. The bunkers usually diesel grade and delivered by truck on a prearranged schedule.

CONSULS: None. Nearest consuls at San Francisco.

REPAIRS: Small welding jobs, and minor machine work only. Major repairs normally carried out in San Francisco.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Services of gangway guards available if required by ship.

OPENING/CLOSING HATCHES: Normally stevedores' work unless done prior to docking. Vessel's crew may assist in opening and closing hatches, if hatches require special attention.

CERTIFICATES: Ship's Register, Load Line Certificate, Derat Certificate, Cargo Gear Certificate, Tonnage Tax Certificate and all other usual certificates required.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes and 1 lb. of tobacco. Wine and/or Spirit, 1 bottle (approx. 1 quart).

CARGO GEAR: Must be in good order and safe operating condition and all cargo gear certificates must be valid.

REPATRIATION: Normally done in conjunction with San Francisco, Portland, Los Angeles or Seattle Agent.

AIRPORT: Airport located approximately 20 miles North of Eureka. Limousine service available. Major airline, United Express. At present 3 flights per day to San Francisco.

TIME: Local time is Pacific Standard Time and is GMT minus 8 hours. However, from first Sunday in April till last Sunday in October, Eureka is on Daylight Saving Time.

HOLIDAYS: No work performed by longshoremen on following holidays: New Year's Day (January 1st); July 4th; Labour Day (1st Monday in September); Thanksgiving Day; Christmas Day (December 25th).

POLICE/AMBULANCE/FIRE: Eureka City Police 442-4545; Eureka City Ambulance 442-4551; Eureka Fire Department 443-5656; Humboldt County Sheriff Department 443-5671; Arcata Fire District 822-2424; Humboldt Fire District No. 1 442-1212.

TELEPHONES: No arrangements for placing telephones on board; however, there are pay phones nearby at each dock as well as phones in nearby offices.

SERVICES: Specific services such as tank cleaning, compass adjusting, tank washing,etc., are not normally performed in the port of Eureka and are usually performed in one of the close major ports such as San Francisco; however, there are facilities available for minor repair.

SHORE LEAVE: Crew members allowed ashore unless restricted for Customs or Immigration reasons.

IDENTIFICATION CARDS: Alien seamen require Crewman Landing Pass (U.S. Form I-95).

DELAYS: Berthing delays seldom incurred primarily due to the fact that the prime Agents are always in contact with the local Agent at Eureka informing them of vessel's ETA and prime Agent is always advised with regard to all arrivals and possible berth conflicts at this port.

AUTHORITY: Humboldt Bay Harbor, P.O.Box 1030, Eureka, CA 95502-1030, U.S.A. *Tel:* (707) 443-0801. *Contact:* Jack B. Alderson, Chief Executive Officer.

EVERETT, Washington: 47.59 N. 122.13 W. **(See Plan)**

DOCUMENTS, PILOTAGE, etc.: Refer to "Tacoma".

PILOTAGE: Pilot boards off Port Angeles Pilot Station. Tel: Seattle 728-6400, dispatcher 448-4455.

ANCHORAGE: Unlimited deep water anchorage in Possession Sound.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

VHF: Pilots on Channels 13 and 14.

TUGS: Available, join vessel off berth. 17 tugs, 150 to 900 h.p.

BERTHING:

South Terminal: Length 705 ft. Approach depth 40 ft. Depth alongside 39 ft. MLLW. Transit shed 22,500 sq.ft. Access by road, rail and barge. 25 acres adjacent paved storage area (currently used for forest products) with log debarker. 1 dolphin berth for 600 ft. vessel. Depth 40 ft. MLLW. Light vehicle access to gangway only.

Pier No. 1 South: Usable berth length 600 ft. Approach depth 40 ft. Depth alongside 45 ft. MLLW. Pier of concrete construction. Two rail spurs on dock. 1×45 ton capacity crawler mounted container crane. Access by road, rail and barge.

Pier No. 1 North: Usable berth length 600 ft. Approach depth 40 ft. Depth alongside 45 ft. MLLW. Pier of concrete construction. Two rail spurs on dock. 36,000 sq.ft. chill facility adjacent to pier.

Pier No. 3 South: Usable berth length 650 ft. Approach depth 40 ft. Depth alongside 38 ft. MLLW. Pier of concrete construction. Pneumatic bulk alumina unloader on dock. Access by road and barge.

Pier No. 3 North: Usable berthing length 650 ft. Approach depth 40 ft. Depth alongside 40 ft. MLLW. Pier of concrete construction. 10 acres paved storage area. Access by road and barge.

STEVEDORES: 11 local gangs, additional gangs may be imported if required.

MEDICAL: Doctors and local hospital available.

DENSITY: Changes daily as port is at the mouth of a fresh water river.

FRESH WATER: Available at wharves.

FUEL: Available by barge from Seattle or by road tanker.

GANGWAY/DECK WATCHMEN: Required only if detainees aboard.

CUSTOMS ALLOWANCES: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.

AIRPORT: Seattle – Tacoma International Airport is 45 miles South of City of Everett on excellent highway. Driving time is approx. 45 minutes.

HOLIDAYS: See "Tacoma".

POLICE/AMBULANCE/FIRE: Port of Everett Security: Tel: 259-3164; Everett City Police: Tel: 259-8711; Everett City Fire Dept.: Tel: 252-1111; Ambulance Service: Tel: 252-1234.

TELEPHONES: Will be placed on board vessel on request. Charges are only for calls made. Arrangements should be made through ship's Agent.

SHORE LEAVE: Crew members are able to visit Everett at all times.

GARBAGE DISPOSAL: Tel: 259-0044 for service.

WASTE OIL DISPOSAL: Handled by tanker trucks from Seattle.

SEAMAN'S CLUBS: Nearest are at Seattle.

AUTHORITY: Port of Everett, 2911 Bond Street, P.O.Box 538, Everett, Washington 98206, U.S.A. *Tel:* (206) 259-3164. *FAX:* (206) 252-7366. *Contact:* E. Paskouskis, Director.

FALL RIVER, Massachusetts: 41.42 N. 71.10 W.

(See Plan)

DOCUMENTS: If first port of call in U.S., 2 complete Customs Manifests describing all cargo on board and ports of discharge. Also 1 Cargo List for Fall River cargo; 3 Crew Lists; 3 Stores Lists; 3 Curios Lists; Ship's Register, Load Line Certificate and Tonnage Tax Certificate.

PILOTAGE: Vessel first contact ship's Agent for Pilot and tug arrangements. Northeast Pilots' Association radio call letters KDF-375 on frequency 156.9 MHz, Channel 18. Usual Pilot pick-up is at Brenton Reef Light Tower off Newport, R.I.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

RADIO: Chatham Radio or Amagansett Radio.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Tugs for N.E. Power Station meet at Buoy 6; all other berths North, meet tugs at Buoy 10. Tugs provide own lines at no extra charge.

2 tug companies serve Narragansett Bay and Port of Fall River.

4 tug boats – 24 hour dispatching service. 2×3,000 h.p. boats.

BERTHING: *State Pier:* Principal maritime cargo terminal at State Pier. Berth 600 ft. long with depth of 35 ft. MLW alongside.

Ro-Ro facility 80 ft. wide by 42 ft. inboard depth. (8° incline at water's edge – concrete deck on wood piling).

All utility services available. Further information telephone 617-674-5707 or ship Agents.

BRIDGES: All bridges have 135 ft. clearance with exception of Brightman Steel Bridge at approach to Montaup Electric Co. and Shell Oil docks. This bridge has a draw clearance of 97.5 ft. and passage allowed for vessels with less than 75 ft. beam. No unusual requirements. Practice is to depart on flood tide. (See "Developments").

TANKERS: Berth at Shell Oil Docks. Depth alongside 35 ft.

FRESH WATER: Available at most berths. State Pier delivery is at 125 pounds pressure.

OPENING/CLOSING HATCHES: Usually performed by stevedores.

CERTIFICATES: All certification of vessel, safety conditions and radio facilities should be available for U.S. Coast Guard.

CARGO GEAR: No additional safety requirements.

TIME: Eastern Standard Time, GMT minus 5 hours. Daylight Saving Time GMT minus 4 hours from first Sunday in April till last Sunday in October.

HOLIDAYS: New Year's Day (January 1st); Washington's Birthday (February 22nd); Patriots' Day (April 19th); Memorial Day (May 30th); Independence Day (July 4th); Labour Day (1st Monday in September); Columbus Day (October 12th); Veterans' Day (November 11th); Thanksgiving Day (last Thursday in November); Christmas Day (December 25th); or any day celebrated in lieu thereof.

TELEPHONES: Available at most berths. Contact Agents.

SHORE LEAVE: Permitted, but consult Agents.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95 issued for the same vessel.

DEVELOPMENTS: Plans for construction of a new 150 ft. wide draw bridge to replace the existing Brightman Street Bridge. This will mean unobstructed use of the entire port area.

SHIPMASTER'S REPORT: October 1991.
Charts: B.A. Charts No. 2730, 2731 and 2732.
Pilotage: The pilot boards 2.5 miles S.E. of Brenton Reef Light Tower from a fast cutter. On departure the pilot officially leaves in the same position but in practice he normally disembarks just North of the tower. The boarding position is an official position required by State law due to environmental requirements.

The pilot boards and disembarks in all types of weather and a good lee is always required. The pilot is ordered through the agent.

"N.E. Marine Pilot" can be called on VHF Channels 16, 18A, 14 and 10. The pilot office is located at Newport, Rhode Island and is manned between 0800 hrs. and 1600 hrs. (local time) from Monday to Friday. At nighttime, weekends and public holidays the Despatcher can be called at home (Tel: (401) 331-4824). He can also be obtained through local radio station. The pilot office is located at 243 Spring Street, Newport, Rhode Island. (Tel: (401) 847-9050), Cables "Rispilot Providence".

The pilot boat is manned 2 hours before the latest ETA. The pilot takes the vessel through Narragansett Bay and berths and unberths the vessel.

The Pilot Association covers all Long Island Sound from New York Harbour Eastern limits, East to the Cape Cod Canal and all ports in between, including all Narragansett Bay.
Anchorages: If vessel is waiting for pilot or orders the anchorage is 1.5 miles – 2.5 miles S.E. of Brenton Reef Light Tower. The anchorage can experience large Southeasterly swells so additional anchor chain is recommended. There is little shelter from Southerly winds and the holding ground is only fair.

There are a number of anchorages in Narragansett Bay and all require a pilot when anchoring.

A popular anchorage when waiting for a berth is Prudence Island Anchorage which is located in position Lat. 41° 36.5′ N., Long. 71° 17.2′ W. (see B.A. Chart No. 2730).
Channel: The maximum draft for vessels proceeding to Providence is 39 ft. The channel in the bay is wide.

From Brenton Reef Light Tower it is about 20 miles to Fall River State Pier and 24 miles to Providence.
Restrictions: LPG vessels only berth during daylight hours and are subject to U.S.C.G. Inspection at the anchorage before berthing (inner or outer anchorage, depending on weather).
Tugs: Tugs up to 3,000 h.p. are available.
Berths: Borden and Livingstone Wharf: The berth is about 500 m. South of the State Pier (see B.A. Chart No. 2732). The minimum depth alongside was 23 ft. 09 in. at MLW on the S.W. end of the berth (See "Plan"). The tidal range is about 4 ft.

Vessels can berth either side alongside and generally use 2 tugs for berthing and unberthing. Vessels berth against 3 or 4 breasting dolphins, depending on length. The latex and caustic soda manifolds are on the centre breasting dolphin. The dock is a private facility and has its own linesmen. Vessels are berthed and unberthed throughout 24 hours.
Cargo Operations: Discharge is through shore pumps and lines into 36 underground tanks and 30 above ground tanks of various capacities. The total capacity is 350,000 U.S. gallons (12,500 tonnes).

Caustic soda is also discharged into the underground storage.
Density: Density at H.W. was 1020.
Fresh Water: Fresh water is available at no charge. Ship's hoses are used and the rate is moderate.

Also see "Providence" – "Shipmaster's Report dated October 1991".

AUTHORITY: Fall River Port Authority, State Pier, Water Street, Fall River, Massachusetts 02721. *Tel:* (508) 674-5707. *Contact:* William J. Torpey, General Manager.

FERNDALE, Washington: 48.49 N. 122.43 W.

(See Plan)

DOCUMENTS/HEALTH/etc.: Refer to "Seattle".
PILOTAGE: Compulsory. Pilot boards at Port Angeles.
TUGS: Tug escort required if vessel is loaded and is larger than 40,000 d.w.t. Tug horsepower must be 5% of d.w.t. Available up to 3,000 h.p. Additional tugs ordered from Seattle if required.
RESTRICTIONS: Vessels enter any hour day or night.

Regulations prohibit tankers larger than 125,000 d.w.t. in U.S. waters East of a line from Discovery Island Light to New Dungeness Light.
MAX. SIZE: Length 1,000 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
BERTHING: Terminal used for crude and product discharging. Vessels berth alongside finger pier, lines to quick release hooks. Inner berth for barges only. Outer berth 900 ft. long, depth alongside 60 ft. at MLW. Dirty ballast water 3,000 long tons with prior notification.
OPERATOR: Tosco Northwest Company, Ferndale Refinery, P.O.Box 8, Ferndale, WA 98248-0008, U.S.A. *Tel:* (206) 384-8349. *Telex:* 910-449-2412. *FAX:* (206) 384-8360. *Contact:* J.E. Miller, Refinery Manager.

FORT PIERCE, Florida: 27.27 N. 80.19 W.

PILOTAGE: Compulsory. Pilot boards at sea buoy. Send vessel's E to Agent 72 hours, 48 hours and 24 hours prior to arrival.
ANCHORAGE: Vessel anchors and awaits Pilot 0.5 miles seawar sea buoy.
RESTRICTIONS: Vessels are able to berth and unberth during ho of darkness if the weather is clear. The leading lights are good but channel is narrow and a number of buoys are unlit. Diameter of tur basin 1,000 ft. Least depth of water in the channel from sea to b 25 ft.
MAX. SIZE: Max. draft 25 ft. Range of tide averages 2 ft.
RADIO: Tampa Radio.
VHF: Channels 16 and 13. Watch only maintained when ve expected.
TUGS: One 500 h.p. tug and one 1,000 h.p. tug available. Large ves should use tugs when berthing.
BERTHING: Berthing at Fort Pierce is at Indian River Terminal. T privately owned facility has berths of 454 ft., 330 ft., 150 ft. and 20 The city operates an adjacent facility with mooring for small ves including a Ro-Ro ramp used by a landing craft trading with Bahamas.

Vessels up to 560 ft. have safely berthed at the terminal facility w is well maintained and fendered. Vessels can arrive or depart at stage of the tide, however, the Harbour Master has temporarily restr vessels over 24 ft. 6 in. draft to high water movements only.
CARGO HANDLING FACILITIES: Indian River Terminal prov excellent facilities for general cargo. The pierside refriger warehouse serves the citrus industry. Shore side cranes are avail on request but most cargoes are discharged and loaded at this fa with ship's gear. The terminal and local stevedores are fully equip with forklifts, hand trucks, slings and pans for handling palletise breakbulk products, most particularly fruits and vegetables. Contai and heavy lift cargoes have also been loaded at this facility whic serviced by a rail spur directly from the FEC railroad main line. T adjacent city facility provides berthing for several small craft presently accommodates a cross state waterway inland cruise ve and a small island trader.

A tug/barge bulk facility that handles argonite occupies an area N of the Indian River Terminal. This facility has a 3-dolphin mooring sys for vessels up to 16 ft. draft.
MEDICAL: Doctor and hospital available.
FRESH WATER: Available.
FUEL: Light diesel is available by truck from nearby facilities. Hea fuel must be barged or trucked from Port Canaveral or Port Evergla
REPAIRS: No facilities available.
AIRPORT: Local airport 5 miles from port with U.S. Customs on Commercial flights available from Palm Beach and Melbourne, 1.5 hours by car.
SERVICES: Fresh provisions, laundry services, groceries and m available.
GENERAL: The Port of Fort Pierce is on the threshold of developm The present level of activity at Indian River Terminal indicates a n for additional facilities to accommodate the expanding export citrus t and other business. The United States Corps of Engineers has rec approved a harbour deepening and expansion project to allow ves up to 28 ft. draft to berth. This project is scheduled to begin in 1995, and be completed by the end of the year. Local community lea are working to acquire port side undeveloped land that is pres privately held. The Port Authority at the present time does not ow operate any port property.

Stevedores at Indian River Terminal excel in handling breakbul palletised citrus fruit. Production and quality of stow are excellent.

Agency and stevedoring personnel are keen, helpful and anxiou co-operate fully.

FREEPORT, Texas: 28.57 N. 95.21 W.

(See P

DOCUMENTS: See "Houston".
PILOTAGE: VHF Channels 6, 8, 12, 13, 14, 16 at sea buoy. Pilot (tel. 233-1120), 200 West 2nd, Freeport, Texas; Pilot boards 0.2 North of sea buoy. Anchor 1 mile from sea buoy if awaiting Pilot
ANCHORAGES: 1 to 2 miles from sea buoy.
RESTRICTIONS: Depth 45 ft. at bar.
MAX. SIZE: Length 670 ft., draft 43 ft. for ships from bar to within turning basin, 36 ft. from upper turning basin to Public Fa Tide governing these dimensions – plus or minus 3 ft.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Alb
HEALTH: See "Health: All Ports" before first U.S.A. port (Al Illness Reports made to Miami Quarantine Station.
RADIO: Galveston Marine Operator.
TUGS: Join vessel at shore line. Tug's lines to be used, and no for use of lines.

BERTHING: 1 hour to reach berth. Deep water terminals at Public Facilities consist of 1,250 linear ft. of deep water bulkhead wharf with 3 modern transit sheds consisting of 200,000 sq.ft. 1 berth of 250 linear feet of deep water bulkhead wharf with transit shed of 36,000 sq.ft. In addition a back-up warehouse is available consisting of 60,000 sq.ft. The large transit sheds and back-up warehouse have railroad tracks under cover, permitting all-weather work and preventing cargo damage.

Ro-Ro facility in operation.

A new public liquid barge dock and tank farm in operation (in connection with the Old River Co.).

The Navigation District owns a total of 9,700 acres of land for future port and industrial development, 6,500 ft. of this land is situated on the Brazos River.

CRANES: Vessel is required to use own gear, shore cranes are available in area for hire.

STEVEDORES: Obtained through Agent.

MEDICAL: Obtained through Agent and advance notice required. Doctors, hospital available.

TANKERS: Facilities operated by Phillips Petroleum, Dow Chemical and Seaway Pipeline Inc.

Report: Entering and Berthing: Vessels inbound over 630 ft. LOA are to enter harbour only during daylight hours from sunrise to:

1. 30 minutes before sunset going to berths below Phillips Terminal.
2. 1.5 hours before sunset going to berths at Phillips Terminal and above when loaded.
3. Vessels under 630 ft. judged unsafe for handling after dark will be limited to daylight hours.
4. Inbound operations will be suspended during times when weather conditions do not permit safe navigation.

DENSITY: 1020.

FRESH WATER: Available ex-wharf at Brazos Harbor.

FUEL: All grades available by barge from Houston.

CONSULS: None. Nearest at Port Arthur or Houston.

REPAIRS: Available.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: None required but available through Agent.

OPENING/CLOSING HATCHES: Stevedore contract.

CUSTOMS ALLOWANCES: Local Customs Agent control.

REPATRIATION: Possible, through Agent.

AIRPORT: Houston Intercontinental Airport – Houston, Texas (80 road miles to Brazos Harbor); Metro Airlines – Shuttle to Angleton, Texas (15 miles from Brazos Harbor).

TIME: GMT minus 6 hours. Daylight saving time starts last Sunday in April and ends the last Sunday in October – GMT minus 5 hours.

HOLIDAYS: New Year's Day (January 1st); Martin Luther King's Birthday (January 15th); Lincoln's Birthday (February 12th); Washington's Birthday (Third Monday in February); Good Friday; Texas Independence Day (March 2nd); St. Patrick's Day (March 17th); Decoration Day (Last Monday in May); Emancipation Day (June 19th); Independence Day (July 4th); Labour Day (First Monday in September); Columbus Day (Second Monday in October); Veteran's Day (November 11th); Thomas W. Gleason's Birthday (November 8th); Thanksgiving Day (Fourth Thursday in November); Christmas Day (December 25th). No work on Christmas Day or Labour Day.

If any of the above holidays fall on Saturday or Sunday the following Monday will be recognised as the holiday.

POLICE/AMBULANCE/FIRE: Police 239-1211; Fire 233-2651; Ambulance Service 233-2651.

TELEPHONES: No arrangements exist for placing telephones on board.

BANKS: First Freeport National. Tel: (409) 233-4401.

SERVICES: Tank-cleaning facilities available locally. Compass adjusting available from Houston.

SHORE LEAVE: Crew members allowed ashore.

GARBAGE DISPOSAL: Garbage collection service according to Marpol Annex V Regulations, arranged by the Port Authority. Rates for services charged according to Port Tariff. Collection times set by Port Authority.

WASTE OIL DISPOSAL: Collection service available by commercial tank trucks. No special berths available for this service. Service provider will quote rates at time of service.

IDENTIFICATION CARDS: None needed.

SEAMAN'S CLUBS: Seaman's Service Center, 230 East Fifth Street, Freeport, TX 77541. Tel: (409) 233-5641. Contact: Rev. Joe Jones.

DEVELOPMENTS: The port has commenced a dredging and widening project, which will on completion give a channel depth of 45 ft. and an alongside depth of 36 ft. The main channel will be widened to 400 ft.

Berths No. 1 and 2 to be extended Eastward to provide a new berth (Berth No. 3) with a length of 640 ft. Berth will be dedicated to rice export. Berth 'A' is to be extended by 400 ft.

Certificate of Financial Responsibility.
I.O.P.P. Certificate.
No health document required.

APPROACHES: Mariners are advised that ship-to-ship lightering activity is regularly conducted in the following general vicinities which are 50 – 60 miles from the Galveston Sea-Buoy.

Lat. 28° 35′ N., Long. 94° 15′ W.
Lat. 28° 25′ N., Long. 94° 34′ W.

Mariners are urged to use caution when transitting these areas, as they make their way to the Port of Galveston.

ANCHORAGES: In Bolivar Roads, 6.7 miles inwards from sea buoy No. 1. Depths 32 ft. – 34 ft.

PILOTAGE: Radio to local Agent who arranges Pilot and specifies boarding time. United States Coast Guard require 24 hours' notice of arrival at Galveston Bar. Contact pilot boats and pilot station on VHF Channel 14. Pilot boats can be signalled by light in international code. Pilot taken on board at sea buoy No. 1 located 6.7 miles from Galveston.

RESTRICTIONS: Prolonged North winds can reduce water level as much as 4 ft. in Winter. Channel depth 40 ft. F.W.

MAX. SIZE: No length or height restrictions. Draft according to berth depth.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

RADIO: International Telephone and Telegraph station Galveston, call sign KLC.

TUGS: Available if required.

BERTHING: See "Table" overleaf.

STEVEDORES: Order before 1800 for 0700 or 0800 hrs. following day. During day can be ordered at 2 hours' notice. Gangs must be ordered before 1800 hrs. on Saturday for Sunday or holiday.

MEDICAL: All medical assistance available.

FRESH WATER: Available at all wharves.

FUEL: All grades available from Galveston Terminals Inc. Tel: (409) 744-6351.

CONSULS: Italy and Norway.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Required only if crewmen detained by Immigration.

OPENING/CLOSING HATCHES: By stevedores only.

CUSTOMS ALLOWANCES: Each man 300 cigarettes, or 100 cigars or 1 lb. tobacco; 1 quart wine/spirits.

TIME: Central Standard Time. Daylight Saving Time effective from April to October.

HOLIDAYS: *ILA Holiday:* January 1st; Martin Luther King Day, President's Day; Texas Independence Day; Good Friday; Memorial Day; Emancipation Day; July 4th; Labour Day; Veterans Day; Thanksgiving Day; Christmas Day.

POLICE/AMBULANCE/FIRE: All services provided. Tel: (409) 766-2100.

SHORE LEAVE: No restrictions unless detained by Immigration.

IDENTIFICATION CARDS: Immigration Form I-95 required.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany).

The following information was received from the Port of Galveston:

"To arrange for garbage and trash pickup, contact the Harbour Master.

Any vessel whose previous port of call was outside the continental limits of the United States, or who has residue of food stuffs purchased outside the continental limits of the U.S. on board, must have their agent arrange for garbage pickup by an authorised transporter previously approved by the Department of Agriculture. All such garbage must be inspected by the Dept. of Agriculture prior to being discharged ashore.

Trash and garbage from coastwise vessels, outer continental shelf supply and seismograph boats, and other nondescript water craft will normally be picked up by the Galveston Wharves maintenance department. 150 cu.ft. trash trucks and garbage containers will be provided alongside on the dock upon request, availability permitting.

All trash and garbage must be retained onboard until suitable containers are available. Under no circumstances shall trash or garbage be deposited directly onto the pier aprons. All garbage must be wrapped or packaged in leak-proof containers or plastic bags. All empty cardboard boxes shall be broken down flat to conserve space.

No lead-acid batteries containing liquid will be discharged. No waste oil, chemicals, or other hazardous material shall be dumped or mixed in with trash and garbage. Trucks shall not be loaded within 6 inches below the top of the sideboards.

The tariff for hauling away trash and garbage will be $125.00 for the first truck load and $75.00 for each truck load thereafter.

In the event no Galveston Wharves equipment is available to receive trash and garbage at the time requested, the Harbour Master may authorise vessels to contract directly with commercial garbage transporters who are properly franchised with the City of Galveston in accordance with Section 15-61 of the Galveston City Code. A complete list of those authorised contractors will be provided by the Harbour Master upon request.

The Harbour Master will also authorise an outside contractor to provide containers at any time for large amounts of scrap metal, used cable or any other material which because of size or weight makes it beyond the capability of wharves equipment to properly handle.

Any vessel not in compliance with the above procedure will be directed to vacate its berth."

The following is a list of authorised contractors:

Affordable Disposable Company, 1624 Avenue M., Galveston, Texas. Tel: 762-5842.

Best Waste Systems, 1555 F.M. 517 West, Dickinson, Texas. Tel: (713) 337-3903.

Browning-Ferris Industries, P.O.Box 1379, La Porte, Texas. Tel: (713) 471-9142.

William Blue, 6806 Woodrow, Texas City, Texas. Tel: 938-8037.

Freddie Swanson, 1109 46th Street, Galveston, Texas. Tel: 765-5462.

Trashmasters, Galveston, Texas. Tel: 762-5392.

WASTE OIL DISPOSAL: Service available from Malone Company, P.O.Box 709, Texas City, Texas 77592. Tel: (409) 945-3301, (713) 487-6500, under requirements of 33CFR 158. 130 barrel vacuum tractor trucks and 50 barrel vacuum bobtail trucks available at any berths. This contractor meets response time, transfer rates, and capacity requirements under 33CFR 158.

SEAMAN'S CLUBS: United Ministry to the Port of Galveston, Inc., 2 Mechanic, Galveston. Tel: (409) 762-0026. Facilities include ship's s international telephone service, church services when requested, ga organised (soccer), postage facilities, bus collection to and from s hospital transportation, pool, videos, table tennis, TV, restaurant, a bibles provided in numerous languages.

CURRENCY: U.S.Dollar (U.S.$).

DEVELOPMENTS: Future plans include the expansion of the conta terminal by filling and paving the slip area between Piers No. 12 a No. 14 and resurfacing Pier No. 14, adding approximately 9 ac Additionally, the extension of the container dock to 3 full berth proposed.

AUTHORITY: Port of Galveston, P.O.Box 328, Galveston, Texas 775 *Tel:* (409) 765-9321, 766-6119. *Telex:* 765436 Prt. GEISMAR (Including Sunshine), Louisiana:

30.13 N. 91.01 W. **(See Plan)**

East bank of Mississippi River, about 187 miles from sea.

DOCUMENTS/PILOTAGE: For all general information, refer to "New Orleans".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available if required; normally not used (see "Tankers").

BERTHING: BASF Corporation: Berth 620 ft. long, 32 ft. depth. BASF Corporation Chemical Division, P.O.Box 457, River Road, Geismar, Louisiana 70734. Tel: (504) 473-9871. Telex: 510-600-7967. Contact: Plant Security.

DENSITY: Fresh water (1000).

TANKERS: *BASF Corporation: – Geismar:* General: The B Chemical Dock is located on the North side of the river, approxim 180.4 miles above Head of Passes (AHP). A series of mooring dol interconnected by rubber faced steel pile fenders form a 615 ft. ber face. Electric driven warping winches on the dock and mooring dol handle vessel's mooring lines.

Cargo Handled and Shore Installations: Various chemicals handled at this dock, e.g., methanol, ethylene dich perchloroethylene, caustic soda, etc. All chemicals are generally lo through 6 in. hoses connected to shore lines which are generally diameter and vary in length from 0.5 miles to 4 miles.

An emergency loading stop control is located on the dock.

Docking: All vessels are required to use a 600 h.p. tug for assis in docking and undocking. Vessels should approach the dock ste the current with a tug on the port bow. The vessel is then manoe alongside for a starboard side to docking.

Docking and undocking are generally performed by the River P

Nordix/No. 1 – Sunshine: General: The Nordix Dock is located on the left descending bank of the Mississippi River, approximately 170 miles AHP. The dock consists of a hose platform attached by catwalk and fender system to several mooring dolphins for a total dock length of 960 ft.

River current at the dock varies from 1 knot to 4 knots, depending on the height of the river.

Cargo Handled and Shore Installations: Crude is transferred through 2×8 in. hoses at a maximum discharge pressure of 100 p.s.i. on the dock.

Docking: Docking is strictly starboard side to and is performed by the River Pilot. 2×1,200 h.p. tugs are required for all docking/undocking operations.

The normal mooring arrangement calls for 2/3 head lines, 2 stern lines, 1 spring line forward and 1 spring line aft. The leads for breast lines are poor.

Willow Glen/No. 1 – Sunshine: General: The Willow Glen Terminal, approximately 180 miles AHP is on the left descending bank of the Mississippi River. The dock consists of a 150 ft. hose handling platform, 2 breasting dolphins and 4 mooring buoys. All mooring points are equipped with electric capstans for line handling. The dock is normally served by barge but is capable also of handling tankers.

Current at this dock varies between 1 knot and 4 knots, depending on river height.

Cargo Handled and Shore Installations: No. 2 and No. 6 fuel oil are the only products handled. These are transferred to the dock through 4×8 in. Chicksan arms at a maximum discharge pressure of 100 p.s.i. Portable jacks are provided by the terminal to support the cargo arms on the ship.

Docking: Docking is performed by the River Pilot and is strictly starboard side to, vessels of 30,000 d.w.t. or greater are required to use 2 tugs for docking and undocking; smaller vessels are required to use a single tug for these operations.

The normal mooring arrangement calls for 2 head lines, 1 breast line forward and 1 aft, 1 spring line forward and 1 aft and 2 stern lines. Wire or synthetic mooring lines may be used.

Petro United – Sunshine: General: The Petro United Dock is located approximately 170 miles AHP on the left descending bank of the Mississippi River. The dock consists of a 65 ft. hose handling platform and 6 mooring dolphins interconnected by 2 catwalk and fender systems.

At high river the current often causes swirling eddies off the dock which should be accounted for when approaching, docking and undocking.

Shore Installations: 4×10 in. and 2×12 in. hoses are available for the transfer of cargo.

Docking: 2 tugs are normally required for docking and undocking operations. All tugs must come from St. James or Baton Rouge so that a minimum of 2 hours advance notice must be given to the terminal and Agent prior to docking or undocking. Extensive delays have been known to occur due to tug unavailability and insufficient advance notice of docking/undocking requirements.

Docking is performed by the River Pilot and is strictly starboard side to.

The terminal generally requires the use of 3 head lines, 2 stern lines, 2 breast lines forward, 2 breast lines aft, 3 spring lines forward and 2 spring lines aft.

FRESH WATER: Available ex-wharf.

FUEL: Not available.

SHIPMASTER'S REPORT: December 1990.

Berth: Arcadian (formerly Allied Chemical) located at Mile Statute 187 above Head of Passes.

The private wharf is said to be 1,175 ft. long. It is equipped with one travelling gantry crane and grab. Conveyor belt to yard storage within chemical plant. Phosphate rate is about 12,000 tonnes per day. Vessel guaranteed 39 ft. fresh water and berthed against 5 "Bridgestone" type inflated fenders. Vessel was 12 ft. from wharf and 12 ft. – 15 ft. below safety rails on arrival in low river. Ship's MOT type gangway and ship's bulwark steps are required on shore. Fenders were removed when ship's draft less than 32 ft. Gangway required frequent adjustment, and was changed to short size, then changed again to long size when aftermost hatch finished. Vessel moored with 4 headlines, 1 breast rope, 2 forward back springs, 2 after back springs and 4 stern/breast ropes aft. Stern nearly level with end of berth.

No fresh water available from quay, but a water barge can be hired from Burnside. Cost was U.S.$140 per hour for towage and $3.50/4.00 per ton for the water.

Only limited provisions allowed across dock, no chemicals or hazardous materials.

Visitors require prior authorisation, insurance, safety helmet, goggles and lifejacket.

No bunkering allowed.

Density ranges from 0.994 in Summer to 0.999 in Winter.

GEORGETOWN, South Carolina: 33.22 N. 79.17 W.
(See Plan)

PILOTAGE: Available. Make contact on VHF Channel 16. Pilot boards at Sea Buoy "2WB" in position 33° 11.6′ N., 79° 05.4′ W. for the 14 mile passage to Georgetown.

ANCHORAGE: Vessels wait for berth at Buoy "2WB".

RESTRICTIONS: Vessels over 600 ft. LOA dock during daytime only.

MAX. SIZE: Max. LOA 700 ft. Max. beam 100 ft. Depth at all terminals 27 ft. MLW.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

VHF: Pilot and tug on Channel 16. Port Authority have no facilities.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Tugs assist vessels from Buoy 28 to the dock. Georgetown Towing operate 2 tugs, and McAllister Towing operate 3 tugs.

BERTHING:

Berth No.	*Wharf Length* (ft.)	*Depth at LW* (ft.)
1	500	27
2	700	27
Steel Dock	600	27

CRANES: 1×90 ton P & H truck crane at the terminal.

BULK CARGO FACILITIES: Holnam Cement Corporation: Bulk storage facility with capacity 20,000 tons. Discharge rate for cement 700 t.p.h.

STEVEDORES: Advise requirement 1600 hrs. day prior to arrival in order to commence work 0800 hrs. next day.

MEDICAL: Georgetown Memorial Hospital 3 miles from port.

TANKERS: No facilities.

FRESH WATER: Available.

FUEL: Bunkers available through ship's Agent.

CONSULS: None locally.

REPAIRS: Minor repairs and small engine repairs possible.

DRY DOCKS: Tugs and barges only.

SURVEYORS: Available.

GANGWAY/DECK WATCHMEN: Ship's gangway used. Watchman available.

OPENING/CLOSING HATCHES: Opened by crew or stevedores.

REPATRIATION: Facilities available.

AIRPORT: 35 miles from port.

TIME: Eastern Standard Time. Daylight Saving Time from first Sunday in April till last Sunday in October.

POLICE/AMBULANCE/FIRE: Police 527-4454. Ambulance 546-8140. Fire 546-5151.

DEVELOPMENTS: Delta Cement Corporation: Bulk storage facility recently completed. Capacity 20,000 tons. Discharge rate for cement 700 t.p.h.

AUTHORITY: South Carolina State Ports Authority, Port of Georgetown, Dock Road, State Pier 31, P.O.Box 601, Georgetown, South Carolina 29442, U.S.A. *Tel:* (803) 527-4476. *FAX:* (803) 527-2601. *Telex:* 810-677-2265. *Contact:* L. David Schronce, Director.

GRAYS HARBOR, Washington: 46.55 N. 124.08 W.
(See Plan)

DOCUMENTS, etc.: Refer to "Tacoma".

PILOTAGE: *Boarding Area:* Near Grays Harbor Buoy.

Pilot Ladder: Near midships, 3.0 m. – 4.0 m. above water. No manropes. Automatic ladders are acceptable for boarding. Use only Jacob's ladder for disembarking.

Pilot Boats: "Chehalis": 20 m. orange and green steel boat, pilot house aft. "Grays Harbor": 18 m. orange and green steel boat, pilot house amidships.

Notification: To be sure of service give maximum advance notice, at least 24 hours via the Marine Exchange, Seattle, WA., VHF Channel 20. Pilot boat does not cruise on station. Keep pilots advised of changes in arrival time. Four hour minimum notice required on pilot orders. Orders for pilots on weekends should be received by 1700 hrs. Friday.

Communications: Pilot radio station (call WRD 709 or Grays Harbor Pilots (206) 532-2761). Guards Channels 12 and 16. If contact is made on Channel 16, be prepared to switch promptly to another channel, preferably Channel 12. Same procedure applies to pilot boats when manned. In emergency, a message may be relayed through U.S. Coast Guard Station, Westport, using above procedure.

Maximum Draft: Loaded vessels are limited to 11.0 m. visible draft for departure at flood tide. In case of severe silting in channel this figure may be reduced. The allowable draft for incoming vessels is substantially less because of difficulty in turning around. The safe handling of loaded ships outbound through the bridge requires a little trim by the stern.

Maximum Width and Length: Vessels passing through the bridges over the Chehalis River are restricted to 26 m. beam and 183 m. length.

Vessel Condition: All vessels arriving or departing Grays Harbor are asked to have all hatches covered. Deck cargo must be properly stowed and secured. A safe walk-way must be provided to the pilot boarding area.

ARRIVED VESSEL: Vessels must be inside Grays Harbor Bar to be considered an "arrived vessel".

ANCHORAGES: No specific areas in Grays Harbor have been designated as anchorage grounds. The best area is Southward of Sand Island Shoal in depths of 35 ft. to 40 ft.; the holding ground is good.

RESTRICTIONS: Bar Channel depth 48 ft. MLLW, and Approach Channel depth 36 ft. MLLW. Turning Basin width of 900 ft. Mean tidal range of approximately 10 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available.

BERTHING: Three deep-draft berths with depths of 41 ft. MLLW and one shallow draft berth with depth of 34 ft. MLLW. The channel is maintained at a depth of 36 ft. MLLW.

Terminal No. 4: (Wharf-Dolphin).
2 berths: Each 700 ft. in length.
Deck height: 18 ft., berth depth 41 ft. MLLW, depth continuously maintained with water-jet system.
Alignment of pier: 274°.
Fender spacing: Continuous.
Bollard/cleat spacing: Variable.
Two × 60 ton cargo cranes.
New on-dock rail system with 4 parallel spurs, 50 railcar capacity, serviced by 2 main line railroads and connected to transit sheds.
Two new 30,000 sq.ft. transit sheds adjacent to on-dock rail system.
Services: Water, lights, taxi.
Use: Bulk, breakbulk, neobulk, Ro-Ro, general cargo, cruise ships.

Terminal No. 2: (Wharf-Dolphin).
1 berth: Length 600 ft.
Deck height: 18 ft., berth depth 41 ft. MLLW.
Alignment of pier: 274°.
Fender spacing: Continuous.
Bollard/cleat spacing: Variable.
50,000 sq.ft. and 40,000 sq.ft. warehouses behind Terminals 2 and 1.
Services: Water, lights, taxi.
Use: Bulk, breakbulk, neobulk, Ro-Ro, general cargo, cruise ships.

Terminal No. 1: (Dolphin).
1 berth: Width 50 ft., length 480 ft. with dolphins.
Deck height: 18 ft., berth depth 34 ft. MLLW.
Alignment of pier: 302°.
Fender spacing: None, 3 dolphins parallel to face.
Bollard/cleat spacing: Variable.
Services: Water, lights, taxi.
Use: Barge services, small cruise ships and others.

All 3 Port Terminals are backed up by 175 acres of lighted, partially paved cargo yard. In addition, a total of 150,000 sq.ft. of covered storage is available on-dock or adjacent to the terminal areas. The federal navigation channel up to the Port docks is federally maintained at a depth of 36 ft. MLLW. Major commodities handled through the Port of Grays Harbor are forest products, metals, equipment, liquid products, and other bulk, breakbulk and neobulk commodities.

Private:

Name	*Length*(ft.)	*Use*
ITT-Rayonier Pulpmill Dock	475	Pulp and oil.
ITT-Rayonier Sawmill Dock	600	Pulp and logs.
Citifor Dock	500	Logs.
Weyerhaeuser Bay City Dock	800	Logs.
Weyerhaeuser Sawmill Dock	900	Lumber.

BULK CARGO FACILITIES: All berths (See "Berthing") are available for bulk, Ro-Ro, and general cargo activity, and are backed up by 150,000 sq.ft. of warehouse space as well as 175 acres of lighted, partially paved cargo yard. Two × 60 ton cargo cranes are also available at Terminal No. 4, as well as an on-dock rail system.
STEVEDORES: Jones Washington Stevedoring, Tel. Steve Bouch (206) 533-2561; and Stevedoring Services of America, Tel. Will Sheahon, (206) 532-4650. 20 local gangs available. Additional gangs brought in if needed.
MEDICAL: All medical facilities available. Local hospital.
DENSITY: Salt water.
FRESH WATER: Available at all wharves.
FUEL: Available at berth or anchorage. Capacity of barge 15,000 bbls.
GANGWAY/DECK WATCHMEN: Required only if detainees aboard.
CUSTOMS ALLOWANCES: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.
HOLIDAYS: See "Tacoma".
POLICE/AMBULANCE/FIRE: Dial 911 for emergencies.

Ambulances:	
Aberdeen	532-1252
Hoquiam	532-3311

GARBAGE DISPOSAL: The vessel/Agent is responsible for ordering garbage service through Harbor Disposal Company Inc., 4201 Olympic Highway, Aberdeen, WA. 98520. Tel: (206) 532-3240. Containers, drop boxes and compactors are available.
WASTE OIL DISPOSAL: No facilities available.
SEAMAN'S CLUBS: Seamen's Service of Grays Harbor, 313 South "I" Street, Aberdeen, WA. 98520. A wide variety of services are available.
AUTHORITY: Port of Grays Harbor, P.O.Box 660, Aberdeen, Washington, WA. 98520-0141, USA. *Tel:* (206) 533-9528. *FAX:* (206) 533-9505. *Contact:* Russ R.Richardson, Commission President. Clifford C. Muller, Executive Director. Leonard Barnes, Operations Director.

GREEN BAY, Wisconsin: 44.32 N. 88.02 W. (See Pla

For important general information refer to St. Lawrence Seaway.

DOCUMENTS: No special documents required. All necessary Custo and St. Lawrence Seaway documentation should be accomplished p arrival.
PILOTAGE: Pilot not compulsory although some Masters prefer P aboard. Pilot boards prior to arrival.
CHANNEL: From Grassy Island, outside mouth of Fox River, to FW Railway bridge, channel is maintained 24 ft. below low-water-da (576.8 ft. above Father Point, Quebec) and 300 ft. width except thro bridges. Above Railway bridge channel and turning basin is maintai at 20 ft. below low-water-datum. From Grassy Island lakeward chan maintained at 26 ft. below low-water-datum varying in width from 30 to 500 ft. for approximately 8 miles. 24 ft. deep turning basin maintai at confluence of Fox River and East River opposite Leicht's North Do Currents will flow up and down river and will influence channel dep at times. Present high-water will add1 ft. – 2 ft. to channel depths.
RESTRICTIONS: Entry may be made at any time of day or night sub to Master's discretion.
MAX. SIZE: Subject water depths and width of bridge openings.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: all Ports" before first U.S.A. port (Alba Illness Reports made to Chicago Quarantine Station.
Pratique may be obtained prior to entry of St. Lawrence Seaw Suspected disease should be reported locally.
Rat guards required on all lines.
RADIO: Ships' Agents located at Milwaukee and Chicago, ETA sho be directed accordingly.
TUGS: Join vessel at any designated point. Charges should be obtai from tug operators. Use ship's lines.
BERTHING: General cargo at Leicht's North Dock, 1,500 ft. length, channel depth. Discharge by ship's gear and shore based equipme Bulk cargo handled at several docks.
CRANES: Shore based lifting devices to 20 tons. 100 ton stiff-legg derrick available for heavy cargo.
BULK CARGO FACILITIES: Available at several places for coal, s fertiliser, chemicals, liquid cargo, stone, pig-iron, etc.
BRIDGES: No bridge opening restrictions for railroad bridges. Highw bridges permit vessels of 300 tons or over to transit at any ti However, heavy land traffic occurs about 0730 – 0830 hrs., 114 1315 hrs. and 1630 – 1730 hrs., and co-operation of Masters is urg during these times so that city bridges may remain closed.
STEVEDORES: Services performed by Leicht Transfer and Storage C and arrangements should be handled by ship's Agent or directly w Leicht's.
MEDICAL: Subject to regulations of U.S. Customs and Immigration a St. Lawrence Seaway Authorities. 3 excellent hospitals.
TANKERS: The major oil companies have facilities. Limited only harbour dimensions.
DENSITY: Fresh water.
FRESH WATER: Available through ship's Agent and water compan
FUEL: Fuel oil available in any quantity. Normal fire precautions.
CONSULS: No consuls. Nearest are at Milwaukee, Chicago, a Minneapolis.
REPAIRS: Topside and engine repairs available. Complete rep service available at Sturgeon Bay, 45 miles North.
DRY DOCKS: No local facilities. Available at Sturgeon Bay, Wiscons
SURVEYORS: Available through ship's Agent.
GANGWAY/DECK WATCHMEN: Available at ship's option.
OPENING/CLOSING HATCHES: By stevedores.
REPATRIATION: Available through local Immigration officials.
AIRPORT: 8 miles from port. Served by regular airlines with o 30 flights daily.
TIME: Central Standard Time. Central Daylight Saving Time in eff from the first Sunday in April to the last Sunday in October.
HOLIDAYS: January 1st (New Year's Day), May 31st (Memorial Da July 4th (Independence Day), 1st Monday in September (Labor Da Last Thursday in November (Thanksgiving Day), December 2 (Christmas).
POLICE/AMBULANCE/FIRE: Police: Green Bay – Administrative c 448-3200, Emergency 911, Sheriff 911, Ambulance 432-0305, Fire De Rescue – 911, Fire: 911.
TELEPHONES: On board service. Contact Wisconsin Telephone C
SERVICES: Tank cleaning, fumigation, waste disposal, chandler.
SHORE LEAVE: Permitted.
IDENTIFICATION CARDS: Proper identification should be carried.
GARBAGE DISPOSAL: Service available on request.
WASTE OIL DISPOSAL: Service available on request.
SEAMAN'S CLUBS: Seafarer's Ministry of Green Bay, P.O.Box 40 Green Bay. Tel: 494-0958.
DELAYS: Expect no delays for berthing or harbour movement.
AUTHORITY: The Port of Green Bay, Brown County Board of Ha Commissioners, P.O.Box 23600, 305 E. Walnut Street, Green B Wisconsin 54305-3600. *Tel:* (414) 448-4290. *FAX:* (414) 448-4 *Contact:* Alan T. Johnson, Port Director.

GULFPORT, Mississippi: 30.21 N. 89.05 W. **(See Plan)**

DOCUMENTS: See "New Orleans".

PILOTAGE: Compulsory from Outer Sea Buoy to docks, provided by Gulfport Pilots Association, arranged through Agent. Pilot boards at Sea Buoy.

Pilot boat has red hull, white superstructure with "Pilot" in black lettering. When pilot boat is underway, contact can be made by VHF Channel 16.

RESTRICTIONS: The Gulfport Channel is 12 miles long running between Ship Island and Cat Island. Channel is 225 ft. wide and has a minimum depth throughout of 36 ft. at MLW. Harbour is dredged rectangular basin about a 0.25 mile wide and 0.5 mile long, this area being protected by piers. Depth in harbour and along wharves is 36 ft. with a 2.5 ft. tide variation. No entry restrictions as to time.

MAX. SIZE: Length of vessel is restricted to approximately 900 ft. by turning basin, no breadth restrictions.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

RADIO: Gulfport Radio KJC 768 – VHF Channel 16. Continuous service.

TUGS: 2 tugs (1,200 h.p. and 2,000 h.p.) available but not required unless requested to assist in berthing.

BERTHING: 5,850 linear ft. of berthing space (See "Plan").

CARGO HANDLING: 50,000 sq.ft. transit shed refrigerated facility.

2 container cranes, 1×30 ton and 1×35 ton, in operation. Ship's gear usually used but mobile cranes available with 48 hours' notice.

STEVEDORES: Must have 12 hours' notice to arrange stevedore gangs. Normal work day 0800 – 1200 hrs., and then 1300 – 1700 hrs. Monday to Friday.

MEDICAL: No advance notice required for medical attention, doctor and hospital care readily available.

DENSITY: Brackish.

FRESH WATER: Fresh water is available. Rate 10 t.p.h.

FUEL: Suppliers of marine fuel at the port provide direct barge to ship service. A 185,000 gallon fuel barge is moved from its mooring and placed alongside the vessel for refuelling. The barge is manoeuvred by an 800 h.p. twin screw push boat. Once alongside, pumps on the barge deliver fuel at a rate of 32,000 gallons per hour. Shallow draft coastal traffic can be fuelled at the port or 6 miles South in the Intra-coastal Waterway.

CONSULS: Many countries have consuls within a 100 mile radius of Gulfport.

REPAIRS: Most deck and engine repairs could be arranged within port facilities.

SURVEYORS: Available from Mobile or New Orleans.

GANGWAY/DECK WATCHMEN: Port guards.

REPATRIATION: Can be arranged.

AIRPORT: Gulfport Municipal Airport is approximately 4 miles from the port and served by regularly scheduled airlines.

TIME: The Port of Gulfport is on Central Standard Time, GMT minus 6 hours; clocks are moved ahead 1 hour during Summer months.

HOLIDAYS: United States national holidays are observed, cargo work can be arranged on these days at a penalty time.

POLICE/FIRE/AMBULANCE: Telephone number for all emergency services is 911.

TELEPHONE: Can be placed aboard only by special arrangement; not normally available.

GARBAGE DISPOSAL: Waste Management of Mississippi, Inc., P.O.Box 3869, Gulfport, Ms. 39505. Tel: 601-832-3144. Service available 0800 hrs. – 1700 hrs.

Browning-Ferris Industries, P.O.Box 550, Ocean Springs, Ms. 39564. Tel: 1-800-443-6562, 601-392-5108. Service available 0800 hrs. – 1700 hrs.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: The International Seamen and Truckers Center (under construction at this time).

CURRENCY: U.S.Dollar.

AUTHORITY: Mississippi State Port Authority at Gulfport, P.O.Box 40, Gulfport, Mississippi 39502. Street Address: 1422 23rd Avenue. *Tel:* (601) 865-4300. *Telex:* 785197 Gulfp Port Gup. *FAX:* (601) 865-4335. *Contact:* James Badger, Acting Port Director.

HAINES, Alaska: 59.15 N. 135.25 W. **(See Plan)**

In Lutak Inlet. Located 5 miles N.W. of Haines. Open all year.

DOCUMENTS: See "Anchorage, Alaska".

APPROACHES: Lynn Canal to Lutak Inlet.

PILOTAGE: Pilot pick-up point located in vicinity of Point Retreat.

ANCHORAGE: Lutak Inlet.

MAX. SIZE: Harbour depth 36 ft. at zero tide. Tides: Diurnal range 16 ft. Also see "Berthing".

BERTHING:

1. Haines Dry Cargo Dock can be secured by request through City of Haines (Telephone: Area code 907 number 766-2231). Berthing length – 967 ft. and an open surface of over 300 ft. in width. Depth at face of dock – 36 ft. MLLW. No covered sheds, 6 acre open staging area. Crane may be available. Continuous to 300 ft. Alaska State Ferry facility.

Ro/Ro cargo facility at N.W. end of Dry Cargo Dock.

2. Schnabel Lumber Co. Dock: Berthing length – 640 ft. long and 80 ft. wide. Depth at face of dock – 45 ft. No covered storage. Open storage. 35,000-ton capacity for bulk cargo storage. Chip loader with 350 t.p.h. capacity. Crane available.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: 3 available.

STEVEDORES: 4 gangs.

MEDICAL: Doctor/dentist available.

FRESH WATER: Available in small quantities in temperate seasons only.

FUEL: Not available.

REPAIRS: None.

CUSTOMS: Quarantine, Immigration and Customs locally.

TRANSPORTATION: Air, ferry. Haines Highway principal route connecting Southeast Alaska with the Alcan Highway leading to the interior of Alaska and Canada.

AUTHORITY: City of Haines, P.O.Box 1049, Haines, Alaska 99827. *Tel:* (907) 766–2448. *FAX:* (907) 766-3179. *Contact:* Robert Stokley, Harbour Master.

HAMPTON ROADS DISTRICT, Virginia: **(See Plan)**

NORFOLK: 36.51 N. 76.19 W.
NEWPORT NEWS: 36.59 N. 76.26 W.
PORTSMOUTH: 36.50 N. 76.17 W.

DOCUMENTS:

3 copies Cargo Manifest (Forms 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (Curio List).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List.

Customs Boarding Officer will also examine Ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours of arrival from a United States port:

Health Pratique.
Master's Oath (Customs Form 1300).
All foreign clearances.
U.S. Certificates of payment of Tonnage Tax (Customs Form 1002).
Certified Crew List.
F.M.C. Certificate of Financial Responsibility.

PILOTAGE: Compulsory; is generally arranged through port Agent. Vessels approaching port may use VHF telephone, Channel 16, radio telephone 2738 kHz. Advance notice of 24 hours is required of ETA. Pilot Lookout Tower located at Cape Henry, Virginia, the entrance to Chesapeake Bay.

The Virginia Pilot Association can be contacted by telephone at (804) 496-0995. Pilot monitors tower VHF-FM Channel 11 and VHF-FM Channel 16.

ANCHORAGES: 4 deep draft anchorages have been dredged at Hampton Roads. Two of the anchorages at Sewell's Point, one of which was dredged to 45 ft. and the other to 40 ft. The other 2 anchorages at Newport News are each 40 ft. deep.

Additional deep draft anchorages exist in the protected waters of the Chesapeake Bay at Cape Charles and Lynnhaven. These 2 anchorages, located near the entrance to the Hampton Roads harbour, have a water depth ranging to 47 ft. and can accommodate approximately 120 vessels. In addition, the inner harbour anchorage areas of lesser depth can accommodate up to 40 vessels.

Anchorage Regulations: A change in U.S. Coast Guard Regulations permits colliers and other bulk carriers, such as grain ships, to use the Big Stone Anchorage in Delaware Bay. Previously, the anchorage was open only to oil tankers. The new rules are advantageous to super colliers that are able to carry up to 150,000 tons, taking advantage of the anchorage's minimum natural depth of 55 ft. The super colliers then can be partly loaded up to about 90,000 tons, at Hampton Roads, Virginia, and topped off at the Stone Anchorage by two 30,000 ton barges.

RESTRICTIONS: Ships entering Hampton Roads from the sea follow a course between the Virginia Capes, across the lower end of Chesapeake Bay via Thimble Shoal Channel into the deep waters of Hampton Roads.

Thimble Shoal Channel: Extends from the Virginia Capes across the lower end of Chesapeake Bay into the deep waters of Hampton Roads. Thimble Shoal Channel is presently 1,000 ft. wide and approximately 13 miles long. The channel is 50 ft. deep within the 650 ft. wide outbound lane and 45 ft. deep within the remaining 350 ft. wide inbound lane.

Two channels extend through Hampton Roads, one southward into Norfolk, Portsmouth and Chesapeake, and one Westward to Newport News and up the James River.

Norfolk Harbour Channel: Extends from Hampton Roads into Southside cities via the Elizabeth River into Norfolk, Portsmouth and Chesapeake. Beginning at the Hampton Roads Bridge Tunnel, the Norfolk Channel is 19.6 miles long. Between deep water in Hampton Roads and Sewell's Point the Channel is 1,000 ft. wide and 50 ft. deep. Between Sewell's Point and a point just South of the Norfolk Southern Railway coal piers at Lambert's Point the channel is 50 ft. deep within the 650 ft. to 800 ft. wide outbound lane. Opposite the Naval Base at Sewell's Point and extending upstream to Norfolk International Terminals, the channel is 45 ft. deep within the 600 ft. wide inbound lane. Authorised improvements provide for deepening the Norfolk Channel to 55 ft. between Hampton Roads Bridge Tunnel and Lambert's Point. A 40 ft. channel extends from the coal piers to the N&W Railway Bridge on the Southern Branch. Beyond this point a 35 ft. channel extends 4.6 miles to a point 0.8 miles above the Interstate 64 Bridge, where the channel connects with the Atlantic Intracoastal Waterway route through the sounds of North Carolina to the South Atlantic Coastal States. Funding is available for the engineering and design study of deepening this portion of the Norfolk Harbour Channel to 45 ft., deepening a portion of the Southern Branch to 40 ft. and enlarging the turning basin at the Southern end of the channel.

The width of the Norfolk Harbour Channel is 1,000 ft. from its outer end to a point opposite Norfolk International Terminals; thence 1,250 ft. to the N&W Railway Coal Piers; thence 750 ft. to the junction of the Eastern and Southern Branches; thence up the Southern Branch 450 ft. wide to the Belt Line Railroad Bridge; thence 375 ft. wide for one mile to the N&W Railway Bridge; thence 250 ft. wide to its junction with the Atlantic Intracoastal Waterway route.

Newport News Channel: Extends 6.0 miles Westward from Hampton Roads to Newport News and thence up the James River, 68 miles and 90 miles respectively to the ports of Hopewell and Richmond. The Channel to Newport News has a depth of 50 ft. over a width of 800 ft.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

RADIO: Radio-telephone communications in the Hampton Roads area are furnished by the Chesapeake and Potomac Telephone Company of Virginia. A regular ship-to-shore channel transmits to ship on 2538 kHz and the ship returns the call on 2142 kHz. A "day-time" ship-to-shore channel transmits to ship on 2450 kHz and the ship returns the call on 2366 kHz. In the very high frequency band, "XY" ship-to-shore is available which transmits to the ship on 161.9 MHz and the ship returns the call on 157.3 MHz. A second "day-time" ship to shore channel transmits on Channel 20 and monitors Channel 16.

TUGS: Tugs are arranged for by the vessel's Agent according to ETA information. The required number of tugs and the horsepower are determined by the assigned tonnage, handling characteristics and final berth destination. Should vessel be unable to manoeuvre normally, Master to advise the Agent and request additional tug power. There are 17 tugs with horsepower up to 4,300 available in the port.

Safe working height of arm 67 ft. 1×4 in. vapour return hose. Controlling air draft at MHW is 135 ft. (3 bridges). Max. draft in channel at MLW is 35 ft. Storage capacity 20 million gallons. Also see "Shipmaster's Report dated June 1992.

Amoco: The terminal of the Amoco Company is located on the Southern Branch of the Elizabeth River, in Chesapeake, about one mile South of the Norfolk Naval Shipyard. This company has a site comprising 80 acres, with a splendid waterfront, on which are erected a ship and barge pier, pipelines, storage tanks, boiler house, tank-car and truck loading racks, and other facililties requisite to a modern petroleum storage terminal.

The terminal has storage capacity of 655,000 barrels for handling gasoline, light fuel oil, bunker C and asphalt.

Vessels carry petroleum products to its terminal from various refineries located in the U.S.A. and from abroad. Petroleum products are also received through the Colonial Pipeline system.

Fuel oil deliveries may be made to vessels at the company's wharf. Deliveries are also made by water to any section of Hampton Roads, Richmond, various other points in the Chesapeake Bay area and its tributaries. Loading equipment for making such delivery consists of barges with the necessary pumps, hose, flanges and other equipment for making up connections. Also see "Shipmaster's Report" dated November 1992.

Mobil: The Mobil Oil Corporation's terminal is located on the Southern branch of the Elizabeth River. Terminal facilities include bulk storage for 10 million gallons of gasoline, 6.7 million gallons of kerosene, 9 million gallons of fuel oil, 2 million gallons of diesel, and 11 million gallons of bonded bunker and marine diesel fuel.

The Mobil Oil terminal can accommodate vessels up to 32,000 d.w.t. Maximum length allowed is 660 ft. with maximum beam up to 90 ft. Maximum draft allowed is 35 ft. Water at this berth is brackish.

IMTT: The oil terminal complex is located on the Southern branch of the Elizabeth River. This is a deep water port that can accommodate vessel drafts of 35 ft. and lengths up to 630 ft. with beams to 90 ft.

The Company's facility has a storage capacity of more than 850,000 barrels and handles a complete range of industrial fuel oils including No. 2 fuel oil, No. 4 fuel oil, No.6 fuel oil and bunker oils. The terminal operates around-the-clock and is connected with the Colonial Pipeline system.

Koch: The Koch Terminal is situated adjacent to the C&O Railroad yards in Newport News. It has a storage capacity in excess of 520,000 barrels for handling diesel fuel, No. 2 fuel oil, No.4 fuel oil, No.5 fuel oil, No. 6 fuel oil, bunker fuels and asphalt.

Products are received into the terminal by tanker and barge. This is a deep water port that is located 24 miles from the sea buoy. Maximum draft allowed is 34 ft. Max. length of vessel allowed is 630 ft. with a beam up to 90 ft.

Limitations from environmental factors on berth operations do not exist. The tidal current sets across the approach. Vessels generally sail at any stage of the tide. Controlling depths in the navigation channel are 45 ft. and at the berth the controlling depth is 33 ft. Flood tide is in a N.W. direction, ebb tide is in a S.E. direction. Current velocities are between 1.1 knots and 1.4 knots.

Equipment available at the terminal to contain oil spills include: 200 ft. of boom, launch, oil snares, and absorbent material. Firefighting equipment on the pier is limited, but includes: 2×150 lb. dry powder extinguishers, and 2×20 lb. dry powder extinguishers. There is no water under pressure on the pier. A public telephone is the only means on the pier used for fire emergencies.

Norfolk Oil Terminal Inc.: The terminal is located at Lambert's Point Docks in Norfolk. At Pier L, commodities are handled via 3×4 in. and 2×6 in. lines. At Pier N, commodities are handled through 1×6 in. line. 16 storage tanks with capacities 8,000 – 768,000 gallons. Total storage 3,205,000 gallons (73,331 barrels). Commodities handled include animal fats and oils, vegetable oils, chemicals, latex and fatty acids.

Shipmaster's Report: November 1992.

Vessel (87,000 d.w.t.) berthed at Amoco Jetty.

Max. draft is 34 ft. (F.W.) for any tide, and 35 ft (F.W.) for high tide only.

Vessels have to return to Hampton Roads to take bunkers.

Stores may be loaded from barge whilst alongside.

Pilot and tugs require 6 hours notice, but Virginia Pilots require 2 hours notice.

Vessels over 100,000 d.w.t. can only transit during daylight hours.

Shore gangway available and adjustable.

Amoco provide transport from the head of the "T" Jetty to the gate (distance 2.5 miles).

DENSITY: Average 40% fresh.

FRESH WATER: Available at all berths. Barge service available if required.

FUEL: All grades available at oil company berths. Delivery by barge to all other locations.

CONSULS: The following countries are represented at Norfolk:

Belgium
Brazil
Denmark
Finland
France
Germany
Iceland
Italy
Mexico
Netherlands
Norway
Panama
Sweden

GANGWAY/DECK WATCHMEN: Not required unless crew members detained by Immigration.

CERTIFICATES: Cargo Gear Certificate, Derat, Radio, Safety Equipment, and Ship's Register.

REPAIRS: Newport News Ship Building and Dry Dock Company in James River; 5 outfitting piers up to 1,160 ft. length. Floating cranes up to 67 tons capacity. Gantry crane to 900 tons capacity. Other repair facilities and cranes also available.

Norfolk Ship Building and Dry Dock Corporation, situated on East Branch of Elizabeth River. Channel depth 25 ft.; 7 piers equipped for ship's repairs. 4×30 ton diesel locomotive cranes.

Other repair companies in addition.

DRY DOCKS: Norfolk: 1 dry dock 450 ft. long, 57 ft. beam. Berkley plant features the Titan Steel floating dock 950 ft. long, with lifting capacity of 54,250 long tons and second floating dock 670 ft. long, 126 ft. wide lifting capacity 20,000 tons.

Newport News: Dry docks:

	Length inside gate	*Width of entrance*	*Depth of water over sill MHW*
No. 1	649 ft.	92 ft.	33 ft.
No. 2	862 ft.	118 ft.	31 ft. 3 in.
No. 3	459 ft.	72 ft.	33 ft.
No. 4	525 ft.	75 ft.	33 ft.
No. 10	961 ft. 6 in.	128 ft.	35 ft.
No. 11	1,101 ft.	137 ft.	40 ft.
No. 12	1,613 ft.	250 ft.	33 ft.

Slipways: The shipyard has 2 inclining slipways with lengths up to 650 ft.

SURVEYORS: American Bureau of Shipping, P.O.Box 5189, Newport News 23605 and 65 Broadway, New York, New York 10006.

Williams, Rolf (Surveyor for Scandinavian Marine Claims Office, Inc. and Det Norske (Veritas)), 201 E. City Hall Ave. (10).

CUSTOMS ALLOWANCES: At the discretion of Customs Officers. Normal allowance is 200 cigarettes or 2 lb. tobacco and 1qt. wine/spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.

AIRPORT: Norfolk International Airport, and Patrick Henry International Airport at Newport News, over 100 flights daily.

TIME: Eastern standard time, GMT minus 5 hours. Daylight saving time, GMT minus 4 hours, from first Sunday in April till last Sunday in October.

HOLIDAYS: New Year's Day; Martin Luther King's Birthday; Lee's Birthday; Washington's Birthday (3rd Monday in February); Good Friday; Memorial Day (Last Monday in May); Jefferson Davis Day; Independence Day (July 4th); Labour Day; Election Day (1st Tuesday after 1st Monday in November); Veterans Day (November 11th); Thanksgiving Day; Christmas Day. No work can be arranged on New Year's Day, Labour Day or Christmas Day.

TELEPHONES: Onboard telephones only available at shipyards.

IDENTIFICATION CARDS: Identification required by Immigration for shore passes.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany).

Service available from Incendere Inc., 508 E.Indian River. Road, Norfolk, VA 23523. Contact Paul A.Underdown, Jr. Tel: (804) 454-8960. Fax: (804) 543-7661. Service includes dockside pickups at $100.00 each, 44 galls. corrugated containers for packaging of waste at $12.50 each, transporting waste to incinerator, incinerate and deposit ash in an approved landfill, destruction of garbage at $0.30 per pound, provide signed manifest certifying that the waste has been properly disposed of.

WASTE OIL DISPOSAL: Services available from the following private contractors:

Industrial Marine Service, Inc., 1301 Marsh Street, P.O.Box 1779, Norfolk, VA 23501. Tel: (804) 543-5718. Fax: (804) 543-4561. Estimated daily capacity, 6,394 tonnes. Tank trucks. No special berth for this service. Charges are available through the ship's agent.

Marpol, Inc., 1125 East Water Street, P.O.Box 569, Norfolk, VA 23501. Tel: (804) 622-9915. Fax: (804) 626-1806. Estimated daily capacity, 11,017 tonnes. Trucks and tank barges (3,714,000 galls., 378,000 galls., 96,600 galls.). 700 ft. berth at facility. Charges are available through the ship's agent.

PetroChem Recovery Services, Inc., P.O.Box 1458, Norfolk, VA 23501. Tel: (804) 627-8791. Fax: (804) 640-1261. Estimated daily capacity, 7,000 tonnes. Tank trucks. No special berth for this service. Charges are available through the ship's agent.

SEAMAN'S CLUBS: International Seamen's Friend House, 2901 West Avenue, Newport News, Virginia. Tel: (804) 247-6112. Centre of ministry shared between Catholic and non-Catholic .sister organisations. Facilities include snacks, currency exchange, international telephone, transport to town/centre.

Lighthouse Baptist Seamen's Mission, 1455 West 38th Street, Norfolk, VA 23508. Tel: (804) 626-3935. Fax: (804) 627-8199. Baptist Seamen's mission – dealing with seamen of any religion. Facilities include telephone, transportation to town, postal services, church services, free bibles and christian literature, currency exchanges, special purchases.

International Seamen's House, 1222 W.Olney Road, Norfolk, Virginia. Tel: (804) 623-4222. Fax: (804) 627-7872. Centre of ministry shared between Catholic and non-Catholic sister organisations. Facilities include snacks, football, shop, currency exchange, international telephone, transport to town.

CURRENCY: U.S.Dollar (U.S.$).

DEVELOPMENTS: *Authorised Channel Improvement:* Major improvements to the channels serving Hampton Roads were authorised in August 1985 and construction began in March 1987 on the first element of these improvements, consisting of a 50 ft. outbound channel. The authorised improvements provide for deepening the Norfolk Harbour Channel to 55 ft., deepening the Newport News Channel to 55 ft, and constructing a new channel in the Atlantic Ocean to a depth of 60 ft. The authorised improvements also provide for deepening the Norfolk Harbour 40 ft. channel to 45 ft., and a portion of the Southern Branch 35 ft. channel to 40 ft. A deep draft anchorage opposite the City of Hampton will also be constructed in connection with the 55 ft. channel improvements.

Port Expansion: Plans include extension of Pier C on the North side to allow for the berthing of large container and breakbulk ships simultaneously. Extending the pier by 186 ft. will provide an additional 68,000 sq.ft. of open cargo storage space. In order to increase the apron widths of the piers, the transit sheds will also be modified and updated, allowing for more productive material handling. Pier 8, which lies South of Pier C, will be demolished to allow more manoeuvrability for the larger cargo vessels calling at the terminal.

Expansion is also being undertaken at the coal piers. Dominion Terminal Associates announced plans to expand its facility area by nearly 50%, from it's current 68 acres to 101 acres, in order to accommodate demand for coal. The additional space will serve a wider variety of coal qualities and will accommodate more transhippers interested in moving coals to export and domestic markets.

SHIPMASTER'S REPORT: June 1992.

Berth: Atlantic Energy – Norfolk.

Charts: B.A. Charts No. 2919, 2814 and 2813.

Approach: From the South, the new IMO approved buoyed channel is very well marked and shows up well.

Chesapeake Lt. Tower and Racon is conspicuous from South or East.

Pilots: As per ALRS. Call "Virginia Pilot" on VHF Channel 16, generally works on Channel 11. Pilot control is in Radar Tower, which controls all pilotage movements at the Chesapeake Bay Entrance. It is manned by both Virginia and Maryland Pilots. Position: Lat. 37° 55.6′ N., Long. 76° 00′ W., close by Cape Henry Lighthouse.

Virginia Pilots operate four fast modern cutters of 23 knots speed (although Pilots report that they have been downrated to 19 knots to assist maintenance). The Cutter Base is in Lynnhaven Inlet (37° 54.4′ N., 76° 05.6′ W.).

Pilots generally board in the vicinity of "CB" Buoy.

One Pilot takes vessel near the berth, where Berthing Pilot boards from a tug.

Anchorage: Numerous anchorages available, all at the entrance to Chesapeake Bay, which is very exposed to Easterly and North Easterly winds.

All Gas Carriers under Gas Vapours and Liquids are required by U.S.C.G. to anchor in Lynnhaven Roads for inspection. This is mandatory, before proceeding to the berth.

The numerous old wrecks and obstructions in Lynnhaven Roads are "off-putting", but Pilots report all sunk and no hindrance to anchoring.

Pilot is required both Inwards and Outwards, to and from Lynnhaven Anchorage.

Gas Carriers under Vapours and Liquids cannot anchor in Hampton Roads.

All stores, etc., and engine maintenance has to be done in Lynnhaven Roads.

Another acceptable anchorage, with U.S.C.G. approval for laden G Carriers, is off Cape Charles Township to the North. At present (19 U.S. Navy Rapid Deployment Ammunition ships are taking the m suitable anchorages, and the U.S.C.G. does not permit Gas Carrier presently use the area.

As mentioned, Lynnhaven is very exposed, and there is alway swell running, even in calm conditions.

We used 5 shackles whilst our engine was undergoing a bea check.

Tugs: Many tug companies available. We used Moran, taking 2 tu Tugs joining and leaving at Town Point, Norfolk City. Tugs lines u forward and aft.

If a loaded Gas Carrier has to immobilise, a stand-by tug is requ under U.S.C.G. Rules. We had to engage a stand-by tug (Moran Lynnhaven Anchorage for 9 hours whilst doing a main engine bea inspection.

Channel: From Cape Henry to Atlantic Energy Berth (Chesapeake 30 miles, or about 3.5 hours pilotage.

Maximum draft in Channel is 35 ft. from Jones Creek Southwa North of Jones Creek, 40 ft. can be accommodated to the Grain Be in Jones Creek. For the first stage in Thimble Channel, maximum sp is called for.

Stand-by forward is required from and to Old Point Comfort.

For Gas Carriers under Vapours or Liquids, the U.S.C.G. only perm daylight navigation. Such ships can anchor at Lynnhaven Anchora during darkness.

Ocean navigation is available in Elizabeth River as far as Mains Cr Turning Basin (36° 46.2′ N., 76° 17.9′ W.).

To Atlantic Energy Berth, 3 lift-bridges have to be passed throu The Southern most bridge (Norfolk and Western Rail Road) is the mo restrictive. Vertical clearance (air draft) is 134 ft. H.W. (not 135 ft. charted). Horizontal (breadth) clearance is 218 ft. (not 220 ft. charted). This bridge is about 1.5 miles North of Berth. Therefo restrictions as far as the berth are 35 ft. draft, 134 ft. air draft and 21 breadth. For breadth calculations, there is a tug strapped alongside.

In general, Panamax size vessels are a maximum normal for s Gas Carriers of 52,000 cu.m. partly loaded, regularly use the berth.

U.S.C.G.: Very restrictive. As previously mentioned, the U.S.C require Gas Carriers transiting Hampton Roads to load or discha LPG/LNG, to undergo Arrival Inspection at Lynnhaven Roads. This mandatory, even if the vessel has just had an inspection the day befo at another U.S. port.

Daylight transit inwards and outwards for all Gas Carriers und Vapours or Liquids.

U.S.C.G. conducts inspections from 0700 hrs. to 1600 hrs. Genera inspections take about 3 – 4 hours, with all safety items checked as p standard U.S.C.G. Check List, but with particular emphasis on the G Analyser and Emergency Shut Downs.

U.S.C.G. escort is provided inwards and outwards from Old Po Comfort.

U.S.C.G. will not allow fuel deliveries by either tanker truck or bar whilst on the berth and vessel connected. No boats alongside wh connected.

With special permission, U.S.C.G. allowed fresh water from a tank truck to be pumped aboard and provisions to be loaded with shi derrick from jetty whilst loading in progress.

U.S.C.G. in attendance whilst connecting and disconnecting, and ha a "rule" about the use of non-sparking tools.

Berth: A trestle (concrete and steel structure) which has been upgrad over the years. Minimum depth alongside quoted as 31 ft. We fou density to be 1005 with 3 ft. tidal range.

Vessels up to 750 ft. LOA would have head and stern lines lead as breasts, otherwise moorings good.

Port side alongside.

Ships midship accommodation ladder/gangway can be landed.

Cargo: 1×12 in. Chicksan with auto-disconnect commissioned in ea 1992, with 4 in. VRL attached, but not at present in use.

Shore connect/disconnect.

One Loading Master in hut on jetty at all times whilst connected.

Terminal personnel generally helpful and cooperative.

A storage facility only, comprising of 2×1,000,000 U.S. gal refrigerated tanks (about 4,000 tonnes each) with road and rail tank discharge/loading facilities. As a general rule, Propane is imported a Butane exported. We loaded Butane at −5°C at 85 tonnes/hr., which the maximum loading rate with terminal's 2 pumps. Going down to pump barely gets product up the arm and into the ship.

The ship after us was going to discharge Propane, discharge ra about 400 tonnes/hr.

When road tankers are discharging into the facility, this decreases t loading time by 15 minutes a tanker truck. Product from Amoco Refin near by.

Saybolt Surveyor very strict and knows his job.

Terminal Official Title: Atlantic Energy Inc., 2901 South Mil Highway, P.O.Box 1156, Chesapeake, VA.23320-1156. Tel: 804-4 1018. Fax: 804-487-5084.

Facilities: Generally poor.

No public telephone at Terminal. Nearest public telephone is outs gate to the right and about 1.5 miles away.

Officers can use Terminal Office telephone for local calls or international calls, if they have a credit card.

Fresh Water: Not available on berth. Barge available, 200 ton minimum, no matter how little taken. Cost U.S.$ 2,900 for 200 ton including barge. We arranged road tanker delivery and obtai U.S.C.G. permission to pump whilst loading cargo. Truck can bac to about 75 m. from ship's side. Ship's hoses used. We took 4 loads 23 tonnes nominal capacity each, actually delivered about 80 tonne all. First load very expensive with connecting time and truck prepara (U.S.$ 243.00), then next 3 loads at U.S.$ 160.00 each. We obta 5% discount for cash. Overall charge was U.S.$ 7.50 per tonne 80 tonnes.

Stores: Trucks cannot get within 75 m. of ship's side. U.S.C.G. will not give permission for stores derrick/crane to be used for lifting metal objects (pipes, steel, bottles, drums) whilst Chicksan connected. Stores barge also not allowed alongside.

We obtained permission to use derrick to load provisions and liferafts whilst connected. Fortunately our derrick was well aft of Chicksan. Otherwise stores have to be taken when Chicksan disconnected or at Lynnhaven Anchorage.

Fuel: Not available by barge or truck whilst connected. This applies to lub oil. Another restriction for lub oil is that barge will not deliver to Lynnhaven Anchorage, due to swell.

Chandler: With experience over 2 visits, the best chandler is a local firm, Virginia Marine (Telex: 212356. Tel: 804-623-1036). Excellent service and cooperation, good prices.

Out of town chandlers are generally from Baltimore.

Repairs: Phillyship provide good service for commercial shipping in Chesapeake Bay area. Local machine shop at Portsmouth, VA. (Tel: 804-397-7400. Telex: 901086).

Norshipco, near Norfolk City, with extensive engineering and large docking facilities tend to be more orientated to U.S. Navy work, and put too many restrictions in way of commercial repair work.

Charts: There is a local firm, W.T.Brownley & Co., who can supply local U.S. Publications, but are not comprehensive.

The nearest Admiralty "A" Class Agent is Maryland Nautical. Found to be very good. Despatch to Norfolk by UPS or Federal overnight.

Mall: Greenbrier Mall about 4 miles away, is the nearest good shopping. Cost U.S.$ 12.00 in taxi. Loading Master will arrange taxi.

Surveyors: The National Cargo Bureau can provide an independent survey service (they also do Liberian and Panamanian Annuals) (Tel: (804) 622-2393. Fax: (804) 622-8193).

Lloyd's have an exclusive Surveyor at Norfolk. DNV use a freelance or an exclusive from Baltimore.

Airport: Norfolk Airport to North of city, near the Bay coast. About 45 minutes in taxi, outside rush hour.

Boat Service: At Lynnhaven Anchorage, a stores and personnel launch service operates out of Lynnhaven Inlet. Very expensive, especially in overtime hours.

Authorities: Officials will board at Lynnhaven Anchorage if weather fair. Customs and Immigration board with Agent and U.S.C.G.

We found Immigration quick and no difficulties encountered. We had Visaed Crew List done by U.S. Consul in Recife and couriered to U.S.

U.S. Public Health Inspector boards on berthing and each day. Very particular. Vessel is fined U.S.$ 250.00 for any fresh food garbage not in sealed drums, and checks disposal of plastics.

Liberian Inspector: Home of Liberian Inspection Division nearby at Reston, Va. We had Liberian Annual Safety by National Cargo Bureau, very particular over documentation, particularly Officers Licences and Discharge Books. Required Safety/Boat muster and boat lowered. Also required emergency forward fire pump run with water jets and emergency generator run on load.

Notices: Notice from Agent to Master (dated May 1992).

Below is a copy of a letter from the U.S. Immigration and Naturalisation Service dated November 30th 1990, which outlines higher fines and penalties for violations of INS Laws.

Quote:

Please note, if you are going to more than one (1) U.S. port, it is the responsibility of the Agent at the last U.S. port to file with the Immigration Service a "Departure Crew List". This Crew List will show all crew changes made during this voyage. Furthermore, it is your responsibility to advise your Agent at your last U.S. port of all crew changes made at the previous U.S. ports. He should collect the Shore Passes for joining crew members only and pick up a copy of Immigration Form 1-408 (Applicaton to pay-off or discharge alien crewmen). Failure of the above taking place will result in an immigration fine against the vessel.

Unquote.

This letter is meant to assist you and bring your attention to laws that may not have been enforced in the past, but are *definitely* being enforced presently.

Letter from Atlantic Energy, Inc., to ship's Agent (dated June 1992):

Quote:

Prior to the arrival of the vessel (under your Agency), which is scheduled to arrive in Norfolk on or about 1st June 1992, would you please contact the ship's Master and advise him of Atlantic Energy's cargo connections as follows:

Liquid connection: 12 in. ASTM A150.
Vapour connection: 4 in. ASTM A150.

We request that the vessel advise Atlantic Energy of their cargo manifold sizes, should they be unable to adapt to our flanges. If the vessel has the correct adaptors onboard, would you please ask that they be in place upon arrival at our berth.

Please advise all interested parties that the vessel shall be docked "port-side-to" at our berth.

We request that you arrange for line handlers for both the ship's arrival and departure.

Enclosed is information that should be of interest to the Master of the vessel. Would you please see that this information is given to the Master upon the vessel's arrival at anchorage or before, if at all possible (see "Plan Section").

AUTHORITY: Virginia Port Authority, 600 World Trade Centre, Norfolk, Virginia 23510, U.S.A.. *Tel:* (804) 683-8000. *FAX:* (804) 683-8500. *Cables:* Vastports. *Contact:* J. Robert Bray, Executive Director.

HILO, Hawaii: 19.46 N. 155.06 W. (including Kawaihae 20.02 N. 155.50 W.) (See Plan)

DOCUMENTS:
4 Crew Lists.
4 Passenger Lists.
Customs Documents.
Clearance, Travelling Manifest.
Local Manifests.
Health Documents.
Bill of Health and Vaccination Certificates.
4 Manifests.
4 Bills of Lading.
Ship's Papers.
Certificate of Registration or Enrolment.
Annual Inspection Certificate.
Load Line Certificate.
Derat Certificate.
Drinking Water Certificate.
Radio Certificate and Licence.
4 Stores Lists.

PILOTAGE: Pilots boats have VHF. Contact is made on VHF Channel 16, then switch to Channel 12. Pilot service is provided on a 24-hour basis upon suitable advance notice.

At Hilo, Pilot boards on starboard side in position 0.75 mile due East of Paukaa Light. In picking up Pilot, vessels should be on Southerly course with enough speed for steerageway. Special instructions will be given by radio telephone.

At Kawaihae, Pilot station in position 1 mile 287° true from Buoy No. 2. Pilot usually boards on port side with vessel on course for the entrance at dead slow speed.

ANCHORAGES: No safe anchorages either Hilo or Kawaihae for vessels awaiting Pilot. In this situation, a vessel should heave to or steam. Under good weather conditions, safe anchorage can be had in Hilo Bay. Anchorage is inside pilotage waters and requires local knowledge for safety; vessels should not anchor without Pilot.

RESTRICTIONS: At Hilo, under good weather conditions, vessels with draft up to 32 ft. 6 in. can be handled at any time.

At Kawaihae, vessels with draft up to 33 ft. handled anytime.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Honolulu Quarantine Station.

RADIO: Communicate through RCA or ITT stations in Honolulu.

TUGS: Tugs join vessels at entrance at Kawaihae and at Coconut Island at Hilo. Tug's lines are usually used at no extra charge.

BERTHING: There are many factors which affect berthing at Hawaii Island ports, the most important of which are surge and wind. Vessels should be well equipped with long mooring lines and sufficient additional line to make up 2×900 ft. buoy lines. In all instances, berthing instructions will be given after details concerning vessel and her cargo are received.

Pier No. 1 in Hilo handles bulk sugar vessels and container vessels, 1,220 ft. of berthing space.

Pier No. 3 in Hilo handles tankers, 575 ft. of berthing space.

Kawaihae has one overseas berth which handles both bulk sugar vessels and tankers, 605 ft. of berthing space.

CRANES: Shore cranes available, max. capacity 90 tons.

STEVEDORES: Hilo Transportation and Terminals Co. (Hilo) and Kawaihae Terminals Inc. (Kawaihae).

MEDICAL: All facilities available.

DENSITY: Variable in Hawaii area due to fresh water run-off.

FRESH WATER: Available from county of Hawaii by pipeline.

FUEL: Can be supplied subject advance notice.

REPAIRS: Limited repair service available; almost any type of machine work, welding and ordinary electrical repairs can be handled.

GANGWAY/DECK WATCHMEN: Required for tankers. Other ships as may be necessary due to special circumstances.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes, 50 cigars per man, and one U.S. quart bottle, wine or spirit.

REPATRIATION: Direct air service to Continental United States and to Honolulu International Airport.

AIRPORT: About 1 mile from Port of Hilo and is served by regular airlines.

POLICE/AMBULANCE/FIRE: *Hilo:* Police 9353311; Ambulance and Fire 961-6022.

Kawaihae: Police 8857334; Ambulance 885-7334; Fire 961-6022.

TIME: GMT minus 10 hours all year round.

TELEPHONES: Special arrangements may be made with Hawaiian Telephone Co.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Seamen's Passports only required.

AUTHORITY: State of Hawaii, Department of Transportation, Harbours Division, Port of Hilo, Hilo, Hawaii 96720. *Tel:* (808) 935-4877. *Contact:* Ian Birnie, District Manager.

AGENT: See "Honolulu".

HOMER, Alaska: 59.36 N. 151.25 W. (See Plan)

DOCUMENTS: See "Port of Anchorage, Alaska".

APPROACHES: Via Cook Inlet. Port located at mouth of Kachemak Bay on Kenai Peninsula.

PILOTAGE:

(1) Southwest Alaska Pilots' Association. Tel: (907) 235-8783. Fax: (907) 235-6119.

Pilot boards 1 mile South of Lands End Lt. (59° 35′ N., 151° 25′ W.).

(2) The Southwest Alaska Pilots' Association serves all ports in Cook Inlet, Prince William Sound, Resurrection Bay, Kodiak Island, the Aleutian Islands, Bristol Bay and Bering Sea. The pilot station cable address is "Homerpilot". The pilot station stands by on VHF Channels 10 and 16, 24 hours a day; call sign "KCE-203 Southwest Pilots".

ANCHORAGES: Kachemak Bay is excellent anchorage for vessels of any size. Foreign vessels may enter bay to anchor, but must have a Pilot aboard to come to dock.

MAX. SIZE: Harbour depth 40 ft. MLLW. Tidal range 28 ft. (−6 ft. to +22 ft.) Max. draft for berthing 30 ft. at MLLW.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

VHF: Homer Port Radio monitor Channel 16. Call sign "WHG-651".

TUGS: 2 tugs available.

BERTHING: Homer City Main Dock, 410 ft. long and 50 ft. wide. Limited to draft of 30 ft. at MLLW. 3 privately owned mobile cranes available. Capacity 15, 35 and 70 tons.

410 ft. face with sloping bottom suitable for vessels with 20 ft. draft or less at chine. Inside and outside storage is available for holding and staging. Water, gasoline and diesel are available on dock.

Deep Water Dock: Length 344 ft. Depth 40 ft.

MEDICAL: Homer Hospital is a 38 bed hospital with 5 full-time doctors.

FRESH WATER: Available from the berth at both docks.

FUEL: Available at Main Dock.

REPAIRS: Minor repairs possible.

EMERGENCIES: Police department and a volunteer fire department are available plus a rescue truck.

AIRPORT: Daily air service.

GARBAGE DISPOSAL: Skips are provided. Port Authority requests prior notification for large quantities of rubbish.

WASTE OIL DISPOSAL: Available with advance notice.

SEAMAN'S CLUBS: None.

SHIPMASTER'S REPORT: February 1993.

Berths: Two berths at Homer capable of taking average size merchant vessels.

The old wood pile construction City Dock, used by the Alaskan Ferry and U.S.C.G. cutter and the new Ocean or Deep Water Dock, North of the fishing/boat harbour constructed in 1990 for wood chip exports.

At the City Dock, 30 ft. MLW is available, and at Deep Water Dock, 35 ft. MLW is available.

Berthing can be difficult to impossible on either dock, if a strong N.E. wind is blowing. Berthing is not undertaken on the ebb. Best berthing conditions are on the last of the flood which runs N.W. to S.E. Berthing at either dock is always port side alongside.

Departure can be undertaken on the ebb, but best at near slack water.

The Deep Water Dock is used by cruise liners in Summer and is available for diesel bunkers by tank truck. The Dock has a flat face length of 105 m., plus a further 70 m. to the North (forward) mooring dolphin. Fenders are wood flats on sprung rubber and are very good. New mooring dolphins are to be constructed at the South (aft) end during 1994.

The export of wood chips to Japan from the pier is to be commenced in April 1993, when a conveyor belt will be built down to the connecting roadway.

Ship's gangway required at both' berths. Use of normal accommodation ladder not possible due to tidal range (about 25 ft. at Springs).

Also see "Nikiski" – "Shipmaster's Report" dated February 1993.

AUTHORITY: Port of Homer, 4350 Homer Spit Road, Homer, Alaska, AK 99603-8005, U.S.A. *Tel:* (907) 235-3160. *FAX:* (907) 235-3152. *Contact:* Richard David, Harbour Master. Dennis Erlandson, Port Director.

HONOLULU, Hawaii: 21.19 N. 157.52 W. (See Plan)

(A) HONOLULU AND PEARL HARBOUR
(B) HAWAIIAN INDEPENDENT REFINERY INC. (HIRI) – BARBER'S POINT
(C) CHEVRON U.S.A. INC. – BARBER'S POINT.

(A) HONOLULU AND PEARL HARBOUR

ANCHORAGE: Except during strong Kona (Southerly) winds, anchorages for deep-draft vessels exist outside the harbour in Mamala Bay off Sand Island and West of the Main, or Fort Armstrong Channel. The anchorage is located within 600 yards on either side of an underwater sewer outfall line. Anchorage is not permitted inside the harbour due to the limited swinging room. An explosives anchorage area lies 1.3 miles West of Sand Island's Kalihi Channel, directly off Keehi Lagoon.

DOCUMENTS:

4 Crew Lists.
4 Passenger Lists.

Radio Certificate and Licence.
4 Stores Lists.

Vessels scheduled to call at Pearl Harbour are required to furn 6 copies of Crew Lists and Passenger Lists, if applicable, at lea 1 working day prior to arrival, for Naval security requirement.

The United States Immigration Service requires that the Master vessels manned by alien crew members arriving from a foreign p present the United States Immigration and Naturalisation Servic Officer with a current Crew List (Form I-418) properly visaed in th possession. An I-94 should be prepared for each passenger prior vessel's arrival.

U.S. Immigration Department representatives are not stationed at a Hawaiian outports. Customs Officials, however, are stationed at all en ports and accomplish both Customs examination and Immigration.

The United States Agriculture Service examines and seals shi stores from restricted ports. Special arrangements for garbage dispos may also be required by this Agency, if for example meat aboard ha been purchased in a port where there is a high incidence of "hoof a mouth" disease. All garbage should be disposed of prior to arrival port.

All regulatory bodies assess overtime charges for services of th personnel if rendered on Saturdays, Sundays, holidays or after hou on week-days.

PILOTAGE: Pilot requested by Agent. Channels 16, 12 and 9, call "WH 456". Pilot boat, 37 ft. cabin cruiser, yellow with black striping. Only " flag necessary for vessel requiring Pilot. Pilot station, Lat. 21° 16′ 12″ Long. 157° 53′ 24″ W., no alternative.

RESTRICTIONS: Entry at any time subject to harbour control signa 24 hours' notice of arrival is obligatory.

MAX. SIZE: *Entrance Channel:* Depth 45 ft. *Harbour:* Depth 40 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Alban Illness Reports made to Honolulu Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany). Illness Reports made to Honolulu Quarantine Station.

RADIO: VHF Channel 16, call WHX 528, Aloha Tower Harbour Com Station.

TUGS: 30 tugs. Tugs normally join vessel within harbour limits. Bo ship's lines and tug's lines used depending on conditions.

STEVEDORES: Gangs must be ordered 24 hours in advance. Gene cargo, average load per hour: 15 long tons; average discharge per hou 15 long tons.

MEDICAL: Agents would like as much advance notice as possib Complete medical facilities available. Vaccinations in accordance w U.S. Public Health requirements.

TANKERS: 4 tanker berths, max. draft 36 ft. No slop discharge facili *Pearl Harbour:* U.S. Navy Terminal. Max. LOA 800 ft. Max. dr 38 ft. 6 in.

Also see Sections "B" and "C".

DENSITY: Pure salt water, no fresh water allowance.

FRESH WATER: Delivered via 2.5 in. fire hose with meter on pier. Ra of delivery between 30 t.p.h. and 60 t.p.h., depending on the berth.

FUEL: All U.S. grades available, no advance notice other th establishment of credit.

FIRE PRECAUTIONS: Fire wires required by tankers berthed alongsi Permit required for hot work whilst in port.

CONSULS: The following countries are represented in Honolulu:

American Samoa
Australia
Austria
Denmark
Finland
France
Germany
Great Britain
Guatemala

India
Indonesia
Italy
Japan
Korea
Mexico
Monaco
Nauru
Netherlands

New Zealand
Norway
Panama
Philippines
Portugal
Sweden
Switzerland
Thailand
Western Samoa

REPAIRS: All types of deck and engine repairs possible. Hull repa below water-line in accordance with dry dock capacities.

DRY DOCKS: Commercial within Honolulu Harbour. Dry dock: 2,8 long ton lifting capacity, 385 ft. long, 56 ft. wide. Floating Dock: Li capacity 2,620 tons. Length 200 ft. Width 100 ft. Marine railway: 1,4 long ton lifting capacity, 223 ft. long, 65 ft. wide.

Commercial within Barber's Point Harbour. Dry dock: 7,875 long to lifting capacity, 516 ft. long, 110.5 ft. wide.

GANGWAY/DECK WATCHMEN: Services of watchm recommended, usually arranged by Agent.

OPENING/CLOSING HATCHES: Normally carried out by stevedor

CUSTOMS ALLOWANCES: 200 cigarettes, 50 cigars per man, a 1 bottle, U.S. quart, wine or spirits.

REPATRIATION: All facilities, crews generally leave State wi 24 hour period.

AIRPORT: International airport, served by all major airlines, 5 miles fr harbour.

TIME: GMT minus 10 hours all year round.

BERTHING: Berthing given on a "first-come-first-served basis" according to type of vessel and particular requirements as to cargo, bunkering, etc. Must be arranged through a local shipping Agent.

Pier No.	*Length (ft.)*	*Depth (ft.)*	*Use*

(B) BHP PETROLEUM AMERICAS REFINERING INC. (BHPPAR) – BARBER'S POINT

LOCATION: The BHPPAR CALM – Type Single Buoy Mooring (SBM) is approximately 2 miles bearing 146° True from Barber's Point Light on the Island of Oahu, Hawaiian Islands. Position: Lat. 21° 16.2′ N., Long. 158° 05.7′ W.

DOCUMENTS: *Arrival and Departure Requirements:* All arrival and departure requirements are handled through the ship's Agent. All matters related to arrival or departure should be referred to that Agent.

VESSEL ACCEPTANCE: In order to maintain safe control, all vessels must be nominated to and accepted by BHPPAR prior to arrival. BHPPAR reserves the right to refuse any nomination due to vessel's specifications or previous experience with vessel or similar vessels. As a guide, vessels calling at the BHPPAR SBM should be in compliance with the "OCIMF" publications "Recommendations for Equipment Employed in the Mooring of Ships at Single Point Moorings", and "Standards for Oil Tanker Manifolds and Associated Equipment".

The minimum SWL for the vessel's port hose handling boom or crane should be 10 tons for all vessels.

Tankers should have sufficient clean ballast for safe manoeuvring.

Officer accommodation should be available for 2 Pilot/Mooring Masters and one Inspector, meals are to be provided for all three.

PILOTAGE: The area of the BHPPAR and Chevron moorings at Barbers Point were designated as a Federal Pilotage Area, effective 1st May 1991. Tankers will be boarded by a team of 2 BHPPAR Pilots/Mooring Masters approximately 3 miles South of Barbers Point light, or at anchorage if the vessel is proceeding to the SBM from waiting at anchor. The pilot ladder should be rigged to provide an adequate lee for safe boarding. The vessel, if underway should maintain minimum headway. The end of the ladder should be 1.0 m. above the water and crew should be standing-by on deck with a heaving line, in order to take aboard the Pilots' equipment and gear. The Pilot/Mooring Masters will usually board from a small assist mooring tug.

The Pilot/Mooring Masters will initially meet with the Master and advise on approaches to the SBM berth, mooring and unmooring and all cargo operations to be undertaken by the vessel. Manoeuvring of ships within the limits of the terminal shall be done with the advice of the pilot, subject to the understanding that in all cases the Master of the vessel being manoeuvred shall remain solely responsible on behalf of his vessel's owners for the safety and proper manoeuvring of the vessel. The Master or a qualified Deck Officer must be on the bridge at all times when the vessel is manoeuvring.

ANCHORAGE: Vessels have anchored in the vicinity of 21° 16.6′ N. and 158° 03.5′ W. while waiting for their berthing opportunity. In doing so they are cautioned to remain clear of the approaches to both the BHPPAR and Chevron offshore terminals. Vessels are also cautioned not to anchor within the charted restricted anchorage to the East of the mooring area.

The Honolulu Harbour Master has directed that all tankers awaiting their turn at the Barber's Point moorings shall anchor in the vicinity of the moorings in lieu of the anchorages off-port Honolulu.

As this is a Federal Pilotage Area, the vessel should contact its Agent regarding pilotage requirements and a proper anchorage location so as not to interfere with ongoing tanker operations at the two petroleum berths in the area.

TUGS: Two assist boats and a tug are used during the mooring operation. One boat will assist with lifting the mooring hawser/chain to the vessel, one will attend the floating hose string, and the tug will be made fast astern to assist in manoeuvring. The tug astern will use its own hawser and the ship's crew should be prepared to have it on board shortly after the Pilot/Mooring Masters board. Following mooring, the tug will remain made fast to the tanker's stern to prevent the tanker from over-riding the SPM. One of the assist boats will help in lifting and connecting the floating hoses. One assist boat will then stand-by as an emergency/oil spill response boat.

By order of the U.S. Coast Guard Captain of the Port, all laden or partially laden tankers, mooring or unmooring at the BHPPAR SBM must have adequate tug assistance standing by until safely moored or unmoored and well clear of the terminal.

Tug and assist boat will be arranged through the Agent and approved by BHPPAR Pilot/Mooring Master prior to the tanker's arrival.

RESTRICTIONS: Berth and terminal operate 24 hours a day. Mooring and unmooring during hours of darkness is customary. At times weather and sea conditions can deteriorate to the extent that mooring operations are suspended and/or vessel must be unmoored.

MAX. SIZE: In general, tankers having these maximum particulars are acceptable:

LOA	945 ft.
Summer d.w.t.	150,000 tons
Bow to centre manifold	470 ft.
Draft	Depth of water at the berth is in excess of 80 ft.

RADIO: 72 hours, 48 hours and 24 hours prior to arrival, tankers should advise BHPPAR Hawaii Marine Operations (Telex 7430292) of their ETA.

VHF: During loading/discharging operations, the Pilot/Mooring Master will have 2 portable VHF transmitter/receiver radios for communications between the tanker and BHPPAR Pumphouse Control Station.

BHPPAR use the following Simplex VHF frequencies:

Channel 6	Emergency	156.30 MHz
Channel 9*	Ship to Shore (primary)	156.45 MHz
Channel 16	Calling/Emergency	156.80 MHz
Channel 19A*	Ship to Shore (Secondary)	156.95 MHz

(*Either 9 or 19A may be used as working Channel).

BHPPAR Pumphouse	Call Channel 16, Communicate Channel 9/19A, Call sign: "KTD 466".
BHPPAR Hawaii Marine Operations	Call Channel 16, Communicate Channel 9, Call sign: "KZG 757". (Not guarded).

Other useful VHF Channels are:

Aloha Tower, Honolulu Harbour Control:	Call Channel 16, Communicate Channel 12, Call sign: "WHX 528" (Guarded 24 hours)
Honolulu Pilots:	Call Channel 16, Communicate Channel 12, Call sign: "WXZ 456"
Chevron Shipping:	Call Channel 16, Communicate Channel 10, Call sign: "KEN 778"
Davies Marine Agencies:	Call Channel 16, Communicate Channel 11, Call sign: "KXJ 712"

TERMINAL FACILITIES: BHP Petroleum Americas Refinery (BHPPAR) is located onshore to the East of Barber's Point Light about 2 miles from the offshore marine terminal.

The offshore terminal consists of a CALM type single point mooring buoy. A 30 in. crude pipeline, a 20 in. clean product pipeline and a 16 in. bunker pipeline connect the SBM to the shore. 3×840 ft. long 16 in. floating hoses reduced to 12 in. over the rail, connect the tanker to the SBM for cargo operations. The bunkering over-the-rail hose is 8 in. Flanges are standard 150 lb. ANSI-B lap ring type.

Crude oil is normally discharged through 2 hoses with a max. operating pressure of 150 p.s.i. and a max. flow rate of 33,000 bbl./hr. per hose. Loading rates vary between 6,000 bbl./hr. and 12,000 bbl./hr., depending on the product.

BALLAST: Normally, no dirty ballast is accepted. However, with prior notification, facilities can be made available to receive limited quantities. The vessel will be charged for use of the refinery ballast facilities.

Tankers must arrive with sufficient clean ballast for safe handling, having due regard to existing weather and sea conditions. It is the responsibility of the Master to ensure that no oil or contaminated ballast of any kind is pumped overboard. Inspection of ballast is strict. Any trace of oil on the surface of the ballast will preclude overboard discharges.

Tankers equipped with a segregate ballast system are permitted to discharge cargo and load ballast simultaneously with prior approval of the Pilot/Mooring Master.

MOORING/UNMOORING: Prior to mooring, the Pilot/Mooring Master will deliver a copy of the "Terminal Conditions" letter to the ship's Master for his signature (See "Appendix"). By his signature he agrees, on behalf of his owners, to comply with all relevant terminal conditions.

The ship will moor to a single hawser through the forward centreline Panama fairlead. The hawser is 180 ft. long, connected to a 26 ft. long chafe chain. A 500 ft. long 10 in. poly pick-up line is attached to the chain for heaving it on board. The chafe chain will be secured using either a bow chain stopper or vessel's bitts with a terminal supplied nylon snotter, depending on the type of mooring equipment installed on the vessel.

The size of the chafe chain is 76 mm. (3 in.). A 54 mm. (2.15 in.) piece of chain can be installed only if absolutely necessary for smaller vessels.

The ship's crew is responsible for securing the mooring chafe ch with advice from the Pilot/Mooring Master. A suitable messenger li should be available on the fo'castle to retrieve the mooring hawser p up line. A ship's deck officer shall be on the bow during mooring a unmooring operations. The Pilot/Mooring Master will be stationed on t bridge to advise the Master and crew during approach and moor operations. A second Mooring Master will be stationed on the bow.

HOSES/CARGO OPERATIONS: The ship's crew is responsible t connecting and disconnecting hoses. A ship's deck officer shall be the area of the cargo manifolds during hose handling operations. A Pil Mooring Master will be available to advise the crew during ho operations. The ship's crew is responsible for all cargo operations. T Pilot/Mooring Master will advise with respect to operating conditions a hazards, but will not direct the loading or unloading.

It is dangerous to close ship's valves against the oil stream. Such procedure creates excessive pressure which may damage term facilities. Tankers will be held liable for damages resulting from failu to observe this precaution.

The Pilot/Mooring Master reserves the right to suspend oil trans operations, if necessary, to protect the terminal facilities or t environment.

All rules and regulations concerning safety, local conditions, term operations and oil transfer will be carried aboard the tanker by the Pil Mooring Master.

The following are specific requirements for all vessels while moor at the BHPPAR SBM:

1. The vessel's main engines, steering gear and all necessa equipment shall be maintained in a condition to allow immedia manoeuvring of the vessel.
2. The Master or his qualified deputy must be available to respo immediately on the bridge to take control in the event of emergency or upon request of the Pilot/Mooring Master.
3. A qualified bow/SBM lookout shall be maintained to report if the sh begins to encroach upon the buoy. This lookout shall be in rad contact with the deck watch officer.
4. Sufficient crew shall be available to disconnect hoses, unmoor a get underway at all times.
5. An officer fluent in English shall be on duty at all times.
6. Oil transfer shall cease if radio communication with the termina lost.
7. Oil transfer shall cease and the U.S. Coast Guard notified if oi spilled.

All tankers are expected to unmoor as soon as practicable at completion of cargo operations. The ship's crew will disconnect hose and unmoor. During unmooring a Pilot/Mooring Master will be statione on the bridge to advise the Master. A second Mooring Master and w assist from the bow.

FRESH WATER: Not available at SBM. Available at limited locations Honolulu Harbour.

FUEL: Subject to availability, bunker and diesel fuel can be supplied the SBM. Prior arrangements with BHPPAR are required. Fuel can delivered by barge in Honolulu or off port.

Bunker orders: Telex 7430292 or Telephone 808-547-3269, 3205

MEDICAL: Honolulu has many excellent medical facilities and hospita Services can be arranged by local agent.

REPAIRS: Limited ship repair facilities are located in Honolulu.

STORES: Stores are available in Honolulu. Stores cannot be load while the tanker is in the mooring, except with express permission the Pilot/Mooring Master.

AIRPORT: Honolulu International Airport has regularly scheduled flig to all parts of the world.

TIME: The Hawaiian Islands observe "Hawaiian Standard Time" ye round which is GMT minus 10 hours. Daylight Savings Time is n observed.

WEATHER/TIDES: The Master is referred to published sa instructions for this area for information on tides, currents, wind a weather.

The Hawaiian Islands are dominated in all seasons by tradewin from the N.E. These tradewinds are present about 75% of the time a their average velocity is 12.5 m.p.h. They exceed 20 m.p approximately 2% of the time; however, gusts approaching 100 m.p are possible.

Hawaii's average temperature ranges from about 74°F in March 79°F in September. Almost everywhere in Hawaii, the warmest a coolest months differ, on the average, by only 9° or less.

"Kona" weather refers to the Southerly winds which occur m frequently during the months of October through April. During the storms, heavy rainfall and cloudiness can be expected. Moori scheduled during these months may be subject to delay.

The predicted times and heights of the high and low tides a published for Honolulu. The periodic tides around Barber's Point avera only 1 ft. to 2 ft. and are normally mixed. The effect of strong wi added to normal tidal action may cause water levels to fall considera below chart datum and/or rise considerably above MHHW. At Barb Point where the trades usually blow directly off the land, a shift to Ko winds or to a calm has been observed to raise the tide level a few te of a foot.

Currents at the mooring normally run parallel to shore in an East and Westerly direction. The maximum velocity varies from 3.0 ft. second on the surface to 1.3 ft. per second 3 ft. above the sea bott

Tsunamis or tidal waves are possible in this area although qu infrequent. On receipt of a tsunami warning, tankers will be unmoo and will proceed to safe locations until the warning is lifted or the dan is passed.

APPENDIX:

TO: Master

SUBJECT: TERMINAL CONDITIONS – BHP PETROLEUM AMERICAS REFINING, MARINE TERMINAL

Welcome to BHP Petroleum Americas Refining (BHPPAR) Marine Terminal, Barbers Point, Oahu, Hawaii. You are advised that in calling at our Terminal, your vessel is subject to all applicable laws and regulations of the United States and the State of Hawaii, including regulations issued by the U.S. Coast Guard and other federal and state executive agencies. The following instructions and guidelines are provided to promote safe operations while your vessel is moored at the BHPPAR Marine Terminal.

The following definitions are used herein:

"*Terminal*" means the oil transfer facility operated by the BHPPAR off Barbers Point, Oahu, Hawaii, and all associated buoys, hoses, pipes, valves and other appendages in or beneath the sea at the Terminal.

"*Terminal Operator*" means BHPPAR and its parent and affiliate companies, and their directors, officers, employees, servants, contractors and agents.

"*Terminal Services*" means any and all services of any description (whether compulsory, voluntary or otherwise) provided or performed (whether for consideration or otherwise) by or on behalf of the Terminal Operator at or on or about the Terminal and/or the tanker within 3 nautical miles of the Terminal and rendered directly or indirectly in connection with the mooring and/or transfer of crude oil or petroleum product at the Terminal, including without limit to the foregoing, pilotage, navigation, berthing, mooring, unmooring, transfer procedures, communications, watch, divers, tug or workboat assistance or other services, assistance, direction, advice, instruction or conduct whatsoever.

"*Tanker*" means the vessel requiring Terminal Services to be provided or performed.

"*Tanker Owners*" means, jointly or severally, the Tanker, her Owners, Charterers, Owners of cargo and/or bunkers aboard the Tanker, and their respective directors, officers, employees (including Master and crew), agents and contractors.

"*Information Manual*" means the BHPPAR SPM Marine Terminal Information Manual, latest issue.

"*Operations Manual*" means the United States Coast Guard approved Marine Oil Transfer Facility Operations Manual for the BHPPAR SPM Terminal, latest issue.

The provision or performance of any Terminal Services are rendered in consideration of, and accepted by the Tanker and Tanker Owners and expressly subject to agreement with the following conditions:

1. At all times and under all circumstances, the Master of the Tanker will remain solely responsible for the proper navigation, operation, manoeuvring, mooring and unmooring of the Tanker, connecting and disconnecting hoses, discharging and loading cargo and bunker fuel, ballasting and deballasting, safe loading of the Tanker, pollution prevention and compliance with all laws, regulations and orders issued by the competent authority, as well as the instructions herein the Information Manual and the Operations Manual.
2. The Terminal Operator shall not be responsible for or liable to the Tanker or Tanker Owner or any other person in respect to any death, personal injury, illness, loss or damage to property or delay arising directly or indirectly from the performance or non-performance of any Terminal Service.
3. It is agreed that all persons employed or contracted by the Terminal Operator in connection with performance of Terminal Services are supplied on the condition that in so providing or performing each is a servant of the Tanker in every respect and not the servant of Terminal Operator. The presence of such persons in or about the Tanker and performance or non-performance of Terminal Services in no way relieves the Tanker, her Master or crew of any obligation, responsibility or liability in connection with the safety, condition, operation or proper navigation of the Tanker or its property and cargo. It is further agreed that the Tanker and Tanker Owner shall indemnify and hold harmless Terminal Operator from any liability, loss, claims or damages arising out of the rendering of any Terminal Services to the Tanker, including but not limited to services performed by Pilots/Mooring Master(s), operators, crews and boats, whether or not arising out of the fault of said Pilots/Mooring Master(s), operators, crew or Terminal Operator.
4. That while the Terminal Operator will endeavour to insure that Terminal Services are safe and suitable, no warranty, guarantee or representation (express or implied) as to the safety or suitability or otherwise is given.
5. That the Tanker Owners shall be solely responsible for all liability for pollution or contamination by oil or any other substance, and for the direct and indirect consequences of same, if such pollution or contamination is caused directly or indirectly by the Tanker, whether negligently or otherwise, or if the pollution or contamination occurs as a result of escape of oil or other substance from any point on the Tanker. Should a spill occur at the Terminal, Tanker and Tanker Owners shall immediately take the action necessary to clean up the spill and mitigate its effects. Terminal Operator is authorised, at its option with or without notice to Tanker and Tanker Owners to take the action and incur the expenses necessary in its judgement to clean up any spill and to mitigate its effects, and Terminal Operator shall be entitled to reimbursement by them for any expenses which it may incur.
6. That if the Tanker or any part of it sinks, or becomes a wreck or an obstruction in any part of the Terminal or its approaches, the Terminal Operator shall be empowered and have the right to remove the obstruction or wreck with or without notice to the Tanker and Tanker Owners. All expenses of such removal shall be borne by the Tanker and the Tanker Owners at the time of the incident which caused the wreck or obstruction, and Terminal Operator shall be entitled to reimbursement by them for any expenses which it may incur in surveying and removing the wreck or obstruction.
7. That the Tanker Master acknowledges receipt of a copy of the Information Manual, and agrees to comply with the provisions therein.
8. That the Pilot/Mooring Master, as representative of the Terminal Operator, is entitled to suspend Terminal Services and the transfer of cargo or bunkers in the event of any of the following:

The Tanker fails to comply with any applicable federal or state law, regulations or orders issued by competent authority, the provisions of the Information Manual, or the Operations Manual.

The Tanker is not in all respects ready or fit to berth at the Terminal and conduct transfer operations.

Weather or other environmental conditions exceed or are expected to exceed safe operational limits.

9. These conditions shall be governed and construed according to the laws of the State of Hawaii.

By his or her signature below, the Tanker Master acknowledges receipt, understanding and agreement to the provisions of these Terminal Conditions, on behalf of the Tanker and Tanker Owners.

____

Pilot/Mooring Master –
On behalf of the Terminal Operator

____

Tanker Master –
On behalf of the Tanker and Tanker Owners

____

Date and Time

GENERAL: All tankers calling at United States ports must undergo inspection by the United States Coast Guard. Upon successful completion they will be issued a "Tank Vessel Examination Letter" that is valid for one year. No tanker is permitted to transfer oil without a valid "TVEL".

"Notice of Readiness" will not be accepted at time of arrival unless the tanker is in all respects ready to load or discharge.

Laws of the United States govern this terminal and all personnel are required to abide by them. Regarding any matter in question, it is the responsibility of the Master to obtain the necessary clarifications from his local agents.

OPERATOR: BHP Petroleum Americas Refining Inc., 733 Bishop Street, P.O.Box 3379, Honolulu, Hawaii 96842. *Tel:* (808) 547-3395/3715. *Telex:* ITT 7430292. *FAX:* (808) 547-3807. *Contact:* Captain William E. Heddaeus, Manager, Hawaii Marine Operations.

(C) CHEVRON U.S.A. INC. – BARBER'S POINT:

LOCATION: Chevron U.S.A. Inc. has been granted the use of the following anchorage for its Barber's Point Offshore Tanker Terminal:

> The waters of the Pacific Ocean within an area beginning at a point in Latitude 21° 16′ 58″ N. and Longitude 158° 04′ 39″ W., thence on a bearing of 090° true, 850 yards, thence on a bearing of 180° true, 450 yards, thence on a bearing of 270° true, 850 yards, thence on a bearing of 000° true, 450 yards to the point of commencement.

The centre of the above described area is on an "approximate" bearing of 119° true, 2.3 miles from the Barber's Point Light. The four corners of the mooring are marked by buoys. The two Southerly corners of the area are marked by lighted buoys which are painted yellow and red and are in 84 ft. of water. The Northerly corners of the area are marked by white spar buoys and are in 66 ft. of water. The area is designated as Area "C" – See "Plan".

The offshore terminal facilities in the above described area are owned and operated by the Chevron U.S.A. Inc., Hawaiian Refinery, and serve to handle cargo between the refinery at Barber's Point and tankers calling at the terminal.

The offshore tanker terminal is the responsibility of the Blending and Shipping Area Supervisor, Chevron U.S.A. Inc., Barber's Point, Oahu, Hawaii. The marine representative in Hawaii is the Chevron Shipping Company Port Captain. He is responsible for all ship operations.

DOCUMENTS:

A. *For Immediate Entry for Customs* (for Preliminary Entry Certificate Issuance):
   - Original and 3 copies of I–418, Crew List and Passenger List.
   - Original and 3 copies of CF–1304, Customs Crew Effects Declaration.
   - Original and 3 copies of CF–1303, Customs Ship's Stores Declaration.
   - Original and 3 copies of CF–1301, Customs General Declaration.
   - Original and 3 copies of CF–1302, Customs Inward Foreign Manifest.
   - Original and 3 copies of CF–1300, Customs Master's Oath of Entry.

   For Immigration Inspector:
   - Visaed Crew List (Form I–418) or Waiver prepared in lieu – fee U.S.$15.00.
   - Form I–95, completed for each crew member for issuance of D–1.

   For USDA Inspector (when entering Honolulu Harbour):
   - Shipmaster's Declaration (AIQ–43) – (Inspector will bring on board).

B. *Required for Formal Entry and Clearance at U.S. Customs House: Entry:*
   - Original set of Preliminary Entry Manifest as prepared dockside (see above).
   - Port Clearance (last port).
   - Vessel's Certificate of Registry.
   - U.S. Tonnage Tax Receipts (CF–1002), prior voyages.
   - SOLAS Certificate (Safety Equipment Certificate).
   - Load Line Certificate.
   - Certificate of Financial Responsibility (CFR).

   Clearance:
   - Master's Oath of Clearance, original and 2 copies, CF–1300.
   - General Declaration, original and 2 copies, CF–1301, signed by Master.

PILOTAGE: Pilotage is compulsory for all vessels using the berth. This service is performed by the Chevron Shipping Company Mooring Master who remains aboard the vessel the entire time the vessel is in the berth. The Mooring Master will advise the vessel's Master on approaching and departing the berth, mooring, and unmooring. With the concurrence of the vessel's Master, this advice may take the form of directions to members of the vessel's crew. All manoeuvring within the mooring area should be done in accordance with the advice of the Mooring Master. Nevertheless in all cases the Master of the vessel shall remain solely responsible on behalf of the vessel's owner, for the safety and proper manoeuvring of the vessel. The vessel's Master and a qualified deck officer must be on the bridge at all times while the vessel is manoeuvring.
Pilot Station: When not anchoring on arrival, a Chevron Shipping Company Mooring Master will board arriving vessels. For vessels arriving, the Mooring Master boards about 2 miles South of the anchorage area.

ANCHORAGE: Pilotage is not required for anchoring in the Barber's Point Terminal area. Foreign flag vessels, however, should not enter inland waters North of a line connecting Barber's Point Light to Diamond Head Light and all vessels must remain clear of several prohibited anchorage areas. Masters should be aware that this is a very limited area for anchorage with deep water and poor holding ground. Vessels awaiting berth may anchor, however, in such a position so that the approach to and departure from the berths is not impeded. Chevron recommends (but does not warrant the safety of) anchoring within a 500 yard radius circle centred on position: Latitude 21° 16.2′ North, Longitude 158° 03.7′ West (approximately 3.2 miles East–Southeast of Barber's Point Light). Vessels should not anchor directly South of the Chevron U.S.A. Berth unless next scheduled for berthing as notified by Chevron Shipping Company, Honolulu.

RESTRICTIONS: Mooring operations are conducted in daylight only. Unmooring operations can be conducted at any time, day or night, weather permitting.

MAX. SIZE: *Berth Capacity:*
A. Maximum length overall 1,000 ft.
B. Maximum distance stern to centre manifold 500 ft.
C. Maximum deadweight tonnage 150,000. Chevron may allow vessels of a larger size under special circumstances to be determined on a case–by–case basis by Chevron Shipping Company.
D. Maximum draft 50 ft. (salt water) in the Summer. Max. draft is 52 ft. in the Winter. Vessels with a draft greater than 50 ft. (salt water) may be accepted on a case–by–case basis.

HEALTH: Vessels arriving from a foreign port must clear with U.S. Customs and Immigration before handling cargo. This is normally done with the assistance of a local agent. Either the vessel or the agent is required to furnish the U.S. Coast Guard at least 24 hours' advance notice of the ship's arrival time.

The agent brings the port authorities to the mooring area in a launch where they board.

Should a vessel arrive from a foreign port with sickness on board, the U.S. Public Health Service must be notified. This is usually done through the agent.

TUGS: It is a U.S.C.G. requirement that all laden tankers are required to use tugs for mooring and unmooring. A mooring launch is used to attach the vessel's lines to the mooring buoys and assist in picking up the submarine hoses. A mooring launch stands by continuously to assist in unmooring and in any emergency which may arise while the vessel is in the berth.

BERTHING: Within the mooring area there are 7 mooring buoys. Vessels should moor by using both of the ship's bow anchors and by running lines to the mooring buoys.
Mooring Equipment: Chevron U.S.A. Inc. reasonably believes, but does not warrant, that vessels meeting the following criteria may safely moor at the berth.
A. All ground tackle must be in good working condition. Vessels up to 50,000 d.w.t. must have at least 10 shackles of chain on each anchor. Vessels over 50,000 d.w.t. must have at least 12 shackles of chain on each anchor.
B. Mooring wire and rope requirements are shown on the "Summary of Minimum Wire and Rope Requirements" – See "Appendix".
C. To accommodate wires and/or ropes, winches, fairleads, bitts and chocks must be so placed that mooring lines (wires or ropes) may be handled as follows:
  1. Vessels smaller than 80,000 d.w.t.:
    (a) 3 lines on the forecastlehead or main deck forward (2 to weather side, 1 to lee side).
    (b) 3 lines on the main deck aft (2 to weather side, 1 to lee side). It is desirable that winch or warping head arrangement be capable of working one line or wire out of each side simultaneously.
    (c) 4 lines on the poop deck (2 to weather side, 1 aft and 1 to lee side).
  2. Each synthetic line must be secured to a separate bitt.
  3. For vessels larger than 80,000 d.w.t., fittings must permit doubling of all lines for a total of 14 mooring lines.
D. Each mooring winch must be capable of heaving the first layer of wire or rope on the drum at a no–load speed of at least 150 ft./min. and a loaded speed of at least 75 ft./minute. The respective winch speed must be maintained during simultaneous operation of one winch on the main deck forward, one winch on the main deck aft, 2 winches on the stern and one anchor windlass operating.
E. Mooring winches must be capable of warping the vessel in position without tug assistance. On a case–by–case basis the Mooring Master may waive this requirement and utilise tug assistance instead. Tugs will be for vessel's account.
Berthing Procedures: The procedure is modified to fit conditions of the berth, wind, current, sea state, vessel size/loading, limitations of vessel's mooring gear, and other factors as recognised with the advice of the Mooring Master.

In general, the following procedure is followed for typical berthing
Vessel approaches the mooring on a due North heading, pas approximately 200 yards East of No. 6 mooring buoy.

Starboard anchor is let go at Point A and 9 – 9.5 shackles of ch are paid out on the run, starboard chain is then held.

When starboard chain fetches up leading aft, port anchor dropped at Point B and stern is worked into berth as the starboa chain is held and the port chain is paid out to approxima 8 shackles and the lines are run to the mooring buoys. Then t chains are adjusted as necessary to position the vessel proper the berth.

Wind and current will largely govern usage of tug assistance a which mooring lines are run out first.

Miscellaneous Vessel Requirements:
A. Vessels should be equipped with a searchlight on each bridge w to assist in illuminating buoys during mooring and unmooring at ni
B. The ship's crew is required to perform all hose handling w (including raising, connecting, adjusting, disconnecting, and lower the hoses), and adjusting of mooring wires and anchor chains addition, the crew will be required to take aboard a gear basket a to return it to the mooring launch before departure. All of this w will be done with the advice of the Mooring Master.
C. All vessels are required (at their expense) to provide food a accommodation for the Mooring Master and up to 3 mooring lau personnel for the duration of the visit.
D. All vessels shall comply with regulations and procedures set forth the Operations Manual for the Chevron Barber's Point Offsho Tanker Terminal in addition to U.S. Coast Guard Regulations s forth in Title 33 of the Code of Federal Regulations (33 CFR). In t event of conflicts between the Operations Manual and the USC Regulations, the provisions of the USCG Regulations shall prev except when provisions set forth in the Operations Manual are mo stringent than USCG's and other government regulations.
E. All vessels are subject to inspection to confirm their suitability for t Barber's Point berth. Vessels not meeting any one of t requirements may be refused berthing.
F. Vessels may be required to unberth and/or otherwise incur de during adverse weather conditions.

Departure from Berth: The procedure for leaving the berth conventional for such moorings and includes the following steps:

Hose is disconnected, blinded and lowered to the sea bottom.

Lines to buoys are slacked by the vessel's crew then released the buoy by the mooring launch crew.

Anchors are either heaved in simultaneously or the port anchor heaved in first, while No. 5 line is held until the vessel's stern is w clear of the spar buoys.

Mooring Master leaves the vessel after it is underway and cl of the moorings.

MEDICAL: Arrangements must be made with the ship's Agent f medical services. Medical services are normally obtained by taking t patients to Honolulu by launch. This is a distance of 12 miles (one wa Ambulance service is provided by the City & County of Honolulu throu the island–wide emergency telephone No: 911.

REPAIRS: Repairs which render the vessel incapable of gett underway are prohibited while the vessel is in the berth.

TIME: All islands in the State of Hawaii are on Zone plus 10 (10 ho slow of Greenwich Mean Time) throughout the year. All communicatio should be in local time.

FRESH WATER: Not available.

FUEL: Bunkering is not permitted or available at the mooring.

HOSES: Two pipelines serve to transfer products between the termi and the refinery, 1×20 in. diameter and 1×30 in. diameter. Hose str attached to the ends of each of these pipelines are raised by lifting t free end of the hoses by their attached buoys and chains. When t free end of the hose string is above the vessel's deck, the hose st is secured to the vessel by an attached chain bridle between the f and second lengths of the hose string. The end of the hose is t lowered in a smooth curve to the deck, the cap removed and the ho connected to the vessel's manifold. Both pipelines and hose str terminate on the port side of the vessel.
The hose string description is as follows:

Pipeline	*Hose Order from Shore*	*No. of Sections*	*Hose Diameter* (in.)	*Hose Length* (ft.)	*Total Lengt* (ft.)
20 in.	1	1	16	25	25
	2	5	16	30	150
	3	2	12	30	60
	Total	8		Total	235
30 in.	1	1	16	25	25
	2	10	16	30	300
	3	2	12	30	60
	Total	13		Total	385

Each hose string is terminated on the free end of the last 12 diameter section by a lever–operated, blanked butterfly valve an standard 12 in. 150 ANSI flange. The 20 in. system is normally used transferring gasoline products. The 30 in. system is normally used transferring crude oil and fuel oil.

The submarine pipelines extend nearly 2 miles to the shore and t approximately one additional mile across flat land to the Che Refinery. Both submarine pipelines contain internal gut water lines w can be used to provide heat when hot water is circulated through th Water is pumped out one gut line from the refinery and returns thro the other. The two gut lines are connected at the seaward end b short submarine hose.

Hose Handling/Cargo Transfer Equipment Requirements:

A. Port hose boom and related equipment shall have minimum safe working load capacity of 10 long tons except that vessels up to 30,000 d.w.t. may have 7 long ton minimum safe working load capacity.

B. Bitts for hanging-off the hose chain should be provided in front of the port side manifold. If the vessel is to load bunkers while handling cargo, separate bitts shall be provided for the bunker hose, also on the port side.

C. Rail to manifold distance should not be less than 15 ft. Top of roll bar should not be higher than the lower lip of the manifold flange(s).

D. All fittings, piping and valves outside of and including the first valve on the ship's cargo and bunker systems must be of steel construction and properly supported by a permanent installation (i.e., vessel must meet the Arco Cast Iron Clause). No more than one reducer outside the vessel's permanent installation will be allowed and in any case all connections must be made inside the oil drip pan.

E. All vessels must have the capability of loading segregated ballast during discharge equal to at least 30% of vessel deadweight. Those with the capability of handling segregated ballast quantity above 30% will be less subject to delay during adverse weather conditions. Vessels may load segregated ballast during discharge of cargo. Ballast may be loaded into unsegregated systems either during cargo discharge or when discharge is interrupted, but only if piping used for ballast is segregated from cargo piping by at least two valves. Single valve separation is acceptable if it can be shown that no leakage will occur through the valve except that in this case ballast cannot be loaded concurrently with transfer of cargo. Vessels not capable of meeting these requirements may be forced to vacate the berth prior to completion of discharge.

BALLAST: There are no shore facilities for handling either dirty or clean ballast at the terminal.

Pollution: It is imperative that no oil or pollutants of any type escape into the water. All regulations regarding pollution of the sea or air must be complied with.

Reporting Oil Discharges or Spill: Any oil spill into the water from a vessel in the moorings, at anchor, or underway in the vicinity of the Terminal shall be immediately reported to United States Coast Guard and the Terminal facility. If a Mooring Master is onboard, he shall notify the shore facility by radio as appropriate. In addition, the ship's Master shall in all cases notify the vessel's agents of the occurrence of the spill, no matter how small nor from what cause. If no Mooring Master is aboard, the vessel shall inform the Terminal facility by the most expeditious means available. Any other notifications required of the vessel by law shall also remain the responsibility of the vessel to carry out.

WEATHER: *Normal/Storm Conditions:* The local weather is usually moderate with temperatures between 75°F. to 85°F. and N.E. trade winds between 10 to 15 miles per hour. Tropical storms and hurricanes occasionally affect the islands between June and November. They cause high surfs and wind conditions at the mooring. In Winter months, storms with strong southerly winds called "Kona" winds may render the berth unusable for several days at a time. All vessels must be especially alert to the dangers caused by this type of weather condition.

Other violent winds may occur with the passing of a frontal system or a trough. These are more localised and occur from either the North or the South with violence and little warning.

A complete discussion of local weather is contained in the U.S. Coast Pilot No. 7. Up-to-date weather information is broadcasted by the National Weather Service on 162.55 MHz.

Any changes in the weather should be immediately brought to the attention of the Mooring Master so he may take appropriate action.

Tides and Currents: The maximum tidal range at the Mooring Area is approximately 3 ft. Mean higher high water is 2.0 ft., mean tide level is 0.8 ft. and mean lower low water is 0.0 ft. The extreme low water is −1.0 ft.

Currents normally set from East to West and are unpredictable. However, they do sometimes reverse.

Visibility: The visibility in the mooring area is usually excellent with only rare occasions of limited visibility.

SAFETY: *Fireboats:* A fireboat is available only from Honolulu harbour. Because of the distance to the harbour, this fireboat would be called upon only in the event that the ship's equipment cannot control a fire.

Crude Washing: Crude washing should be undertaken only with approval of Mooring Master. The Shore Control Operator shall also be notified.

Inert Gas Systems: Normally a vessel fitted with an inert gas system (IGS) will not be permitted to carry on cargo operations unless the inert gas system is in good order and in operation. When an IGS equipped vessel arrives with the system inoperative, the vessel will not be berthed until the IGS is repaired and/or put in operation. If after a reasonable time the system is not operative and/or cannot be repaired, the terminal may elect to berth the vessel and carry on the cargo operation under strictly controlled conditions and in compliance with existing governmental regulations. If the IGS breaks down after the vessel has berthed, all cargo operations will be stopped and the terminal may elect to take the vessel off the berth unless the IGS is repaired in a reasonable time. If the IGS cannot be repaired, the terminal may elect to carry on cargo operations under strictly controlled conditions and in compliance with existing governmental regulations.

All time lost because of the IGS being inoperative and/or out of order will be for the vessel's account.

Containment Equipment: The area of the refinery where the marine pipelines emerge above ground is protected by dykes which are designed to adequately impound any oil leakage from valve packings, flange leaks or pipeline leaks.

The Refinery is a member of Clean Islands Council Oil Spill Cooperative (CIC). Should an onshore or offshore oil spill occur, the Refinery has access to all the CIC equipment.

A 650 ft. Rotopak oil boom is placed aboard the ship prior to mooring. This equipment is to provide immediate first response capability in case of an offshore oil spill.

Onshore response time is within one hour. Offshore deployment time is dependent on the availability of tugs. A mooring tug is available to assist in the event of an offshore oil spill, under the operational control of the Mooring Master. Depending on the reason for the spill, ocean conditions, and the vessel's situation, the Mooring Master may or may not allow the tug to return to port to obtain the spill containment equipment.

GENERAL: *Charts and Publications:*
The anchorage area is shown on the following charts:
National Oceanic and Atmospheric Administration
19362 – Oahu, Ahua Point to Barber's Point.
19357 – Island of Oahu.

Publications of value and interest are:
Current edition of United States Coast Pilot No. 7 (Pacific Coast).
Hawaiian Refinery Emergency Plans and Procedures Manual.
U.S. Coast Guard Regulations 33CFR153, 154, 155 and 156.

Rules of the Road: All vessels should be aware that inland rules apply inshore of a line connecting the Diamond Head Light and Barber's Point Light.

Provisions: Arrangements for provisions are made with the ship's Agent. Provisions are brought from Honolulu to the ship by launch. Weather conditions usually allow loading only on the vessel's port side. Terminal Regulations prohibit lifting stores with the hose boom while the submarine hose is connected.

Launch Service: If shore leave is allowed, the vessel's Master must make arrangements with the Agent to provide personnel launch service. A mooring launch is provided for line handling. The mooring launch does not leave the terminal area while the ship is in the berth.

Check List: A Marine Terminal Check List has been prepared for vessels using the berth. It must be signed by the vessel's Master and Chief Engineer and the Mooring Master before cargo can be handled. Its purpose is to ensure that important safety and anti-pollution procedures are followed by all personnel aboard the vessel.

AUTHORITY: See Section (A).

APPENDIX: SUMMARY OF MINIMUM WIRE AND ROPE REQUIREMENTS.

	Wires				*Synthetic Lines*					
Vessel Size d.w.t.	*Number*	*Diameter* (in.)	*Length (Note 2)* (ft.)	*Breaking Strength* (lb.)	*Number*	*Circumference* (in.)	*Length* (ft.)	*Material*	*Breaking Strength* (lb.)	
Up to 50,000	7	1.25	1,000	130,000	4	8 (minimum) 10 (maximum)	720	Note 3	130,000	
				OR						
	any combination of wires and ropes (per above)									Note 1
				OR						
					11	9 (minimum) 10 (maximum)	720	Note 3	175,000	
50,000 to 80,000	7	1.5	1,000	165,000	4	8 (minimum) 10 (maximum)	720	Note 3	175,000	
				OR						
	any combination of wires and ropes (per above)									Note 1
				OR						
					11	9 (minimum) 10 (maximum)	720	Note 3	175,000	
Over 80,000	7	1.5	1,000	165,000	7	8 (minimum) 10 (maximum)	720	Note 3	175,000	

Notes:
(1) Vessels equipped with fewer than 7 wires may be required to unberth and/or otherwise incur delay during adverse weather conditions.
(2) Synthetic rope pendants may be used to achieve the necessary length if the breaking strength of the pendant is at least 1.25 times that required for the wire.
(3) Polyester required. Nylon or polypropylene not acceptable.

HOUSTON, Texas: 29.45 N. 95.20 W. (See Plan)

DOCUMENTS:
1 Visaed Crew List.
3 Passenger Lists.
3 or more copies of complete Manifests of Cargo for discharge at all U.S. ports.
2 or more copies of Manifest of Cargo for each individual U.S. port.
Souvenir List.
Stores List.
Ship's Register.
Tonnage Tax.
Load Line Certificate and Nationality Certificate.
No health document required.

Tankers: Customs required copy of Bill of Lading, ship ullage on loading and shore ullage on loading.

PILOTAGE: Compulsory. Radio to local Agent who arranges Pilot and specifies boarding time. U.S. Coast Guard requires 24 hours' notice in advance of arrival Galveston Bar. Pilot boats and station on VHF Channel 66, Bridge to Bridge is Channel 13 and tugs for docking and off-docking on Channel 14. 3 Pilot boats marked "HP No. 1" – 53 ft., "HP No. 2" – 61 ft. and "HP No. 3" – 106 ft. in length. Pilot boats contacted by light in International Morse code; no sound signal. Pilot taken on board at Sea Buoy No. 1, located 6.7 miles from Galveston. Seldom, if ever, is water too rough for boarding at above location. Anchorage located in Bolivar Roads, 6.7 miles inward from Sea Buoy No. 1.

Report: 1993.

Sabine Bank Pilot to Houston uses VHF Channels 16, 14 and 12.

ANCHORAGES: Vessels are prohibited from anchoring in the Houston Ship Channel or Turning Basin, except in cases of emergency, in which circumstances they shall anchor as near as possible to the channel edge or Turning Basin so as not to interfere with free navigation or obstruct the approach to any pier.

Vessels may anchor in the Gulf of Mexico in the Galveston Entrance Anchorage Areas, just inshore of the intersection of the Galveston Safety Fairway with the Coastwise Fairway. Inside Galveston Harbour, a federally designated anchorage area has been established along the North side of the Inner Bar Channel, this area is described as follows: bounded by the North edge of the channel, extending West from Buoy 10 (Latitude 20° 20′ 48.5″ N., Longitude 94° 42′ 52.5″); thence to Buoy 12 (Latitude 29° 20′ 43″ N., Longitude 94° 44′ 46.5″ W.) thence 029° to Buoy B (Latitude 29° 21′ 15″ N., Longitude 94° 44′ 47″ W.) thence 096° to Buoy A, (Latitude 29° 21′ 05.3″ N., Longitude 94° 42′ 51.4″ W.); thence 183.5° to the point of origin. This anchorage area is for temporary use of vessels of all types, but especially for naval and merchant vessels awaiting favourable weather and travel conditions. Except when stress of weather makes sailing hazardous, vessels are not permitted to anchor in this area for periods exceeding 48 hours, unless longer periods are expressly authorised by the Captain of the Port.

In Galveston Bay, small craft can anchor anywhere outside the dredged channels where the depth is sufficient. The water in the bay may be lowered as much as 2 ft., by a "Norther" and vessels should anticipate this when selecting an anchorage during the Winter.

RESTRICTIONS: None with respect to time of day or night, or with state of tide.

Notes: (1) Includes 400 ft. channel width.
(2) Includes 300 ft. channel width.
(3) 40 ft. to Brady Island. Authorised.

*All depths refer to the plane of mean low tide.

Tidal Range and Currents of Galveston Bay:
Under ordinary conditions, mean tidal range is 0.6 ft. to 1.3 ft. in t lower and upper parts of Galveston Bay and 0.5 ft. to 1 ft. in the S Jacinto River and Buffalo Bayou. Extreme ranges, under ordina conditions, are about 2 ft. in the lower part of Galveston Bay, 1.2 ft. the upper part of the bay and 1 ft. in San Jacinto River and Buffa Bayou. Freshets cause rises of over 12 ft. in Buffalo Bayou, howeve this condition has not occurred since completion of Addicks and Bark Dams for flood control on the upper watershed of Buffalo Bayou. Heig of tides is dependent largely on the wind, and during strong "Norther in Winter season the water surface of Galveston Bay may be depress 2 ft. below mean low tide.

Report: Mariners are advised that ship-to-ship lightering activity regularly conducted in the following general vicinities which are 50 mil – 60 miles from the Galveston Sea-Buoy.
Lat. 28° 35′ N., Long. 94° 15′ W.
Lat. 28° 25′ N., Long. 94° 34′ W.

Mariners are urged to use caution when transitting these areas, they make their way to the Port of Houston.

MAX. SIZE: Navigation safety guidelines on the Houston Ship Chann between Galveston Bar and the Turning Basin, Houston, Texas – Boli Roads to Barbours Cut: Maximum vessel size 950 ft. LOA w beam 135 ft.

Barbours Cut to Baytown: Maximum vessel size 900 ft. LOA w beam 135 ft.

Baytown to Boggy Bayou (Shell): Maximum vessel size 860 ft. w beam 120 ft. Vessels exceeding 800 ft. LOA or 39 ft. draft will restricted to daylight passage only above Baytown.

Boggy Bayou to Sims Bayou (Arco): Maximum vessel size 750 ft. w beam 116 ft. Vessels exceeding 105 ft. beam, but not exceeding 116 f shall not be allowed to meet any ship traffic above Boggy Bayou.

Sims Bayou to Houston Turning Basin: Maximum vessel size 750 LOA with beam 106 ft. Vessels exceeding 700 ft. LOA or 37 ft. draft w be restricted to daylight passage only between Sims Bayou and th Houston Turning Basin.

Note: The permitted draft may be less than 37 ft. because of conditio of the channel or tide.

HEALTH: See "Health: All Ports" before first U.S.A. port (Alban Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: International Telephone and Telegraph – ITT – Galveston ca letters KLC.

TUGS: Tugs come alongside just off dock or immediately prior t entering turning basin if vessel is to turn, or at Pilot's discretion.
Towing Companies:
Intracoastal Towing & Transportation Co. Tel: 524-5522.
Bay Houston Towing Co. Tel: 529-3755.

** Used for grain elevator operations at Houston Public Elevator No. 2.

Care Shipping Inc.: Located 12 miles East of Houston. Deep-water terminal. Length 500 ft. Depth alongside 38 ft.

Manchester Terminal Company: 3 ship berths – 1,650 ft. in length (including 1 piling cluster). Depth 32 ft.

Served by 1 marginal track and 2 outside tracks behind docks plus loading tracks to all other facilities. Special loading-unloading docks for motor trucks available.

Equipment: 62 lift machines; 7 tractors; 1 towmotor, 30,000 lbs. capacity; 4 sweepers, 3 scrubbing machines.

Manchester Terminal Company also has 18,000 cargo pallets.

New Terminal Warehouse Corporation: Capacity 3 ship berths. Wharf 1,400 ft. long. Open storage areas of 50,000 sq.ft. Covered storage areas of 200,000 sq.ft.

Other Wharf Facilities: In addition to the for-hire terminals Port of Houston has some 43 ship berths plus various barge facilities on the Ship Channel maintained and used exclusively by industries. Most of these facilities are tanker ship berths at the refineries. There are also 4 liquid-bulk terminals for hire: Amerada Hess Terminal and General American Tank Storage Terminals, the latter having 2 separate locations; South Coast Terminals; Robertson Terminals, Inc.

Fentress Bracewell – Barbours Cut Terminal: The Port of Houston Authority continues development of its massive intermodal facility. Barbours Cut is located 2.5 hours from open sea where the Houston Ship Channel enters Galveston Bay. The facility is equipped to handle container, Ro/Ro and LASH services. There are 5 container berths each 1,000 ft. in length, representing 5,000 ft. of continuous quay. The channel is dredged to a depth of 40 ft. Additionally, 10 Paceco Portainers service the 5 container berths. The 5 container berths are backed up by approximately 203 acres of container marshalling are suitable for both grounded and wheeled operations. 20 rubber tyred yard cranes handle the stacking of containers in the container yard.

A Ro/Ro platform is provided for vessels equipped with ramps. There are two 100,000 sq.ft. Ro/Ro transit sheds with rail service available as well as 35 acres of concrete paved open storage for heavy equipment and automobiles. A "U" head pier and mooring dolphins provide for berthing of LASH ships. Additionally, a barge fleeting area and barge mooring dolphins are provided.

There is a container freight station with 55,000 sq.ft. of covered storage and rail service available. A railroad yard or ramp point with 1 lead track, 1 storage track and 2 working tracks provides a facility to unload containers and trailers to and from flat cars. The car capacity on the working and storage tracks is approximately 121 ft.×89 ft. long cars.

Container and chassis repair services are available on and off terminal. Container storage areas are available adjacent to the terminal as are automobile storage and preparation facilities.

Bayport Division: A 300 ft. wide by 42 ft. deep Bayport Ship Channel and its 1,600 ft. diameter turning basin connects with the Houston Ship Channel in Galveston Bay and extends approximately 2 miles inland to provide berths for deep-draft tankers and bulk freighters. Petro United Inc., Celanese Corporation, American-Hoechst Corporation and Hudson Oil Company have docks and facilities on the Bayport Ship Channel.

BULK HANDLING FACILITIES:

Public Bulk Materials Handling Plant: At Greens Bayou. Loading capacity at 67 lb./cu.ft. material, unloading capacity at 94 lb./cu.ft. material free digging rate. Fully automatic plant handles dry bulk commodities rapidly to and from ships and barges through the loading and unloading towers, conveyor systems, hoppers, pits, surge bins and scales; with rail and truck facilities and ample ground storage. Rail cars are rapidly moved with large rubber-tyre tractors. Boom of unloading tower reaches 60 ft. from face of dock, bucket capacity is 12 tons; loading tower boom reaches out 66 ft. from dock face and is equipped with automatic trimmer. Both towers can travel the full length of the dock. Mooring facilities for a waiting vessel have been installed next to existing dock. Also available: 2 heavy-duty front-end loaders and 4 heavy-duty car shakers. Max. LOA 750 ft. (larger if cleared with Houston Pilots prior to chartering). Max. beam 116 ft. Max. draft 39 ft. Air draft 40 ft. Depth of water 40 ft. Minimum hatch size 25 ft.×25 ft. Travel of loader 500 ft.

Elco Shipside Elevator Company: 2,000,000 bushel capacity elevator which loads up to 25,000 bushels per hour to vessels berthing at Dock No. 2 of the Port Authority's Manchester Wharves. Length of berth 500 ft. Depth 32 ft.

Woodhouse Terminal/Houston Public Elevator No. 2: Grain elevator with 12,000,000 bushel capacity – 4 ship berths. Also general cargo handling. Max. draft 38 ft. Loading rate 1,000 t.p.h.

Adams Terminal: Phillips Terminal Company. 2,700 linear ft., capacity 5 vessels. Bulk cargo loading conveyor system rated at 400 t.p.h.; horizontal boom, hammerhead-type clamshell unloader equipped with five-yard ore bucket, rated at 150 to 250 t.p.h.; 2 gantry cranes, capacity 40 tons at 30 ft. radius; Robbins heavy-duty car shakeout; 20-ton truck mounted crane. One D & H gantry crane modified to handle five-yard bucket for bulk ore discharge. 100 t.p.h. Specialists in import and export bulk cargo. Covered storage – 73,000 sq.ft.

International Terminal Corp.: Shiploading Rate 3,000 t.p.h. Depth in turning basin 42 ft. Storage capacity 150,000 tonnes (corn, soya, wheat, etc.).

Jacintoport Terminal: Deep-water shipside terminal located on the North side of the Ship Channel some 15 miles downstream from the Turning Basin.

Three ship berths (length 1,830 ft.) with water depth alongside the wharf at 36 ft. 24,000 sq.ft. of transit sheds. Transcontinental or Houston Deepwater, the present Jacintoport Operators, have preferential berthing at Wharves No. 2 and No. 3 for vessels that have at least 500 short tons of boxed or bagged cargo. Harbourside Refrigerated Services operate the cold storage facility located adjacent to Jacintoport and has preferential berthing at Wharf No. 1 for vessels that have at least 500 short tons of refrigerated or frozen cargo. Rail service by the PTRA. Slip is 4,200 ft. long and 400 ft. wide, owned by Port of Houston Authority.

Cargill, Inc.: Grain elevator with a capacity of 5,700,000 bushels. 2 ship berths. Max. draft 40 ft. Loading rate 70,000 bushels per hour to 140,000 bushels per hour.

CRANES: (Capacities 1 ton = 2,000 lbs.)

Mobile Crane – Diesel: Capacity 80 tons.

Gantry, American Revolver R-25 Electric: Capacity at 65 ft. radius – 50 tons.

Gantry, Clyde Whirley, Diesel Electric: Capacity at 45 ft. radius – 30 tons.

Gantry, Portainer, Electric: Capacity at 81 ft. reach – 27.5 tons.

Gantry, Portainer, Diesel Electric: Capacity at 113 ft. reach – 44 tons.

Gantry, Portainer, Electric: Capacity at 140 ft. reach – 30 tons.

Stiff Leg Derrick, Electric: Capacity at 50 ft. reach – 75 tons.

Floating derrick barge crane 500 ton capacity, Owner Joe D. Hughes, Halliburton Co.

Gantry, Portainer, Electric: Capacity at 127 ft., outreach 50 long tons.

Rubber tyred mobile crane, diesel with 300 short ton capacity operated by Ryan Walsh Stevedoring and Shippers Stevedoring.

BRIDGES: Two bridges cross the channel at this time, the I-610 Bridge, immediately East of Wharf No. 32, has a clearance of 135 ft., and the Beltway 8 Toll Bridge, immediately West of the Shell Terminal, has a clearance of 175 ft.

Under construction is the Baytown Bridge which will have a minimum clearance of 172 ft. and is due to be completed by January 1996, replacing the Baytown Tunnel.

STEVEDORES: Stevedore, on advice from representative of local Agent, must order labour prior to 1700 for 0700 or 0800 hrs. start the following day. Can order at 0800 for 1000, 1100 for 1300 and 1700 for 1900 hrs. start. Gangs must be ordered prior to 1700 hrs. on Saturday for Sunday or holiday.

MEDICAL: Give sufficient notice to order doctor or ambulance. Numerous hospitals available. Seaman's health certificate required.

TANKERS: No specific requirements for oil carriers with respect to load/discharge lines. Tankers must be gas free to enter turning basin area. 12 tanker berths available

Restrictions: The Houston Ship Channel has vessel size limitations as set forth by the Houston Pilots Association (See "Max. Size"). Deadweight tonnage is restricted by zone as follows:

Bolivar Roads to Baytown – 95,000 d.w.t.

Barbours Cut to Boggy Bayou (Shell Terminal) – 80,000 d.w.t.

Boggy Bayou to Sims Bayou (Arco Terminal) – 55,000 d.w.t.

Sims Bayou to Turning Basin – 45,000 d.w.t.

All dead ships and LPG/LNG vessels greater than 550 ft. LOA daylight transit only through the entire Houston Ship Channel.

Arco/Sims Bayou: General: The Arco Refinery Terminal consists of berths "B" and "C". This terminal is located in the vicinity of Sims Bayou, approximately 48 miles from Sea Buoy.

Mooring and Berth: At both berths 2 or 3 tugs are used for docking, while only 1 is necessary for undocking. The tugs and Docking Master meet the vessel 1 mile below the berths and turn the ship at the Arco Turning Basin for a starboard side berthing. The terminal does not provide a gangway.

Cargoes handled at both berths include crude, gasoline, distillate, lube oil, av. gas, jet fuel, and petro-chemicals. Sizes of cargo hoses are 4 in., 6 in. and 8 in. All cargoes are pumped at 100 p.s.i. Both berths can receive ballast and slops. Only av. gas and jet fuel are handled by a common pipeline.

Charter International Oil – Traweek: General: The Charter International Oil Company Berth is the Traweek Dock located 49 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: Tug requirements are determined by the vessel's Master. Vessels are generally turned, if light, in the vicinity of the berth and moored starboard side to. Breasting units keep the vessels directly off the side of the dock. All lines are doubled-up. Long bow/stern leads allow considerable fore and aft movement of the vessel. To counter the movement good spring lines are required. Hooks on shore are secured to 2×1.625 in. wires to a "deadman" on the upper bank. All lines are handled by a workboat. The terminal does not provide a gangway.

Passing ships in the Ship Channel affect vessels at this berth. Strict attendance to mooring lines is essential.

Cargoes handled at this terminal include gasoline, fuel oils, jet fuel, No. 6 fuel oil, and kerosene. All cargoes are transferred through 8 in. lines and hoses at a maximum pressure of 100 p.s.i. Connections at the manifold are made with bolted flanges. Both ballast and slops can be received at this berth.

Crown Central Petroleum Co.: General: The Crown Central Petroleum Co. Berth is located 50 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: 2 or 3 tugs are used for docking and 1 or 2 tugs are used for undocking. Tugs meet the vessel below the berth depending on existing conditions and turn the vessel prior to docking. No gangway is provided at this terminal.

Cargoes handled at this terminal include distilliate, gasoline, petrochemicals, heavy fuel oil and crude oil. Petro-chemicals are handled through 6 in. lines at 40 p.s.i. All other products and crude are handled through 8 in. lines with pressures varying between 30 p.s.i. and 100 p.s.i. All cargo hose connections are ASA-type connections. Ballast and slops are received at this terminal.

GATX No. 1 and No. 2 – Galena Park: General: The Galena Park Terminal of GATX consists of 2 berths, No. 1 and No. 2. Storage capacity: 5 million barrels.

Mooring and Berth: 2 tugs are used for both docking and undocking. Vessels are usually turned when in the light condition. The terminal does not provide a gangway.

Cargoes handles at both berths include heavy fuel oil, special petroleum products, solvents, and other clean products. Heavy fuel oils are handled through 8 in. lines only. All other products are handled through 4 in., 6 in. and 8 in. lines. Maximum pumping pressure for all products is 100 p.s.i. All connections are ASA flange connections.

GATX – Pasadena: Mooring and Berth: Tug requirements are determined by the vessel's Master. Vessels are normally turned in the light condition. The berth is close to the Houston Ship Channel and vessels can be affected by passing traffic. Vessels moored at this berth should be well moored and all lines kept taut. The terminal does not provide a gangway.

This terminal handles a variety of products. Crude oil or products requiring heating are not handled by this terminal. All products are handled through 4 in., 6 in. and 8 in. lines at 100 p.s.i. Hose handling may be expected to be slow on account of the limited equipment on the pier.

Hess No. 1: General: The No. 1 Ship Dock of the Amerada Hess Corp. is located 48 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: Vessel's Master determines tug requirements for docking and undocking. The vessel proceeds past the berth when docking and backs into the berth for a port side berthing. The stern will be approximately 100 ft. from the North bulkhead of the berth. The terminal does not provide a gangway. Gangway placement is critical.

Cargoes handled at this terminal include crude oil, fuel oil, light oil and gasoline. Fuel oil is handled through a 10 in. line at 150 p.s.i. All other cargoes are handled through 12 in. lines at 150 p.s.i. Connections are all "quick connections". There are no ballast or slops storage space at this terminal.

Hess No. 2: General: The Amerada-Hess Corp. No. 2 Ship Dock is located 45 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: A minimum of 2 tugs are used for docking and undocking. Loaded vessels approach from the channel, normally starboard side to. After discharging the vessel is than turned to seaward. A loaded vessel can be turned should a port side mooring be required. All lines are carried to mooring dolphins by a small boat. A gangway is not provided by the terminal.

Intercontinental No. 1: Mooring and Berth: 2 tugs are required for docking and undocking. The vessel is met by the tugs and Docking Master near Lynchburg Crossing. As the vessel approaches Slough, tugs assist in turning the vessel broadside to the channel and in line with the berth. The vessel is then manoeuvred into the berth. Most vessels are moored starboard side to. A gangway is not provided by the terminal.

Various clean products are handled by this terminal. There are no facilities for receiving ballast or slops.

Oil Tanking No. 1, No. 2 and No. 3: General: These berths are located at the Oil Tanking of Texas Terminal which is 42 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: 2 or 3 tugs are used for docking and 2 tugs are used for undocking. Vessels docking at Berth No. 1 are turned to starboard for a port side mooring. Vessels are moored head-in, starboard side to in Berth No. 2 and port side to, head-in at Berth No. 3. At Berth No. 2 and No. 3 mooring lines are handled by a launch. Bollards on the outer breasting/mooring platform are fitted with hooks on steel wire pennants so as to be accessible to the boat crew. The terminal can provide a gangway at all 3 berths.

Vessels should use extra spring lines leading aft as there are no stern line leads available. The terminal plans to install a mooring buoy between the platform and the nearer channel line.

Crude oil and clean products are handled at Berth No. 1. Crude oil is the only product handled at Berth No. 2 and No. 3. All cargo transfer lines are 16 in. Connections are made with ASA flanges, reducers are furnished by the terminal. There are no facilities for ballast or slops.

Paktank No. 1 – Deer Park: Cautionary Advice: There is a considerable chance that passing traffic and/or wind could cause a ship exceeding 630 ft. LOA to break away from the berth, which could lead to disastrous consequences with regard to oil pollution.

General: The Paktank Terminal is located at Deer Park which is 36 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: A mooring buoy has been installed by the terminal to secure stern lines. This mooring buoy is apparently inadequate both from a standpoint of proper location and strength.

2 tugs are normally used for docking and undocking. The vessel is turned into the berth directly off the channel, upbound. A complement of mooring wires and leads are used at this terminal.

Crude oil, petro-chemicals, and various refined petroleum products are handled by this terminal. All transfer hose and lines are 6 in. or 8 in. Connections to the manifold are bolted. Maximum pumping pressure is 100 p.s.i. There are no facilities for receiving ballast or slops.

Shell No. 1, No. 2, No. 3 and No. 4 – Deer Park: General: The Shell Oil Company Refinery is located 42 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berthing: When docking at any of the 4 berths at terminal, 1 or 2 tugs are used. 1 tug is normally used for undock Vessels are turned prior to docking for a starboard mooring. The us complement of mooring lines and/or wires are used at these be Constant attention must be paid in keeping proper tension on all li due to the surging effect caused by passing ships in the chan Gangways are provided by the terminal at all 4 berths.

Crude oil, No. 6 fuel oil, gasoline, diesel fuel, jet fuel, aviation fu and other refined petroleum products are handled at this terminal cargoes are transferred through 8 in. lines with bolted connection the ship's manifold. Maximum pumping pressure for all product 100 p.s.i. The terminal has facilities for handling ballast and slops.

Warren Gas No. 2 and No. 5: General: The Warren Gas Terminal Be No. 2 and No. 5 are located 46 miles from the Sea Buoy on the Hous Ship Channel.

Mooring and Berthing: Tug requirements for undocking and dock are determined by the Master. Vessels proceed directly into Berth No for a port side mooring. A motor launch is used to run wires or lines the mooring points. Gangways are only provided when requested p to arrival.

Propane and butane are handled at Berth No. 2 and No. 5. All trans lines are 12 in. at Berth No. 2 and 16 in. at Berth No. 5. Connection ship's manifold are bolted. Maximum pumping pressure is 100 p.s.i. Berth No. 2 and 150 p.s.i. at Berth No. 5.

Shipmaster's Report: September 1992.

Deer Park is a good place to take stores, as there are shore cra available.

DENSITY: Classed as full fresh but varies with rainfall and tide, usu 4 in. to 5 in. allowance on full draft.

FRESH WATER: Available at all terminals through pipe and hose.

FUEL: All grades and viscosities available.

FIRE PRECAUTIONS: All standard precautions per code of Fede Regulations plus local ordinances. Tankers, unless gas free, permitted at wharves in the immediate turning basin area.

REPAIRS: All types available.

DRY DOCKS: Todd Shipyard, 12,000 ton dry dock at Greens Ba and 14,000 ton capacity (length 400 ft.) dry dock in the Houston S Canal.

GANGWAY/DECK WATCHMEN: Not required, but are available a can be arranged by local Agent at Master's request.

OPENING/CLOSING HATCHES: By stevedores only – vessel wil charged for this work if done by crew.

CARGO GEAR: Cargo gear safety certificate required.

CUSTOMS ALLOWANCES: Tobacco, 300 cigarettes, 100 cigars, 1 of tobacco or combination for each man. Wine and/or Spirit, 1 qu bottle for each crew member.

SURVEYORS: District Headquarters for the following Societies:

REPATRIATION: Danner Guard Service can handle all phases.

AIRPORT: Approximately 0.5 hours by car; served by regular airli

TIME: Central Standard with daylight saving time effective from Ap October.

HOLIDAYS: January 1st; January 15th; February 12th; 3rd Monda February; March 2nd; March 17th; Good Friday; last Monday in M June 19th; July 4th; First Monday in September; 2nd Monday in Octo November 8th; November 11th; 4th Thursday in November; Dece 25th. When holiday falls on Saturday or Sunday the following Mon will be holiday.

POLICE/FIRE/AMBULANCE: All services provided or available.

TELEPHONES: Currently no arrangements for placing telepho aboard but easily accessible on wharves.

SERVICES: All services available.

SHORE LEAVE: Shore leave granted except when individua qualified.

IDENTIFICATION CARDS: Immigration Form I-95 card required.

GARBAGE DISPOSAL: Browning-Ferris Ind. (solid waste sys Tel: 713-635-7777.

WASTE OIL DISPOSAL: Waste Management of Houston. Te 695-4055.

SEAMAN'S CLUBS:

Barbours Cut Seafarers' Center, P.O.Box 1434, Laporte, TX 77571. Tel: (713) 470-2414.

At the Turning Basin, Houston International Seafarers' Center, (H.I.S.C.), P.O.Box 9506, Houston, TX 77261-9506. Tel: (713) 672-0511. Facilities include chapel, library, gift shop, cafe, T.V., table tennis, pool tables, outdoor track and canopied basketball court.

Volunteers from both centres will pick up seafarers at the dock. Please call as early in the day as possible to make arrangements.

DEVELOPMENTS: Channel depths to be maintained at 40 ft.

Bayport Liquid Bulk Terminal has 2 privately owned Terminals (Baytank Inc. and Petro-United Terminals Inc.) operating the facility which is also open for public use.

The Barbours Cut Container Terminal has plans to build Berth No. 6 and expansion of the rail ramp adjacent to the facility is underway.

The multi-user Wharf Manchester No. 3 will start renovation in 1995 improving access to all.

SHIPMASTER'S REPORT:

Customs:

Bond remained sealed.

2 copies of Curio Lists.

2 copies Stores Lists.

1 copy Crew List.

Immigration:

No visit. 1 copy Crew List.

Agents:

Given Travelling copies of Clearance last port, Tax Tonnage receipt last port plus cargo manifests.

Agricultural Dept. Re-sealed meat and vegetable rooms. Inspected Galley Messrooms, etc. Garbage cans to be covered.

Provisions and Stores. Satisfactory. Select own ship chandler.

Laundry. Facilities available but not used.

Coast Guard. No visit.

National Cargo Bureau: Same as New Orleans.

Watchmen: None placed on board. Security at gate strict.

Telephone: None placed on board. Use dock office.

Fresh Water: Available.

Fuel: Available by barge if required. Do not over stem.

Engineering and Repairs: Efficient and satisfactory. Price high compared to N.Z.

Radio Messages: Send ETA after departure New Orleans to Agents and Houston Pilots with draft. Notify Agents of any explosives.

Stevedores: Hours of work. 0800 to 1200 hrs., 1300 to 1800 hrs., 1900 to 2300 hrs. Weekday gangs will work through meal hours to finish. At weekend, day labour works right through to midnight if necessary on time and a half then double time for meal hours.

Crew must not clean hatches. Labour has claim on cleaning and has to be paid in addition to crew. Crew open and close hatches, but not until hatch foreman present. Not before labour working hours.

Working heavy lifts with ship's gear loading rate very slow, especially at end of shift. Due to nature of deck cargo; 11 ton lifts 52 ft. long.

Constant supervision needed for deck cargo.

Head stevedore checks Factory Act Book before starting.

If detailed plan is required for break bulk (general cargo) additional clerk must be ordered.

General: Pilot boards from large grey metal cutter off Fairway Buoy. Flash every 2.5 seconds. Give good lee and have ladder 8/10 ft. above water with usual manropes, heaving line, etc.

If you have to anchor, most vessels use the Eastern anchorage about 1.5 miles East of fairway buoy and clear of fairway marked channel. Soft mud bottom. Use plenty of cable.

Berth: Ships spaced very close to each other. Rise and fall of tide about 1 ft.

Moorings: At least 4 head lines and stern lines plus 2 springs each end. Ships frequently passing and channel narrow consequently a good deal of surge. Lines to be frequently looked at and kept tight. Parted 3 springs in as many days!!! Gangway also to be watched. General rule is to use ship's gangway. Wide apron in front of sheds with rail lines but fork-lifts used most.

Agents have office on wharf with direct line to city office and outside lines.

Wooden piling which acts as fenders. Bollards of the large cleat type. Sufficient but not plentiful. Two linesmen each end when arriving and departing. No permanent cranes but mobile ones can be hired. Quay about 25 ft. above water.

Recommended not to walk about or up to bus especially at night. Better for 2 or more to get a taxi. Fairly good, 3–4 dollars to Houston.

Seaman's Mission near by. Very good, new and modern.

Tugs: Used for berthing and unberthing. Had 2 on arrival due to strong wind and close proximity of mast top to bridge.

Sailing had 1 tug lashed up alongside forward shoulder.

Tugs use own lines.

Bridge: There is a bridge above Upper Clinton Bend from Manchester on the South to Clinton Park on the North. This is a relatively new bridge to be passed under with a clearance of only 135 ft. Check the rise of tide on way up.

SHIPMASTER'S REPORT: August 1980.

Tenneco Terminal – Vessel discharged ammonia.

Approaches: B.A. Chart 975.

The safety fairway is usually very busy and it is advisable to ensure that you are in fact keeping to the starboard side.

At the entrance to the fairways there are many oil rigs. With the predominately low lying coast, radar positions are extremely difficult. Satellite navigator is highly useful in this respect. The first good check is off the buoys in the final safety fairway. These showed on radar at about 7 miles.

Some radar echoes are received from Galveston itself.

The charted rigs in Anchorage 'A' are in fact in those positions.

Pilotage: If anchored, the pilot boat will call vessel into the "Whistle Buoy" for boarding.

The cutter is a large, fast launch and usually lies inside until working a vessel.

Pilot ladder about 8 ft. from the water to clear the boarding platform.

Contact can be made via Galveston Pilots initially on Channel 16 who will relay the messages. Houston Pilots themselves work on Channel 14.

One Pilot, the length of pilotage is about four hours to the first line ashore. Two tugs used.

No night time pilotage for a vessel of this size (32,000 g.r.t.) and type. There is a TV video surveillance system operating throughout the length of the channel.

Berth: About 4 miles below Warren Terminal.

Plant and terminal now owned by Occidental (Oxy) but Tenneco rent the berth.

Berth is far too small for this vessel, at least as far as the moorings are concerned. Typical American 'T' barge jetty, the head of which is only about 25 m. long, with walkways leading to 3 dolphins at each end. The bow and stern overlap these mooring dolphins and head and stern lines are taken to posts on the river bank. These are only breast lines and it is advisable to make advance preparations to put out as many as 4 springs at each end. There is a great deal of traffic passing continuously.

Gangway: The gangway should remain stowed until in position. Whether vessel can use the accommodation ladder will depend on draft. If vessel deeper than 26 ft. there will not be sufficient clearance from the fender so a "B.O.T." type gangway resting on accommodation turntable will have to be used.

When the accommodation ladder is used it has to be turned through 120° and landed on the aft dolphin immediately adjacent to the jetty head.

Discharge: 12 in. flexible hose 150 ASA used. 'T' piece, two shore hoses.

Max. back pressure allowed is 50 p.s.i. Vapour return line is 4 in.

The plant ashore is only equipped to export cargo and its reliquefaction plant is small.

A shore walkie-talkie is placed with the officer of the deck.

Discharge rate can vary (October 1979 – 260 t.p.h., August 1980 – 550 t.p.h.).

Shore surveyors figure taken for bill of lading. Density 1001.

USCG: No inspection prior to commencement, apparently this is normal. The port is far too busy for them to visit every ship. But be prepared, they are very particular on navigation equipment and Officers' Certificates and experience.

General: It is possible to load bunkers by barge alongside the terminal if prior arrangements and permission are obtained but it depends on Agent and Authorities.

Fresh water is available from the jetty, at a very low rate.

Storing can present difficulties as the after crane does not plumb the dolphin. By arrangement, vessel can use shore crane when the operation is not too difficult.

Public telephone on dock – minimum charge 25c.

Liferaft service available, 24 hours' service.

A considerable distance from the city, which rather complicates services and communications.

Agents leave a radio onboard for contact with Agent and office, but often outside range, office on maximum range.

No private transport (taxis) allowed into refinery area. Transport to the gate by their own minibus and then telephone for taxi. Crew transport service allowed into berth area with pass from Agent.

SHIPMASTER'S REPORT: October 1991.

Approaches: Galveston Light is visible at over 25 miles. There are Racons on the oil rigs in the approach safety fairways which are conspicuous. The "G.B." Buoy is equipped with a Racon and is also conspicuous.

Anchorage: The Fairway Anchorage is to the East of the "G.B." Buoy and the traffic separation area. It is often very crowded and has poor holding and there is no shelter.

Bolivar Roads Anchorage off the Inner Bar Channel near Galveston is the only inner anchorage for vessels awaiting berths that have been cleared inward. This anchorage is often used by vessels changing berths or awaiting berths.

Pilotage: The pilot boards and leaves near the "G.B." Buoy from a large cutter which is nearly always on station outside the Galveston breakwaters. The cutters have accommodation for 5 pilots and maintain watch on VHF Channel 14.

The pilot requires 6 hours notice of ETA when arriving from sea, with updates every 2 hours. The pilot for sailing from the berth requires an initial notice of 4 hours and if a vessel is delayed, the pilot can be re-ordered within 2 hours.

The distance from the "G.B." Buoy to Deer Park Basin is 41 miles and time from pilot boarding to first line ashore is about 4 hours.

There is no dock pilot. The sea pilot docks vessels and also boards for shifting in the berth.

The channel depth is maintained at 40 ft.

Tugs: Tugs are supplied by Bay Houston Towing Co., who have about 10 tugs up to 4,500 h.p. stationed at Houston. They usually secure "American Style".

Services: Laundry: Ship's Laundry of Houston were very good and prompt and provide a 24 hour service. Tel: 713-661-5315.

Supplies: We used Cross & Co. (Tel: 713-673-3100. Telex: 775602) who we found to be very good. The quality of provisions was also good.

Telephones: The agent provides a mobile telephone and pager unit for the Master. Only U.S. calls are possible.

At Paktank 1 there is a telephone in the dock office adjacent to the dock.

At Paktank 2 there is a telephone adjacent to the dock.

At Paktank 3 no telephone is available.

At ITC 1, 2 and 3 there are telephones about 100 m. West of ITC 1.

Airport: It takes about 1 hour to get to Houston International Airport, which is North of the ship canal.

Berthing:

Paktank 1: The berth is an 'L' shaped pier with a length of 50 m. and depth alongside 35 ft. Vessels can berth either side alongside. Ship's gangway required. Fresh water not available. Stores cannot be taken at the berth. Flexi-hoses are required for handling of products. Crane available. We loaded Exxon additives at 140 tonnes/hr. per line.

Paktank 2: The berth is located in the N.E. corner of the basin and vessels can berth either side alongside. The length of the berth is 80 m. and depth alongside 35 ft. This is the best berth for storing of all the berths as trucks are allowed within 25 m. of the ship's side. A crane is available for hire at U.S.$100.00 per hour. No fresh water available at the berth. Ship's brow gangway required.

Products are handled through flexi-hoses or Chicksans. Additives are loaded either from Paktank storage tanks at 150 tonnes/hr. or from manufacturing facility which is about 5 miles away but the rate is only 30 tonnes/hr. Shore cranes are available for hose handling.

Paktank 3: The berth was completed in 1990 and is in the main ship canal. The location of the flat faced concrete pier is Lat. 29° 44.89′ N., Long. 95° 05.88′ W. The length of the berthing face is 100 m. and the depth alongside is 40 ft. The fendering system is good and is made up of flat shock spring timber and rubber. When berthed alongside, the vessel heads up channel with port side alongside. Ship's brow gangway required. Products are handled through flexi-hoses and there are cranes available for hose handling. We loaded additives at 120 tonnes/hr. per line. No fresh water available. Store trucks may not proceed closer than 100 m. from the vessel. Good moorings are required, they should be kept tight at all times due to passing traffic.

ITC 1: The berth is a flat faced concrete jetty on the S.W. side of the basin. Vessels berth head in only, starboard side to. Fresh water available at a very slow rate. Good berth for handling of stores. Ship's accommodation ladder can be used. Flexi-hoses required for handling of products.

ITC 2: This flat faced pier is an extension of ITC 1. Vessels can berth either side alongside. Depth at berth 33 ft. Fresh water available at a very slow rate but storing is not possible. A brow gangway is required at the berth. Flexi-hoses and Chicksans are available for cargo handling. We loaded additives at 180 tonnes/hr. per line.

ITC 3: The berth is opposite ITC 2 and has recently been dredged to 35 ft. Length of berth 150 m. Fresh water is available at a slow rate but storing is difficult. Vessels berth head in only, port side alongside. Brow gangway required. Chicksans and flexi-hoses are available for handling products.

Fuel: Bunkers are not usually taken at ITC Berths as a surcharge is imposed on the barges. No bunker surcharge at Paktank Berths.

AUTHORITY: Port of Houston Authority, P.O.Box 2562, Houston, Texas 77252-2562. (111 East Loop North, Houston, Texas 77002) *Tel:* (713) 670-2400. *FAX:* (713) 670-2564. *Contact:* H. Thomas Kornegay, Executive Director. John Horan, Director of Operations.

HUENEME, California: 34.09 N. 119.12 W. (See Plan)

PORT LIMITS: No laytime boundary. "Arrived Ship" status commences at berth dockside.

DOCUMENTS: See "San Francisco".

PILOTAGE: It is requested that ships entering port stand-by 1 mile off harbour entrance just seaward of the Port Hueneme seabuoy designated "R2" (Fl. R. 4 secs. Bell) and await port Pilot who will board from a tug. The U.S. Coast Guard Station at the Channel Islands Marina maintains a radio beacon. Contact Pilot or "Port Hueneme" on VHF Channel 16, shifting to Channel 14 for Administration; VHF Channel 65A for tug/pilot/bridge.

All vessels 300 g.r.t. and over or carrying a foreign flag entering, leaving and shifting within the Port of Hueneme, including area of the Oxnard Harbour District, must be piloted by a port Pilot duly licensed to perform the services of piloting vessels within the Port of Hueneme. The Oxnard Harbour District does not maintain Pilots; licensed Pilots are available on a 24-hour-a-day basis from Port Hueneme Pilots' Association (Captain Carl Dingler at (805) 984-4933).

ANCHORAGES: If there is a wait for Pilot caused by weather, visibility, congestion in harbour, or any other reason, the best anchorage area is W.S.W. of the harbour entrance where there are no hazards and there is some protection afforded by the natural curve of the coastline.

RESTRICTIONS: The length of entrance channel is 2,300 ft. The narrowest width of harbour entrance channel is 330 ft. However, because of prevailing fresh winds, this is a one-way channel; thus, deep-draft ships not able to manoeuvre easily in a restricted channel have precedence over smaller craft. Vessels may enter/leave at any time day or night.

MAX. SIZE: Due to the 1,400 ft. × 1,200 ft. turning basin, vessels with greater length than 700 ft. requires U.S. Navy permission to enter. Longest vessel berthed in harbour was 826 ft. Vessels draft normally to be 2 ft. – 3 ft. less than water depth.

HEALTH: See "Health: All Ports" before first U.S.A. port (Alba Illness Reports made to Los Angeles Quarantine Station.

Ships required to pass quarantine may enter port and moor. "Q" Fl is to be flown. Upon mooring, ship must post gangway watch until sh has passed quarantine. When Port of Hueneme is its port of first arri in the United States from foreign ports or from States other th California, a ship must be inspected by the Department of Agricultu There is a local representative in Oxnard. The Oxnard Harbour Distr will order officials if requested by ship or Agent.

RADIO: The "Port Hueneme Wharfinger" guards Channel 16 and w normally shift to Channel 14 for administrative purposes. The harbo tugs guard Channel 16 continuously. The harbour Pilots, when expecti a commercial merchant vessel guard Channel 16 voice circuit and voi call "Port Hueneme Commercial Pilot".

Tugboat working frequency is VHF Channel 65A (156.275 MHz).

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Tug services for Port of Hueneme are furnished by the Oxna Harbour District, Port Hueneme, California. Requests for tug servic may be made to the Executive Director or Director of Operations of th Oxnard Harbour District, who will act as Agent for ship in forwardi them. 3 tugs are available on a 24 hour basis. The tugs are 3,000 s.h. single and twin screw vessels. The number of tugs to be used on a movement is determined by port Pilot in charge of the movement. Tu are not available for deep-sea towing, except in case of emergency t save life or property. A twin screw 500 h.p. pusher/pilot boat is al available for small tows and assistance work. As a service to all vesse the Oxnard Harbour District, acting as Agent for vessel, will pay all t fees to United States Government when necessary, subject t reimbursement conditions as arranged between the vessel, her Owner or Agents, and the Executive Director, Oxnard Harbour District. Seldo are tug charges more than the minimum due to the short transit time t berths.

BERTHING: Berthing arrangements should be made with the Direc of Operations by Agent as far in advance of arrival date as possib specifying dates of arrival and sailing, and nature and quantity of carg to be handled. Agent is requested to submit Berthing Application in time manner. The Oxnard Harbour District also has a licence agreement wi the U.S. Naval Construction Battalion Center, Port Hueneme, for th use of additional berths and terminal facilities on an "as available" basi Prior arrangements must be made, should use of these addition facilities be desired or necessary. The Port of Hueneme has 5×600 f berths with depth 35 ft. MLW and appropriate terminal facilities. At th present time there are 11 deep-draft berths within the entire port are

Bottom is sand and mud. Mean low water is + 1.5 ft. Height of wha above the MLLW is 13 ft. 6 in.

CRANES: Many land cranes available which can handle loads up t over 100 tonnes in most cases.

STEVEDORES: Stevedore work is presently performed by reside stevedores, the Marine Terminals Corporation, Stevedore Services o America and Metropolitan Stevedoring Co., who also have offices in Sa Francisco, Long Beach, etc. MTC maintain an office at 111 Ponom Street, Port Hueneme; SSA at 241 Market Street, Suite 1 and MSC a P.O.Box 547, Wilmington, CA 90748. They provide modern handli equipment to suit cargo's need. There is no special fixed bulk handli equipment available as yet. Longshoremen are members of th International Longshoremen's and Warehousemen's Union and confor to the Pacific Coast Longshore Agreement. Hours of work are as outline in this agreement. Longshoremen at this port do all covering a uncovering of hatches and rig the gear. There are 8 gangs available the port. Day and night gangs for Tuesday through Saturday (exce Monday through Saturday, 1900 hrs. initial start) must be ordered b 1500 hrs. the previous day. Night gangs required Monday for a 1900 h initial start, and Sunday and Monday gangs must be ordered b 1100 hrs. Saturday. Cancellation time is same as ordering time, if gang which have been ordered are cancelled after the aforementione deadlines, the agreement's 4 hour minimum applies. Normal day shi begin at 0800 hrs. and normal night shifts at 1800 hrs. Each sh consists of 8 hours and on sailing day 10 hours may be worked by th final shift. There are no obstructions on the wharf to keep all hatche from being worked concurrently.

MEDICAL: Patients are provided with medical attention at the Medic Center, Port Hueneme, or St. John's Hospital, Oxnard Califor Temporary visa must be obtained from Department of Immigration a Transportation if a crew man or passenger must remain after the sh sails.

FRESH WATER: Fresh water is available. There are hydrants along t wharves and delivery to ship is effected by hose. Water is good to ta but is hard. It is not suitable for boilers. Contact wharfinger on duty f delivery of water. Boiler feed water is available by truck upon reque

FUEL: Diesel oil and bunker fuel is available by pipeline at Wharf No and by truck at all wharves.

REPAIRS: Minor repairs may be made in port. Machine shops in Ventu and Oxnard are qualified for normal voyage repair work.

GANGWAY/DECK WATCHMEN: Gangway or special wharf watchm are available upon request.

HOLIDAYS: U.S. Federal and State holidays are observed by the P and Terminal management. If stevedoring is required on holiday it performed in accordance with the International Longshoremen's a Warehousemen's Union-Pacific Coast Longshore Agreement.

TELEPHONES: Pay telephone booths are located at the centre of Wh 2 and 12 pay telephone booths on Wharf No. 1. The wharfinger's of has a telephone which may be used by people calling in to contact t ship. This telephone is manned 24 hours a day for convenience number is (805) 488-4615. The Port of Hueneme office telephones available to ship's officers and Agents for local calls or collect lo distance calls. Wharf lines permit a telephone to be installed at a nom charge if desired by Agent.

SHIP SUPPLY SERVICE: Port Hueneme Marine Supply, 700A Hueneme Road, Port Hueneme, CA 93041. Tel: (805) 488-0988. Fax: (805) 488-3141. Total ship chandlery, except food.

Allied Maritime Agency, 345A Ponoma Street, Port Hueneme, CA 93041.

AUTHORITY: The U.S. Navy (Commanding Officer, U.S. Naval Construction Battalion Center) exercises overall Port Control Authority; the Oxnard Harbour District is solely responsible for its commercial operations.

Port of Hueneme, Oxnard Harbour District, P.O.Box 608, Port Hueneme, California 93041-0608. *Tel:* (805) 488-3677. *Contact:* Robert K. Harmuth, Director of Marine Operations. Anthony J. Taormina, Executive Director.

HUNTINGTON BEACH, California: 33.38 N. 118.00 W. (See Plan)

LOCATION: Approximately 1.3 miles off Huntington Beach as shown on United States West Coast California San Pedro Channel Chart 18746, published by the U.S. Department of Commerce National Oceanic and Atmospheric Administration.

A lighted Bell Buoy "HB" is located 2,242 ft. from the spar buoy at the Western approach to the Seaberth. It is a private aid to navigation and is shown on the above chart.

PILOTAGE: Mooring Master will board the vessel in the Los Angeles area for an inspection and acceptance of the ship's mooring facilities. He may accompany this vessel, after agreement, to the Seaberth. On repeat visits, he may join vessel at Seaberth area.

RESTRICTIONS: In addition to max. size, wind force, wave height and direction in conjunction with mooring lines, sizes, place limits on conditions for remaining in the mooring. When these conditions are approached or predicted the vessel will return the submarine hose to the seabed after flushing, as necessary, to avoid damage to the crude unloading facilities. The determination of these limitation conditions is made by the Mooring Master and vessel's Master.

MAX. SIZE: Length 930 ft., beam 145 ft., draft varies depending on sea state.

TUGS: A mooring vessel will run the ship's lines to the buoys and serves also as a first response Pollution Control Vessel. It has aboard, for immediate deployment, 1,000 ft. of Model 3000 Expandi Boom.

BERTHING: *Multi Point Mooring:* Consists of 8 buoys. Water depth 50 ft. Tidal range 5 ft. to 6 ft. Bottom sand. Current max. 1.7 knots, excluding storm conditions.

Normal Mooring: Bow anchors and 7 buoys are used.

Mooring Equipment: Require 14 lines, either 9 in. synthetic or 1.25 in. wire rope minimum. Minimum length for 9 in. synthetic rope 720 ft. Minimum length of 1.25 in. wire rope on drum 720 ft. Both bow anchors serviceable with an appropriate length of chain for vessel's size according to Lloyd's or ABS requirement. Usual mooring conditions require 8 to 10 shackles of chain in the water.

A tug, charged to the vessel's account, is required to assist the vessel's approach, mooring, unmooring and exit from the berth.

If mooring wires are used, the synthetic tail or eye, if so fitted, must be in good condition and of 125 per cent breaking strength of the wire. The tail or eye, if so fitted, shall be connected to the wire with a Mandell Shackle or equal. A minimum pennant length of 30 ft. is requested for ease of handling by the mooring vessel.

General: The moorings at seaberth have been modified to allow handling of vessels up to 150,000 d.w.t. under certain wind, wave and sea conditions. This modification includes the repositioning of all buoys, increasing the size of the dip and riser chain to 3.125 in. and the installing of additional 5 ton anchors to supplement the 10 ton existing anchors.

No. 4 or D Buoy, which is at the stern of the vessel, has 2×3.125 in. dip and riser sections and 4 shackles of 3.125 in. chain. Mooring lines to this buoy are doubled during each mooring operation. Weight has been added to each buoy to decrease the buoyancy. An additional buoy, No. 8 or H, was added to allow the moorings to be used by barges.

DISCHARGING: *Lifting Equipment Requirements:* Derrick that can be utilised to lift the 12 in. hose from the seabed and swing the hose to the ship's manifold. Minimum lifting capacity, 5 tons.

Products Received: Crude, Naphtha and other refinery requirements.

Discharge Rate: Maximum 22,000 bbls./p.h. through 8 or 9 lengths (200 ft. – 225 ft.) of hose, 12 in. diameter into 22 in. I.D. sealine. Emergency flush possible from cross connected 10 in. line from shore. Pumping distance to shore tanks 9,479 ft. Height to shore tank 3 ft. – 4 ft. Tank height max. 39 ft. 6 in.

Temperature Limitation at Rail: Maximum product, Crude or Fuel Oil temperature of 150°F.

General: Refinery will furnish the Mooring Master with pertinent information on crude pours and vessel charter conditions, e.g. pump rates or lay time, in order that the Mooring Master can be fully appraised of the Charter Party Terms and conditions. Deviations from the Charter Party Terms furnished, if not correctable in discussions with the vessel's Master, will be discussed via radio with the Supervisor of Pipe-lines and Terminals to determine if a protest should be filed.

FRESH WATER: Not available.

FUEL: Not available.

BALLAST: No facilities.

GARBAGE DISPOSAL: Not available. See "Agriculture" before first U.S.A. port (Albany).

WASTE OIL DISPOSAL: Only as per 33 CFR 158.

SEAMAN'S CLUBS: None.

AUTHORITY: Berth within Los Angeles Customs District.

Operator: Golden West Refining Co., 13539 E. Foster Road, Santa Fe Springs, CA 90670. Postal address: P.O.Box 2128, Santa Fe Springs, CA. 90670. *Tel:* (310) 921-3581. *FAX:* (310) 921-7510. *Contact:* John W. DeVries, Manager, Shipping and Receiving.

HURON, Ohio: 41.24 N. 82.35 W.

Refer to St. Lawrence Seaway for important general information.

PILOTAGE: None required other than what is required for Great Lakes.

ANCHORAGES: Depth 3 to 10 fathoms.

MAX. SIZE: Length 716 ft., breadth 75 ft., draft 26 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: WMI Lorain.

TUGS: Meet vessel at the pier head. Use ship's lines.

BERTHING: Norfolk and Western Ore Dock, operated by the Lake Erie Dock Co., can handle 15,000 tons of ore in 8 hours. Ore slip is 1,400 ft. long with 26 ft. of water.

Limestone Dock, 700 ft. length with 26 ft. of water.

Grain loading facilities operated by the Pillsbury Company. Load speed, 20,000 bushels; unload speed, 15,000 bushels; berthing space, 832 ft.; max. length 610 ft.

STEVEDORES: None available.

FRESH WATER: Available.

FUEL: None available.

CONSULS: Nearest at Cleveland.

REPAIRS: No facilities.

REPATRIATION: No facilities.

AIRPORT: 50 miles from port (Cleveland International Airport).

POLICE/AMBULANCE/FIRE: 433-4114.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required by Immigration.

AUTHORITY: The Huron Joint Port Authority, P.O.Box 468, Huron, Erie County, Ohio 44839. *Tel:* (419) 433-5240. *Contact:* F.James, Chairman.

JACKSONVILLE, Florida: 30.20 N. 81.40 W. (See Plan)

DOCUMENTS:

Public Health:

Maritime Quarantine Declaration Form HSM 13.19.

Customs:

3 U.S. Customs Manifests for cargo to be discharged at first port of entry.

2 U.S. Customs Manifests covering all other cargo on board vessel for discharge at other than first port of entry.

3 Stores Lists.

3 Crew Lists.

3 Passenger Lists.

3 Curio and Crew Personal Items Lists.

Vessel's Clearance from last port.

Vessel's Register and Load Line Certificate.

Vessel Utilisation and Performance Report.

Form MA.578 for dry cargo vessels.

Immigration:

1 Certified Crew List and Landing Permit form I-95 for each crew member.

Valid Passport for each crew member.

PILOTAGE: Vessels approach Pilot Entrance Buoy STJ No. 2 (Red) approximately 6 miles at sea off jetty entrance to St. John's River. Pilot station located just inside jetty on river channel at Mayport Naval Station. Pilot station operates both VHF and HF frequencies, VHF Channels 16 and 18 A. HF Frequencies 2738 and 2182 kHz. Pilot cable address "Jaxpilot". Pilot boards from pilot boat "Jaxpilot" just East of Entrance Buoy STJ No. 2. Pilot boat does not maintain station at sea but answers call or is dispatched on information by vessels' Agents. Vessels anchoring awaiting Pilot should anchor as near Entrance Buoy as safely possible.

ANCHORAGES: 2 anchorages located inside harbour near dock sites with depth of about 31 ft.

RESTRICTIONS: For vessel drawing not more than 38 ft. water no restrictions and vessel can enter and clear harbour on 24 hour basis. Pilots and tug assistance available all hours day or night. Vessels drawing more than 38 ft. required to await tide.

MAX. SIZE: Draft should not exceed 38 ft. for dry cargo vessels and tankers.

Note: St. John's Bar Pilot Association advises max. draft 37 ft. (20th April, 1982).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Tropical Radio, Miami, Fla. Call letters WAX. Lantana Radio, Boynton Beach, Fla. Call letters WOE.

TUGS: Under normal conditions with vessels able to proceed under own power, tugs approach vessel in vicinity of pier at which vessel is to dock. Tugs use own lines but no charge made.

BERTHING: Vessels can dock day or night. Transit time from pilot station to berths about 2 hours.

Blount Island Terminal: Operator: Jacksonville Port Authority. Length of berth, 6,300 ft. Depth alongside at MLW 38 ft. (11.6 m.). Containers, autos, paper and general cargo are handled.

Blount Island has 3 on-terminal transit sheds with a total cargo floor area of 372,000 sq. ft. There are also 357 acres of paved open storage area. For cargo handling, Blount Island offers 3×40 ton capacity Paceco container cranes, 2×40 ton capacity IHI container cranes, 3×70,000 lb. container stackers; a 100 ton capacity gantry crane; a 40 ton Le Tourneau straddle hoist; a 50 ton capacity gantry crane; 2 self-propelled multi-level rail car automobile loading ramps; and 390 reefer outlets. 2 Ro/Ro berths. Berth No. 1, depth 38 ft. Berth No. 2, depth 30 ft.

Tallyrand Docks and Terminals: Operator: Jacksonville Port Authority. Length of berth 4,660 ft. Depth alongside at MLW 38 ft. Cargo handled – general, cars, lumber, containers, steel, coffee and petroleum.

There is over 275,000 sq. ft. of warehouse space available, with 40,000 cu. ft. being refrigerated. Talleyrand's cargo handling equipment includes 4×40 ton capacity container cranes; 1×100 ton multi-purpose, level luffing gantry Whirley crane; 1×50 ton gantry Whirley crane; 1×35 ton container stacker; 1×40 ton container stacker; 3×10,000 lb. capacity forklift trucks; 3×10,000 lb. capacity clamp trucks; 2×30,000 lb. capacity forklift trucks; 1×46,000 lb. capacity forklift truck; 310 refrigeration outlets; and tanker discharge facilities.

Talleyrand and Blount Island are served by railroad and truck service. 2 surface tracks on the pier apron and 2 platform-level tracks serve both facilities.

Commodore Point Terminal: Length of wharf 2,750 ft. Depth alongside 34 ft. Cargo handled: Oil, cement and liquid chemicals. Terminal also occupied by North Florida Shipyards. Storage facilities: Charter Oil; 340,000 barrels. Glidden – Durkee: 60,171 barrels for chemical storage. Atlantic Cement; 6 silos capacity 40,000 tons. Universal Atlas Cement; 6 silos capacity 32,000 tons.

Jacksonville Bulk Terminals: A subsidiary of Occidental Petroleum. Length of loading berth 1,000 ft. Depth MLW maintained at 36 ft. – 38 ft. 2 fixed loading towers capable of loading vessel at a rate of 2,850 long tons of phosphate per hour. Maximum outreach 81 ft., clearance above MLW of 40 ft. Terminal also capable of loading superphosphoric acid, phosphate rock, zircon sand (of sufficiently low moisture), granular fertilisers, tachonite, ilmenitite and mullite. Storage facilities: 6 concrete silos, each with a designed capacity of 5,000 tons of phosphate rock. Six tanks with capacities of 15,000 tonnes of superphosphoric acid each.

Dunns Terminal: Length of wharf 1,000 ft. Depth 38 ft. Leased for exclusive use by Military Sea Transportation Services.

Celotex Corp: Tel: (904) 751-4800. Berth: 635 ft. (205 m.) with dolphins. Depth: 32 ft. (9.8 m.). Terminal for receipt of gypsum rock by self-unloading vessels.

BRIDGES: Only 1 bridge that vessel would have to negotiate and that only if docking at Commodore Point terminal.

STEVEDORES: Master should keep Agents closely advised by radio of ETA and any amendments to first ETA given. Recommended that Master give ETA 72, 48 and 24 hours in advance of arrival. Enables ordering gangs or cancelling gangs ordered in event of delayed ETA.

MEDICAL: Hospital facilities available. International Vaccination Certificates required by all crew members.

TANKERS: All petroleum terminals provide own hose ranging from 8 in. to 12 in. Prior to arrival, Master should request information from Terminal Company size of connection required.

Private Terminals:

Amerada Hess: Tel: (904) 765-4427. Berth: 200 ft. (60.1 m.) with dolphins. Depth: 30 ft. (9.2 m.). Tank storage capacity: 460,000 barrels. Receipt of petroleum products.

Alton Box Board Company: Tel: (904) 353-3611. Berth: 750 ft. (230 m.) with dolphins. Depth: 24 ft. (7.2 m.). Receipt of residual fuel oil.

Eastern Seaboard Petroleum Company: Tel: (904) 355-9676. Berths 250 ft. (80 m.) with dolphins (1); 160 ft. (48 m.) with dolphins (2). Depth: 18 ft. (5.5 m.). Tank storage capacity: 1,266,000 barrels.

Shipping of petroleum products by barge; loading of barges for bunkering vessels at berth in the harbour; fueling of tugs and small vessels.

Gulf Oil & American Oil: Berth: 200 ft. (60.1 m.) with dolphins. Depth: 33 ft. (11.5 m.). Tank storage capacity: 900,000 barrels.

Gulf: Tel: (904) 765-5541.
American: Tel: (904) 768-2583.

Receipt of petroleum products and loading of barges.

Phillips Petroleum Company: Tel: (904) 353-6740. Berth: 205 ft. (60.2 m.) with breasting dolphins. Depth: 34 ft. (10.5 m.). Tank storage capacity: 243,000 barrels. Receipt of petroleum products.

Shell Oil Company Wharf: Tel: (904) 355-5521. Berth: 230 ft. (98 m.) with dolphins. Depth: 33 ft. (10 m.). Tank storage capacity: 448,500 barrels. Receipt of petroleum products; occasionally fuels towboats and loads barges for bunkering vessels at berth in the harbour. Light marine diesel fuel only.

Standard Oil Company Terminal: Tel: (904) 353-1094. Berths: Barge –300 ft. (92 m.) with dolphins; Tanker – 760 ft. (230 m.) with dolphins. Depth: Barge – 10 ft. (3.1 m.); Tanker – 32 ft. (9.8 m.). Tank storage capacity: 595,000 barrels. Receipt and shipment of petroleum products. No bunkering of vessels.

Texaco Pier: Tel: (904) 356-6344. Berth: 550 ft. (167 m.) with dolphins. Depth: 32 ft. (9.8 m.). Tank storage capacity: 320,000 barrels. Receipt and shipment of petroleum products; fuels towboats.

Report: *Approaches:* The Jacksonville Sea Buoy lies outside the entrance of the St. Johns River on the edge of the Gulf Stream where a strong Northerly current is usually experienced. The Sea Buoy ("2STJ") is a red/white, lighted and whistle (Morse (A)) buoy. A counter current setting to the South is usually found close along the coast just inshore of the Sea Buoy. Both the direction and velocity of currents and counter currents vary depending on past and prevailing weather conditions.

Broken ground with least depths of 4 to 5 fathoms lies from 4 to 6 miles from the coast for a considerable distance Northward and Southward of the St. Johns River entrance.

Numerous fish havens are Eastward of the entrance to St. Johns River; the outermost, marked by a private unlighted buoy, is about 27 miles Eastward of St. Johns Light.

All vessels should approach Jacksonville Sea Buoy from between S.E. and N.E. to avoid shallow water along the coast. There are many bright lights ashore at night which would cause confusion or mistaken identity with navigation lights. Refer to current N.O.S. charts regarding danger and cautionary areas.

Sea traffic, especially Southbound ships steaming inshore near the Sea Buoy to avoid the force of the Gulf Stream and take advantage of the counter current, may be encountered.

Naval vessels may be encountered entering and departing Maypo and may also be encountered on exercises outside the Sea Buoy ar

Entrance Channel: A Federal project provides for a channel depth 42 ft. from the ocean to St. Johns Point. A lighted whistle buoy is abo 2 miles off the entrance to the river. The 800 ft. wide entrance chann between 2 converging rubblestone jetties is marked by lighted buoy Two-way traffic is normal.

The echo sounder should be monitored continuously for any silt that may occur and findings reported.

Anchorages: Vessels waiting outside the entrance to St. Johns Riv can anchor in depths of 36 ft. – 50 ft. N.N.E. of the jetties if wind an sea permit. Anchorage South of the jetty is not recommended becau of heavy shrimp boat activity in that area.

Pilots sometimes anchor vessels in the channel opposite Maypo Basin or at St. Johns Bluff in emergencies or while waiting for weath to clear upstream; however, these anchorages are not recommende due to strong currents. A tug should be stationed alongside to ass turning during change of tide.

St. Johns River Designated Permanent Anchorages:

General (Upper) Anchorage: Located on the South shore o Commodore Point between Miller Creek and Empire Point. Vesse remaining in the anchorage more than 24 hours require a permit fro the USCG Captain of the Port.

Quarantine (Lower) Anchorage: Located in the area off the Tallyra Docks and Terminal. Use requires permit from the USCG Captain of th Port.

The holding ground in both anchorages is only fair and both a somewhat constricted. It is not recommended that vessels with dra over 34 ft. use these anchorages.

DENSITY: Varies from fresh water 1000 density to mixed salt wa 1007.5 density. St. John's River is fed from fresh water sources and most practical purposes may be considered fresh.

FRESH WATER: Potable water is available through hose connectio at all berths operated by the Port Authority. No water barges.

FUEL: Most grades marine fuels available ranging from bunker "C" light marine diesels with intermediate blends in between. Most major companies have bunkering facilities.

FIRE PRECAUTIONS: No smoking except in officers' lounge and crew lounge. No open flames. No sparking from funnel.

OPENING/CLOSING HATCHES: Crew may open hatches prior vessel's arrival at dock. After arrival at dockside this work reserved longshoremen. Vessels equipped with MacGregor type or oth automatic opening devices, crew may open hatches at any tim Longshoremen do not open and close these type hatches.

CERTIFICATES: Vessel Register, Load Line, Gear Certificate, Dera

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes per man. If vess remains in port over extended period of time, sea stores can be open under Customs supervision and additional allowances made. Win Spirits: No specific limits as to quantity allowed per man; Customs acc Masters' recommendations for allowances so long as they a reasonable. This applies to beers, wines and spirits.

GANGWAY/DECK WATCHMEN: Watchmen services available but n necessary.

CONSULS: Costa Rica, Denmark, Dominican Republic, Finla France, Germany, Guatemala, Italy, Netherlands, Norway, Spain a Sweden.

REPAIRS: All types engine and deck repairs possible. 2 well-equip shipyards.

DRY DOCKS: 3 large dry docks of 18,000 to 33,000 tons capacity a 6 smaller with capacity of 1,000 to 12,000 tons.

STORING: See "Prelims".

1. Vessel can be stored by barge or truck.
2. No regulations concerning barge storing except when vessel is loading or discharging dangerous cargo.
3. Trucks can proceed alongside at the berth.
4. Yes, fork lift trucks can be used on the jetty to handle stores.
5. Customs regulations in force regarding storing – ship's stores usually supplied free of U.S. excise taxes and supplies (such as alcoholic beverages and tobacco products) must be loaded under the supervision of the U.S. Customs Service for tax exemption to apply.
6. If possible, local Riggers can be employed to assist with storing but usually deliveries are made directly by the supplier.

SHORE LEAVE: No restriction on shore leave if not detained by Immigration.

IDENTIFICATION CARDS: Form I-95A only.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany).

Various local companies can provide these services. Contact agent for details.

WASTE OIL DISPOSAL: Environmental Recovery Group, 251 Levy Road, (P.O.Box 548), Atlantic Beach, Florida 32233. Tel: (904) 241-2200. Fax: (904) 241-4732. This company has the necessary licences and permits to carry out this type of work and offers a large range of services and equipment. Charges vary with type and quantity of oil.

SEAMAN'S CLUBS: Seafarers Fellowship has two local facilities, one at Blount Island and the other at Talleyrand Avenue. Contact Charles Lawhon, Director. Tel: 751-3785 (Blount Island), 633-9971 (Talleyrand), 744-9685 (Home). Usual facilities provided including indoor games, postal and telephone, TV, newspapers, books, bibles and church services.

CURRENCY: U.S.Dollar (U.S.$).

REGULATIONS: No garbage to be disposed overside, no pumping of dirty ballast into river. Smoke emissions must be controlled to minimum.

AUTHORITY: Jacksonville Port Authority, P.O.Box 3005 (2831 Talleyrand Avenue), Jacksonville, Florida 32206-3496. *Tel:* (904) 630-3070. *Telex:* (510) 600-2478. *FAX:* (904) 630-3066. *Contact:* C. Mendoza, Managing Director.

JUNEAU, Alaska: 58.18 N. 134.24 W.

Located at N.E. side of Gastineau Channel, 8 miles from Stephens Passage. Juneau is the capital of Alaska. Open all year.

DOCUMENTS: See "Anchorage, Alaska".

APPROACHES: Via Chatham Straits, Lynn Canal and Stephens Passage.

PILOTAGE: Pilot provided by Southeast Alaska Pilots Association. Pick–up point is Guard Island.

Also see "General" – "Pilotage" before first U.S.A. port.

ANCHORAGE: 16 fathoms in centre of Juneau Harbour.

Restrictions: A Safety Zone has been established, comprising the area between the shore and a line extending 9 cables N.W. from No. 2A light-buoy. Within this zone, which is effective from June 1st to September 30th annually, no vessel other than passenger carrying vessels of 500 gross tons and over (including cruise ships and ferries) may anchor without the express consent of the Captain of the Port. There is no restriction on vessels navigating within the area.

MAX. SIZE: Harbour depth 15/19 fathoms. Tides: diurnal range 16.4 ft. Also see "Berthing".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

CUSTOMS: Quarantine, Immigration and Customs, locally.

BERTHING:

1. Foss Alaska Line Dock: berthing length 550 ft. 36 ft. LW. No cranes.
2. Juneau Cold storage: berthing length 250 ft., 36 ft. LW. Cranes, 2 electric hoists, 3 lift trucks, 40,000 sq. ft. covered shed space. Fresh water.
3. Juneau Ferry Terminal: berthing length 400 ft. 32 ft. LW. No cranes. This is a Ro/Ro facility for wheeled vehicles and self-propelled or towed. 35 tons capacity. No covered shed space. Fresh water.
4. Coast Guard Dock: 750 ft. long, 31 ft. deep at face. No storage. Restricted use.
5. Trucano Construction Co. Dock: Length 500 ft. Crane with 90 ft. boom available, capacity 50 tons.

STEVEDORES: 1 gang.

MEDICAL: Hospital available.

FRESH WATER: Available.

FUEL: Available.

REPAIRS: Engine repairs possible.

TRANSPORTATION: Air and ferry.

AUTHORITY: The City and Borough of Juneau, Harbor Department, 155 South Seward Street, Juneau, Alaska 99801. *Tel:* (907) 586-5255, 9425. *FAX:* (907) 586-5367. *Contact:* Joseph L. Graham, Harbour Master.

KAHULUI, Hawaii: 20.53 N. 156.28 W. (See Plan)

DOCUMENTS:
4 Crew Lists.
4 Passenger Lists.
Customs Documents.
Clearance, Travelling Manifest.
Local Manifests.
Health Documents.
Bill of Health and Vaccination Certificates.
4 Manifests.
4 Bills of Lading.
Certificate of Registry.
Annual Inspection Certificate.
Load Line Certificate.
Derat Certificate.
Radio Certificate and Licence.
4 Stores Lists.

PILOTAGE: Request for Pilot normally made through Agent. Contact Pilot on VHF Channel 12. Pilot boards 0.25 mile East of Waihee Reef lighted Buoy No. 2. Anchorage 0.5 mile East of Buoy.

ANCHORAGES: No anchorage inside breakwaters. Only anchorage 0.5 mile East of Waihee Reef lighted Buoy No. 2 in 9 to 12 fathoms.

RESTRICTIONS: 24 hours' notice of arrival is obligatory. No tide restrictions.

MAX. SIZE: Max. length 700 ft. Max. draft 34 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Honolulu Quarantine Station. (Health: Tel. 244-4273.)

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany). (Agriculture: Domestic Overseas Arrivals Tel: 877-7801. Foreign Arrivals Tel. 244-3882.)

RADIO: Communicate through RCA or ITT stations in Honolulu.

TUGS: 1 × 1,500 h.p. tug stationed at Kahului. Additional tugs dispatched from Honolulu if necessary. Tug joins vessel between breakwater and Waihee Reef Lighted Buoy No. 2. Tug's lines normally used. No extra charge.

CARGO HANDLING: Kahului has 1 berth specially equipped to load bulk sugar. Matson Navigation Company operates a straddler to move Matson containers.

Young Brothers Ltd. operate a forklift to move containers.

Dock Load Limits: 500 lb./sq.ft. over the area supported by piles, cylinders or seawall. 1,000 lb./sq.ft. over the area supported by land or fill.

STEVEDORES: To be ordered by 1500 hrs. of day prior to operations.

MEDICAL: Hospital facilities available. Tel: 244–9056.

TANKERS: Discharge only. 12 in. line for molasses, 12 in. line for heavy fuel oil, 6 in. lines for light fuel oils. No slop discharge facilities. One berth available for tankers, max. draft 34 ft. Two berths available for barges.

FRESH WATER: Available from 2 in. water line at each berth. Rate of delivery about 200 gallons per minute.

FUEL: Small amount of diesel fuel and heavy fuel available in an emergency only.

REPAIRS: Minor deck and engine repairs only.

GANGWAY/DECK WATCHMEN: Services of watchman recommended, usually arranged by Agent.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes, 50 cigars per man, and 1 bottle wine or spirits. (Customs Port Director Tel: 877-6013).

AIRPORT: Distance to airport 1.5 miles. Served by Inter Island Airlines.

TIME: GMT minus 10 hours all year round.

POLICE/FIRE/AMBULANCE: Police 911; Ambulance 911; Fire 911.

EMERGENCY CO-ORDINATION CENTRE: U.S. Coast Guard: Tel. Honolulu 536-4336 or Locally Tel. 244-5256.

TELEPHONES: Arrangements made with Hawaiian Telephone Co. (Tel: 242-5211), to install on board.

STORING: 48 hours' free time for domestic cargo. 120 hours' free time for foreign cargo. Trucks allowed alongside to handle special cargoes; bulk and heavy lifts.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Rubbish bins are available on the pier. Bins are provided by contractor providing services. User must contact contractor directly for services. Contact:
BFI Waste Systems. Tel: (808) 871-9727,
Best Disposal Inc. Tel: (808) 871-8431, or
Maui Disposal Co. Inc. Tel: (808) 871-4917.
WASTE OIL DISPOSAL: Not available at present.
SEAMAN'S CLUBS: None.
DELAYS: Occasional delays due to limited berthing space and shortage of stevedore gangs.
AUTHORITY: State of Hawaii, Dept. of Transportation, Harbors Division, 103 Ala Luina Street, Kahului, Maui, Hawaii 96732-0216. *Tel:* (808) 877-6051. *FAX:* (808) 877-0554. *Contact:* James R. Costello, District Manager and Harbour Master.

AGENT: See "Honolulu".

KETCHIKAN, Alaska: 55.20 N. 131.38 W. (See Plan)

DOCUMENTS: See "Anchorage, Alaska".
APPROACHES: Port located on Revillagigedo Island. Open all year round. Ships coming from Hecate Straits or outside Graham Island proceed into Dixon Entrance to vicinity of Guard Island where the Pilot will meet them.
Vessels coming up the inside passage from Vancouver, B.C., are met at Lucy Island Pilot Station.
PILOTAGE: South Eastern Alaska Pilots' Association, Box 6100, Ketchikan, Alaska 99901. Telegraphic address; Alaska Pilots Ketchikan.
The Alaska Pilot Service requires 5 days, 48 hours, and 12 hours advance notice of ETA and can be contacted on Channel 16 VHF or 2182 kHz.
The pilot boat "Jenny B" (RG 2437) normally rendezvous with the vessel 0.75 miles from Guard Island.
Pilotage is compulsory for Cross Sound and Icy Strait. Vessels proceeding to the Point Retreat Pilot Station are excluded from compulsory use of a pilot if travelling via Cape Ommaney and Chatham Strait.
ANCHORAGE: Safe anchorage can be obtained in the area for deep draft vessels; however there are no specified anchorage areas.
MAX. SIZE: The largest vessel to be berthed to date is a 26,000 ton freighter; however larger vessels could be accommodated.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
RADIO: Cables to Agent, Receivers, and Pilots can best be routed through AKM Juneau.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Tugs can be arranged through the ship's Agent. Lines from tug are normally used with no additional charge.
BERTHING: City Berth I: Length 1,450 ft., depth 45 ft. LW.
City Berth II: Length 575 ft., depth 33 ft. with 2 mooring dolphins, combined length 780 ft.
Ketchikan Pulp Company (at Wards Cove, 6 miles North of Ketchikan): Private dock, berthing length 800 ft., depth 33 ft. at low water. 50 ton crane on rails, also mobile units and forklifts.
STEVEDORES: Stevedores obtained through shipping Agent. 24 hours' notice normally required.
4 or possibly 5 gangs available dependent on obtaining casual labour.
MEDICAL: Medical matters may be referred to shipping Agent. Excellent hospital and out-patient treatment facilities are available.
TANKERS: Tow lines (fire wires) required fore and aft.
FRESH WATER: Water available at City Berths. Contact Harbour Master for service charge.
FUEL: Fuel available for deep draft vessels: No. 2 Diesel and gasoline.
CONSULS: The nearest Consul is in Anchorage, Alaska.
REPAIRS: Excellent welding and machine-shop services are available.
DRY DOCKS: Ketchikan Shipyard, 600 ft., depth 30 ft.; 434 ft. floating dry dock. Facility in first stage of shipyard development.
GANGWAY/DECK WATCHMEN: Recommend security watch for passenger vessels. Watchmen can be arranged through the shipping Agent.
OPENING/CLOSING HATCHES: Done by longshoremen.
REPATRIATION: Repatriation matters can be handled through the shipping Agent and Immigration Officials.
AIRPORT: Daily flights to and from Seattle as well as points North may be obtained.
TIME: Ketchikan is on GMT minus 8 hours during the Winter and GMT minus 7 during the Summer. Time changes from first Sunday in April till last Sunday in October.
IDENTIFICATION CARDS: Crew identification cards are required by Immigration Officials.
GARBAGE DISPOSAL: Service can be arranged by ship's Agent with the City of Ketchikan, Solid Waste Department.
WASTE OIL DISPOSAL: Can be arranged with Ketchikan Shipyard Inc.
SEAMAN'S CLUBS: None.
AUTHORITY: City of Ketchikan, Port and Harbours Department, 334 Front Street, Ketchikan, Alaska 99901, USA. *Tel:* (907) 225-3610. *FAX:* (907) 247-3610. *Contact:* A.D. Ensley, Director.
Supervisor, U.S. Coast Guard, Marine Safety Detachment, c/o U.S. Coast Guard Base, Ketchikan, Alaska.

KODIAK, Alaska: 57.47 N. 152.24 W. (See Pla

Located near the N.E. tip of Kodiak Island in the Gulf of Alaska, So of Anchorage and East of the Alaska Peninsula.
DOCUMENTS: See "Port of Anchorage".
APPROACHES: North Entrance: Buoy No. 4 off Spruce Cape.
Pick-up Point: Hutchinson Reef Buoy.
East Channel Entrance: Humpback Rock off Cape Chin Steer 280°T until reaching St. Paul Buoy.
PILOTAGE: Pilot can be contacted through Southwest Pil Association in Homer, Alaska, Tel: (907) 235-8783, Fax: (907) 235-61 24 hours' notice should be given when requesting a Pilot. Pilot Sta Lat. 57° 44′ N., Long. 152° 22′ W. (2.0 miles × 100° from St. Pa Harbour Entrance Lt.).
Pilot boat is tug "Kodiak King". Tel: (907) 486-5503. V Channels 10, 12 and 16 and Single Side Band 4125 kHz.
ANCHORAGES: Safe anchorage between Puffin and Gull Islands Ea of shipping channel.
Prohibited Anchorage: The City of Kodiak has declared that vessels a prohibited from anchoring within the Inner Boat Harbour Light 1 (LL 3536.10) to a point at position 57° 46′ 56″ N., 152° 25′ 09″ W., the to the North Pacific Fuel Pier (formerly the old Union Oil Pier at posi 57° 47′ 05″ N., 152° 25′ 18″ W.) due to possible fouling and damage waste water discharge from the canneries in that vicinity (St. P Harbour anchor zone).
Note: Mooring buoys available in St. Paul inner anchorage and St. Herman Harbour.
MAX. SIZE: Harbour depth in excess of 30 ft. Tides: Range appro imately 10 ft.
HEALTH: See "Health": All Ports before first U.S.A. ports (Alban Illness Reports made to Seattle Quarantine Station.

TUGS: Alaska Tug and Salvage: Tel: (907) 486-5503. Radio Call Si WYN66116. VHF Channel 10, 12 and 16. SSB 4125 kHz.
BERTHING: Pier 1/Ferry Dock: 204 ft.×28 ft., 26.6 ft. at MLL Use: Mooring, loading and unloading and bunkering.
Pier 2/City Dock: 925 ft.×64 ft., 38 ft. at MLLW. Use: Loading a unloading commercial freight vessels, moorage for fishing vesse Covered warehouse space available. 20 ton and 90 ton cranes availab Various size forklifts.
Pier 3/Container Terminal: 490 ft.×64 ft. (880 ft. bollard to bolla 38 ft. at MLLW, container services/general cargo, 30 ton gantry cra available.
CRANES: See "Berthing" and "Stevedores".
STEVEDORES: Sea-Land Services, Inc., Operations Departme P.O.Box 2542, Kodiak, AK 99615. Tel: (907) 486-5795 or 486-4137.
Mobile cranes 20 tons, 40 tons and 90 tons available.
MEDICAL: Ample hospital facilities available. Also paramedics, docto dentists and optometrists.
FRESH WATER: Available through Harbour Master or stevedo company.
FUEL: Light fuels only. 2 fuel companies. 24 hour service available.
REPAIRS/SERVICES: Most deck, hull, engine, R/T, radar, gy hydraulic, electrical, refrigeration and most types of marine electro repairs. Divers available for underwater surveys and repairs.
SURVEYORS: Norm Holm, Box 365, Kodiak. Tel: (907) 486-5616.
DRY DOCKS: None available for large vessels.
AIRPORT: 5 miles from city centre. Various flights available depend on time of year. Ferry service available March to December.
POLICE/FIRE/AMBULANCE: Emergency 911, Police (907) 486-80 Fire and Ambulance 911.
EMERGENCY CO-ORDINATION CENTRE: Coast Guard, Search a Rescue (Kodiak Island) Zenith-5555 anywhere in Alaska. VHF Chan 16.
DEVELOPMENTS: The Port of Kodiak is responding to the increas activity by planning an ambitious 15 year program of developme Included is a proposal to build a 1,000 ft. deep draft pier to accommod commercial and military vessels, some 2,000 ft. of loading docks ins the harbour, plus dredging and development of additional staging are
AUTHORITY: Port of Kodiak, Harbour Department, 403 Marine Wa Kodiak, Alaska 99615, U.S.A. *Tel:* (907) 486-8080 or 486-80 *FAX:* (907) 486-8090. *Contact:* George V. McCorkle, Harbour Mast Port Administrator.

LAKE CHARLES, Louisiana: 30.13 N. 93.15 W. (See Pla

PORT LIMITS: Buoy No. 26, In Calcasieu Ship Channel, 3 miles Cameron, Louisiana.
DOCUMENTS:
U.S. Customs: If foreign cargo on board for discharge at any port
3 copies of Cargo Manifest of all Cargo.
3 copies of Crew List.
3 copies of Stores List.
3 copies of Curio List (crew personal effects).
3 copies of Passenger List if carrying passengers.
If vessel in ballast, only 2 copies of above documents required.
If vessel in ballast and carrying passengers, 3 copies of ab documents required.
1 copy of Clearance from last port.
2 copies of Customs Form 1300 (Master's Oath).
2 copies of Customs Form 1301 (General Declaration).

U.S. Customs Boarding Officer must examine Load Line Certificate, Safety Equipment Certificate, Tonnage Tax Receipt, Certificate of Financial Responsibility (Oil Pollution), Ship's Register and Ship's Certificate of Nationality (if any).

1 copy of Certified Crew List (If American Ship).

Bonded lockers may be sealed by Customs.

U.S. Immigration:

1 copy of Visaed Crew List from American Consul at foreign port of clearance (if any).

1 I-95 (Identification Card) for each crew member on board.

All Passports must be validated for each crew member.

U.S. Bureau of Etomolgy:

All meat lockers and freezers with restricted meat will be sealed. All fruit from prohibited countries will be confiscated. All animals or birds from foreign countries must remain on board.

PILOTAGE: Radio Agent ETA, who will arrange Pilot board at Calcasieu Bar. Vessel to stand-by on VHF Channel 66A.

ANCHORAGE: At Calcasieu Bar only.

RESTRICTIONS: Entrance channel 40 ft. depth. Distance 40 miles.

During LNG/LPG movements, special restrictions may be placed on the waterway by the local Coast Guard Captain of the Port.

MAX. SIZE: 1,000 ft. length, 38 ft. draft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

RADIO: Tropical – New Orleans, WNU.

AGRICULTURE: See "Agriculture" before first USA port (Albany).

VHF: Pilots may be contacted on Channel 12, 13, 65 and 66.

TUGS: Meet vessel 30 minutes away from berth. Use tugs' own lines. 2 for berthing, 2 for unberthing.

BERTHING: General Cargo Berths: 10 with total length: 5,675 ft. All have draft of 36 ft. (fresh water).

CRANES: Mobile pneumatic and track cranes available with lifts up to 50 tons.

BULK HANDLING FACILITIES: 3 bulk-loading berths: No. 1, West bank of Calcasieu River, 8 miles below main port facilities, 1,200 ft. length, 40 ft. depth, loading rate 1,600 t.p.h. Clam bucket type ship unloading crate, unloading rate of 600/800 short tons per hour.

No. 2, Contraband Bayou Section, main port, 920 ft. length, 35 ft. depth, loading 480 t.p.h. 16,000 long tons storage facilities.

SPECIALISED CARGO HANDLING FACILITIES: 1 berth suitable for Ro/Ro traffic. 2 berths at main port for liquid chemicals, No. 5 for heavy liquid import and No. 6 for import/export. Private berth for private company for receiving LNG.

BRIDGES: One bridge with vertical clearance of 135 ft.

STEVEDORES: Notice of firm ETA and request for gangs must be received prior to 1600 hrs. CST for work following day.

MEDICAL: Hospital facilities available.

TANKERS: Citgo Petroleum Corp. B-Dock, 673 ft. length, 36 ft. depth; C-Dock, 660 ft. length, 34 ft. depth; D-Dock 665 ft. length, 36 ft. depth. Also see "Shipmasters Report No. 1".

Continental Oil Co. Berth 1, 1,000 ft. length, 40 ft. depth; Berth 3, 1,000 ft. length, 40 ft. depth. (Also see "Report" dated April 1994).

PPG, 700 ft. length, 40 ft. depth.

Olin Corp. Dock: 400 ft. length, 28 ft. depth. Also see "Shipmaster's Report No. 2".

DENSITY: Salt water in Summer, fresh water in Winter. Allow density 1000 for drafts.

FRESH WATER: Available at all berths.

FUEL: Bunker "C" and diesel available at Cities Service berths; other berths served with bunkers by barge.

FIRE PRECAUTIONS: Usual precautions.

REPAIRS: Small repairs carried out only; very limited facilities.

DRY DOCKS: None.

SURVEYORS: 1. Cargo inspectors are available.
2. Surveyors are available.

GANGWAY/DECK WATCHMEN: Not required.

HATCHES: Rigging performed by stevedores. MacGregor-type hatches opened by crew, others by stevedores.

CARGO GEAR: Shore cranes available at ship's request.

CUSTOMS ALLOWANCES: At the discretion of Customs officers. Normal allowance is 200 cigarettes or 2 lb. tobacco and 1 litre wine or spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.

REPATRIATION: Facilities exist. Arrange through Agent.

AIRPORT: 7 miles from port. 26 flights per day.

TIME: CST, that is GMT minus 6 hours.

HOLIDAYS: Only 2 days affected on which no work carried out – Labour Day and Christmas Day.

POLICE/AMBULANCE/FIRE: Police or Fire, 911. Fire only 491–1350. Police only 491–1311. Ambulance 433–1677, 433–4411 and 433–1668.

EMERGENCY CO-ORDINATION CENTRE: United States Coast Guard, Sabine, Texas. Tel: (713) 971–2361.

TELEPHONES: None on board ship.

BANKS: Calcasieu Marine National Bank, 844 Ryan Street, Lake Charles, Louisiana 70601.

Premier Bank of Lake Charles, 3401 Ryan Street, Lake Charles, Louisiana 70605.

Gulf National Bank, 825 Ryan Street, Lake Charles, Louisiana 70601.

Lakeside National Bank, One Lakeside Plaza, Lake Charles, Louisiana 70601.

National Bank of Commerce, 535 Kirby Street, Lake Charles, Louisiana 70601.

STORING: See "Prelims".

1. Vessel can be stored by barge or truck.
2. Vessel can be stored during loading/discharging as long as it does not interfere.
3. Trucks can proceed alongside berth.
4. Forklifts can be used on docks.
5. No customs regulations for United States stores.
6. Longshoremen must be employed to assist in storing.

SHIP SUPPLY SERVICE: *Offshore Waters Personnel Transfer:*

Air: ERA Helicopters, Inc., P.O.Box 6566, Lake Charles, La. 70606. Tel: (318) 478-6131.

Boat: McCall Boat Service, P.O.Box 186, Cameron, La. 70631. Tel: (318) 775-5685.

Inland Waters Personnel Transfer:

Land and Water: Port Shuttle, Inc., P.O.Box 1772, Lake Charles, La. 70601. Tel: (318) 433-1613.

SHORE LEAVE: Allowed if not detained by Immigration.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.

GARBAGE DISPOSAL: Service available from Browning Ferris Industries and Cities Service Highway.

WASTE OIL DISPOSAL: Service available from Ali Marine Inc., Lake Charles. Tel: (318) 436-8656.

SEAMAN'S CLUBS: Lake Charles Seafarers Center, 150 Marine Street, Lake Charles. Tel: (318) 436-1315.

DELAYS: Very few delays encountered at any berth.

SHIPMASTER'S REPORT No. 1: 1977.

Cities Services Oil Co., Clifton Ridge:

Location: Lat. 30° 09′ 32″ N., Long. 93° 19′ 30″ W.

Max. Size: Length 805 ft., beam 115 ft., draft 39 ft. (FW).

Density: 1005.

Restrictions: Vessels may berth and unberth at any stage of the tide day or night.

Anchorage: At Bar: 2 miles East of seabuoy in depth of 42 ft. For Bunkering: South of Clooney Island in Old Calcasieu River Channel in midstream.

Distance to Berth: Sea buoy to berth 45 miles.

Terminal Information: 2 × 10 in. Chicksan arms. Max. discharge pressure 150 p.s.i. Derricks not required. Accommodation ladder not required.

Services: Fresh water, provisions, fuel oil, diesel and lube, doctor, hospital, airport and laundry.

The following services are not available: Repairs, drydocks, Lloyd's Surveyor and slop tanks.

Telephone Numbers: Dock 318-583-2432. Terminal Supervisor 318-491-6121, 318-491-6437.

SHIPMASTER'S REPORT No. 2: 1979. Olin Chemical Berth.

Approach: If without Loran "C" or satellite navigator the approach at night can be awkward, best made in daylight.

Due to flat coastline, lack of European navigation aids (Decca and Racon) plus numerous oil rigs the entrance to Calcasieu River (like Sabine) is difficult to make.

Calcasieu and Sabine D/F good.

Numerous oil rigs South of buoyed channel which are either side of safety fairway. This corridor can be clearly seen on radar and provides a good longitude.

The soundings, in particular the 100 fathom line, give a good latitude.

The wreck buoy on chart 975 – (Approach to Calcasieu River) at Lat. 29° 19.5′ N., Long. 93° 12′ W. has been removed.

'CC' Buoy was picked up at 6 miles.

Pilot/Channel: (B.A. Chart 975). The channel is easy to follow as long as U.S. system of buoyage is remembered. Vessels under 30 ft. can go out of the channel on their starboard side leaving starboard hand buoys to port. This is quite in order up to Pilot Area No. 1. Do not go on port side or West as this is spoil ground.

A Westerly current sets across channel 90% of the time and up to 1 knot. The boarding area is as Vol. No. 6 ALRS. If vessel takes a Pilot at Area No. 3 it costs $300 more than No. 1 (not necessary unless vessel restricted by draft – 24 hour service).

Pilot boat is an ex-fishing cutter. White, very fast and strong. Minimum notice for Pilots: Boarding at Area No. 1 four hours, Area No. 3 six hours. For sailing from Lake Charles 2 hours. From Area No. 1, one Pilot to Lake Charles, from Area No. 3, two Pilots. Pilot will *not* use hoist.

VHF: Calcasieu Pilots Channels 12, 13 and 16. Difficult to contact pilot station until well into channel North of 'CC' Buoy.

Public Correspondence: Several stations in area – Port Arthur, Cameron, Erath, Lake Charles, a number, notably Erath and Lake Charles have the "80" Channels which they use in preference to "20" Channels. Very busy, but if you search around you can get through fairly quickly. As with all U.S. Marine Operators, overseas ships have difficulty if not calling 'Collect'.

Calcasieu Channel: About 35 miles to Lake Charles from breakwaters. 5 hours from Pilot Area No. 1 to 'Olin' Chemical Dock.

With Northerly wind and heavy rain on ebb, a current of up to 5 knots at Cameron at entrance just North of breakwater.

Bridge: Highway 102 gives 135 ft. clearance HW. 3.75 hours North of breakwater.

Draft: Max. transit draft of 38 ft. 6 in. (FW) from No. 30 buoy to Lake Charles Docks. We consistently had 39 ft. on echo sounder.

Tugs: 2 tugs of 2,500 h.p. and 3,200 h.p. secure in American style, port side, at bridge 102 and leave in same area.

Berthing: Olin Chemical.

Dock: At head of seagoing navigation at bridge interstate 10. In cut, so no traffic passing. New concrete pier upgraded from barge dock. Min. depth 30 ft. Head in, starboard side to. Vessel left at 0200 hrs. without difficulty.

Moorings: 3 headlines, 2 breast lines and 2 springs each end. Springs go on to bollards on the jetty and breast lines and stern lines on to hooks on the bank.

Cargo Hoses: 8 in. × 300 ASA and spool piece to 12 in. × 150 ASA. 3 lengths, ship connects. Takes about 1 hour to connect and disconnect.
VRL: No.
Venting: No, on shore there are detectors on the tanks for ammonia. Generally the wind is onto the works which makes the detection of venting immediate. Vessel has to wait for a change of wind from the North.
Samples: Taken by chemist of tank atmosphere before loading. Must have min. 97% NH_3 by volume before loading.
Rate: Max. 330 t.p.h. (15 minutes of notice if possible, to stop).
Nitrogen: Available but not for hose purge.

Fresh Water: Water on berth very acid. Difficult to get hold of fresh water barge.
Stores: Ship's crane can reach end of jetty. Also small crane on hose platform on jetty which can be used for stores. Lorry cannot get to ship's side.
Gangway: No difficulties. Some ships have to use pilot ladder.
Developments: LPG dock at Beacon 85/86 about half way up the canal owned by Citgo Petroleum Corp. Good mooring facilities. 1 Chicksan. Dredged area 1,000 ft. long, 45 ft. deep.

SHIPMASTER'S REPORT No. 3: June 1988.

Louisiana pilot's office works on Channel 66. Passage in and out varies between 2 hours and 5 hours, depending on tide and where vessel leaves pilot on way out.

The Customs District for this port is New Orleans.

At Conoco Berth (Clifton Ridge), their regulations prohibit the loading of any flammable goods while vessel discharging cargo. (I pointed out that we were discharging 66,000 tonnes of flammable goods, i.e. crude oil and on our return we were able to load flammable goods during discharge). However, vessels unable to take bunkers alongside and have to go further up river and then anchor, 1 shackle in water and lie against the bank. This means that vessels require 2 tugs when departing from anchorage.

REPORT: April 1994.
Berth: Conoco Refinery Dock – Dock No. 1 Facility.

Transit time from Pilot Station Buoy "CC" to dock is approximately 6 hours (No daylight restrictions in ballast or loaded condition).

Cargo/Commodities handled: Diesel, gasoline, naphtha, heavy oils, gasoil and kerosene.

Size and number of cargo hoses/arms: 1×12 in. arm.
Cargo arms connected by dock crew only.
Number of products handled simultaneously: Normally one.
Permanent line for nitrogen supply: Yes.
Fresh water available alongside: Yes.
Vapour recovery installation: Yes.
Average load rate: Diesel 6,000 bbls./hr.
Gasoline 4,000 bbls./hr.
Naphtha 4,000 bbls./hr.
Gasoil 2,800 bbls./hr.
Heavy oil 800 to 3,000 bbls./hr.
Size of pipeline from dock to shore tank: 4 in. to 16 in.
Distance of pipeline from dock to shore tank: 1.5 miles to 2 miles.
Store/provision deliveries permitted via truck only.

Dock No. 1 Restrictions:
Air draft restriction: 135 ft. mean low water (I-210 Bridge).
Maximum permissible height from waterline to manifolds: 50 ft.
Maximum permissible length alongside: 800 ft. (Can be 825 ft. – 850 ft. max.).
Maximum safety draft permissible alongside: 37 ft. fresh water (36 ft.).
No bunkers available at berth.
No bunker barge permitted alongside vessel.
No lube oil transfers permitted in bulk via barge or truck.
No stores/provision deliveries permitted via barge.
No dangerous goods delivery permitted via barge (Truck delivery permitted with permission from dock).
No cargo transfers permissible via barge.
No shore gangway available.
No shore ballast facility available.
No pumping overboard while alongside of any ballast from cargo tanks (only S.B.T. ballast permitted to be pumped overboard).
Request vessel to be inerted on arrival alongside.
Request vessel to always sail at even-keel.
Minimum mooring lines requested: 12 lines.
3 bow lines, 2 forward springs, 1 breast.
3 stern lines, 2 aft springs, 1 breast.
Prefer to use synthetic ropes for spring lines, bow and stern.
No engine or other repairs permitted alongside (require vessel's main engine power to be available at all times).

LONG BEACH, California: 33.45 N. 118.13 W. (See Pla

DOCUMENTS:
Certificate of Registry.
International Load Line Certificate – Tonnage Certificate (Admeasurement).
Inspection Certificate.
Derat Certificate.
Safety Radio Certificate.

Inbound cargo for discharge – United States must have a Travelle Manifest (Form 7527), original manifest, and dock inspection co covering cargo to be discharged at first U.S. port of entry, Custo Utilisation Form 1302 (Inbound), Form 1302A (Outbound) must be fi within 10 working days after vessel's entry at first U.S. port. Landi permits must be made out prior to arrival (Form I-95) for each crewma of alien origin for the U.S. Department of Immigration (and Form I-4 for each passenger of alien origin). 3 sets of Crew Lists (Form I-41 must be presented to U.S. Customs, plus 2 sets to the Immigra Inspector, and 1 for the U.S. Public Health Service (Quarantine), a 3 sets Stores Lists plus 3 sets Curio Purchases List for U.S. Custom

American Ships from Foreign Ports:
Safety Equipment Certificate.
Cargo Ship Safety Construction Certificate.
Customs Form CF 226 Affidavit of Repairs Abroad.
Certified Crew List.

Foreign Ships:
1 copy of Visaed Crew List for Immigration (Form I-418 & 5 copie Other forms may be necessary under certain circumstances, b normally can be taken care of after the vessel's arrival.

If a foreign vessel from a foreign port departs for a foreign port, 2 copi *of (Form I-418) covering crew changes in the United States* must b *submitted to the Department of Immigration upon sailing of the* vess

(a) Number of copies required: all single except as noted.
(b) The reports mentioned above are all government laws, requeste by U.S. Customs, U.S. Immigration, Department of Agricultu Public Health Service, and B.I.A.
(c) Purpose of documents: to record all vessel movements such a cargo, crew changes, health standards, etc.
(d) Procedure of presenting documents: documents must b presented to Quarantine Boarding Officer and Customs Brok and/or Agent, during or immediately after Quarantine.

PILOTAGE: Pilots ordered by local Agents. Order placed by telepho to 435-6354/5. Pilots require 2 hours notice prior to arrival. Pilot sta contacted on VHF radio Channel 12 (156.6 MHz) or Channel 16 (15 MHz). Call sign KMA – 372 Long Beach Pilots. Pilot boats motor cruise light grey, fly International Flag "H". Local whistle signal for a Pilot ship's whistle, 1 short and 1 long blast. Pilot boat normally meets vess in vicinity Long Beach Sea Buoy or approximately 1 mile South breakwater entrance. Vessels should have a Pilot ladder on starboa side, weather permitting. In bad weather vessels may be required proceed inside breakwater entrance prior to Pilot boarding. Pilot bo on VHF Channel 13.

Shipmaster's Report: March 1994.
Vessels en route to Long Beach must contact "Long Beach Pilot' VHF Channel 74.

APPROACHES: VTIS: See "Los Angeles".

ANCHORAGE: Preferably outside anchorage approximately 0.5 m S.E. of Long Beach Sea Buoy in 66 ft. of water. Inside anchora available N.E of channel in outer harbour at approximately 8 fathoms water depth. Special explosive anchorages available by request, on b sides of entrance channel in 48 ft. of water.

U.S. Coast Guard Anchorage Regulations:
1. The Master of every vessel upon anchoring shall notify the Co Guard Captain of the Port giving vessel name, anchorage number a time anchored.
2. The Master of every vessel upon departing anchorage shall no the Coast Guard Captain of the Port giving vessel name, anchora number, time underway and destination; i.e., bound for sea or for be number.
3. For the above reports, the call to the Coast Guard Captain of t Port should be made on VHF Channel 16.

RESTRICTIONS: Vessels with dangerous cargoes aboard or loadin discharging such cargo within port district shall obtain permit from U Coast Guard, countersigned by Long Beach Fire Prevention Bureau a Long Beach Port Authority, subject to safety inspection prior ent assigned anchorage or berth. (Application for entry or hand dangerous cargoes must be requested by Steamship Compan authorised Agent and approved prior entry.)

Also see "Tankers" last paragraph.

MAX. SIZE: (1) Designed depth of water at general cargo berth 30 ft. – 42 ft. at MLLW.

The Entrance Channel is maintained at 65 ft. MLLW.

(2) No length or breadth restrictions at general cargo berths.

(3) Dry bulk facility berths designed depth at MLLW is 36 ft. to 5 No restriction on length. However, ships with over 130 ft. beam m experience some difficulty in loading without turning ship.

There are 10 bulk oil facilities, 2 with 76 ft. of water at MLLW a with 37 ft. to 52 ft. of water at MLLW alongside berths. It is feasible t vessels over 1,000 ft. in length could use the deep-water oil facil There are no restrictions as to beam.

HEALTH: See "Health: All Ports" before first U.S.A. port (Alb Illness Reports made to Los Angeles Quarantine Station.

QUARANTINE: Quarantine Station, U.S. Public Health Se 380 World Way, L.A. International Airport, Los Angeles, CA 90 Tel: (310) 215-2365. Hours: 0600 – 1800 hrs. regular boarding ho 1800 – 0600 hrs. overtime boarding hours.

STANDARD PROCEDURE FOR MARITIME BOARDING

Dockside Boarding: Vessels subject to Quarantine Inspection are normally boarded upon arrival in berth.

A vessel crewman should be stationed at the gangway to prevent any crew member from going ashore and shore personnel from coming aboard until the vessel has been passed by the Quarantine Boarding Officer.

Vessels are boarded at anchor.

Boarding in the Stream: Vessels are boarded at anchor:

Only if ship is to be at anchor for some time, such as waiting berth, etc.

Or upon special request by the ship's Agent.

Effective July 1st, 1973, Radio Pratique as a method of quarantine clearance was discontinued at all ports under control of the United States. Changes in regulations, policies, and procedures concerning Maritime Public Health Clearance has been promulgated.

Vessels Subject to Routine Inspection: Only vessels in the following categories will be subject to on board Public Health Inspection upon arrival at ports under control of the United States:

A. Vessels which, during the 15 days prior to arrival in the United States, or since the last U.S. port (whichever period is shorter) have or have had on board among passengers or crew any of the following conditions or illness signs or symptoms:

1. Temperature of 100°F (38°C) or greater (a) which persisted for 2 days or more; or (b) which was accompanied or followed by any one or all of the following: rash, jaundice, glandular swelling; *or*
2. Diarrhoea severe enough to interfere with work or normal activity; *or*
3. On board occurrence of death, regardless of the signs and symptoms above.

B. Vessels which have been in plague infected country in the 60 days prior to arrival in the United States.

Procedures: Vessels in any of the categories A or B above will be granted Provisional Pratique and boarded upon arrival for inspection. In addition, vessels boarded for quality control may be boarded upon or subsequent to arrival. IN ACCORDANCE WITH REGULATIONS YOU MUST INFORM THE QUARANTINE STATION, THROUGH YOUR VESSEL AGENT, AT OR NEAREST THE INTENDED PORT OF YOUR VESSEL'S FIRST ARRIVAL IN THE UNITED STATES OF THE OCCURRENCE OF ILLNESS AS SPECIFIED IN A ABOVE. Based on information you provide your Agent, or information your Agent already possesses regarding your vessel's itinerary, your Agent will notify the Quarantine Station if your itinerary included a plague infected country.

ARRIVING VESSELS NO LONGER NEED TO COMPLETE A MARITIME PUBLIC HEALTH DECLARATION UNLESS BOARDED FOR INSPECTION AS DESCRIBED ABOVE. THE BOARDING INSPECTOR WILL PROVIDE THE DECLARATION.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Station KOU Marine Operator, San Pedro.

Channel 1 — ship transmit on 2009 kHz
ship receive on 2566 kHz

Channel 4 — ship transmit on 2126 kHz
ship receive on 2522 kHz

Station KOU also monitors Channel 16 (156.8 MHz) and Channel 26 (157.3 MHz) for distress, safety and calling.

Hours of report 0805, 2005 PST. Operator gives notice 5 minutes prior to each report. No ship traffic is handled during report period.

TUGS: Tugs will meet vessel inside breakwater prior reaching inner harbour area. Pilot and tugs are in communication.

RADAR/VHF: Radar service provided to vessels only if Pilot aboard, in which case radar advisory information will be fed from shore-based radar at Pilot Station.

Use	*Channel*	*Frequency (MHz)*
Distress, Safety and Calling	16	156.80
Safety, S.A.R.	6	156.30
Bridge to Bridge	13	156.65

Marine Exchange Non-VTIS	14	156.70
Long Beach Pilots, KMA 372	12	156.60
Los Angeles Pilots, KEB 260	14	156.70
U.S. Navy, Control No. 2	12	156.60
Harbour tugs, primary	77	156.875
Harbour tugs, secondary	65A	156.275
San Pedro Marine Operator	24	157.20
San Pedro Marine Operator	26	157.30

Note: The Marine Operator does not guard Channel 16.

Channel 77 – Pilot/Tug channel: This channel is restricted to communications by a harbour pilot and support personnel in the movement and docking of ships. The use by commercial and recreational boat users is *in strict violation* of FCC rules. The loss of communications between a pilot and his assisting tugs due to interference by unauthorised users could result in a serious catastrophe within a harbour.

Channels 12, 14, 65A – Port Operations channels: Messages are restricted by FCC Rules to "the operational handling, movement and safety of ships and, in emergency, to the safety of persons." Other use is a violation of FCC rules.

Channel 13 – Navigational Bridge to Bridge channel: Use of this channel is restricted by FCC rules to navigational communications, such as meeting and passing arrangements, and vessel traffic services. No shore-based of this channel is permitted in this harbour area except Marine Exchange VTIS and the Cerritos Channel lift bridges.

Vessel Traffic Information Service: Upon entering the precautionary area, vessels are encouraged to contact the Marine Exchange on VHF Channel 13 (Call Sign KGW-299) to ascertain what vessel traffic may be expected.

BERTHING: No requirements as to time of entry providing berthing arrangements have been made with Port Authority. Assignments classified as follows:

Preferential Assignments. Secondary Assignments, Subordinate Right granted for use of Preferential Assigned Berth. Temporary Assignment – temporary permission granted to use certain berth.

Note: All berth assignments shall be held by Assignee subject provisions of Port of Long Beach Tariff as to charges, rates, rules and regulations applicable thereto, and to all of terms, conditions and provisions contained in such assignment.

Depths/Elevations: Average elevation of wharf decks above mean lower low water datum and design depth of water alongside berths below mean lower low water datum. (Design Depths are subject to change. Consult Pilot Station for latest information).

GENERAL CARGO FACILITIES:

Berth 1, 2:

Terminal Operator:	–
Cargoes Handled:	–
Total Terminal Area:	7.9 acres (2.8 ha.)
Length of Berths:	1,070 ft. (326 m.)
Wharf Height:	25.3 ft. (7.7 m.)
Wharf Area:	37,995 sq.ft. (3,530 sq.m.)
Apron Width:	34 ft. (10.4 m.)
Open Storage Area:	174,240 sq.ft. (16,204 sq.m.)
Loading Platform Area:	13,000 sq.ft. (1,208 sq.m.)
Design Depth of Water:	30 ft. (9.1 m.)
Transit Shed Area:	108,000 sq.ft. (10,044 sq.m.)
Special Equipment/Facilities:	Specialised equipment to handle unitised cargo. Also handles general cargo and containers.

Berths 3, 4:

Terminal Operator:	Cooper/T. Smith Stevedoring Co.
Cargoes Handled:	Steel, lumber.
Total Terminal Area:	8.5 acres (3.4 ha.)
Length of Berths:	1,000 ft. (304.8 m.)
Wharf Height:	22.4 ft. (6.8 m.)
Wharf Area:	34,075 sq.ft. (3,166 sq.m.)
Apron Width:	35 ft. (10.7 m.)
Open Storage Area:	275,000 sq.ft. (25,548 sq.m.)
Loading Platform Area:	11,505 sq.ft. (1,069 sq.m.)
Design Depth of Water:	30 ft. (9.1 m.)
Transit Shed Area:	99,840 sq.ft. (9,275 sq.m.)
Special Equipment/Facilities:	Mobile cranes, forklifts.

Berth 201:

Terminal Operator:	Port of Long Beach.
Cargoes Handled:	Standby berth.
Length of Berth:	600 ft. (183 m.)
Wharf Height:	16 ft. (4.9 m.)
Wharf Area:	18,000 sq.ft. (1,673 sq.m.)
Apron Width:	30 ft. (8.1 m.)
Open Storage Area:	12,000 sq.ft. (1,115 sq.m.)
Design Depth of Water:	32 ft. (9.8 m.)
Special Equipment/Facilities:	None.

Berth 208:

Terminal Operator:	
Cargoes Handled:	Fresh bananas.
Total Terminal Area:	5.7 acres (2.3 ha.)
Length of Berth:	600 ft. (183 m.)
Wharf Height:	19.1 ft. (5.8 m.)
Wharf Area:	24,000 sq.ft. (2,044 sq.m.)
Apron Width:	40 ft. (12.2 m.)
Loading Platform Area:	14,000 sq.ft. (1,300 sq.m.)
Design Depth of Water:	40 ft. (12.2 m.)
Transit Shed Area:	4 electric, travelling banana
Special Equipment/Facilities:	unloaders. Capacity 17,000 boxes (365 tons) per hour. Electric conveyor system from unloaders to trucks, with automatic computer controlled diverter system. Truck scale, maintenance building, 41,500 sq.ft. refrigerated warehouse.

Berths 12, 13:

Terminal Operator:	Chiquita Brands, Inc.
Cargoes Handled:	Bananas.
Total Terminal Area:	20.4 acres (8.3 ha.)
Length of Berths:	2,696 ft. (821 m.)
Wharf Height:	18.7 ft. – 22.2 ft. (5.7 m. – 6.8 m.)
Wharf Area:	108,462 sq.ft. (10,076 sq.m.)
Apron Width:	45 ft. – 200 ft. (13.7 m. – 61 m.)
Open Storage Area:	186,325 sq.ft. (17,310 sq.m.)
Loading Platform Area:	12,000 sq.ft. (1,115 sq.m.)
Design Depth of Water:	32 ft. – 36 ft. (9.7 m. – 11 m.)
Transit Shed Area:	180,000 sq.ft. (16,722 sq.m.)
Special Equipment/Facilities:	Mobile cranes, forklifts, Ro/Ro ramp. Heavy lift capability. Rail spur. 3 chilled storage refrigeration buildings.

Berths 17, 18, 28, 29:

Terminal Operator:	California United Terminals.
Cargoes Handled:	Breakbulk general.
Total Terminal Area:	30 acres (12.1 ha.)
Length of Berths:	2,190 ft. (688 m.)
Wharf Height:	10.5 ft. – 18.5 ft. (3.2 m. – 5.6 m.)
Wharf Area:	126,000 sq.ft. (11,705 sq.m.)
Apron Width:	45 ft. – 130 ft. (13.7 m. – 39.6 m.)
Open Storage Area:	288,600 sq.ft. (26,811 sq.m.)
Loading Platform Area:	9,000 sq.ft. (836 sq.m.)
Design Depth of Water:	36 ft. – 43 ft. (11 m. – 13.1 m.)
Transit Shed Area:	96,000 sq.ft. (8,922 sq.m.)
Special Equipment/Facilities:	Stevedoring equipment. Access for rail to heavy lift berths. Ro/Ro ramp.

Berth 122:

Terminal Operator:	Weyerhaeuser Company† Fremont Forest Products‡
Cargoes Handled:	Lumber and lumber products.
Total Terminal Area:	22.2 acres (9 ha.)†
Length of Berth:	600 ft. (183 m.)
Wharf Height:	22.9 ft. (7.0 m.)
Apron Width:	40 ft. (12.2 m.)
Open Storage Area:	210,000 sq.ft. (1,951 sq.m.)‡
Design Depth of Water:	40 ft. (12.2 m.)
Transit Shed Area:	3 dry storage sheds total 15,000 sq. ft. (1,394 sq.m.)‡
Special Equipment/Facilities:	150 ft. notched wharf to accommodate barges and lumber handling equipment. Notch height - 12.7 ft. (3.9 m.) Weyerhaeuser storage located at Berths No. 115-116.

Berths 204, 205:

Terminal Operator:	Cooper/T. Smith.
Cargoes Handled:	Recyclable steel for export, steel products, plywood and lumber.
Total Terminal Area:	19.7 acres (8 ha.)
Length of Berths:	1,265 ft. (386 m.)
Wharf Height:	18.5 ft. (5.6 m.)
Wharf Area:	130,000 sq.ft. (12,077 sq.m.)
Apron Width:	50 ft. – 150 ft. (15.2 m. – 45.7 m.)
Open Storage Area:	673,847 sq.ft. (62,600 sq.m.)
Loading Platform Area:	9,000 sq.ft. (836 sq.m.)
Design Depth of Water:	36 ft. (11 m.)
Transit Shed Area:	180,000 sq.ft. (16,722 sq.m.)
Special Equipment/Facilities:	Recyclable steel facility. Terminal services.

Berths 206, 207:

Terminal Operator:	Crescent Terminal, Inc. (SSA).
Cargoes Handled:	Steel products, plywood and lumb
Total Terminal Area:	22 acres (8.9 ha.)
Length of Berths:	1,200 ft. (366 m.)
Wharf Height:	18.5 ft. (5.6 m.)
Wharf Area:	57,500 sq.ft. (5,341 sq.m.)
Apron Width:	48 ft. (14.6 m.)
Open Storage Area:	530,000 sq.ft. (49,237 sq.m.)
Loading Platform Area:	13,800 sq.ft. (1,288 sq.m.)
Design Depth of Water:	32 ft. (9.8 m.)
Transit Shed Area:	190,000 sq.ft. (17,651 sq.m.)
Special Equipment/Facilities:	Stevedoring equipment.

Berths 50, 52, 53, 54:

Terminal Operator:	Forest Terminals Corp.
Cargoes Handled:	Newsprint.
Total Terminal Area:	13.8 acres
Length of Berths:	4 wharfs, 2,220 ft. (677 m.)
Wharf Height:	10.2 ft. – 17.1 ft. (3.1 m. – 5.2 m.)
Wharf Area:	63,645 sq.ft. (5,912 sq.m.)
Apron Width:	30 ft. – 38 ft. (9.1 m. – 11.6 m.)
Open Storage Area:	6.9 acres lumber storage
Loading Platform Area:	9,750 sq.ft. (906 sq.m.)
Design Depth of Water:	36 ft. (11.0 m.)
Transit Shed Area:	494,800 sq.ft. (45,968 sq.m.)
Special Equipment/Facilities:	Specialised ships and barges designed for newsprint vacuum handling, loading and unloading. Vacuum lift truck on dock. Easy access to L.B. Frwy. Minimum truck loading.

Berths 82, 83:

Terminal Operator:	Toyota Motor Sales, U.S.A.
Cargoes Handled:	Automobiles.
Total Terminal Area:	154 acres.
Length of Berths:	1,300 ft. (396 m.)
Wharf Height:	14.6 ft. (4.5 m.)
Wharf Area:	61,750 sq.ft. (5,737 sq.m.)
Apron Width:	95 ft. (30 m.)
Open Storage Area:	2,730,000 sq.ft. (253,617 sq.m.) 2,100,000 sq.ft. (195,090 sq.m.)
Design Depth of Water:	38 ft. (11.6 m.)
Special Equipment/Facilities:	Toyota Motor Sales, U.S.A. – and processing buildings, body shop, car wash, truck bed installation building.

Berth T118:

Terminal Operator:	Hiuka America.
Cargoes Handled:	Recyclable steel and steel
Total Terminal Area:	18.9 acres (7.6 ha.)
Length of Berth:	750 ft. (229 m.)
Wharf Height:	22 ft. (6.7 m.)
Wharf Area:	52,000 sq.ft. (4,832 sq.m.)
Apron Width:	65 ft. (19.8 m.)
Open Storage Area:	590,000 sq.ft. (54,813 sq.m.)
Loading Platform Area:	65 ft. (19.8 m.)
Design Depth of Water:	36 ft. (11 m.)

CONTAINER FACILITIES:

Berths 6, 8, 10:
Terminal Operator: Long Beach Container Terminal, Inc.
Total Terminal Area: 85.3 acres (34.5 ha.)
Length of Berths: 2,700 ft. (823 m.)
Wharf Height: 15 ft. (4.6 m.)
Crane Truck Gauge: 100 ft. (30.4 m.)
Clear Lift/Above Water: 105 ft. (32 m.)
Boom Outreach: 137 ft. (41.8 m.)
Backreach: 50 ft. (15.2 m.)
Open Storage Area: 3,216,000 sq.ft. (298,766 sq.m.)
Design Depth of Water: 50 ft. (15.2 m.)
Cargoes Handled: General cargo in containers.
Special Equipment/Facilities: Ground and chassis operation. 5 travelling container cranes of 40 long ton capacity; 45 tons without spreader. 7 transtainers, 4 high stacking. 10,000 TEU ground capacity, incl. 340 reefer outlets, 2,700 FEU chassis slots, 504 FEU chassis stacked vertically.

Berths 24 – 26:
Terminal Operator: California United Terminals.
Total Terminal Area: 75 acres (38.8 ha.)
Length of Berths: 1,950 ft. (594 m.)
Wharf Height: 11.3 ft. – 18.4 ft. (3.4 m. – 5.6 m.)
Crane Truck Gauge: 50 ft. (15.2 m.)
Clear Lift/Above Water: 98 ft. (29.9 m.)
Boom Outreach: 141 ft. (43 m.)
Backreach: 50 ft. (15.2 m.)
Open Storage Area: 2,520,000 sq.ft. (234,108 sq.m.)
Design Depth of Water: 41 ft. (12.5 m.)
Cargoes Handled: General cargo in containers.
Special Equipment/Facilities: 2 Ro/Ro ramps, one stern ramp. 5×40 ton travelling container cranes, transtainers, top handlers, side handlers. Container storage space for 14,400 TEU ground capacity, 2,500 FEU chassis slots, 360 reefer outlets. 11-lane main gate and 6 scales. Rail spurs.

Berths 227, 228, 229, 230:
Terminal Operator: Sea-Land Service, Inc.
Total Terminal Area: 95 acres (40.4 ha.)
Length of Berths: 2,550 ft. (778 m.)
Wharf Height: 15.6 ft. (4.8 m.)
Crane Truck Gauge: 100 ft. (30.4 m.)
Clear Lift/Above Water: 106 ft. (32.3 m.)
Boom Outreach: 115 ft. – 127 ft. (35 m. – 38.7 m.)
Backreach: 60 ft. (18.3 m.)
Open Storage Area: 5,317,200 sq.ft. (493,619 sq.m.)
Design Depth of Water: 42 ft. – 44 ft. (12.8 m. – 13.4 m.)
Cargoes Handled: General cargo in containers
Special Equipment/Facilities: Ground and chassis operation. 6×30 ton travelling container cranes. Space for 10,230 TEU containers, 2,550 grounded, 5,900 chassis, including 482 reefer chassis spaces. Container freight station separate from terminal with 71,150 sq.ft. (6,610 sq.m.). 4 transtainers.

Berths 232, 233, 234:
Terminal Operator: International Transportation Services, Inc.
Total Terminal Area: 109 acres (44 ha.)
Length of Berths: 2,300 ft. (701 m.)
Wharf Height: 16 ft. (4.9 m.)
Crane Track Gauge: 50 ft. – 100 ft. (15.2 m. – 30.4 m.)
Clear Lift/Above Water: 92 ft. – 115 ft. (29.3 m. – 35.1 m.)
Boom Outreach: 115 ft. – 145 ft. (35 m. – 44.2 m.)
Backreach: 35 ft. – 45 ft. (10.7 m. – 13.7 m.)
Open Storage Area: 2,980,460 sq.ft. (276,885 sq.m.)
Design Depth of Water: 36 ft. – 42 ft. (11 m. – 12.8 m.)
Cargoes Handled: General cargo in containers.
Special Equipment/Facilities: Ground and chassis operation. 3×30 and 4×40 long ton container cranes. 7×40 long ton and 6×30 long ton capacity transtainers. Space for storing 12,800 TEU containers on ground, including 384 reefer outlets. 4,000 TEU chassis slots. Container Freight Station with 70,000 sq.ft. (6,505 sq.m.).

Berths J245 – J247:
Terminal Operator: Pacific Container Terminal.
Total Terminal Area: 80 acres (32.4 ha.)
Length of Berths: 3,300 ft. (1,006 m.)
Wharf Height: 15.9 ft. (4.8 m.)
Crane Track Gauge: 50 ft. (15.2 m.)
Clear Lift/Above Water: 91 ft. – 106 ft. (27.7 m. - 32.3 m.)
Boom Outreach: 115 ft. – 125 ft. (35 m. – 38 m.)
Backreach: 50 ft. (15.2 m.)
Open Storage Area: 2,500,000 sq.ft. (232,250 sq.m.)
Design Depth of Water: 36.4 ft. – 42 ft. (11 m. – 12.8 m.)
Cargoes Handled: General cargo in containers.
Special Equipment/Facilities: Grounded and chassis operation. 6 travelling container cranes with 40 ton capacity, 40 ton transtainers. Athwartship and overweight capabilities. Space for storing 12,000 TEU containers. Complete reefer container services and storage with 168 reefer outlets.

Berths J266 – J270:
Terminal Operator: Maersk Pacific, Ltd.
Total Terminal Area: 107 acres (43.3 ha.)
Length of Berths: 2,711 ft. (826 m.)
Wharf Height: 15 ft. (4.6 m.)
Crane Track Gauge: 50 ft. & 100 ft. (15.2 m. & 30.4 m.)
Clear Lift/Above Water: 106 ft. (32.3 m.)
Boom Outreach: 115 ft. – 125 ft. (35 m. – 38 m.)
Backreach: 50 ft. (15.2 m.)
Open Storage Area: 2,787,840 sq.ft. (259,005 sq.m.)
Design Depth of Water: 43 ft. (13.7 m.)
Cargoes Handled: General cargo in containers.
Special Equipment/Facilities: Grounded and chassis operation. 2×50 ton and 4×40 ton ship to shore cranes. 3×40 ton rubber tyred gantry cranes. 4,147 TEU wheeled slots for containers, 100 of which are dual voltage 220/440 V. On-dock double-stacked rail yard.

Berths 60 – 62:
Terminal Operator: Hanjin Shipping Company.
Total Terminal Area: 58.9 acres (23.8 ha.)
Length of Berths: 1,804 ft. (550 m.)
Wharf Height: 15.0 ft. (4.5 m.)
Crane Track Gauge: 100 ft. (30.4 m.)
Clear Lift/Above Water: 115 ft. (35 m.)
Boom Outreach: 155 ft. (47.2 m.)
Backreach: 50 ft. (15.2 m.)
Open Storage Area: 2,477,689 sq.ft. (231,560 sq.m.)
Design Depth of Water: 45 ft. (13.7 m.)
Cargo Handled: General cargo in containers.
Special Equipment/Facilities: 3×40 long ton container gantry cranes, 50 tons with cargo beam. 4,000 TEU grounded capacity. 1,384×40 ft. chassis slots, 2,014 TEU stacked and 106 spaces for reefer boxes. Additional 3.2 acres of off-dock container yard.

DRY BULK FACILITIES:

Berths 32, 33:
Terminal Operator: Pacific Coast Cement Corp.
Cargoes Handled: Bulk cement.
Total Terminal Area: 2 acres (0.8 ha.)
Length of Berths: 1,100 ft. (335 m.)
Wharf Height: 13.8 ft. (4.2 m.)
Open Storage Area: 87,525 sq.ft. (8,131 sq.m.)
Design Depth of Water: 36 ft. (11 m.)
Special Facilities/Equipment: Silo capacity 50,000 tons. Screw-type unloader capacity 600-800 t.p.h., unloads to conveyor system direct to silos. Highest elevation vertical screw 70 ft., lowest elevation vertical screw 38 ft. Max. reach 94 ft. from face of wharf (concrete), 91.5 ft. from pierhead line. Vertical clearance under boom at MHW 89 ft., under vertical screw at MHW 20 ft. Truck loading spouts.

Berth 46:
Terminal Operator: Domtar Gypsum.
Cargoes Handled: Gypsum.
Total Terminal Area: 10 acres (4 ha.)
Length of Berth: 640 ft. (195 m.)
Wharf Height: 17.2 ft. (5.2 m.)
Design Depth of Water: 40 ft. (12.2 m.)

Berth 82:

Terminal Operator:	National Gypsum Co.
Cargoes Handled:	Bulk gypsum.
Total Terminal Area:	19.9 acres (8 ha.)
Length of Berth:	650 ft. (198 m.)
Wharf Height:	14.6 ft. (4.5 m.)
Open Storage Area:	65,340 sq.ft. (6,076 sq.m.)
Design Depth of Water:	38 ft. (11.6 m.)
Special Facilities/Equipment:	Adjustable, elevated receiving hopper served by an elevated electric belt conveyor system extending to a 40,000 ton capacity storage building. 800-900 t.p.h. capacity.

Berth F208:

Terminal Operator:	MCC-Lucky Cement Co.
Cargoes Handled:	Bulk cement.
Total Terminal Area:	4.2 acres (1.7 ha.)
Length of Berth:	520 ft. (158 m.)
Wharf Height:	18.9 ft. (5.8 m.)
Open Storage Area:	None.
Design Depth of Water:	40 ft. (12.2 m.)
Special Facilities/Equipment:	Kovako BV. Vacuum discharge system. Maximum outreach 45 m. Unloading capacity 800 t.p.h. Covered storage 50,000 sq.ft.; 58,000 ton capacity.

Berth 210:

Terminal Operator:	Morton Salt
Cargoes Handled:	Bulk salt.
Total Terminal Area:	5.1 acres (2.1 ha.)
Length of Berth:	1,100 ft. (335 m.)
Wharf Height:	19.0 ft. (5.8 m.)
Open Storage Area:	117,740 sq.ft. (10,938 sq.m.)
Design Depth of Water:	40 ft. (12.2 m.)
Special Facilities/Equipment:	Movable inclined elevated electric belt conveyor system with receiving hopper extending from wharf to stock pile area. Packaging plant adjacent.

Berth 211:

Terminal Operator:	Koch Carbon Co.
Cargoes Handled:	Petroleum coke.
Total Terminal Area:	12.8 acres (5.2 ha.)
Length of Berth:	1,100 ft. (335 m.)
Wharf Height:	19.3 ft. (5.9 m.)
Open Storage Area:	291,000 sq.ft. (27,000 sq.m.)
Design Depth of Water:	40 ft. (12.2 m.)
Special Facilities/Equipment:	Receipt, storage, blending and vessel loading of petroleum coke.

Berths 212, 213, 214, 215:

Terminal Operator:	Metropolitan Stevedore Co.
Cargoes Handled:	Bulk petroleum coke, coal, potash, borax, soda ash and prilled sulphur.
Total Terminal Area:	22.9 acres (9.3 ha.)
Length of Berths:	2,110 ft. (643 m.)
Wharf Height:	18.5 ft. – 18.8 ft. (5.6 m. – 5.7 m.)
Open Storage Area:	782,000 sq.ft. (6,691 sq.m.)
Design Depth of Water:	50 ft. (15.2 m.)
Special Facilities/Equipment:	Two electric, travelling bulk shiploaders.
Loader No. 1:	Outreach: 56 ft. (17.7 m.) Clear Height: 47.7 ft. (14.5 m.) Travelling Distance: 1,800 ft. (548.6 m.) Designed Capacity: 3,500 t.p.h. Actual: 1,500-2,000 t.p.h. Working hours: 16 hrs./day.
Loader No. 2:	Outreach: 79 ft. (24.1 m.) Clear Height: 64 ft. (19.5 m.) Travelling Distance: 700 ft. (213.4 m.) Designed Capacity: 5,000 t.p.h. Actual: 2,500-3,000 t.p.h. Working hours: 16 hrs./day. Rail Facilities: 100 car unit trains can be accommodated while waiting movement to dump sites. One rotary and 3 bottom-dump systems. Bulk materials are handled by 48 in. (1.2 m.) and 72 in. (1.9 m.) belt conveyor systems extended to shiploader through tunnel from storage facilities. Storage Capacities: Covered storage: 400,000 tons. Silo storage (Prilled sulphur): 30,000 tons (2×15,000 ton silos). $22 million in additions and improvements are scheduled for completion in 1994.

TANKERS:

Berths 30, 31, 32:

Terminal Operator:	Baker Commodities Inc.
Cargoes Handled:	Tallow, vegetable oils (coconut oi palm oil, cotton seed oil).
Total Terminal Area:	1.2 acres (0.5 ha.)
Length of Berths:	1,480 ft. (451 m.)
Wharf Height:	19.5 ft. (5.9 m.)
Design Depth of Water:	43 ft. (13 m.)
Special Facilities/Equipment:	2×6 in. pipelines from Wharf D-30 to storage tanks. Storage capacity 6.7 million gallons. Also 3×10 in. pipelines from Berth D-32 to storag tanks.

Berths 73, 74:

Terminal Operator:	Powerline Oil Company.
Cargoes Handled:	Crude oil and fuel oil.
Total Terminal Area:	2.8 acres (1.2 ha.)
Length of Berths:	830 ft. (253 m.)
Wharf Height:	11.7 ft. (3.6 m.)
Design Depth of Water:	37 ft. (11.3 m.)
Special Facilities/Equipment:	Storage capacity: 570,000 bbls.

Berths 76 – 80:

Terminal Operator:	ARCO Terminal Services.
Cargoes Handled:	Petroleum products: Gasoline, blending stocks, MTBE, diesel, naphtha jet fuel, nonenes tetramer fuel oils, carbon black, crude oil.
Total Terminal Area:	19.9 acres (8.1 ha.)
Length of Berths:	2,192 ft. (668 m.)
Wharf Height:	14.4 ft. (4.4 m.)
Design Depth of Water:	46 ft. (14 m.)
Special Facilities/Equipment:	Capacity for storage: 1,800,000 bbl Terminal has several pipeline connections to other companies. Loading arms on dock are 8 in. Chicksan and are capable of loadin rates of 10,000 – 15,000 bbls./hr. Three vessels can be loaded or discharged simultaneously.

Berths 82, 83:

Terminal Operator:	Petro-Diamond.
Cargoes Handled:	Gasoline, gasoline blend stocks, diesel, toluene, MTBE and lube oi
Total Terminal Area:	5.7 acres (2.3 ha.)
Length of Berths:	1,060 ft. (323 m.)
Wharf Height:	14.4 ft. (4.4 m.)
Design Depth of Water:	38 ft. (11.6 m.)
Special Facilities/Equipment:	Terminal has pipeline connections which allow petroleum products to be shipped to most L.A. Basin Refiners and common carrier pipelines. 1×8 in. dock hose connecting into one of 2×500 ft. 12 in. dock lines capable of receiving up to 7,500 bbls./hr. Tru rack at the Terminal is capable o loading 100 trucks per 24 hour period. Permits are available for DSP and bonded storage. Capacity for petroleum products: 410,000 bbls.

Berths 84, 85, 86, 87:

Terminal Operator:	Texaco Refining and Marketing.
Cargoes Handled:	Crude oil, petroleum products, bunker fuel.
Total Terminal Area:	10.7 acres (4.3 ha.)
Length of Berths:	1,980 ft. (604 m.)
Wharf Height:	16.8 ft. (5.1 m.)
Design Depth of Water:	52 ft. (15.8 m.)
Special Facilities/Equipment:	Discharge capacity 32,000 bbls. 24 in. pipeline to storage and tan farm. Storage capacity: 245,000 bbls.

Berth 101:

Terminal Operator:	Dow Chemical Co.
Cargoes Handled:	Miscellaneous bulk liquid chemic
Total Terminal Area:	10 acres (4 ha.)
Length of Berth:	700 ft. (213.4 m.)
Wharf Height:	15.5 ft. (4.7 m.)
Design Depth of Water:	36 ft. (11 m.)
Special Facilities/Equipment:	Dedicated pump and piping sys to transfer products to and from ships, barges, railcars and tank trucks. Storage capacity: 15 mil gallons.

Berth 121:

Terminal Operator:	ARCO Western Pipeline.
Cargoes Handled:	Crude oil and petroleum products.
Total Terminal Area:	11.7 acres (4.7 ha.)
Length of Berth:	1,250 ft. (381 m.)
Wharf Height:	20 ft. (6.1 m.)
Design Depth of Water:	76 ft. (22.4 m.)
Special Facilities/Equipment:	4×16 in. diameter articulated crude unloading arms and 1×8 in. diameter articulated bunker/diesel loading arm; 275 p.s.i. max. working pressure; designed to accommodate tankers from 50,000 to 265,000 d.w.t. tankers; arms are FMC Chicksan with hydraulic couplings. Storage tanks available at ARCO facilities in Carson and the inner harbour via 42 in. and 24 in. pipelines.

Berths 211A:

Terminal Operator:	Chemical Marine Terminal.
Cargoes Handled:	Petroleum products and bunker fuel.
Total Terminal Area:	6.2 acres (2.5 ha.)
Length of Berth:	1,630 ft. (496 m.)
Wharf Height:	19.1 ft. (5.8 m.)
Design Depth of Water:	40 ft. (12.2 m.)
Special Facilities/Equipment:	Storage capacity: 425,000 bbls. Pipeline system to handle ships, barges, trucks and railcars to Piers F, J, G, E and D. Pipeline connection to Carson Tank Farm, which supplies petroleum products to most L.A. Basin refiners and terminals.

Berth 242:

Terminal Operator:	Westway Trading Corp.
Cargoes Handled:	Miscellaneous bulk liquid chemicals. Vegetable oils and tallow.
Total Terminal Area:	4.5 acres (2.2 ha.)
Length of Berth:	700 ft. (213.4 m.)
Wharf Height:	15.0 ft. (4.6 m.)
Design Depth of Water:	36 ft. (11.0 m.)
Special Facilities/Equipment:	Pumping and pipeline system designed to handle product from barges, ships rail cars and trucks. Heavy duty pumps to handle a variety of bulk liquids. Storage tank capacity: 5.2 million gallons.

The following is part of a letter sent by the Captain of the Port to a tanker operator:

The safety of the port and the VLCC tankers using the harbour for bunkering and provisioning is of paramount concern to the Coast Guard. Consequently the following guidelines have been established for all such vessels 200,000 d.w.t. and larger when utilising the Outer Harbour (inside of the breakwater) of the ports of Los Angeles/Long Beach:

(a) Vessels may enter or depart the harbour areas inside the breakwater only during daylight if over 56 ft. draft.
(b) Minimum visibility of 1 mile is established for vessel movement.
(c) Adequate tugboat assistance shall be provided when passing through the breakwater entrances upon entering or departure, and when navigating inside the breakwater to and from anchorages.
(d) A qualified Pilot must be onboard when entering or departing the harbour. One way traffic is to be maintained during the VLCC's transit through the breakwater entrance.
(e) Vessel must have a 10% draft clearance under the keel when crossing either the Los Angeles or Long Beach entrance.
(f) No "dead ship" status will be permitted without prior approval of the Captain of the Port.
(g) No vessel with a beam in excess of 200 ft. shall enter either harbour without the permission of the Captain of the Port.

CRANES: Barge cranes available capacity 45 tons – 275 tons. A U.S. Navy floating crane capacity 385 tons available for hire.

BRIDGES: No restrictions into Port of Long Beach. The Gerald Desmond Bridge over Back Channel has vertical clearance of 155 ft. Cerritos Channel which connects Long Beach through Back Channel to Port of Los Angeles has 2 bridges which must be opened for passage of vessels.

Signal for Opening: 3 long blasts on horn or whistle. During inclement weather, call through a megaphone or make a loud and distinct stroke on a bell.

MEDICAL: Advance notice preferable. Adequate hospital and medical facilities available for providing necessary or emergency care. From information available, Public Health Department may, if required, request certain information prior to granting Free Pratique for inoculations, Vaccination/Fever Certificates.

DENSITY: Local water density 1.025 grams per millilitre or pure sea water at all stages of tide.

FRESH WATER: Potable fresh water available all Municipal berths through 2 in. lines. Rental charge for use of each 50 ft. length water hose when furnished.

FUEL: All grades (viscosities) of bunker fuels available in any amount through pipelines at most Municipal berths, and by barge at anchor or at berths if desired. Notify quantity and type desired to local Steamship Company or Agent.

FIRE PRECAUTIONS: 2 fire boats and 1 fire station; in addition City fire service available.

Special fire precautions required at all berths handling petroleum products or dangerous cargoes. In addition to all applicable provisions of Long Beach Municipal Code, flammable and combustible liquids and flammable gases shall be handled and stored at Marine Petroleum Terminals in accordance with minimum fire safety requirements promulgated by Chief, Department of Fire, City of Long Beach.

CONSULS: (Consul Generals, Consul or Vice-Consul). In Los Angeles. (Area code 310)

REPAIRS: Within greater port area facilities to accomplish all types of deck and engine repairs.

DRY DOCKS: Within greater port area 2 large private commercial dockyards, Bethlehem Shipbuilding and Repair, and Todd Shipyard Corporation with large floating dry docks and repair facilities. Also, 3 large capacity graving docks located at Naval Shipyard available for emergency use by merchant vessels when not occupied by naval vessels.

SURVEYORS:

1. Lloyd's Register (local office), 1328 N. Avalon Blvd., Wilmington, CA 90744, (P.O.Box 575) 90748. Tel: (310) 834 2334.

American Bureau of Shipping, 200 Pine Ave., Suite 503, Long Beach, CA 90802. Tel: (310) 437-6488. Fax: (310) 491-1840.

2. Pacific Cargo Inspection Bureau, Pier A, Berth 4, Long Beach, CA 90802. Tel: 435-7861.

Jacobsen and Associates, Inc., 1324 N. Avalon Blvd., P.O.Box 248, Wilmington, CA 90748. Tel: 834-4553. Fax: 834-3586.

GANGWAY/DECK WATCHMEN: Normally used, but only compulsory when detainees aboard.

OPENING/CLOSING HATCHES: Crew can open or close hatches at sea or at anchor. If closed or opened at dockside, the use of longshoremen compulsory.

CUSTOMS ALLOWANCES: Tobacco, each crew member entitled to 300 cigarettes, 50 cigars and 3 lb. of tobacco or combination of above. If the stay in port is such that additional tobacco is required, Customs will so issue. Wine and/or Spirit, not to exceed 1 quart of alcoholic beverage each adult non-resident. This exemption for alcoholic beverages may be applied to more than one kind but not to an aggregate volume of more than 1 quart for each adult crew member.

Note: Upon arrival of vessel from foreign port, or vessel engaged in foreign trade from a domestic port, sea stores and ship's stores not required for immediate use or consumption on board while vessel in port, and articles acquired abroad by officers and members of crew, for which no permit to land has been issued, shall be placed under seal, unless Customs Officer is of the opinion that circumstances do not require such action.

CARGO GEAR: Employer shall not use ship's cargo handling gear until he has ascertained that vessel has a current and valid Cargo Gear Register and Certificate indicating that cargo gear has been tested, examined and annealed in accordance with requirements of International Labour Organization Convention No. 32.

REPATRIATION: Through U.S. Department of Justice, Immigration and Naturalisation Service, and clearance of personal effects by U.S. Customs.

AIRPORT: Los Angeles International Airport approximately 18 miles from port, and provides regular scheduled and international airline service.

TIME: GMT minus 8 hours. United States observes Daylight Saving Time, from first Sunday in April till last Sunday in October.

POLICE/AMBULANCE/FIRE: Port of Long Beach – Police 435-6711 (routine), 911 (emergency); Fire Department and Paramedics 911; Harbour Security Officers 590-4195.

In an emergency dial 911.

EMERGENCY CO-ORDINATION CENTRE: U.S. Coast Guard, Captain of the Port, 165 N. Pico Ave., Long Beach, CA 90802. Tel: (310) 980-4444. Fax: (310) 980-4413.

HOLIDAYS: The subject Legal holidays are defined as follows: New Year's Day (1st January); Lincoln's Birthday (12th February); Washington's Birthday (3rd Monday February); Memorial Day (Last Monday May); Independence Day (4th July); Labour Day (1st Monday September); Admission Day (9th September); Columbus Day (2nd Monday October); Veterans' Day (11th November); Thanksgiving Day (4th Thursday November); Christmas Day (25th December).

Notes: (1) Also, every Statewide Election is a holiday.
(2) Also, any other legal holiday that may be proclaimed by State or National authority is a holiday.
(3) When one of the above days falls on Sunday, the following Monday shall be observed as a holiday.

TELEPHONE: Installation of telephone aboard ship at Municipal berths.

SERVICES: All services from tank cleaning to compass and instrument repair available at various locations within greater port area.

STORING: See "Prelims".

1. Vessel can be stored by barge or truck by prior arrangement.
2. No restriction on storing from barge while vessel is discharging or loading except when the vessel is handling hazardous cargo, petroleum products or bunkering.
3. Truck can proceed alongside the berth for the purpose of delivering or receiving stores and chandlery supplies.
4. Forklift trucks may be used on the berth to handle stores with approval of the stevedoring company.
5. Customs Regulation regarding storing: Stores *not in bond* may be taken on board the vessel on an export declaration certified by the Customs' Inspector on duty. Stores *in bond* must be signed off by the bonded warehouse on a vessel supply export document and received on board the vessel by the Customs' Inspector on duty.
6. Riggers employed to assist with storing, stevedores or longshoremen assist with the stores on the wharf but the storing on board vessel is done by the ship's crew.

SHIP SUPPLY SERVICE: See "Los Angeles".

SHORE LEAVE: Crewmen allowed shore leave providing necessary application presented to U.S. Immigration Officer is approved and crewmen's Landing Permit issued (Form 5129). Customs declaration required for articles to be landed by crew members (1 quart of alcoholic beverage with seal broken is allowed).

IDENTIFICATION CARDS: U.S. Department of Justice, Immigration and Naturalization Service Form I-95-A (Form I-94 for passengers) must be completed.

GARBAGE DISPOSAL: Not available. See "Agriculture" before first U.S.A. port (Albany).

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: International Seafarer's Centre, 120 So. Pico Avenue, Long Beach, CA 90802-6247. Tel: (213) 432-7560. Facilities include telephone, postage, shop, pool tables and basketball.

DELAYS: Arrival at berths are normally on time as scheduled. However, there are times of inclement weather or lack of cargo at a berth which create a short delay. Shortage of longshoremen can also cause a delay in discharging or loading cargo. No delay experienced in bunkering.

GENERAL: For information regarding various social organisations, call 436-9041. Long Beach Recreation Department, for information.

AUTHORITY: Board of Harbor Commissioners, Port of Long Beach, P.O.Box 570, (925 Harbor Plaza), Long Beach, California 90801-0570. *Tel:* (310) 437-0041, (213) 775-3469 (Los Angeles). *Telex:* 656452. *FAX:* (310) 437-3231. *Cables:* Portobeach. *Contact:* Steven R. Dillenbeck, Executive Director. Don Wylie, Director of Trade and Maritime Services.

LONGVIEW, Washington: 46.10 N. 122.55 W.

(See Plan)

DOCUMENTS:
3 Complete Cargo Manifests.
3 Stores Lists.
3 Possessions Lists.
3 Crew Lists on Immigration forms.
Vessel's Documents.
Tonnage Tax Statement.
Quarantine Form completed.

At first port of arrival, ship is boarded and inspected by Customs, Immigration, Public Health and Agriculture officials. At each subsequent port only Customs Agent will board prior to docking.

PILOTAGE: See "General – Pilotage" before first U.S.A. port.

ANCHORAGE: Safe anchorages indicated by Columbia River Pilots.

RESTRICTIONS: None in regard to arrival time or state of tide. Channel depth 40 ft. at mean low water and tidal range varies between 2.5 ft. and 4 ft.

MAX. SIZE: No limitation on length or breadth. Depth alongside 40 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Columbia River Pilots have knowledge of tug positions and other knowledge pertaining to tugs aiding a vessel.

BERTHING: 7 berthing facilities are available at Port Longview, starting adjacent to the Lewis & Clark Bridge and extending upstream for a distance of nearly a mile.

Berths 1 through 4 are located on one continuous wharf 2,155 ft. long. Berths 1, 2 and 3 are equipped to handle general cargo, pelletised feed grains, bulk ores and chemicals. One gantry crane serves Berths 1 and 2 and a 600-ton capacity heavy lift is located at Berth 3. A paved 2.8 acre assembly area fronting Berth 2 is suitable for handling lumber or multi-commodity project shipments. 3 transit sheds and 1 gear locker are located near the three berths.

Berth 4 is used for receiving and shipping grain and is served by a 5 million bushel grain elevator operated by the Port.

Berth 5 is a 515 ft. wharf and is an exporting facility for the shipme of bulk chemicals. It is also available for the loading of logs using sh gear from the water side of the vessel, and handling barges.

Berths 6 and 7 form a continuous wharf 1,500 ft. long. The ship-si container crane is located at Berth 7. An open cargo handling area 54 acres is located adjacent to the 2 berths. On the dock is one lar transit shed (100,666 sq.ft.). 3 rail tracks are located along the leng of the apron. There is a rail spur on the inland side of the transit she

Port Longview operates its own facilities and performs all termi services between ship's tackle and consignees or inland carriers.

In addition to these facilities operated by the Port, there are 9 othe berths operated privately in the Longview Port District. Weyerhaeus Company owns 6 berths and Reynolds Metals Company, Internatio Paper Company and Longview Fibre Company each operate 1 ber apiece. 6 of the 9 berths are used primarily for export while the oth 3 are used mainly for receiving raw materials used by the mills.

BULK HANDLING FACILITIES:

Containers: Port Longview's container facility centres around a 30 lo ton, electrically operated, rail mounted crane.

The crane has a rated lifting capacity of 30 long tons below th spreader and 37 long tons below the cargo beam. The telescop spreader can be adjusted to handle 20 ft., 27 ft., 35 ft. and 40 containers. It is designed to handle 20 load/discharge containers p hour.

The boom can be raised and lowered to provide clearance of sh superstructure and is designed for through-leg rapid load-handling.

With an outreach of 124 ft. from the waterside rail and a vertical rea of 110 ft., the crane can service Panamax size vessels.

Utilising a unique "trailer-train" system, a continuous flow of containe can be maintained between storage and staging areas to susta loading/unloading operations.

A 40-acre area located behind Berth 6 – 7 is for use as a contai storage yard.

Containers received from the vessel can be immediately inspecte and rerouted either to warehouses for devanning or to rail or truck ongoing movement. Export containers are staged to the vessel in loadi sequence in the adjacent cargo assembly area.

Grain: The Port operates the 5,165,000 bushel capacity grain eleva at the Port of Longview Terminal.

Pellets/Soda Ash/Coke/Fertiliser: Port Longview has three dry bu shipping facilities. Sugar beet pulp pellets are loaded at Berth No through a 600 t.p.h. loader.

At Berth 2, a new state-of-the-art loader went into operation in th Summer of 1990 to handle bulk chemicals and minerals at 1,800 t.p

Atlantic Richfield Co. uses a calcined coke storage/loading facilit Berth No. 5 that loads at 900 t.p.h.

Two portable hoppers with belt conveyors are available to hand inbound free flowing dry bulks unloaded by ship's gear or dock Whir cranes equipped with clams.

Roll-on/Roll-off: A 240 ft. extension to the upstream end of Berth 7 accommodate Ro/Ro vessels is available at the Port of Longvie 96 ft. of the extension is constructed at a level 8 ft. lower than t remainder of the dock and serves as the loading/unloading area accommodate a Ro/Ro vessel's stern ramp.

BRIDGES: One bridge crossing Columbia River at Longview ha sufficient clearance so as not to present a problem. Clearance 169 ft 185 ft. depending on season.

CRANES: 1 electric-powered gantry crane serves Berths 1 and 2 550 ft. of track. It is equipped with a 130 ft. boom and has a capacit 60 tons at a 45 ft. radius.

The 'Columbia Giant', a 600-ton capacity shore-based crane loca at the port, is one of the largest capacity lifting facilities on the We Coast. The twin booms of the derrick reach 130 ft. above the dock a have a tested lifting capacity of 660 tons. The blocks can be hois separately or in tandem. The lifting system is certified by Federal a State agencies and has passed safety requirements for heavy lifting AEC controlled projects. The 'Columbia Giant' is available for single l ranging from 65 short tons up to its rated capacity of 600 short tons

Also see "Berthing" – Berths No. 6 and 7.

STEVEDORES: At least 24 hours notice necessary to arrange gan before ETA. Arrange through Port Office via Ship's Agent.

MEDICAL: Hospital facilities available.

TANKERS: No facilities.

DENSITY: Columbia River is fresh water at Longview.

FRESH WATER: Available through 8 in. line with 2.5 in. connectio Rate of delivery approx. 14.5 t.p.h.

FUEL: Available by tanker trucks only.

CONSULS: At Portland, Oregon.

REPAIRS: Some deck and minor engine repairs are possible Longview.

GANGWAY/DECK WATCHMEN: Arrangements for security guards be made.

OPENING/CLOSING HATCHES: Work carried out normally stevedores.

CUSTOMS ALLOWANCES: See "Portland, Oregon".

REPATRIATION: No facilities for effecting crew changes repatriations.

AIRPORT: Nearest airport served by regular airlines is in Port Charter flights may be arranged from a small local airport.

TIME: GMT minus 8 hours. In addition, clocks are moved ahead 1 h on the first Sunday in April and returned back 1 hour on the last Su in October, at 0200 hrs. local time on those 2 days.

HOLIDAYS: New Year's Day (January 1st); Martin Luther King Birthday (3rd Monday in January); President's Day (3rd Mond February); Memorial Day (last Monday in May); Independence Day 4th); Special Longshore Holiday (July 5th); Labour Day (first Mond September); Veteran's Day (November 11th); Thanksgiving Day (Thursday in November); Christmas Day (December 25th). Cargo can be arranged on most of these holidays.

POLICE/FIRE/AMBULANCE: Police 911; Fire 911; Ambulance 911.
TELEPHONES: Available at dockside.
BANKS: Security Pacific Bank and Seattle First National Bank.
STORING: See "Prelims".

1. Yes.
2. Yes.
3. Yes.
4. Yes.
5. —
6. Yes.

SHIP SUPPLY SERVICE: The only firm currently engaged in the ferrying of personnel from ship to shore in the Columbia River in the Port Longview area is Brix Maritime Co. Their address is: Brix Maritime Co., 611 East "A" Street, Rainier, Oregon 97048, U.S.A. Tel: (206) 577-0487.
SHORE LEAVE: Crews allowed ashore if papers are in order.
IDENTIFICATION CARDS: Advisable but not necessary.
GARBAGE DISPOSAL: Collection receptacles can be placed on dock alongside ship by a private firm, Waste Control Ltd. Tel: 425-4302. Charges will be quoted by the firm.
WASTE OIL DISPOSAL: No service available.
SEAMAN'S CLUBS: Seaman's Information Service, 455 Oregon Way (about 1 km. from the dock). Tel: 636-0450.
AUTHORITY: Port Longview, P.O.Box 1258, 10 Port Way, Longview, Washington 98632. *Tel:* (206) 425-3305. *FAX:* (206) 425-8650. *Contact:* Ken O'Hollaren, Executive Director.

L.O.O.P. TERMINAL (Louisiana Offshore Oil Port), Louisiana: 28.53 N. 90.01 W. **(See Plan)**

OPERATOR:
Official Address: LOOP Inc., One Seine Court, Box 6638, New Orleans, Louisiana 70174-6638.
Requests for Port Information: LOOP Inc., One Seine Court, Box 6638, New Orleans, Louisiana 70174-6638. Attention: Vice-President, Operations. Fax: (504) 363-7284.
TWX Address: LOOP Inc. (810) 950-5875 (LOOP MARTERM), (810) 951-5165 (LOOP Inc., Nola).
Telephone Number:
New Orleans Office (504) 368-5667. Contact: A.B. Cranstoun, Administrative Coordinator Tel: (504) 363-9298 (direct line)
Operations Centre (504) 632-6970
Marine Terminal (504) 632-6980
Radio Contact:
Call sign "KR-7808" – "Loop Radar".
Frequencies:
VHF-FM
U.S. Channel 10 156.500 MHz (Simplex only)
U.S. Channel 16 156.800 MHz (Simplex only)
U.S. Channel 74 156.725 MHz (Simplex only)

LOOP Personnel involved in Tanker Discharge:
(1) Port Superintendent: Resident at Marine Terminal who has overall authority over the Marine Terminal and port.
(2) Vessel Traffic Controller: Resident at marine terminal. Responsible for traffic control at the port.
(3) Mooring Master/Assistant Mooring Master: Assists the Master in mooring and unmooring the vessel. Remains on board to coordinate the discharge.
(4) Deck Watch: Maintains a 24 hour watch of tanker's manifold and bow while vessel is moored.
(5) Oil Movement Controller: Resident of Galliano Operations Centre. Supervisor of cargo discharge. In constant radio contact with the Mooring Master.

Time Zone: Local-Central Standard Time (CST). Greenwich Mean Time (GMT) minus 6 hours or Zone plus 6.
Note: From the first Sunday in April to the last Sunday in October, this is modified by use of Daylight Saving Time to minus 5 hours GMT or Zone plus 5.
Official Language: English.
U.S. Coast Guard: Telex: 701801 (USCG NLN-UD).

The LOOP Inc. deepwater port and associated facilities are designed for unloading crude oil cargoes from deep draft tankers. The marine terminal is located in open waters of the Gulf of Mexico approximately 29 km. (18 statute miles) offshore from the State of Louisiana.

The port is owned and operated by LOOP Inc. under licenses granted by the Government of the United States of America and the State of Louisiana. The port is governed by the laws of the United States in the same manner as if the port were an area of exclusive federal jurisdiction located within a state.

LOOP shall not permit a tanker registered in a foreign state or flying the flag of a foreign state to utilise its facilities unless the foreign state involved does not object to the jurisdiction of the United States over the tanker and its personnel while the tanker is located within the safety zone of the port, and unless the tanker owner or operator has designated an agent in the United States for receipt of service of process in the event of any claim or legal proceeding resulting from activities of the tanker or its personnel while located within the port safety zone, and unless the tanker owner carries insurance or demonstrates financial responsibility as required by Title 33, United States Code Annotated, Section 1517 and any amendment.

At the time of nomination of a tanker, LOOP shall require the person nominating the tanker, or his authorised agent nominating the tanker, to provide LOOP with the name and address of the tanker's designated agent in the United States.

The United States Coast Guard's Marine Safety Office, whose office is in Morgan City, La., has governmental authority over LOOP.

LOOP's Port Superintendent has overall authority over the marine terminal and port. This encompasses all personnel at the port, including contract personnel, and all vessel and aircraft operations at the port. During emergency conditions, all response activities at the port are directed by the Port Superintendent. This includes the shutdown of tanker cargo discharge. Emergency conditions are those that, in the Port Superintendent's judgment, involve or could involve safety, environmental protection, personnel injury or property damage. Examples of these emergencies include, but are not limited to, the following, if they occur at the marine terminal, or on a tanker, or other vessel or aircraft, or at any other location anywhere in that portion of the deepwater port that lies within the safety zone:
(a) Oil spill.
(b) Fire or explosion.
(c) Tanker collision, actual or potential, with another vessel or with the pumping platform complex.
(d) Tanker grounding.
(e) Electrical power failure on the platform.
(f) Disruption of communications between shore and the port.
(g) Aircraft disaster.
(h) Serious illness, injury or death.
(i) Presence of poisonous gas.
(j) Evacuation operation of the platform (usually due to impending hurricane).

The Port Superintendent is present at the port at all times.

ABBREVIATIONS:
AMM – Assistant Mooring Master
ANSI – American National Standards Institute
AST – Atlantic Standard Time (GMT + 4)
BHP – Brake Horsepower
BPH – Barrels Per Hour
CB – Citizens Band (radio)
CFR – Code of (U.S.) Federal Register
CMH – Cubic Meters Per Hour
COW – Crude Oil Washing
CST – Central Standard Time (GMT + 6)

SALM – Single Anchor Leg Mooring
SOLAS – Safety of Life At Sea
SPM – Single Point Mooring
UHF – Ultra High Frequency
ULCC – Ultra Large Crude Carrier
USCG – United States Coast Guard
VHF – Very High Frequency

PLATFORMS:
Pumping Platform Complex:
The Marine Terminal pumping platform complex consists of the pumping platform and the control platform. The two platforms are connected by a walkway bridge between the lower decks. The top of the lower deck of each platform is 21.3 m. (70 ft.) above MHW.

The pumping platform measures 61 m.×65.5 m. (200 ft.×215 ft.) and contains equipment for receiving, measuring, sampling, controlling and pumping oil to assist in cargo unloading.

The control platform contains a control room manned 24 hours a day for communications, traffic control, monitoring and surveillance purposes. Also, a supervisory control and monitoring system provides the capability for the control room personnel, when so directed, to assume control of all marine terminal processes otherwise normally initiated from the Operations Centre located near Galliano, Louisiana.

The control platform is a two-deck structure measuring approximately 21.3 m.×21.3 m. (70 ft.×70 ft.). The lower deck contains platform utility equipment and supporting facilities. The upper deck supports a two-level control building.

DOCUMENTS: See "New Orleans".

PILOTAGE: *Boarding Considerations:* Actual sea conditions for small craft are not always appreciated when viewed from the bridge of a large vessel. Boarding of personnel is a potentially hazardous operation requiring complete cooperation. Although specific rules for this transfer cannot be made, the following points should be used as a guide:

(a) Agree when and how the transfer of personnel will take place.
(b) Allow sufficient time and sea room.
(c) Tanker should always advise delivering vessel of any change in heading.

Pilot and Accommodation Ladders: Size, draft and manoeuvring requirements of vessels calling at LOOP may not always allow the ship to create a lee side for boarding by alteration of heading alone. Therefore, *LOOP requires that all tankers using the Port be equipped with accommodation ladders on the port and starboard sides, leading aft.*

The requirements are as follows:

(a) All pilot and accommodation ladders must be clean, in good condition, and comply with all existing IMO/SOLAS requirements.
(b) The rigging of pilot and accommodation ladders and the embarkation and disembarkation of personnel shall be supervised by a responsible deck officer of the ship.
(c) Every pilot ladder shall be secured in a position clear of any possible discharges from the ship, and so that each step rests firmly against the ship's side.
(d) If the freeboard exceeds 10 m. at any time, an accommodation ladder shall be rigged in conjunction with the pilot ladder.
(e) *All vessels shall have an accommodation ladder on the port and starboard side.*
(f) The lower end of the accommodation ladder must rest firmly against the side of the ship within the parallel body midlength and as far as practical within the midship half section.
(g) The accommodation ladder must lead aft.
(h) Adequate lighting shall be provided so that the pilot and accommodation ladders and the position where personnel board the ship will be properly illuminated.

Also see "Tanker Arriaval".

MAX. SIZE: See "Berthing".

TANKER ARRIVAL:

Arriving from Seaward: Tankers will normally approach LOOP via the 63 mile Safety Fairway. Communications with LOOP shall be established when the tanker is 20 miles from the entrance of the Safety Zone on the International Calling Frequency 156.800 MHz (Channel 16). The Vessel Traffic Controller will assign a working frequency, usually 156.725 MHz (Channel 74) and will pass instructions to the vessel. The arrival time for a tanker is recorded as the time and date the inbound tanker enters the Safety Zone, either enroute to LOOP's anchorage or to moor or anchor outside of the Safety Zone in the vicinity of the port. Tankers must enter and depart the port via the Safety Zone between Buoys 1 and 2.

1. *Berthing Order:* When a buoy becomes available, the tanker with the earliest Firm Arrival Window will be berthed, provided that tanker has issued its Notice of Readiness to Discharge. LOOP may adjust a tanker's position in the queue, a maximum of one position, when such adjustment is necessary for optimum operations of the LOOP system.
2. *Navigational Assistance:* During the mooring operation, including transit of the approach and terminal sections, the Mooring Master and the Assistant Mooring Master perform the following functions:
   (a) The Mooring Master advises the tanker's Master on operational and ship control matters and regulations that are peculiar to the port, such as navigational aids, depth of water and current characteristic of the manoeuvring area during existing conditions, mooring equipment and procedures, emergency towing procedures, and the port's vessel control procedures. The Mooring Master will maintain communications with the Vessel Traffic Controller, mooring launches and the Assistant Mooring Master until the mooring operation has been completed.
   (b) The Assistant Mooring Master is stationed on the forecastle of the tanker during mooring operations to assist the Mooring Master by reporting position approach data relative to the SPM and to advise the tanker's personnel in the handling of mooring equipment peculiar to the port.
3. *Transiting the Approach, Terminal and Anchorage Sections:* The Master of the tanker, a licensed deck watch officer, and a competent helmsman must be on the bridge, and machinery spaces must be manned by a licensed engineer, at all times while the tanker is manoeuvring in the approach and anchorage sections or transiting the terminal section of the Safety Zone and approaching a SPM to moor. A competent deck officer is to be on the bow along with one seaman as lookout, who is capable on command of letting go the anchor, if necessary.
4. *Manoeuvring Capabilities:* LOOP SPM buoys are located on a radius of 2,438 m. (8,000 ft.) from the Marine Terminal pumping platform complex with spacing between buoys of 1,981.2 m. (6,500 ft.). Tanker must have the capability to perform the manoeuvring required to approach and depart from a SPM within an area not greater than 1,524 m. (5,000 ft.) radius from the buoy at speeds not exceeding 3 knots. LOOP may require evidence of a tanker's capability to approach and enter the Safety Zone. The Mooring Master may determine this by pre-berthing checks of a tanker's manoeuvring characteristics. It is recommended th vessels endeavour to arrive on an even-keel whenever possible.
5. *Securing Anchor: Prior to approach and while at the SPM, anchor are to be positively secured with locking pawls and/or secur wires/turnbuckles. No work on windlass or anchoring gear wh requires releasing the brake or removal of securing gear/paw allowed while at the SPM.*

Tankers Proceeding Directly to a Mooring:

(a) The Mooring Master, Assistant Mooring Master, deck watch an oil inspectors will board the tanker, and the port furnishe equipment is picked up by the tanker prior to entering the Safe Zone. The boarding area is usually at the North end of the Safe Fairway where it turns and joins the approach section at th Safety Zone. The entrance to the Safety Zone is marked at th lateral boundaries by Buoys No. 1 and 2. (Note: Also se "General" – "Helicopter Transfer of Personnel and Supplies" Section (B) for times when Mooring Master boarding is done b helicopter).
(b) Weather permitting, a pilot ladder shall be rigged port an starboard 2.0 m. above the water. An accommodation ladder conjunction with a pilot ladder shall be rigged prior to arrival the freeboard exceeds 10 m. and prior to completion of discharg if the sailing freeboard exceeds 10 m. The tanker will be advise of what side the mooring and connecting equipment will b handled, so that the appropriate derrick can be topped and rigge in preparation for lifting the equipment aboard and for handli the hoses after mooring. The derrick block should be plumbe midway between the rail and the manifold at the manifo centreline. Tankers are asked to provide a lee in order to allo for a safer boarding and an easier equipment handling operation. *The tanker must have operative and ready for immediate us bow and stern emergency towing equipment, as recommende by IMO.*
(c) Equipment brought aboard the tanker for use in the moori arrangement shall be transported to the bow by ship's personne and returned to the manifold in the way of the derrick a completion of port operations. Ship's personnel, supervised by deck officer and advised by the Assistant Mooring Master, sha prepare and arrange the tanker's mooring equipment to th satisfaction of the Assistant Mooring Master and the tanker Master.
(d) After the Mooring Master is aboard, the tanker may proceed unde his guidance into the Safety Zone to the assigned berth f mooring. The shipper and tanker owner shall be responsible an liable to LOOP for any damage or injury done by his tanker t any LOOP facility, equipment or personnel. Services of th Mooring Master, Assistant Mooring Master, deck watch, moori launches and their crews, and such other LOOP personnel a may be required aboard the tanker are provided with the expres understanding that the Master of the tanker has and accepts th ultimate responsibility for the tanker and crew. If it become necessary for the Master of a tanker to disregard a Moori Master's advice in order to ensure the safety of his ship, it requested that a written report from the Master be submitte promptly to LOOP.
(e) Specific tanker speed will be recommended by the Moori Master to the vessel, consistent with the International Rules f Navigation, Rule 6 – Safe Speed.

Tankers Proceeding Directly to LOOP's Anchorage (in Safety Zone

(a) Tankers proceeding directly to LOOP's anchorage may proce into the Safety Zone without a Mooring Master on board whe the following conditions are met:
   (1) The tanker is proceeding directly to the designated anchorag section.
   (2) Entry is via the designated Safety Fairway through Buo No. 1 and 2.
   (3) Clearance is obtained from the Vessel Traffic Controller.
   (4) No other tankers are underway in that portion of the Safe Zone that is South and East of Buoys No. 3 and 4.
   (5) No more than 4 tankers are anchored in the designat anchorage.
(b) Specific tanker speeds are to be consistent with the Internatio Rules for Navigation, Rule 6 – Safety Speed.
(c) The shipper and tanker owner shall be responsible and liable t LOOP for any damage or injury done by his tanker to any LOO facility, equipment or personnel.

Anchoring at LOOP: LOOP has a designated 2.0 nautical miles 4.0 nautical miles anchorage area inside the Safety Zone to provide t safety and continuity of operations. All vessels are expected to uti this anchorage unless such vessels are proceeding directly to moor up arrival. While the tanker is at anchor in the anchorage section of t safety zone, a competent deck officer shall be stationed at all times the bridge to watch for any dragging of the anchor which can be detec by taking radar ranges or rounds of bearings as necessary on th pumping platform or on any other fixed objects and to moni Channel 16 (156.800 MHz.) and Channel 74 (156.725 MHz.). Vesse *at anchor must maintain engines and propulsion machinery in readine to clear the marine terminal area under full power on short notice. repairs are permitted which would interfere with this requirement. anchorage is in the open sea and is not in a harbour. A 10 minu less ready stand-by requirement for engines and anchors wil invoked in the event of rough weather. The Port Superintendent invoke the rough weather advisory.*

Tankers Proceeding to Mooring from Anchor (in Safety Zone):

(a) The Vessel Traffic Controller advises the tanker of the arrival of the Mooring Master, Assistant Mooring Master, deck wa and oil inspectors, and of the equipment to be made ready (Note: See "General" – "Helicopter Transfer of Personnel Supplies" – Section (B) for times when Mooring Master boar is done by helicopter).

(b) Upon receiving clearance from Vessel Traffic Controller, tanker may get underway without a Mooring Master on board for the purpose of making a lee only. The Mooring Master will then board the vessel and proceed to the bridge to pilot the vessel to berth.

(c) Equipment brought aboard the tanker for use in the mooring arrangement shall be transported to the bow by ship's personnel and returned to the manifold in the way of the derrick at completion of port operations. Ship's personnel, supervised by a deck officer and advised by the Assistant Mooring Master, shall prepare and arrange the tanker's mooring equipment to the satisfaction of the Assistant Mooring Master and the tanker's Master.

(d) Specific tanker speed will be recommended by the Mooring Master to the vessel, consistent with the International Rules for Navigation, Rule 6 – Speed.

Tanker Proceeding to Mooring from Anchor (Outside of Safety Zone):

(a) The Vessel Traffic Controller advises the tanker of the arrival time of the Mooring Master, Assistant Mooring Master, deck watch and oil inspectors, and of equipment to be made ready. Included are instructions for preparation of an accommodation ladder and/or pilot ladder, equipment hoist and operative emergency towing equipment. (Note: See "General" – "Helicopter Transfer of Personnel and Supplies" – Section (B) for times when Mooring Master boarding is done by helicopter). Tanker may raise anchor and get underway prior to Mooring Master's arrival, but under no circumstances shall the tanker enter the Safety Zone until the Mooring Master is on board.

(b) Equipment brought aboard the tanker for use in the mooring arrangement shall be transported to the bow by ship's personnel and returned to the manifold in the way of the derrick at completion of port operations. Ship's personnel, supervised by a deck officer and advised by the Assistant Mooring Master, shall prepare and arrange the tanker's mooring equipment to the satisfaction of the Assistant Mooring Master and the tanker's Master.

(c) Specific tanker speeds will be recommended by the Mooring Master to the vessel consistent with the International Rules for Navigation, Rule 6 – Safe Speed.

Navigational Assistance: During the mooring operation the Mooring Master and the Assistant Mooring Master perform the following functions:

(a) The Mooring Master advises the tanker's Master on operational and ship control matters and regulations that are peculiar to the port, such as navigational aids, depth and current characteristics of the manoeuvring area during existing conditions, mooring equipment and procedures, and the port's vessel control procedures. The Mooring Master will maintain communications with the Vessel Traffic Controller, mooring launches and the Assistant Mooring Master until the mooring operation has been completed.

(b) The Assistant Mooring Master is stationed on the forecastle of the tanker during mooring operations to assist the Mooring Master by reporting position approach data relative to the SPM and to advise the tanker's personnel in the handling of mooring equipment peculiar to the port.

Manoeuvring Capabilities: LOOP SPM buoys are located on a radius of 2,438 m. (8,000 ft.) from the Marine Terminal Pumping Platform Complex, with spacing between buoys of 1,981.2 m. (6,500 ft.). Tankers must have the capability to perform the manoeuvring required to approach and depart from an SPM within an area not greater than 1,524 m. (5,000 ft.) radius from the buoy at speeds not exceeding 5.5 km./hr. (3 knots). LOOP may require evidence of a tanker's capability to approach and enter the safety zone. The Mooring Master may determine this by pre-berthing checks of a tanker's manoeuvring characteristics.

Berthing Order: When a buoy becomes available, the tanker with the earliest Firm Arrival Window will be berthed, provided that tanker has issued its Notice of Readiness to discharge. LOOP may adjust a tanker's position in the queue a maximum of one position when such adjustment is necessary for optimum operations of the LOOP system.

VESSEL REQUIREMENTS:*General Condition of Vessels:* Each tanker calling at LOOP shall be seaworthy, have a fit crew, and not be leaking oil and not be in a condition which presents a risk or threat of a prohibited oil discharge.

CAUTION: *Prior to arrival, the Master shall ensure that the vessel does not have stern seal leakage. Stern seal pressure shall be monitored throughout the cargo discharge to ensure that changes in draft or trim do not cause a stern seal leak.*

Navigation Equipment: Any vessel calling at LOOP must meet the U.S. Coast Guard navigational equipment requirements for a vessel entering U.S. waters (i.e. 33 CFR 164.35). Coast Guard personnel will board selected arriving vessels to ensure compliance with Federal Regulations.

Pre-arrival, Connection and Transfer:

Preparations, procedures, tests and inspections to be followed both by the tanker and by the LOOP platform during the pre-arrival time, connection and transfer must meet the requirements of 33 CFR 150(D), and the recommendations of the OCIMF Safety Guide.

The Mooring Master will have a LOOP Check List, which includes a Declaration of Inspection, that shows all the items to be tested or inspected in order to comply with the Federal Regulations and with current OCIMF recommendations. The inspection is to be made and the Check List is to be signed both by the tanker's Master and by the Mooring Master before the start of oil transfer operations.

Oil Transfer Equipment:

All tankers must meet the requirements of 33 CFR 155 and 46 CFR, sub-chapter (d) (Tank vessels), with regard to oil transfer equipment. Cargo hoses must be connected by the tanker's personnel, under the guidance of the Mooring Master or the Assistant Mooring Master.

The Mooring Master will provide a remotely operated Emergency Shutdown Signalling Device to be kept in the Cargo Control Room. Activation of this alarm requires an immediate, rapid stopping of the pumping operation. The Mooring Master will explain the use of the Emergency Shutdown Signalling Device.

Physical Parameters of Vessel:

Tankers to be accepted by LOOP must:

(a) Have oil transfer equipment that conforms to the technical recommendations of the Oil Companies' International Marine Forum (OCIMF).

(b) Be equipped with shipboard mooring fittings installed and located for safe and effective mooring to an SPM and in compliance with current OCIMF recommendations and LOOP requirements.

(c) Be equipped with a derrick, located near the cargo manifold for hose handling, capable of lifting and sustaining a safe working load of 10 tons to a height of 13.7 m. (45 ft.) above deck level. (ULCCs should have a 15 ton crane because of the extra hose weight due to their greater freeboard).

(d) Be equipped with emergency towing equipment that is in place and in compliance with IMO Assembly Resolution A535(13) and LOOP requirements.

(e) Not exceed maximum mooring load limitations of SPMs. See "Berthing".

(f) Have serviceable pumping equipment.

(g) Be capable of delivering a cargo size or quantity that is in accordance with LOOP's Terms and Conditions of Service.

Hull Condition: Hulls of tankers calling at LOOP shall be free of obstructions, (e.g. barnacles) which could cause damage to marine hoses, pollution, or injury to personnel.

Deck Floodlighting:

Illuminated Locations: In addition to the light usually displayed, tankers are required to furnish adequate additional lighting for night operations including:

(a) Proper safety lighting of the accommodation ladder for personnel embarkation and disembarkation. This is particularly essential for arriving and departing tankers when the Mooring Master and Assistant Mooring Master board or depart the tanker. A deck officer is required to supervise these procedures.

(b) Lighting of the forecastle area.

(c) Lighting of areas encompassing the derricks, deck and water during equipment and hose handling operations.

(d) Lighting to illuminate the cargo manifold.

(e) Portable or hand-held safety lanterns for inspections and other deck activities that may require particular attention.

Type of Equipment: Only explosion-proof lighting equipment and electrical apparatus certified intrinsically safe for use in a hazardous area is permitted to be used on deck while a tanker is at an SPM. Portable electric lamps or other apparatus with flexible cable shall not be used without permission from the ship's officer-in-charge and from the Mooring Master/Assistant Mooring Master aboard the tanker. In this regard, the recommendations of ISGOTT should be followed.

Accommodation: Tankers discharging at LOOP must provide meals and accommodation for the Mooring Master, the Assistant Mooring Master and deck watch, during their time on board and for an independent Petroleum Inspector during his required time on board.

Vessel Readiness:

Equipment/Personnel: Vessels at moorings or anchorage must maintain engines, propulsion machinery and emergency towing equipment in readiness to clear the Marine Terminal area under full power on short notice. No repairs are permitted which would interfere with this requirement. Vessel trim and draft should also be considered in determining vessel manoeuvring capability. Masters of tankers are advised to have sufficient personnel aboard and on watch to enable them to depart upon advice from the Vessel Traffic Controller. The Master of a tanker may, in an emergency, for the protection of life or property, depart without clearance from the Vessel Traffic Controller, if the Master advises the Vessel Traffic Controller of the circumstances by radio at the earliest moment.

Minimum Ballast: The Master is to maintain his vessel in a seaworthy condition and be ready to sail and manoeuvre at all times. This port is in the open sea and *is not in a Harbour.* Weather can change rapidly as mentioned in section on weather. The Master is to maintain his vessel with sufficient ballast to obtain full immersion of the propeller at all times while maintaining a reasonable stern trim. These additional factors must be considered by the Master in maintaining the seaworthy condition and readiness to sail and manoeuvre.

A 10 minute or less ready standby requirement for engines and anchors will be invoked in the event of rough weather. The Port Superintendent will invoke the rough weather advisory.

Emergency Towing Equipment: LOOP employs an Emergency Response Vessel (ERV) at the Port for the designed purpose of providing escort and, if required, emergency towing response to disabled tankers. For emergency towing response to be effective, LOOP requires all tankships calling at the Port to be fitted in accordance with IMO Assembly Resolution A535(13) "Recommendations on Emergency Towing Requirements for Tankers".

NAVIGATION AIDS:

SPM Buoys: In addition to the port name "LOOP" and an SPM number, each SPM buoy is painted white on top with yellow sides and is equipped with the following navigational aids:

(a) A quick flashing (0.3 seconds "on", 0.7 seconds "off") white light installed on the buoy at a height of 5.5 m. (18 ft.). The light can normally be seen through 360° of arc at a range of 7.4 km. (4 nautical miles). It is actuated by a solar photo-electric switch.

(b) A 406.4 mm. (16 in.) diameter all-directional radar reflector mounted on the highest point of the buoy.

(c) Buoy number daymarks at 90° intervals around the buoy hull.

Platform Complex Beacon Light: A rotating beacon which shows a flashing white light (6 flashes per minute) is mounted above the pumping platform atop the communications tower at an elevation of 64 m.

(210 ft.) above MHW and it is visible all around the horizon. It is actuated from the control platform. The light is 47,000 candela and is visible for at least 18 miles.

Platform Complex Obstruction Lights: Obstruction lights are installed at each corner of both platforms and one on the bridge connecting the structures. The lights on the pumping platform are 25 m. (81 ft.) above MHW and on the control platform are 23 m. (76 ft.) above MHW. They are quick flashing white (0.3 seconds "on", 0.7 seconds "off") (60 flashes per minute). They flash in unison and are placed so that at least one light can be seen for a minimum of 5 nautical miles from any approach angle to the platform complex. They are actuated from the Control Platform at night and in periods of low visibility.

Platform Complex Fog Signals: 2 fog horns are installed at the platform complex. One is hung below the lower deck near the middle of the Northwest edge of the pumping platform about 21.3 m. (70 ft.) above MHW, and the other is hung below the lower deck on the Southern edge of the control platform. The signals are synchronized to sound a 650-800 Hz 2 second blast every 20 seconds and can be heard for at least 3.7 km. (2.0 nautical miles). They are actuated from the control platform.

Buoys: The following table lists the characteristics of the buoys marking the approach section of the safety zone:

Buoy Daymark	*Buoy Colour*	*Water Depth Metres*	*Feet*	*Lantern Colour*	*Radar Reflector*	*Fog Signal*
No. 1	Green	47.5	156	Green	X	X
No. 2	Red	46.3	152	Red	X	None
No. 3 No. 4	See "Plan" for new locations.					

From seaward, Buoys No. 1 and 3 define the port (left) lateral limits of the approach section and Buoys No. 2 and 4 the starboard (right) lateral boundary. Buoys No. 1 and 2 are located at the entry to the approach section when proceeding from seaward.

Safety Zone Navigation Buoys: The Safety Zone is shown in "Plan Section" together with the location of floating aids to navigation and marine terminal components. International "Rules of the Road" apply in the safety zone. The purpose of a deepwater port safety zone is to define an area in which any activity that may directly or indirectly increase the environmental and safety risks associated with port operation may be minimised or prohibited. The IMO vessel routing measure known as a precautionary area; i.e. a routing measure comprising an area within definite limits where ships must navigate with particular caution and within which the direction of traffic flow may be recommended, has been adopted as the concept for U.S. deepwater port safety zones. The safety zone is made up of 3 parts; the approach section, the anchorage section, and the terminal section. Inside the terminal section there are 4 "areas to be avoided"; one is 600 m. in radius around the pumping platform complex and 3 are 500 m. in radius around each of the SPMs. "Areas to be avoided" conform to IMO measures to keep ships or certain classes of ships outside a delineated area. 4 navigational marker buoys define the boundaries of the approach section of the safety zone. Proceeding from seaward, the 2.0 nautical miles wide approach section extends 5 nautical miles from the Safety Fairway to the terminal section. The buoys have the following characteristics:

Daymarks: Reflective, located at 90° intervals around buoy superstructures; visible range 3.7 km. (2 nautical miles) minimum.

Lights: Installed at 4.6 m. (15 ft.) above the water; slow flashing (0.6 seconds "on", 5.4 seconds "off"); light intensity 75 candela, actuated by solar photoelectric switches.

Radar Reflectors: All-directional; detectable from at least 15 km. (8.0 nautical miles) by typical shipboard radar systems.

Fog Signal: (Buoy No. 1 only) minimum audible range approximately 1 km. (0.5 nautical miles); programmed to send Morse code "L" at 20 second intervals. This buoy's fog signal operates continuously.

Safety Fairway: The LOOP Safety Fairway, shown in NAV 3A, "Plan Section", has no marker buoys. To lessen the chance of accidents, ships enter and leave U.S. Gulf Coast ports via safety fairways. The fairways are 2 miles wide. No offshore drilling rigs or structures are permitted in them. LOOP recommends that tankers enter or leave the LOOP Safety Fairway at its Southernmost point or at least South of 28° 18′ N.NOAA Chart 11359 has details of the LOOP Deepwater Port including pipelines within the safety fairway and safety zone.

Service Vessel Mooring Buoys: The 2 buoys provided for mooring port service vessels at the marine terminal are white with a horizontal blue band between the top of each buoy and the waterline. The buoy identification is reflective. Battery powered, slow flashing (0.4 seconds "on", 3.6 seconds "off") white lights are installed 2.4 m. (8 ft.) above the water, and are actuated by solar photoelectric switches.

Also see "Anchorage".

ANCHORAGE: *Anchorage Section Buoys:*

The designated anchorage section of the safety zone is a 3.7 km.(2.0 nautical miles) wide area beginning at safety zone Buoy No. 2 and extending 7.4 km. (4.0 nautical miles) along and next to the Eastward boundary of the safety zone. Buoys "L-B" and "L-A" mark the corners and define the outer boundaries of the anchorage section. The anchorage section buoys have characteristics as follows:

Daymarks: Reflective, located at 90° intervals around buoy superstructures; visible range 3.7 km. (2.0 nautical miles) minimum.

Lights: Installed at 4 m. (13 ft.) above the water; slow flashing (0.6 seconds "on", 5.4 seconds "off"), actuated by solar photoelectric switches.

Radar Reflectors: All-directional; detectable at 15 km. (8.0 nautical miles) by typical shipboard radar systems.

Buoy Daymark	*Buoy Colour*	*Water Depth Metres*	*Feet*	*Lantern Colour*	*Radar Reflector*	*Fog Signal*
L-B	White	45.7	150	White	X	None
L-A	White	37.1	122	White	X	None

Also see "Tanker Arrival".

RADIO/VHF: *Notices of Arrival:*

The Master of a tanker bound for LOOP should send his first a advice message as nearly as possible to 7 days before his expe date of arrival, even if he is in port at the time. If his trip to LOOP is than 7 days he should also send another arrival advice as soo possible after leaving his loading port. His next arrival advice shou sent 72 hours before the estimated time of arrival. The arrival ad should be transmitted and updated again at 48 hours and again not than 24 hours before the estimated time of arrival. An arrival ad message can and should be sent at any time when there is a signifi change in a previously estimated arrival time. These arrival ad messages should be sent to LOOP INC. The first message sho contain, at a minimum, the following:

1. Tanker's name and call sign.
2. Estimated time of arrival at LOOP.
3. (a) Arrival draft, fore and aft.
   (b) Fore and aft draft at completion of discharge.
   (c) Departure draft, fore and aft.
4. Type(s) and amount(s) of cargo on board.
5. Basic discharge plan, times and pumping rates.
6. Cargo manifold size and type, if 16 in. not available.
7. Type of mooring equipment installed.
8. Expected discharge rate.
9. Expected number of ballast hours upon completion.
10. Type of Emergency Towing Equipment.
11. Any special requirements which need early actions.

These messages can be sent by Western Union International T (810) 950-5875, LOOP MARTERM or by radio to coast stations W Slidell, WLO Mobile or WPA Port Arthur. It is suggested that ETA adv also be sent to tanker's Agents, with logistics requirements.

Pre-Arrival Instructions: A message will be sent to LOOP-bound tank approximately 72 hours prior to their arrival, outlining arrival procedu and discharge planning recommendations. See "Pre-Arr Instructions" below.

LOOP's Pre-Arrival Instructions:

To Master:

(a) Mooring Master Station is 28° 47′ N., 89° 53′ W. Recomme approach via existing safety fairways. If anchoring on arrival, may enter the LOOP Safety Zone Anchorage. Anchoring in LOO Anchorage will facilitate berthing. You do not need a Moor Master to anchor in LOOP Anchorage, but must have permiss from LOOP Radar. You may also anchor outside.

(b) LOOP Terminal call sign is "LOOP Radar" and guards Channel VHF-FM.

(c) Advise "LOOP Radar" when 20 nautical miles from Mooring Mas Boarding Area. Have officer accommodation for 2 Mooring Mas and accommodation for 2 deck watch personnel.

(d) Advise unloading plan and arrival draft. Include any shut-downs stripping and COW. Advise usable slop tank capacity.

(e) For efficient discharge, it is important during bulk discharge t the vessel pumps at a constant maximum rate.

(f) Rate, reductions for COW, ballast or stripping should be hand during arranged shut-down periods.

(g) The vessel shall maintain sufficient ballast to obtain full immers of the propeller at all times while maintaining reasonable stern t

(h) Plan your discharge accordingly, subject to safety considerati prevailing at all times.

(i) Upon arrival, the Master shall submit detailed discharge plans review.

(j) Advise ETA.

(k) Advise nationality of officers, crew and ship's registry.

24 Hour Message: By regulation, the 24 hour arrival message shall addressed both to the Coast Guard Captain of the Port, Morgan C (Telex 701801 USCG NLN-UD) and to LOOP INC. This message sho contain the following:

1. Name, gross tonnage, and draft of the tanker.
2. Type and amounts of cargo on board.
3. Any condition on the tanker that may impair its navigation, s as fire, malfunctioning propulsion machinery or steering equipment limitations on navigational or radiotelephone capabilities because equipment or material malfunctions. (No vessel will be allowed to underway in the Safety Zone with any steering or propulsion equipm deficiency or with inoperative emergency towing equipment recommended by IMO).
4. Any leaks, structural damage, or machinery malfunctions that m impair cargo transfer operations or cause a discharge of oil.
5. ETA at the Safety Zone: If the information reported changes at time before entering the Safety Zone, or while the tanker is in the Sa Zone, the Master of the tanker shall report the changes to the Co Guard Captain of the Port and to LOOP INC. as soon as possible cable and single side band.

Radio Frequencies for Berthing: In addition to the above notices, communication on the International VHF Maritime Band (Channel 156.725 MHz.) should be started at a distance of 20 nautical miles f the safety zone, or more, if possible. This Channel should be used a "twenty-mile", final arrival notice, and for communications with terminal and with the Mooring Master, until he boards the tanker.

Radio Communications at the Port: The LOOP platform always gua the international calling frequency 156.800 MHz. (Channel 16). LOO working frequencies are VHF Maritime Channel 74 (Primary), Channel 10 (Secondary). Use of shipboard radar and HF radi forbidden while moored to an SPM. While in port, LOOP communi with the tankers via the Mooring Master's UHF portable radio.

LOOP's Communications Facilities: LOOP has the ability to use the following communications for vessels trying to contact the Port:

Type of Communications	*Frequencies*	*Call Sign*
VHF-FM Maritime Mobile	(Carrier assigned in MHz)	KR-7808
	156.500, Channel 10, Commercial Working.	
	156.800, Channel 16, Distress, Safety and Calling.	"LOOP Radar"
	156.725, Channel 74, Port Operations.	

Transit Traffic: LOOP maintains a VHF Maritime radio system capable of communicating with vessels other than tankers or LOOP support vessels if such vessels are equipped with comparable equipment. When necessary to communicate with vessels of unknown communication capabilities, the Vessel Traffic Controller will attempt to contact such vessel on VHF Channel 16. If such efforts at radio communication are unsuccessful, a LOOP mooring launch or personnel boat will be dispatched to advise the vessel of any potential danger to the vessel as observed by the Vessel Traffic Controller's surveillance and also to advise the vessel operator of the port's precautionary areas and areas to be avoided.

When requested by a Master of a vessel other than a LOOP support vessel or tanker, the Vessel Traffic Controller shall furnish information concerning tankers, support vessels, and other vessels underway or moored in the safety zone.

Weather Advisory System: Coast Guard radio stations make two types of marine information broadcasts: radiotelephone (voice) for all seagoing users, and radiotelegraph (CW) for vessels carrying trained radio operators. Scheduled radiotelephone broadcasts include routine weather reports, small craft warnings, storm warnings, navigational information and other advisories on working frequencies, following a preliminary call on the voice international distress and calling frequencies. Urgency and safety broadcasts are made upon receipt of the information, urgency information is repeated 15 minutes later, and both are included in the next scheduled broadcast unless cancelled before that time. Additional broadcasts may be made at the discretion of the originator. Urgency broadcasts are preceded by the signal: "PAN" for radiotelephone and "XXX" for radiotelegraph. Both the urgency signal and message are transmitted on 2182 kHz and 156.80 MHz (Channel 16). Safety broadcasts are preceded by the signal: "SECURITE" for radiotelephone and "TTT" for radiotelegraph. After a preliminary call on 2182 kHz, or 156.80 MHz, the station shifts to its assigned working frequency for the broadcast.

The following Coast Guard Radio stations make urgency, safety and scheduled marine information broadcasts preceded by a preliminary call on 2182 kHz or 156.8 MHz, at the times and on the working frequencies indicated:

Station	*Working Frequency*	*Time(s)*
NCF, Miami Beach, Florida	2670 kHz.	0400, 0600, 0800, 1050, 1300, 1900 and 2250 EST
	157.10 MHz (Channel 22)	0630, 1200 and 1730 EST
NOK, Key West, Florida	157.10 MHz (Channel 22)	0600, 1200 and 1700 EST
NMA-21, St. Petersburg, Florida	2670 kHz	0920 and 2320 EST
	157.10 MHz (Channel 22)	0650, 1250 and 1750 EST
NMG, New Orleans, Louisiana	2670 kHz	0435, 0635, 1035, 1150, 1635 and 2350 CST
	157.10 MHz (Channel 22)	0450, 1050 and 1650 CST
NMG-15, Grand Isle, Louisiana	157.10 MHz (Channel 22)	0435, 1035 and 1635 CST
NOY, Galveston, Texas	2670 kHz	0450, 0650, 1050 and 1650 CST
NOY-3, Port Aransas, Texas	157.10 MHz (Channel 22)	0440, 0640, 1040 and 1640 CST
NCH, Port Isabel, Texas	2670 kHz	0440, 0640, 1040 and 1640 CST
	157.10 MHz (Channel 22)	0435, 1035 and 1635 CST
NMR, San Juan, Puerto Rico	2670 kHz	1100 and 2300 AST
	157.10 MHz (Channel 22)	0710, 1310 and 1810 AST

Scheduled radiotelegraph broadcasts include routine weather reports, small craft warnings, storm warnings, navigational information and other advisories on working frequencies following a preliminary call on the radiotelegraph international distress and calling frequency 500 kHz. Urgent and safety broadcasts are made as follows:

(a) Safety broadcasts are made upon receipt of the information; urgent broadcasts are also made upon receipt of the information except within 10 minutes of the next silent period.

(b) Safety and urgent messages are made during the last 15 seconds of the first silent period after receipt, and are repeated at the end of the first silent period which occurs during the working hours of one-operator ships, unless the warning has been cancelled or superseded by a later warning message. Urgent broadcasts are preceded by the signal "XXX". Both the urgent signal and the message are transmitted on 500 kHz. Safety broadcasts are preceded by the signal "TTT". After the preliminary call on 500 kHz, the station shifts to its assigned working frequency to transmit the broadcast. The following Coast Guard radio stations in the Gulf of Mexico area and its approaches make urgent, safety and scheduled marine information broadcasts preceded by a preliminary call on 500 kHz, at the times and on the working frequencies indicated:

Station	*Working Frequency*	*Time(s)*
NMA, Miami, Florida	440 kHz	1100 and 2000 EST
NMG, New Orleans, Louisiana	428 kHz	1120 and 1830 CST
NMR, San Juan, Puerto Rico	466 kHz	1220 and 2120 AST

LOOP also has weather and sea monitoring equipment installed at the Marine Terminal and receives NOAA weather advisories. Upon request, weather information will be transmitted to tankers in the vicinity.

In addition, NOAA gives continuous weather information, forecasts and warnings on the following frequencies:

WX1 162.500 MHz
WX2 162.400 MHz.

Weather facsimile information is available via WLO, Mobile on the following frequencies:

6852.0 kHz.
9157.5 kHz.

RADAR: *Navigation Advisory System (Surveillance Radar):* 2 radar surveillance systems, X-band and S-band frequencies, are installed at the marine terminal. The systems provide coverage from the platform complex to a range of about 50 km. (27 nautical miles) for tankers, and include, among other things, a collision avoidance system. After an incoming tanker makes radio contact on the VHF system about 20 miles from the safety zone, the Vessel Traffic Controller will advise of the location of navigational hazards as well as relative positions and estimated courses and speeds of other vessels within radar range of the platform.

Radar Beacon: The LOOP radar beacon (RACON) operates 24 hours daily on the X-band frequency from 9300 to 9500 MHz. The transponder is mounted on top of the communications tower 64 m. (210 ft.) above MHW. The RACON will respond to incoming signals by transmitting Morse coded letter "O" as the identifying signal for the marine terminal platform complex. The RACON has a range of about 40 km. to 48 km. (22 nautical miles to 26 nautical miles), depending on the height of shipboard radar antennas.

TUGS: Support Vessels: *List of Characteristics by Vessel Name:* The following 2 launches are operated by LOOP for the primary purpose of assisting in mooring operations:

Names: "Loop Line" and Loop Loader".
Length overall: 26 m. (85 ft.).
Beam: 7.9 m. (26 ft.).
Draft: 2.1 m. (7 ft.).
Propulsion: 2 model 16V-92 GM diesel engines, twin screw, 1,200 h.p. total.
Maximum speed: 10 knots.
Bollard pull: 3,629 Kg. (8,000 lb.) line pull.
Navigation and Communications: Sitex 48 mile radar, digital fathometer, Loran C, SSB and VHF radios (Channel 10, 16 and 74) plus an 8 Channel LOOP UHF radio.
Construction material: Steel.
Fuel Capacity: 75,708 litres (20,000 gallons).

The LOOP maintenance vessel functions primarily for inspection, servicing, and maintenance of marine terminal components.

Name: "Loop Lifter".
Length overall: 61 m. (200 ft.).Beam: 15.2 m. (50 ft.).
Draft: 3.7 m. (12 ft.).
Propulsion: 2 D-399 Caterpillar engines, twin screw, 3,000 h.p. total.
Maximum speed: 11 knots.
Navigation and communication: Auto pilot, Sitex 48 mile radar, fathometer, Loran C, SSB and VHF radios (Channels 10, 16, and 74), plus an 8-Channel LOOP UHF radio.
Construction material: Steel.
Fuel Capacity: 80,000 gallons.
Fire pump: 9,475 litres per minute (2,500 GPM).

The following vessel is operated by LOOP for the primary purpose of escorting and emergency response to tankers calling at the port:

Name: LOOP Responder
Length: 47.2 m. (155 ft.)
Beam: 15.7 m. (51.5 ft.)
Draft: 4.9 m. (16 ft.)
Main Engines: 2 Model 3608 Caterpillar 7,300 BHP
Propulsion: 2-Voith Schneider 36 IIG
Maximum Speed: 13 knots
Tow Winch: Single drum line handling 150 ft./min. line recovery rate
Hawser: 1,000 ft. 3.75 in. diameter spectra
Fuel Capacity: 60,000 gallons
Portable Water: 15,000 gallons
Fire Pumps: 2×1,000 h.p.
Fire Monitors: 2×7,000 GPM each
Foam Capacity: 5,000 gallons
Construction: Steel
Fendering: Full

BERTHING: LOOP single point moorings (SPM) are the single anchor leg mooring (SALM) type, designed for tankers up to 700,000 d.w.t. The SPMs are numbered clockwise and are described as follows:

SPM 102:	Water Depth	35.1 m. (115 ft.)
	Maximum Tanker Draft*	28.7 m. (94.3 ft.)
	Maximum Mooring Load	650 tons
	Tail/Rail Hose Diameter	406 mm. (16 in.)
	Maximum Discharge Rate	15,900 cu.m./h. (100 MBPH)
SPM 103:	Water Depth	35.7 m. (117 ft.)
	Maximum Tanker Draft*	29.4 m. (96.3 ft.)
	Maximum Mooring Load	650 tons
	Tail/Rail Hose Size	406 mm. (16 in.)
	Maximum Discharge Rate	15,900 cu.m./h. (100 MBPH)

SPM 104:	Water Depth	35.1 m. (115 ft.)
	Maximum Tanker Draft*	28.7 m. (94.3 ft.)
	Maximum Mooring Load	650 tons
	Tail/Rail Hose Diameter	406 mm. (16 in.)
	Maximum Discharge Rate	15,900 cu.m./h. (100 MBPH)

*The maximum drafts shown here allow for a gross underkeel clearance of 6 m. (19.7 ft.) during Gulf coast LW and calm seas. The maximum drafts result in a clearance of 2.9 m. (9.4 ft.) above the SPM base U-joints, since the U-joints are 3.4 m. (11.3 ft.) above the ocean bottom. Gross underkeel clearance means the distance between the keel of a tanker and the ocean bottom when the tanker is moored in calm seas. Net underkeel clearance means the distance between the ocean bottom and the keel of a tanker that is anchored, considering ship motion in response to wind, wave, tide and current conditions. It is required that there be a net underkeel clearance of 4.7 m. (15.3 ft.) during bad weather.

The limiting drafts at various significant wave heights that will result in a 4.7 m. (15.3 ft.) underkeel clearance during bad weather, when a tanker may be pitching or rolling, are shown on graphs in the "Plan Section".

Note: Significant wave height is the average height of the highest one-third of all waves passing a point in a given period of time.

MOORING:

Mooring Equipment and Hawser System: Before a tanker is accepted for offloading and *prior to arrival, the ship should notify LOOP of the type of SPM mooring equipment installed* to determine if the equipment is capable of sustaining the safe working load that will be imposed on it and if fitted in accordance with the 1992 OCIMF recommendations for mooring of tankers at SPM's. *All tankers are required to utilise the two hawser system to moor at the SPM.* LOOP requires that all ships be fitted as follows:

Requirements effective 1st April 1993:

(a) All vessels will be fitted with 2×76 mm (3 in.) bow stoppers and two, one each side of the centreline, bow chock openings, capable of allowing free passage of 76 mm. (3 in.) chafe chain.

(b) Pedestal roller fairlead and winch drums or capstans to provide proper leads and clearances (drum end of anchor windlass is acceptable).

The exact arrangement will be determined by the Assistant Mooring Master after inspection of the ship's fittings and equipment. *Mooring and unmooring is to be done by the crew of the tanker with the advice of the Assistant Mooring Master.*

Two launches will normally assist in mooring. One launch will tend the hawser systems. Successively for each of the two hawser systems, the launch personnel will secure the tanker's messenger line to a pick-up line in order for the hawser system chafe chains to be winched aboard the tanker and secured to the shipboard mooring fittings. The second launch tends the floating hose strings during the tanker mooring, drawing the hose strings aside from the tanker's track during the approach and mooring. LOOP has no tugs to routinely assist in mooring.

HOSES: *Floating Hoses:* The floating hoses, which extend approximately 1,100 ft. from each buoy, consist of 2×24 in. crude oil discharge hoses with 16 in. inside-diameter tails, each with 150 ANSI flanges for connection to the tanker's manifold. Each hose-string has a one Candela yellow light on a pick-up buoy at its end. In order to avoid delays in connecting hoses, tankers should have an adequate number of reducing spools to fit 16 in. standard ANSI flanges. Tankers are requested to remove the blank flanges from their discharge manifolds before mooring so as to expedite the connecting of the floating hoses. *Connecting and disconnecting of the cargo hoses is to be performed by the tanker crew under the advice of the Assistant Mooring Master.*

Hose Handling: Mooring launches tow each floating hose into position beneath the tanker's lifting derrick. The derrick runner is lowered to the launch and secured to the hose pick-up sling. After the hose is lifted above the level of the tanker's rail, it is swung inboard. A snubber chain connected between the first and second hose-lengths is then used to control its angle (i.e., to guide it towards its proper place on the cargo manifold). When the hose has been raised enough to span the distance between the tanker's rail and the cargo manifold, the snubbers can be made fast. The hose end is then lowered to the manifold and connected to it. Upon completion of discharge, each hose is disconnected from the manifold after its weight is borne up by the derrick runner. It is then swung outboard, lowered to the water, and released.

Care in Raising and Lowering the Hose: Care is necessary in raising the hoses before discharge and particularly in lowering them after discharge. At these times they are especially vulnerable to kinking.

Damaging Configurations for the Hose: While the cargo transfer hose is connected to the tanker, certain positions that the tanker might take relative to the SPM could cause the hose to bend excessively and thus could damage it.

For example, if a tanker overrides the buoy, it could damage both the hose and the buoy. This condition can be corrected by the tanker going astern or being pulled astern.

Another damaging position could happen if the SPM seabed swivel does not turn as the tanker swings around it. In such a case the Mooring Master will seek LOOP's assistance. If this situation is not immediately resolved, the Port Superintendent or the Mooring Master should issue the order to stop pumping cargo.

Also see "Tanker Arrival".

CARGO OPERATIONS: *Tanker Discharge Planning:* Ship's officers should be aware of LOOP's requirements prior to preparing their pre-arrival discharge sequence planning. Consistent with maintaining vessel seaworthiness and readiness to sail and manoeuvre, LOOP encourages the highest possible bulk discharge rate followed by a stoppage for consolidation of strippings and Crude Oil Washing (COW). This runs counter to conventional tanker practice of always keeping some flow going ashore but is necessary at LOOP in order to maximise pipeline utilisation. While stopped for stripping and/or COW, another ship will normally be pumping at a high rate.

Discharge Operation: The discharge operation will be controlle personally supervised by a ship's officer, to the satisfaction o Mooring Master or the Assistant Mooring Master. Upon being info by the ship's officer on watch that the tanker is ready to b discharging, the Mooring Master will request the discharge operatio proceed according to a previously agreed upon plan regarding sta rates and maximum discharge rates. *In the event of any emerge either on board the tanker or on the operating platform, or anywhe the LOOP system, all oil transfer must be stopped and all oil tra valves closed.*

These emergencies are:

(a) Fire or explosion of a tanker, on the platform, or anywhe the LOOP system.

(b) Loss of power or steering on a tanker underway in the sa zone.

(c) Breakage of a hawser.

(d) Rupture of a floating hose.

(e) Any confirmed pipeline rupture in the LOOP system.

(f) Power failure at any LOOP pipeline facility.

(g) Severe electrical storm in the area of the port. (Ballast re must also be stopped during such electrical storms.)

(h) Failure of the UHF radio communication system.

In the event of failure of the UHF radio communication system, tanker will sound 5 long blasts on her whistle. Cargo discharge is t stopped until communications are re-established.

Oil Transfer Watch: One crew member will be stationed at the bow, an additional crew member stationed at the cargo manifold are licensed officer and pumpman will be based in the cargo control ro with the pumpman moving onto the deck as necessary. During the ca transfer, the watch organisation must provide the capability to shut do pumping on short notice and to stay in constant communication wit Mooring Master and LOOP personnel at the Marine Terminal and Galliano Operations Centre. Communications for cargo handling wi directly with the Mooring Master through the LOOP UHF portable ra system. (NOTE: Each Tanker shall have an officer who is fluen English on duty at all times.).

Crude Oil Washing (COW): Crude Oil Washing of cargo tanks is allo after LOOP is assured that the operation will be done safely. In or for Crude Oil Washing to be undertaken, the tanker and the tank personnel must satisfy the following requirements:

(a) Strict compliance with USCG Regulations 33 CFR 157. A c of this regulation must be aboard the tanker and readily avail to key shipboard personnel.

(b) Strict adherence to ISGOTT Recommendations for Crude Washing are required. A copy must be aboard the tanker a readily available to key shipboard personnel.

(c) Notwithstanding the above regulations and guidelines, no CO will be permitted until the Mooring Master is satisfied that:

1. All cargo tanks have discharged at least 1 m. of cargo de in order to eliminate any water that may have accumulated the bottoms of cargo tanks.
2. The Chief Officer or the person in charge of the CO operation has participated at least twice in Crude Oil Wa operations aboard a tanker similarly equipped.
3. There is a sufficient number of adequately trained person onboard to assist in the dual operations of transferring ca and crude oil washing, in order to ensure that:
    - (i) Gun nozzles are rotating in proper sequence.
    - (ii) Enough source product remains in the t supplying the cleaning oil.
    - (iii) The on-deck piping system carrying the cleanin is continuously watched.

Note: Consideration should be given to washing dirty ballast tanks soon as is practical to allow for ballasting, should the weather condi deteriorate.

Inert Gas Systems (IGS): The Masters of tankships calling at LOOP required by 46 CFR 32.53 to have IGS operational and capable maintaining an inert atmosphere in the cargo tanks at the requ positive gas pressure of 100 mm. (4 in.) of water on filled cargo ta and during loading and unloading, except when the cargo tanks are free. Additionally, all tankships calling at LOOP will be in st compliance with 46 CFR 32.51-1 through 46 CFR 32.53-85 to ens that the approval, operation (including instructions), control a instrumentation of IGS are valid and functional in all respects.

DEPARTURE: *Normal Departure Procedure:* Upon completion of cargo discharge, the tanker's Master or Chief Officer and the Moor Master together estimate the time needed to prepare the tanker departure. This time will be given to the Vessel Traffic Controller on control platform, so that clearance for departure can be planned and that a mooring launch can be summoned to assist the tanker in operations of unmooring.

When the tanker is ready to leave the SPM, the Assistant Moor Master on the bow recommends the use of the tanker's engines in or to ease the load on the mooring lines. When the load is eased enou the tanker's crew can then disengage the mooring hawser and le the mooring lines to the water.

Departure time is the time when the last mooring line is cast off. A the tanker is unmoored, she manoeuvres to go clear of the SPM b and to take a course for departure through the safety fairway.

Departure from the SPM to the disembarking point of the Moor Master is done under the Mooring Master's guidance and the Ve Traffic Controller's surveillance.

Emergency Departure Procedures: An emergency departure ca initiated either from the control platform or from the tanker. If initi from the platform, the Mooring Master is so notified. The tanker's eng must then be made ready for immediate service, and if cargo is b discharged, the tanker's pumps must be shutdown in accordance w the seriousness of the emergency. *If an abrupt shutdown of platform's booster pumps is necessary, it is essential that the tank pumps either be immediately shutdown or else immediately shif* a recirculation mode. In accordance with the nature of the emergency, cargo hoses may be lowered by line-slipping to the water. All other procedures are the same as those initiated from the ship. The Master of a tanker may, in an emergency, for the protection of life or property, depart from an SPM without clearance from the control platform.

Emergency Shutdown: Following are the procedures to be followed in case the offload pumping must be quickly stopped because of some emergency.

(a) LOOP's Cargo Transfer Supervisor notifies the tanker's watch officer and the Mooring Master of the emergency shutdown, and activates the Emergency Shutdown Signalling Device.
(b) The LOOP system automatically goes into a pumping rate reduction, and shuts down the pumps and meters as the flow rate dictates.
(c) The tanker's manifold valves and the hose end butterfly valves are closed as soon as LOOP's pumps and the tanker's pumps are shut off.
(d) The Pumping Platform Supervisor shuts LOOP's PLEM valves.
(e) If the emergency is one that makes a quick departure of the tanker necessary, the emergency departure procedures of the preceding paragraph will then be followed.

MEDICAL: Agents can arrange medical and dental treatment as well as consultation and hospitalisation at short notice.

FRESH WATER: Not available.

FUEL: LOOP does not provide any bunkering services or facilities to tankers operating in the LOOP deepwater port area. Such bunkering will be conducted by private concerns under arrangements made with the owners or operators of tankers.

Bunkering will not be allowed to interfere with the safe and expeditious unloading of crude oil from tankers. All companies, craft, equipment and personnel involved in bunkering inside LOOP's deepwater port area must have LOOP's prior approval and must also follow LOOP's Bunkering Guidelines and Regulations, copies of which are available upon request from LOOP.

FIRE PRECAUTIONS: As per the "International Safety Guide for Tankers and Terminals".

REPAIRS: Skilled craftsmen are available for all on-board repairs through Agent.

SURVEYORS: *Petroleum Inspectors:* A contracted "Inspector of Record" is available at the port to make shipboard inspection of the cargo. Use of this service is at the option of the shipper and is at shipper's expense. Shipper shall have the right to have representatives witness the inspection. Shipper should contact LOOP or the "Inspector of Record" regarding the prevailing fees and to make known intentions regarding use of the service.

AIRPORT: New Orleans International Airport is serviced by major airlines with world wide connections. The airport is located 90 miles from LOOP.

WEATHER: *Waves and Currents:* At the port, significant wave height is less than 1.8 m. (6 ft.) for 72% of the time, and greater than 3 m. (10 ft.) for 5.4% of the time. Currents take a generally Westerly direction 75% of the time. Average current speed is 0.72 knots, but 3% of the time the current can reach a speed of 2 knots or more.

Weather at the Port: LOOP's Marine Terminal is located in a semi-tropical zone. Average Summer temperature is 29°C (84°F), and average Winter temperature is 14°C (57°F). Lowest temperature recorded is -12°C (10°F) and highest is 38°C (100°F).

Thunderstorms in Summer and cold fronts in Winter develop quickly and can be quite severe, with storm winds (up to Force 10) developing for short periods. The Terminal is in a hurricane zone, and although such storms are an infrequent occurrence at the port, the area is often affected adversely between the months of June and November by hurricanes passing East or West of the port. Poor visibility occurs most often in January when visibility of 2 nautical miles or less occurs 2% of the time.

Weather Operating Rules: Mooring operations, hose hook-up and the operation of LOOP support vessels are weather determinant, which includes, but is not limited to, consideration of state of sea and swell, wind direction and velocity, visibility and current strength and direction. In general, the LOOP Port Superintendent may use the following guidelines in determining whether to inititate, continue or terminate any activities in the port.

(a) Generally, tanker mooring and hose hook-up can be conducted in significant seas of up to 2.0 m. Significant seas in excess of 2.0 m. will cause the activity to be reviewed by the Port Superintendent in order to consider the benefit of a lee side.
(b) Operation of LOOP support vessels and cargo discharge can generally be conducted in significant seas up to 4 m. In the event that seas increase beyond, or are predicted to increase beyond 4 m. significant wave height, especially as a result of a building storm, cargo operations may be discontinued and cargo hoses disconnected.
(c) Tankers may be required to depart the SPM when the conditions below exist, or are predicted:
    (1) if seas become greater than 5 m.
    (2) if winds become greater than 44 knots.
    (3) if current becomes greater than 1.8 knots and is aligned with winds of 40 knots or more.
    (4) if current becomes greater than 1.2 knots and is perpendicular to 40 knots winds.
(d) The complete shut-down of all systems and the evacuation of the port will be ordered when it is predicted that the centre of a hurricane will pass within 160 nautical miles of the port. Normally evacuation orders will be issued 36 hours before the storm's expected arrival.
(e) A hurricane alert is issued 72 hours ahead of an approaching hurricane. Incoming tankers will not normally be berthed after a hurricane alert, and berthed tankers will complete discharging as soon as possible and depart the port.

Also see "Radio".

REPATRIATION: Crew changes and repatriation of crew members can be arranged through Agent.

GENERAL:

List of United States Federal Regulations referenced in this Port:

Title 33 USCA 1517 – Deepwater Ports – Liability.
Title 33 CFR 150(D) – Oil Transfer Operations.
Title 33 CFR 150.345 – Regulated Vessel Activities.
Title 33 CFR 155 – Oil Pollution Prevention Regulations for Vessels.
Title 33 CFR 157 – Rules for the Protection of the Marine Environment Relating to Tank Vessel Carrying Oil in Bulk.
Title 33 CFR 157.25 – 157.49 – Vessel Operations.
Title 33 CFR 159.7 – Marine Sanitation Devices – Requirements for Vessel Operators.
Title 33 CFR 164 – Navigation Safety Regulations.
Title 33 CFR 164.35 – Equipment: All Vessels.
Title 46 CFR 32.53 – Inert Gas System.
Title 46 CFR 34.05 – Fire Fighting Equipment.
Title 46 CFR 35.01 – Special Operating Requirements.
Title 46 CFR 35.30 – General Safety Rules.
Title 46 CFR 35.35 – Cargo Handling.
Annex V of MARPOL 73/78.

Charts: The following official charts of the National Oceanographic and Atmospheric Administration (NOAA) are recommended for use when approaching LOOP's Marine Terminal:

11340 (U.S. Gulf Coast – Mississippi River to Galveston).
11358 (U.S. Gulf Coast – Barataria Bay and Approaches).
11359 (U.S. Gulf Coast – Louisiana, LOOP Deepwater Port).

The latest editions of NOAA charts are listed in NOAA's publication "Dates of Latest Editions", which is issued quarterly and available free from National Ocean Survey, Division C44, Riverdale, Maryland 20840.

Support Vessel Base: National Oceanographic and Atmospheric (NOAA) Administration Chart No. 11358 shows the navigable route from the Marine Terminal to the Small Boat Harbour located on the East shore of Bayou Lafourche near Belle Pass where the support vessels are based.

Onshore Components: Major onshore components are: the Clovelly Dome Storage Terminal for receiving and storing the oil coming from the Marine Terminal and for delivering it to connecting facilities; the Operations Centre for controlling and monitoring system operations; and the Fourchon Booster Station for helping to pump the crude oil from the Marine Terminal to Clovelly Dome Storage Terminal.

Services: LOOP does not provide facilities for logistic services to tankers using the port. The company is not an "Agent", but does render to all tankers calling at its terminal the services necessary to effect a prompt, efficient turnaround. LOOP provides those services and facilities necessary for scheduling, receiving, mooring, unloading of cargo and departure of tankers calling at the port. Arrangements for logistic services must be made through each tanker's agent. Lists of logistic services can be obtained from the Agents. Messages concerning such requirements, except in an emergency, will not be accepted by LOOP.

Vessel used to deliver bunkers and tanker supplies must be approved by LOOP. Such vessels must apply for approval in accordance with the LOOP Guidelines and Regulations covering logistical service. Lists of currently approved vessels are available from LOOP on request. No telephone service is available to the ships.

Included in tanker services that need to be arranged through tankers' agents are mail services, medical services and garbage pick-up. Garbage collection shall be in compliance with Annex V of MARPOL 73/78. There are no facilities for handling mail. *It is important that mail for tankers not be addressed to LOOP Inc.* There is no medical service on LOOP's offshore platforms. Medical service ashore, as well as helicopter service for medical evacuation, is available through Agent.

Helicopter Transfer of Personnel and Supplies: Helicopter operations are sanctioned on tankers, subject to the Master's and the Port Superintendent's approval, for the following situations:

(a) Medical evacuation, personnel transfer and replenishment of supplies by helicopter is permitted on an individual basis. The Port Superintendent has authority to determine when conditions are not safe for such helicopter operations. Shoreside treatment for medically evacuated patients must be arranged by the tanker through the tankers' agent. LOOP will assist with communication relays for emergency medical purposes but will not act as agent.
(b) In order to facilitate decisions about the safety or feasibility of helicopter operations on tankers, LOOP advises Masters of the characteristics of any helicopters that LOOP itself dispatches.

Personnel Transportation: LOOP provides no boats for transportation of tankers' personnel to shore. When transportation is required, it must be arranged through tanker's agents. There is almost no public transportation on land from towns near the LOOP platform. Any such land transportation should also be arranged in advance through tanker's agents.

Small Boats and Visitors: No boats are permitted or authorised to come alongside tankers calling at the port except those required by LOOP or by the ship to furnish services or carry out official business, and then only after clearance from the Vessel Traffic Controller and Mooring Master.

It is strongly recommended to Masters of tankers that visitors to the ship be restricted to a minimum, because of the hazards involved. Visitors to the ship and crew are not allowed to embark or disembark by the way of LOOP's platforms or launches.

Masters of vessels are advised that decks and the ship's ladders should be well lighted and ladders should be kept well clear of the water during unloading to prohibit unauthorised persons from boarding the ship.

Storage: Procedures and charges for storage of crude oil by shippers in excess of normal residence time are covered in the Terms and Conditions of Service.

Cargo Documentation: The Cargo Quantity and Quality Report, which is a LOOP document, will be completed as much as possible by LOOP personnel before each tanker's arrival. After the tanker finishes discharging, the Mooring Master receives the necessary figures by radio from the Control Transfer Supervisor, so that the document can be completed before sailing. Cargo quantity is measured by representatives of LOOP by using turbine meters and provers on the pumping platform. Cargo quality is monitored by automatic sampling devices on the platform, and for accounting purposes manual tests are done on samples taken from the automatic sampler on the platform. LOOP furnishes United States Customs authorities with the necessary documentation.

Pollution: Discharge of oil or oily slops into the sea is strictly forbidden. LOOP has no facilities for receiving any oil residues or oily ballast water. Tankers wishing to offload such substances must do so elsewhere. Tankers that release oil or oily ballast water either at the SPM or in the anchorage area will be held responsible for all clean-up costs. The U.S. Coast Guard Regulations concerning water discharges at sea are contained in 33 CFR 157.25 to 157.49. Regulations in 33 CFR 159.7 require an operable marine sanitation device aboard all vessels in United States waters. For purposes of these regulations the LOOP safety zone is considered U.S. waters.

Note: All ballast and bilge overboard discharge valves are to be shut and sealed and all deck scuppers plugged while at a LOOP SPM or anchorage, although scuppers can be temporarily opened to drain off rainwater.

Safety: LOOP maintains a vigorous safety programme. The Mooring Master will discuss and review LOOP's safety requirements and procedures with tanker's Master and Chief Officer before cargo discharge begins. Coast Guard Inspectors will board all foreign vessels, at least annually, to ensure compliance with federal regulations, including Part 164, Title 33 of the United States Code of Federal Regulations, Navigation Safety.

Drug and Alcohol Policies: It is the company's belief that the use of drugs or alcohol impairs employee performance and creates unsafe working conditions, thereby posing dangers to employees, contractors, vessel personnel and to the environment. LOOP is committed to maintaining a productive and safe working environment. To that end, all LOOP employees and employees of contractors performing services for LOOP, are not permitted to consume or have in their possession any alcohol or drugs, while on Company premises. For this policy's purpose, the Safety Zone is considered to be Company premises.

Masters, whose ships are in the Safety Zone, are strongly encouraged to voluntarily follow LOOP's policy concerning consumption of alcohol and drugs by crew members, thus contributing to a safer discharge.

Customs: LOOP furnishes customs authorities with documentation of volumes and evidence of quality of cargoes received into the system based on measurements at the Marine Terminal pumping platform. Arrangement for the posting of such sureties and payment of fees or duties, and for other documentation that may be required, is the responsibility of the importer and/or operator of the tanker. The importer's customs broker, or his other authorised representative, will advise the importer regarding procedures and the amount of duty or fees levied on oil shipped through the port complex.

State Fees: There are presently no usage fees directly assessed by Louisiana to shippers and tankers at the deepwater port. If Louisiana imposes any fees in the future, tankers will be responsible to pay them.

Provisions: All deck and engine room stores are available in quantity. High quality fresh and frozen provisions available through Agent.

Regulated Vessels Activities: Vessel activities permitted and prohibited at the port, controls on those activities, and the specific safety zone areas in which the controls apply are set forth in 33 CFR 150.345.

	Safety Zone		
Regulated Vessel Activities	*Areas to be avoided around each PPC and SPM*[1]	*Anchorage Area*	*Remaining Portion of Safety Zone*
Tanker calling at port.	C	C	C
Support vessel movement.	C	C	C
Transit by vessels other than tankers or support vessels.	N	P	P
Mooring to SPM by vessel other than tankers or support vessels.	F		
Anchoring by vessels other than tankers or support vessels.	N	F or P	N
Fishing, including bottom trawl (shrimping).	N	P	N
Mobile drill operations or erection of structures[2].	N	N	N
Lightening/transshipment[3].	N	N	N

[1] The radius of areas to be avoided around each PPC is 600 m. and around each SPM is 500 m.

[2] Not part of Port Installation.

[3] Exception, 33 CFR 150.423(e).

Note: The person in charge of any vessel planning to enter a Safety Zone should contact the port's Vessel Traffic Supervisor on Channel 10 or 74 VHF-FM before entry and comply with that person's instructions.

Key to regulated activities:
F – Force Majeure.
N – Not permitted.
C – Tanker calling at port and support vessel movements: Permitted when cleared by Vessel Traffic Supervisor.
P – Vessels other than tankers or support vessels: Permitted when not in immediate area of tanker, clearance by Vessel Traffic Supervisor required.

Communications with Vessel Traffic Supervisor required.

For transitting foreign flag vessels, the requirement for clearance to enter the Safety Zone is advisory in nature.

AUTHORITY: LOOP Inc. (See "Operator").

LOS ANGELES, California: 33.43 N. 118.16 W.

(See Pl

PORT LIMITS: The seaward boundary of the Port of Los Angeles for most purposes, the breakwater through which arriving vessels p at Angels Gate Light.

DOCUMENTS: *First Port of Arrival:*
1 Complete Manifest deposited with Customs, original and travel
1 Complete Manifest returned to vessel.
1 Manifest of first port cargo deposited with Customs broker.
2 Quarantine Declarations (Form PHS 43).
2 Agriculture Declarations (Form AIQ 43).
1 Visaed Crew List (Form I-418) 5 additional copies.
1 Crewman's Landing Permit (Form I-95A) for each crew member a (Form I-94) for each passenger.
1 Dangerous Cargo Manifest deposited with Captain of the P 1 copy in hands of Chief Officer for review by the Fire Departme
The Coast Guard Captain of the Port must be informed of vesse ETA 24 hours prior to vessel's arrival.

Second and each subsequent Port of call in U.S:
2 Manifests of Cargo for second U.S. port left with Customs.
1 Travelling Manifest returned to Master.

(*Note:* Travelling Manifest is carried and deposited with Customs at th port of discharge in U.S. – in addition to above required docume 4 additional copies should be available.)

Radio Officer's Report: April 1991.

Immigration: Hand over form issued by Immigration at previous U port.

Customs Broker:
1 copy Travelling Manifest.
2 copies Master's Oath (Form 1300).
2 copies Crew List (Form 1-418).
2 copies Ship's Stores List (Form 1303).
2 copies General Declaration (Form 1301).

Agriculture: Officials will board the vessel and inspect and seal stor

Crew Signing-off: Fill in Crew Declaration (Form 5129), state o number of suitcases and bags. Hand over 1-95A to Agent to prepa Immigration matters (together with Passport).

Crew Signing-on: Crew member to hand over Form 1-94 to Agent Immigration.

PILOTAGE: Request made through Agent. Contact can be ma through VHF Channels 14 (156.7 MHz) or 16 (156.8 MHz). Call: K 260 Los Angeles Pilots. Tel: 519-3805. Fax: 832-3811. Not less th 2 hours notice of arrival or departure. 1 long and 1 short blast on shi whistle or siren, or international signal. Pilot will board in vicinity of se buoy ("LA" entrance buoy, lighted bell buoy "L.A." red and white vert stripes. Radar reflector).

Under normal weather conditions, the pilot ladder should be on t starboard side 1 m. above water.

Arriving vessels should keep to Eastward of Los Angeles Sea-Bu

Departing vessels should keep to Westward of Los Angeles Se Buoy.

Masters or Agents are requested to advise the pilot station whene there is a change in the arrival or sailing time.

Note: Ships arriving can usually make good VHF radio contact exc between Point Vicente and Point Fermin.

Shipmaster's Report: March 1994.

Vessels enroute to Los Angeles must contact "Los Angeles Pilot' VHF Channel 73.

ANCHORAGES: Anchorages defined on charts. No permit required anchor less than 10 days. Permit for over 10 days obtained from Capt of the Port, USCG and Harbour Department Port Warden. Permi required for Explosives anchorage.

Anchorage Regulations: Reports required per U.S. Coast Guard:
(1) The Master of every vessel upon anchoring shall notify the Co Guard Captain of the Port, giving vessel name, anchorage num and time anchored.
(2) The Master of every vessel, upon departing anchorage, shall no the Coast Guard Captain of the Port, giving vessel name, ancho number, time underway and destinaton, i.e. bound for sea or bo for Berth No....
(3) For the above reports, the call to the Coast Guard Captain of th Port should be made on VHF Channel 16.

APPROACHES: Vessels approaching the ports of Long Beach/L Angeles should use the prescribed traffic separation scheme. I advised that the traffic separation scheme has been tempora modified, pending adoption of permanent changes by the Mari Safety Committee. The modification reconfigures the Western appro to the Los Angeles/Long Beach precautionary area in the follow manner: a portion of the TSS separation is reduced from 2 miles 1 mile in width and merges with the existing separation zone at a sligh adjusted turn point; the outbound lane has been shifted 1 mile Sou its present charted location; and the precautionary area is reduce size on its Eastern side. Vessel charts should be corrected as per m recent Notice to Mariners for geographical positions of these chang Large tankers should pick up the Pilot 1 to 2 miles South of the s buoy and Pilots should have the opportunity to board without exce way on the vessel so as to have her under control before entering t breakwater area. All vessels entering the port should pass Eastwa the respective sea buoy and vessels outbound shall pass Westwa the sea buoy. The Master should use extreme caution in t Precautionary Area due to proximity of outbound traffic and nume small craft, when at night, their lights are not easily distinguishab and around breakwaters or against the background of harbour li Outbound vessels should avoid setting course before clearing Sou the sea buoys and adjoining anchorages and be alert for crossing tr

Also see "VTS".

MAX. SIZE: Restrictions on draft only. Supertanker terminal in outer harbour has fairway of 51 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Los Angeles Quarantine Station.

Foreign Quarantine: U.S. Public Health Service Quarantine Station, 380 World Way, Box N-19, Los Angeles International Airport, Los Angeles, California 90045. Tel: 215-2365.

Standard Procedures: Radio Free Pratique clears a vessel to enter the harbour without inspection. Inspection Officer will board a vessel based on the following criteria:

A. 15 days prior to entering a U.S. port, if any crew member or passenger exhibits these symptoms:
   (1) Temperature of 100° or higher for 2 days, or is accompanied by:
      (a) rash
      (b) jaundice or
      (c) glandular swelling
   (2) Diarrhoea severe enough to prevent performing normal duties.
   (3) Death aboard ship.

B. Any ship visiting a plague-infested country within 60 days prior to entering a U.S. port.

C. Any ship that has requested a Deratting Inspection/Exemption Certificate.

If subject to inspection, vessel boarding hours are 0600 hrs. – 1800 hrs., Monday – Saturday regular time. 1800 hrs. – 0600 hrs. is overtime, including Sundays and holidays.

Reporting or request for boarding must be relayed and received by the office 24 hours prior to a ship's arrival. Under Conditions A and B above, the quarantine flag may be ordered flown.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: International Telephone and Telegraph, call letters "KOK" Los Angeles Radio.

RADAR/VHF: The Los Angeles Harbour Pilot's station equipped with radar for use of Pilot. The Pilots also monitor VHF Channels 14 (156.7 MHz) and 16 (156.8 MHz). Also see "Long Beach" and "Services".

VTS: *Vessel Traffic Information Service:* Upon entering the precautionary area, vessels are to contact "LA – Long Beach Traffic" to ascertain what vessel traffic may be expected.

Shipmaster's Report: March 1994.

The new V.T.I.S. program for Los Angeles and Long Beach ports came into effect on 1st March 1994. This new system, supervised by U.S. Coast Guard, is subject to payment and it is mandatory for the following vessels:

Vessels of 300 or more gross tons that are propelled by machinery.

Vessels of 100 or more gross tons that are carrying one or more passengers for hire.

Vessels certified for 150 passengers or more for hire.

Commercial vessel of 26 ft. or over in length engaged in towing another vessel alongside, astern or by pushing ahead.

Dredge and floating plant.

VTIS area includes the waters of San Pedro Bay and San Pedro Channel, and navigable waters outside the breakwaters that are encompassed by the arc of a circle having its centre at Point Fermin Light, with a radius of 20 nautical miles drawn from a position on the shore in the vicinity of Newport Beach clockwise to the Eastern boundary of the Northwesterly bound traffic lane in Santa Monica Bay and thence to the shore at Point Vincente Light, excluding Santa Monica Bay, East of the existing Vessel Traffic Separation Scheme.

The voice call for the VTIS is "LA – Long Beach Traffic" through VHF Channel 14. Inside the VTIS area, a continous watch must be maintained on Channels 14 and 16.

Entering the VTIS area (20 miles from Point Fermin), vessel must report the following information:

Name and call sign.
Position, course and speed.
Destination.
ETA Breakwater Sea Buoy/Pilot Station.

Vessel must also contact the VTIS when entering the Precautionary Area and when passing the breakwaters. Speed in the Precautionary Area must not exceed 12 knots for vessels greater than 300 gross tons and a minimum of 0.25 miles must be maintained between vessels underway.

Departing berth or anchorage, vessel must contact the VTIS and report:

Name and call sign.
Position.
Destination.
(This report is normally made by the Pilot).

Vessels leaving the port must also contact the VTIS when passing the breakwaters (entering the Precautionary Area), when leaving the Precautionary Area (entering the Traffic Separation Scheme) and when leaving the VTIS area (20 miles from Point Fermin).

Vessels must also report to the VTIS any abnormal situation reducing the capacity of the vessel or which may affect the safety of other vessels due to defective propulsion, defective steering, inoperative navigational running lights, unusual handling, inoperative whistle, etc.

Same must be done in case of any emergency or unusual event such as fire, collision, grounding, man overboard, etc.

TUGS: On stand-by 24 hours a day. However, should be ordered prior to arrival. Tugs join vessel in main channel, tug lines used, except when towing astern.

BERTHING: Generally arranged through Agent. Berthing under control of Port of Los Angeles' Chief Wharfinger.

Whenever a vessel is scheduled, which would approach the design depth of a particular berth, the Pilot Station Management should be contacted, so that an individual judgment can be made.

CONTAINER HANDLING FACILITIES:

Container Terminal: Berths 87 – 90.
Operated by: Public berth.
Contact: LA Harbor Department, Tel: (213) 519-3860.
Total Land Area: 25 acres (10.1 hectares).
Berth Length: 800 ft. (244 m.)
Container Capacity: 1,800 TEUs, 120 reefer outlets.
Number of Cranes: 2 × 40 ton portainers.
Stevedores: Optional.
General: Handles containers and breakbulk.

American President Lines: Berths 121 – 126.
Operated by: Eagle Marine Services Limited, Berths 121 – 126, San Pedro, CA 90733.
Contact: For general information, Tel: (310) 548-8777.
Total Land Area: 129 acres (52 hectares).
Berth Length: 2,000 ft. (609.6 m.).
Container Capacity: Grounded and Chassis.
Mode of Operation: Wheeled/Grounded.
Number of Cranes: 5 × 40 ton.
Stevedores: Eagle Marine Services Limited.
General: Container freight station of 154,000 sq.ft.(14,307 sq.m.). Maintenance and repair station of 39,000 sq.ft.(3,623 sq.m.). Underground Bunkering.
Services: American President Lines (APL), ANZDL, OOCL and PM&O.

Yang Ming Container Terminal: Berths 127 – 131.
Operated by: Marine Terminal Corporation, 1606 West Water Street, Long Beach, CA 90802.
Contact: Capt. Derek Luo. Tel: (310) 548-4629.
Total Land Area: 60 acres (24 hectares).
Berth Length: 1,800 ft. (549 m.).
Container Capacity: 2,662 TEUs with 200 reefer outlets.
Mode of Operation: Grounded and chassis.
Number of Cranes: 3×40 ton single-lift portainers.
Stevedores: Marine Terminal Corpration.
General: Maintenance and repair facilities.
Services: Yang Ming Line.

Trapac Terminal: Berths 136 – 139 and 142.
Operated by: Trans Pacific Container Service Corporation, 920 West 'B' Street, P.O.Box 1178, Wilmington, CA 90748.
Contact: Frank Pisano. Tel: (310) 830-2000.
Total Land Area: 88 acres (36 hectares).
Berth Length: 1,775 ft. (540 m.) (plus 1,300 ft. (396 m.)).

Container Capacity: Stacking area for 2,450 units, including 48 reefer units. On-chassis area for 1,850 units plus 206 reefer units.
Mode of Operation: Grounded and Wheeled Storage.
Number of Cranes: 4 × 40 ton (plus 3×40 ton).
Stevedores: Trans Pacific Container Service Corporation.
General: 450 reefer plugs (wheels), 48 ground plugs, 3 transtainers, 3 side handlers, one toplifter.
Services: Mitsui OSK, "K" Line, Dole Ocean Liner Express, Nedlloyd Lines, d'Amico Line and Italia Line.

Matson Terminal: Berths 206 – 209.
Operated by: Matson Terminals Inc., P.O.Box 3367, Terminal Island, CA 90731.
Contact: Richard Bliss, Tel: (310) 519-6502.
Total Land Area: 86 acres (34.8 hectares).
Berth Length: 2,180 ft. (665 m.).
Container Capacity: 10,000 TEUs with three and four-high stacking.
Mode of Operation: Grounded and Chassis.
Number of Cranes: 4×40 ton capacity gantry cranes.
Stevedores: Matson Terminals Inc.
General: Container freight station of 6,200 sq.ft. (576 sq.m.). Additional four-rail mounted Morgan cranes, 4 transtainers, 12 straddle carriers and 4 side loaders.
Services: Matson Navigation Co., Blue Star Line, Columbus Line, CSAV, Grancolombiana Line, Navicana Line and SERPAC.

Yusen Terminal: Berth 212 – 216.
Operated by: Yusen Terminals Inc. (a subsidiary of NYK Line).
Contact: President and Chief Executive Officer, Yusen Terminals Inc. Tel: (310) 548-8000.
Total Land Area: 134 acres (54 hectares).
Berth Length: 2,146 ft. (654 m.).
Mode of Operation: Wheeled and grounded.
Number of Cranes: 4 post-Panamax, 100 ft. gauge, each with 40 long ton capacity.
Stevedores: Yusen Terminals Inc.
General: 21,937 sq.ft. administration/in-gate building, 23,386 sq.ft. maintenance and repair building with 10 bays, 4,798 sq.ft. marine building, 400 reefer connnections with underground work for 453 additional outlets in future, 10 entry lanes with 6 scales, 4 exit lanes, 11,079 TEU storage capacity, 1,008 vertical stalls for vertical chassis stacking, 3 transtainers, 37 hustlers, 2 tophandlers, 2 sidehandlers, 2 chassis stackers and designs for 45,000 sq.ft. consolidation container freight station to be constructed when needed.
Services: NYK Line, Neptune Orient Lines Ltd. (NOL) and Hapag-Lloyd (America) Inc.

Evergreen Terminal: Berths 229 – 236.
Operated by: Metropolitan Stevedore Company.
Contact: Captain George Chang, Senior Vice-President, Evergreen. Tel: (310) 519-6800.
Total Land Area: 118 acres (47.8 hectares).
Berth Length: 3,900 ft. (1,189 m.).
Container Capacity: 3,600 TEUs, one high; 636 × 20/40 chassis, 130 with reefer plugs.
Mode of Operation: Grounded and Chassis.
Number of Cranes: 6×40 ton.
Stevedores: Metropolitan Stevedore Company.
General: Customs, full-service maintenance and repair facilities available. Refrigerated container wash rack and maintenance. Nine transtainers and two tophandlers.
Services: Evergreen.

SPECIALISED CARGO HANDLING:
Berths 49 – 53:
Operated by: Kaiser International Corp., 411 North Harbor Boulevard, Suite 300, San Pedro, CA 90731. Tel: (310) 514-2880.
Contact: Richard E. Holdaway or James E. Holland.

Depth alongside of 51 ft. (16 m.) enables bulk carriers exceeding 100,000 d.w.t. to call at this dry bulk terminal. The facility can stockpile more than 170,000 metric tons of commodities, including coal and petroleum coke. Unit trains carrying coal, copper concentrates and other dry bulk products are unloaded by rotary car dumping. Petroleum coke is delivered by railcars and bottom dump trucks. Export commodities are transferred from hoppers by conveyor belt either directly to ships for export or to a rail-mounted stacker for storage. The shiploader handles 1,400 tons (1,270,059 kg.) of coal an hour, moving between hatches for a spread of up to 600 ft. (183 m.). An 800 ft. (242 m.) concrete wharf supports the shiploader. Import commodities are discharged using a dock rail-mounted Whirley gantry crane and clamshell bucket. Imports are stockpiled or directly loaded to railcars or trucks.

Berth 191:
Operated by: Wilmington Liquid Bulk Terminals Inc., 401 Canal Avenue, Wilmington, CA 90744. Tel: (310) 549-0961.
Contact: Charles Menechios.

Wilmington Liquid Bulk and CPC Terminals operate a bulk cement distribution facility at this site. Built to handle up to 1,000,000 tons of cement annually in an 86,000 sq.ft. (7,989 sq.m.) warehouse, the Terminal features state-of-the-art computerisation, dust control and pneumatic conveying. Two 250 t.p.h. pneumatic Kovako units discharge up to 38,000 tons of cement from bulk carriers to either the warehouse or silo storage areas. The cement then is distributed by truck throughout Southern California. Wilmington Liquid Bulk also operates Berths 187-190.

Berths 210-211:
Operated by: Hugo Neu-Proler Co., P.O.Box 3100, Terminal Island, CA 90731. Tel: (213)775-6626 or (310) 831-0281.
Contact: John Prudent.

This 22 acres (9 hectares) dry bulk facility handles all grades of ferrous and non-ferrous scrap metal, which is transported in by truck from throughout Southern California. A bulkloader is used to discharge cut and shredded grades of scrap metal into 25,000 ton to 33,00 vessels. The onsite automobile shredder processes approxima 900 tons of automobiles and light-gauge scrap metal daily, an 2,000 ton onsite shear processes an additional 300 tons of unprep heavy melting steel scrap. The berth has an alongside depth of 3 (12 m.).

Berths 216-217:
Operated by: Refiners Marketing Co., 100 South Seaside Aven Terminal Island, CA 90731. Tel: (310) 519-7696.
Contact: M.H. Asghar.

Refiners Marketing Co., which specialises in handling petroleum a chemical products, coordinates its activity at this liquid bulk facility w the cargo-handling operations of its primary Terminal at Berth 225.

Berth 225:
Operated by: Refiners Marketing Co., 100 South Seaside Aven Terminal Island, CA 90731. Tel: (310) 519-7696.
Contact: M.H. Asghar.

Refiners Marketing Co. handles petroleum products, ethylene gl and other chemicals at this liquid bulk facility. Pipelines located un the wharf send cargo to a backland tank farm, where products are sto blended and packaged for distribution by truck or rail or reloading o ships. Refiners Marketing Co. also has a liquid bulk pipeline Berths 216-217.

BRIDGES: *Horizontal and Vertical Clearances:* Vertical clearances a given above Mean High Water (4.7 ft.).
Vincent Thomas Bridge:
  Horizontal usable width (of channel): 1,150 ft.
  Vertical clearance: 165 ft.
  Middle 500 ft. width: Vertical clearance 185 ft.
Ford Avenue Bridge:
  Horizontal clearance: 180 ft.
  Vertical clearance: Bridge down – 7 ft.
  Bridge up – unlimited.
Commodore Heim Bridge:
  Horizontal clearance: 180 ft.
  Vertical clearance: Bridge down – 37 ft.
  Bridge up – 162 ft.
Cerritos Channel Drawbridges – Consolidated Requirements:
(The U.S. Coast Guard has consolidated the requirements drawbridge operations, including Cerritos Channel, as containe Code 33 of Federal Regulations, Part 117).

(a) The draw of the Commodore Schuyler F. Heim Highway Bri Mile 4.5 at Long Beach, shall open on signal, except that 0630 hrs. – 0800 hrs. and 1530 hrs. – 1800 hrs., Monday thro Friday, except federal holidays, the draws need not open fo passage of vessels.
(b) The draw of the Henry Ford Avenue Railroad Bridge shal maintained in the open to navigation position, except when a is crossing or when maintenance work is being performed.
(c) The opening signal for the Commodore Schuyler Heim Bridg 3 prolonged blasts. The acknowledging signal is 2 prolonged bla followed by 1 short blast when the draw will open immediately, 5 short blasts when the draw cannot open immediately.
(d) If the draw of the Henry Ford Avenue Railroad Bridge is in the cl position, the opening signal is 2 short blasts, followed 1 prolonged blast. The acknowledging signal is 2 prolonged bla followed by 1 short blast when the draw will open immediately, 5 short blasts when the draw cannot open immediately.
(e) Radiotelephones are installed to enable the drawtender a Commodore Schuyler Heim Bridge and the Henry Ford Ave Railroad Bridge to communicate with vessels on radioteleph frequency 156.65 MHz (Channel 13), or such other frequenc may be assigned by the Federal Communications Commissio

Gerald Desmond Bridge:
  Horizontal usable width (of channel): 260 ft.
  Vertical clearance: 155 ft.
Southern California Edison Co. – Overhead Power Cables:
  Vertical clearance: 153 ft.

TANKERS: Load and discharge lines have 6 in. and 8 in. stan flanges (super-tanker terminal has 12 in. lines with standard flange not so equipped ship must furnish its own "C" clamps. Recommend have reducers on board to handle 6 in. and 8 in. flanges. Res discharge facilities available for limited quantities. All types and gr of petroleum available. Also see Long Beach – "Tankers".

Berth No.	*Length (ft.)*	*Depth (ft.)*	*Operator*	*Remarks*
45-47	898	47	Unocal/Mobil	Crude, bunkering products. 3 loadin arms (2×16 in., 1×12 in.). Pipeline miles by 30 cm. 2 conveyor belts fo stores.
70-71	800	38	GATX	Petrochemicals, petroleum produc 105 tanks, capac 568,000 barrels. Pennzoil uses Ber for lube oils.
97-102	848 805	32 32	Chevron	Petroleum, bunke diesel, lube. 21 ta capacity 660,000 barrels. Access b road only.

Berth No.	*Length (ft.)*	*Depth (ft.)*	*Operator*	*Remarks*
118-119	821	36	GATX	GATX have 4×30 cm. and 2×15 cm. pipelines from wharf to 12 storage tanks, total capacity 592,000 barrels. B.P. North American Petroleum also uses this public berth.
120	418	35	Western Fuel Oil Co.	Petroleum, LPG and chemicals. 30 cm., 25 cm. and 15 cm. pipelines to Western Fuel, Petrolane, B.P. and GATX tanks.
148-151	1,344	35	Unocal	Refined products.
163-164	850	32	Wickham Oil Terminal Inc.	Also used by Ultramar Inc., received base oil, fuel oil and diesel.
165-166	679	45	U.S. Borax	Exports borates. Rate 1,000 t.p.h.
167-169	1,249	38	Shell	Receives crude, receives and ships petroleum products. 11 storage tanks, capacity 530,000 barrels.
171-173	1,412	35	GATX	Public terminal. Receives crude, ships petroleum products. 18 storage tanks, total capacity 1,000,000 barrels.
187-190	–	45	Wilmington Liquid Bulk Terminals Inc.	Public terminal for storage and shipping of various liquids (lube, diesel, caustic, coconut oil, etc.). 68 tanks, capacity 1.3 million barrels.
238-240B	2,621	35	Mobil	The terminal handles tankers and barges (30 ft. depth). Crude oil, semi-finished and finished products.

CRANES: *Barge Cranes:* 1×350 tons capacity (Manson Construction).
STEVEDORES: Agents make necessary arrangements.
MEDICAL: Necessary to notify Agents of required medical attention: this can be done when final ETA is determined. Hospital facilities available (private).

Vaccinations/fever certificates, etc., shall conform with rules and models prescribed by the International Sanitary Regulations.

DENSITY: Average density 1026 (exception during or after heavy rain).

FRESH WATER: Availability unlimited, delivery universal, rate of delivery 100 t.p.h.

FUEL: Unlimited fuel, all grades at attractive rates. 48 hours' advance notice generally required.
CONSULS:

Argentina – Consul General
Australia – Consul General
Austria – Consul General

FIRE PRECAUTIONS: Whenever vessel bunkering, sufficient serviceable fire hose with suitable nozzles attached to reach all parts of vessel shall be connected to fire main on vessel and made ready for instant use at all times during bunkering operations. If no adequate water pressure available on board, connections shall be made to shore lines to obtain adequate pressure. All tankers shall be moored bow seaward and have wire towing pendants rigged fore and aft readily available for emergency use, fire hoses shall be connected as above at all times while vessel in port.

International fire signals will be used in case of fire (5 prolonged blasts of ship's whistle or siren of 4 to 6 seconds duration).

SURVEYORS: ABS, Det Norske Veritas, Lloyd's Register and NKK. SGS, Toplis and Harding Inc., and many other marine surveyors available.
REPAIRS: All types of deck and engine repairs possible.
DRY DOCKS: Largest dry dock 559 ft. by 110 ft., 22,000 displacement tons.
CERTIFICATES: *Passenger Vessels:*

Safety Certificate, with 50 or more passengers.
Load Line Certificate.
Radio Certificate.
Radio Telephone Certificate, if aboard.

Cargo Vessels:

Safety Equipment Certificate.
Load Line Certificate.
Certificate of Inspection/Home Certificate.
Trading Certificate.
Cargo Gear Certificate.
Radio Certificate, Radio Telephone Certificate, if aboard.

If carrying passengers from U.S. ports, vessels must have PAC (Persons in Addition to Crew) Certificate issued by USCG.

Tanker Vessels:

Same as cargo. Exception: If carrying exotic cargo, required to have cargo facilities plan reviewed and approved by USCG, Washington, D.C. On vessel's first visit it will be inspected and receive a letter of compliance.

GANGWAY/DECK WATCHMEN: Gangway watch recommended. Tankers and vessels handling dangerous cargo required to have gangway and deck watch.
OPENING/CLOSING HATCHES: Automatic hatches may be opened and closed by crew, manual hatches opened and closed by stevedores.
CUSTOMS ALLOWANCES: Tobacco, either 300 cigarettes, 50 cigars, or 3 lb. of smoking tobacco, for the personal use of crew member. Wine and/or spirit, 1 quart for personal use of crew member.
CARGO GEAR: Gangway net attached between ship and dock; extending 5 ft. beyond turntable in one direction and 5 ft. beyond point of intersection of gangway and stringpiece in the other direction. Preventer guy must be rigged separately to head of boom from working guy. Exception if cast head of boom is capable of withstanding the stress of all the lines attached thereto. (This is a West-Coast requirement.)
REPATRIATION: Arrangements can be made through Immigration on request of Agent to have crewman change ship or return to home port.
AIRPORT: Approximately 20 miles to International Airport which serves all major airlines.
TIME: Standard Time, GMT minus 8 hours. Daylight saving time GMT minus 7 hours (April through October).
HOLIDAYS: Cargo may be worked on holidays with holiday pay scale.
POLICE/AMBULANCE/FIRE: The telephone numbers are Fire (213) 832-4241, Police (213) 832-7211, Ambulance (213) 832-4243. Fire Alarm boxes adjacent to all cargo sheds. Emergency number is 911.
EMERGENCY CO-ORDINATION CENTRE: Coast Guard Rescue Co-ordination Centre. Tel: 590-2225.
TELEPHONES: For passenger vessels at passenger terminals only.
SERVICES: A ship-reporting service "The Marine Exchange" located at Angels Gate Park near Los Angeles Harbour.They monitor Channels 14 (156.7 MHz) and 16 (156.8 MHz) VHF and have Channel 9 (156.45 MHz) VHF as their own. Primary duties are reporting arrivals, departures and locations of vessels.
BANKS: Over 50 international banks.
SHIP SUPPLY SERVICE: The port is served by numerous ship suppliers offering a wide range of services.
SHORE LEAVE: Crew members are allowed ashore.
IDENTIFICATION CARDS: 1 crewman's landing permit (Form I-95A) or Immigration card (Form D-1).
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany).

This service is provided by the terminal operators, who should be able to provide details on request.

WASTE OIL DISPOSAL: This service is provided by the terminal operators, who should be able to provide details on request.
SEAMAN'S CLUBS: Worldport LA, The Port of Los Angeles, produce a small booklet – Mariners Guide – detailing the facilities available to seafarers, including seafarers centres, public transportation, and a port map amongst others.

There follows a list of the seafarers centres from whom further information can be obtained:

Seafarers' Communications Center, World Cruise Center, Berth 93A-Cargo Mezzanine. Tel: 832-2964.

Seamen's Church Institute, 101 West 11th Street, San Pedro, CA 90731. Tel: 832-2563.

Norwegian Seamen's Church, 1035 South Beacon Street, San Pedro, CA 90731. Tel: 832-6800.

Swedish Seamen's Church, 1035 South Beacon Street, San Pedro, CA 90731. Tel: 832-6800.

International Seafarers Center, 120 South Pico Avenue, Long Beach, CA 90802. Tel: 432-7560.

REGULATIONS: Permits required for hot work (welding, cutting, etc.). Permit required for any dangerous cargo. Permit to discharge ballast (clean water) required. Restrictions on bunkering operations (scuppers plugged, valves closed).
DELAYS: No delays in berthing, load or discharge or bunkering can be expected.
DEVELOPMENTS: Pier 300: 130 acre container terminal, 103 acre consolidated dry bulk terminal with 2 deep water berths and 47 acre near-dock railyard.
AUTHORITY: Port of Los Angeles, P.O.Box 151, (425 S. Palos Verdes Street), San Pedro, California 90733-0151. *Tel:* (310) 732-3840. *FAX:* (310) 831-4896. *Contact:* Ezunial Burts, Executive Director.

MANITOWOC, Wisconsin: 44.06 N. 87.38 W.

LOCATION: Situated on the Western shore of Lake Michigan, 70 miles North of Milwaukee. Port open all year round.
DOCUMENTS: Vessels cleared by Quarantine Officials at Quebec. Customs Officer stationed at Green Bay.
PILOTAGE: Not locally required or available. Pilots should be taken on board prior to entering harbour.
MAX. SIZE: Max. draft 21 ft., vessels up to 600 ft. LOA can berth.
HEALTH: See "Documents".
TUGS: Not available.
BERTHING: 2 breakwaters protect the harbour. Entrance dredged to 25 ft. Outer harbour from pier heads to inner red light dredged to 23 ft. Inner harbour up to Medusa Cement Company dredged to 21 ft. Maximum depth alongside docks, 19 ft. Turning basin, 600 ft. radius.

All berths owned by private industry and located as follows from harbour entrance:

1. Manitowoc Public Utilities: 2 slips capable of handling 400 ft. car-ferries which handle railroad freight cars or Ro/Ro vehicles. Located port side at a right angle to river channel South side of harbour.
2. C. Reiss Coal Company, 509 Jay Street: A 900 ft. slip just inside car-ferry docks, at a right angle to river channel, South side of river.
3. Manitowoc Company Inc., 500 South 16th Street: 800 ft. long. South side of channel, parallel docking.
4. Busch Agricultural Resources Inc., 605 Washington Street: 490 ft., South side, has marine leg for unloading grain.
5. McMullen & Pitz Construction Company, 901 Commercial Street: 300 ft. North side of river between 8th and 10th Street bridges.
6. Soo Line Railroad Company, 923 Commercial Street: 300 ft. North side of river just above 10th Street bridge. This includes an unused car-ferry slip capable of handling a 400 ft. car-ferry. Also, 600 ft. North side just above car-ferry dock but is unimproved.
7. Manitowoc Company Inc., 500 South 16th Street: Approximately 8 berths varying in length from 180 ft. to 850 ft., port side bordering the peninsula.
8. Medusa Cement Company, 1801 Spring Street: Final large dock upriver, 1,200 ft. starboard side.
9. Consumers Steel & Dock, 1311 Spring Street: 330 ft. starboard side just prior to Medusa dock.

CRANES: Manitowoc Company Inc.: One fixed crane max. 80 tons lift. Travelling crane max. 70 tons lift.
BRIDGES: Operating regulations in effect. Contact City Police or the Harbour Master in advance.
DENSITY: 1000.
FRESH WATER: Available.
FUEL: Available.
REPAIRS: Can be undertaken by Bay Shipbuilding Co.
DRY DOCKS: Floating dock available. Length 604 ft., width 70 ft., depth over blocks 13 ft., max. LOA 640 ft. – Bay Shipbuilding Co., Sturgeon Bay, Wis.

Bay Shipbuilding Co. have 1 drydock which will accept vessels of 1,000 ft. LOA and 35,500 gross tons. Depth over sill 17 ft.
SURVEYORS: Lloyd's Surveyor available from Cleveland.
AIRPORT: Manitowoc County. N.W. side of City off Monasha Avenue. Simmons Airlines, commercial feeder line, passenger and freight.
TIME: GMT minus 6 hours.
GARBAGE DISPOSAL: Daily operation with 2 containers. Contact: Manitowoc Disposal. Tel: (414) 682-7758.
WASTE OIL DISPOSAL: Contact Manitowoc Fire Department. Tel: (414) 683-5421.
SEAMAN'S CLUBS: None.
AUTHORITY: City of Manitowoc, Harbour Commission, 817 Franklin Street, Manitowoc, Wisconsin 54220, U.S.A. *Tel:* (414) 683-4550. *Contact:* E. Steckmesser, Harbour Master. Tel: (414) 682-8349.

METLAKATLA, Alaska: 55.08 N. 131.35 W.

LOCATION: Located on Annette Island. Open all year.
DOCUMENTS: See "Anchorage, Alaska".
PILOTAGE: Ships coming up from the Hecate Straits or outside of Graham Island proceed into Dixon Entrance to the vicinity of Point McCartey where the Pilot will meet them. Vessels coming up the inside passage from Vancouver, B.C. are met at Lucy Island Pilot Station.
ANCHORAGES: Good anchorage in gravel and mud.
RESTRICTIONS: Usually daylight berthing only.
MAX. SIZE: Depths in harbour 120 ft. Tides: diurnal range – 14.7 ft. Also see "Berthing".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
CUSTOMS: Quarantine, Immigration and Customs, from Ketchikan.
VHF: Harbour Master monitors Channel 16.
TUGS: Available in Ketchikan. A minimum of 2 tugs required for berthing and unberthing. Arrangements made with Pilot from Ketchican.
BERTHING: 2 berths: 1. City Dock: 400 ft. long and 60 ft. wide. More than 35 ft. deep. Due to shallow water at East end, a starboard landing is usually made. No covered storage, temporary open storage. 4 fork lifts, 2 of 20,000 lb. capacity.

2. Annette Island Canning Co.; 200 ft. long and 23 ft. deep. 15 ton crane and 2 forklifts. 1×25 ton forklift.
CRANES: No Port Authority cranes.
STEVEDORES: 4 gangs available.
MEDICAL: Hospital available in Ketchikan; small clinic in Metlakatla.
SUPPLIES: Bonded and unbonded stores from Ketchikan.
FRESH WATER: Available.
FUEL: Not available.
REPAIRS: Facilities at Ketchikan.
SURVEYORS: Cargo Inspectors and Surveyors available in Ketc
AIRPORT: Small charter plane only. Jet to Juneau and Seatt Ketchikan Airport only.
EMERGENCY CO-ORDINATION CENTRE: At Ketchikan.
BANKS: National Bank of Alaska.
STORING: See "Prelims".

1. By truck.
2. Yes.
3. Yes.
4. Yes.
5. None.
6. Yes.

DEVELOPMENTS: New state ferry pier under construction.
AUTHORITY: Port of Metlakatla, P.O.Box 434, Metlakatla, A 99926. *Tel:* 886-4646. *FAX:* (907) 886-3124. *Contact:* Bruce Gu Harbour Master. *Tel:* 886-3531 (Residence).

MIAMI, Florida: 25.46 N. 80.10 W. (See P

PORT LIMITS: The Miami Harbour embraces the artificial basins, and channels that have been dredged along the bay front of Miami in the bay and through the shoal water of Biscayne Bay to the oc and is located generally at Lat. 25° 46′ N., Long. 80° 10′ W.
Administration: The Port of Miami is a "non-operating" port, taxpa owned and administered by the Seaport Department, a functio Metropolitan Dade County Government. Permanent facilities are lea to port users and operators. All equipment (except the gantry cra is owned and operated by private companies. The gantries are lea operated under Seaport Control. Berth space is authorised by the Director, and scheduled by Seaport Operations. The U.S. Coast Gu serves as Captain of the Harbour.
Physical:
Total port land area: 600 acres (242.83 hectares).
Dodge Island: 300 acres (121.41 hectares).
Lummus Island: 300 acres (121.41 hectares).
Total lineal dimension: 30,000 ft. (9.144 km.).
Bulkhead berth space: 11,510 ft. (2.18 miles) (3.51 km.).
Container berth: 3,500 ft. (1,066.8 m.) bulkhead.
Lineal balance 17,635 ft. (3.34 miles) (5.38 km.) under developme
Dodge and Lummus Islands connected by two-lane partial, tempo connecting causeway.
DOCUMENTS:
Customs: All foreign and "in bond" goods entering the Port/Country subject to Customs examination and duty. Manifest of foreign ca inbound must be presented to the Customs Boarding Officer pri commencing discharge.

Ship's Agent must notify Customs 2 hours prior to the ship's ar Regular working hours, Monday through Saturday 0800 – 17 telephone 536-5261. Outside normal working hours, telephone con 526-2305; overtime is charged.
Forms required:

2 Master's Oath on Entry of Vessel in Foreign Trade	Form 13
2 General Declaration	Form 13
2 Ships Manifests	Form 13
2 Ship's Stores Declaration	Form 13
2 Crews' Effects Declaration	Form 13
Crew Members' Declaration (1 Declaration for each Crew member)	Form 51
1 Application – Permit – Special Licence (Unloading, loading, overtime services)	Form 31
2 Passenger Lists	Form I – 4
2 Crew Lists	Form I – 4
Customs Declaration (Passengers) (1 Declaration for each family)	Form 6059 –
2 Declarations of foreign repair to vessels (U.S. flag vessels only)	Form 2

Immigration: An Immigration Inspector will meet all ships entering Valid travel documents/passport/visa/entry permit are required in s cases.

Ship's Agent must notify Immigration at least 1 hour prior to s arrival. Regular working hours, Monday through Friday 0800 – 1 telephone 350 – 5739. Outside normal working hours, telephone con 526 – 2626; overtime is charged.
Forms required:

Crewmen's Landing Permit	Form I –
Alien Passengers' Landing Permit	Form I –
Passenger List	I – 4
Crew List	I – 4

PILOTAGE: All vessels with a draft of 7 ft. or more are required to a Pilot who boards near the Outer Sea Buoy, 2.5 miles offshore.

Request Pilot through Biscayne Bay Pilots Association, 24 hou advance, call sign KGW 303, VHF Channel 16, direct from sh through vessel's steamship Agent accompanied by particulars of and berthing assignment. Ship to confirm on VHF Channel 16 one prior to arrival. Channel 16 is monitored 24 hours and station can mo VHF Channels 10, 12 and 14. Ship may cable pilot station direct thr RCA Radio Lantana, Florida, call sign, Miami Pilots. Estimated ti departure should be made when ship docks and must be confirme phone (375-9453) 1 hour prior to the Pilot boarding.
HEALTH: See "Health: All Ports" before first U.S.A. port (Alb Illness Reports made to Miami Quarantine Station.

Ship's Agent must request quick clearance, "Pratique", from Un States Public Health Department.

ANCHORAGES: The prescribed anchorage area for vessels anchoring outside the harbour is located Eastward of a line about 1.5 nautical miles offshore and Northward of a line about 0.2 miles nautical miles North of the sea buoy at the entrance to the ship channel. The entire anchorage area lies North of the entrance channel to Miami. The Northern and Southern extremities of this area are marked by spar buoys. Vessels desiring to anchor off the entrance to the Harbour of Miami are required to do so within this area, to avoid possible damage to cables laid on the ocean bottom in the vicinity. Refer to anchorage area 202.188 on Coast and Geodetic Survey Chart No. 547.

RESTRICTIONS: *Locations:* Main Turning Basin: Lat. 25° 47′ N., Long. 80° 11′ W. Sea Buoy and Channel Entrance: Lat. 25° 46′ N., Long. 80° 06′ W. (approx.).

Channels, Turning Basins: The main channel is marked by 2 sea buoys about 2 miles (3.38 km.) East of the port, at the Western fringe of Gulf Stream shipping lanes. From that point, at which the depth is 44 ft. (13.41 m.), the channel runs 1.02 miles (1.65 km.) at 256° magnetic to a bend, changing to a control depth of 42 ft. (12.80 m.) and turning to 296° for 3.64 miles (5.82 km.), terminating in a 1,700 ft. (518.16 m.) (along North-South axis) by 1,650 ft. (502.92 m.) (East-West) turning basin. MLW depth in the main channel, at Northside berths and in the turning basin, is 36 ft. (10.96 m.). At a distance of 1.3 miles (2.08 km.) from the entrance channel bend at the outer bar cut, the Fisherman's Channel (South Channel) branches off due West for 1.01 miles (2.69 km.), then turns parallel to the main channel for another 1.01 miles, then turns to 247° for 1,500 ft. (467 m.) to intersect the Intracoastal Waterway. Depth along the entire Fisherman's Channel is 25 ft. (7.62 m.), except for the Easternmost 3,300 ft. (975.36 m.), where it is 42 ft. deep. Width of the main channel is 400 ft. (121.92 m.) from the sea buoys, for 3.65 miles (5.84 km.), and 900 ft. (247.32 m.) wide along Dodge Island and into the main turning basin. Width of Fisherman's Channel is 500 ft. (152.4 m.) along its entire length.

MAX. SIZE: No limit to length at port complex. Dodge Island has 4,300 ft. (1,310.64 m.) of lineal berthing space for general cargo, quarter ramp and side ramp vessels plus 4,740 ft. (1,444.75 m.) for 10 Ro-Ro berths at MLW depths from 25 ft. (7.62 m.) to 36 ft. (10.97 m.). Lummus Island container berth has 3,500 ft. (1066.8 m.) of berthing with a MLW depth of 42 ft. (12.80 m.).

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

An Agriculture inspector will board all foreign, coastwise and domestic ships on arrival.

Ship's Agent must notify Agriculture at least 1 hour prior to ship's arrival. Regular working hours, Monday through Friday 0800 – 1630, telephone contact 536-4758. Outside normal working hours, telephone contact 526 – 2821; overtime is charged.

Forms required:

1 copy of Cargo Manifest.
1 Report of Ship's Stores and Port of Origin.

Forms provided by and filled out by the inspector:

Cargo Form 212
Boarding Report 288

RADIO/VHF: The Coast Guard and pilot station can be raised on VHF Channel 16. Telephone contact to Agents, receivers, etc., can be made via Miami Marine Operator.

Port of Miami maintains a guard on VHF Channel 16, call letters "KCE 254".

TUGS: Large tugs up to 3,000 h.p. available 24 hours per day. Request tug service via pilot station. Big tugs privately owned by Coastal Tug and Barge Inc. who work closely with Pilots. Smaller tugs available on Miami River and operated by Backus Towing Inc.

BERTHING: Berths are all marginal berths, no piers or slips. 9,040 ft. (2,755.40 m.) at MLW depths of 25 ft. (7.62 m.) and 36 ft. (10.97 m.). Dock aprons are 68 ft. (20.72 m.) wide. Large ships are able to turn at berthside in the 900 ft. (274.32 m.) wide main (North side) channel or may continue into the 1,700 ft. (518.16 m.) × 1,650 ft. (502.89 m.) turning basin. The new (Fisherman's Channel) South Channel is 500 ft. (152.40 m.) wide and 42 ft. (12.80m.) depth at the Eastern end for a distance of 3,500 ft. (1,066.8 m.) and continues Westerly at a depth of 25 ft. (7.62 m.) for its remaining 10,000 ft. (3,048 m.) with 3 turning basins: one at the confluence with the main channel, one midway and one (under construction) at the Western junction with the Intracoastal Waterway. There are 10 Ro-Ro berths for bow and stern loading vessels. Lummus Island container berth at port's Eastern end is 3,500 ft. (1066.8 m.) long with a MLW depth of 42 ft. (12.80 m.). (Note: 42 ft. plus 1 ft. overdredge from Government Cut to West of Container Berth No. 3; 44 ft. plus 1 ft. overdredge from Government Cut out to Sea Buoy. 1,200 ft. diameter turning basin East of Lummis Island).

Gear and Heavy Lift Equipment: 8 shipside cranes, all truck-mounted, rubber-tyred with outriggers, capacity 2×140 tons; 2×150 tons, 1×165 tons, 1×180 tons and 2×200 tons; 20 container movers ("port packers") to 85 tons, 4×35 ton forklifts, 12 forklifts from 15 to 31 ton capacities, and about 125 smaller forklifts from 3,000 lb. to 30,000 lb. capacities.

Cruise Ship Piers: Marginal berthing for 12 cruise ships, each with modern air-conditioned passenger lounge and Custom Inspection areas.

Container Handling: 3×40 long ton (with telescoping spreader for 20 ft. and 40 ft. containers; 45 long ton under hook) gantry cranes with 130 ft. outreach and 85 ft. vertical clearance over apron. Duty cycle 40 per hour and 3×50 long ton (with telescoping spreader for 20 ft., 40 ft and 45 ft. containers with 60 ft. clearance between legs; 70 long tons under hook) gantry cranes with 151.5 ft. outreach and 85 ft. backreach with 100 ft. vertical clearance over apron. Duty cycle 45 per hour. All 6 cranes service a 3,500 ft. (1066.8 m.) concrete container berth at the Easternmost end of Fisherman's (South) Channel, just 2.3 miles (3.7 km.) from ocean shipping lanes, with a MLW depth of 42 ft. The port also has 2 Gottwald mobile container cranes with a lifting capacity of 40 tonnes and capable of 28 containers per hour.

Cold Storage Cargo: Current port facilities provide in excess of 45,000 sq.ft. of refrigerated space. In addition, there are approximately 600 reefer outlets throughout the port.

Commercial Warehouses: Ample on the mainland. On Port, 81,754 sq.m. in 7 modern transit cargo buildings.

BRIDGES: There are no bridges between the open sea and the port, or the Miami River. The new South Channel provides direct access from shipping lanes and the river, as well as all berthing on the seaport's South side. A highway and rail bridge spans the Intracoastal Waterway between the island seaport and the mainland. Only smaller ships enter the Miami River, which is dredged to 15 ft. at HW and is 150 ft. wide for a distance of 3 miles above entrance. A bridge about 0.5 miles from entrance is closed from 0700 hrs. to 0900 hrs. and 1600 hrs. to 1800 hrs. local time.

STEVEDORES: All receiving, recording, moving, loading and discharge of cargo is performed by the stevedoring companies. They employ longshoremen members of the International Longshoremen's Association (I.L.A.). Normal working hours 0800 – 1700. Overtime is charged for Saturdays, Sundays, and holidays. Port open 24 hours per day.

Contract Stevedores at the Port:

Continental Stevedoring & Terminals Inc., 655 Asia Way, P.O.Box 015269, Miami, Florida 33101. Tel: (305) 379-3700. Fax: (305) 371-9969. Telex: 514901. Contact: Marvin Stephens.

Florida Stevedoring Inc., 125 N.E. 9th Street, P.O.Box 01-1254, Miami, Florida 33132. Tel: (305) 373-4765. Fax: (305) 374-7231. Telex: 519154. Contact: Jorge Rovirosa, Frank Rovirosa III.

Oceanic Stevedoring Co., 1007 North America Way, Miami, Florida 33132. Tel: (305) 374-6400. Fax: (305) 381-6512. Telex: 807063. Contact: Don Quinn, Dan Quinn.

SEL Maduro (FLA) Inc., 1040 Port Boulevard, P.O.Box 011470, Flagler Station, Miami, Florida 33101. Tel: (305) 371-4581. Fax: (305) 381-6390. Telex: 807036. Contact: Jack McGovern, Carlos Arocha.

Universal Maritime Service Co., 1007 North America Way, 4th Floor, Miami, Florida 33132. Tel: (305) 371-5308. Fax: (305) 358-5106. Telex: 3767556. Contact: Mark Baker.

MEDICAL: Clinics available.

TANKERS: No slop (residue) discharge facilities in the Port.

Private facility: Coastal Fuels, Fisher Island – No slop (residue) discharge facilities. One tanker berth available, 760 ft. Max. draft of 34 ft. at MLW. No special fittings required. Telephone contact 672-1065.

Report: Cautionary Advice – Approaches: All approaches to the Sea Buoy should be made from the East to avoid shoal areas to the North and South of the Entrance Channel. The Gulf Stream current running to the North may be felt just outside the Sea Buoy. A counter current usually sets to the South in the vicinity of the Sea Buoy and Southbound traffic is usually encountered 1 mile off the Sea Buoy.

Miami has numerous passenger ships calling at this port. Most movements between Sea Buoy and berths take place between 0500 to 0700 hrs. and again at about 1700 hrs.

Care must be taken to carefully identify each navigation light to avoid mistaken identity with bright lights along the coast.

Vessels may anchor to the Northward of the Sea Buoy outside the 50 ft. depth line.

Entering and Berthing: Vessel should have full manoeuvring power available and competent helmsman at the wheel. The currents around Fisher Island are strong (3 to 4 knots reported), and the ebb tide runs from a direction of 270° at the berth to approximately 300° in the Main Channel. Ranges and buoys are used to identify channel limits. The Outer Channel is 500 ft. wide and the Main Channel starting between the jetties narrows to 400 ft. The distance between Sea Buoy and Fisher Island is 4.5 miles.

The draft of a tanker berthing at Fisher Island is limited due to depth limitation at the berth and just offshore of the bow and stern areas of a vessel in the berth. (See "Plan").

Berthing is limited to beginning of ebb tide period in order to take advantage of higher water level as well as to stem the outgoing tide. The ship is difficult to control in the Turning Basin off the berth with a strong current running. Unberthing is carried out during flood tide when current is weak.

The berth at Coastal Oil Terminal has a total berthing face of 700 ft. with a total of 8 pier bollards spaced 100 ft. apart. The ship berths port side to the pier.

Gangway: There is no pier gangway available. There is ample room on the pier deck for the ship's gangway.

PILOTAGE: Pilot boards at Montreal and at several other stations al St. Lawrence Seaway route.

ANCHORAGES: The chart does delineate anchorage area for la vessels and shows the 27 ft. depth just East of South Piers 1, 2 a Liquid Cargo Pier. This deep area, about 2,400 ft. × 5,400 ft., used large vessels for anchorage.

MAX. SIZE: 739 ft. × 75 ft. with 27 ft. draft. No tidal effect, althoug levels vary seasonally. Minimum depth above low water level 27 ft.

HEALTH: See "Health: All Ports" before first U.S. port (Alba Illness Reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Alban

RADIO: Radio station at Port Administration Building. Harbour Ma and Dock Superintendent can be reached at this facility Monday thro Friday between 0800 and 1630 hrs.; 156.8, 156.6 and 156.5 MHz

TUGS: Normally pick up vessel inside breakwater. Tugs optio discretion of ship's Master. Fee for use of tug's lines.

BERTHING: The time of passing harbour entrance lightho establishes order of berthing, provided vessel is ready to work.

BRIDGES: No bridges are transited, except to smaller, shallow draft (22 ft.) private docks up river. This portion of the harbour generally reached only by small Laker vessels and barges. Bridges closed between 0730 hrs. and 0830 hrs. and 1630 hrs. and 1730 hrs. except on Sundays and 8 legal holidays. In addition, 2 hours' notice required for opening bridges across Milwaukee River North of and including Buffalo Street.

SPECIALISED CARGO HANDLING FACILITIES: In addition to the 3 general cargo terminals of approx. 340,000 sq. ft. covered area (9 berths), and dry bulk terminal, the port is served by a refrigerated warehouse of 10,000 sq. ft.; 1 open dock area (2 berths) for handling bulk commodities such as pig iron; 1 open dock (3 berths) for heavy lifts and equipped with a 220-ton stiff leg crane and 2 gantry cranes of 70 and 50 tons; 1 liquid cargo pier for edible and inedible fats, greases and tallow; 2 grain elevators of 3.5 million and 2.5 million bushel capacity and 2 scrap iron loading facilities. The port is also equipped with a mobile heavy lift/container crane, of 200 tons capacity, capable of serving all berths.

STEVEDORES: Vessel should provide a stowage plan, manifest of inbound cargo and exceptions list (unusual vessel or cargo characteristics affecting facilitation of cargoes). Vessel should comply with the U.S. Dept. of Labor's safety regulations.

MEDICAL: Advance notice desirable. Hospitalisation available.

TANKERS: Diameter of load lines and discharge lines 8 in. and 10 in. Slop residue facilities. 4 berths available, with draft to seaway depth.

FRESH WATER: Potable water available at most berthing areas.

FUEL: All grades of fuel oil available by truck delivery at shipside, also 24 hour refueling berths available for bunkering.

CONSULS: The following countries are represented:

Belgium	Dominican Republic	Norway
Costa Rica	France	Sweden
Denmark	Nicaragua	Yugoslavia

REPAIRS: Full service repairs, except large vessel dry docking.

GANGWAY/DECK WATCHMEN: Not necessary, but available on request.

OPENING/CLOSING HATCHES: At the option of ship.

CERTIFICATES:

Registry of Ship.
Master's Licence.
1st, 2nd and 3rd Officer's Licences.
Radio Licence.
Wireless Operator's Licence.
Derat Certificate (done each year).

(Additional certificates may be required, dependent upon Registry, cargo, trade route engaged in, nationality of crew, etc.).

CUSTOMS ALLOWANCES: Tobacco, 10 packages or 200 cigarettes in possession at any time. Wine and/or Spirits, 1 bottle per officer.

REPATRIATION: Local Agents effect repatriation.

AIRPORT: 5 miles distant.

TIME: U.S.A. Central Time. Central Daylight Time from early April to late October – 5 hours behind GMT. Central Standard Time from late October to early April – 6 hours behind GMT.

HOLIDAYS: Memorial Day, Columbus Day, Veterans Day, July 4th (if on a Sunday, Monday is a holiday); First Monday in September; Fourth Thursday in November; Christmas Day; New Year's Day. Cargo can be worked on these days at holiday pay.

POLICE/AMBULANCE/FIRE: Police – non-emergencies Tel: 273-8660; Emergency, including emergency ambulance service Tel: 765-2323; Fire, including rescue squad service Tel: 347-2323.

TELEPHONES: Can be arranged, but unnecessary because sufficient phones available in dockside offices.

SHORE LEAVE: Crew allowed ashore.

IDENTIFICATION CARDS: U.S. Immigration rules.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany).

Two companies, both certified by U.S. Coast Guard, can provide mobile reception facilities. Containers up to 30 cu.yd. can be made available alongside vessel with 24 hours prior notice.

BFI Waste Removal, Inc., Town & Country Division, College Ct., Muskego, WI 53150. Tel: (414) 679-0860.

Waste Management, Inc., Best Disposal Division, 10627 S. 27th Street, Franklin, WI 53132. Tel: (414) 761-2100.

Pier South B 1	41 ft. MLW		
Pier South B 2	41 ft. MLW	Berth 2 tipple	44 ft. MLW
Pier South B 3	41 ft. MLW	Berth 3 tipple	40 ft. MLW

CRANES: 1,600 ton capacity (1,200 tons at 208 ft.) crane, 75 ton stationary crane, 50 ton mobile crane and 80 ton floating crane.

SPECIALISED CARGO-HANDLING FACILITIES: Container berth, length 894 ft., equipped with 1×45 ton lift capacity crane.

1 Ro/Ro berth at Pier A.

STEVEDORES: Normal working hours for the port are 0800/1700 hrs. Monday through Friday.

TANKERS: Max. length 950 ft. restricted by turning basin. American Bituminals & Asphalt Co. – Jetty berth dredged to 38 ft.

Magazine Point: Hess Terminal: Jetty berth dredged to 43 ft.

FRESH WATER: Available ex-wharf at all berths.

FUEL: Most grades fuel/diesel available via pipeline, barge or truck.

DENSITY: 1000 (Fresh Water).

REPAIRS: *Atlantic Marine, Inc.* – Dry Docks ranging from 5,000 to 18,000 tons displacement all serviced by 51 ton gantries. Dock length range from 380 ft. to 620 ft. Also available is a 70 ton floating crane. Any type of repair can be effected.

Bender Ship Repair. Dry docks ranging from 4,000 – 18,000 tons displacement. Majority of repair work is dry docking, but also makes topside repairs. 100 ton floating crane available.

CUSTOMS ALLOWANCES: At the discretion of customs officers. Normal allowance is 200 cigarettes or 2 lb. tobacco and 1 quart wine or spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.

HOLIDAYS: Normally no work is performed on New Year's Day, Easter, July 4th, Labour Day, Christmas Eve (1200 hrs.–2400 hrs.), Christmas Day and New Year's Eve (1200 hrs.–2400 hrs.). Working holidays are New Year's Eve (0001 hrs.–1200 hrs.), Martin Luther King's Birthday Holiday, Mardi Gras Day, Monday after Easter, Veteran's Day, Thanksgiving Day and Christmas Eve (0001 hrs.–1200 hrs.).

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany).

Under the provisions of Annex V of MARPOL 73/78, port reception facilities for ships garbage and separation on board vessel of various waste are required. Garbage is defined as "all kinds of victual, domestic and operational waste excluding fresh fish and parts thereof, generated during the normal operation of the ship and liable to be disposed of continuously or periodically". In order to accommodate the needs of shipping through facilities of the Alabama State Docks, the Department has filed an Application for a Certificate of Adequacy with the Captain of the Port, United States Coast Guard, for garbage reception facilities. Applicants for berth at any facility of the Alabama State Docks shall provide, upon request, the reception facilities which meet the requirements contained in 33 CFR, Parts 151, 158. Berth applicants shall require a 24 hour notice of vessel's intent to discharge garbage and reception facilities for food, plant, meat, and other potentially infectious waste shall be provided by the berth applicant or his designated contractor when requested by the vessel in accordance with the above and with the requirements set forth in 7 CFR 330 and 9 CFR 94. Regluated food waste must be handled at a facility approved by the Animal and Plant Health Inspection Service (APHIS). Berth applicants or their designees shall provide the necessary reception facilities when requested to do so for other than APHIS regulated garbage from any commercial, full-service solid waste firm. The firm listed below has indicated to the Captain of the Port of Mobile that they are interested in contracting their services in this regard and are approved by the Department of Agriculture, Animal and Plant Health Inspection Service.

Waste Management, 4770 Hamilton Boulevard, Theodore, Alabama, 36582.

WASTE OIL DISPOSAL: If desiring to discharge oily waste, a vessel, her owners and agents are responsible for selecting an inspected and approved company that meets United States Coast Guard requirements for receipt of oily waste and further are responsible for making the necessary arrangements for discharging the oily waste. Such discharge operations are to be reported to the Superintendent or Terminal Manager in charge of the particular facility prior to the actual discharge.

The firms listed below have indicated to the Captain of the Port of Mobile that they are interested in contracting their services in this regard. Their listing herein does not indicate a preferential recommendation on the part of the Alabama State Docks Department but merely reflects the company's desire to function in the above capacity and the Captain of the Port's recognition of the firm with respect to the Alabama State Docks Department's application. All enquiries should be directed to the Captain of the Port, United States Coast Guard. Any contractor is subject to the applicable regulations for the transfer of oil (33 CFR 154-156).

Aaron Oil Company, Inc., P.O.Box 2304, Mobile, Alabama, 36652.

Midstream Fuel Service, Inc., P.O.Box 2626, Mobile, Alabama, 36652.

SEAMAN'S CLUBS: Catholic Maritime Club, 273 Dauphin Street, Mobile. Tel: 432-7339.

International Seaman's Center, 605 Texas Place, Mobile. Tel: 432-7953.

CURRENCY: U.S.Dollar (U.S.$).

DEVELOPMENTS: The 400 ft. wide ship channel was recently dredged to 45 ft. and to be dredged at a later stage to 55 ft. with a width of 550 ft.

The Alabama State Docks is currently involved in a $25 million capital improvement program, which will upgrade the general cargo warehousing and docking facilities. A 365,000 sq.ft. forest products warehouse and steel and heavy lift berth is presently being built to better serve dock customers. A 14 acre waterfront site was recently purchased and renovated providing a 1,400 ft. pier system, open storage area and a 175,000 sq.ft. warehouse.

PILOTAGE: Vessel's Agent orders Pilot 48 hours in adva telephone, correcting ETA as necessary with 4 hours final no last minute change occurs. Pilot boat "Anini" from Hawaii Association serves Nawiliwili and Port Allen. Tel: (808) 521-278 boards 1 mile East of Nawiliwili and 0.5 miles South of Port Allen. in accordance with International Code.

ANCHORAGES: *Nawiliwili:* Between Nawiliwili Light and Carter in 5 – 9 fathoms. Not good in strong trade-wind weather. Fair ground. Not recommended.

Port Allen: 0.5 miles South of Port Allen Breakwater Light in fathoms. Fair holding ground. Untenable in Kona or S.W. storms occur from November to March.

RESTRICTIONS: 24 hours notice of arrival is obligatory. Nawiliwili: Arrivals sunrise, departures sunset time. From October 21 to March 21 Pilot boards at 0630 hrs. Balance of year 0600 hrs. Port Allen: No time restrictions.

MAX. SIZE: *Nawiliwili:* Length 800 ft., draft 32 ft. 6 in.

Port Allen: Length 687 ft., draft 32 ft. on North side and 28 ft. on South side. Pier is 600 ft. long, so larger vessels overhang.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Honolulu Quarantine Station.

RADIO: Communicate through RCA or ITT stations in Honolulu. Also KOM marine operator for radio telephone and telephone to Kauai.

TUGS: One 2,000 h.p. tug meets vessels off port and in outer harbour. Both ship's lines and/or tug's line may be used. Has radio telephone, "WTT 3602" and Channel 12 is usually used. Extra tugs available from Honolulu.

BERTHING: Limited to one large vessel at Nawiliwili and one at Port Allen. Considerable barge traffic. Prior reservations by Agent necessary with Marine Cargo Specialist. Berth conflicts usually solved in Honolulu by rerouting of Island ports.

Ro/Ro barge facility at Piers 1 and 3.

New Pier 3 and yard under construction and scheduled for completion in August 1994. Pier 1 renovation to begin at this time with completion 12 months later.

CARGO HANDLING FACILITIES: Nawiliwili has one sugar loading gantry on Pier 2; no equipment or storage to handle grain, ore, coal, sulphur. Fertiliser is discharged by self-unloading barge, and the bulk hauled away via truck. There is a container yard but no facilities to off-load containers. Weekly service is by a self-unloader. Roll-on/Roll-off cargo is moved on ramps furnished by barges. LPG and petroleum product lines are privately owned.

STEVEDORES: All stevedoring by McCabe Hamilton and Renny Co. Ltd., with headquarters in Honolulu and branches in outports. 48 hours notice by Agent for labour and equipment. Inward cargo is containers, general, bulk fertiliser, petroleum products, and building and construction materials. Outward is raw sugar, general and molasses. Foreign vessels are subject to heavy fines for carrying stevedore gear inter-island without Customs Clearance.

MEDICAL: 2 hospitals on Kauai with 2 doctors under contract to United States Public Health Service. Standard international inoculations and vaccination required. Advance notice by Agent desirable but not necessary.

TANKERS: All piers have pipeline connections for incoming cargo and outgoing molasses. Fuel oil 10 in., molasses 10 in., water line 6 in., gasoline, kerosene and diesel 8 in. These are the main lines under the wharves. Hose connections to ships vary with the type of riser and hose so size of fittings should be checked with Agent. No slop discharge facilities available. 5 tanker berths available.

DENSITY: Varies from full salt to brackish in periods of heavy rainfall with freshets in the streams. No specifics available.

FRESH WATER: Available from 2 in. dock hydrants via ship's hose. About 100 gallons per minute.

FUEL: Bunker C not available for large vessels. Diesel fuel available via tank truck with 6 hours notice. Weekend and holidays order previous day.

CONSULS: All in Honolulu.

REPAIRS: Light machine shop, welding and burning and pipe work available. Plantations may do some heavy repairs if part can be sent to their shop. Their engineers are helpful in emergencies. Heavy or technical repairs must be done in Honolulu.

GANGWAY/DECK WATCHMEN: Tankers discharging gasoline required to have uniformed dock watchman. Usually off duty policeman. All ships provide own gangway and deck watch.

OPENING/CLOSING HATCHES: Normally done by stevedores. A few foreign ships prefer doing it with own crew.

CUSTOMS ALLOWANCES: 200 cigarettes, 50 cigars per man, and one bottle, U.S. quart, wine or spirits.

REPATRIATION: Agent can arrange by air via Honolulu. Immigration clearance necessary.

AIRPORT: Lihue is 3 miles from Nawiliwili and 20 miles from Port Allen; served by inter-island regular carriers. Numerous lines, and charter flights available.

TIME: GMT minus 10 hours, all year round.

HOLIDAYS: National: New Year's Day (January 1st); President's Day (February 22nd); Memorial Day (May 25th); July 4th; Labour Day (first Monday in September); Election Day (first Tuesday in November); Veteran's Day (November 11th); Thanksgiving Day (November 26th) and Christmas Day (December 25th). Cargo can be worked but at penalty rates.

POLICE/AMBULANCE/FIRE: Emergency calls – Dial 911 for all services, or dial "O" for operator.

EMERGENCY CO-ORDINATION CENTRE: Coast Guard Search/Rescue Centre, Tel: (808) 246-0390.

TELEPHONES: Arrangements by Agent.

SHORE LEAVE: Permitted after Immigration check. Eastern Bloc visitors may be restricted.

IDENTIFICATION CARDS: Desirable but not required by law.

DEVELOPMENTS: Turning basin may be enlarged to handle liners and large bulkers. Project depth 35 ft. Also see "Berthing".

AUTHORITY: State of Hawaii, Department of Transport, Harbours Division, 3242 Waapa Road, Lihue, Kauai, Hawaii 96766, U.S.A. Tel: (808) 245-6996. *FAX:* (808) 246-9344. *Contact:* Barry Kim, Harbour District Manager.

AGENT: See "Honolulu".

NEW BEDFORD, Massachusetts: 41.38 N. 70.55 W.

(See Plan)

DOCUMENTS: See "Boston".

PILOTAGE: Compulsory. 3 Massachusetts State Pilots available, ordered through Agent. VHF Channel 16 monitored. Pilot on station only after 12 hours notice. Small pilot vessel with basic communication equipment. Pilots board all vessels at Buzzards Bay Buoy at the entrance to New Bedford Outer Harbour situated at Lat. 41° 30′ 42″ N., Long. 70° 50′ 07″ W.

ANCHORAGE: It is recommended that vessels delayed due to weather, etc., anchor 0.5 miles South of Buzzard's Bay Bell Buoy.

RESTRICTIONS: A modern harbour approach begins at Buzzard's Bay Buoy and runs a straight course of 7.5 miles direct to the pier facilities. The channel is 350 ft. wide and has a depth of 30 ft. MLW. The channel leads into a moderate size (1,000 yd.) turning basin.

Hurricane dyke barrier gate 150 ft. wide with depth of 30 ft. MLW.

MAX. SIZE: 700 ft. length. Vessels over 30 ft. draft restricted by tides.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S. port (Albany). Illness Reports made to New York Quarantine Station.

RADIO: RCA Chatham Radio, New Bedford Marine Operator for VHF, and Boston Marine Operator for ship to shore frequencies.

VHF: Pilot vessel on Channels 16 and 13. Pilot office on Channels 16 and 18A.

TUGS: Tugs join vessel in inner harbour. Tug lines used. 2 tugs available. Tugs are not normally used at the State Pier in docking and undocking of deep-water vessels. The large turning harbour basin, the wind-sheltered position of the pier and lack of tidal current minimise use of tugs. In extreme weather conditions tugs are used.

BERTHING: At State Pier, berthing space for 3 ships:

North side 600 ft. length, South side 775 ft. length, East side 450 ft. length.

Depth of water at all berths is 30 ft. MLW.

Maritime Terminal, depth 27 ft.

BRIDGES: Passage to upper reaches of harbour to Maritime Terminal requires navigation through the New Bedford and Fairhaven Bridge only in daylight for larger vessels over 250 ft. length.

STEVEDORES: 24 hour notice required for New Bedford Stevedoring Corporation to prepare gear. 25 tons discharged or loaded per hour as average production per gang. Nearly all cargoes handled.

MEDICAL: 24 hours notice required. Excellent hospital facilities available.

DENSITY: Static, since tidal variations light. Density same as ocean water.

FRESH WATER: Fresh water available.

FUEL: All types available, to be ordered in advance.

CONSULS: Most Consuls available in Boston, 50 miles or 1 hour away.

REPAIRS: All types of minor ship repairs available.

GANGWAY/DECK WATCHMEN: Watchmen available. Non police or police.

OPENING/CLOSING HATCHES: Depends on negotiated contract and cargo handled.

CUSTOMS ALLOWANCES: Designated by U.S. Customs with regard to particular circumstances.

REPATRIATION: Agent can handle formalities.

AIRPORT: 3 airports within 1 hour's drive. All international services.

HOLIDAYS: New Year's Day (January 1st); Washington's Birthday (February 22nd); Patriot's Day (April 19th); Memorial Day (May 30th); Independence Day (July 4th); Labor Day (first Monday in September); Columbus Day (October 12th); Veterans' Day (November 11th); Thanksgiving Day (last Thursday in November); Christmas Day (December 25th).

TELEPHONES: No telephones on board, but exist adjacent to pier.

SERVICES: All services can be obtained if required.

SHORE LEAVE: If U.S. Immigration has cleared crew member, he is allowed ashore.

GARBAGE DISPOSAL: Garbage containers are available on most piers and wharves. Contact: A.B.C. Disposal. Tel: (508) 995-0544 and Frades Disposal. Tel: (508) 995-9121.

WASTE OIL DISPOSAL: Contact Franklin Recycling Co. Tel: (508) 995-1179.

SEAMAN'S CLUBS: None.

SHIPMASTER'S REPORT: December 1982.

Documents: See "Boston"

Pilotage: Compulsory. Pilot boards at "BB" in Buzzards Bay. Advise Agent 6 hours prior to arrival.

Restrictions: Vessels enter and leave on rising tide during daylight hours. The approach is hazardous as vessel has to pass through hurricane barrier (width 150 ft.) and swing bridge (width 94 ft.).

Max. Size: LOA. 600 ft. Beam 85 ft. Draft 25 ft. Underkeel clearance of 5 ft. required in channel. Mean tidal range 3 ft.

Radio: Chatham Radio.

Tugs: 3 tugs available (2,000 h.p.). 2 tugs are normally sufficient for berthing/unberthing.

VHF: Pilot on VHF Channel 16.

Berthing: Maritime Terminal Wharf: Distance from "BB" Buoy to Berth is 9 miles. U.S. and U.K. Pilot Books indicate 30 ft. to 31 ft. at berth. Least depth in Channel from sea to berth 30 ft. Nature of bottom at berth – very soft mud. Density 1025. Good security. Palletised cargo and 20 ft. and 40 ft. containers handled. Ample storage space for containers.

Services: Fresh water, fresh provisions, limited repair facilities, Lloyd's Surveyors (at Boston), Salvage Surveyor (New York), laundry service, (Boston). Bunker fuel oil, diesel oil, lubricating oil, doctor, hospital, groceries and meats (Boston).

AUTHORITY: City of New Bedford, Harbor Development Commission, Wharfinger Building, Fisherman's Wharf, New Bedford, Massachusetts 02740. *Tel:* (508) 993-1770. *FAX:* (508) 991-6181. *Contact:* Martin Manley, Director.

NEW HAVEN, Connecticut: 41.14 N. 72.55 W.

(See Plan)

DOCUMENTS: Refer to "New York".

APPROACHES: *From New York:*

Charts: 12339, 12366, 12367, 12363, 12354, 12371.

Vessels leaving New York bound for New Haven will be transiting New York's East River and Western Long Island Sound. All shoals and rocks are well marked and the close proximity to the shore line provides an excellent radar target for position checking. During Summer months, thick fog will present a hazard on this route. Long Island Sound is also a major yachting centre, so extreme care must be exercised while transiting this area.

There are numerous dangers to be wary of when making the passage from New York to New Haven. In order of approach they are:

1. East River and Hell Gate are areas of strong tidal currents averaging 4.6 knots for the ebb current which sets in a Southwesterly direction. Vessels drawing up to 35 ft. may transit Hell Gate at HWS only. Sluggish handling vessels should arrange for towboat assistance up the East River and through Hell Gate.
2. 26 ft. Buoy "32A" usually passed well clear to the South.
3. Cable and Anchor Reef usually passed to the South.
4. Stratford Shoals deep draft vessels pass at least 1 mile off the South of the shoal then alter course to New Haven Sea Buoy.

From Block Island:

Charts: 13205, 13215, 13209, 12354, 12371.

On approaching Block Island from the Southerly direction, Block Island's Southern shore is mainly high rock cliffs, and a good radar target is obtained along with bearings taken from the RDF station at Southeast Light.

Care should be exercised by vessels deeper than 30 ft. to always approach Block Island to the East due to the numerous shoals found on the Western side of the island.

It is also advisable to remain at least 1 mile to the East of Block Island due to the numerous shoals close in shore.

There are numerous dangers to be wary of when making the passage from the pilot station to New Haven. In order of approach they are:

1. Block Island North Reef Buoy "1B1" marks a dangerous shoal and should be passed well clear.
2. The Race is a narrow channel into Long Island Sound. Strong East to West currents exist during maximum ebb or flood and knowledge of position should be maintained in view of the possibility of unusual set. Valiant Rock, with a least depth of 19 ft., nearly in the middle of the Race, is surrounded by shoal area. A lighted bell buoy is Northward of the rock.
3. Great caution should be exercised during the Summer months when transiting through Block Island and Long Island Sound due to the heavy small boat traffic, especially in the area in proximity to The Race.
4. Fog is prevalent during the Summer months and is heavy. Good judgement should be used before transiting the area during fog.

Good water is found in Long Island Sound from The Race to New Haven as long as the Mid-Channel Buoys "P1" and "CF" are passed close to and care is taken so as not to pass North of "Twenty-Eight Foot Shoal" lighted bell buoy. When a vessel is within 4 or 5 miles of New Haven, the depth of the water is reduced, so caution is again needed. Radar is the best navigational aid in this area. There are numerous RDF stations that can be used to ascertain positions. Also fathometer readings will be helpful.

PILOTAGE: Compulsory. State Pilots are available on a 24 hour basis and are usually arranged through the ship's Agent or directly by shipping companies. Pilot will board vessel in vicinity of New Haven Sea Buoy, marked "N.H." – short and long flash; black and white vertical stripes. Boarding will be from a 44 ft. steel launch named *New Haven Pilot* – blue hull with "Pilot" marked on both sides in white letters, or from a tug-boat. Contact can be made via VHF telephone, Channel 13 (156.65 MHz), Channel 16 (156.80 MHz), or Channel 19A (156.95 MHz).

Dock Masters provided by Constitution State Pilots.

Pilotage Association Report: The New Haven – Bridgeport Pilots maintain a tide gauge, from where they depart to meet vessels. The normal tidal range is 6 ft. They believe that 4 ft. of water in excess of the ship's deep draft is necessary for a safe transit. A rule of thumb, used by them, is 31 ft. on LW, and 37 ft. on HW. (For any variation of this, a Pilot should be consulted.) A normal transit time from the entrance buoy to any of the berths in the inner harbour is 45 minutes to 1 hour. Docking time of 30 minutes to 1 hour should be added to this average, dependent on where the ship is berthing, as well as possible weather conditions.

There was a maintenance dredging of New Haven Harbour, completed in 1994. The after-dredging survey submitted to them by the U.S. Army Corps of Engineers shows a controlling depth, with rock bottom of 35 ft. at MLW. This rock is located at South West Ledge Light at a point where a 35° turn is executed by the ship.

Prevailing winds are Westerly, and have a decided effect on the rise of tide. The tide gauge is the determining factor as to the time of entry when wind conditions do exist.

Advice from State of Connecticut, Department of Transportation:

Pilotage is compulsory for vessels transitting the waters of Long Island Sound via Block Island Sound bound to or from ports and harbours on Long Island Sound. Vessels bound for New Haven via Block Island/Long Island Sound usually board a Pilot at either the Point Judith Pilot Station (41° 17.2′ N., 71° 28.5′ W.; 2 miles South of the Point Judith R "2" whistle buoy), or the Montauk Pilot Station (41° 02′ N., 71° 42′ W.; 3 miles due East of Montauk whistle buoy Mo (A) "MP"). Some Block Island/Long Island Sound Pilots also serve as Pilots for New Haven. If a local harbour Pilot is to be boarded, he will usually board vessel in vicinity of New Haven Sea Buoy, marked "N H" – short and long flash; red and white vertical stripes.

ANCHORAGES: Vessels awaiting berth, and or tides, will find good anchorage up to 40 ft. draft within 1 mile S. – S.E. of the "N.H." Buoy.

RESTRICTIONS: Vessels can proceed to and from berths in New Ha Harbour at any hour during the day or night, weather and tide permit Entrance channel dredged to 35 ft. MLW and width 400 ft.

MAX. SIZE: Draft up to 38 ft. subject weather and tides. Vessels 50,000 d.w.t. with part cargo, do call occasionally, but should con with the Pilot and terminal concerned.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany

HEALTH: See "Health: All Ports", before first U.S.A. port (Alba Illness Reports made to New York Quarantine Station.

RADIO: Vessels arriving from North use Chatham Radio. Vessels fr South use Amagansett Radio on Long Island.

Bridgeport Marine Operator on VHF Channels 24 and 27.

TUGS: Gateway Towing operates tugs based in New Haven and ser Long Island Sound ports. The office is on VHF Channel 13, 24 hou day. The 24 hour telephone number is (203) 469-7288. The 4 tu stationed in New Haven have 2,400 h.p. with twin screws. There two other New York based tug companies serving this a Spentonbush Red Star Co., Tel: (800) 223-5470.

BERTHING:

Wyatt Inc.: Pink Tanks:

In the Winter of 1994, this terminal, on the West side of the harbo was dredged to 36 ft. The dock on the East side has been closed ships of 715 ft. LOA can be docked portside to on the West dock.

Wyatt Inc.: T Dock:

In the Winter of 1994, this terminal, on the East side of the harbo was dredged to 36 ft. The dock is parallel to the main channel w manifold area and dolphins connected by walkways. Ships are dock portside to.

Gulf Terminal: The Gulf Dock is located parallel to the channel on t East side of the inner harbour, and ships of 35,000 d.w.t. with draf 35 ft. and LOA of 675 ft. are considered to be maximum size. (35 from bow to manifold.)

The dock parallels the channel and consists of 2 main caissons centre platform and dolphins connected by a catwalk. Ships consign for Gateway Terminal use this facility.

Gateway Terminal: Gateway Terminal is an independent deep-wa marine terminal owner and operator, handling various types of dry a liquid bulk cargoes. It features its own petroleum transfer and oil stora tank farm (4 tanks), with an aggregate capacity of approximately 500, barrels. The fuel transfer facility is connected to the Buckeye-Jet Pipeline System servicing central Massachusetts, and has a work arrangement with Gulf Oil to utilise a number of their immedia adjacent facility components, including their T – dock.

Gateway Terminal has a newly constructed concrete pier, 75 length by 60 ft. width, which is at a 90° angle to the main channel. T pier provides up to 3 berths and can accommodate on the South s 40,000 d.w.t. tankers and dry cargo vessels up to 68,000 d.w.t., 75 LOA, 106 ft. beam and 36 ft. draft at MLW. Smaller vessels and barg with up to 35 ft. draft at MLW use the North side. Also available 3×9,000 ton elevators for cement storage. The pier provides a timb rubber cushion 50 ft. on centre fendering system. Two high speed ga cranes with capacity 40 tons are on the pier and additional mobile cra with capacity 25 tons are available. Advanced truck loading and we stations are immediately adjacent to the pier. Ships can berth por starboard side to.

Bunkers, petroleum products and fresh water are available at all tim

New Haven Terminal, Inc.: This facility has 3 ship berths on a heading from the channel, dredged in 1994. The Scrap Dock, as called, is a continuous pier, with a wearing strip cushioned by a rub backing. The pier is 650 ft. long, with 35 ft. at MLW. Scrap is load from here and all types of dry cargo handled. Two gantry cranes are the dock and additional mobile cranes are available. Railroad cars be brought on to the dock. Ships berth port side to.

The Finger Pier on the North side is a continuous pier, 650 ft. lo and is mainly used as a tanker berth. Bow to manifold is 35 (additional hoses can be added to increase this distance.) The si 196 ft. in width, and 2 ships may be accommodated at the same ti as long as 30 ft. is allowed for a tug boat between the ships. Depth 3 at MLW.

The South side is a tanker or general cargo berth, with 38 ft. at ML Bow to manifold is 350 ft. and additional hoses may be used. Ships 700 ft. may be secured at all 3 of these berths.

Bunkers can be trucked in, and fresh water is available at all ber New Haven Terminal Inc., 100 Waterfront Street, New Haven. Tel: (2 469-1391. Telex: 710-465-2994. Fax: (203) 469-1318.

Exxon Terminal: Exxon Dock parallels the main channel. The doc 750 ft. long with 2 main caissons, dolphins, and platform connecte a catwalk.

Ships of 50,000 d.w.t. call at this dock, with a draft of 36 ft., doc on the rising tide. Ships are docked starboard side to. Bunkers are available, though fresh water is.

MEDICAL: All facilities available.

TANKERS: See "Berthing".

BALLAST: There are no slop lines available.

FRESH WATER: Available at all terminals.

FUEL: Available from oil terminals or delivered by barge.

CONSULS: All countries represented in New York.

CUSTOMS ALLOWANCES: At the discretion of Customs Offic Normal allowance is 200 cigarettes or 2 lb. of tobacco and 1 quart w spirits per man. Additional allowances may be given if consid necessary, due length of vessel's stay in port.

AIRPORT: New Haven Airport 1 mile distant. New York Internati Airport 70 miles distant.

TIME: Eastern Standard Time, GMT minus 5 hours. Daylight Sa Time, GMT minus 4 hours from first Sunday in April till last Sund October.

HOLIDAYS: New Year's Day (1st January); Washington's Bir (22nd February); Memorial Day (30th May); Independence Day July); Labor Day (first Monday in September); Columbus Day

October); Veteran's Day (11th November); Thanksgiving (fourth Thursday in November); Christmas Day (25th December).

SERVICES: Professional Sea Services (monitor Channels 16 and 19A) of New Haven offers launch service to ships at anchor, movement of stores, and skin divers. Tel: (203) 932-2159.

Sea Support, 500 Waterfront Street, New Haven, CT. 06512. (P.O.Box 9166, New Haven, CT. 06532). Tel: (203) 467-1590 (24 hours). Fax: (203) 468-2670. Telex: 413474 Conn Marine. *Contact:* Ralph Gogliettino. Services: Complete ship chandlery and repair services. Boom deployment, oil containment and recovery, air, sea and shore terminal services.

GARBAGE DISPOSAL: Agent must make arrangements with Department of Agriculture.

Charges: U.S.$ 250.00 per container; haulage U.S.$ 10.00 per container; disposal U.S.$ 80.00 per net ton.

WASTE OIL DISPOSAL: Service available and must be arranged through ship's Agent.

See "Services".

SEAMAN'S CLUBS: None.

GENERAL: Through a co-operative agreement, all the terminals have a slick boom, skimmers and absorbent available at all times.

There are no slop tanks available in this port for pumping ballast.

None of the terminals supply gangways; ships must use their own.

AUTHORITY: U.S. Coast Guard, Captain of the Port, Long Island Sound.

Contact: Captain D.V. Monks, New Haven – Bridgeport Pilots' Association, 45 Alison Avenue, Wallingford, Connecticut 06492. *Tel:* (203) 230-0778, (203) 265-3673 (Residence).

NEW LONDON (Including Groton), Connecticut:

41.21 N. 72.06 W. **(See Plan)**

DOCUMENTS: Refer to "New York".

PILOTAGE: Pilotage is compulsory for vessels transiting the waters of Long Island Sound via Block Island Sound bound to or from ports and harbours on Long Island Sound. Vessels bound for New London harbour via Block Island/Long Island Sound usually board a pilot at either the Point Judith Pilot Station (41° 17.2′ N., 71° 28.5′ W., 2 miles South of the Point Judith R "2" whistle buoy,) or the Montauk Pilot Station (41° 02′ N., 71° 42′ W., 3 miles due East of Montauk whistle buoy Mo (A) "MP"). Some Block Island/Long Island Sound pilots also serve as pilots for New London. If a local harbour pilot is to be boarded, he will usually board the vessel at General Anchorage "E" or if under way inbound, approximately one mile South of New London entrance buoys "1" and "2". Vessel's agent will arrange pilotage and advise vessel of pilot boarding area.

Dock Masters provided by Constitution State Pilots.

ANCHORAGES: General Anchorage "E": In the waters off the mouth of New London Harbour, approximately 1.5 miles S.S.E. of New London Ledge Light (See "Plan").

RESTRICTIONS: Vessels can proceed to or from berths in New London or Groton at any hour during the day or night, weather and tide permitting. Transits of the Thames River to or from Dow Chemical's Terminal at Allyn Point are limited to daylight hours.

The U.S. Navy has dredged New London Harbour to provide a main ship channel with depths of 36 ft. and 40 ft. at MLW, 500 ft. wide from Long Island Sound to the Route I-95 bridge.

MAX. SIZE: Dry cargo vessels of approximately 600 ft. – 650 ft. and tankers of approximately 800 ft. have been using the harbour.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

RADIO: Vessels arriving from North use Chatham Radio on Cape Cod. Vessels from South use Amagansett Radio on Long Island. However, either one may serve the purpose.

VHF: New London Marine Operator monitors VHF Channels 25, 26 and 86.

TUGS: Usually join vessel at Ledge Light if a dry cargo vessel and near entrance buoys "1" and "2" if a tanker. Tugs use their own lines. Three tugs of about 1,000 h.p. – 3,000 h.p. are usually available with advance notice. Tel. (203) 443-9433.

BERTHING: Advance ETA must be made for berthing.

State Pier No. 1: Depth-pending completion of hydrographic survey, pilot and terminal should be consulted (Vessel's draft normally not to exceed 31 ft. – 32 ft.).

Long Wharf: Consult Pilot and Terminal Operator regarding draft limitation/availability of Long Wharf for berthing.

Dow Chemical Co. Wharf: Depth 22 ft. MLW (docking on rising tide), daylight docking and undocking.

Hess Groton: Depth 36 ft. MLW.

City Pier (South side): Depth approximately 18 ft. MLW (not used as a cargo terminal). Contact New London Marine Commerce and Development Office. Tel: (203) 443-8331.

BRIDGES: There are no bridges across Main Ship Channel. However, at New London, at the head of the Main Harbour, the Thames River is crossed by 1 drawbridge and a twin fixed bridge: the Amtrak Railroad bascule bridge with a horizontal clearance of 151.5 ft. and a vertical clearance of 30.9 ft. at high water and a fixed highway bridge with a vertical clearance of 135 ft. for a middle width of 200 ft.

STEVEDORES: Gangs must be requested on weekdays no later than 1630 hrs. preceding the scheduled work day.

MEDICAL: All facilities available.

TANKERS: Amerada Hess Oil Dock: Max. draft 36 ft. (Lines 10 in. and 12 in.).

Pfizer Wharf: Barge berth, currently not handling tankers.

Report: Port Approaches – Cautionary Advice: When approaching Block Island from the South or East, prior to picking up the Pilot, all mariners should be aware of the precautionary zone to the S.E. of Block Island. Usually ships bound for Point Judith Pilot Station will make for 1 mile East of Block Island S.E. lighted whistle buoy then, traffic permitting, head due North, to pick up the Pilot. All traffic in this area should be monitoring VHF Channels 13 and 16. Principal navigational aids used in making landfall are RDF stations at Montauk Point, S.E. Point, Point Judith, Brenton Reef Light and Buzzards Bay Light Tower. The high bluffs on the South side of Block Island also provide excellent radar targets for position fixing. Ships bound for Point Judith Pilot Station are advised to approach the pilot station from the East side of Block Island due to the shoals found on the island's Western side. Ships bound for the Montauk or Point Judith Pilot Station should be cautioned against proceeding past the pilot boarding area without a pilot on board. Vessel agents arranging boarding at Montauk Pilot Station should consult pilots regarding draft restrictions for vessels transitting the Montauk-Block Island Channel, S.W. of Block Island. Among the dangerous shoals in that area is Southwest Ledge, marked by a lighted buoy. There are numerous dangers to be wary of when making the passage from the pilot station to Groton. In order of approach they are:

Block Island North Reef Buoy "1BI" marking a dangerous shoal which should be given a wide berth.

"The Race" which is a narrow channel leading into Long Island Sound. Strong Easterly and Westerly currents exist during maximum flood and ebb tides (flood set to the West) and an accurate position should be maintained at all times so that any unusual set may be observed.

It should also be noted that sport fishing boats frequent the area in great numbers practically all year round. Tugs with large barges on long hawsers can also be expected. Valiant Rock, with a least depth of 19 ft., nearly in the middle of The Race is surrounded by shoal area. A lighted bell buoy is northward of the rock. Security broadcasts should be made on VHF Channels 16 and 13 when approaching the area and passing situations discussed before entering "The Race".

Cautionary Advice: Extreme caution should be exercised during the Summer months when transiting through Block and Long Island Sounds due to heavy small boat traffic, especially in the area around "The Race".

Submarine operating areas are in the approaches to New London Harbour and off the Northern end of Long Island. Submarines may be operating either surfaced or submerged in these areas.

Fog is prevalent during the Summer months and can be very dense. Prudent judgement should be used before transitting the area during fog because of the aforementioned hazards.

Berthing: (Hess Oil – Groton): The harbour provides excellent room for manoeuvring. Currents of up to 0.5 knots exist but set fair with the channel. The tidal range averages 2.6 ft. with a spring range of 3.1 ft. Vessels approach the berth at a small angle. Usually vessels dock starboard side to. Once alongside the platform, the bow will be secured first, followed by the stern. The Platform is well protected by rubber fenders. Lines are run to offshore piles and a mooring buoy by a small boat. 12 mooring lines are used under normal weather conditions. (See "Plan").

FRESH WATER: Available at pier side through 2.5 in. and 1.5 in. hoses.

FUEL: Bunker or marine diesel not normally available (arrangements are possible, if ship's Agent is given sufficient advance notice).

CONSULS: Nearest at New York.

REPAIRS/DRY DOCKS: Drydocks of sufficient size/capacity to handle cargo ships currently unavailable to the public. Towing and minor repairs are available through Thames Shipyard, Inc. in New London. Tel: (203) 442-5349.

GANGWAY/DECK WATCHMEN: Not required and not recommended.

OPENING/CLOSING HATCHES: May be performed by stevedores or ship's personnel.

REPATRIATION: Facilities exist.

AIRPORT: Nearest airport is Groton - New London Airport, situated in the Southeast part of Town of Groton, Connecticut. USAir provide scheduled commercial service to this field.

TIME: Eastern Standard Time, GMT minus 5 hours. Daylight Saving Time, GMT minus 4 hours, from first Sunday in April till last Sunday in October.

HOLIDAYS: Eleven holidays may affect stevedore services at State Pier. With the exception of Labor Day, cargo work can be arranged on holidays. The Terminal Operator should be contacted at Tel: (203) 442-3939 for information concerning observed holidays.

POLICE/AMBULANCE/FIRE: Dial 911.

TELEPHONES: Available if required.

GARBAGE DISPOSAL: For specific information regarding garbage disposal contractors, the State Pier Terminal Operator should be consulted at Tel: (203) 442-3939. Necessary arrangements might also be made through the vessel's Agent.

WASTE OIL DISPOSAL: Upon request, information concerning Waste Oil Contractors will be available through the Terminal Operators, vessel's Agent or the Office of Waterways, located at State Pier, Tel: (203) 443-3856.

SEAMAN'S CLUBS: None.

CURRENCY: U.S.Dollar.

AUTHORITY: State of Connecticut, Dept. of Transportation, Bureau of Aviation and Ports (Office of Waterways), State Pier, New London, Connecticut 06320, U.S.A. *Tel:* (203) 443-3856. *FAX:* (203) 437-7251. *Contact:* D. Douglas Brown, Director of Port Operations.

NEW ORLEANS, Louisiana: 29.56 N. 90.04 W.

(See Plan)

DOCUMENTS:

3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (Curio List).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List (Form I-418).
2 copies previous Tax Certificates (Form 1002).
2 copies Certificate of Financial Responsibility.
2 copies General Declaration (Form 1301).
2 copies Vessel Repairs (Form 226) (Required only for American Flag vessels arriving from foreign ports).

Customs Boarding Officer will also examine Ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States Port:

Master's Oath (Customs Form 1300).
All foreign clearances.
Certified Crew List.

The Bureau of Customs at New Orleans, Louisiana, will not, regardless of the circumstances, accept Customs Entry Papers from vessels unless they are on the proper U.S. Customs Forms and properly prepared.

Specially referred to are Customs Forms 1303 (Ship's Stores Declaration), 1304 (Crew Effects Declaration) and 1302 (Inward Foreign Manifest).

U.S. Customs at New Orleans require that the 1303 be completed, that is all stores (deck, engine, etc.) be listed on the form; it must also include firearms and medicines. They will not accept "as per attached list".

Form 1304, Crew Effects List, must likewise be properly completed. All effects and curios will have to be listed on the form. The term "souvenirs" is not sufficient and may not be used. All values have to be listed. Attachments to the 1304 are not permitted. (This does not apply to American Flag vessels using the Form I-418 Crew List with Crew Declaration numbers listed for their souvenir list.)

Also see "Berthing – Ama (Shipmaster's Report) – General" regarding Customs' areas of jurisdiction.

APPROACHES: *Operator's Report:* 1984 (Corrected to 1988 conditions).

The coastline of the Mississippi River delta is low lying and generally swampy, having no easily distinguished geographic characteristics. The oil rigs and drilling platforms off Southwest Pass are usually sighted well before any navigational aids or landmarks. The first navigational aid to be seen is normally the Southwest Pass Entrance Light near the end of the East Jetty, a red tower on a white dwelling, 85 ft. above the water. The Entrance Light is also equipped with a Racon displaying Morse K (—·—) and Radio Beacon "OT" (307 kHz). The East End Jetty is also a conspicuous navigational aid consisting of a red triangular daymark on a red skeleton tower, 50 ft. above the water.

The sea buoy ("SW") is a red/white light (Morse (A)) buoy located approximately 1.6 miles South of the jetties and may be difficult to distinguish at long range due to the numerous oil wells and other lights in the vicinity.

Entry and transit should not be attempted during dense fog or any other unfavourable conditions.

River Transit: *General:* The Army Corps of Engineers has the responsibility for maintaining a project depth of 45 ft. in the entrance to and along the navigable channel in the Mississippi River up to Mile 150 AHP and 40 ft. from Mile 150 AHP to Baton Rouge. However, even with regular dredging, there will be occasions when the project depth cannot be maintained, resulting in a reduction of the transit draft. A decrease in water depth is most likely to occur when:

(a) the river stage is at its highest usually between January and June, and
(b) the river current velocity decreases causing siltation primarily after major Winter and Spring run-offs of rain and melted snow.

The influence of the above factors on water depth cannot be accurately predicted, neither for the day nor the location in the river. While this is not of concern for many miles of the river where deep water is always available, it is of particular concern within the 9 crossings between New Orleans and Baton Rouge.

Within these crossings it is, therefore, necessary for the Corps of Engineers to take frequent soundings not only to keep track of where the least water depth is, but also to determine the priority crossing for dredging.

Soundings taken for this purpose are very comprehensive, i.e., lines of soundings within each crossing are along the centre line ranges as well as along parallel lines 125 ft. to 250 ft. on either side of the centre line; soundings are recorded on these lines at about 150 ft. intervals. The maximum allowable transit drafts within the river are determined by the available water depth in the deepest 250 ft. wide channel in the 500 ft. wide crossings. As a result, Pilots in selecting such a navigable route may not always proceed on the centre line ranges of a crossing. The maximum draft will never exceed 45 ft. to Mile 150 AHP and 40 ft. from Mile 150 AHP to Baton Rouge.

Currents in the river vary according to the stage of the river (currents due to tides are a negligible factor) being of greater strength and velocity during high river flood stages and of lesser velocity during low river stages. High river stages normally occur in April and the low stages in October. Vessels transiting the river during flood stages should take precautions to avoid wash damage to the banks.

Extra caution is required in navigating the river in the vicinity of Algiers Point, particularly when the river is high. When the Carollton Gauge reaches 10 ft. on a falling stage, all vessels in the vicinity of Algiers Point shall be governed by the Governor Nichols and Gretna traffic lights. Furthermore, low powered vessels should not navigate the area unle they can clear Algiers Point during daylight.

When transiting the river it should be noted that the VTS is not operation. Thus, the mariner may be confronted at any time w unreported hazards. It is important, therefore, that all Pilot rules an other applicable rules and regulations be strictly adhered to.

Six bridges cross the Mississippi River between Head of the Passe and Baton Rouge, with the following clerances:

Mile (AHP)	*Bridge*	*Horizontal Clearance* (ft.)	*Vertical Clearance* (ft.)	Span
94.0	Hale Boggs	1,400	170.0	A
95.7	Greater New Orleans	1,400	170.0	A
106.1	Huey P. Long	725	153.0	A
121.7	Luling & Destrehan	1,200	154.9	A
167.4	Sunshine	750	168.0	B
229.3	Baton Rouge I-10	500	172.5	A

Note: The vertical distance is measured at zero elevation of th river at the nearest gauge on the river. For example: th Baton Rouge I-10 bridge shows a clearance of 172.5 ft. a zero on the gauge. When the gauge shows 10 ft., th clearance is 172.5 ft. – 10 ft. = 162.5 ft.

Ferries transport passengers and cars across the river at Pointe a Hache, Belle Chase, Chalmette, New Orleans, Gretna, Destreha Reserve, Lutcher, Donaldsonville, White Castle and Plaquemine.

When fog is predicted for the lower Mississippi River and/or Gul outbound vessels above New Orleans should anchor around Norco a above. Vessels below New Orleans should anchor well above Pilottow unless the weather can be expected to remain clear up to the entranc of the pass.

Draft/Speed Relationship: It is important to take account of the effect o "squat" when navigating within the crossings of the Mississippi Rive For your guidance, the increase of draft due to "squat effect" i approximately 1 ft. for each 5 knots of speed.

River Crossings: The 9 crossings are critical areas, therefore, it i desirable to obtain either from the Pilot or local Agent the most recen information on locations where soundings indicate water depth less tha the project depth 40 ft. or 45 ft. You should discuss with the Pilot wha the intended track within a crossing should be in order to remain with the deepest water. In order to further reduce the risk of bottom touching a reduction in speed is considered necessary in these circumstances Reduction of speed should be discussed with the Pilot to ensure th the effect of "squat" is compensated for while in a crossing. Since it i important to ensure the desired ship response to rudder movement while in a crossing, speed reduction has to be carried out before entering a crossing.

The manoeuvres required at the crossings are rather unique. In mos cases the channel is not parallel to the river current, and the Pilot wi therefore, utilise the set of the current to negotiate the crossing. Spee has to be sufficient to compensate for the effect of the current, while a the same time maintaining a balance with increased draft due to "squat" Full sea speed is to be avoided.

When entering or leaving a crossing, the Pilot may manoeuvre clos to the bank and on occasions take advantage of bank rejection to ai the manoeuvre.

Experienced helmsmen are required during the entire river trans between New Orleans and Baton Rouge.

River Traffic: Surging caused by passing channel traffic is a commo problem. To avoid damage to Chicksan/hose connections and th parting of wires or lines, special attention should at all times be give to the condition and tautness of moorings. It is recommended that on or several qualified crew members be assigned exclusively to the tendin of mooring lines and winches.

PILOTAGE: Advise Agents ETA at sea buoy 48 hours in advance. Agen will arrange for Pilot. Pilot boat 46 ft. long, red hull, white cabin, flyin blue and white Pilot flag. Pilot boards at sea buoy, requires Pilot ladde 6 ft. above water level, and in compliance with Chapter V, Regulatio 17 of the International Convention for the Safety of Life at Sea, 1974 Pilot boats can be contacted by VHF, Channel 9 or 16 when 30 t 40 miles off. Bar Pilot is exchanged for River Pilot at Pilottow Head of Passes.

Following Advice Received from Crescent River Port Pilo Association:

Cable: Crespilots, New Orleans.

Vessels bound to any destination on the Mississippi River an Mississippi River Gulf Outlet (MRGO) are requested to supply th following information via Coastal Radio Telegraph addressed t Crespilots, New Orleans:

(1) ETA – 24 hours before expected arrival at pilot station (Se Buoys), and any change of ETA in excess of 6 hours.
(2) Indicate if vessel is arriving Mississippi River or Mississippi Riv Gulf Outlet.
(3) Deepest fresh water draft and speed of vessel.
(4) Please contact pilot station at entrances via VHF Radio Phon on Channel 16 (156.80 MHz), Channel 9 (156.45 MHz), or, Channel (156.65 MHz) at least 2 hours prior to arrival for boarding instruction (This is normally done by the Bar Pilot).

Your co-operation will greatly assist in expediting the dispatching o Pilots and avoid costly delays to your vessels.

Report: S.W. Pass Pilot uses VHF Channel 9.

ANCHORAGES: Safe anchorage within 2 miles of South Pass or S.W Pass entrance. Vessels may anchor at the Point below New Orlean depending on ship size, weather, etc., tug assistance may be requi MISSISSIPPI RIVER DESIGNATED PERMANENT ANCHORAGES

Pilottown Anchorage: An area extending from Mile 1.5 to Mile 6.7 AH along the right descending bank and having a width of 1,600 ft. at upper and lower limits.

Boothville Anchorage: An area extending from Mile 12.2 to Mile 1 AHP along the right descending bank and having a width of 1,000 ft its upper and lower limits.

Ostrica Anchorage: An area extending from Mile 23.5 to Mile 24.4 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

Port Sulphur Anchorage: An area extending from Mile 37.5 to Mile 39.7 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Magnolia Anchorage: An area extending from Mile 45.5 to Mile 46.9 AHP on the right descending bank, having a width of 1,100 ft. measured from the Low Water Reference Plane from Mile 45.5 to 46.3, and 600 ft. measured from 500 ft. riverward of the Low Water Reference Plane from Mile 46.3 to 46.9.

Davant Anchorage: An area extending from Mile 53.5 to Mile 54.5 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Alliance Anchorage: An area extending from Mile 63.6 to Mile 65.8 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

Wills Point Anchorage: An area extending from Mile 66.5 to Mile 67.6 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Cedar Grove Anchorage: An area extending from Mile 69.9 to Mile 70.6 AHP on the right descending bank, 700 ft. wide with a Western limit 400 ft. from the Low Water Reference Plane on the right descending bank.

Belle Chase Anchorage: An area extending from Mile 73.1 to Mile 75.2 AHP along the right descending bank and having a width of 1,000 ft. at its upper and lower limits.

Lower 12 Mile Point Anchorage: An area extending from Mile 78.5 to Mile 80.8 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

Lower 9 Mile Point Anchorage: An area extending from Mile 82.7 to Mile 85.0 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

New Orleans General Anchorage: An area extending from Mile 89.3 to Mile 90.5 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits. (See Appendix, paragraph 8).

Quarantine Anchorage: An area extending from Mile 90.9 to Mile 91.6 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits (See Appendix, paragraphs 6, 8 and 9).

Kenner Band Anchorage: An area extending from Mile 115.1 to Mile 115.6 AHP along the right descending bank and having a width of 700 ft. at its upper and lower limits.

Ama Anchorage: An area extending from Mile 115.7 to Mile 117.2 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits.

Bonnet Carre Anchorage: An area extending from Mile 127.3 to Mile 128.8 AHP along the left descending bank and having a width of 600 ft. at its upper and lower limits. (See Appendix, paragraph 10).

La Place Anchorage: An area extending from Mile 134.7 to Mile 135 AHP along the left descending bank and having a width of 600 ft. at its upper and lower limits.

Reserve Anchorage: An area extending from Mile 137.0 to Mile 137.5 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

Lower Grandview Reach Anchorage: An area extending from Mile 146.5 to Mile 147.1 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits.

Upper Grandview Reach Anchorage: An area extending from Mile 147.7 to Mile 148.8 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits.

Lower Sunshine Anchorage: An area extending from Mile 165.0 to Mile 165.9 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Upper Sunshine Anchorage: An area extending from Mile 166.3 to Mile 167.0 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Baton Rouge General Anchorage: An area extending from Mile 225.8 to Mile 227.3 AHP along the right descending bank and having a width of 1,400 ft. at its upper and lower limits. Less than 27 ft. draft.

Lower Baton Rouge Anchorage: An area extending from Mile 228.5 to Mile 229.0 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits. Light draft.

Middle Baton Rouge Anchorage: An area extending from Mile 229.6 to Mile 229.8 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits. Light draft.

Upper Baton Rouge Anchorage: An area extending from Mile 230.6 to Mile 231.0 AHP along the left descending bank and having a width of 1,075 ft. at its upper limit and 1,200 ft. at its lower limit. Light draft.

Note 1: Loaded vessels are not allowed to use Middle and Upper Baton Rouge Anchorages.

Note 2: An explosives anchorage, approximately 1,000 ft. wide, is located on the West side of the river 1.4 miles upstream of Oak Point Light (63.0 miles AHP) and cannot be used by any vessel without previous approval from the Commander, Eighth Coast Guard District.

All anchorages have mud bottoms and are protected by the Mississippi River banks on each side. Vessel's position should be monitored continuously for dragging while anchored. No specific distances are required between anchored vessels. Caution is advised if required to anchor off Baton Rouge Docks, due to proximity of submerged pipeline crossing just South of docks.

The Coast Guard advises that during high water conditions, Mariners should give anchored vessels a particularly wide berth. Fast river currents may cause anchored vessels to swing in wide arcs. Under these conditions, it is important that the Mariner beware of anchor chains.

APPENDIX:

Regulations Concerning Designated Anchorages have been extracted from 33 CFR 110.195.

(1) Anchoring is prohibited outside of established anchorages except in cases of emergency. In an emergency, if it becomes necessary to anchor a vessel outside an established anchorage, the vessel shall be anchored so that it does not interfere with or endanger any facility or other vessel. The Master or person-in-charge of the vessel shall notify the Captain of the Port of the location of the emergency anchoring by the most expeditious means and shall move the vessel as soon as the emergency is over.

(2) In an emergency, if it becomes necessary to anchor a vessel in Southwest Pass, the vessel shall be positioned as close to the left descending bank as possible.

(3) No vessel may be anchored unless it maintains a bridge watch, guard and answer VHF Channel 16, maintains an accurate position plot and can take appropriate action to ensure the safety of the vessel, structure, and other vessels.

(4) When anchoring individually or in fleets, vessels shall be anchored with sufficient anchors or secured with sufficient lines, to ensure their remaining in place and withstanding the action of winds, currents and the suction of passing vessels.

(5) No vessels may be anchored over revetted banks of the river or within any cable or pipeline area. The locations of revetted areas and cable and pipeline areas may be obtained from the District Engineer, Corps of Engineers, New Orleans.

(6) The intentions to transfer any cargo while in an anchorage shall be reported to the Captain of the Port, giving particulars as to name of ships involved, quantity and type of cargo, and expected duration of the operation. The Captain of the Port shall be notified upon completion of operations. Cargo transfer operations are not permitted in the New Orleans General or Quarantine Anchorages. Bunkering and similar operations related to ship's stores are exempt from reporting requirements.

Note: Activities conducted within a designated anchorage (e.g. cargo transfer, tank cleaning, stack blowing, etc.), may be restricted by other Federal, State or local Regulations. Owners, or persons in charge of any vessel should consider all safety and/or environmental regulations prior to engaging in any activity within designated anchorges.

(7) Nothing in this section relieves the owner or person-in-charge of any vessel from the penalties for obstructing or interfering with navigation or navigational aids or for failing to comply with the navigation laws for lights, day shapes, or fog signals and any other applicable laws and regulations.

(8) Vessels carrying cargoes of particular hazard as defined in 33 CFR 126.10 or cargoes of petroleum products in bulk may not be anchored in the New Orleans General Anchorage or Quarantine Anchorage without permission from the Captain of the Port.

(9) Except when required by the United States Public Health Service for quarantine inspection, the Quarantine Anchorage may be used as a general anchorage.

(10) When the Bonnet Carre Spillway is open, no vessel may be anchored in the Bonnet Carre Anchorage.

RESTRICTIONS: Draft governed by Southwest Pass, project depth 45 ft. Entrance day and night. New Orleans is 115 miles upriver.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available, and join vessel off berth if required. One tug normally used for berthing/unberthing at New Orleans.

BERTHING: *Public Grain Elevator:* No. 2 Berth, 670 ft. long, 40 ft. depth; No. 3 Berth, 650 ft. long, 40 ft. depth; No. 4 Berth, 635 ft. long, 40 ft. depth.

Loading Rates 20,000 bushels per hour per belt, in Berths No. 2 and 3; up to 40,000 bushels per hour per belt, in Berth No. 4. Each berth has 2 loading belts.

Southern Scrap Material Co.: Berth 550 ft. long, 32 ft. depth. Loading 200 t.p.h. with cranes.

Kaiser: Chalmette Wharf: Aluminium discharge facilities, max. draft 38 ft.

Westwego: Continental Grain Elevator: 2 Berths, 600 ft. long and 500 ft. long, 40 ft. depth; loading 2 booms upstream, 3 "Buhler" arms and 1 boom downstream. Loading rate 2,000 t.p.h. – 3,000 t.p.h.

Louisiana Dock: 28 ft. alongside, bulk oil products loaded 200 t.p.h.

Pacific Molasses Co.: Berth 35 ft. alongside.

Ama: Shipmaster's Report: February 1985 (Corrected to 1991 conditions).

Berth: ADM – Growmark.

Location: Lat. 29° 56.4′ N.,Long. 90° 18.5′ W. On the S.W. bank of the Mississippi about 122 miles from the Southwest Pass (New Orleans Customs Zone).

Health/Agriculture: See "U.S.A. – General" before first Port.

Tugs: Tugs normally used.

Berth: Length of berthing face about 550 ft.

Port side to, head up. Head, stern, breast lines to dolphins. Springs to wharf or dolphins according to size (Moorings: 4 head lines, 2 breast lines, 2 forward backsprings, 2 after backsprings, 2 breast lines and 3 stern lines). Strong current along berth. River traffic passes close by. Substantial moorings required, with regular adjustment. Poop gangways generally do not reach wharf. A contractor's gangway normally on wharf but is charged for delivery, collection in addition to rental. Access road very narrow, no vehicles allowed on wharf. Road deliveries must be collected manually from levee 300 yards away. Otherwise delivery by boat from Fairview Wharf. All provisions, laundry, etc., from New Orleans. Public telephones on wharf.

Loading: Loading rate about 1,500 t.p.h. – 2,000 t.p.h. Using 4 "Buhler" arms simultaneously. Sometimes there is a delay in back weighing cargo for preparation of documents.

Fresh Water: Available from wharf via 2 in. line, at a low rate.

Fuel: By barge at anchorage only.
Density: 1000.
General: Now only one Customs Zone for entry and departure. Three copies of following documents required – Crew Manifest, Stores List, Crew List, and one Visaed Crew List.

It is a common practice for ships to anchor below New Orleans for clearance by Customs, N.C.B. and U.S.D.A. before going on towards a bulk or grain loading terminal. Bunkers are generally taken during this period as the grain elevators normally refuse permission to do this alongside.

Also see "South Louisiana".

CONTAINER HANDLING FACILITIES: Handled at most docks. Full container facilities at France Road Berth No. 1 with 830 ft. leased to Sea-Land. Napoleon Avenue wharf 1,520 ft. Nashville/Henry Clay wharf 2,820 ft.

France Road Berth No. 4, wharf 700 ft. France Road Berth No. 5, wharf 900 ft. Berth No. 6, 800 ft. Berth No. 4 leased to Navieras de Puerto Rico and Berths No. 5 and 6 leased to New Orleans Marine Contractors, Inc.

France Road Berth No. 6, with Ro/Ro pier.

BRIDGES: 6 bridges. 3 bridges cross river at New Orleans, 1 at Baton Rouge, 1 at Destrehan and 1 at Donaldsonville. Sufficient clearance at all times.

STEVEDORES: Working hours 0800 – 1200 and 1300 – 1700, Monday to Friday.

MEDICAL: All facilities available.

TANKERS:
Chalmette: Humble Oil Terminal: Tanker berth 30 ft. depth; Tenneco Oil Terminal: Tanker berth 35 ft. depth.
Amesville: Texaco Tanker Loading Berth, 34 ft. alongside. 2×8 in. hoses loading up to 12,000 bbls.p.h. No ballast facilities.
Avondale: American Liberty Tank Terminals Berth, 60 ft. alongside. 4×6 in. hoses loading up to 18,000 bbls.p.h. No ballast facilities. International Tank Terminals Berth, 45 ft. alongside. 12 in. hoses loading 150 t.p.h.
Gretna: Publicker Chemical Corp.: Berth 30 ft. alongside. Southern Pacific Company: Berth 600 ft. long, 35 ft. depth; dry cargo discharging only. Industrial Molasses Corp: Berth 27 ft. depth; 2×10 in. pipelines, loading 200 t.p.h.
Marrero: Hess Terminal Corp: Tanker berth 38 ft. depth; 6×12 in. hoses loading 500 t.p.h. Texaco: Tanker berth 35 ft. depth; 6×16 in. lines loading 250 t.p.h. No ballast facilities.
St. Rose: Cities Service: Tanker berth 35 ft. depth; International Tank Terminals: Berth 35 ft. depth; no fresh water available.
Operator's Report:
Pilottown: General: The Texaco Terminal is located on the East side of the river, 1.7 miles AHP and is a crude oil terminal consisting of a single berth. The dock, mooring dolphins and walkway are constucted of steel and concrete. The dock itself is a 'T' head dock 60 ft. in length; the total cluster of mooring dolphins, however, spans 1,000 ft.

Water at the berth is brackish with an approximate tidal range of 1 ft.

The berth is isolated and far from any commercial centre or district. Launch service to Venice, a small fishing village 8 miles upriver from Pilottown, may be available on request.

Cargo Handled and Shore Installations: Crude oil is loaded to vessels from an 820,000 bbls. capacity storage tank through a 22 in. shoreline leading into 3×8 in. hoses; maximum loading rate is 24,000 bbls.p.h. The hoses are supported by a steel boom at the top of the hose handling structure on the dock.

The berth is equipped with an emergency shutdown system located on the dock; the vessel is provided with a similar piece of equipment for emergency use.

Docking: The River Pilot berths the vessel. No tugs are required for docking or undocking; docking is strictly starboard side to.

Vessels should approach the dock stemming the current, dropping the port (offshore) anchor when off the dock. The anchor is then used to help manoeuvre the vessel alongside the dock. When undocking, the anchor is hove up as the vessel manoeuvres away from the dock.

Mooring bollards on the main dock structure are rated at 100 tons; mooring hooks on the dolphins are rated at 60 tons or more.

Gangway: The ship's gangway must be used and should be properly illuminated and rigged.

Bunkers and Fresh Water: No bunkers or fresh water are available at the dock.

Ballast/Slop Facilities: No ballast or slop facilities are available at Pilottown; vessels arriving with dirty ballast should plan for this.

Venice: General: Getty No. 1 Dock is a crude oil loading dock located on the West bank of the river approximately 11.8 miles AHP.

The 3 arms provided for loading cargo have a designed maximum rail to manifold distance of 12.5 ft. Vessels with a manifold inset greater than 12.5 ft. must use a 10 ft. long spool, provided by the dock, to connect the loading arms.

Cargo Handled and Shore Installations: Crude, the only cargo handled, is loaded through 3×12 in. Chicksan loading arms fitted with 8 in. manifold connections. Maximum loading rate is 40,000 bbls.p.h. The terminal requires that a minimum rate of 10,000 bbls.p.h. be maintained throughout the loading.

Emergency shutdown systems are located in the dock office and on the approach to the dock. The vessel is provided with a portable emergency stop.

Docking: Port side to docking is required and is normally performed by the River Pilot. No tugs are required for docking or undocking; the vessel's starboard anchor is usually used to control the vessel's movement during these manoeuvres. Approach should always be made with the vessel stemming the current.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Connecting Hoses: Chicksan arms are connected to the sh manifold by ship's personnel.

Communications: A public telephone located at the terminal site, n the dock, is available for use by ship personnel.

Repairs: Only emergency repairs which do not involve hot work a allowed.

Bunkers and Fresh Water: No fuel or fresh water are available at t berth.

Ballast/Slop Facilities: A single 64,000 bbls. capacity tank is availa for ballast storage/treatment. The maximum permissible discha pressure is 150 p.s.i.

The terminal specifies that ballast shall not be loaded or discharg while handling bulk cargo and requests that vessels arrive with t minimum possible amount of ballast under the prevailing weather n conditions.

Empire: General: The Chevron Terminal is a crude oil loading dock a is located at Mile 26.7 AHP on the East bank of the river. The do consists of a 'T' head hose handling platform, 2 breasting dolphins a 5 mooring buoys (3 upsteam of the platform and 2 downstream). T dock is connected to shore by a 12 ft. wide pier capable of suppor 2-ton loads.

Cargo Handled and Shore Installations: Crude is loaded throu 3×12 in. hoses attached to a loading arm assembly on the ho platform. The maximum delivery rate is 40,000 bbls.p.h.

An emergency shutdown system is located on the hose handl platform with a portable remote control unit aboard the ship.

Docking: Docking is generally performed by the River Pilot and o starboard side to dockings are allowed. No tugs are required for dock or undocking as the vessel uses its offshore anchor to manoeu alongside the dock.

Approaches should be made stemming the river current and the p anchor should be dropped when the vessel is above the dock to facilita manoeuvring into position. The anchor is hove up as the vessel leav the dock.

Repairs: Only emergency repairs which do not involve hot work a allowed.

Communications: A public telephone located on the hose handl platform is available for use by ship's personnel.

Gangway: The vessel's gangway must be used and should be prope rigged and illuminated.

Bunkers and Fresh Water: No bunkers or fresh water are availabl this dock.

Ballast/Slop Facilities: All dirty ballast and slops must be pumped the shore ballast tank, (capacity 80,000 bbls.) connected to the ho platform by a 16 in. pipeline. Ballast and cargo operations cannot b handled simultaneously.

Maximum discharge rate for ballast is 20,000 bbls.p.h. at a maxim rail pressure of 125 p.s.i.

Bellechase: General: The Gulf/Alliance dock is a multiple product be located on the right descending bank of the river, approxima 65.6 miles AHP.

Transfer of cargo is made through a set of 10 in. hoses attached a loading arm assembly on the dock. Shore lines vary in size from 8 for toluene and benzene to 20 in. for crude oils.

Tank washing while alongside the dock is strictly prohibited.

Cargo Handled and Shore Installations: Products commonly handl by the dock include xylene, LPG, crude, naphtha, carbon black, toluen benzene, gasolines, jet fuel and heating oil.

Maximum allowable rail pressure for discharging vessels is 100 p.s

An emergency loading stop is located on the dock; another, portab unit is placed aboard the ship.

Docking: The River Pilot normally handles docking and undock operations. Docking is port side to only and generally requires the a of a 1,200 h.p. tug. Small tankers are occasionally allowed to do without the aid of a tug, using their starboard anchor instead. Howev since dock regulations prohibit the use of an anchor while alongsid is recommended that a tug be used by all vessels calling at the bert

Approach to the dock should be made stemming the current wi tug on the vessel's starboard bow. The vessel is then manoeuvred i position alongside the dock.

Repairs: Minor repairs, excluding hot work, may be undertaken w written consent from the dock's Chief Operator countersigned by t offsite Shift Supervisor.

Gangway: The ship's gangway must be used and should be prope rigged and illuminated.

Bunkers and Fresh Water: Bunkers are not available at Gulf/Allia Fresh water, however, is available and can be delivered at a maxim rate of 7 t.p.h.

Ballast/Slop Facilities: All slops and ballast must be dischar ashore. The shore storage tank has a 100,000 bbls. capacity; s discharge ballast/slops into this tank through an 18 in. line at a maxim rate of 12,000 bbls.p.h.

Meraux: General: Murphy Oil Refinery is located on the North sid the Mississippi River, approximately 75 miles AHP. The tall stacks a cracking towers of the refinery are prominent features of the shore

The berth serves as a primary receiving dock for crude oils which a refined into various petroleum products for transfer by ship and ba to other ports.

Cargoes Handled and Shore Installations: Crude is received a maximum rate of 20,000 bbls.p.h. or a maximum 125 p.s.i. rail press Refined products (gasolines, jet fuel, etc.) are loaded on to vessel an average rate of 5,000 bbls.p.h. All cargo transfer is made thro 8 in. hoses.

Docking: Docking is normally performed by the River Pilot and is strictly starboard side to. All vessels are required to use a minimum of 1 tug for docking and undocking; more tugs may be used at the Master's discretion. Vessels approach the refinery dock stemming the current with a tug on the port bow. The tug assists vessels manoeuvring into position alongside.

Communications: A public telephone located at the head of the dock is available for use by ship's personnel.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunker-C, diesel fuel and fresh water are available upon request.

Ballast/Slop Facilities: No ballast or slop facilities are available at this dock.

Chalmette: General: The Exxon dock is a small dock with 310 ft. of dock face consisting of a concrete deck on steel pilings. Mooring bollards on the dock and mooring dolphins are serviced by air driven capstans for hauling ship's mooring lines.

Cargo Handled and Shore Installations: Marine diesel and Bunker-C are handled at this dock. The dock is equipped with a loading arm assembly to which 3×8 in., hoses are attached for the transfer of cargo. Maximum allowable discharge pressure at the rail is 125 p.s.i.

An emergency loading stop control is located on the dock.

Docking: Docking and undocking are performed by the River Pilot and require the aid of an 800 h.p. tug. Vessels approach the dock stemming the current with a tug on the port bow and are then manoeuvred into position, starboard side to, alongside the dock.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunker-C, inter-fuel, diesel fuel and fresh water are available upon request.

Ballast/Slop Facilities: There are no ballast or slop facilities available at the berth.

Harvey: General: The Commercial Solvents Wharf is located on the South side of the river near Harvey Canal; and consists of an 'L' shaped dock with 370 ft. of dock face and 6 mooring dolphins.

Cargo Handled and Shore Installations: Various clean speciality products are handled. The product most frequently handled is methanol. Cargo is transferred through a single 6 in. hose with a 6 in flanged connection at the vessel's manifold. Maximum rail pressure for vessel's discharging is 100 p.s.i., maximum loading rate is 2,500 bbls.p.h.

Docking: Docking is performed by the River Pilot and is strictly port side to. 2 tugs are required for docking operations and a single tug for undocking. The general mooring arrangement calls for 2 head lines, 2 stern lines, 1 breast line forward, 2 breast lines aft, 2 forward spring lines and 2 after spring lines for a total of 11 mooring lines.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: No fuel or fresh water are available from the dock.

Ballast/Slop Facilities: There are no ballast or slop facilities at the terminal.

St. Rose: General: The International Matex Tank Terminal berths are located on the North side of the river, approximately 103 miles AHP. The terminal consists of two individual tanker berths (No. 1 and No. 5) and a barge dock.

No. 1 Dock, upstream of No. 5 Dock, consists of a small 'T' head dock with 5 mooring buoys to accommodate head, stern and breast lines. No. 5 Dock has a longer dock face which can accommodate all but the head and stern lines. Both docks are connected to shore by catwalks.

The velocity of the river current at both berths varies between 1 knot and 4 knots, depending on river conditions.

Cargo Handled and Shore Installations: No. 1 Dock handles mainly the receipt of crude oils and the shipment of Bunker-C, No. 2 fuel and naphtha. The cargoes most frequently handled at No. 5 Dock are No. 6 fuel oil and No. 2 diesel oil.

No. 1 Dock is fitted with a set of 12 in. Chicksan arms. Cargo at No. 5 Dock is transferred through a maximum of 3×8 in. hoses. Maximum discharge pressures are 100 p.s.i. at No. 1 Dock and 90 p.s.i. at No. 5 Dock.

Docking: Docking is performed by the River Pilot and is strictly starboard side to at both berths. All vessels are required to use at least 5 tugs for docking and undocking; 3 tugs are required when the river is above 15 ft. on the St. Rose gauge.

The general mooring arrangement at No. 1 Dock call for 4 head lines, 2 breast and 2 spring lines forward, 2 spring lines aft and 2 stern/breast lines. The lead for stern lines is poor. Wires may be used on all bollards and hooks except those on the loading platform. The terminal prefers polypropylene lines to wires for docking at No. 5 Dock. This dock requires 2 head lines, 2 stern lines, and one breast and one spring line both forward and aft.

Communications: Public telephones located on each dock and at the shoreside end of each catwalk are available for use by ship's personnel.

Gangway: The vessel's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Fuel (Bunker-C, inter-fuel and diesel) and fresh water are available at each dock upon request.

Ballast/Slop Facilities: No ballast or slop facilities are available at either dock.

Marrero – Texaco: General: The Texaco Tanker Berth is located on the South side of the river some 86.5 miles AHP. The berth consists of a 'T' head dock with pontoons and mooring buoys alongside forming a 750 ft. berthing space.

Cargo Handled and Shore Installations: Various products are shipped and received by barge; the only product handled by tanker is bonded heavy fuel oil. This product is received through a single 10 in. hose at a maximum pressure of 100 p.s.i. on the dock.

Docking: Docking is normally performed by the River Pilot and is strictly port side to. Tugs are recommended, but are not compulsory, for docking and undocking operations.

Approach is made stemming the current and parallel to the dock. When no tugs are used for docking, the vessel's starboard anchor must be used to manoeuvre the vessel alongside.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Fresh water is available upon request; fuel, however, cannot be obtained at this berth.

Ballast/Slop Facilities: There are no ballast or slop facilities at the terminal.

Marrero – Hess: General: The Hess Tanker Dock is a concrete structure with steel pilings and 320 ft. of dock face. Mooring dolphins provide a location for head, breast and stern lines.

Current at this dock varies from 2 knots to 4 knots, depending on river conditions.

The dock is located on the South or left descending bank of the river approximately 86 miles AHP.

Cargo Handled and Shore Installations: Crude oils, Bunker-C and heating oil are commonly handled at this berth. All cargo transfer is made through 8 in. or 10 in. Chicksan arms.

Maximum loading rate for crude oil is 25,000 bbls.p.h. and for other products approximately 6,000 bbls.p.h. Maximum rail pressure for discharging vessels is 100 p.s.i.

An emergency loading stop control is located near the dock manifold.

Docking: Docking is strictly port side to and performed by the River Pilot. Vessels under 35,000 d.w.t. are required to use 2 tugs for docking and undocking; vessels greater than 35,000 d.w.t. are required to use 3 tugs. During extremely high river stages all vessels are required to use 4 tugs for docking and undocking operations.

Berth mooring requirements specify that 4 head lines, 4 spring lines forward, 2 after spring lines, 2 after breast lines, and 4 stern lines be used by all vessels (a total of 16 mooring lines.)

Gangway: The ship's gangway, properly rigged and illuminated, must be used.

Bunkers and Fresh Water: Bunker-C, diesel oil, inter-fuel and fresh water are all available upon request.

Ballast/Slop Facilities: No ballast or slop facilities are available at the terminal.

DENSITY: Fresh water (1000).

FRESH WATER: Available ex-wharf.

FUEL: Only available by barge. Oil companies can supply Bunker "C" ex-terminals at Amesville and Marrero. Chemoil can also supply fuel.

REPAIRS: 7 berths available.

GANGWAY/DECK WATCHMEN: Recommended if any crew detained by Immigration.

CUSTOMS ALLOWANCES: At the discretion of Customs Officers. Normal allowance is 200 cigarettes or 2 lb. tobacco and 1 litre wine or spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.

AIRPORT: New Orleans International Airport, served by most airlines.

TIME: Central Standard Time GMT minus 6 hrs. Daylight Saving Time from first Sunday in April till last Sunday in October.

HOLIDAYS: New Year's Day (1st January); Clarence Henry's Birthday (7th January); Martin L. King's Birthday (third Monday in January); Mardi Gras; Washington's Birthday (third Monday in February); Good Friday; Memorial Day (last Monday in May); Independence Day (4th July); Labour Day (first Monday in September; Veteran's Day (11th November); Thanksgiving (fourth Thursday in November); Christmas Day (25th December). No work on New Year's Day, Mardi Gras, Labour Day and Christmas Day. Mail, baggage and perishable cargo excepted.

Holidays are observed on following Monday, if designated day is a Sunday.

POLICE: Harbour Police Department has jurisdiction over harbour area. Tel: 528-3371 or 3372.

BANKS:

Alerion Bank, WTC Building, New Orleans. Tel: 504-569-0482.

First National Bank of Commerce, 210 Baronne Street, New Orleans, LA 70112. Tel: 504-561-1371.

Hibernia National Bank of New Orleans, 313 Carondelet Street, New Orleans, LA 70161. Tel: 504-586-5551.

Whitney National Bank of New Orleans, 228 St. Charles Avenue, New Orleans, LA 70130. Tel: 504-586-7272.

SHORE LEAVE: Allowed for any crew member not detained by Immigration.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany).

The following companies may be able to provide these facilities.

Browning-Ferris Industries, Metairie, LA. Tel: (504) 837-8950.

Health Management Inc., Reserve, LA. Tel: (504) 536-8650.

Reliable Disposal Co., New Orleans, LA. Tel: (504) 835-1696.

WASTE OIL DISPOSAL: The following companies have indicated to the Captain of the Port New Orleans that they are interested in contracting their services. We have received applications from facilities identifying some of these companies as their contractors. Each contractor is subject to the applicable regulations for the transfer of oil (33 CFR 154-156).

Browning-Ferris Industries (BFI), Chemical Services, Inc. Calcasieu, P.O.Box 5416, Lake Charles, LA 70601. Tel: (318) 527-6857.

Norwegian Seamen's Church, 1772 Prytania St., New Orleans, LA 70130. Tel: (504) 525-3602 or 525-5570. Fax: (504) 529-3423. Contact: Rev.Ingrid Frivold. Services: Sunday and various evening services, shopping, Scandinavian newspapers, swimming pool, recreational facility.

Presbyterian Port Ministry, 4219 Constance Street, New Orleans, LA 70115. Tel: (504) 891-6677. Contact: Chaplain Steven C.Paradise.

Stella Maris Maritime Center, 4219 Constance Street, New Orleans, LA 70115. Tel: (504) 891-6677. Contact: Deacon Robert M.Balderas Sr., Director and Port Chaplain. Services: Library, athletic, recreational and chapel facilities, snacks. Shipboard services on request. Port representative, American Merchant Marine Library Association.

CURRENCY: U.S.Dollar (U.S.$).

DEVELOPMENTS: Jourdan Road Terminal Complex comprising of a two berth facility with 290,000 sq.ft. of open space, 144,000 sq.ft. transit shed, complete with crane rails and marginal track, plus 440,000 sq.ft. marshalling area. Marshalling area adjoining the terminal complex consisting of 10 acres with an additional 34 acres of preload area to be developed as required.

Lower Mississippi River dredged to 45 ft.

A Capital Improvements Program includes construction of the New Nashville Avenue Terminal, which will be a multi-purpose terminal handling a variety of cargoes. The Nashville B Wharf will stretch 3,150 ft., and connect the existing Nashville Avenue Wharf with the Napoleon Avenue Wharf, resulting in a continuous wharf 2.03 miles in length.

SHIPMASTER'S REPORT: 1979.
South West Passage:

Pilotage: Pilots prefer accommodation ladder together with pilot ladder but will sometimes use pilot hoists, on larger vessels.

Restrictions: For 100,000 d.w.t. vessel max. draft for S.W. passage is 35 ft., (fresh water) to sail out at any time.

SHIPMASTER'S REPORT: 1979.
Mississippi Lightening Area:

Port Limits: Centred at Lat. 28° 00′ N., Long. 89° 30′ W. and within 15 nautical miles radius.

Documents: Officials take photostat copies of Bill of Lading and give receipt for cargo, and take one copy of Notice of Readiness.

Pilotage: They are equipped with Loran "C".

Anchorages: Very deep. Vessel drifted 7 nautical miles N.N.E. in 11 hours (February) with wind N.E. – 3. Checked with satellite navigator.

Health: No formalities.

Radio: Initial contact on W/T via "WLO" Mobile then by R/T 12427.5 kHz A3J. When close enough Channel 16 VHF; then Channel 11 for all operations. If vessel fitted with bridge wing VHF extension then best to give all engine room orders over Channel 11 so that lightening vessel can also hear.

Berthing: As per OCIMF/ICS SSTG (P). Require 2 headlines and 1 ste line from STBL after putting aboard their lines which are a polypropylene except springs which are wires with nylon tails. Steame at about 3.5 knots. They throw across heaving lines and carry a necessary equipment. Do not require derrick, they have gangway an 4 'Yokohama' fenders.

Tankers: STBL can load at up to 10,000 t.p.h. They prefer to use 2 cen manifolds with reducers down to 16 in.

Identification Cards: Required.

SHIPMASTER'S REPORT: December 1990.

Restrictions: Though project depth is listed at 40 ft., currently grea drafts are available in the lower reaches of the river. Some loaded gra vessels have sailed with 45 ft. – 47 ft., and current information shou be obtained from Agents (topping-off may be required).

Fresh Water: Supply from shore is refused at certain berths as bein not potable. A number of fresh water barges are available along th river. Typical charges are $ 140 per hour away from berth, plu $ 3.50/4.00 per ton. Pumping rates can range from 30 t.p.h. – 90 t.p. Minimum charge is for 200 tons of water.

SHIPMASTER'S REPORT: October 1991.

Pilotage: Pilot boards from a fast cutter off the S.W. Buoy, 1.5 mile South of the S.W. Pass Lighthouse. Prior to arrival call "Bar Pilots" o VHF Channel 9 (Channel 67 mentioned in ALRS is only used for Bridg to-Bridge Communications).

Bar Pilot Station is situated on the West bank of the S.W. Pass, abo 1.0 miles North of the S.W. Pass Lighthouse. There are approximate 60 Bar Pilots, of which 25 may be on station at any one time.

Vessels change Pilots at Pilottown, which is 21 nautical miles abov the S.W. Pass.

Crescent River Pilots take vessels from Pilottown to Algiers, off Ne Orleans, and about 94 nautical miles above S.W. Pass.

With a nominal sea speed of 13 knots, passage to Pilottown with half knot current is 2 hours and a further 6 hours up to New Orlean There are about 80 Crescent River Pilots of which half are on station a any one time.

Bar Pilots will attempt to board a vessel in any weather, but good le is required.

Baton Rouge Pilots take vessels above New Orleans and board a Algiers.

Entrance: The Racon on S.W. Pass Lighthouse is very conspicuous. A oil rig to the West of the safety fairway entrance channel is also equippe with a Racon.

A strong Westerly setting current and strong Westerly winds are ofte encountered near the S.W. Buoy, so great care has to be taken whe in the vicinity of towing vessels when entering and leaving S.W. Pas due to their lack of manoeuvrability.

River: A depth of 40 ft. is maintained up to Baton Rouge. In Octobe 1991 48 ft. fresh water was allowed to Baton Rouge.

The river current is slack between September and December an runs at approximately 0.5 knots. During the Spring months the curren can run as high as 7 knots. During this time, passage for low powere vessels can take a long time and it is potentially dangerous due to th large strings of barges which have little directional control.

Anchoring: Anchorage is possible off the S.W. Buoy but this is no considered a good anchorage due to poor holding ground and oil ri in the vicinity.

There are numerous river anchorages which are safe when the curre is running at a low rate, but when the river is running at a high ra vessels should be on full stand-by at all times.

Tugs: There are many powerful tugs available, they generally wa around in the anchorages. When the river is running at a high rate th services are called upon continuously.

Airport: New Orleans International Airport is just West of the city cent

Charts: B.A. Chart No. 3382 and U.S. Chart No. 11370.

It should be noted that no B.A. Charts are published for the are between New Orleans and Baton Rouge. U.S. Chart No. 11370 cove this area. The U.S. Army Corps of Engineers "Plans of the Mississip River" are published annually in book form and are very useful for givin berth positions, limits of deep channels and other useful information no published on charts.

Berthing:

International Matex Terminal (IMTT), Avondale:

Location: The berth is located on the South Bank of the river at Mi Post 108.2 (113 miles above S.W. Pass Lighthouse) and 3 miles abov Huey P. Long Bridge, just upstream from Avondale Shipyard.

Facility: The facility has a tank farm dealing exclusively with vegetab oils. The intake is by rail and road tanker trucks.

Berth: The berth is a typical Mississippi River berth and was origina built for handling of barge traffic but was strengthened at a later da for handling ocean-going vessels. The berth can accept vessels up t 30,000 d.w.t., depth alongside is 50 ft.

The berth consists of 2 pile dolphins 150 m. apart with an old deck over barge moored between the dolphins forming a flat front. The barg is set back 2.0 m. from the dolphin line.

We berthed with the bow resting on the upstream end of the barg and the stern alongside the downstream dolphin (the stern is not allow to touch the end of the dolphin). There are fenders on the dolphins a large truck tyres on the upstream end of the barge, there are no fende on the downstream end of the barge.

Moorings consisted of 3 headlines/sternlines and 2 springs at ea end. The headlines and sternlines are sent to the shore and secured hooks. The forward springs are sent to the barge and the after spri are sent to the aft dolphin. When the river is running at a high rate (to 7 knots) additional moorings are required.

One tug is used for berthing and there is also a mooring boat bu is unreliable.

Fresh water was not available at the time we called as the line was broken. Storing is not possible at the berth.

No shore gangway available and we could not use a short brow gangway, so pilot ladder was used for surveyor and the offshore gangway and a hired launch was used for boarding of officials.

Cargo: 1×6 in. flexi-hose connection from tanks to the vessel. We loaded peanut oil at a rate of 150 t.p.h. A careful preloading survey is carried out when loading vegetable oils. Flexi-hoses are used for all the different grades and occasionally the ship's hoses are used as the shore hoses are of insufficient length when the vessel is in a ballasted condition.

Chevron at Oak Point:

Location: The berth is one mile below Belle Chase and 91 miles above S.W. Pass Lighthouse, on the West bank of the river.

Berth: The berth is a well constructed steel pile structure with about 60 m. of flat faced side, with breasting dolphins at either end and mooring dolphins to the North and South of the breasting dolphins. All dolphins are connected by a catwalk.

The jetty has recently been rebuilt after nearly being destroyed by a passing tanker whose steering failed. One tug used for berthing.

The berth is generally used by barges but ocean-going vessels up to 50,000 d.w.t. can berth at the facility.

Storing trucks are allowed alongside if they are diesel driven. Fresh water available at a rate of 20 t.p.h., ship's hoses used. A shore gangway is provided. A public telephone is available on the shore.

Cargo: Polymers are imported and only lube oil additives are exported. There are dedicated Chicksans with 6 in. connections.

The ship has to shift when changing grades, unless the ship's cargo lines can be changed over. Flexi-hoses are not allowed.

We loaded grade "858C" from a tank about 1 mile away and rate was very slow, 26 tonnes/hr. Other grades were loaded at a rate of 100 tonnes/hr. – 150 tonnes/hr. Heavy "pigging" required on completion of grades, be careful if tank is full.

AUTHORITY: Board of Commissioners, Port of New Orleans, P.O.Box 60046, New Orleans, Louisiana 70160, U.S.A. *Tel:* (504) 522-2551. *FAX:* (504) 524-4156. *Contact:* J. Ron Brinson, President/C.E.O. Mark Reynolds, Port Marketing & Sales. Kenneth Parker, Marine Terminals.

NEW YORK, New York and New Jersey:

40.43 N. 74.00 W. **(See Plan)**

DOCUMENTS:

3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (Curio List).
2 copies Stores List.
2 copies Passenger List (Form I – 418).
2 copies Crew List (Form I – 418).

Customs Boarding Officer will also examine Ship's Register and Load Line Certificate.

In addition the following documents will be required for formal entry, to be made within 48 hours of arrival from abroad:
Health Pratique.
Master's Oath (Form 1300).
All Foreign Clearances.
U.S. Certificates of payment of Tonnage Tax (Customs Form 1002).
Certified Crew List.
Vessel's certificates may be inspected by a Coast Guard Boarding Officer during the vessel's Port call. Some of the certificates that may be required by the Coast Guard Boarding Officer include:
Certificate of Financial Responsibility (Mandatory).
National Cargo Bureau Certificate (Optional).
Load Line Certificate (Mandatory).
Oil Record Book (Mandatory).
International Oil Pollution Prevention Certificate (IOPP Mandatory).
SOLAS Safety Equipment Certificate (Mandatory).
SOLAS Safety Construction Certificate (Mandatory).
Radiotelephone Certificate (Optional).
Radiotelegraphy Certificate (Mandatory).
Vessel's Deck Log (Mandatory).

Note: The vessel's navigational charts are also subject to Coast Guard inspection. Mariners should have onboard and corrected up to date, the largest scale (greatest detail) charts for the intended route of transit through the port. Certain foreign charts have been approved for use. Contact Captain of the Port, New York for details.

Shipmaster's Report: March 1987.

3 copies of all necessary documents. All are given to Agent, who distributes them to Immigration, Customs, etc.

For all U.S. ports, the name of vessel's operator must be the same on Form 1300 as that shown on the U.S.C.G. Certificate of Financial Responsibility (Water Pollution).

For tankers, the cargo figures shown on Form 1302 should be in gallons and barrels.

APPROACHES: Ambrose Channel, 2,000 ft. wide, is the princip entrance from the Sea to the Lower Bay and onward to The Narrow between Staten Island and Brooklyn, which is 15 miles from Ambros Tower. The project depth of this channel is 45 ft. MLW. Vesse proceeding up Sandy Hook Channel are limited by a project depth 35 ft. MLW and an 800 ft. wide channel.

Vessels arriving at the Port of New York normally utilise Gene Anchorages No. 23 and No. 24 which are North of the Verrazano Brid and adjacent to the Stapleton Quarantine Station or Anchorage No. 2 off Bay Ridge. However, at times it may be necessary to direct inbou tonnage to the Gravesend Anchorage, No. 25, South of the Verrazan Bridge. Occasionally, due to congested conditions at the abo locations, vessels may be directed to anchor at the newly establishe anchorage adjacent and N.W. of Ambrose Tower. Vessels instructed use the anchorage off Ambrose Tower must pick up a Pilot for prop selection of an anchorage location.

For limits of anchorages generally used in the Port of New York se "Plan". Use of Charts 12349 and 12334 is strongly recommended.

Specific operating and safety procedures have been agreed upon wi the Pilot's Association, as follows:

1. Flood Tide Procedure:

Vessels with an LOA in excess of 800 ft. or a draft of more than 40 f (salt water) will not be brought in from sea to the General Anchorag off Stapleton, Staten Island (Southern part of No. 23 and entire area No. 24) on the flood tide. This will avoid the need to turn around in ord to anchor at a location which may be congested with traffic and shi at anchor.

2. Transit Restrictions:

Ambrose Channel: Guideline for starting in from Ambrose Tow during normal weather conditions.

Vessels with Drafts of 46 ft. 06 in.:
Thirty mintues after high water Sandy Hook.
Vessel with Drafts of 46 ft:
Thirty minutes to one hour after high water Sandy Hook.
Vessel with Drafts of 45 ft. 06 in.:
From thirty mintues after high water Sandy Hook to one hour and thi minutes after high water Sandy Hook.
Vessels with Drafts of 44 ft. 06 in.:
From thirty minutes after high water Sandy Hook to two hours an thirty minutes after high water Sandy Hook.
Vessels with Drafts of 43 ft. 06 in.:
From thirty minutes after high water Sandy Hook to three hours an thirty minutes after high water Sandy Hook.
Vessels with Drafts of 42 ft. 06 in.:
From thirty minutes after high water Sandy Hook to five hours afte high water Sandy Hook.
Vessels with Drafts over 40 ft. 00 in.:
From 30 minutes after high water Sandy Hook to 5 hours after hig water Sandy Hook. All vessels in the above categories should pas through the Narrows before low water slack at the Narrows.

The procedures outlined above are guidelines only. Weath conditions, tides, currents and ship capabilities should, of course, b taken into consideration.

3. Anchoring Procedures:

The Pilot Association has notified the Pilots to stay aboard all arriv ships at anchorage until the following procedures are carried out:
(a) The anchor chain is to be brought up and ship is to be stationa
(b) The Pilot will point out landmarks so proper bearings may b obtained and plotted on the charts.
(c) Pilots will inform the Master of conditions that he may encoun at the anchorage.
(d) The Master will be briefed on currents and time of tide chang
(e) All Pilots must record the ship's bearings on the back of th Pilot Orders.

In order to assist the attending Pilot, the Master should inform him a boarding of any special characteristics of his vessel, such as p manoeuvring speeds, turning circle, compass error and exact draft.

4. Anchor Watch:

Due to usually congested anchorages, strong tidal current, occasion fresh winds and traffic, all Masters are cautioned to maintain continuous bridge anchor watch by a deck officer with engine standby. Anchor bearings should be taken frequently and plotted t ensure proper anchor holding. During change of tides, the anch windlass should be in readiness with a deck officer standing by.

If an anchorage becomes dangerously congested after a ship ha been anchored, the ship's Master may request Agent to (a) send a Pi to relocate vessel to a safer anchorage, or (b) send a tug to assist ves in turning during a change in tide, or to stand by during fresh wi conditions.

PILOTAGE: Compulsory for foreign flag ships, and U.S. ships boun and from foreign ports.

24 hours notice of ETA required. N.Y. N.J. Sandy Hook Pilot bo should be contacted on VHF Channel 16, call "Ambrose Pilot", pi vessel also on Channels 13, 8 and 73 or ship-to-ship Channel 263 2738. Vessels requiring Pilot should hoist signal letter "G" in daytim In foggy weather the letter "X" should be sounded on whistle.

Pilot boat is generally found about 1.5 miles West of Ambrose Li Tower. In bad weather Pilot tries to stay windward of normal pilot sta

In poor visibility an inbound ship should make Ambrose Tower a then proceed at slow speed to the Ambrose Channel Sea Buoy wh blowing the letter "X" on her whistle. If no Pilot is obtained by the ti she is in the vicinity of the sea buoy she should then anchor ab 0.5 mile to 1 mile North of the line from Ambrose Tower to thesea bu and await Pilot.

ANCHORAGES: For ships entering from Sandy Hook there are anchorages in Lower New York Bay, Gravesend Bay, Raritan Bay, and Arthur Kill off Perth Amboy. In the Upper Bay, anchorages available off Bay Ridge for 30 days and off Stapleton for 48 hours. For vessels entering via Long Island Sound there are anchorages in the Western end of the Sound and in the East River.

Vessels must notify the Captain of the Port when it anchors, of the vessel's name, length and draft and its position in the anchorage.

Regulations for anchorages may be found in the 33 Code of Federal Regulations, Part 110.155.

Vessels entering New York Harbour are required to have 2 working anchors, by U.S.C.G. regulations.

Also see "Approaches".

RESTRICTIONS: Ambrose Channel, 10 miles long, maintained to a width of 2,000 ft. and a depth of 45 ft. MLW. The Northern approach to the harbour is through Long Island Sound into the East River. Main channels in the port are maintained to a depth of 45 ft. MLW.

MAX. SIZE: Restricted only by berth depth and location.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

VHF: All vessels over 100 tons gross are required to keep continuous watch on VHF Channel 13 when in areas where U.S. Inland Water Regulations apply.

V.T.S. became operational in December 1990. Channels to be used are 16, 13, 11, 12 and 14. (Channel 14 for vessels calling).

TUGS: Over 50 private towing and transportation companies registered in the port.

BERTHING:

Brooklyn: 8 berths at South Brooklyn Marine Terminal, including 2 container berths; 4 berths at 23rd Street Pier; 7 berths at Red Hook Marine Terminal.

Hudson River: Passenger Ship Terminal on Manhattan Shore between 48th and 52nd Streets provides 6 ship berths.

Hoboken Port Authority Marine Terminal: 2 piers, 4 general cargo berths.

Jersey City: 2 berth container facility at Port Jersey (Global Terminal) with 5 gantry cranes.

Newark, N.J.: Port Newark (22 general cargo, 5 specialised, and 4 container berths). Depth range alongside 30 ft. – 34 ft. Berths No. 10 and 12 handle coal with 3 floating cranes, rate 10,000 tonnes per day.

Elizabeth, N.J.: Elizabeth Port Authority Marine Terminal, 22 full container berths, channel depth 35 ft.

Department of Ports and Trade: The Department of Ports, International Trade and Commerce (PITC) of the City of New York is responsible for maintaining, leasing, and developing City-owned waterfront property. One of the principal maritime agencies in the nation's busiest port, the Department is actively involved in harbour affairs. As part of its commitment to the economic vitality of the Port, the Department plays a leading role in pressing for streamlined dredging operations, improved transportation connections, expansion of marine terminals, and the development of international trade and investment opportunities.

Pier 36 Terminal – Manhattan:

Operator: Vacant.

Situated on 10 acres off the East River, Pier 36 is the sole marine terminal in Manhattan capable of handling breakbulk, Ro/Ro and containerised cargo. In 1986, 82,000 long-tons were handled. The facility offers 1,300 ft. of berthing space with a dockside depth of 32 ft. and 175,000 sq.ft. of covered transit shed space. Its location offers direct access to the lucrative Manhattan market, as well as convenient access to major truck routes in the Metropolitan area.

Pier 42 Terminal – Manhattan:

Operator: Vacant.

Shipping Lines: —

More recently used for handling imported bananas, pineapples and coconuts, Pier 42 is located on the East side of Lower Manhattan. 4 specialised gantry cranes and a highly mechanised operation enable this terminal to move 150,000 boxes of fruit per day. The facility handled 200,000 long-tons of fruit over the course of calendar year 1986. The terminal contains over 120,000 sq.ft. of warehouse space including an air-conditioned storage area. Water depth at dockside is 32 ft. 48 truck loading bays ensure that goods move quickly from dockside to the road.

CONTAINER FACILITIES:

Bay Avenue Terminal:

Location: South side of Elizabeth Channel (Berths 68, 70, 72, 74 and 76).

Owner or Lessee: The Port Authority of NY and NJ.

Terminal Operator: –

Address and Telephone: 2170 North Fleet Street, Elizabeth, NJ 07201. Tel: (201) 289-3000 or (800) 526-6802.

Total Area of Terminal: 94 acres.

Length of Ship Berths: 2,825 ft.

Depth: 35 ft. MLW.

Container Cranes: 3×30 tons (Paceco), 1×40 tons (Star).

Equipment: 5 Clark straddle carriers (31.5 tons.) 15 Ottawa hustlers (25-ton capacity). 13 Ottawa hustlers (35-ton capacity). 1 Ottawa hustler (125-ton capacity). 1 P & H truck crane with 70 ft. boom (90-ton capacity). 2 Hyster cranes (5-ton capcity). 41 Hyster trucks (capacities ranging from 2.5 tons to 23 tons). 1 Kalmar truck (25-ton capacity). 212 reefer plug slots.

Stuffing and Stripping Facilities: 62,680 sq.ft. 88 truck bays. Served by rail siding.

Ro/Ro Accommodation: 2 ramps×60 tons.

Rail Service: Conrail.

Global Marine Terminal/Jersey City:

Location: West shore of Upper New York Bay at the Jersey City-Bayonne boundary (part of the Port Jersey industrial complex).

Owner or Lessee: Global Terminal and Container Services, Inc.

Terminal Operator: Global Terminal and Container Services, Inc.

Address and Telephone: P.O.Box 273, Jersey City, NJ 07303. Tel: (201) 451-5200 or (212) 344-7020.

Total Area of Terminal: 100 acres.

Length of Ship Berth: 1,800 ft.

Depth: 40 ft. MLW.

Container Cranes: 3 Star×40 tons. 1 Krupp×40 tons.

Toploader: Taylor×30 tons.

Sideloader: 1 Taylor×8 tons.

Mobile Yard Gantry Cranes: 3 Drott×30 tons. 2 Krupp×40 tons EP.

Forklift Trucks: 1×26 tons, 1×30 tons, 2×15 tons.

Reefer Plug Slots: 86.

Stuffing and Stripping Facilities: 125,000 sq.ft. 150 truck bays. Served by rail siding.

Rail Service: Conrail and Port Jersey R.R.

Chassis Vertical Stacking: 18 racks with a total capacity of 324 chassis stored vertically.

Howland Hook Terminal/Staten Island:

Location: Staten Island on the Arthur Kill just North of Goethals Bridge.

Owner or Lessee: The Port Authority of NY & NJ.

Terminal Operator: Vacant.

Address and Telephone: 300 Western Avenue, Staten Island, NY 10303. Tel: (718) 816-7748.

Total Area of Terminal: 187 acres.

Length of Ship Berth: 2,500 ft.

Depth: 25 ft. – 30 ft.

Container Cranes: 4 IHI×40 tons, 1 Peiner×50 tons with rotating spreader, 2 Paceco×40 tons.

Forklift Trucks: 19×13.5 tons to 30 tons.

Toploaders: 1×45 tons.

Reefer Plug Slots: 36.

Stuffing and Stripping Facilities: 208,000 sq.ft., 150 truck bays, 22,000 sq.ft. refrigerated warehouse plus MID defrost and inspection facility, 21,000 sq.ft. Special cargo warehouse.

Rail Service: Delaware Otsego Corp. (SIRC).

Maher Terminal/Fleet Street, Elizabeth:

Location: South side of Elizabeth Channel (Berths 52-68).

Owner or Lessee: The Port Authority of NY and NJ.

Terminal Operator: Maher Terminals, Inc.

Address and Telephone: 202 North Fleet Street, Elizabeth, NJ 07201. Tel: (201) 527-8200 or (212) 962-6322.

Total Area of Terminal: 200 acres.

Length of Ship Berth: 4,875 ft.

Depth: 35 ft. MLW.

Container Cranes: 2 Star×30 tons, 5 Paceco × 50 tons.

Equipment: 20 straddle carriers, 30 yard hustlers, 14 forklifts × 15 tons, 15 forklifts × 4 tons, 30 forklifts × 2.5 tons. 200 reefer plug slots.

Stuffing and Stripping Facilities: 155,000 sq.ft. 120 truck bays. Served by rail siding.

Rail Service: Conrail.

Maher Terminal/Tripoli Street, Elizabeth:

Location: Newark Bay (Berths 78, 80, 82, 84 and 86).

Owner or Lessee: The Port Authority of NY and NJ.

Terminal Operator: Maher Terminals, Inc.

Address and Telephone: 4010 Izmir Street, Elizabeth, NJ 07201. Tel: (201) 527-8400.

Total Area of Terminal: 243 acres.

Length of Ship Berth: 3,150 ft.

Depth: 38 ft. MLW.

Container Cranes: 3 Paceco×40 tons (low profile), 1 Canron×40 tons, 3 Morris×30 tons.

Equipment: 80 yard hustlers, 12 stackers (15 ton capacity), 7 toploaders × 40 tons, 40 forklifts × 2.5 tons, 60 forklifts × 4 tons, 4 transtainers, 200 reefer plug slots.

Stuffing and Stripping Facilities: 371,000 sq.ft., 238 truck bays. Served by rail siding.

Rail Service: Conrail.

Maersk Line Terminal/Port Newark:

Location: North side of Elizabeth Channel (Berth 51).

Owner or Lessee: The Port Authority of NY and NJ.

Terminal Operator: Maersk Container Service Co., Inc.

Address and Telephone: 231 Tyler Street, Port Newark, NJ 07114. Tel: (201) 465-1000.

Total Area of Terminal: 64 acres.

Length of Ship Berth: 764 ft.

Depth: 37 ft. MLW.

Container Cranes: 1×50 ton (Paceco), 2×40 ton (Paceco) and 1×40 ton (Star).

Equipment: 1 toploader × 50 tons, 1 toploader × 35 tons, 1 toploader × 13 tons, 1 stacker × 15 tons, 70 hilos × 5 tons to 7 tons. 192 reefer plug slots.

Stuffing and Stripping Facilities: 175,000 sq.ft., 154 truck bays. Served by rail siding.

Rail Service: Conrail.

Red Hook Container Terminal/Brooklyn:

Location: Brooklyn Waterfront, near entrance to Brooklyn-Battery Tunnel.

Owner or Lessee: The Port Authority of NY and NJ.

Terminal Operator: Universal Maritime Service Corp.

Address and Telephone: Building 115, foot of Hamilton Avenue, Red Hook, Brooklyn, NY 11231. Tel: (212) 875-0777.

Total Area of Terminal: 79 acres.

Length of Ship Berth: 3,030 ft.

Depth: 35 ft. – 40 ft. MLW.

Container Cranes: 3 Paceco×40 tons. 1 Star × 40/70 tons.

Equipment: 11 top handlers, 2 forklifts×26 tons, 5 forklifts×15 tons, 33 yard hustlers, 16 flatbed trailer, 125 hilos×3 tons. 150 reefer slot plugs.

Stuffing and Stripping Facilities: Break-bulk consolidation shed, 345,000 sq.ft., 80 truck bays.

Ro/Ro Accommodation: 660 ft. berth.

Rail Service: New York Dock Railway.

Sea-Land Terminal/Elizabeth:

Location: Newark Bay (Berths 88, 90, 92, 94, 96 and 98).

Owner or Lessee: The Port Authority of NY and NJ.

Terminal Operator: Sea-Land Service, Inc.

Address and Telephone: P.O.Box 1050, Elizabeth, NJ 07207. Tel: (201) 558-6000.

Total Area of Terminal: 230 acres.

Length of Ship Berth: 4,519 ft.

Depth: 40 ft. MLW.

Container Cranes: 6 Paceco×30 tons and 1 Mitsubishi × 40 tons.

Equipment: 3 top loaders×30 ton capacity, 45 forklifts×2.5 tons to 25 ton capacity, 60 yard hustlers, 1×40 ton transtainer.

Stuffing and Stripping Facilities: 306,000 sq.ft., 328 truck bays. Served by rail siding. 468 reefer plug slots.

Rail Service: Conrail.

South Brooklyn Marine Terminal/Brooklyn:

Location: Brooklyn shore of Upper New York Bay.

Owner or Lessee: The City of New York.

Terminal Operator: Continental Terminals, Inc.

Address and Telephone: Foot of 39th Street, Brooklyn, NY 11232. Tel: (718) 499-6300.

Length of Ship Berths: 1,535 ft. container berth plus general cargo berths of 4,600 ft.

Depth: 32 ft. MLW.

Container Cranes: 1 Star×50 tons, 1 Kone×50 tons

Equipment: 9 Valmet straddle carriers, 6 Clark straddle carriers, 10 Ro-Ro yard Tractors, 8 stackers, 65 forklift trucks (varying capacity).

Stuffing and Stripping Facilities: 600,000 sq.ft., 4 separate LTL sheds 446,000 sq.ft. CFS and general cargo sheds.

Roll-On/Roll-Off Accommodations: 2

Rail Service: New York Cross Harbour Railroad Terminal Corp.

Universal Terminal/Port Newark:

Location: North side of Elizabeth Channel (Berths 53, 55, 57 and 59).

Owner or Lessee: The Port Authority of NY and NJ.

Terminal Operator: Universal Maritime Service Corp.

Address and Telephone: 221 Starboard St., Port Newark, NJ 07114. Tel: (201) 589-6200.

Total Area of Terminal: 89 acres.

Length of Ship Berth: 3,058 ft.

Depth: 35 ft. MLW.

Container Cranes: 3 Paceco×40 tons.

Equipment: 11 top handlers, (42 ton capacity), 2 forklifts (26 tons), 5 forklifts (15 tons), 33 yard hustlers, 16 flatbed trailers, 25 hilos (3 tons). 248 reefer plug slots.

Stuffing and Stripping Facilities: Break-bulk shed 250,000 sq.ft. Served by rail sidings.

Rail Service: Conrail.

Also see "Berthing".

CRANES: Mobile floating cranes with capacity up to 500 tons available.

STEVEDORES: 13 stevedoring firms are active in the port, many of whom are also terminal operators. Normal working hours 0800 – 1700 hrs. Bulk Cargo work usually continues through 24 hours.

TANKERS: There is a history of repeated breakouts in the New York area due to sudden wind gusts of up to 60 knots, particularly associated with squalls. Moorings should, therefore, be kept tight and winch brakes tightened up after moorings have been adjusted.

Brooklyn: Paragon Oil Terminal, 2 berths, depth 37 ft.; Patchoque Oil Terminal, 2 berths, depth 29 ft. and 35 ft.; Whale Oil Terminal, 1 berth, depth 36 ft.

Hudson River: Tappan Oil Co., 1 berth, 35 ft. depth.

Bayonne, New Jersey: Public Oil Terminal, 3 berths, 32 ft. depth; Humble Oil Terminal, Constable Hook, up to 38 ft. depth; Belcher Oil Co., 3 tanker berths up to 38 ft. depth; Texas Oil Co., 4 tanker berths, up to 32 ft. depth; Texaco, 4 berths up to 32 ft. depth. Constable Terminal: 1 berth for handling caustic soda, chemicals, vegetable oil and molasses. 27 tanks (9 million gallons). Max. draft 31 ft. MLW.

Kill Van Kull: Lehigh Tanker Terminal, chemicals, 35 ft. depth; Humble Oil Co., 3 tanker berths, up to 38 ft. depth; Texas Oil Co., 4 tanker berths up to 32 ft. depth; Ross Oil Co., 1 berth up to 32 ft. depth.

Newark, New Jersey: 4 berths, 31 ft. and 32 ft. depth.

Elizabeth New Jersey: Chevron Oil Company, 1 tanker berth, 26 ft. depth; Crown Central, 1 tanker berth, 30 ft. depth.

Arthur Kill: **Perth Amboy,** Chevron Oil Co. (tanker berth, 26 ft. depth); Hess Oil Co. (tanker berth 30 ft. depth); Cities Service (tanker berth, 34 ft. depth); **Stolt-Nielsen,** (tanker berth max. draft 38 ft.); **Sewaren,** Royal Petroleum Co. (tanker berth, 32 ft. depth); Public Service Co. (tanker berth, 35 ft. depth); Shell Oil Co. (tanker berth, 35 ft. depth). **Port Socony,** Mobil Oil Co. (2 tanker berths, 27 ft. and 30 ft. depths). **Carteret,** American Oil Co. (tanker berth M, 25 ft. depth); General American (2 tanker berths, 25 ft. and 35 ft. depth). **Linden,** Cities Service (tanker berth, 32 ft. depth); Humble Oil Co. (tanker berth, 35 ft. dep Sinclair Oil Co. (tanker berth 31 ft. depth). **Gulfport,** Gulf Oil Co. (tan berth, 32 ft. depth).

Lightering Operations: Most crude and black oil tankers and occasional clean oil tanker entering the Port of New York must lightered before proceeding to their assigned discharge berths. All su vessels are assigned an anchorage either off Stapleton, Bay Ridge, Gravesend Bay. (See "Anchorages" and "Approaches").

Lighters used in the New York area range from 1,000 – 12,000 d.w capacity.

The U.S. Coast Guard has established regulations for oil trans operations in U.S. waters as a means to avoid oil pollution. The regulations are enforced. The principal items covered by the ne regulations are as follows:

1. Designation of person(s) in charge.
2. Qualifications of person(s) in charge.
3. Oil transfer procedures.
4. Emergency shutdown.
5. Records.
6. Requirements for oil transfer.
7. Connections, drip pans.
8. Declaration of Inspection.
9. Supervision by person in charge.

In most instances, an oil Company employed Oil Pollution Preventi Inspector will board vessel at anchorage to assist with the USC requirements. In any case, the lighter officer must contact vessel fo joint inspection and completion of a Declaration of Inspection before transfer can be started.

Exxon Bayonne Terminal: The Exxon Bayonne Terminal at Bayonn New Jersey, is located on the Northside of Kill Van Kull, 1.6 miles Ea of the Bayonne Bridge.

The terminals structure is a 700 ft. long concrete pier having a ho gantry and shore gangway. 2 teflon faced fenders breast the vessel into the dredged basin.

Lube Dock – Pier 1: Docking/Mooring: Usually all vessel dock portsi to at Bayonne with 2 tugs assisting. Vessels should arrive off the be at slack water, turn, and head into the slip. Care should be taken not have too much headway or to set down on the corner of the pier whi is not fendered. Vessels should be taken completely into the slip befo landing on the fenders. Fenders are teflon faced and will not slow t forward motion of the vessel. Once in position, 2 tugs will hold the sh while lines are run out. If the vessel extends past the end of the pi then extra lines should be used aft as a precaution for the tidal curre and passing traffic. Vessels having a bow thruster can undock with 1 tu at the discretion of the Master. (See "Plan").

Hoses/Pumping: All shore connections are 6 in. A maximum pressu of 125 p.s.i. is enforced. There are no slop facilities ashore.

Bunkers/Water: Bunkers are not available at this facility. Bunkers can be arranged at anchor. For bunker requirements, the vessel's Ag should be contacted prior to taking arrival at Ambrose. Fresh water not available at the dock.

Weather: There is a history of repeated breakouts in the New Yo area due to sudden wind shifts accompanied by strong and gusty wind Vessels alongside the dock must insure that mooring lines are taut a properly set. Vessels are strongly advised to maintain a VHF weath watch and to shut down operations if conditions warrant. The termi closes the berth during sustained Westerly winds of 50 m.p.h. or dur sustained winds over 73 m.p.h. from any direction. During the conditions, vessel must shut down and disconnect; a tug may b required to stand by.

Fuels and Specialty Dock – Pier 6: The Fuels and Specialty docks a located on the North side of Kill Van Kull, just off the Constable Ho Range. The terminal structure is a steel and concrete pier connected a concrete capped turning dolphin and fender system on the offsho end.

Docking/Mooring: Prior to berthing the intended docking manoeuv should be reviewed with the Pilot. Information on the velocity a direction of the current as well as water height should be obtained fr the Pilot. Tidal data is recorded from stations at the Battery, New Yo and Bergen Pt., New Jersey every 6 minutes. Readings can be obtain through VHF Channel 9 KEH 567.

Generally, vessel is assisted by 2 tugs. One of the 2 tugs will ma fast near the bow. The second tug stands by on the inboard berth side forward without making fast. As the vessel approaches the be the inboard tug moves aft along the ship's side. This tug then shifts the outboard quarter of the vessel in order to assist in berthing the sh against the dock fenders.

If installed, bow thruster should be ready for immediate use.

Ships should arrive off the berth at slack water. Care should be tak approaching the berth with minimum headway. Vessel should be tak completely into the slip before landing on the dock fenders.

Occasionally, unexpected cross currents are experienced wh approaching the berth. Immediate corrective action may be required maintain the ship within the dredged area in the vicinity of the bert

Vessels approaching Pier 6 for docking on the North berth will app to be making an approach towards the South berth. When the vess bow is close to the dolphin a the end of Pier 6, the ship is moved later North and ahead a sufficient distance to clear the fender line of the No berth. This manoeuvre is necessary due to the shoal area North of t dredged basin. Once in position 2 tugs will hold the ship while lines a run out. If the vessel extends past the end of the pier, then extra lin should be used aft as a precaution for the tidal current and pass traffic. Vessels having a bow thruster can undock with 1 tug at t discretion of the Master. (See "Plan")

Hoses/Pumping: Presentation flange sizes are grade dependent a can be obtained from Agent prior to arrival. A maximum hose press of 125 p.s.i. is enforced. There are no slop facilities ashore.

Bunkers/Water: Bunker C is available at this facility. Other bun can be arranged at anchor. For bunker requirements, the vessel's Ag should be contacted prior to taking arrival at Ambrose. Fresh water is available in limited quantities at a rate of about 20 t.p.h.

Exxon Bayway Terminal: The Exxon Bayway Terminal, consisting of 2 marginal type berths, is owned and operated by Exxon Company, U.S.A.

It is situated on the West bank of the Arthur Kill just below the Goethals Bridge.

Proceeding from Anchorage to Bayway: The Pilot/Mooring Master and tugs join the vessel at the anchorage. One of the tugs will assist in holding the stern of the ship up against the tide if a turn is required in the anchorage. Departure from anchorage is timed so that the vessel will arrive off Bayway at HW slack.

Before leaving the anchorage, the Pilot will broadcast a message by VHF advising other ships and New York VTS of the position of the vessel and the route it will follow. Normally 2 tugs attend the vessel while proceeding from the anchorage through the Kill Van Kull and Arthur Kill (between Staten Island and New Jersey) to the berth.

Three bridges are passed:

Bayonne Bridge: Vertical clearance of 140 ft. over channel at MHW.

Lift Bridge: Vertical clearance of 135 ft. over channel at MHW.

Goethals Bridge: Vertical clearance of 137 ft. over channel at MHW.

Because of the heavy traffic situation in the Port of New York and the close proximity of berthed vessels, ships should proceed at a moderate speed during the entire passage to Bayway. Also, ship personnel should stand-by the anchors.

On entering the Kill Van Kull the tide will be setting Northwestward and attention is to be paid to stay well clear of the bank extending Southward from Robbins Reef.

As a rule, the Pilot will be aware in advance of seagoing vessels proceeding Eastward through the Kill Van Kull. Normally the vessel will not enter the Kill until such outbound vessels have cleared the entrance.

Extreme caution is to be exercised when approaching and passing Bergen Point (about 3 miles Westward of the entrance to the Kill Van Kull) where 3 channels converge. In this are the view is obstructed by the Bayonne Bridge and by oil storage tanks located on Bergen Point.

The Pilot will communicate (VHF Channel 13) with the Pilots on the other vessels approaching this point and make arrangements for the vessel to pass this area without encountering other seagoing ships. Traffic information is also obtained from the operators of the railroad drawbrige across Newark Bay.

At times, cargo ships with destination Port Elizabeth wait off Bergen Point for the drawbridge to open. Normally, the Pilot is aware of this situation well in advance and the speed is adjusted to ensure that such ships are not passed off Bergen Point.

Berthing: The dock is a substantial concrete marginal-type with bollards located on land and on the dock. Most breast lines are run to hooks located on the dock which are secured to the shore bollards by wires. Spring lines are generally passed to the dock first. Large vessels dock and undock with the assistance of 2 tugs.

Large ships are berthed starboard side to (See "Plan") heading Southward; LPG ships docking at Berth No. 2 may berth portside to. (See "Report" dated August 1984).

The dredged basin at Berth No. 1 requires that the vessel be stopped off the berth and breasted into position. During docking, when vessels are in position, tugs hold the vessel alongside until all mooring lines are passed.

Passing traffic could cause the ship to break away from the Berth if mooring lines are not maintained tight and if the ship is not kept snug alongside at all times.

The following minimum moorings are required at the Bayway Pier:

Forward	*Aft*
2 head lines	2 stern lines
2 breast lines	2 breast lines
2 spring lines	2 spring lines

Depending on circumstances, additional moorings may be run out.

Departure:

1. Ships under 660 ft. LOA and mast height up to 130 ft. are turned off the berth and proceed to sea along the route which was followed when entering. The same precautions have to be taken when approaching the area off Bergen Point outward.

2. Ships over 660 ft. LOA are not turned off the berth because of limited manoeuvring space. They proceed to sea via the Southern part of Arthur Kill and Raritan Bay. A tug will accompany the ship until it has cleared Tufts Point (about 4 miles South of Bayway). The depths in the channel Southward of Bayway limit the departure draft to 33 ft.

The bridge across the channel near the Southeastern tip of Staten Island has a clearance of 143 ft. over the channel at MHW. Rounding Tremley Point (about 2 miles South of Bayway) requires particular attention. The view in this area is obstructed, therefore, before reaching this point the Pilot should ensure that there is no traffic approaching from the South which could hamper safe passage. Off Tufts Point, a 70° course alteration to starboard has to be made. The manoeuvring space is limited, and if required, the attending tug will assist in making the turn.

Tidal Information: Off Bayway the HW levels vary between 2.5 ft. and 5.0 ft. above MLW. Extreme LW has been reported as low as 4.0 ft. below MLW level. Current velocities of up to 2.0 knots are experienced.

Loading Connections: Berth No. 1 has 3×10 in. Chicksan Arms for receipt of crude oil.

Berth No. 2 has 3×10 in. Chicksan Arms for LPG receipt.

Both berths can also handle many refined black and clean products with various hose sizes up to 10 in.

Bunkers and Fresh Water: No bunkers are available through the pier connections at Bayway. All grades of bunkers may be supplied by barge, either at anchorage or while alongside the pier, providing arrangements are made in advance.

Fresh water is available in unlimited quantities, at approximately 20 t.p.h. to 25 t.p.h.

Stores, Provisions, Lubricants: All kinds of stores and provisions can be made available and delivered by truck or lighter, if advance request of at least 24 hours is received. During normal working days, stores and provisions may be supplied on very short notice.

Weather: There is a history of repeated breakouts in the New York area due to a sudden wind shifts accompanied by strong gusty winds. Vessels alongside the dock must ensure that mooring lines are taut and properly tended at all times and that winch brakes are properly set. During wind shifts and frontal passages, vessels have been blown off the dock with vessel and dock damage as well as pollution resulting. Vessels are strongly advised to maintain a VHF weather watch and to shut down operations if weather conditions warrant. Dock personnel will also advise vessels to shut down operations if an electrical storm is in the vicinity or if winds exceed 30 m.p.h. At 35 m.p.h. to 40 m.p.h., hoses and/or arms may be disconnected.

Belcher Bayonne Terminal: The Belcher Terminal in Bayonne, New Jersey is located 1.1 miles East of the Bayonne Bridge on the North bank of Kill Van Kull. The dock's facilities consist of 2 concrete mooring islands protecting a 600 ft. long wooden pier on which all pipelines and the hose gantry are supported.

Transit from Anchorage to Terminal: The Pilot/Mooring Master will board and heave anchor approximately 1.5 hours to HW (Battery). Then proceed into Kill Van Kull. 2 tugs will assist the vessel in docking. (See also Bayway Terminal).

Docking and Mooring: All vessels dock starboard-side-to with the assistance of 2 tugs. Vessels approach the terminal at time of HW slack with minimal headway. Due to the shape of the dredged basin all vessels are normally spotted off the berth and then moved broadside into position alongside the breasting islands. Tugs hold vessel in position while a small line boat runs head and stern lines to pile clusters. Note that the head line cluster is placed well inshore resulting in long (460 ft.) head lines leads. Head and stern lines cannot be wire due to the inadequacy of the small line boat. See "Plan".

Due to heavy passing vessel traffic, all mariners are advise to run extra lines to ensure that the vessel will remain safely in berth at all times.

The minimum suggested mooring arrangement is as follows:

4 head lines
3 forward springs
3 after springs
4 stern lines

Due to the poor mooring line leads from the bow, extra care should be given to the tending of all lines during the discharge. *There have been reports of vessels being pulled from the berth by passing traffic; exceptional care must be taken to properly tend mooring lines at all times.*

Hoses and Pumping: Cargo manifolds should be prepared prior to docking. The proper size and number of reducers should be in place and the blanks removed. Prior to berthing, ask the vessel's Agent what number and size of reducers are required. This will vary depending on the particular cargo being delivered. All shore hoses are equipped with 8 in. American standard flanges. Maximum working pressure allowed at the manifold is 125 p.s.i.

Bunkers and Water: Some grades of fuel oil are available from the dock in emergency situations, but most vessels bunker by barge. Fresh water is available in unlimited quantities at approximately 20 t.p.h.

Weather: There is a history of repeated breakouts in the New York area due to sudden wind shifts accompanied by strong and gusty winds. Vessels alongside the dock must ensure that mooring lines are taut and properly tended at all times and that winch brakes are properly set. Vessels are strongly advised to maintain a VHF weather watch and to shut down operations if weather conditions warrant.

Shipmaster's Report: 1976.

Greater New York Terminal, Astoria, Long Island:

Location of Berth: Lat. 40° 47′ N., Long. 73° 53.7′ W.

Distance from Entrance to Berth: 28 miles.

Max. Size at Berth: LOA, 900 ft. Draft, Pilot stated 34 ft.

Restrictions: Vessel should be ballasted sufficiently to pass under Brooklyn Bridge, clearance 127 ft.

Vessels may berth and unberth day and night but only at certain stages of the tide.

Anchorage: At Stapleton as designated by USCG.

Terminal Information: Starboard side manifold to barge at Stapleton Anchorage, use 6 in. hoses. Port side manifold used at the berth, ship's hoses not required. The connection is 12 in. running into 18 in. Nearest shore tank 1,000 ft. from berth. Line fitted with steam jacket but not efficient. Max. pressure allowed 125 p.s.i. Shore gantry used at berth. Derrick used at anchorage for discharging into barge. Product handled: Fuel Oil (Heating Oil). No slop tanks available.

General: Pilotage compulsory. Ambrose Pilot requires 24 hours' notice of arrival. Radio station handling traffic is Chatham. Most services are available at the berth, however it is advisable to take stores and send laundry from Stapleton Anchorage as there is no means of delivery at the berth other than carrying by hand. Stapleton Launch Service, tel. 981-8333/8384. Fresh water may have to be taken by barge in very severe weather as shore lines become frozen.

Approaching: From a Line from Rockaway Inlet to Ambrose thence Highlands Light, vessel must remain on VHF Channel 13 for ship-to-ship communication. When Pilot on board he maintains this Channel and ship can use own VHF other Channels. Marine operator on VHF 26 (call). For the passage of East River (remember Brooklyn Bridge Clearance 127 ft.) one tug each bow alongside. After Hell's Gate and passing Port Morris to port, vessel cants to starboard to pass between North and South Brothers to starboard and Rikers Island to port through 500 ft. wide buoyed channel (some unlit) South to berth (inwards). It is preferable to come through Hell's Gate at HW or LW slack, thus avoiding cross currents between Brothers at other times.

Report: August 1984.

Exxon LPG Berth at Bayway:

United States Coastguard requires all vessels with cargo on board (other than heel) to both enter and depart via Southern Channel, regardless of length. If vessel discharges completely (only heel remaining), then vessel is considered non-dangerous by U.S.C.G., and may depart via North Channel (without turning). (If completely discharged, other gas carrier restrictions – daylight only, 2 mile visibility, etc. – also do not apply.)

There are obstructions to South of Exxon berth which limits distance between manifold and bow or stern to 330 ft. (May be stretched to 335 ft. by Exxon on case by case basis.)

Other limitations given by Exxon for berth:

Draft: 31 ft.

Beam: 100 ft. (may be stretched)

Manifold Position: 13 ft. to 68 ft. above water line, 6 ft. to 15 ft. from deck edge.

Therefore any vessel which sails with part cargo must be turned for departure to comply with U.S.C.G. although it is physically possible to turn vessels up to 725 ft. – 730 ft. LOA off Exxon Berth provided there is no vessel berthed opposite Exxon at Gulfport (it has been done). Exxon is afraid that vessel might damage sea water intake structure for refinery while turning, and therefore says vessels longer than 660 ft. (may be stretched to 680 ft.), cannot be turned.

Other possibilities for turning are:

Continue North about 1 mile to Elizabethport Container Terminal where channel is wider.

Back ship anywhere between a few ship lengths to 0.5 miles South of Exxon, and then turn. We were advised by East Coast Pilots that it is possible to turn ship up to 730 ft. LOA at that location, with draft limit 25 ft. forward, 30 ft. aft. However, others advise that although oil tankers customarily turn at that location, it involves touching bottom (mud) at bow, and is therefore inadvisable for gas tankers.

FRESH WATER: Available at most piers in the port district at a nominal rate. Water barge available to serve vessels at anchor in emergency but this is expensive.

FUEL: All grades of fuel readily available. Except for tankers loading or discharging, bunkers are normally delivered by barge. It may be economical to shift vessel to refuelling berth.

NIKISKI (including Kenai), Alaska: 60.41 N. 151.24 W.

(See Plan

Located on West side of Kenai Peninsula between Homer a Anchorage. Pan and brash ice in Inlet from November to March. New freezes solid. Open all year.

Nikiski is approximately 12 miles from the city of Kenai and has group of 3 berths, privately owned by Unocal Chemical Divisio (manufacturer of liquid ammonia and urea which is exported by tanker and bulk vessels), Phillips Petroleum Co. (manfacturers of liquid natu gas which is exported by Marathon tankers to Japan) and Kenai Pipelin Dock (which operates the dock for Tesoro Alaska Petroleum Co. whic exports residual fuel oil and diesel products on various tankers).

DOCUMENTS: See "Anchorage, Alaska".

APPROACHES: Via Cook Inlet.

PILOTAGE: Pilot pick-up point 1 mile South of Lands End Lt. (59° 35′ N 151° 25′ W.). Also see "Homer" Pilotage.

Vessels are docked by pilots using tide and current for assistanc Transit time from pilot station in Homer, Alaska to Nikiski is 6 – 7 hou

ANCHORAGES: Good anchorage.

MAX. SIZE: Harbour depth in excess 40 ft. Max. size 80,000 d.w. Tides diurnal range 28 ft. Also "Berthing".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

CUSTOMS: Quarantine, local. Immigration and Customs fro Anchorage, Alaska.

BERTHING:

1. Port Nikiski Dock: 3 sided, 550 ft. long, 200 ft. on each side, 1,000 wide, 12 feet at MLLW. 400 ft. by 75 ft. covered storage.

2. Three finger piers for tankers and bulk carriers. All exceed 40 depth at MLLW.

All 3 berths are dolphin berths ideal for rapid bulk loading.

Main products:

(a) Unocal Chemicals and Minerals Dock: Bulk urea and ammon liquid. Vessels docking at Unocal require between 14 – 24 line depending on length and beam of vessel and season. Loadi of urea is done through fixed spout, loading rate approxima 800 short tons per hr. Vessel must shift alongside from hold t hold. This is only done during slack tide which is about every hours and lasts for about 1 hour.

Also see "Tankers" and "Shipmaster's Reports".

(b) Phillips Petroleum Dock: Petroleum products and liquid natu gas. See "Tankers".

(c) Kenai Pipeline Dock: Refined and crude petroleum produc

Vessels at Kenai Pipeline Dock must maintain 5 ft. under ke clearance at all times. Vessels require 8 wires in their moori arrangement and must have 12 lines as a minimum and 18 – 20 li in Winter.

TUGS: Not available.
STEVEDORES: Two gangs.
MEDICAL: Health Centre, 3 doctors, 3 dentists.
TANKERS: *Kenai LNG Marine Terminal:* The Kenai LNG Plant and Marine Terminal are located on the East side of Alaska's Cook Inlet (Lat. 60° 40′ 43″ N., Long. 151° 23′ 38″ W.). The facilities are jointly owned by Marathon Oil Company and Phillips Petroleum Company.

Operator: Phillips Petroleum Co. (See "Authority").
No. of Berths: One.
Max. Size: LOA 261 m., max. draft 10.1 m., max. beam 40 m.
Max. Berthing Displacement: 40,500 tonnes.
LNG Tank Capacity: 3 × 37,775 cu.m.
Depth Alongside at Zero Tide: 12.80 m.
Normal Side to when Berthing: Port.
Loading/Discharge Arms (from seaward):

Arm No.	*Use*	*Diameter*
1	Liquid	30.5 cm.
2	Vapour	30.5 cm.
3	Liquid	30.5 cm.
4	Fuel/Diesel	20.3 cm.

Clearances required on vessel to fit Loading/Discharging Arm:

Flanging distance from ship's side to flange face:	Max. 4.0 m.	Min. 2.1 m.
Allowable spacing between manifold centres:	Max. 3.5 m.	Min. 1.8 m.
Centre Line of Manifold above Water Line:	Max. 21.7 m.	Min. 15.4 m.

Working Range at Ship's Rail:
Height above Datum: Max. 26.8 m. Min. 9.4 m.
Fore and aft slew allowance: 4.6 m.

Ship/Shore Communications, Ship/Shore Links, etc.: Telephone connections to the plant control room and outside phone line are available. Mooring line tensions are available to vessels fitted with proper equipment. ESD system is pneumatic.

Minimum Mooring Requirements:

Moorings	Head Lines	For'd Breasts	For'd Springs	Aft Springs	Aft Breasts	Stern Lines
Numbers of Lines	3	2	2	2	3	3

Allowable Speed of Approach for Berthing: 17.3 cm./sec.
Ship's Pipeline Condition on Berthing: Warm.
Manifold Liquid Line Filters Fitted: None.
Type of Filter: N/A.
Bulk Loading/Discharging Rate Permitted: 5,000 cu.m./hr.
Min. Liquid Flow Rate available: 3,500 cu.m./hr.
Max. allowable Volume of Return Gas: 21,700 cu.m./hr.
Temperature of Return Gas: −100°C.
Max. allowable Cargo Pressure on Arrival: 0.25 Bar(g) A.
Fuel/Fresh Water/Stores:

Availability of Supplies	*YES/NO*	*Line Size* (m.)	*Normal Quantity available* (cu.m.)	*Delivery Rate* (cu.m./hr.)
Liquid Nitrogen	NO			
Drinking Water	YES			
Fuel Oil	YES	0.203	1,250	318
Diesel Oil	YES	0.203	636	318
Dirty Ballast or Slop Facilities	NO			

Tugs: Not available.
Tidal and Current Information: Semi-diurnal.
Range of tides: Highest Astronomical Tide (HAT): 7.9 m.
Lowest Astronomical Tide (LAT): −1.8 m.

Pilotage:
Harbour Pilot boarding position: Lat. 59° 35′ 05″ N., Long. 151° 26′ 05″ W. (Homer Pilot Station).
Distance – Sea Pilot to Berth: 83 miles.
Pilot Boarding Arrangements: By Boat.
VHF Communication Channels: 16 and 10.
Number of Pilots boarded: 1 normal, 2 if Training Pilot.
Traffic Surveillance/Monitoring Service available: No.
Charts: DMA 16645, 16661 and 16662.
Berthing/Unberthing: 24 hours.

Unocal Wharf: The Unocal Wharf is situated on the East side of Cook Inlet. The exact position of the Wharf is Lat. 60° 39′ 30″ N., Long. 151° 23′ W.

There is one berth on the Inlet side approximately 1,135 ft. long from outer dolphin to outer dolphin. Water depth is 40 ft. at MLLW.

Tides and Currents: The maximum tidal range is approximately 33 ft., and the minimum range is 12 ft. Maximum tidal current is flood: 5.8 (m.p.h.) Northerly and Ebb 4.8 (m.p.h.) Southerly. Average tidal current is flood: 3.8 (m.p.h.) Northerly and Ebb 2.6 (m.p.h.) Southerly.

Winds: Winds of varying strength may come from any quarter. The prevailing wind however is from S.S.W. in the Summer, and N.N.E. in the Winter. Visibility in this area of Cook Inlet is generally excellent with occasional fog lasting until noon.

The local weather is seasonal with temperatures ranging from −40°F to 85°F. The U.S. Coast Guard radio stations make scheduled broadcasts, preceded by a preliminary call on 500 kHz and 2182 kHz at times.

Hours of Operation: There are ample anchorage and manoeuvring areas within Cook Inlet. The Terminal is available 24 hours a day, 7 days a week.

Time Belt: Local time (Yukon Standard Time – minus 9 hours on Greenwich time or Zone plus 9).

During the months of April through October, this may be modified by use of Daylight Savings Time to minus 8 hours GMT or Zone plus 8. All communications should be in local time.

Telephones: The Terminal telephone is operational 24 hours a day (907-776-8121, ext. 3833). There is a pay-phone for public use (907-776-9973).

MARINE VESSEL STANDARD FOR UNOCAL CHEMICALS DIVISION KENAI WHARF:

General: It is the intent of Unocal Chemicals Division to operate the Kenai Wharf in a safe and workable manner, and to comply with all pertinent OSHA Regulations. Unocal Chemicals Division will work within the Operations Guide prepared by the Nikiski Marine Safety Committee and the "International Rules of the Road" (Colregs 72), as well as the regulations and directives of the U.S.C.G.

The carriers and the ship's Agent must be notified that Unocal Chemicals is not capable of providing maintenance at the Kenai Wharf. All mechanical work must be done elsewhere and corrected before giving Unocal Chemicals Division Notice of Readiness.

Carriers should be notified that water and provisions will not (officially) be available at the Kenai Wharf.

The ship's Agent must be readily available while the ship is berthed at the Unocal Chemicals Division Wharf.

A. Communications: Before arriving within 10 miles of the Nikiski Terminal Complex, the incoming ship or barge and tug will establish its intention, and determine the intentions of vessels in the area by bridge-to-bridge communications.

While at berth, a means of two-way voice communication will be maintained at all times between ship and/or barge and tug and the wharf. When a vessel is at it's dock, Unocal Chemicals Division will maintain a watch on VHF Channels 7A or 10 intended for ship-to-wharf communication. Channel 7A will also be used to communicate emergency messages to other terminals.

B. Equipment:
1. If a tug becomes immobilised, a substitute equivalent tug is to be provided as soon as possible. Emergency tug repairs shall not be done at the Kenai Dock, unless first authorised by Unocal Chemicals Division.
2. Vessels and barges must be equipped with adequate winches, lines and personnel to handle them. This means a minimum of 2 forward and 2 aft winterised double drum winches or equivalent.
3. All vessels should be prepared to put out and properly tension the minimum number of good lines shown below. Soft lines should be 7.5 in. minimum circumference, and wire lines should be 1 in. minimum diameter. Lines should be a minimum of 400 ft. length.

Lines required for ship length:

	Less than 500 ft.	500 – 550 ft.	550 ft. and over
Summer Rules	14	18	20
Winter Rules	18	22	24

Barges: 8 × 1 in. wire lines and 2 × 7.5 in. soft lines.

C. Ship Configuration:
1. Ships exceeding 650 ft. in length or 35,000 d.w.t. tons should be considered only under special circumstances, and their use must be specifically approved by the Manager of Manufacturing.
2. Ships smaller than 650 ft. in length or less than 35,000 d.w.t. tons, which meet all other conditions specified herein, can be chartered without prior plant approval during periods of Summer conditions only.
3. Under Summer condition, ships 650 ft. or less must have a minimum distance of 70 ft. from the bow to the back edge of the most forward hold to be loaded, and also from the stern to the front edge of the furthest aft hold to be loaded. Ships larger than 650 ft. will need more than 70 ft. clearance.
4. Ships smaller than 600 ft., which meet all other conditions specified herein, can be chartered without prior plant approval during any season.
5. When Winter Rules are in effect, ships larger than 600 ft. length should have more than 70 ft. distance. All such ships must still be approved by the Kenai Plant prior to chartering.
6. No hatch should have dimensions smaller than 30 ft. long and 28 ft. wide, and shall not be more than 24 ft. from edge of ship to edge of hatch.
7. Superstructure must not overhang the hull.
8. "Tweendeckers" are undesirable and should be avoided. Also "Tumble home" ship sides must be avoided, as they could cause damage to fender systems.

D. Approach and Departure:
1. All movement within the Nikiski Terminal Complex priority area is governed by existing "International Rules of the Road" (Colregs 72).
2. All vessels and barges should arrive at the Wharf in trim, which allows for a proper light ship survey. All ballast tanks should be either completely full or empty, and any trim corrections are to fit into the correction for trim table envelopes.
3. The current should be carefully considered, so that the vessel or barge and tug are in good control, and have adequate clearance when passing nearby terminals.
4. The Wharf Supervisor or Shift Supervisor may refuse permission to dock, depending on wind and water conditions at the dock.
5. It is recommended that ships dock with the port side to the Wharf.
6. An anchor may be used to assist with approach, but once moored, the anchor should be weighed.
7. Departure shall be timed so as to utilise the tide for maximum safety. Reasonable effort should be made to depart into the current.

E. Personnel:
1. The agreement with the vessel or barge line must specify that the ship or tug retain enough crew on board at all times to safely cast-off and leave the dock. The agreement must also specify constant line tending. If lines are not tended to the satisfaction of the Wharf Supervisor, loading may be suspended.

2. It must also specify that the ship or tug must maintain the necessary watch in the engine room and bridge to permit immediate manoeuvring response.
3. During adverse wind, tidal or ice conditions (as determined by Unocal Chemicals Division), personnel and equipment must be kept ready for departure.

F. Cast-Off:

1. The vessel, barge and tug must be seaworthy and prepared to cast-off at any time during loading.
2. During seasons when ice, wind or tidal conditions would put the ship, barge, tug or wharf in jeopardy, they may be asked to cast-off.
3. A South/West wind aggravates any adverse conditions at the Unocal Chemicals Division Wharf. Therefore, at any time the wind velocity increases to 15 m.p.h. from that quarter, loading operations may be suspended, and vessel or barge and tug made ready for cast-off.
4. If the winds increase in velocity, or are forecast to increase, the vessel or barge and tug may be asked to cast-off.
5. The casting-off procedure shall at all times be at the direction of the Officer-in-charge of the vessel or tug.
6. Approximately 30 minutes prior to its departure, the ship shall announce its intentions on VHF Channels 7A and 16, so that other vessels and terminals in the area are alerted.

G. Winter Rules:

The starting and ending dates for Winter Rules will be established by the Nikiski Marine Terminal Safety Committee. During this period, the following special rules shall apply:

1. The ship's and tug's engines, particularly cooling and fuel systems, should be winterised for operation in an ice filled inlet and −40°F air temperatures. Winches, ballast systems and auxiliary equipment must also be adequate for good operation under these conditions.
2. Fresh water ballast must be pumped prior to arrival at the Kenai Dock (Lower temperatures in the Cook Inlet create the danger of freezing parts of the ballast system).
3. Tugs using sea water cooling are normally not suitable due to clogging of sea water inlet with ice.
4. Berth so as to stem the worst ice conditions to be expected. Since the ice is heavier on the flood, this means the vessel must dock with the port side to the Wharf.
5. Where applicable, manipulate ballast and cargo to keep sea suction and propeller below the ice. Keep trim to a minimum in order to prevent ice from sliding beneath the vessel.
6. Unless directed otherwise by the Wharf Supervisor or Shift Supervisor, loading will be discontinued at no later than 2 hours into the flood tide. For urea ships, the boom will be raised, for ammonia ships, the product line will be disconnected, and for barges, the power line will be disconnected.
7. Steam propulsion ships should take special precautions to:
   - (a) Provide an emergency supply of water or steam to the condensers, so that any slush ice taken in can be melted or flushed away immediately.
   - (b) Insure that fuel does not freeze, and that temperature is sufficient to provide immediate flow of fuel to all burners in the event of an emergency. This precaution includes the fuel supply for the emergency generators.
8. Vessels with internal combustion engines used as main propulsion units shall maintain such in immediate readiness for use, and shall take these special precautions:
   - (a) Starting air is to be peaked in all tanks.
   - (b) Cooling water shall be heated and ready for circulation in the main engines.
   - (c) Lubricating oil for the main engine is to be in readiness for service.
   - (d) Fuel system on the main engine should be purged and ready for instant use.
9. Ships must maintain the necessary watch in the engine room and bridge.

Report: February 1985.

Vessel to load ammonia at Kenai in position 60° 33′ N., 151° 16′ W.

Regulations:

1. Vessel must have on board 20-24 mooring lines, each a minimum of 400 ft. in length, depending on weather on arrival.

2. Fresh water cannot be obtained or loaded at the wharf. Provisions to be obtained through ship chandler.

3. No preventative engine maintenance can be allowed at the wharf and vessel's engines must be maintained in such a way as to permit immediate manoeuvring power at all times while vessel is alongside the berth.

4. Sufficient vessel personnel must remain on board during loading to handle any emergency situation and adequate deck watch must be maintained on a 24 hour basis.

5. For proper light ship survey vessel must arrive suitably trimmed and sufficiently submerged both fore and aft.

6. Ballast tanks must be either full or empty and all cargo holds must be totally devoid of any ballast.

7. Please also ensure vessel has all certificates in order, including Oil Pollution Certificate (Certificate of Financial Responsibility).

General: Please obtain Master's acknowledgment and confirmation of all above. Advise Master that pilot station is located Lat. 59° 36.2′ N., Long. 151° 24.5′ W. Master should cable ETA Homer pilot station to Agent.

Master to monitor ITT KFS (San Francisco) while in transit. If ship has telex on board, please provide number.

Rental mooring lines available at U.S.$300 each plus loading/unloading costs of U.S.$1800. Advise how many lines onboard and Agent will request funds based on how many rental lines necessary.

Berth Operator sometimes makes exceptions to restrictions on a case by case basis.

IFO fuel is virtually unobtainable in Alaska. While there is one suppl at Kenai (and none elsewhere in Alaska), they have a long standing a firm 5,000 bbl. minimum requirement with no exceptions.

Vessel will vacate berth during purging and will either purge at anch off berth or at Homer.

Load rate 400 tonnes/p.h., except during purging, when rate mu slower.

Confirm vessel has Letter of Compliance issued by Coast Guard a that vessel has been licensed to carry propane/ammon simultaneously.

REPAIRS: Repairs of a minor nature can be carried out in Homer.

Small machine shop also available in Homer.

FRESH WATER: Available by barge from Homer at a cost of U.S.$15.0 per ton (minimum supply 150 tons). For supply contact Cook Inlet Mari (Tel: 235-8086).

FUEL: Only available if minimum 5,000 bbls. ordered from Tesoro.

TELEPHONES: Saling Ship Services can arrange a cellular telepho for Master when acting as the vessel's Agent.

TRANSPORTATION: Highway to Anchorage and Homer. Air transp available.

SERVICES: Saling Ship Services (See "Agent") can supply limit stores (fresh provisions, rice, flour, dry goods and soft drinks, but n bonded stores). Saling can also arrange liferaft inspection.

GARBAGE DISPOSAL: Drums are placed on board, and waste plastic bags should be placed in the drums.

GENERAL: Port is open all year. Winters vary, some being mild a some being severe. The port has had ice in years past from Novemb till March.

Currents are between 4.0 knots and 6.5 knots.

Kenai is a town of 5,000 people with several banks, supermarkets mall, dental and medical offices. The Central Peninsula Hospital located in Soldotna, a small neighbouring town 12 miles away. Ken also has several motels, a theatre, book store and post office. Excelle fishing during June, July and August. Fresh salmon available during th time.

OPERATIONS GUIDE – NIKISKI MARINE TERMINAL COMPLEX:

This guide (not producted in full) establishes voluntary procedures th are designed to optimise the safety of marine operations directly relat to all marine terminals existing in the Nikiski area.

Berthing Priority:

(A) Priority of berthing at a specific wharf will be established by th Terminal Operator. This sequence will be established and convey to subject vessels well before they approach the Terminal are e.g. before passing Anchor Point or before departing Drift River Anchorage.

(B) Priority for ships proceeding to different wharves will be establishe by mutual agreement between the Masters and Pilots of shi proceeding to the Terminal Area. This agreement will be reache by the time either of the vessels is within 10 miles of the Termin

(C) Upon mutual consent, the Marine Terminal Operators may impos an operational priority to override the sequence established in above. In this case, onshore plant operations would be dictatin sequence change that is necessary to prevent curtailment operations. Instructions regarding changes will be conveyed t vessels concerned prior to their approach to Anchor Point departure from other Cook Inlet berths.

Approaches and Departing Marine Terminals:

(A) All movements inside the priority area is governed by existing USC Colregs 72.

(B) Before arriving within 10 miles of the Terminal Complex, t incoming vessel will establish its intentions, and determine t intentions of other vessels in the area by bridge-to-brid communications.

(C) An anchor may be used to assist with approach, but once moor the anchor should be weighed.

(D) Summer Rules shall apply during the ice-free periods. Each mar terminal will establish its own procedures that protect the safety the vessel and other marine terminals.

(E) Upon mutual consent, the Committee will establish a date at which all vessels entering Cook Inlet shall be prepared to comp with "Winter Rules". This date shall be selected in advance of actu enforcement of the rules to give ship's Agents and Owners adequa time to prepare for these special conditions.

(F) "Winter Rules" will be declared in force when there is free ice float in the Inlet, in sufficient amount to cause hazard to shipping und any circumstances of weather and tide. They will remain in for for the duration of the Winter, and will be cancelled upon a mutu agreed date. The starting date for this enforcement will established by mutual agreement of the Committee, and all sh Agents and Owners will be notified.

The special rules that will apply under "Winter Rules" are follows:

1. Berth so as to stem the worst ice condition to be expec Since the ice flow is heavier on the flood, this generally mea the vessel should approach the Wharf port side to.
2. Where applicable, manipulate ballast and cargo to keep s suction and propeller below the ice, and keep trim to a minim to prevent ice from sliding beneath the vessel.
3. No vessel will be permitted to proceed to berth that is equipped with sufficient mooring lines of good quality to prov a safe tie-up. In heavy ice conditions, it may be necessar double or triple the normal mooring line requirements. It is responsibility of each Terminal Operator to confirm t requirement in advance with shipping companies intendi use their facility. However, the Terminal Operators responsible to advise on ice conditions only, and are responsible for providing or causing to be provided adequ lines aboard ships.

(G) Each Terminal is equipped with VHF Channel 7A. The intent is that this channel be used for all communication with the individual terminals during arrival and departure manoeuvers.

(H) Each terminal is also equipped with VHF Channel 10. The intent is that this channel be used for communications involving ship-to-shore loading/discharge operations.

At Berth:

(A) Ships, tugs and marine terminals will maintain a means of two-way voice communication between the person in charge of the transfer operation on the vessel/tug, barge and the Marine Terminal Operator.

(B) Under "Winter Rules", the ships must maintain the necessary watch in engine room and bridge to permit immediate manoeuvring response and anchors will be ready for immediate use.

(C) Under "Winter Rules", the Terminal will be prepared for immediate suspension of cargo operations and to cast-off mooring lines. Under circumstances such as restricted visibility due to darkness or fog conditions, it may be necessary to proceed to a standby condition with cargo operations suspended and cargo systems disconnected in readiness for cast-off orders. The casting-off shall at all times be at the direction of the Officer-in-charge of the vessel.

(D) Under "Winter Rules", steam propulsion ships should take these special precautions:

1. Maintain sufficient ballast or cargo aboard, so that sea suctions and propeller are below the level of any ice.
2. Provide an emergency supply of water or steam to the condensers, so that any slush-ice taken in can be melted or flushed away immediately.
3. Establish precautions to insure that fuel does not freeze, and that temperature is sufficient to provide immediate flow of fuel to all burners in the event of an emergency. This precaution includes the fuel supply for the emergency generators.
4. Keep steam flowing through steam drive equipment on deck.

(E) Under "Winter Rules", vessels/tugs with internal combustion engines used as main propulsion units shall maintain such in immediate readiness for use:

1. Starting air to be peaked in all tanks.
2. Cooling water shall be heated and ready for circulation in main engine.
3. Lubrication oil for the main engine to be in readiness for service.
4. Fuel system on main engine to be purged and ready for instant use.

(F) Except in an emergency, repairs that immobilise the ship shall not be undertaken while moored to the dock. When emergency repairs are needed, they will first be authorised by the Manager of the shore facility and the Captain of the Port, U.S.C.G.

(G) While a ship is at its wharf, each terminal will maintain a portable VHF unit equipped with Channel 7A at the wharf. This will be used to communicate emergency messages to other terminals as regards ship movements.

Departure:

(A) Departure shall be timed so as to utilise the tide for maximum safety. Reasonable effort shall always be made to depart into the current.

(B) When moored port side to and leaving during the ebb tide (or conversely when moored starboard side to and leaving during the flood tide), the current should be carefully considered, so that the vessel is in good control, and has adequate clearance when passing the berth immediately to the South (or North).

(C) Approximately 30 minutes prior to its departure, and again at time of departure, the ship shall announce its intentions on VHF Channel 16, so that other ships and terminals in the area are alerted.

(D) Approximately 30 minutes prior to ship's departure, the Terminal Representative will announce to other terminals the ship's intentions. This announcement to be made on VHF Channel 7A.

(E) Care shall be taken in establishing estimated departure time (ETD). This is important, as these times will be used by incoming or passing vessels in determining their best course to minimise hazard in their approach to the Terminal area.

SHIPMASTER'S REPORT: July 1985 (Updated 1992).

Unocal Chemicals and Minerals Dock: (Formerly Collier Pier):

In addition to the comments on the "Plan", which see; the following notes are to be considered as a advice to those entering the Port of Nikiski:

Mooring without tugs. There is a 24 hour mooring service.

No mooring during slack tide.

Currents from up to 1.5 knots to 6.0 knots experienced.

Whilst mooring present bow first as near as possible to the pier at an angle of about 25° to the pier.

Firstly pass 2 spring lines and 2 head lines forward, engines running ahead for riding off the current.

It is most important during the entire mooring operation to hold both forward springs and both head lines tight.

Send out 2 breast lines forward; tighten; put both head lines on the bitts making sure not to allow any slack.

Send out 2 spring lines and two stern lines aft and tighten.

Send out 2 breast lines aft as soon as both stern lines are on the bitts and heave the stern along. Keep both aft springs tight at all times.

Note: Ships loading urea have to shift alongside when changing to another hatch, as the conveyor belt is a single point loading type.

Whilst shifting along the pier be aware of strong currents, or ice in Winter season getting caught between pier and ship's bow.

SHIPMASTER'S REPORT: October 1987 (Updated 1992).

Unocal Chemicals and Minerals Dock: This dock is the Southernmost dolphin berth and extends into the sea for approximately 800 m. It has a fixed loader for Urea. Ammonia gas is also loaded at this berth.

Anchorage: No anchoring allowed off Nikiski or Kenai. If the vessel has to vacate the berth for a priority vessel/barge, the vessel is taken back to Homer, a distance fo 84 nautical miles.

Berthing: Well handled by Pilots, making use of the tidal streams. No tugs available. The tidal stream runs at up to 6 knots and the range of the tides are up to 28 ft. For this reason a vessel is moored with a total of 14-24 ropes, depending on size of vessel and weather conditions. Extra ropes can be hired and put on board at Homer Pilot Station.

Shifting alongside: This is only possible shortly before the changing of the tide. At all times have engines ready. Shifting up to 50 m. (2 holds) is not too difficult. We shifted from Hold No. 1 to No. 5 (100 m.) which took us about 3 hours. This is a much bigger operation than mooring as all ropes have to be shifted and there are only 4 men available ashore to assist. Also, by the time we finished there was already a strong flood tide running. When shifting over such a distance, I advise vessels to make use of a pilot.

Ice/Winds: According to pilots, some ice in Winter which makes berthing even more difficult. Strong southern winds may cause swell alongside.

Bunkers: Apparently fuel is available at another dolphin berth when unoccupied, but probably expensive.

Provisions: Ship chandlery service is available (Saling Ship Services). No vehicular access to the vessel. Provisions transported on small car which runs through narrow 1 km. tunnel to the gate. This is also used by the crew.

Loading: Loading rate approximately 500 – 700 tonnes/hr. The figures of a draft survey are taken for the final cargo loaded.

SHIPMASTER'S REPORT: February 1993 (Updated 1994).

Cook Inlet: Homer/Kenai (Nikiski).

Charts: NOAA 16640, 16645 and 16660.

General: Homer, at the entrance to Katchemak Bay, where it joins Cook Inlet, is the entrance point for ports in Cook Inlet, including Anchorage.

Homer is the pilotage point for the Inlet and affords a good anchorage and essential services. Three tanker/urea berths are situated on the East Bank of the Inlet at Nikiski, about 8 miles above the town of Kenai, which is some 80 miles above Homer.

Cook Inlet is navigable all year round by normal trading merchant vessels, but during Winter "slush", first year ice builds up above Cape Ninilchik (60° N.), when extra precautions should be taken. There is no icebreaker assistance in the Inlet.

Pilots: Main pilot station in Cook Inlet is at Homer where a despatcher is on duty 24 hours, although Pilots are generally not on standby here as they operate from home. Two pilot cutters are stationed at Homer, "Mary Dele" and "Katmie". The former is a red hulled craft on the lines of a fishing smack with ice strengthened hull and is used during the Winter months. During period April through to December, the "Katmie" is used, constructed of aluminium and faster than "Mary Dele".

Channels 16 and 10 are monitored by the despatcher throughout 24 hours. Normally 24 hours is required to arrange a Pilot, although sometimes a Pilot can be obtained within 6 hours. Pilots normally fly into Homer from Anchorage. All Pilots were found to be very competent and helpful.

One Pilot is used for the passage and berthing at Homer up to Nikiski or Anchorage.

Pilot boards off Coal Point.

Pilotage is compulsory for anchoring inside Katchemak Bay at Homer.

Transit time Homer to Nikiski and vice versa is about 6 hours, depending on Winter ice which can extend time to 8 hours.

Anchorage: If waiting for a berth in Cook Inlet, the recognised anchorage is in Katchemak Bay under pilotage, about 2 miles East of Coal Bay in 30 fathoms.

Fairly well sheltered, except in N.E. winds, which come whistling down Kamchatka Bay. Holding ground is good.

Vessels generally do not anchor in the Upper Cook Inlet, unless in emergency.

Tugs: At Homer, one tug of 800 h.p. available. Generally no tugs are available at Nikiski. At anchorage, there are reported to be two tugs of moderate power, but of little use in ice conditions.

Currents: Strong in the Upper Cook Inlet. At Nikiski, tidal current of up to 5.8 knots on the flood.

Berths: Nikiski: Three berths for tankers and urea ships. All are at jetties in the Inlet. The most Northern is about 1.5 miles South of East Foreland and is owned by Kenai Pipeline Co. (supplies mainly to Chevron), and is suitable for tankers of up to 120,000 d.w.t.

Just South is the LNG dock owned by Phillips and used for LNG exports to Japan.

About 2.5 miles South of East Foreland is Unocal Dock, owned by Unocal (Union Oil Co. of California), for the export of liquid ammonia and urea, and import of caustic soda and sulphuric acid for plant use. Actual size is considered by the Terminal as a "one off" before charter accepted.

Unocal's comment:

Quote:

1. Ships exceeding 650 ft. in length or 35,000 deadweight long tons should be considered only under special circumstances and their use must be specifically approved by the Manager of Manufacturing.
2. Ships smaller than 650 ft. in length or less than 35,000 deadweight long tons, which meet all other conditions specified herein, can be chartered without prior plant approval during periods of Summer conditions only.

Unquote.

Berthing is port side alongside at all berths against the flood tide.

For Unocal Jetty, a portable shore gangway is provided, tended by Terminal personnel, generally pulled onshore at the height of the flood and at very low water.

Berthing: Always on the flood tide. Berthing window is 30 minutes into flood tide to 2 hours into flood in Winter and 3 hours in Summer. Departure is as soon as the flood commences until 4 hours into the flood.

Starboard anchor is let go on approaching the berth, and generally 2 shackles are used.

Tides: Flood is always the strongest, and can run at 6 knots in Springs with a range of 25 ft.

Density at Nikiski is brackish. Water changes density around Ninilchik (60° N.).

The water temperature at Nikiski was found to be about 10° colder than at Homer (February).

Ice: During Winter, slush and first year ice builds up to maximum during February and March. Generally it does not come South of a line from Cape Douglas to Cape Ninilchik, except in Homer Harbour. With the prevailing N.E. wind, the ice tends to concentrate on the Western shore of the Inlet.

Alongside Unocal Dock (Nikiski), the flood tide brought the heaviest concentrations, blocking sea suctions for up to 5 hours. As soon as the ebb commenced, the ice tended to clear and suctions became clear. In general, the ice is of no physical danger (apart from blocking suctions) to normal merchant vessels. It will slow the vessel down during transit of Cook Inlet, and put extra pressure on moorings of vessels moored at the 3 docks at Nikiski.

Pilots report that vessels have had their engines at full ahead at the height of the flood with a lot of ice, to relieve pressure on the moorings. We went to slow ahead for 4 hours on the flood tide.

Sometimes in February and March, when ice has formed from N.E. winds, then wind changes to S.W., which raises the temperature and brings heavy snow, which lays on top of the ice. The wind then again changes to N.E., which drastically lowers the temperature, freezing the snow and slush ice in the Inlet. In these conditions, the ice becomes very hard and thick and navigation can become a hazard.

At Homer in Katchemak Bay, ice forms in Coal Bay in Winter. This is no hazard to vessels calling for a Pilot or going to anchor, but is a nuisance to the pilot cutter and any service craft getting in and out of the harbour.

Pilot boarding delays can occur.

Ice Precautions: Normal merchant vessels berthing at Nikiski or Anchorage during January through March are required to have, under U.S.C.G. and Jetty Regulations, the following:

1. Main engine power available at all times.
2. Continuous officer manning of deck and engine room.
3. Extra moorings – Unocal require 22 lines out (each end 4×4×3). Extra lines can be hired at Homer and returned when outbound. Hire cost is large and lines are difficult to handle, best for vessel to be equipped with its own lines.
4. Suctions must be kept continuously clear, or vessels must have internal cooling water recirculation provided for generators and main engine.

From experience and talking to other vessels, also found the following precautions advisable:

5. Ballast should be completely salt and should be kept moving continuously, pumping in and out.
6. Adequate steam heating for bunker tanks and fuel systems.
7. Adequate heating for fresh water systems and tanks.
8. Cargo compressors to run continuously or heating lamps placed alongside.
9. Steering gear to be continuously run or heating lamps placed in space.
10. Winches to be run continuously.
11. Tank level gauges that contain an oil bath to be drained.
12. Radar scanners to turn continuously.
13. Accommodation to be well heated (not only for personnel), but to prevent fresh water systems freezing up.
14. Complete thermal protection clothing for personnel, *not* just "Parkas" which are totally inadequate. (Editor's Note: Winter clothing (hats, gloves, heavy overalls and insulated boots) can be supplied by Agent at 4-5 days notice).

Weather: During the Winter months and especially January through March, extreme sub-zero temperatures can be encountered as vessel moves up Cook Inlet. We encountered −20°C with a biting N'ly wind, but −40°C is not uncommon. In general −10°C is normal in Winter, along with the N.E. wind which gives a low chill factor.

The approaches to Cook Inlet bring Northerly winds of up to 60 knots or more with freezing spray.

At Homer, we found the temperature to be some 10°C warmer than in Upper Cook Inlet.

Mooring: Vessel approaches Unocal and other Cook Inlet berths using starboard anchor as a "dredge" against the flood tide. Spring lines sent first, then breasts, then head lines, all onto quick release hooks.

Pilot puts vessel alongside dock before lines are passed over by heaving line.

The normal time for Winter mooring is a minimum of 4 hours and about 1 hour to let go.

Mooring can be undertaken on a 24 hour basis, but if the vessel has any defects, U.S.C.G. will only allow daytime movements.

Loading: Nikiski: Ammonia loading is through 2 pumps, each capable of around 270 tonnes p.h.

In actual fact, we found with one pump maximum rate was around 300 tonnes p.h. and with 2 pumps around 450 tonnes p.h.

Terminal has difficulty controlling rate outside one or two pumps.

Terminal undertakes all connection and disconnection (12 in. Chicksan with hydraulic clamps).

In Winter ice conditions on flood tide, Chicksan is often disconnected for around 4 to 5 hours.

Communication is by VHF Channel 10. Terminal will loan portable set.

Urea ships have to shift backwards and forwards along jetty as the loading boom is fixed. Very tiresome and prolonged in Winter.

Terminal very cooperative and helpful.

All controls are from cabin on jetty. Normal shift ashore on jetty some 5 men who handle all moorings, maintenance, gangway, etc.

Sulphuric acid and caustic soda is discharged through separate 6 Chicksans next to the NH3 Chicksan.

Fresh Water: Carriers should be notified that water and provisions not be available at the Kenai Wharf.

At Homer, water is piped to City Dock, but not to Deep Water Do (Harbour Master said pipe to be layed on in 1994).

At Homer, water is obtainable by barge by giving 36 hours notice Winter, less in Summer. Cost is U.S.$ 15.0 per long ton, and officia minimum quantity is 150 tons, but can be negotiated down to 50 ton

Stores: Provisions are obtainable both at Homer and Kenai from local supermarket. Both stores open 24 hours. The supermarket deliver alongside or to launch landing. At Unocal, access to the jetty by small personnel/stores trucks operated by Wharf Terminal personne who will deliver alongside vessel. General merchandise/hardwa available at both locations (Agent very helpful and will assist).

Repairs: No repairs allowed to main engine at Kenai/Nikiski. Repairs be undertaken at anchor at Homer.

There are small machine shops at both Homer and Kenai, and elect motor rewinding possible at Kenai.

Fuel: MDO/Gas oil available by tank truck from local storage at Home (an efficient operation). We took 180 tonnes in 6 hours from relays small trucks whilst alongside Ocean Dock.

Airport: Both Homer and Kenai have local airports with flights eve 2 hours to Anchorage, from where regular flights to Seattle Internation can be obtained.

Since the "Opening up of Russia", very few trans-polar flights pa through Anchorage on their way to Europe and Far East.

General: Seattle is the gateway to Alaska from the U.S.A. for all spare service not immediately obtainable in Anchorage.

Very scenic and tremendous fishing.

At Homer anchorage, the pilot boat can be hired as a shore lea boat for U.S.$ 170.0 per round trip.

Telephone: Public telephone in jetty control cabin at Unocal (Nikiski).

At Homer, telephone at City Dock and 2 telephones about 500 from base of Ocean Dock.

Extra telephones are connected at Homer in Summer.

Notice: To all Vessels Transiting Upper Cook Inlet, Alaska. Captain the Port Order 16-92: "Special Vessel De-icing Procedures for Upp Cook Inlet".

Since 1st December 1992, 2 laden and one ballasted tank ship hav suffered full or partial loss of power, due to power plant cooling syste icing and subsequent power plant failure, while transiting Upper Coo Inlet.

These incidents appear to be caused by "slush" ice inducted into th vessel's intakes.

Action:

Effective immediately and until this order is rescinded, all vesse requiring a State of Alaska or federally licensed Pilot to Transit Coo Inlet, shall comply with the following requirements, as a minimum, whi transiting Upper Cook Inlet, Alaska:

(1) Engine cooling water shall be supplied via "low sea suction" if available.

(2) A closed internal system of engine cooling water circulation, or means of applying sufficient heat to the engine cooling water intak to prevent ice from clogging the intake, shall be used.

If the vessel's physical dimensions permit:

(3) Maintain a minimum forward draft of 1.8 m. or 6 ft., and a minimu after draft of 1.8 m. or 6 ft. above the propeller blades.

For the purpose of this order, "Upper Cook Inlet" is defined as th waters of Cook Inlet North of Lat. 60° 20′ N.

Signed: M.R.Miller, Captain, U.S. Coast Guard, Captain of the Po Western Alaska.

AUTHORITY: *Operators:* Unocal Chemicals and Minerals Divisio P.O.Box 575, Kenai, Alaska 99611. *Tel:* (907) 776-8121. *FAX:* (90 776-5579. *Contact:* E.L. Burcham, Supervisor – Shipping. Lewis L. Ri Operations Superintendent.

AGENT: Saling Ship Agency, 427 Rogers Road, Kenai, Alaska 9961 U.S.A. Tel: (907) 283-5053. Fax: (907) 283-4794.

NORTHPORT, New York: 40.57 N. 73.20 W. **(See Plan)**

LOCATION: The Northport offshore oil discharge facility is operated by the Long Island Lighting Company. It is located in Lat. 40° 57′ 15.4″ N., Long. 73° 20′ 29.6″ W., approximately 10,000 ft. offshore from the power station, and approximately 2.6 miles East of Eatons Neck Point.

APPROACHES: *Approaches to Pilot Station and Transit to Northport:* On approaching Block Island from the South, Block Island's high Southern shore provides a good radar target. Also, bearings can be taken from the RDF station at Southeast Light.

It is advisable to remain at least 1 mile to the East of Block Island due to the numerous shoals close in shore.

There are several dangers to be wary of when making the passage from the pilot station to Northport.

Block Island North Reef Buoy "1B1" marks a dangerous shoal and should be passed well clear.

The Race is a narrow channel into Long Island Sound. Strong East to West currents occur during maximum ebb or flood and knowledge of position should be maintained in view of the possibility of unusual set. Valiant Rock may be passed on either side.

Caution should be exercised during the Summer months when transiting through Block Island and Long Island Sound in view of the heavy small boat traffic, especially in the area in proximity to The Race.

Dense fog is prevalent during the Summer months.

Good water is found in Long Island Sound from The Race to Northport as long as the mid-channel buoys "P1" and "CF" are passed close by and care is taken so as not to pass North of "Twenty-Eight Foot Shoal" Buoy. "Stratford Shoal" should be passed to the South.

In the event that adverse weather restricts berthing, vessels should anchor, if necessary, North and East of the facility to avoid electric cables on the bottom. The submarine cables lie West of the facility and are shown on Chart No. 12363.

PILOTAGE: Pilotage is arranged by the vessel's Agent. A Pilot will be required to standby aboard vessel throughout transfer.

Vessels approaching from Block Island embark Pilot about 2.5 miles South of Point Judith.

U.S. flag vessels under enrolment approaching from Block Island embark Pilot 1.4 miles East of Old Harbour – Block Island.

The pilot boat 'Rhode Island Pilot' or 'Northeast Pilot' should be called via VHF Channel 16 approximately 1 hour prior to arrival at the pilot station.

ANCHORAGES: All vessels are advised that 7 submarine electric cables lie West of the facility, as shown on USC & GS Chart No. 1213. To avoid any possibility of damage to these cables, vessels should anchor (if necessary) North and East of the facility.

RESTRICTIONS: Berthing of vessels shall be limited to 1.5 hours prior to and 30 minutes following high slack water, and shall be prohibited when winds exceed 20 knots.

MAX. SIZE: The maximum size vessel for which the Long Island Lighting Company can presently provide a safe berth, is a ship with a loaded displacement tonnage not to exceed 70,000 long tons and meeting all of the additional parameters as follows:

Hull Design:	Welded construction only.
Cargo Holds:	Compartmented.
Max. Length overall:	825 ft.
Max. Draft:	40 ft. at H.W.
Max. Beam:	144 ft.
Rail to Manifold:	15 ft. maximum.
Loaded Freeboard:	10 ft. minimum.
Light Freeboard:	40 ft. maximum.
Number of Mooring Lines:	20 independent lines.
Bow to Manifold:	50% of LOA.

RADIO: *ETA:* Vessels are required to send ETA message 72, 48 and 24 hours in advance of arrival at Block Island Pilot Station. These messages are to be sent to Agent in New York. Advise arrival draft (salt water) in initial message.

VHF: Pilots can be contacted on VHF Channels 16, 13 and 18A.

TUGS: A minimum of 2 tugs are required for mooring and a minimum of 1 tug for unmooring. Terminal requires 1 tug in attendance while vessel is alongside. A launch is provided by terminal to run vessel's lines to the mooring buoys. Launch will stand-by throughout operations.

BERTHING: *Precautionary Weather Information:* There is a history of repeated breakouts in the New York area due to sudden wind shifts accompanied by strong and gusty winds. Vessels alongside the platform must insure that mooring lines are taut and properly tended at all times and that winch brakes are properly set. Vessels are strongly advised to maintain a VHF weather watch and to shut down operations if weather conditions warrant.

The terminal requires suspension of transfer operations and clearing of the berth whenever sustained winds of 45 m.p.h. or greater are anticipated. Southerly winds (off the platform) of 30 m.p.h. may require similar action. The terminal is equipped with an anemometer. Similarly, heavy swells may require the suspension of transfer operations.

Berth Facilities: The berth consists of 3 concrete platforms and 6 mooring buoys. The 2 outer platforms provide a breasting face of 310 ft. The centre platform is fitted with 2×12 in. Chicksan arms for fuel oil unloading, and is 19 ft. above Mean Low Water.

A quick flashing white light is located 26 ft. above the extreme outboard end of each breasting platform.

Each mooring buoy is fitted with a quick release hook.

Berthing Operation: Vessels approach Sea Berth stemming current and/or wind.

Berthing port side to is recommended, weather permitting.

Moorings: It is imperative that the vessel remains in position alongside the berth. LILCO considers the minimum safe mooring for this berth to be as follows:

1. Two lines to buoy "A" (synthetic or steel).
2. Two lines to buoy "B" (synthetic or steel).
3. Two lines to buoy "C" (steel preferred, synthetic acceptable).
4. Two lines to buoy "D" (steel preferred, synthetic acceptable).
5. Two lines to buoy "E" (synthetic or steel).
6. Two lines to buoy "F" (synthetic or steel).
7. Two bow springs to one breasting platform bollard (steel preferred, synthetic acceptable).
8. Two stern springs to the other breasting platform bollard (steel preferred, synthetic acceptable).
9. Two lines from well deck to East breasting platform bollard (synthetic).
10. Two lines from well deck to West breasting platform bollard (synthetic).

Note: There shall be no mixing of wire and synthetic lines on any one buoy.

A boat will be provided by LILCO to handle the vessel's lines to the mooring buoys. Personnel will be provided to handle the vessel's lines to the breasting platform bollards.

Warping winches must be adequate to handle mooring lines under heavy strain. Stoppers must be readily available to stop off mooring lines for transfer from winch to bitts without loss of tension. Mooring lines secured on surge or tension winches are prohibited; any line on a winch must be set tight using the brake only.

CARGO OPERATIONS: The Chicksan arms are designed to permit fore and aft drift and some lateral movement. However, vessel should maintain position at all times. Failure to observe this will result in suspension of operations and disconnection of unloading arms. Ship's crew connect and disconnect arms.

Ships equipped with inert gas systems shall have such systems in operation prior to berthing, throughout the transfer and until the ship is released from the facility and underway.

A responsible member of the ship's crew, *capable of speaking and understanding the English language,* must be available on the vessel's deck to take any remedial action necessary to maintain safe and efficient cargo transfer.

FRESH WATER/FUEL/STORES: Bunkers and fresh water are not available ex-berth. Stores cannot be loaded from dock.

Transfer of bunkers from barge is not permitted while alongside.

MEDICAL: There is a hospital in Huntington, New York, Tel. No. 516-351-2000. Medical attention must be arranged by the vessel's Agent. The nearest United States Public Health Service Marine Hospital facilities are in New York City, which is approximately 45 miles West of Northport.

GENERAL: *Fire Fighting Facilities:* The terminal has very limited fire fighting equipment. 4×100 lb. CO_2 extinguishers are provided; no fixed fire fighting gear is available. The standby tug is fitted with a low capacity fire pump hose.

Fire wires should be hung, one forward and one aft, on the offshore side for easy reach by a tug in case of fire.

The tanker should have all fire fighting equipment aboard in readiness to combat any fire that may arise.

Pollution: All U.S. harbours have stringent pollution regulations forbidding the discharge of oil into harbour waters or the emission of heavy smoke. Long Island Sound is a particularly sensitive area and all anti-pollution regulations are rigidly enforced. In the event of an emergency or pollution, the Agent should be contacted immediately.

Launch Service: LILCO does not provide launch service for ferrying of ship's personnel or stores. Vessels must make their own arrangements for such service. The LILCO standby boat is for the exclusive use of LILCO personnel, and will not be used for launch service. The LILCO standby boat will be used for initial boarding upon arrival.

Customs and Immigration: Northport is a Port of Entry whenever a vessel docks without first calling at another United States port. Entry and clearance must be arranged by the vessel's Agent. The appropriate authorities in New York City must be advised well in advance of the vessel's arrival; 24 hours advance notification is recommended as a minimum.

AUTHORITY: Long Island Lighting Co., Northport Power Station, Waterside Avenue, Northport, N.Y. 11768. *Tel:* (516) 262-2226. *FAX:* (516) 262-2282. *Contact:* Brian T. McCabe, Chief Engineer.

OAKLAND, California: 37.50 N. 122.18 W. **(See Plan)**

See "San Francisco" *for Documents, Pilotage, etc.*

RESTRICTIONS: Minimum depth in harbour 38 ft. Tidal range 5.6 ft.

HEALTH: See "Health: all Ports" before first U.S.A. port (Albany). Illness Reports made to San Francisco Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

BERTHING:

Outer Harbour:

Bay Bridge Terminal: Berths No. 8, 9 and 10 (General cargoes, steel, autos, containers). For information call Port of Oakland.

3 Berths:
Berth 8: Length 304 m.
Berth 9: Length 366 m.
Berth 10: Length 256 m.
Deck Height: 4.3 m.
Depth: 10.7 m.
Facilities: Accepts Ro/Ro barges, combination ships.
Services: Water, lights, fencing, taxi, telephone.

Multi-purpose cargo terminal designed to handle general cargoes, steel, autos and containers.

Temporarily inoperative due to 1989 earthquake damage.

Sea-Land Terminal: Berths No. 20, 21 and 22. (Containers; preferential assignment to Sea Land).
Operator: Sea Land Services, Inc., 1425 Maritime Street, Oakland, CA.94607. Tel: (510) 271-1000. Fax: (510) 271-1277. Terminal Manager: Elvis Ganda.
3 Berths: Total length 699.2 m.
Deck Height: 4.3 m.
Depth: 12.2 m.
Cranes: 4×30 ton container gantry cranes.
Storage System: Chassis.
Reefer Capacity: 250 outlets × 480V.
Total TEU Storage Capacity: Over 3,900.
Total Terminal Area: 26.5 hectares.
Services: Water, lights, fencing, taxi, telephone.

Yusen Terminal: Berth No. 23. (Containers; preferential assignment to NYK/NOL).
Operator: Yusen Terminals, Inc., 1195 Maritime Street, Oakland, CA. 94607. Tel: (510) 763-1080. Fax: (510) 763-5728. Terminal Manager: Edward Stellin.
1 Berth: Total length 274 m.
Deck Height: 4.3 m.
Depth: 12.2 m.
Cranes: 2×40 ton container gantry cranes.
Storage System: Port-packer, transtainer, chassis.
Reefer Capacity: 98 outlets (56×480V; 42×240V and 96 portable 240V).
Total TEU Storage Capacity: Over 3,200.
Total Terminal Area: 16.2 hectares.
Rail Spur for direct Transfer.
Services: Water, light, fencing, taxi, telephone.

Maersk Terminal: Berth No. 24. (Containers; preferential assignment to Maersk Line).
Operator: Maersk Pacific Ltd., 909 Ferry Street, Oakland, CA. 94607. Tel: (510) 835-7500. Fax: (510) 763-3545. Terminal Manager: Michael Bourgault.
1 Berth: Length 319 m.
Deck Height: 4.3 m.
Depth: 12.2 m.
Cranes: 3×50 ton container cranes.
Storage System: Chassis.
Reefer Capacity: 157 outlets × 480V.
Total TEU Storage Capacity: Over 2,700.
Total Terminal Area: 15.3 hectares.
Rail Spur for direct Transfer.
Services: Water, lights, fencing, taxi, telephone.

TransBay Container Terminal: Berths No. 25 and 26. (Containers; preferential assignment to K-Line).
Operator: TransBay Container Co., 707 Ferry Street, Oakland, CA.94607. Tel: (510) 839-8228. Fax: (510) 444-6219. Terminal Manager: Robert Bergman.
2 Berths: Total length 412.4 m.
Deck Height: 4.3 m.
Depth: 10.7 m.
Cranes: 2×40 ton container gantry cranes.
Storage System: Transtainer, chassis.
Reefer Capacity: 120 outlets × 240V. (capability for another 50 outlets).
Total TEU Storage Capacity: Over 2,400.
Total Terminal Area: 11.3 hectares.
Services: Water, lights, fencing, taxi, telephone.

7th Street Complex:
TraPac Terminal: Berth 30. (Container; preferential assignment to Mitsui OSK).
Operator: TransPacific Container Corp., 2800 Seventh Street, Berth 30, Oakland, CA 94607. Tel: (510) 286-8600. Terminal Manager: Michael Porte.
1 Berth: Length 333 m.
Deck Height: 4.3 m.
Depth: 12.2 m.
Cranes: 2×50 ton container cranes.
Storage System: Chassis.
Reefer Capacity: 569 outlets × 480V.
Total TEU Storage Capacity: 2,500.
Total Terminal Area: 13.8 hectares.
Services: Water, lights, fencing, taxi, telephone.

Matson Terminal: Berths No. 32, 33 and 34. (Containers/breakbulk; preferential assignment to Matson).
Operator: Matson Terminals, Inc., 3050 7th Street, Oakland, CA.94623. Tel: (510) 271-9756. Fax: (510) 465-2803. Terminal Manager: Jon E. Roselle.
2 Container Berths: Total length 468 m.
1 Ro/Ro berth: 219 m. with concrete dolphins.
Deck Height: 4.3 m.
Depth: 10.7 m.
Cranes: 1×28 ton, 1×30 ton and 1×40 ton gantry container cranes.
Storage System: Straddle carrier, chassis.
Reefer Capacity: 460 outlets × 240V.
Total TEU Storage Capacity: Over 5,500.
Total Terminal Area: 26.5 hectares.
Services: Water, lights, fencing, taxi, telephone.

Marine Container Terminal: Berths No. 35, 37 and 38. (Container; pu user facility).
Operator: Marine Terminals Corp., 520 Third Street, Oakla CA.94607. Tel: (510) 891-0990. Fax: (510) 763-9086. Term Manager: David Adam.
3 Berths: Total length 921 m.
Deck Height: 4.3 m.
Depth: 12.2 m.
Cranes: 3×50 ton and 2×40 ton container gantry cranes.
Storage System: Port-packer, transtainer, chassis.
Reefer Capacity: 192 (portable) × 480V.
Total TEU Storage Capacity: Over 3,700.
Total Terminal Area: 19.6 hectares.
Services: Water, lights, fencing, taxi, telephone.

Berth 40: General cargo, contact Port of Oakland.
1 berth: 188 m. in length.
Deck Height: 4.3 m.
Depth: 10.7 m.
Restricted capability due to earthquake 1989.

Middle Harbour:
American President Lines: Berths No. 60, 61, 62 and 63. (Contai preferential assignment to APL).
Operator: Eagle Marine Stevedoring, 1395 Middle Harbour Ro Oakland, CA. 94607. Tel: (510) 272-2010. Fax: (510) 272-7 Terminal Manager: Robert Fairbanks.
4 Berths: Total length 836 m.
Deck Height: 4.3 m.
Depth: 11.6 m.
Cranes: 4×40 ton and 2×45 ton container gantry cranes.
Storage System: Chassis.
Reefer Capacity: 344 outlets, 151×240V, 193×480V.
Total TEU Storage Capacity: Over 4,500.
Total Terminal Area: 30.5 hectares.
Services: Water, lights, fencing, taxi, telephone.

Inner Harbour:
Howard Terminal: Berths No. 67, 68 and 69. (Containers; public facility).
Operator: Stevedoring Services of America, 1 Market Street, Oakla CA.94607. Tel: (510) 271-1815. Fax: (510) 451-4779. Term Manager: Scott Thomas.
3 Berths: Berths No. 67 and 68: Length 500.5 m., plus 21.3 m. do
Berth No. 69: Length 173 m.
Deck Height: 4.3 m.
Depth: 12.2. m.
Cranes: 2×40 ton and 1×50 ton container gantry cranes.
Storage System: Port-packer, transtainer, chassis.
Reefer Capacity: 144 outlets×480V.
Total TEU Storage Capacity: Over 3,000.
Total Terminal Area: 19.8 hectares.
Services: Water, lights, fencing, taxi, telephone.

Ninth Avenue Terminal: Berths No. 82, 83 and 84. (General cargo, s lumber; public user facility).
Operator: Marine Terminals Corp., 520 Third Street, Oakla CA.94607. Tel: (510) 891-0990. Fax: (510) 763-9086. Term Manager: Ed Hewlett.
3 Berths: Berths No. 83 and 84: Total length 348 m.
Berth No. 82: Length 282 m.
Deck Height: 4.3 m.
Depth: 10.7 m.
Cranes: 4×100 ton mobile cranes.
Storage System: As required.
Reefer Capacity: As required.
Total TEU Storage Capacity: Limited.
Total Terminal Area: 8.02 hectares.
Services: Water, lights, telephone.

Schnitzer Steel Products: Private Berth. (Scrap metals).
1 Berth: 240 ft. at each of 2 pier faces.
Deck Height: 14 ft.
Depth: 33 ft.
Services: Water, light, taxi.

CRANES: Heavy lift cranes available:
Bigge Crane & Rigging – to 250 tons (mobile). Tel: (510) 638-8
Sheedy Drayage – to 225 tons (mobile). Tel: (510) 638-8100.
Dutra Construction – to 400 tons (floating). Tel: (510) 523-5925
STEVEDORES:
Metropolitan California Stevedore Company. Tel: (213) 816-650
Levin-Richmond Terminal. Tel: (510) 232-4422.

San Francisco Stevedoring Co. Tel: (415) 986-9545.
Stevedoring Services of America. Tel: (510) 641-8980.
FRESH WATER: Available.
FUEL: Available at dock or by barge.
Chemoil. Tel: (415) 956-3834.
Chevron. Tel: (415) 944-6287.
GP Resources. Tel: (415) 673-2928.
Shell. Tel: (800) 231-6990.
Texaco. Tel: (818) 505-2608.
REPAIRS: Major repairs and overhauls possible.
DRY DOCKS: Graving dock for up to 28,000 tons at Richmond.
AIRPORT: Oakland International Airport.

GENERAL: *Stores:* Deck, engine, stewards and in-bond stores available.

Port Users: APL, Australia-New Zealand Container Line, Blue Star Line, Canadian Transport Co., Cho Yang, Columbus Line, COSCO, D'Amico Lines, DSR/Senator Lines, Hanjin Shipping Co., Hapag-Lloyd, Hyundai, MTL, Italian Line, 'K' Line, Maersk Lines, Matson Navigation, Mitsui OSK, Nedlloyd, NOL, Norsul, NYK, OOCL, PM&O, Pan Ocean Bulk, Polynesia Line, Sea Land Service, Star Shipping, Toko Line, Toyofuji, Yang Ming Line.

Heavy Lift Cranes:

Bigge Crane & Rigging. Tel: (415) 638-8100. Cranes up to 250 tons (mobile).

Sheedy Drayage. Tel: (415) 638-8100. Cranes up to 225 tons (mobile).

Dutra Construction. Tel: (415) 523-5925. Cranes up to 400 tons (floating).

Tugs:

American Navigation Company Inc. Tel: (415) 957-9005. Tugs up to 4,000 h.p.

Bay Delta & Towing. Tel: (415) 441-4677.

Crowley Maritime. Tel: (415) 546-2600. Tugs up to 9,000 h.p.

Oscar Niemeth Towing Inc. Tel: (415) 893-0231. Tugs up to 4,300 h.p.

Tweed Towing Inc. Tel: (415) 233-4213. Tugs up to 4,200 h.p.

GARBAGE DISPOSAL: Alongside drop-box service available for any garbage-debris only. Contact Terminal Operator to arrange service, 48 hours advance notice required.

WASTE OIL DISPOSAL: Normally not available. Limited tank truck service available in emergency situations. Contact Terminal Operator.

SEAMAN'S CLUBS: International Seamen's Club, 7th Street, Oakland.

DEVELOPMENTS: Dredging of the harbour to 42 ft. is scheduled for 1994.

The port is in the process of leasing 200 of the 400 acre Naval Supply Center facility for expansion of marine terminal, rail and trucking operations. The first development phase will begin in June 1994.

AUTHORITY: Port of Oakland., 530 Water Street (P.O. Box 2064), Oakland, California 94604-2064, U.S.A. *Tel:* (510) 272-1100. *FAX:* (510) 839-6899. *Contact:* Charles R. Roberts, Executive Director. OGDENSBURG, New York: 44.42 N. 75.30 W. (See Plan)

Refer to "St. Lawrence Seaway" for important general information.

PILOTAGE: Seaway Pilot boards at Cape Vincent or Snell Lock and acts as docking Pilot.

ANCHORAGES: Anchorage area West of city at open roadstead area.

RESTRICTIONS: No tide. No restrictions other than Pilots' discretion as to wind and visibility.

MAX. SIZE: Largest vessel to enter 730 ft. long. Draft 27 ft.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

RADIO: Western Union to OCN Corp. VHF Seaway Channel via Maria Radio Cardinal.

TUGS: No tugs necessary.

BERTHING: By prior notice only. Port Authority Terminal, length 1,200 ft., depth 27 ft. One Grain Elevator capacity 500,000 bushels.

CRANES: Available, up to 82 tons capacity.

BRIDGES: Ogdensburg/Prescott International Bridge – 126 ft. clearance MWD.

STEVEDORES: Order by 1800 hrs. day preceding arrival. Advise any change of ETA.

MEDICAL: Excellent medical service and availability of doctors. No vaccination necessary.

DENSITY: Fresh water.

FRESH WATER: Available by pipeline at Port Authority Terminal.

FUEL: One day's notice, all grades. Diesel, Bunker "C", Kerosene.

REPAIRS: Limited dockside repairs available.

GANGWAY/DECK WATCHMEN: Normally not used.

OPENING/CLOSING HATCHES: By stevedores.

CUSTOMS ALLOWANCES: Tobacco, wine/spirits, normal Customs allowance U.S. Ports.

CARGO GEAR: 25 ton mobile crane, fork trucks to 13 tons capacity. Ship's gear to be in good working order.

REPATRIATION: Can be arranged.

AIRPORT: (0.5 mile from city). Chautaugua Airline – 3 flights daily to Syracuse, New York, etc.

TIME: Eastern Standard Time GMT minus 5 hours. Daylight Saving time in Summer GMT minus 4 hours from first Sunday in April till last Sunday in October.

HOLIDAYS: New Year; Washington and Lincoln's Birthdays; Memorial Day; 4th July. Labour Day, Veteran's Day.

POLICE/AMBULANCE/FIRE: Police, Tel: 393-1551; Ambulance, Tel: 393-1221; Fire, Tel: 393-1010.

TELEPHONES: Available at Pierside (315) 393-7580.

SHORE LEAVE: Crew members allowed ashore.

IDENTIFICATION CARDS: Needed as per Immigration Department requirements.

AUTHORITY: Ogdensburg Bridge and Port Authority, Bridge Plaza, Ogdensburg, New York 13669. *Tel:* (315) 393-4080. *FAX:* (315) 393-7068. *Cables:* Ogdenport. *Contact:* Salvatore L. Pisani, Port Director.

OLYMPIA, Washington: 47.00 N. 122.53 W. (See Plan)

PORT LIMITS: Vessel is to be considered an "Arrived Ship" at the Port of Olympia, Washington, when anchor is dropped in Budd Inlet or when the vessel is all fast at the dockside.

DOCUMENTS: See "Tacoma".

PILOTAGE: The vessel picks up Puget Sound Pilot at the Port Angeles Pilot Station located at the entrance to Puget Sound on the Straits of Juan de Fuca, and it is normal for the vessel's Agent to provide the pilot station with a 48-hour, 24-hour, 12-hour and 8-hour ETA. The pilot station monitors VHF Channel 13.

ANCHORAGE: Safe anchorage is located North of Olympia Shoal in 30 ft. to 45 ft. of water. Bottom is sandy and area is a sheltered inlet.

RESTRICTIONS: Channel depth 30 ft. MLW with a high tidal range of 14.4 ft. Also restricted turning basin of 800 ft. Vessels max. size would be governed by the turning basin of 800 ft. and draft of 30 ft. at MLW.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: "KPH" San Francisco or Mackay Radio, Everett "KLB".

VHF: No VHF other than Pilot to tug or ship to tug available at Olympia.

TUGS: 2 Crowley Maritime tugs are berthed at the port. They use ship's lines to assist the vessel in turning at the turning basin and to moor.

BERTHING:

Berth No. 1 is a concrete dock with depth of 40 ft. MLW.
Berth No. 2 is a concrete dock with 40 ft. depth MLW.
Berth No. 3, is a concrete dock with 40 ft. depth MLW.

BULK CARGO FACILITIES: Presently discharged with ship's gear. Primary back-up cargo yard of approximately 30 acres handling coke, coal, pig iron, lumber, steel, foodstuff and palletised cargoes.

SPECIALISED CARGO HANDLING FACILITIES: Olympia has approximately 100 acres of open cargo yard; 33 acres are paved, however, it can be adapted for Ro-Ro traffic and is presently engaged in handling bulk cargoes such as coal, coke, etc.

Warehousing: Olympia has a 76,000 sq.ft. warehouse between Berths Nos. 1 and 2. The site has a 150 ft. apron from the face of the pier and is served by rail. In addition, there is another 40,000 sq.ft. of off-dock warehousing available for cargo storage. There is a rail ramp available.

BRIDGES: None pertinent to this area.

STEVEDORES: 3 stevedoring companies available in the Olympia area. Unlimited manpower available to load/discharge cargoes.

MEDICAL: Medical and hospital facilities are available without prior notification for emergencies; otherwise all medical and dental requirements can be taken care of by appointment.

TANKERS: No shore facilities for loading or unloading of tankers.

DENSITY: Salinity is on an average 29 parts per thousand.

FRESH WATER: Delivered to vessel by shoreside hose.

FUEL: Most grades available by barge from Seattle for fueling at dockside.

FIRE PRECAUTIONS: Standard for U.S. ports.

CONSULS: Most located at Seattle 60 miles to the North.

REPAIRS: All types of repairs possible.

DRY DOCKS: None at Olympia. Nearest 60 miles to North at Seattle.

SURVEYORS: Lloyd's, A.B.S., N.V. available out of Seattle area.

GANGWAY/DECK WATCHMEN: Not required at Olympia under most circumstances unless crew members detained.

CUSTOMS ALLOWANCES: Sufficient quantities of tobacco, wine and spirits are permitted out of bond for each crew member sufficient to cover length of stay anticipated at the time of arrival. Actual quantities are at the discretion of the boarding customs officer.

CARGO GEAR: Generally vessels are loaded and/or discharged using ship's gear.

REPATRIATION: Facilities exist for repatriation of crew members.

AIRPORT: Local airport service by commuter airlines only. Major international airport (Seattle-Tacoma) located 40 miles to the North.

TIME: GMT minus 8 hours. Daylight saving time in effect during Summer months, from first Sunday in April to last Sunday in October.

HOLIDAYS: Work is available on all holidays on an overtime basis on all days except Christmas, December 25th; January 1st, New Year's Day; July 4th and 5th; 4th Thursday in November (Thanksgiving).

POLICE/AMBULANCE/FIRE: Telephone dispatch for emergency services, the numbers 911 dialled on any public telephone.

TELEPHONES: Public telephones are located within 100 ft. of any berth, and cellular telephones are available for onboard vessel use.

SERVICES: Tank-cleaning, tank-washings, compass adjusting, etc., are all available from the Seattle area, located 60 miles to the North, and most services provide travelling repairs.

SHORE LEAVE: Crew are allowed shore leave by U.S. Immigration, depending on individual case.

IDENTIFICATION CARDS: Not issued by the Port of Olympia, and Seaman's Book is generally sufficient to allow Immigration to determine whether shore leave should be granted.

GARBAGE DISPOSAL: Service available from Seattle Disposal Co., 54 South Dawson Street, Seattle. Tel: (206) 763-2800.

WASTE OIL DISPOSAL: No service available.

SEAMAN'S CLUBS: None.

REGULATIONS: Similar to all North American ports; no special rules or regulations applied to vessels by the Port of Olympia. Rules are set forth in Tariff No. 8.

DELAYS: Only delays that should be encountered at the Port of Olympia would be in the event of berth congestion.

GENERAL: Rail Service: The Port of Olympia is served directly by the Burlington Northern and Union Pacific railroads.

Highway Access: The Port of Olympia is 0.7 miles from Interstate Highway 5, the major North-South highway on the West coast. Access to and from the Port is unobstructed.

AUTHORITY: Port of Olympia, 915 Washington Street N.E., Olympia, Washington 98501. *Tel:* (206) 586-6150. *FAX:* (206) 586-4653. *Contact:* Bill McGregor, Director of Operations. Bill Nucciarone, Director of Trade Development.

ORANGE, Texas: 30.06 N. 93.44 W. (See Plan)

DOCUMENTS: Crew Lists, Passenger List and Customs Documents.

PILOTAGE: Radio to Agent, 12 hours and Pilots 2.5 hours in advance of ETA. Pilots contacted by VHF Channels 12 and 13. Pilots board at Sabine Pass, Sea Buoy position 29° 36′ N., 93° 48′ W. or upon request board at 29° 25′ N., 93° 40′ W. Pilot boats FM (VHF) Channel 65 – 156.275 MHz.

ANCHORAGE: Off Sabine Bar – 40 ft.

RESTRICTIONS: Sabine River Channel: Project depth 30 ft.; bottom width 200 ft., including slip at port; marked and lighted for 24-hour navigation. Turning basin, 1,000 ft.×3,000 ft.

MAX. SIZE: Length – no limit, breadth – no limit, draft – 30 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: RCA – Global Communications.

TUGS: Join vessel in port turning basin. Tug's line used, no charge.

BERTHING: 2,308 ft. mooring space to accommodate 4 deep-sea vessels; all concrete docks; additional berthing space in slip for laying-up 4 vessels. Lay-berth facilities also available.

STEVEDORES: 5 stevedore companies – handled through Agent.

MEDICAL: Local facilities – complete.

TANKERS: Limited to 30 ft. draft.

DENSITY: Brackish.

FRESH WATER: Ample fresh water, through 2.5 in. connection, rate of delivery about 500 gallons per minute.

FUEL: All grades available; 8 hours advance notice required.

FIRE PRECAUTIONS: No welding or burning without U.S. Coast Guard welding permit; also special authority required for ships loading explosives.

CONSULS: None available locally.

REPAIRS: Facilities available.

DRY DOCKS: Texas Drydock:

388 ft.×142 ft. 10,000 tons, 10 ft. 6 in. draft over blocks.

SURVEYORS: National Cargo Bureau, Inc., 550 Fannin, Petroleum Building, Suite 821, Beaumont, Telex: 77701.

American Bureau of Shipping, 398 Pearl Street, Goodhue Building, Suite 806, Beaumont, Telex: 77701.

REPATRIATION: Can be arranged through area Immigration.

AIRPORT: Local, no scheduled airlines. Mid-County Airport with scheduled airline service – 30 miles.

HOLIDAYS: New Year's Day; Martin Luther King's Birthday; Texas Independence Day; Good Friday; Memorial Day; Emancipation Day; Independence Day; Labour Day; Veterans' Day; Thanksgiving Day; Christmas Day; Any holiday which falls on Saturday or Sunday will be recognised on the following Monday. No work performed on Labour Day or Christmas Day.

POLICE/AMBULANCE/FIRE: Police Tel: 883-5654; Ambulance Tel: 883-6414; Fire Tel: 886-7431.

EMERGENCY CO-ORDINATION CENTRE: U.S. Coast Guard tel: (713) 983 8230.

TELEPHONE: Can be connected on board.

BANKS:

Orangebank, Orange, P.O.Drawer 969, Orange, Texas 77630.

STORING: See "Prelims".

1. Yes.
2. Yes.
3. Yes.

GARBAGE DISPOSAL: Garbage disposal restricted.

Contact: Browning Ferris Industries, 100 Ginger Street, (P.O.Box 1056), Nederland, Texas 77627. Tel: 1-800-256-5598.

WASTE OIL DISPOSAL: Carotex Inc., 110 Yacht Club Road, (P.O.Box 3901), Port Arthur, Texas 77642. Tel: (409) 962-0251.

SEAMAN'S CLUBS: None.

GENERAL: No strong tidal currents at the berths, excellent shelter during tropical storms.

DEVELOPMENTS: Additional 190 acre tract on Sabine River for future development.

AUTHORITY: Orange County Navigation and Port District, P.O.Box 516, Orange, Texas 77630-0516. *Tel:* (409) 883-4363. *Telex:* 779325. *FAX:*(409) 883-5607. *Contact:* Roger P. Richard, Port Director. Bob McLaughlin, Operations Manager.

OSTRICA, Louisiana: 29.22 N. 89.32 W.

Terminal has ceased operating and has been mothballed. Shore facilties are now part of Chevron U.S.A. Inc. Shore facilities at Empire, See "New Orleans".

OSWEGO, New York: 43.28 N. 76.30 W. (See Plan)

LOCATION: Oswego Harbour is located on the South shore of Lake Ontario about 15 miles from its East end at the outlet to the Oswego River. It is the first major port on the Great Lakes off the seaway. It is also the Great Lakes entrance to the Great Lakes – Hudson River Waterway which connects with the Hudson River at Troy.

PILOTAGE: No requirements.

RESTRICTIONS: Average navigation season – April 1st to Decem 15th.

Approaches: Through entrance between the Arrowhead Breakwater heads and detached breakwater.

Entrance is 750 ft. wide with a depth of 25 ft. at LW datum.

Controlling depth of water 25 ft. at datum.

No vessel length and beam limitations.

Approach open 24 hours a day.

Navigation lights available

Harbour: Controlling depth – front of each terminal open for public u 21 ft. on West side. 28 ft. on East side.

Turning Basin – 115 acres.

Accessible 24 hours per day.

No vessel length and beam limitations.

HEALTH/AGRICULTURE: See "Health" and "Agriculture" before U.S.A. port (Albany).

TUGS: Towage facilities available on request.

BERTHING: The general cargo facilities are operated by the Por Oswego Authority. The West Side Facility is a finger pier 1,000 ft. lo providing 4 berths and has 21 ft. of water alongside at LW datu 28,000 sq. ft. of covered storage is available with limited open stora A million bushel grain elevator is situated on this pier. The East S Facility is a marginal wharf 1,900 ft. long, providing 3 berths and h 27 ft. of water alongside at LW datum. 134,000 sq.ft. of covered stora is available with unlimited open storage.

Oswego exports general cargo. It imports grain, cement, wood pu fertiliser, petroleum and general cargo.

New Marginal Wharf: Length of berth 1,750 ft. Depth 25 ft. at LW datu

BRIDGES: None.

CRANES: Mobile heavy lift equipment available.

BULK HANDLING FACILITIES: One 1,000,000 bushel capac elevator equipped with 3 loading spouts, 2 Marine legs and 2 car pi

FRESH WATER: Available at all general cargo docks.

FUEL: Seaway Terminal of Metropolitan Petroleum Corporation, 4 tan – Capacity 327,000 barrels of No. 2 and No. 6 oil. Coal bunkera available by truck delivery.

CONSULS: None.

REPAIRS: Above waterline repairs available.

AUTHORITY: Port of Oswego Authority, P.O.Box 387, Foot of East F Street, Oswego, NY 13126-0387. *Tel:* (315) 343-4503. *FAX:* (343-5498. *Contact:* John E. Fitzgibbons, Executive Director.

PALM BEACH, Florida: 26.46 N. 80.03 W. (See Pla

LOCATION: Port is located on a salt water sound known as Lake Wo and lies 1.3 miles from the 37 ft. contour of the Atlantic Ocean to wh it is connected by an artificial cut at the North end of Lake Worth kno as Lake Worth Inlet. The Inlet is located within the boundaries of City of Riviera Beach, Florida.

PORT LIMITS: Sea Buoy at channel entrance. Dockage charg commence when vessel is made fast to wharf, and are on a 24 h basis or fraction thereof.

DOCUMENTS: Basic Customs Documents for Entry:

2 copies Master's Oath, Form CF-1300.
2 copies General Declaration, Form CF-1301.
2 copies Arrival Crew Lists, Form I-418.
2 copies Passenger List, Form I-418.
2 copies Stores Lists, Form CF-1303.
2 copies Crew's Effects Declaration, Form CF-1304.
1 copy Clearance from Last Foreign Port (if available).
1 copy Manifest of *All* Foreign Cargo onboard.
1 copy Manifest of Cargo for Discharge.
1 copy Dangerous Cargo Manifest.
1 copy Form CF-3171 for formal entrance at Customs House.
Valid original vessel documents.

All vessels shall, upon arrival, report to Port Director all cargo t discharged. Such report shall be in form of copies of Ship's Mani or certified statements, and shall show number of units, commod weight, destination, consignee, and all other information which Por Palm Beach deems necessary for compilation of commercial statis for reserving of necessary warehouse or wharf space, or other purpo (Also see "Jacksonville").

PILOTAGE: Compulsory. Provided by Pilots' Association of the Por Palm Beach, 200 13th Street E, Riviera Beach, Florida, 33404. Tel: (845-2628. Telex: 529327.

Pilot's communicate with vessel on VHF Channel 16; if no ans contact Marine Operator to call Pilots on land line. Tel: (305) 845-2

Notice of ETA and request for Pilot must be made to the Pilo least 24 hours in advance.

CHANNEL: Entrance to the harbour is by a dog-leg channel run due West through the jetties and then turning South-westerly to terminals. The channel is 400 ft. wide, narrowing to 300 ft. in wid it continues across the lake another 3,000 ft., leading into a trapez turning basin, 1,400 ft. by 1,310 ft. adjacent to the port terminals o West shore, with an extension of 672 ft. at 25 ft. depth to the New Wharf and Loading Ramps. Present depth of entrance channel is at MLW.

ANCHORAGES: Anchorage is designated by the Bar Pilots, wh most instances is at sea. Port has two federally designated ancho one South of the entrance channel and one North of the en channel.

MAX. SIZE: Vessels up to 620 ft. in length with draft of 33 ft. have facilities.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Port has no communication equipment. U.S. Coast Guard Station, Peanut Island, Riviera Beach, Florida, can be reached on 2182 kHz – 2678 kHz or VHF Channel 16 (156.8 MHz). Pilots VHF Channel 16.

TUGS: Available to assist berthing. Service is provided by the Port Towing Corporation, P.O.Box 30369, Palm Beach Gardens, Florida 33410-0369. Office Tel: 622-6422 and 622-8688, nights and holidays 844-4244 and 622-7548.

Tugs normally join vessel at jetty entrance. Tug's lines normally used.

BERTHING: 2 slips and 4 marginal wharves with 6 Ro/Ro ramps including a 29 acre dedicated container yard.

Supplementing the berths are 295,000 sq.ft. of transit shed storage space. Open storage areas consist of approximately 55 acres. 33 acres dedicated to container handling.

All vessels, their Owners or Agents, desiring a berth at wharves, shall, as far in advance of date of docking as possible, make application to port specifying date of docking, sailing, nature and quantity of cargo to be handled, and name of the vessel.

SPECIALISED CARGO HANDLING FACILITIES: Ramps for Roll-on/Roll-off cargo and wharfside accommodation for equipment to handle containerised cargo only.

Dry Bulk Storage: 55,000 short tons (Cement); 20,000 short tons (Sugar).

Liquid Bulk Storage: 12,500,000 gallons (Molasses).

Freezer/Chill Facility: U.S. Dept. of Agriculture and U.S. Customs approved facility. 17,600 sq.ft. off pier site with rail siding. 5 minute trucking time to port docks.

Also see "Developments".

CRANES: See "Cargo Gear".

STEVEDORES: The recognised working hours of port are from 0800 until 1200 hrs. and from 1300 until 1700 hrs., Monday through Friday, holidays excepted. During the recognised working hours services will be charged for on a straight time basis.

When vessels are loading or discharging cargo the port may furnish checker-foremen to supervise release of cargo being loaded and/or check cargo being discharged. The charge for each man furnished will be based on labour-furnished rates for foremen, with the Port reserving right to furnish as many men as they deem necessary to protect their interests. Charges for this service will be rendered against the vessels, their Owners, or Agents.

MEDICAL: Full hospital facilities available without prior notice. Dentists available during normal work hours.

TANKERS: The port receives tankers each month in the 15,000 to 18,000 gross ton range. Petroleum tankers are handled in Slip 2, Berths 2/3 or 5/6. All petroleum tankers are boomed during pumping operations. Slop facilities at port by mobile tank trucks of private companies.

Report: Port Approaches – Cautionary: All approaches to the Sea Buoy must be made from the East to avoid shoal waters near the coast to the North and South of the Entrance Channel. The Gulf Stream current running to the North may be felt a short distance East of the Sea Buoy. A counter current usually sets to the South in the vicinity of the Sea Buoy. However, this may vary depending on weather conditions. Southbound vessels, avoiding the Gulf Stream, are encountered in close vicinity of the Sea Buoy.

Care must be taken to carefully identify navigation lights to avoid mistaken identity with strong lights along coast.

Vessels may anchor S.E. of the Sea Buoy in approximately 75 ft. – 100 ft. of water.

Entering and Berthing: Vessel should have full manoeuvring power available and competent helmsman at the wheel. Vessels leaving the Gulf Stream usually set sharply to the South and care must be exercised to keep vessel in channel. Ranges and buoys are used to identify channel limits. The turning basin is situated adjacent to Slip No. 2 where tankers berth. Tidal currents in Lake Worth Inlet set North on flood tide and South on ebb tide. Berthing of deep draft bulk carriers has been limited to High Water Slack period, due to the limitation of tug horsepower. If a current is against the tide, an anchor is usually dropped and dragged into the berth. Due to the limited depths of water and the possibility of holing the ship's bottom if the anchor is run over, the use of anchor should be limited to emergency use.

The slip is 700 ft. in length with a width of 225 ft. Pier bollards are situated 50 ft. apart. The last soundings survey indicated depths of 35 ft. or more throughout area of slip with exception of extreme inside section where depths decreased to 32 ft.

FRESH WATER: Fresh water delivered to vessels at wharves or docks by pipeline. Hoses can be supplied by port per tariff charges. Fittings on pipeline are 2.5 in. Minimum charge of U.S.$50.00. Water $0.90 per ton of 240 gallons.

FUEL: Private firms (9) with trucks or barges available by prior arrangement through vessel's Agent.

FIRE PRECAUTIONS: Smoking is strictly prohibited in transit sheds, warehouses, or on apron of wharves and on vessels, handling dangerous, hazardous, or inflammable cargo. Smoking is also prohibited in any areas where gasoline or like materials are being handled or serviced to equipment.

Explosives and hazardous or highly inflammable commodities or materials may be handled over, or received on, the wharves or other facilities of Port of Palm Beach by special arrangements with and at the option of the Port Director, and the receiving, handling, or storage of such commodities shall be subject to Federal and State laws, rules and regulations.

In all cases where explosives and hazardous or highly inflammable commodities or materials are to be handled, prior consent by the U.S. Coast Guard must be received and a copy of the consent filed with the Port Director. Responsibility for safeguarding of life and property will be the duty of the shipper. Proof of sufficient liability insurance must be presented to Port Director prior to arrival of such materials.

DRY DOCK/REPAIRS: No major facilities at port. Mobile repair companies available. No berths dedicated for repair work.

SURVEYORS: Marine surveyors representing Lloyd's, A.B.S., N.V., operate at the port or nearby ports.

C. L. Marine Inc., 825 Oleander Street, Boca Raton, FL 33432. Tel: (407) 391-8932.

GANGWAY/DECK WATCHMEN: No requirement for watchmen required except for special vessel conditions or security reasons as determined by Port Director.

HATCHES: Normally opened and closed by ship's crew.

CUSTOMS ALLOWANCES: United States Customs Regulations.

REPATRIATION: Facilities exist for changes of crews and repatriation of seamen. Scheduled aircraft service Palm Beach area daily with additional flights from two nearby airports. Airports are 5 miles, 35 miles and 70 miles from port.

POLICE/AMBULANCE/FIRE: Police Tel: 845-4123 or 911; Fire Department Tel: 845-4111; Sheriff Tel: 833-7471; Ambulance Tel: 844-6577; Hospital Tel: 844-6300.

CARGO GEAR: Crane capacity can accommodate single lifts up to 300 tons. Also available are 2×150 ton cranes, 3×200 ton crane, 1×65 ton crane and 1×40 ton crane also 1×23 ton fork lift. 7×40 tonne straddle carriers, 7×40 ton fork lifts, 3×25 ton fork lifts, 1×20 ton fork lift, 33 tractors in terminal (10×40 tons and 23×35 tons). Load/discharge operations can be performed by ship's gear or shore gear.

HOLIDAYS: New Year's Day; Washington's Birthday; Columbus Day; Decoration (Memorial) Day; Independence Day; Labour Day; Veteran's (Armistice) Day; Thanksgiving Day; Christmas Day. When any one of these falls on Sunday, the following Monday is observed as a holiday. When any one of these falls on Saturday, the preceding Friday is observed.

Drums or skips available through private industry licensed by government. Ship's agent to notify U.S.Department of Agriculture local agent for coordination of transfer operations. Local DOA agent, Tel: (407) 844-9935. Contact Port Maintenance Superintendent, Tel: (407) 844-6330, for current charges.

WASTE OIL DISPOSAL: Service provided by duly licensed private contractor. Tanker trucks utilised for collection and removal. Ship's agent to make arrangements with private licensed contractor and Port Authority Dockmaster.

SEAMAN'S CLUBS: None.

CURRENCY: U.S.Dollar (U.S.$).

GENERAL: Marine terminal 1.3 miles from the open sea, served by U.S. Highway 1 and is directly connected by port-owned belt-line railroad to the Florida Coast Railway.

Broad aprons (80 ft.) with ship-side rail, and warehouses backed by open storage areas. The slips and wharves are located on a salt water sound, fully protected from the sea by barrier islands; departures from the slips average only 15 minutes through inlet to open sea.

DEVELOPMENTS: New 6 acre container marshalling area has been recently added. Raw sugar storage facility at Slip 2 capacity 20,000 tons, loading rate 600 t.p.h. Acquisition of additional land for port expansion underway. Port Administration Building completed offering Government Services and office space for Maritime companies located at the port. A foreign trade zone and a Cruise Terminal and enclosed Passenger Jetway are available.

AUTHORITY: Port of Palm Beach, P.O.Box 9935, Riviera Beach, Florida 33419. *Tel:* (407) 842-4201. *FAX:* (407) 842-4240. *Contact:* Benson B. Murphy, Executive Port Director. Martin A. Mets, Deputy Port Director. Jack Smith, Dock Master. Sam Logan, Manager of Security.

PANAMA CITY, Florida: 30.10 N. 85.40 W. (See Plan)

DOCUMENTS:
3 Passenger Lists.
3 Crew Lists.
3 Curio Lists.
3 Stores Lists.
Register.
Load Line Certificate.
Tonnage Tax Certificate.
Certificate of Financial Responsibility (Oil Pollution).

PILOTAGE: Compulsory. Pilots board at sea-buoy. Guard Channel 16 VHF. Safe anchorage at sea-buoy if waiting for Pilot.

PC Port Pilots Inc.: Pilot boat, grey and white hull with black lettering. Tel: (904) 785-2209.

PC Pilots Inc.: Pilot boat, red and white hull. Tel: (904) 769-0058.

ANCHORAGES: Several safe anchorages inside bay with 32 ft. or more depth.

RESTRICTIONS: Maximum safe draft over bar is 32 ft. No other restrictions except in case of bad weather.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Preferably WLO Radio, Mobile, Alabama, U.S.A. Also good service from RCA. Vessel should radio ETA and cash requirements.

TUGS: 2 tugs available. Tug is used only to assist in berthing. Always uses ship's lines.

BERTHING: Any time, except for unusual weather. Good safe port. Berths are about 1 hour from Pilot station.

Deepwater Terminal in St. Andrew's Bay:

1. 2,590 ft. of deepwater berthing:
   (a) 5 berths.
   (b) Mean depth of water 32 ft.
   (c) Concrete apron 60 ft.
   (d) Construction – steel sheet piling.
2. 6 Transit sheds totalling 280,000 sq.ft.
3. Bulk Warehouse (28,800 sq.ft.), Storage Silos (6,500 ton capacity) with scale weight in and out.
4. Covered loading/unloading rail service to each warehouse.
5. Truck dock serving each warehouse.
6. Marginal track capability.
7. Heavy lift capability by prior arrangement.
8. 24 hour security service.
9. Paved open storage – 300,000 sq.ft.
10. Ro/Ro capabilities.
11. Container facilities.
12. Barge/Container feeder service.

Barge Terminal in St. Andrew's Bay and Gulf Intracoastal Waterway:

1. 600 ft. of shallow draft:
   (a) Mean depth of water 12 ft.
   (b) Concrete apron.
   (c) Construction – steel sheet piling.
2. Transit shed totalling 30,000 sq.ft.
3. Bulk transfer capability.
4. Service for:
   (a) Covered rail loading and unloading.
   (b) Truck loading and unloading.
5. Paved open storage – 90,000 sq.ft.
6. Heavy lift capability by special arrangement.

Port Equipment:

1. 8 lift trucks, 5,000 lb. capacity.
2. 9 paper roll clamp machines, 7,000 lb. lift capacity.
3. 1 trackmobile switcher.
4. 1 diesel switch engine.
5. Rail tracks owned by Panama City Port Authority, capable of accommodating approximately 80 rail cars.
6. Sweepers.
   (a) Tennant.
   (b) Tractor with brush and front end loader.
7. Gantry crane.

STEVEDORES: 7 companies. Must have ETA by 1500 hrs. local time in order commence loading 0800 hrs. next day. Normal work day 0800 – 1200 hrs., then from 1300 – 1700 hrs., Monday through Friday.

MEDICAL: Medical and hospital service available.

TANKERS: No slop discharge facilities, oil waste by barge.

DENSITY: Salt water. 1.5 ft. tide range.

FRESH WATER: Available all berths but ships must supply hose.

FUEL: Limited amount of diesel oil available. No heavy fuel. Local agents can make available through truck transfer or barge. Midstream Fuel Supply located at Port.

CONSULS: None.

REPAIRS: Limited deck and engine repairs can be effected.

GANGWAY/DECK WATCHMEN: Only if required by ship's Owners or Master.

OPENING/CLOSING HATCHES: Only MacGregor hatches may be opened by the crew.

CUSTOMS ALLOWANCES: Tobacco, 1 carton 200 cigarettes. Wine/Spirits, reasonable quantity – 1 or 2 bottles.

CARGO GEAR: Must show safety inspection if requested.

REPATRIATION: Available.

AIRPORT: Approximately 4 miles from port. Served by 2 schedul lines (Delta and U.S.Air).

TIME: Central Standard Time (GMT minus 6 hours).
Central Daylight time in Summer (GMT −5 hours).

HOLIDAYS: *No work holidays:* New Year's Day; Easter; 4th July; La Day; Christmas Day.

Working holidays: Lincoln's Birthday (February 12); Ge Washington's Birthday (Third Monday in February); Memorial Day (La Monday in May); Veterans' Day (Fourth Monday in October); F Festival Day, Thanksgiving Day (Fourth Thursday in November).

POLICE/AMBULANCE/FIRE: Dial 911.

TELEPHONES: Placed aboard only by very special arrangement – normally available.

SERVICES: Most repairs to radio, radar and other such equipm Advance notice required.

SHORE LEAVE: Any time – any berth.

IDENTIFICATION CARDS: All crew must have U.S. Immigra Landing Permit.

DELAYS: Normally, delays infrequent and for short durations.

AUTHORITY: Panama City Port Authority and Foreign Trade Zone P.O.Box 15095, 5321 West Highway 98, Panama City, FL 324 *Tel:* (904) 763-8471. *FAX:* (904) 769-5673. *Contact:* H.R. Ethered Port Director. T.L. Berry, Assistant Port Director.

PASADENA, Texas: 29.43 N. 95.13 W.
Refer to "Houston" for all general information.

HEALTH: See "Health: All Ports" before first U.S.A. port (Alba Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

PASCAGOULA, Mississippi: 30.21 N. 88.34 W. (See Pl

PORT LIMITS: Subject to Charter-Party Terms, an "arrived sh subject to jurisdiction of the Port Authority, occurs when a ship arr at Horn Island Sea Buoy.

DOCUMENTS: See "New Orleans".

PILOTAGE: Compulsory. Pascagoula Bar Pilots' Association (6 –762 – 1151). Pilot boat to be contacted on VHF Channel 16, pilot b has black hull with white house, International light and sound signa be made by vessel requiring a Pilot. Pilot to be taken aboard vesse vicinity of Horn Island sea buoy. Usual safety measures are requ with respect to boarding. Vessels may anchor in this area while awa Pilot, there is a 35 ft. to 50 ft. depth with good holding bottom.

ANCHORAGES: Only anchorages permitted are in vicinity of H Island Sea Buoy or seaward.

RESTRICTIONS: Under normal conditions there are no entry restrict as to time or state of tide.

From Horn Island Sea Buoy to Horn Island Pass the channel is 35 wide by 40 ft. deep; from Horn Island Pass to Pascagoula River Tur Basin the channel is 350 ft. wide and 38 ft. deep; the Pascagoula R Turning Basin is 950 ft. wide and 38 ft. deep.

Channel into Bayou Casotte (East Harbour) from Junction Bu mouth of Bayou Casotte Harbour is 225 ft. by 38 ft. deep; thence at harbour channel is 300 ft. wide and 38 ft. deep into the Bayou Cas Turning Basin; the Bayou Casotte Turning Basin is 940 ft. wide 38 ft. deep. All dimensions listed are project dimensions; depths to MLW datum.

No vessel or tow shall enter Bayou Casotte Channel outbound a seagoing vessel or tow has passed Buoy 30 inbound, and; no ve or tow shall enter Bayou Casotte Channel inbound after a seag vessel or tow has passed Buoy 11 outbound. Vessels or tows whic at a dock should remain at the dock until the inbound seagoing ve or tow has passed, or until it has reached its berth, whichever oc first.

MAX. SIZE: Pascagoula River: Length of vessel is restricted to app 900 ft. by turning basin, no breadth restriction, draft 38 ft. at M Normal tidal range 1.6 ft.

Bayou Casotte: Vessels with length over 785 ft., max. breadth 1 and draft 38 ft. are taken on a case-by-case basis.

RADAR/VHF: Radar and VHF radio on pilot boat, Channel 16.

Every vessel shall, when entering the Horn Island Pass Channel the Bayou Casotte Channel, or when getting underway from a bert when approaching the Pascagoula Channel while transiting Intracoastal Waterway:

(a) Maintain a radio watch on VHF – FM Channels 13 and 1 accordance with Vessel Bridge to Bridge Telephone Regulation January 1st, 1973.

(b) Check on other traffic operating in the area by transmitting Channel 16:

"SECURITY, SECURITY,
SECURITY(Vessel Calling)
THIS IS ....
ENTERING..................................
CHANNEL PROCEEDING FROM
..................TO ....
CHECKING FOR TRAFFIC, STANDINGBY
ON CHANNELS 13 and 16, ...
(Vessel Calling)
.... OUT"

If other traffic replies, utilise Channel 13 for exchange of inform relative to safe navigation.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Use of Pascagoula Marine Radio (KLU-775) is advisable for ETA cables to Agent. Stands by on VHF Channel 16 and operates on Channel 27 throughout 24 hours.

TUGS: Tugs will join vessels in harbour or off docks. No escort required. Tugs lines normally are used.

BERTHING: Private and public berths are available, by prior arrangement, in both the Pascagoula River Harbour (West Harbour) and the Bayou Casotte Harbour (East Harbour).

West Harbour – Public: Grain Elevator, 900 ft. berth at 780 ft. wharf and 38 ft. deep.

Terminal 'A' with transit shed, 500 ft. wharf and 38 ft. deep.

Terminal 'B' with transit shed, 544 ft. wharf and 38 ft. deep.

Terminal 'C' with bulk cold storage, 718 ft. wharf and 38 ft. deep.

Terminal 'D' with 732 ft. by 187 ft. open wharf by 38 ft. deep, with transit shed.

South Clusters, 1 ship berth approximately 600 ft. by 24 ft. deep.

West Harbour – Private – Ingalls Shipbuilding: Note. These berths are normally occupied with ships being fitted out and are not normally available.

West Bank Shipyard, 4,219 ft. bulkhead, 5 berths by 38 ft. deep.

East Bank Shipyard, one 750 ft. pier with berthing both sides, 38 ft. deep.

Ham Industries, rig repair facility; 1,100 ft. wharf by 38 ft. deep.

East Harbour – Public:

Terminal 'E' with transit shed, 517 ft. wharf by 38 ft. deep;

Terminal 'F' with transit shed, 737 ft. wharf by 38 ft. deep;

Terminal 'G' with transit shed, 516 ft. wharf by 38 ft. deep;

Terminal 'G' Extension 695 ft. by 64 ft. open wharf by 15 ft. deep.

Terminal 'H' with transit shed, 556 ft. wharf by 38 ft. deep.

East Harbour – Private:

Chevron U.S.A. Inc., Wharf No. 1, 5 berths by 38 ft. deep;

Chevron U.S.A. Inc., Wharf No. 2, 1 berth by 38 ft. deep; (crude and coke dock).

Chevron U.S.A. Inc., Wharf No. 3, 1 berth by 38 ft.;

Mississippi Phosphate Company, 2 loading docks each 475 ft. by 38 ft. depth;

Chicago Bridge & Iron Company, slip 900 ft. by 14 ft. deep.

SPECIALISED CARGO HANDLING: Chevron U.S.A. Inc., Wharf No. 1 has facilities for handling acid, caustic, ammonia, and LPG, in addition to petroleum products. Chevron U.S.A. Inc., No. 2 has facilities for handling coke and crude. Chevron U.S.A. Inc., No. 3 has facilities for handling crude.

Gulf Cold Storage Inc.:

Freezer Area: 1.5 million cu.ft. of −10°F. storage.

Cooler Area: 500,000 cu.ft. of +40°F. storage.

Blast Freezers: 4×−50°F. Capacity 24,000 lbs. per day.

Location: Approx. 3 miles South of I – 10 of the West Bank area of the port. Adjacent to dock on a 38 ft. channel.

CRANES: The Port has a heavy lift capability of 400 tons by an arrangement with Ingalls West Bank Facility. Truck cranes with capacity up to 110 tons also available in the port area.

BRIDGES: None affecting 38 ft. channels.

Two bridges across the Pascagoula River above the turning basin, not passed through between channel and harbour.

STEVEDORES: 12 hours notice requested to arrange stevedore gangs.

Check with individual stevedoring companies for arrangements, straight time, and overtime computations.

MEDICAL: Agents to be advised if immediate medical attention is required. Free Pratique granted except in case of communicable diseases aboard, inoculations required by Public Health Service, etc. Doctors and hospital services readily available.

TANKERS: Chevron U.S.A. Inc. owns and operates 3 wharves on East side of Bayou Cosotte harbour. Facilities have 6 in., 8 in. and 12 in. lines with adaptors, discharge tanks with a capacity of 60,000 tons, 3 tanker berths with a 38 ft. draft. Wharf No. 2 for receiving crude oil from large tankers. Wharf designed and built for 50 ft. draft, but presently limited to 38 ft. draft on account of channel and seaward. Wharf No. 2 also handles coke ships.

Also see "Shipmaster's Report" and "Specialised Cargo Handling".

DENSITY: Density varies with the state of tide and wind, from fresh to salt water.

FRESH WATER: Potable water is available at most berths. Water at public terminals can be delivered at flow rate of 50 g.p.m.

FUEL: Vessels are bunkered at berth in the harbour by truck or barge. All grades of fuel are available.

FIRE PRECAUTIONS: Usual safety precautions required. Verify unusual procedures for approval of U.S. Coast Guard.

CONSULS: Many countries have consuls within a 100 mile radius of Pascagoula. (Mobile and New Orleans).

REPAIRS: Most deck and engine repairs could be arranged within port facilities.

DRY DOCKS: Ingalls Shipbuilding Corporation, has 1 launch pontoon (dry dock) with 38,000 ton capacity.

Flechas Shipyard has one 600 ton dry dock.

There are several marineways in vicinity, capacities 50 – 100 tons.

SURVEYORS: Licensed Marine Surveyors are available in Port.

GANGWAY/DECK WATCHMEN: Port guards are furnished for the general cargo terminals at the port's expense. At least 1 person must be on duty aboard vessel.

HATCHES: Opening/closing hatches by the crew is at the discretion of the ship.

CUSTOMS ALLOWANCES: Each crew member is allowed either 300 cigarettes or 50 cigars or 3 lbs. of tobacco. In addition, each member is allowed 1 quart of alcoholic spirits as regulated by provisions of the Mississippi Alcoholic Beverage Commission Rules.

CARGO GEAR: No requirements for cargo gear other than it be certified by a recognised International organisation.

REPATRIATION: The City of Pascagoula is served by regularly scheduled transportation. Vessel's Agent to arrange clearance with Customs and Immigration officials.

AIRPORT: An airport is available approx. 35 miles from the city and is served by regularly scheduled airlines.

TIME: The Port of Pascagoula is on Central Standard Time, GMT minus 6 hours; clocks are moved ahead 1 hour during Summer months. (First Sunday in April to last Sunday in October).

HOLIDAYS: New Year's Day (January 1st); King's Birthday (3rd Monday in January); Washington's Birthday (3rd Monday in February); Mardi Gras (41 days before Easter – Tuesday); *Easter Sunday/Easter Monday (1st Sunday after 1st full moon after March 21st); King's Memorial Day (April 4th); Memorial Day (Last Monday in May); *Independence Day (July 4th); *Labour Day (1st Monday in September); Veterans' Day (November 11th); Thanksgiving Day (Last Thursday in November); *Christmas Eve (December 24th); *Christmas Day (December 25th); *New Year's Eve (December 31st).

(*Non-working). Non-working holidays are observed from midnight of the holiday through to 0700 hrs. of the following day with the exception of Christmas Eve and New Year's Eve when the non-working portion of the holiday commences at noon.

Should any of the above holidays except Easter, Christmas Eve, and New Year's Eve fall on a Sunday the following Monday will be observed.

Saturday shall not be considered as a layday in determining time ships are in berth in this harbour.

POLICE/FIRE/AMBULANCE: Telephone numbers for emergency services are: Fire 762-1133; Police 762-2211; Ambulance 762-4949 or 762-4848. Universal emergency No. 911.

TELEPHONES: Through special arrangements with steamship agents.

SERVICES: Facilities are available for compass adjusting. Tank cleaning and receipt of tank washings can be arranged by contract services available in the area.

SHORE LEAVE: Allowed for any crew member not detained by Immigration Office.

IDENTIFICATION CARDS: Standard Immigration Form I-95 to be made up for each crew member on arrival. Not necessary for crewmen already holding Form I-95 issued for the same vessel.

GARBAGE DISPOSAL: Garbage collection available upon request. Arrangements should be made through ship's Agent. Service provided by BFI. (Tel: (601) 769-7850), and Waste Management. (Tel: (601) 832-3144).

WASTE OIL DISPOSAL: Service provided by Waste Oil Collectors. (Tel: (601) 497-4585). Arrangements should be made through ship's Agent.

SEAMAN'S CLUBS: Seamans Center operated by Jackson County Baptist's Association, 3709 Hospital Road, Pascagoula. Tel: (601) 769-7101. Services: Telephones, postage, stationery, games, transportation to shopping area.

DELAYS: Berths at Public Terminals and the South Clusters are assigned by the Harbour Master of the Port of Pascagoula. Berths at private docks are assigned by the respective owners. No exceptions to this are allowed. Berth at grain elevator is assigned by The Harbour Master of the Port of Pascagoula. No delays are encountered by following this procedure, emergencies excepted.

GENERAL: Some difficulty encountered by unscheduled tows who use harbour for shelter in inclement weather. Pilot Association aware of current situations. Ample barge storage is available in Barge Fleeting Area operated by Colle Towing Company who may be contacted on VHF Channel 16 (KKV-933). Tel. (601) 762-5700.

SHIPMASTER'S REPORT: June 1980.

Vessel: 32,000 g.r.t., loading ammonia at Chevron Refinery.

Approaches: Charts BA. 3981 and 3380.

Approach made from the South East along the Safety Fairway using "Satnav" positions for the approach to the fairway entrance. Failing this the echo sounder may be used to good effect in conjunction with sights.

Two large oil rigs were sighted at the South East entrance to the fairway, but their positions were not plotted.

On the final approach visibility is often reduced due to industrial smog and the outlying islands are low and give no reliable positions until about 8 miles off. There are 4 conspicuous flares beside the Chevron Refinery which will give a good lead to the "HIP" Buoy. These flares are not marked on either chart, but their approximate position is Lat. 30° 20.2′ N., Long. 88° 29.3′ W.

Petit Bois Island is the first to show but with no distinguishing features until close to it. "HIP" Buoy is easily identified at least 8 miles away and shortly afterwards the channel buoys may be identified on radar. These buoys are not marked on B.A. 3380, but help indentify "HIP" Buoys should there be fishing boats in the vincinity. There are numerous fishing vessels in the approaches but they do seem to keep the fairway clear. Many tugs and tows also in the area.

Pilotage: There is no berthing at night for vessels of this size (32,000 g.r.t.) due to having to turn in the turning area above the berth. Vessels may sail at night but careful consideration should be given to weather conditions before agreeing to do so.

Contacted Pilot Office on VHF Channel 16, thereafter working on Channel 13.

Pilot boards from a fast, black hulled launch off "HIP" buoy, ladder on lee side about 1 m. above water.

> *CAUTION:* The outer channel is well marked with conspicuous buoys but the configuration of the channel is liable to change. The approach may be swept with strong conflicting cross currents and, since the widest section is only 350 ft., very careful attention must be paid to steering.

Once inside Petit Bois Island the channel narrows to 225 ft. in places; the Pilots do have an unofficial 'one way traffic scheme' in progress but this is not always adhered to by tows and fishing vessels.

Proceeding inwards, the vessel is turned at the very head of the harbour with the assistance of 2 tugs; vessel is turned to starboard and the head tug then shifts from the port bow to the starboard bow for berthing. Berthing is always port side alongside.

There is not a great deal of room in the turning basin, although the Pilots say that vessels over 800 ft. are turned there regularly.

On sailing, with a deep draft (32 ft. maximum) special care must be paid to steering within the channel. With a width of just over 200 ft. there is no room for error. I would advise that the watchkeeping officer be in attendance on the helmsman throughout the passage.

Time from Pilot aboard to 1st line ashore is about 2 hours.

Berth: Chevron Refinery: Least depth sounded 12.2 m. Very good, with a substantial Chicksan area and fairly good mooring arrangements.

Once made fast and loading a very careful watch must be kept on the moorings since large tankers pass up and down the harbour to the tanker berth close ahead; the shore personnel will not hesitate to stop loading if they think the moorings will allow the vessel to surge.

No motor access to the gate some 200 m. distant.

Telephone on the quay.

Loading: No difficulties were experienced. The facility is very keen on pollution and will watch the discharge of ballast very closely.

The refinery do require ballast to be discharged ashore but that is out of the question. A disclaimer will be presented for the ship to sign.

Since the upreach of the Chicksan is not sufficient, the low extension or flexible hoses will have to be rigged prior to arrival. Shore connection is 8 in. 150 ASA and was done on this occasion by ship's personnel.

No vapour return line.

There is a recirculating system and there was no need to blow through lines on completion.

Product was cold at this call but 'warm' product has been experienced here in the past. Overall load rate was 343 t.p.h. which the shore personnel were extremely happy with. Hourly rates frequently over 500 t.p.h.

Shore Surveyor attended and all figures were based on ship's gauges.

Personnel generally helpful.

General: Fresh water available on the quay but reported as *not potable*.

Bunkers available.

Stores have to be manhandled along the jetty but there are small trolleys available.

Gangway: Best left turned in until in position thence no problem, being clear of obstructions.

No objection made to ship's crew "touching up" ship's side from quay.

U.S.C.G.: No inspection this call but they are known to carry out both cargo and navigational inspections.

Films: Exchanged by ship chandler: Bow and Stern Marine.

Consul: The nearest British Consul is at Houston or Atlanta, should any surveys be required.

AUTHORITY: Port of Pascagoula, 3033 Pascagoula Street, P.O.Box 70, Pascagoula, Mississippi 39567-0070. *Tel:* (601) 762-4041. *Telex:* 161858 PRT PASC. *FAX:* (601) 762-7476. *Contact:* Melody Bradley, Port Director. Paul J. Gavin, Harbour Master. Allen E. Moeller, Manager – Operations and Sales.

PENSACOLA, Florida: 30.25 N. 87.13 W. **(See Plan)**

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

BERTHING:

Berth No.	*Length (ft.)*	*Depth at MLW* (ft.)*	*Use*
No. 1	640	35	General Cargo
No. 2	400	35	General Cargo
No. 3	425	35	General Cargo
No. 5	425	35	General Cargo
No. 6	580	35	General Cargo

*While the Port of Pensacola has 35 ft. depth at MLW in berths, the Corps of Engineers project draft of 33 ft. is the controlling draft for the Port.

Transit Sheds:

Warehouse	
No. 1	72,000 sq.ft.
No. 3	42,300 sq.ft.
No. 4	45,000 sq.ft.
No. 5	72,000 sq.ft.
No. 6	90,000 sq.ft.
No. 7	15,000 sq.ft.
No. 8	83,000 sq.ft.
No. 9	40,000 sq.ft.
Total	459,300 sq.ft.

CRANES: Mobile cranes up to 100 tons.

EQUIPMENT: Leased Equipment: 18×6,000 lb. fork lift trucks, 8×9,000 lb. fork lift trucks, 2×15,000 lb. fork lift trucks, 1 front end loader, 2 motorised driven sweeper, 1 motorised driven scrubber, 1 paper clamp and stevedoring equipment: Fork lift trucks have individual heights of 10, 14, 15, 16 and 17 ft. Attachments permit conversion for handling paper rolls and bales. 1×63,000 lb. lift truck.

TANKERS: *Private:* Coastal Fuels Marketing, Mitch Sartin, Manager, Mid Gulf Area, Port of Pensacola, P.O.Box 12626. Pensacola, FL 32574. Tel: 904-432-2471. Facilities: Industrial, Marine Fuels. 6 bulk oil tanks of 662,000 barrels capacity connecting by pipeline to Berths 1, 2 and 3. 5 positions for loading and unloading. 5 bunkering stations and a truck loading facility.

Report: Port Approaches – Cautionary Advice: Vessels can approach the Sea Buoy with little or no difficulty. Deep loaded vessels should not enter past Buoy No. 1 without a Pilot. Currents in the Gulf of Mexico are varied, but will usually set in direction of the wind; somet approaching 4 to 5 knots during severe storms. When entering har full manoeuvring power and a good helmsman are essential as current in the Entrance Channel can reach 5 knots. Currents inside harbour are approximately 1 knot and set fair with channel. Ves should anchor outside of Buoy No. 1 and off the centre of channel when no Pilot is available to take them to the Inner Anchorage. Lighter is permitted at the Inner Anchorage. Harbour bottom consists of mud. There is very little harbour traffic.

Entering and Berthing: This harbour is serviced by one 1 P organisation who knows all anticipated movements within the harbo so no unexpected traffic should be encountered and all passing is do at desirable positions. Vessels can enter and berth at any stage of t Pilots will use West Channel for ships docking at Berth No. 3 on pier face. When docking at Berth No. 3, the Pilot approaches the be dredging the vessel's anchor and passes her lines. When tugs available in the harbour, Pilots will employ them.

FRESH WATER: Available.

AIRPORT: Pensacola Regional Airport is served by both domestic international air carriers in addition to intrastate airline service.

GARBAGE DISPOSAL: Service available. Dumpsters up to 40 cu.y on board or alongside. Collection on demand. Contact: B.F.I. on (9 433-7425, or Environmental Waste on (904) 478-0633. Rates request.

WASTE OIL DISPOSAL: Collection available for liquid or contamina solids. Capacity into trucks up to 10,000 gallons. Available at any p berth. Charges available on request. Contact: Industrial Waste Inc. (904) 479-1788, or Pensacola Pollution Control on (904) 479-8095.

SEAMAN'S CLUBS: None.

PETERSBURG, Alaska: 56.49 N. 132.57 W.

Located on Mitkof Island, Northern end of Wrangell Narrows. Ope year.

DOCUMENTS: See "Anchorage, Alaska".

PILOTAGE: (From sea via Dixon Entrance up Clarence Strait to Gu Island.) Under pilotage from Guard Island.

ANCHORAGE: Good anchorage in Scow Bay, mud bottom.

MAX. SIZE: Harbour depth 24 ft. MLLW. Tides: Diurnal range 15.7 Also see "Berthing".

HEALTH: See "Health: All Ports" before first U.S.A. port (Alba Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany)

TUGS: 1×320 h.p.

BERTHING: Pacific American Fisheries Inc.: 75 ft. long, 65 ft. w Vessels should dock at slack water. Strong current.

STEVEDORES: 1 gang.

MEDICAL: 21 bed hospital.

FRESH WATER: State approved water available.

FUEL: Diesel and gasoline available.

REPAIRS: Marine ways to 35 tons.

CUSTOMS: Immigration, Guard Island. Quarantine and Customs, lo

TRANSPORTATION: Scheduled and charter airlines and ferry.

AUTHORITY: City of Petersburg, P.O.Box 1047, Petersburg, Ala 99833. *Tel:* (907) 772-4688. *FAX:* (907) 772-3759. *Contact:* Stromdahl, Harbour Master.

PHILADELPHIA, Pennsylvania: 39.57 N. 75.10 W. **(See Pl**

DOCUMENTS:

3 Crew Lists, Form I-418 (suggest 6 be made).
3 Passenger Lists, Form I-418 (suggest 6 be made).
3 Customs Stores Lists (suggest 6 be made).
3 Curio Lists (own ship Form) (suggest 6 be made).
3 Narcotics Lists (own ship Form) (suggest 6 be made).
Manifest (Ship Cargo List). If Philadelphia first port of call, requ copy for Customs and 1 copy to be used as "traveller" surrende last port of call. If Philadelphia not first port of call, 2 copies requ all cargo to be discharged at Philadelphia.

For Immigration Service:

Visaed Crew List.
Valid Passport or Seaman's Book for each person on board.
Crewman's Landing Card (Form I-95) for each crew member.

PILOTAGE: Pilotage is provided by members of the Pilots' Associ for the Bay and River Delaware who maintain a shore station operations tower at Cape Henlopen. The pilot station is in operatio a 24 hour basis and guards VHF Channels 16 and 14. Telegr address is: Delpilots, 214 S. Eleventh Street, Philadelphia, Pa. 1 Telex: 510-1002653. Arrangements for Pilot may be made by the Agent although an ETA and draft either by cable or VHF radio w greatly appreciated and will facilitate prompt boarding on arrival pilot boarding area is inside a line between Entrance Buoys No. 5 6, or approximately 2 to 2.5 miles S.E. of Harbour of Refuge Lightho Pilots may board further off-shore upon special request.

ANCHORAGES: Large and deep draft vessels awaiting berth are encouraged to avail themselves of the deep water anchorage adjacent to the Breakwater near the pilot station. There are 16 anchorage areas available along the Delaware River for moderate size vessels of lesser draft.

Shipmaster's Report: Good holding ground at Big Stone Anchorage. There is a launch service from Big Stone Anchorage to the shore, call VHF Channels 9 and 14.

RESTRICTIONS: There are no restrictions imposed upon entry except those dictated by vessel draft. Throughout most of its length, the Delaware River is dredged to 40 ft. at MLW. In addition there is a mean tidal range of about 5.7 ft. Vessels of 40 ft. fresh water draft can safely transit the river on a rising tide.

MAX. SIZE: Deep-draft oil carriers are lightered in a special anchorage approximately 10 miles N.W. of the pilot station. Vessels are restricted to a max. draft of 55 ft. by Federal Law.

Chesapeake/Delaware Canal: See "Wilmington" – Delaware.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

VHF: A port radio service operated by The Ports of Philadelphia Maritime Exchange on a 24 hour basis is also available to all vessels while transiting the Delaware River. VHF Channels 16 and 14 guarded for purposes of this service.

Ship reporting service in operation.

TUGS: Tugs normally join vessels adjacent to berth. Tug's lines are used.

BERTHING:

Terminal	*Length* (ft.)	*Depth* (ft.)	*Use*
Packer Avenue	3,800	35-40	Containers, Steel Products, Refrig., Fruit, Heavy Lifts.
Piers 122/124	2,000	40	Coal, Coke, Iron Ore, Pellets, Fertiliser. Pier 124 inactive.
Gloucester City	5,500	30-40	Containers, Steel Products, Forest Products, Refrig., Heavy Lifts.
Pier 96	1,380	30	Automobiles.
Pier 82/84	2,849	30	Fruit, Breakbulk, Project Cargoes.
Piers 78/80	3,892	35	Newsprint, Wood Pulp, Forest Products, 2 Ro/Ro Ramps.
Piers 38/40	1,100	35	Newsprint, Wood Pulp, Forest Products.
Petty's Island	1,000	35	Trailers (dry and reefer), Ro/Ro, Containers, Steel Products.
Beckett Street	2,300	30-40	Containers, Scrap Metal, Steel Products, Plywood, Lumber, Salt, Breakbulk.
Broadway	4,000	30-40	Bananas, Pineapples, Coal, Petrocoke, Minerals, Breakbulk.
Tioga (Container)	1,450	40	Containers, Breakbulk, Automobiles, Ro/Ro.
Tioga (Fruit)	1,753	40	Refrig. and Fresh Fruit, Containers, Paper, Cocoa Beans, Autos, palletised and Project Cargoes.
Northern Shipping	3,300	34	Breakbulk, Containers, Bulk, Project and General Cargoes.
Chester	1,100	35	Containers, Steel, Metals, Hardboard, Lumber, Glass, Woodpulp, Paper Products.
Fairless	2,500	40	Steel Products, Iron Ore.

CONTAINER HANDLING FACILITIES: *Tioga Marine Terminal:* Handles containerised and Roll-on/Roll-off cargoes. The terminal is equipped with 2×45 ton container cranes. Length of the marginal wharf is 3,300 ft., upper slip berth 725 ft. and lower slip berth 625 ft.

Packer Avenue Marine Terminal: Handles containerised and Roll-on/Roll-off cargoes. The terminal is equipped with 5×45 ton container cranes, one has a heavy lift capacity of up to 375 tons. The marginal wharf is 3,800 ft. in length and the Roll-on/Roll-off slip berth is 825 ft. in length. 80 Reefer outlets.

Holt Marine Terminal: 2×35 ton container cranes. Ro-Ro facilities available.

Gloucester City Marine Terminal: Located on the New Jersey side of the Delaware River, in Gloucester City. Terminal area 150 acres. 6 berths with total length 5,500 ft. (4 berths – depth 40 ft.; 1 berth – depth 35 ft. and 1 berth – depth 30 ft.). 320 reefer outlets. 2×45 tons container cranes, 1×300 tons P&H truck crane, 1×180 tons Vicon truck crane. 4×92,000 lb. Toploaders, 5×30,000 lb. Toploaders, 230×3,000 lb. – 35,000 lb. forklifts and 30 yard hustlers.

BULK HANDLING FACILITIES:

Berth No.	*Location*	*Operator*	*Berth Length* (m.)	*Berth Depth* (m.)	*Loading Rate* (tonnes/p.h.)
Pier No. 124 (inactive)	Greenwich	Conrail	310	12.19	5,000 (coal)
Pier No. 122 South (2 berths)	Greenwich	Conrail	260	12.19	3,000 (ore)
Pier E	Port Richmond	Conrail	260	12.19	
Camden-Beckett Bulk Terminal (4 berths)	Camden	South Jersey Port Corp.	200	11.50	

STEVEDORES: Ship's Agents make arrangements for stevedore gangs. Agents should be kept advised of any change in ETA.

MEDICAL: Advance notice of requirements desirable to the extent possible. Hospital facilities are available.

TANKERS: All terminals are equipped with reducers. There are slop (residue) facilities at most terminals. Some main terminals listed below:

Fort Mifflin	Atlantic Refining and Marketing Co.	40 ft. depth
Point Breeze	Atlantic Refining and Marketing Co.	32 ft. depth
	Ballast Wharf	32 ft. depth
Hog Island	Chevron U.S.A. Oil Terminal	40 ft. depth
Paulsboro	Mobil Oil Terminal	30 ft. and 40 ft. depth
	B.P. Oil Terminal	36 ft. depth
Marcus Hook	B.P. Oil Corp.	35 ft. depth
	Sun Oil Co.	40 ft. depth
Westville (Eagle Point)	Coastal Eagle Point Oil Co.	40 ft. depth
Girard Point	Chevron U.S.A.	33 ft. depth
Delair	Amerada Hess Corp.	31 ft. depth
Delaware City	Texaco Inc.	37 ft. depth

In addition to the above, the following are available for tankers and chemical carriers:

GATX (NJ) – 3 berths.
GATX (Pa.) – 1 berth.
Citgo (NJ) – 3 berths asphalt).
TCI (Pa.) – 1 berth.

Atlantic Refining and Marketing Co. – Fort Mifflin: Entering and Docking: There is a 5-knot tidal current that may cause extra care in tending lines while moored. Passing river traffic also requires constant attention to mooring lines. "A" and "B" Berths are 800 ft. in length and total mooring leads to each berth being 15. Maximum bow/manifold at "A" Berth is 375 ft.; head lines are 4 breast line leads. "A" Berth also requires 4 forward springs, 2 stern lines, 2 stern/breast lines and 4 after spring lines. "B" Berth requires 2 head lines, 2 forward breast lines, 4 forward spring lines, 2 stern lines, 2 after breast lines, 4 after spring lines. A gangway is not provided by the terminal.

Berthing: If the vessel is under 50,000 d.w.t., 2 tugs (1,000 h.p. – 2,000 h.p.) are required. Vessels in excess of 50,000 d.w.t. and equipped with a bow thruster may utilise 2 tugs. However, if the vessel is in excess of 50,000 d.w.t. and has no bow thruster, then 3 tugs should be used for docking. During normal conditions for vessels of any tonnage 1 tug (1,000 h.p. – 1,500 h.p.) should be employed for undocking. The vessel is normally turned off the dock prior to docking for starboard side mooring. Normal mooring is done approximately 1.5 hours prior to HW. A Pilot is required during docking and undocking. All hoses are 10 in. with bolted flanges. Cargoes handled are: crudes, gasolines, heating oil and kerosene. Maximum working pressure is 100 lbs. The terminal has no facilities for handling ballast or slops.

British Petroleum – Marcus Hook:

Pilotage and Docking: The services of a Pilot and Docking Master is both compulsory and recommended. When docking vessels of tonnages up to 30,000 d.w.t., 1 tug (1,700 s.h.p.) is required. Tonnages less than 50,000 d.w.t. require 2 tugs and vessels with a tonnage greater than 50,000 d.w.t. require 3 tugs when docking. For undocking vessels of any tonnage, 1 tug is required.
